2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Big Ideas Learning
Title:	Big Ideas Math 6th (Green)
ISBN #	**978-1-60840-449-0**
Grade Level(s) or Course:	6th (Green)
Reviewer ID:	MN DA

RECOMMENDED AS:

____X___**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

All materials meet grade level content. The majority of time spent in major works. Students spend 103 days (67%) in major clusters.

COHERENCE-

Not only the book lessons but there is additional lessons within the record and practice journals and enrichment and extension lessons. Laurie's Notes are also beneficial.

RIGOR-

There is multiple practice forms to bring in procedural fluency. The student book has ample practice but when needed Record and Practice Journal and resources by chapter workbooks are available.

CONCEPTUAL UNDERSTANDING-

Different types of questions are asked throughout to encourage higher level thinking. Students are asked to represent understanding multiple ways (tables, diagrams, models, pictures, drawings, and graphs).

MATHEMATICAL PRACTICES-

All mathematical practice standards are evident throughout the text. They are shown throughout Laurie's notes in every section. Each lesson is based on a concept then reaches out and expects the student to reason and explain through a variety of methods.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Text supports all levels of learners from interventions (Review), online tutorials to activities for the advanced self-learner.

OTHER:

Lots of resources for students, teacher, and parents. Laurie's Notes are a great resource for teachers.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: Big Ideas Learning

Title of Material: Big Ideas Math 6th (Green) A Common Core Curriculum

Author: Ron Larson and Laurie Boswell
ISBN #: 978-1-60840-449-0 Copyright 2014

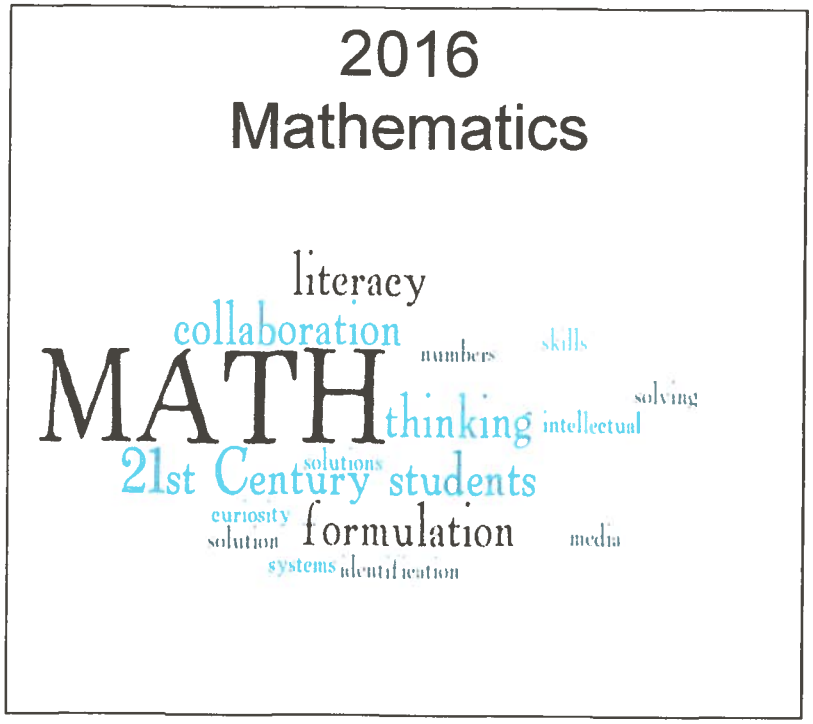
Reviewer ID: MN DA

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials ref the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** All materials meet grade level content.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** The majority of time spent in major works. Students spend 103 days (67%) in major clusters.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting W[illegible]k, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** After topics are introduced they are brought back into practice with other activities. Essential Questions for each chapter.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content progresses throughout the program allowing for building on previous knowledge. Scope and Sequence and Pacing Guide with all concepts linked to Common Core.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials gi[illegible] students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Not only the book lessons but there is additional lessons within the record and practice journals and enrichment and extension lessons. Laurie's Notes are also beneficial.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson ties to previous concepts. Each chapter begins with a section titled "What You Learned Before". Additionally, each lesson includes a "Previous Learning" statement addressing the specifics for the given lesson.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There is a what you learned before page at the beginning of each chapter but a handbook is also available covering skills review and basic skills. There is also a Fair Game Review in the record and practice journal.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Learning objectives are located at the beginning of each lesson for easy access to students. Table of contents has all information.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Connections are made throughout the book bringing previous concepts importance into additional activities. Laurie's notes has connections layout and in her introduction.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance In choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Lessons give great ideas for teachers, and thought provoking questions.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Different types of questions are asked throughout to encourage higher level thinking.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Students are asked to represent understanding multiple ways (tables, diagrams, models, pictures, drawings, and graphs).	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** There is multiple p ice forms to bring in procedural fluency. The student book has ample practice but when needed Record and Practice Journal and resources by chapter workbooks are available.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Each lesson has plenty of practices contained within.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Repeated practice is evident in each lesson.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Every section has problems from basic practice to real life application, and age appropriate.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** There are application and real world problems in every section.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Students are given opportunity to think for themselves.	
Alignment Criterion 1: **Rigor and Balance** **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** **AC1** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

All mathematical practice standards are evident throughout the text. They are shown throughout Laurie's notes in every section. Each lesson is based on a concept then reaches out and expects the student to reason and explain through a variety of methods.

(Reviewer only.)

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Each mathematical practice can be used throughout the year.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** More explanation required as the course progresses.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Laurie's Notes As the student progresses through the year the content becomes more sophisticated and expects the student to do more explaining.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** The program expects the student to explain, justify, and reason especially in the Error Analysis exercises.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Content is designed at a level appropriate to the student's interest. It is visually appealing to the student.	

Do materials explicitly attend to the specialized language of mathematics? Is language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Key Ideas and Vocabulary Sections of each lesson teach the language of math.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Online resources to translate vocabulary in other languages to help students of English language learners.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Text supports all levels of learners from interventions (Review), online tutorials to activities for the advanced self learner.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Desmos applications, Geogebra applications, and Think. Pair. Share. Ideas.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **___X_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Tips in Laurie's Notes to motivate the students and work together.	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson has a variety of methods and progressions. From self-guided sections to teacher instructions there is multiple approaches within each lesson.	**(Reviewer only.)** **___X___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Progression is systematic to help the student gain confidence as they approach more difficult problems.	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Laurie's Notes are an excellent resource for teachers to help students.	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Models of area used correctly.	**(Reviewer only.)** **____X__ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Pre-tests, post tests, mini assessments, quizzes, and online testing tools are all summative assessments available. Formative assessments are imbedded within Laurie's Notes.	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** All assessments have detailed keys and scoring rubrics. Online tests are automatically corrected.	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes, assessments are consistent with unit instructions.	**(Reviewer only.)** **___X___ Yes** **_____ No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Developed by a team of educators with years of experience.	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The text is visually interesting and easy to follow.	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Lessons are easy for parents to follow as well as online tutorials in multiple languages.	**(Reviewer only.)** **___X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: _6th Grade_____**

Publisher: _Big Ideas Learning_____ Copyright: __2014_____ ISBN:_978-1-60840-449-0____

Reviewer ID # __MN___DA_____Date Review Completed:__7 March 2016_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
___X____ Meets _____ Does Not Meet	__X___ Meets _____ Does Not Meet

Non-Negotiable Overall:

___X__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____X__ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet

Alignment Criteria Overall:

___X__ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths

-Lots of resources for students, teacher, and parents.

-Laurie's Notes are a great resource for teachers

-Progression is great across all grades.

-Different paths for regular and accelerated.

Weaknesses

-Can't think of any, keep up the great work!

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Big Ideas Learning
Title:	Big Ideas Math 7th (red)
ISBN #	978-1-60840-[redacted] 450-6
Grade Level(s) or Course:	7th ~~Accelerated~~ (red)
Reviewer ID:	MN DA

RECOMMENDED AS:

____X___**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

All materials meet grade level content. The majority of time spent in major works.
Students spend 103 days (67%) in major clusters.

COHERENCE-

After topics are introduced they are brought back into practice with other activities. Content progresses throughout the program allowing for building on previous knowledge.

RIGOR-

There is multiple practice forms to bring in procedural fluency. The student book has ample practice but when needed Record and Practice Journal and resources by chapter workbooks are available.

CONCEPTUAL UNDERSTANDING-

Different types of questions are asked throughout to encourage higher level thinking.
Students are asked to represent understanding multiple ways (tables, diagrams, models, pictures, drawings, and graphs).

MATHEMATICAL PRACTICES-

All mathematical practice standards are evident throughout the text. They are shown throughout Laurie's notes in every section. Each lesson is based on a concept then reaches out and expects the student to reason and explain through a variety of methods

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Text supports all levels of learners from interventions (Review), online tutorials to activities for the advanced self-learner.

OTHER:

Lots of resources for students, teacher, and parents. Laurie's Notes are a great resource for teachers Progression is great across all grades.

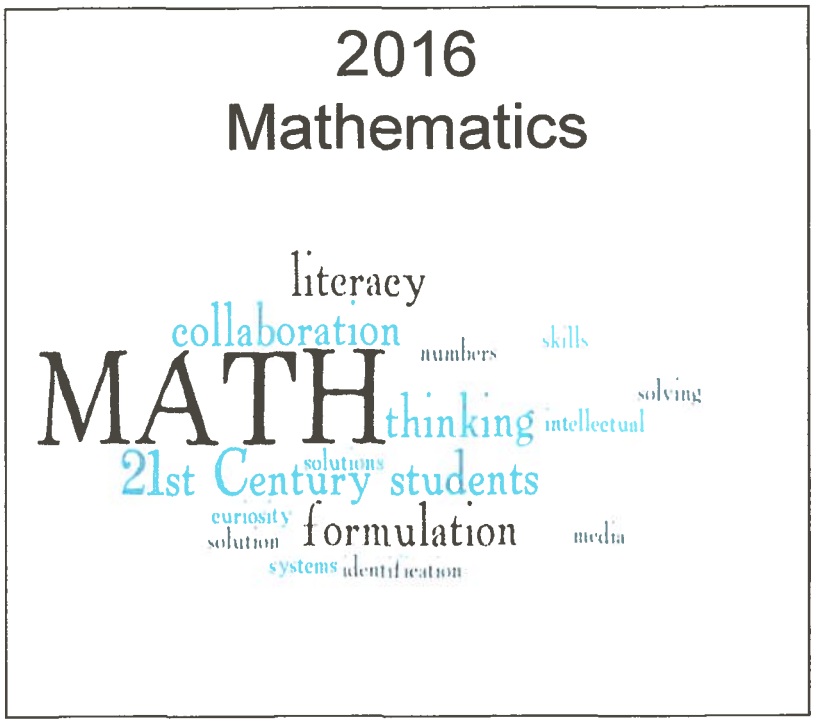
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** All materials meet grade level content.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** The majority of time spent in major works. Students spend 103 days (67%) in major clusters.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting W[illegible], where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** After topics are introduced they are brought back into practice with other activities. Essential Questions for each chapter.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content progresses throughout the program allowing for building on previous knowledge. Scope and Sequence and Pacing Guide with all concepts linked to Common Core.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials gi[illegible] students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Not only the book lessons but there is additional lessons within the record and practice journals and enrichment and extension lessons. Laurie's Notes are also beneficial.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson ties to previous concepts. Each chapter begins with a section titled "What You Learned Before". Additionally, each lesson includes a "Previous Learning" statement addressing the specifics for the given lesson.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There is a what you learned before page at the beginning of each chapter but a handbook is also available covering skills review and basic skills. There is also a Fair Game Review in the record and practice journal.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Learning objectives are located at the beginning of each lesson for easy access to students. Table of contents has all information.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Connections are made throughout the book bringing previous concepts importance into additional activities. Laurie's notes has connections layout and in her introduction. Pg. 232 Percent Equation ties Algebra & Percents	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Lessons give great ideas for teachers, and thought provoking questions.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Different types of questions are asked throughout to encourage higher level thinking. Pg. 32 #4	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Students are asked to represent understanding multiple ways (tables, diagrams, models, pictures, drawings, and graphs).	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo[illegible]onceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** There is multiple pr[illegible]ce forms to bring in procedural fluency. The student book has ample practice but when needed Record and Practice Journal and resources by chapter workbooks are available.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Each lesson has plenty of practices contained within.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Not applicable.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Every section has problems from basic practice to real life application, and age appropriate. Pg. 31	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** There are application and real world problems in every section.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Students are given opportunity to think for themselves.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

All mathematical practice standards are evident throughout the text. They are shown throughout Laurie's notes in every section. Each lesson is based on a concept then reaches out and expects the student to reason and explain through a variety of methods.

(Reviewer only.)

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Each mathematical practice can be used throughout the year.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** More explanation required as the course progresses.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Laurie's Notes As the student progresses through the year the content becomes more sophisticated and expects the student to do more explaining.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** The program expects the student to explain, justify, and reason especially in the Error Analysis exercises. Every unit embeds and highlights SMPs and in particular the questions titled "What is Your Answer?"	

Do the materials support students in producing not only answers and solutions, but also in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Content is designed at a level appropriate to the student's interest. It is visually appealing to the student.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Key Ideas and Vocabulary Sections of each lesson teach the language of math.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Online resources to translate vocabulary in other languages to help students of English language learners.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Text supports all levels of learners from interventions (Review), online tutorials to activities for the advanced self learner.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Desmos applications, Geogebra applications, and Think. Pair. Share. Ideas.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **___X_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Tips in Laurie's Notes to motivate the students and work together.	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson has a variety of methods and progressions. From self-guided sections to teacher instructions there is multiple approaches within each lesson.	**(Reviewer only.)** **___X___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Progression is systematic to help the student gain confidence as they approach more difficult problems.	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Laurie's Notes are an excellent resource for teachers to help students.	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Models of area used correctly. Manipulatives include positive and negative counters, algebra tiles, and a partition circle.	**(Reviewer only.)** **____X__ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Pre-tests, post tests, mini assessments, quizzes, and online testing tools are all summative assessments available. Formative assessments are imbedded within Laurie's Notes.	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** All assessments have detailed keys and scoring rubrics. Online tests are automatically corrected. The assessment book includes item analysis for the standards assessment for each chapter.	**(Reviewer only.)** **___X___ Yes** **_____ No**

8. Materials a[illegible]ss student proficiency using methods that [illegible]e accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes, assessments are consistent with unit instructions.	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Developed by a team of educators with years of experience.	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The text is visually interesting and easy to follow.	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Lessons are easy for parents to follow as well as online tutorials in multiple languages. Each chapter includes a parent letter describing the upcoming content in the Resources.	**(Reviewer only.)** **___X___ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **___X____ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **__X___ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **___X__ Meets _____ Does Not Meet**	

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: __6___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)**	**Points: ___6__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points: ___6__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
_____X__ Meets	**____X___ Meets**	**___X____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

___X__ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths

-Lots of resources for students, teacher, and parents.

-Laurie's Notes are a great resource for teachers

-Progression is great across all grades.

-Different paths for regular and accelerated.

Weaknesses

-Can't think of any, keep up the great work!

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Big Ideas Learning
Title:	Big Ideas Math (Blue): A Common Core Curriculum
ISBN #	978-1-60840-461-3
Grade Level(s) or Course:	8th
Reviewer ID:	Time PB

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The major Works of the curriculum are met at 84% of the time. Standards are taught on grade level and are not introduced before they should be.

COHERENCE- The chapters help "remind" students of previous learning through warm-ups & activities throughout the entire text.

RIGOR- materials support the development of higher-order thinking through error analysis and multiple representations of problems.

CONCEPTUAL UNDERSTANDING- Problems throughout the curriculum ask students to explain and reason through words & multiple representations.

MATHEMATICAL PRACTICES- The mathematical practices are very noticable throughout the entire text. The vocabulary used in the lessons is directly drawn from the MP.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- The Teachers Edition, online resources, digital resources, & ancillary materials are devoted to aiding in ELL help, differentiating lessons, and making learning available to all learners.

OTHER:

The materials and curriculum are complete as packaged.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Similarity & Congruence & transformations are covered in chapter 2. These concepts are not introduced in grades 6 or 7.	(Reviewer only.) X Meets ____Does Not Meet
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) X Meets ____Does Not Meet **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

Chapters One through Seven devoted a majority (84%) to the major work time. Chapters eight thru ten went into more accelerated materias.

(Reviewer only.)

X **Meets**

____ **Does Not Meet/**

Insufficient Evidence

Metric NN2B: **Supporting [illegible]k, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Concepts are introduced an revisited thraught the Scope & sequence.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Progression of grade-by-grade standards are followed and grade level appropriate. Ex: Division with expoents is taught before negative exponents are introduced.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Many tiered resources are available. There are three workbooks (also digital) that had materials for struggling learners as well as enrichment.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each chapter included a "What you Learned Before" page that brings in review. There are also "warm up" activities & questions thruout the chapters that help "remind" students of previous learning.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Previous grade learning and standards are met through the "What I Learned Before" pages in each chapter.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The objectives are directly tied to the CCSS. Standards covered are directly stated in the teacher's edition and objectives are clearly given CCSS activities can also be found	**(Reviewer only.)** X **Meets** ____ **Does Not Meet/** ~~**Insufficient Evidence**~~ in "Left Corner Activities."
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Once topics are introduced and taught they are revisited again & again throught the book.	**(Reviewer only.)** X **Meets** ____ **Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** Very well put together program with lots of resources.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

The content emphasis chosen to evaluate was Statistics and Probability (as well as all others were visited)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

X **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set e[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Materials support the development of higher-order thinking through error analysis and multiple representations of problems.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Throughout the lessons are included very good problems that ask students to explain and interpret.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Multiple Representations ~~are~~ problems are asked for throughout the curriculum.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Lessons give good examples of doing problems procedurally as well as practice for students doing so as well.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** There multiple resources in the text book and online that can aid students and parents through procedural problems.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Does not apply to apply to 8th grade	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Multi-step & word problems are given throughout each chapter and stay focused on the major work of each grade.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Clearly meets the practice of each Standard.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Word Problems apply directly to the chapter & CCSS concepts. Problems are grade level and age appropriate.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling is evident in problems throughout the text that require students to apply mathematical practices including practice.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X_ **Meets** 6 of 6

____ **Does Not Meet**

Strengths/Weaknesses:
This program carefully addresses the standards throughout each chapter and gives appropriate practice as well as rigor.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

The Mathematical Practices are very noticable through the entire text. The vocabulary used in the lessons and problems ~~are~~ is directly taken from the Mathematical practices.

(Reviewer only.)

X **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Metric AC2B: **Materials at[illegible] to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each q[illegible]on and rate Metric 2B.** **(Reviewer only.)** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Questions and applications clearly address the MPs. Activities where students are "partnered" & asked to express reasoning.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Scope & Sequence in the teachers edition addresses the mathematical practices for earlier levels.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Through the chapters "Jaun's Notes" are given and explain how to incorporate the MP Standards	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Multiple activities & problems that address error analysis ask students to construct viable agruments and explain other's views.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Students have to explain, reason, & represent problems in multiple ways.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary is grade level and age appropriate. Language is pulled directly from Standards.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

(Reviewer only.)

X **Meets** 6 of 6

____ **Does Not Meet**

Strengths/Weaknesses:

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Within the text book there are ELL tips and a Spanish/ English glossary. Online & digital resources for ELL resources are also available.	**Reviewer only.)** X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The "Dynamic Teaching Resources" CD includes many tools including skills and review handbook as well as basic skills & differentiating the lesson.	**Reviewer only.)** X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Within the teacher's edition, Laura's notes gives ways to differentiate instruction and motivational tips.	**Reviewer only.)** X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** _X_ **Meets** 6 of 6 ____ **Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons are structured carefully through the pacing guide. Strong teacher's edition with multiple teaching strategies.	**(Reviewer only.)** _X_ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Problems are well-rounded with warm-ups and multiple practice activities and levels.	**(Reviewer only.)** _X_ **Yes** _____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Lessons and problems are scaffolded & build on each other.	**(Reviewer only.)** X **Yes** ____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The teacher's edition is ~~extremely~~ helpful with teaching ideas that support each lesson. Discussion topics & prompts are given to aid the teacher.	**(Reviewer only.)** X **Yes** ____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Although there are no physical manipulatives that come with the curriculum, the suggested & online manipulatives/activities are connected to the lessons	**(Reviewer only.)** X **Yes** ____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** There is an assessment book that includes pre, post, quizzes, formative, and alternative assessments.	**(Reviewer only.)** X **Yes** ____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Rubrics and answer keys are included in the curriculum	**(Reviewer only.)** X **Yes** ____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessments reflect lessons and vocabulary.	**(Reviewer only.)** X **Yes** ____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Comprehensive List of teacher and student reviewers is given on page IV & V.	**(Reviewer only.)** X **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The design is easy to navigate and is appealing to the students.	**(Reviewer only.)** X **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Parents will be able to follow the examples very easily. Parents have access to the online materials as well.	**(Reviewer only.)** X **Yes** ____ **No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

X **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** _X_ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths-

This book is much "smaller" in comparison to many other text books. This is due to the coherence to the CCSS with basic review instead of comprehensive review of previous grades.

The Teacher's Edition is an invaluable resource that gives multiple lesson strategies, representations of learning and motivational strategies.

The curriculum is CCSS aligned with strict obedience to the Mathematical pratices and grade level vocabulary.

Hardback student text will hold up better than other books.

Weakness - None.

EVIDENCE SUMMARY:

FOCUS-

The majority of time spent in major works. There are 52 sections of the book in 10 chapters. Thirty-one of the sections are devoted to the major work of the grade, this represents 60% of the material, given that the major work of the grade reflects 44% of the standards, this seems adequate, although on the low end.

COHERENCE-

Each lesson ties to previous concepts. Each chapter begins with a section titled "What You Learned Before". Additionally, each lesson includes a "Previous Learning" statement addressing the specifics for the given lesson.

RIGOR-

There is multiple practice forms to bring in procedural fluency. The student book has ample practice but when needed Record and Practice Journal and resources by chapter workbooks are available.

CONCEPTUAL UNDERSTANDING-

Students are asked to represent understanding multiple ways (tables, diagrams, models, pictures, drawings, and graphs).

MATHEMATICAL PRACTICES-

All mathematical practice standards are evident throughout the text. They are shown throughout Laurie's notes in every section. Each lesson is based on a concept then reaches out and expects the student to reason and explain through a variety of methods.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Text supports all levels of learners from interventions (Review), online tutorials to activities for the advanced self-learner. Online resources to translate vocabulary in other languages to help students of English Language Learners.

OTHER:

The TE section labeled Laurie's Notes state there are times where one specific method is said to be the only way to solve a problem (pg. T-100) when in fact, mathematically there are multiple ways one can arrive at the correct answer.

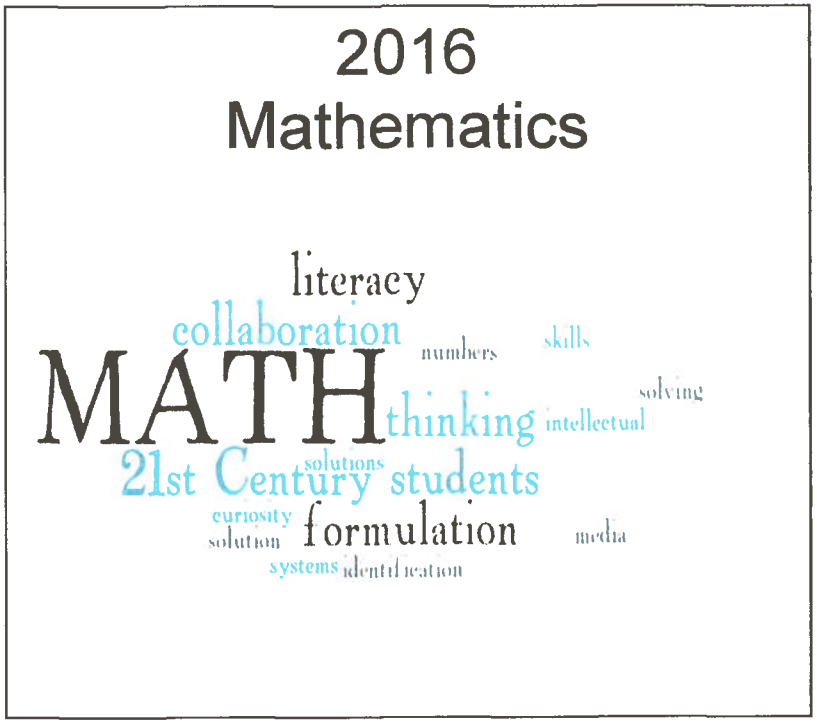
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** All materials meet grade level content.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** The majority of time spent in major works. There are 52 sections of the book in 10 chapters. Thirty-one of the sections are devoted to the major work of the grade, this represents 60% of the material, given that the major work of the grade reflects 44% of the standards, this seems adequate, although on the low end.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting W[illegible]k, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** After topics are introduced they are brought back into practice with other activities. Essential Questions for each chapter. Lesson 7.1-7.4 all incorporate the use of expressions and equations (Major work of the grade) to find angle measures or missing angles.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content progresses throughout the program allowing for building on previous knowledge. Scope and Sequence and Pacing Guide with all concepts linked to Common Core.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give[illegible] students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Not only the book lessons but there is additional lessons within the record and practice journals and enrichment and extension lessons. Laurie's Notes are also beneficial.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson ties to previous concepts. Each chapter begins with a section titled "What You Learned Before". Additionally, each lesson includes a "Previous Learning" statement addressing the specifics for the given lesson.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There is "A What You Learned Before" page at the beginning of each chapter but a handbook is also available covering skills review and basic skills. There is also a Fair Game Review in the record and practice journal.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Learning objectives are located at the beginning of each lesson for easy access to students. Table of contents has all information.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Connections are made throughout the book bringing previous concepts importance into additional activities. Laurie's notes has connections layout and in her introduction.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Lessons give great ideas for teachers, and thought provoking questions. Lessons 1.1-1.5 use a number line and positive/negative counter to build a conceptual understanding around the operations with integers. This works well, but the subtraction component directs students to use "Add the Opposite" method and spends no time modeling subtraction as a difference of two points on the number line. Huge missed opportunity.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Different types of questions are asked throughout to encourage higher level thinking. 1.2 Asks students to create a Magic Square with specific sums. This is not totally open ended, but does have multiple entry points.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Students are asked to represent understanding multiple ways (tables, diagrams, models, pictures, drawings, and graphs).	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** There is multiple practice forms to bring in procedural fluency. The student book has ample practice but when needed Record and Practice Journal and resources by chapter workbooks are available.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $– x = 1 + 2y$.	**Evidence-** Each lesson has plenty of practices contained within.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Not applicable.	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Every section has problems from basic practice to real life application, and age appropriate. The Critical Thinking questions such as the one in Lesson 5.2 have multi-step aspects.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** There are application and real world problems in every section.	

Does modeling b[illegible]lowly across K–8, with applications that are relatively simple i[illegible]lier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Students are given opportunity to think for themselves. Modeling is primarily number lines and algebra tiles.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Suggestions in the teacher's notes stating what students "have to do" to find solutions. This is an example of students losing conceptual understanding by focusing on a procedural skill.

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** All mathematical practice standards are evident throughout the text. They are shown throughout Laurie's notes in every section. Each lesson is based on a concept then reaches out and expects the student to reason and explain through a variety of methods. Multiple SMPs are present in every lesson. Lesson 5.2 highlights SMP 7, 4, and 3.	**(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Each mathematical practice can be used throughout the year.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** More explanation required as the course progresses.	

Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Laurie's Notes As the student progresses through the year the content becomes more sophisticated and expects the student to do more explaining.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** The program expects the student to explain, justify, and reason especially in the Error Analysis exercises. Every unit embeds and highlights SMPs and in particular the questions titled "What is Your Answer?"	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Content is designed at a level appropriate to the student's interest. It is visually appealing to the student. In each lesson there is a prompt titled "Math Practice" that is related to specific practice standards.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Key Ideas and Vocabulary Sections of each lesson teach the language of math.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Shortage of SMP 1.

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-

Online resources to translate vocabulary in other languages to help students of English Language Learners.

They include suggestions like providing a template (Lesson 5.3) a table of symbols and their meanings (Lesson 4.1).

Reviewer only.)

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Text supports all levels of learners from interventions (Review), online tutorials to activities for the advanced self learner. Lesson 4.1 suggests tips for auditory learners, Lesson 5.4 for visual learners, and Lesson 6.1 for kinesthetic learners.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Desmos applications, Geogebra applications, and Think. Pair. Share. Ideas.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** A lack of real items or suggestions of images to make connections to the content vocabulary. Also, there is weakness in writing suggestions and sentence starters to encourage ELL students to use vocabulary to build language. **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **___X_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of

Qu[illegible]y in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 20[illegible])

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Tips in Laurie's Notes to motivate the students and work together.	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson has a variety of methods and progressions. From self-guided sections to teacher instructions there is multiple approaches within each lesson.	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Progression is systematic to help the student gain confidence as they approach more difficult problems.	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** Laurie's Notes are an excellent resource for teachers to help students.	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Models of area used correctly. Manipulatives include positive and negative counters, algebra tiles, and a partition circle.	**(Reviewer only.)** **____X__ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Pre-tests, post-tests, mini assessments, quizzes, and online testing tools are all summative assessments available. Formative assessments are imbedded within Laurie's Notes.	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** All assessments have detailed keys and scoring rubrics. Online tests are automatically corrected. The assessment book includes item analysis for the standards assessment for each chapter.	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes, assessments are consistent with unit instructions. Almost all problems are designed to include the student as the subject (eg. Pg. 85 "You apply gold foil…" pg. 107 "Your family drives…") or a generic subject pg. 265 "A movie theater…	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Developed by a team of educators with years of experience. Eleven teacher reviews and 7 consultants.	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The text is visually interesting and easy to follow.	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Lessons are easy for parents to follow as well as online tutorials in multiple languages. Each chapter includes a parent letter describing the upcoming content in the Resources.	**(Reviewer only.)** **___X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: 7th Grade Accelerated**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **___X____ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **__X___ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **___X__ Meets** **_____ Does Not Meet**	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____X__ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet

Alignment Criteria Overall:

___X__ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths

-Lots of resources for students, teacher, and parents.

-Laurie's Notes are a great resource for teachers

-Progression is great across all grades.

-Different paths for regular and accelerated.

Weaknesses

-ELL suggestions don't include writing prompts or realia.

-Laurie's Notes there are times where one specific method is said to be the only way to solve a problem (pg. T-100) when in fact, mathematically there are multiple ways one can arrive at the correct answer.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Big Ideas Learning
Title:	Big Ideas Math Algebra 1: A Common Core Curriculum
ISBN #	978-1-60840-452-0
Grade Level(s) or Course:	8th Grade
Reviewer ID:	TC PB

RECOMMENDED AS:

____X___**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Found 91 % of the material in this book to be spent on the widely applicable standards.

COHERENCE-

At the beginning of every unit, there is a common core progression in the Laurie's Notes of the teacher's edition.

RIGOR-

The students are asked to "model", "problem solve" and "make an argument" throughout the lessons in the text.

CONCEPTUAL UNDERSTANDING-

Problems throughout the curriculum ask students to explain and reason through problems using words and multiple representations.

MATHEMATICAL PRACTICES-

The mathematical practices are very noticeable throughout the entire text. The vocabulary used in the lesson is directly drawn from the mathematical practices.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

The Teachers edition, online resources, digital resources, and ancillary material are devoted to aiding in the ELL, Help, Differentiating lessons and making learning available to all learners.

OTHER:

This book follows the Accelerated Traditional Pathway as found in Appendix A of the Mathematics CCSS. The book covers every standard in the 8th Grade Algebra 1 Accelerated Traditional Pathway. The standards covered in this book align directly with the Overview of the Accelerated Traditional Pathway for the CCSS as found on pages 82-91 of Appendix A.

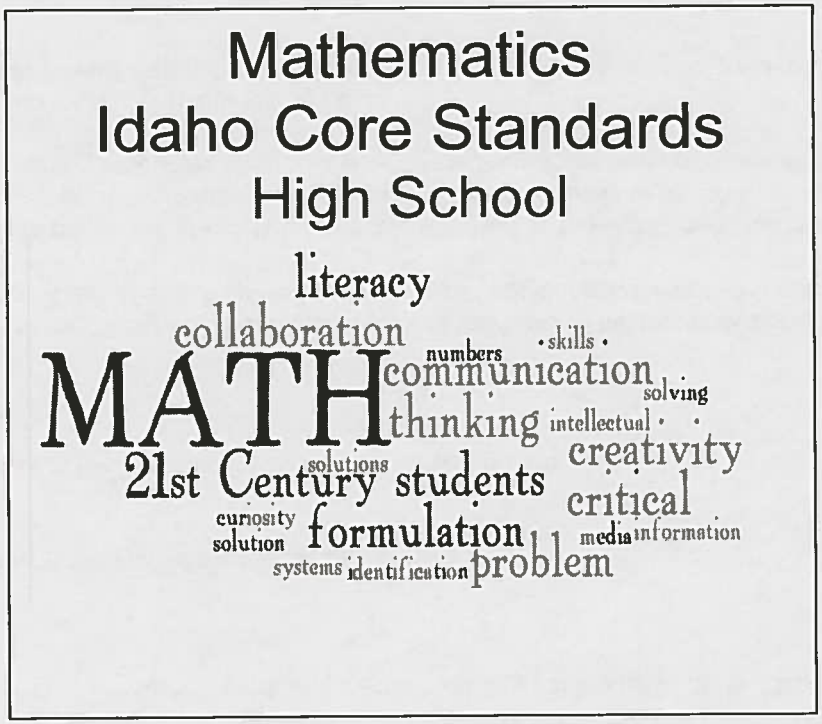
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1 **Focus and Coherence**		
Criterion	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** I Found 91% of the material in this book to be spent on Widely Applicable Standards as found in the Teachers Edition	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Not Applicable for Algebra	**____Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** At the beginning of every unit, there is a common core progression in the Laurie's Notes of the Teachers Edition The Teachers Edition explains the progression of what to teach in middle school and what will be taught in Algebra 1.	**__x__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The material in the course is CCSS Aligned.	**__x__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The textbook itself has a number of problems to support students in their learning of the material. There are also great resources in the Student Journal, Resource Book and Worksheets. There is an Enrichment and Extension Worksheets for the advanced student.	**__x__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** At the beginning of each chapter there is a page called "Maintaining Mathematical Proficiencies" which reviews skills learned earlier and needed for the upcoming chapter.	**_x___Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The objectives tie directly to the CCSS. The Teachers Edition list which Standards are covered and in which sections they are covered in. This evidence is on pages xxii - xxxiii.	**__x__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** There are a number of sections in the text that connect two or more clusters in a domain. Evidence on pages xxxii & xxxiii	**_x___Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Metric NN 1:** If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**__x__Meets** **____Does Not Meet** **Strengths/Weaknesses** Lots of resources and a very well written text.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** The widely applicable Standard I choose was A.REI.3 under Algebra Very good conceptual problems, especially in the area of inequality problems.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Yes, They are asked to "Model", "Problem Solve" and "Make an Argument"	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** The standard I looked at is abstract in nature but the curriculum does ask students to draw polygons, model equations, and also write and graph equations.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The lessons give many examples in the "lesson" portion of each section. Also numerous problems in the "exercise" portion as well.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** Good problems mapping out the steps to help the students learn the procedures needed.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Found many real world problems throughout the text.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The "Real-Life Application" problems apply directly to the widely applicable standards.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** This was evident. The text uses actual vocabulary like "Modeling" in its problem sets.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**_x___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Mathematical Practices are very noticeable throughout the teacher and student editions At the beginning of the teachers edition and student edition there is a full page explaining how to use the mathematical practices and how they are applied throughout the book. This is page xliii.	**__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The 8 Mathematical Practices are used multiple times through each chapter. I really like the vocabulary that is used throughout the book.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** The Teachers Edition includes multiple pages called "Laurie's Notes" where the author gives tips addressing "Common Errors" and giving guided questions. Very good resource.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Multiple activities and problems that address error analysis, asking students to construct viable arguments and explain their views.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Students have to explain, reason, and represent problems in multiple ways.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary is grade level and age appropriate. Language is pulled directly from the CCSS.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Within the text there are ELL tips and a Spanish/English glossary. Online and Digital resources are also available.	**__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The "Dynamic Teaching Resources" CD includes many tools including skills review handbook as well as basic skills and differentiating the lesson.	**__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** In the Teachers edition, Laurie's notes give ways to differentiate instruction and also give different motivational tips	**_x___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Pacing guide on page xl & xli of the Teachers Edition. Strong Teachers Edition with multiple teaching strategies.	**(Reviewer only.)** **__x____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Well rounded problems. Multiple practice activities and levels of problems for the students to master.	**(Reviewer only.)** **__x____ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The lessons scaffold and build on each other.	**(Reviewer only.)** **____x__ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The Teachers Edition is very well put together. Many helpful tips and ideas giving activities, questions to ask, and common errors the students might make throughout the curriculum.	**(Reviewer only.)** **___x___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Although there are no physical manipulative that come with the curriculum, the suggested activities are very good.	**(Reviewer only.)** **__x____ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** There is an assessment book that includes pretest, posttest, quizzes, formative assessments and also alternate assessments.	**(Reviewer only.)** **___x___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Rubrics and answer keys are included.	**(Reviewer only.)** **___x___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes, What you see in the lessons are also on the assignments.	**(Reviewer only.)** **___x___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** A list of reviewers are on pages iv & v of the teachers edition.	**(Reviewer only.)** **___x___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The visual design is a little elementary. Otherwise a very well designed textbook. Might just depend on the maturity level of the advanced 8th grade student.	**(Reviewer only.)** **___x___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level:** _____

Publisher: _____ **Copyright:** _____ **ISBN:**_____

Reviewer ID # _____ **Date Review Completed:**_____

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.		
Non- Negotiable 1: Focus and Coherence **__x___ Meets** **_____ Does Not Meet**		
Non-Negotiable Overall: **__x___ Meets** **_____ Does Not Meet**		
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.		
Alignment Criterion 1: Rigor and Balance **Points: ___6__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **___x____ Meets** **_____ Does Not Meet**	**Alignment Criterion 2: Standards of Mathematical Practice** **Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **____x___ Meets** **_____ Does Not Meet**	**Alignment Criterion 3: Access to Standards for All Learners** **Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **___x____ Meets** **_____ Does Not Meet**
Alignment Criteria Overall: **__x___ Meets** **_____ Does Not Meet**		

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __x___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths
-This book is "smaller" in comparison to other math text books. This is due to the coherence to the CCSS with basic review instead of comprehensive review throughout text.
- Many resource to help support the teacher and also the students learning at different ability levels.
- Hard back text which would hold up to multiple year use.
- The curriculum is CCSS aligned with strict adherence to the mathematical practices and grade level vocabulary.
- This book follows the Accelerated Traditional Pathway as found in Appendix A of the Mathematics CCSS. The Standards covered in this book align directly with the Overview of the Accelerated Traditional Pathway for the CCSS as found on pages 82-91 of Appendix A. Every Standard is covered.
Weakness
-The visual design is a little elementary. Otherwise a very well designed textbook. Might just depend on the maturity level of the advanced 8th grade student.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Big Ideas Learning
Title:	Big Ideas Math 6th Advanced (orange)
ISBN #	**978-1-60840-526-8**
Grade Level(s) or Course:	7th (Orange)
Reviewer ID:	MN DA

RECOMMENDED AS:

____X___**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

The majority of time spent in major works. Students spend 103 days (67%) in major clusters.

COHERENCE-

After topics are introduced they are brought back into practice with other activities. Content progresses throughout the program allowing for building on previous knowledge.

RIGOR-

There is multiple practice forms to bring in procedural fluency. The student book has ample practice but when needed Record and Practice Journal and resources by chapter workbooks are available.

CONCEPTUAL UNDERSTANDING-

There is multiple practice forms to bring in procedural fluency. The student book has ample practice but when needed Record and Practice Journal and resources by chapter workbooks are available.

MATHEMATICAL PRACTICES-

All mathematical practice standards are evident throughout the text. They are shown throughout Laurie's notes in every section. Each lesson is based on a concept then reaches out and expects the student to reason and explain through a variety of methods.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Text supports all levels of learners from interventions (Review), online tutorials to activities for the advanced self-learner.

OTHER:

[redacted]s of resources for students, teacher, and parents. Laurie's Notes are a great resource for teachers. Progression is great across all grades.

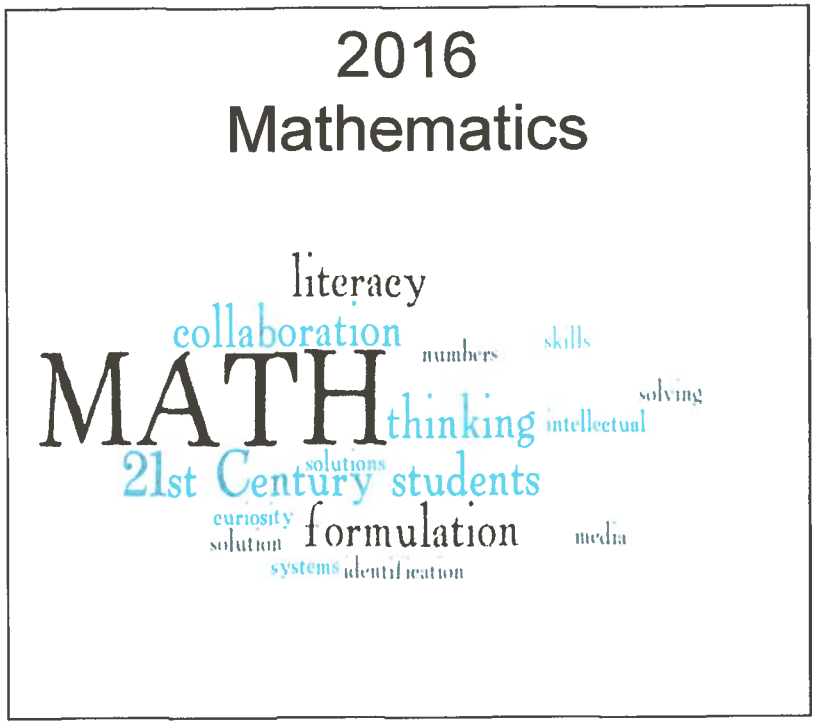
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible]t the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** All materials meet grade level content.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** The majority of time spent in major works. Students spend 103 days (67%) in major clusters.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** After topics are introduced they are brought back into practice with other activities. Essential Questions for each chapter.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content progresses throughout the program allowing for building on previous knowledge. Scope and Sequence and Pacing Guide with all concepts linked to Common Core.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Not only the book lessons but there is additional lessons within the record and practice journals and enrichment and extension lessons. Laurie's Notes are also beneficial.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson ties to previous concepts. Each chapter begins with a section titled "What You Learned Before". Additionally, each lesson includes a "Previous Learning" statement addressing the specifics for the given lesson.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There is a what you learned before page at the beginning of each chapter but a handbook is also available covering skills review and basic skills. There is also a Fair Game Review in the record and practice journal.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Learning objectives are located at the beginning of each lesson for easy access to students. Table of contents has all information.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Connections are made throughout the book bringing previous concepts importance into additional activities. Laurie's notes has connections layout and in her introduction.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Lessons give great ideas for teachers, and thought provoking questions.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Different types of questions are asked throughout to encourage higher level thinking.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Students are asked to represent understanding multiple ways (tables, diagrams, models, pictures, drawings, and graphs).	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develop conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** There is multiple pra ce forms to bring in procedural fluency. The student book has ample practice but when needed Record and Practice Journal and resources by chapter workbooks are available.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Each lesson has plenty of practices contained within.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Repeated practice is evident in each lesson.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Every section has problems from basic practice to real life application, and age appropriate.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** There are application and real world problems in every section.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Students are given opportunity to think for themselves.	
Alignment Criterion 1: **Rigor and Balance** **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** All mathematical practice standards are evident throughout the text. They are shown throughout Laurie's notes in every section. Each lesson is based on a concept then reaches out and expects the student to reason and explain through a variety of methods.	**(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials att[illegible] to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each ques[illegible] and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Each mathematical practice can be used throughout the year.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** More explanation required as the course progresses.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Laurie's Notes As the student progresses through the year the content becomes more sophisticated and expects the student to do more explaining.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** The program expects the student to explain, justify, and reason especially in the Error Analysis exercises.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Content is designed at a level appropriate to the student's interest. It is visually appealing to the student.	

Do materials explicitly attend to the specialized language of mathematics? Is language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Key Ideas and Vocabulary Sections of each lesson teach the language of math.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Online resources to translate vocabulary in other languages to help students of English language learners.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Text supports all levels of learners from interventions (Review), online tutorials to activities for the advanced self learner.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Desmos applications, Geogebra applications, and Think. Pair. Share. Ideas.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **___X_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Tips in Laurie's Notes to motivate the students and work together.	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson has a variety of methods and progressions. From self-guided sections to teacher instructions there is multiple approaches within each lesson.	**(Reviewer only.)** **___X___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Progression is systematic to help the student gain confidence as they approach more difficult problems.	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Laurie's Notes are an excellent resource for teachers to help students.	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Models of area used correctly.	**(Reviewer only.)** **____X__ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Pre-tests, post tests, mini assessments, quizzes, and online testing tools are all summative assessments available. Formative assessments are imbedded within Laurie's Notes.	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** All assessments have detailed keys and scoring rubrics. Online tests are automatically corrected.	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes, assessments are consistent with unit instructions.	**(Reviewer only.)** **___X___ Yes** **_____ No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Developed by a team of educators with years of experience.	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The text is visually interesting and easy to follow.	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Lessons are easy for parents to follow as well as online tutorials in multiple languages.	**(Reviewer only.)** **___X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: _6th Grade Advanced_____**

Publisher: _Big Ideas Learning_____ Copyright: __2014_____ ISBN:_978-1-60840-526-8____

Reviewer ID # __MN___DA_____Date Review Completed:__7 March 2016_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
___X____ Meets _____ Does Not Meet	__X___ Meets _____ Does Not Meet

Non-Negotiable Overall:

___X__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____X__ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet

Alignment Criteria Overall:

___X__ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths

-Lots of resources for students, teacher, and parents.

-Laurie's Notes are a great resource for teachers

-Progression is great across all grades.

-Different paths for regular and accelerated.

Weaknesses

-Can't think of any, keep up the great work!

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Big Ideas Learning
Title:	Big Ideas Math (Advanced 2)
ISBN #	978-1-60840-527-5
Grade Level(s) or Course:	7th grade (8th grade content)
Reviewer ID:	TR + KC

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- All assessed content is 8th grade standards. 82% of material focuses on the major work of the grade.

COHERENCE- Lessons build on one another (as well as previous grade work). Each topic includes "what you learned Before" and review sections.

RIGOR- Each lesson includes an essential question and mathematical Practice standards. The procedural practice is rigorous, but practice of mathematical practice standards is limited.

CONCEPTUAL UNDERSTANDING- Students have many opportunities to practice procedural knowledge, and limited opportunities for application of concept. Due to the advanced nature of the course, perhaps minimal supplementing may be required.

MATHEMATICAL PRACTICES- This is the main area of weakness for this program. The practice standards are addressed. However, the text is procedure heavy which limits student reasoning and justification and choice of tools + strategies.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

This course is designed for advanced students. There are limited supports in the form of vocabulary instruction, visual models, and examples for language learners. There are Spanish resources in the glossary, parent letters, + teacher manual.

OTHER:

This program adequately addresses the content. Teachers will need to push students to think critically, reason + justify, and choose appropriate tools + strategies by supplementing or initiating conversation in their classroom.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: Big Ideas Learning

Title of Material: Big Ideas Math Advanced 2 Blue Book- Grade 7

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible]t the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non- Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** All assess[illegible]nts are on the grade level standards. The 8th grade content on similarity, congruence, and transformations are present and assessed in chapter 2. Standards are tested by topic, rather than grade. Therefore, some assessments are combination of grade level standards. Most standards are 8th grade with 7.EE.4, 7.G.1-7.G.6, and 7.SP.1-7.SP.8	**(Reviewer only.)** __X__ **Meets** ____**Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** The assessments provided include multiple versions of chapter tests, cumulative reviews, standards assessments, and alternative assessments. Each of these is accompanied by an item analysis (except for the alternative assessment) that describes student errors and offers possible reasons for the errors. There is a scoring rubric that accompanies the alternative assessment. Common Core progression is listed at the beginning of each new skill chapter. It can be a little difficult to delineate between 7th vs. 8th grade skills in overlapping skills. **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** __X__ **Meets** ____**Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** There are 50 sections of the book in 10 chapters (units). 41 of the sections are devoted to the major work of the grade; this represents 82% of the material. This is definitely adequate for 8th grade content. There are only 2 lessons for irrational numbers.	**(Reviewer only.)** __X__ **Meets** ____**Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The few places that are not Major Work areas are generally incorporating the Expressions and Equations standards. For example, in Chapter 8 students are asked to find volumes of cylinders and cones. This is utilizing student's understanding of expressions and equations and manipulating algebraic expressions. Also, in Lesson 8.2, students are asked about sand falling out of a cone at a constant rate. This is one of the Major Work clusters suggesting both functions and equations. In Chapter 9, students are asked to construct lines of best fit and write equations for them. This is a Major Work of the grade level.	**(Reviewer only.)** __X__ **Meets** ____**Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The content in the materials do list at the beginning of each chapter the progression of content standards leading up to and including the standards in the chapter. Grades 6 and 7 standards are noted, standard by standard, which ones support and lead up to the current standards. The lessons do not teach lessons for long-term retention. They give a great deal of review and examples which limit the need to recall previous grade material.	**(Reviewer only.)** __X__ **Meets** ____**Does Not Meet/** **Insufficient Evidence**

Metric NN2D **Materials g[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The mate[illegible]s include problems and exercises that are extensive in quantity, and each lesson includes a "Taking Math Deeper" problem. The Resources by Chapter book includes practice set A and Practice set B, Enrichment, and puzzles. The Record and Practice Journal also includes review exercises and activities. The program is limited in problems for depth and real-world application.	**(Reviewer only.)** __X__ **Meets** ____**Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each chapter begins with the section titled "What You Learned Before." This covers the previous grade level content. Additionally, each lesson includes a "Previous Learning" statement addressing the specifics for the given lesson. It also lists strategies for reteaching if students are struggling with the on grade level content by suggesting Fair Game reviews, Skills Handbook, and Lesson Tutorials.	**(Reviewer only.)** __X__ **Meets** ____**Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The sections labeled "What You Learned Before" and "Fair Game Review" are clearly labeled and not specifically related to the 8th grade standards. Also the Skills Review Handbook works with material from previous grades, however, it is not clearly labeled the grade level content or content standards.	**(Reviewer only.)** __X__ **Meets** ____**Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson both student and teacher edition list the goals for the lesson. For example in Lesson 4.4, the goal of the lesson is clearly about graphing and finding slopes. In the teacher materials, the same is listed in the same place but the standard reference is also included (8.EE.6). It is also listed among the "Laurie's Notes" section.	(Reviewer only.) __X__ **Meets** ____**Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There are a few examples where multiple Domains or Clusters meet. There is a clear and natural connection between rational numbers and working with square roots. This is in Lesson 7.4. Lessons 7.3 and 7.5 also include the Expressions and Equations standard of using square roots alongside the Geometry standard of Pythagorean Theorem. Many lessons feel isolated, as each lesson focuses on a particular piece of a skill. There are limited opportunities to connect ideas between the lessons.	(Reviewer only.) __X__ **Meets** ____**Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

The Major Work of the grade is clearly a focus in the text. The progression from previous to current grade level standards is present. The Record and Practice Journal and Resources by Chapter provide a great deal of practice for students.
The weakness is that some of the multiple Domains and Clusters connections are not obvious nor are they frequent.

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__ Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** _____ **Meets (2)** __X__ **Partially Meets (1)** ____**Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** There is an emphasis on the use of Mapping diagrams in the early stages of the unit on Functions. This supports the concept of one output for every input. It is a visual representation of an abstract idea but ties to other models that come up later such as tables and graphs and equations. There are only limited opportunities within the lessons to develop deep understanding, develop algorithms through experience, and interpret thinking. The algorithms are given and practiced in rote ways.	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Each lesson includes the Essential Question and Activities sections at the beginning. These tend to be more conceptual, exploratory, and investigative in nature. Within each of these sections are prompts tied to specific practice Standards. These are called Math Practice followed by the Standard they are focusing on. For example, Lesson 6.4 asks students to explain how they can recognize when a situation in real life is linear or nonlinear. It goes on to ask students to provide an example of each.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Throughout the Functions units, tables, mapping diagrams, and graphs are all related to each other. Students are finding those correspondences between the different forms of each. There are also contextual situations associated with many models that provide a reality for students as they work through the content. Most visual models are often provided for students, and are not used as a means to solve problems.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' development of conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Throughout the materials the practice and exercises develop the procedural fluency necessary to meet the Standards. There is a good deal of extra practice in the Record and Practice Journal and also the Resources by Chapter books. These are primarily procedural practice (the Journal does include the Activities which tend to be more application or concept driven).	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** There are plenty of procedural problems including extra practice problems sets that are largely procedural in the Resources by Chapter book and the Record and Practice Journal. Lesson 1.3 is a good example of a variety of procedural problems and contextual problems that are essentially procedure driven.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **N/A**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The beginning of every lesson starts with an Essential Question and multiple activities, usually to be completed in partners. This is followed by other examples and several contextual problems to apply the math. Unit 4 on Graphing and Writing Linear Equations includes mostly contextual problems. The contextual and real-world applications are spelled out for the student. They do not have to consider which operation(s) are best to use to solve. Rather, they are still following steps to solve.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__ Meets (2)** **____ Partially Meets (1)** **____Does Not Meet (0)**

Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are plenty of single-step contextual problems in each lesson. The multi-step are rarer (in general, I am not considering a part A and part B as multi-step; multi-step build each part to the next and part A and B questions are standalone). The Critical Thinking questions such as the one in Lesson 4.3 do have multi-step aspects to them. Each part requires and explanation and a graph and then the final question asks students to consider a specific situation and explain their choice.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Each lesson has a focus on the standards and stays with that standard(s). Since 80% of the content is Major Work, almost everything supports the Major Work. The Essential Questions and subsequent Activities that open each lesson focus on application of the Standards and by association the Major Work of the grade. Only chapters 8 and 9 are not part of the Major work but they are supported with Standards from the Major Work, in particular Expressions and Equations and Number Systems.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling that supports building understanding and connecting conceptual and procedural work is weak. Throughout the materials most of the models tend to be abstract with a few representations. Situations are modeled primarily through the use of tables, graphs on coordinate planes and equations. This is a precursor to the modeling that students will encounter beyond 8th grade.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

(Reviewer only.)

__X__ Meets

____Does Not Meet

Strengths/Weaknesses:

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths of the materials are that each Lesson begins with an Essential Question and subsequent activities. The activities are designed to be completed in partners encouraging group work and lowering anxiety of students with a bit less confidence. The Record and Practice Journal provides a space for students to record work on the partner and group activities.

The weakness in the materials is there seems to be a push to be procedural. For example the bulk of the exercises are procedural skills, this includes the Resources by Chapter materials and extra work in the Practice Journal. Encouraging modeling especially in ways that are visual (not tables for example) is a weakness.

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Multiple SMPs are present in every lesson. For Example Lesson 6.2 highlights SMP1, 3, 4, and 5. The unit on Linear Functions which is part of the Major Work of the grade does see SMP8 highlighted specifically in 2 out of the 5 lessons. All of the practice Standards are addressed throughout the chapter including SMP5. The chapter does include many tables which supports the ideas of repeated reasoning and looking for pattern or structure (SMP7 & 8).

Students have only limited opportunities to make sense of problems and construct arguments (SMP1 & 3) Models are taught as step by step algorithms and do not ask students to reason through problems using models or tools of their choice. (SMP4 & 5) Patterns and structures are spelled out in the the text, and do not come from the students. (SMP 7 & 8)

(Reviewer only.)

__X__ Meets (2)

_____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The SMPs are largely present in the Essential Questions and Activities as they ask students to work through application questions. The problems and exercises are more geared toward precision (SMP6), however some open-ended response questions are present (Lesson 3.1).	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** The practice Standards are sufficiently complex for the grade level. Students are asked frequently to construct viable arguments. In Lesson 3.2, students are asked to use repeated reasoning to find and describe relationships among triangles. In Lesson 7.5, students are asked to provide counterexamples to justify the claim that a statement is false.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Each lesson highlights the SMPs in "Laurie's Notes" that are the focus and discusses the role they play in the lesson. In the introduction to each lesson (the Essential Question and Activities), the SMP(s) are highlighted. For example, lesson 6.2 practice Standards 3 and 4 are a focus and the teacher materials explain that student's models, like tables, and also equations can represent functions in various ways. The other activities include the suggestion to use square tiles as a manipulative (SMP5).	

Metric AC2C: Materials support the Standards' emphasis on mathematical reasoning. **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **_____ Meets (2)** **__X__ Partially Meets (1)** **____ Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Every unit embeds and highlights SMPs and in particular each lesson includes a question titled "What is Your Answer?" where students are asked to explain their thinking on a given topic. The critique the reasoning of others is not a strength in the materials but there are frequent questions asking students to analyze errors. This meets the goals of SMP3 but it is not an in depth question (Lesson 6.2).	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** "What is Your Answer?" in each section helps to tease out student thinking by asking questions that require some thought and consideration. In addition to this, there are in each lesson a prompt titled Math Practice where students are asked to consider certain situations. For example, in Lesson 6.4 students are asked about constant speed and increasing speed. This hits SMP4 and encourages creating some sort of model (table or graph).	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Each lesson is written in language that utilizes the appropriate mathematical language for the topic and grade level. The Essential Questions and Activities are accessible by all students and use language that is not a deterrent from the math. There is an example where the specialized way of writing an expression may be problematic. Lesson 6.3 Activity 2 uses an output of 2π, 4π, 6π, etc. Leaving values in terms of π might seem odd for students and may be a bit outside the expectation of 8th grade standards.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

The SMPs are present and highlighted throughout the material. Each lesson includes suggestions and tips for maximizing the efficacy of the practice Standards. Each lesson includes a practice Standard that is highlighted for students to consider and there are opportunities in each lesson for students to think and respond on their own to more open-ended questions.
The SMPs are not as present in the practice and exercises (they are included, however). They tend to be primarily included in the activities at the beginning of each lesson. All of the practice standards are addressed in the text, but are very weak in reasoning and justification. Students will need to be pushed by their teacher to move to deeper levels of thinking.

(Reviewer only.)

__X__ Meets

____Does Not Meet

Strengths/Weaknesses:

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]lish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Each lesson includ[illegible]pecific support and suggestions for working with ELL students. They include suggestions like ensuring that the geometry symbols are understood (Lesson 2.1). There are also good suggestions such as creating sentence frames or a cloze paragraph that includes a word bank (Lesson 7.3). These help reduce anxiety and provide access to the content for ELL students. Specifically, the letter to families at the beginning of each chapter in the Resources by Chapter has a Spanish version of the letter.	**Reviewer only.)** __X__ **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The lessons include support for differentiating lessons. Each lesson includes specific suggestions and strategies to reach learners with various learning styles. For example, Lesson 8.1 suggests bringing in actual coins to use as a manipulative for exploring volume, which is supports those kinesthetic learners. Lesson 2.5 suggests tips for visual learners by providing triangles that are the same and similar. Lesson 5.2 has suggestions for a partner activity that includes verbal components. There is an abundance of kinesthetic suggestions throughout the material. These are all a benefit to ELL students. Each lesson moves through a series of partner work, activities, and applications gradually releasing students to work independently on problems and exercises.	**Reviewer only.)** __X__ **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Each lesson does utilize partner work at the beginning. These include using a variety of methods and models to get students thinking. There is a part of the teacher notes called Motivate where suggestions for small group work (matching in partners Lesson 6.3), context for the lesson (who was Pythagoras, Lesson 7.3), and whole class Venn diagrams on the floor with string or yarn (Lesson 7.4).	**Reviewer only.)** __X__ **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students	(Reviewer only.) __X__ Meets ____Does Not Meet **Strengths/Weaknesses:**
Materials must provide supports for English Language Learners and other special populations. **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **The strengths are in the consistent approach to and suggestions to meet the needs of ELL students. Each unit includes a variety of ways to try and meet those students' needs.** **A weakness is the lack of real items or suggestions for images of things to make connections to the content vocabulary. There is a weakness in writing suggestions and starters to encourage ELL students to use vocabulary to build language.** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)

1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Each lesson includes a lot of support by providing what the materials refer to as "Laurie's Notes." These are suggestions for questions that elicit responses focused around the math topic. Each lesson includes a partner activity. The teacher materials provide suggested questions and direction on how to maximize the effectiveness of the activities (pT-202 & T-203). There are reteaching and enrichment suggestions in each lesson (pT-207).	**(Reviewer only.)** __X__ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson is structured the same way where there is an essential question and a partner activity (an exploration of the topic). The problems come next in the section called "On Your Own" where students try to apply the new concept. Sometimes the On Your Own section is bare problems (p104) and other times it refers back to examples (p45). Following this are exercises that students work through. Some of these are contextual and some are bare problems, most are procedural. The Resources by Chapter book include more exercises.	**(Reviewer only.)** __X__ **Yes** _____ **No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Assignments are structured in a very sequential order. The previous lessons tend to build on subsequent lessons. Each lessons includes a section where there is an explicit connection made to previous material and learning. The order of the table of contents makes sense as one leads into another. For example, although it may not seem obvious, Equations leads into Transformations nicely as much of the Equations unit uses geometric figures as contexts for solving equations.	**(Reviewer only.)** __X__ **Yes** _____ **No**

4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The teacher materials do not include in depth discussion (for the sake of the teacher) on the standards or the topic. There seems to be an assumption that the teacher must already have a deep understanding of the content. The majority of the teacher materials is devoted to other areas like organization of the unit in Connect (pT-274), setting the stage for student work in Motivate (pT-274), discussion ideas/questions in Lesson Notes (pT-274), giving guidance and posing questions in each of the explicit examples (pT-274→275), and identifying what common errors teachers might expect to see along with suggestions for addressing the misconceptions (pT-276).	**(Reviewer only.)** __X__ **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** There are few instances in 8th grade where manipulatives beyond models that can be constructed are used. However, the Algebra tiles are faithful representations and are connected to written methods. There is also a partitioned circle used to derive the formula for the area of a circle and this is also connected to the written method and what it represents.	**(Reviewer only.)** __X__ **Yes** _____ **No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Each chapter describes the progression of standards leading up to the current lesson. There is a section highlighting ideas students should already know ("What You Learned Before"). Each chapter includes mid-chapter quizzes (p 165, p190) chapter tests (p196), standards assessments (p197-198) that include item analysis, and spiral review called Fair Game Review (p189). The Assessment book includes item analysis for the standards assessment for each chapter. The item analysis describes misconceptions and common errors for each of the distractors as well as common errors for free response questions. There is a pre-course test included in the ancillary materials.	**(Reviewer only.)** __X__ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** All components of the book include an answer key. Some of the activities have solutions in the TE other assessments are included at the back of the book. The text includes possible or sample answers to more open-ended questions (pT-264). The text includes examples of common student errors and suggestions for addressing the errors (pT-108, pT-262). The Assessment book includes item analysis for the standards assessment for each chapter. The item analysis describes misconceptions and common errors for each of the distractors as well as common errors for free response questions.	**(Reviewer only.)** __X__ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The materials use methods and language that is unbiased and largely accessible. The specific mathematics language is relevant to each lesson and the student prompts are appropriate for 8th graders. Almost all problems are designed to include the student as the subject (e.g. p278 you gradually increase speed, p313 you cut a picture, etc.) or a generic subject (e.g. p305 a tennis player, p323 your teacher, etc.).	**(Reviewer only.)** __X__ **Yes** _____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Page iv and v list 1 teacher reviewers and 7 consultants including mathematics consultants, mathematics assessment consultants, special education advisor, project-based instruction specialist, interdisciplinary advisor, and differentiated instruction consultant.	**(Reviewer only.)** **__X__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The text is easy to navigate although the pages seem very busy and full of images and bright colors. Each chapter is follows the same structure throughout creating a routine for students to find specific aspects that are useful like vocabulary or study tips. Students may appreciate the puzzles in the Resources book. There are a wide variety of real-life and animated images to support the context of a problem (p 155 boat launch, p121 cloud system on Saturn) but in many cases do not actually shed light upon the math (p162 kayaker, p228 a pig race).	**(Reviewer only.)** **__X__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** In the Resources by Chapter book, each chapter begins with a letter to parents explaining the big ideas of the chapter along with examples (and answers) from the chapter. The text itself is familiar in structure to what many parents have experience with including different levels of practice and exercises (in the Record and Practice Journal, Practice set A is slightly less difficult than Practice set B), highlighted key vocabulary, and selected answers in the back of the book.	**(Reviewer only.)** **__X__ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: Big Ideas Math Advanced 2 Blue Book- Grade 8**

Publisher: _____ **Copyright:** _____ **ISBN:** _____

Reviewer ID # Trent Reynolds **Date Review Completed:** _____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets _____ Does Not Meet	X Meets _____ Does Not Meet

Non-Negotiable Overall:

X Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet

Alignment Criteria Overall:

X Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? X Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Overall the material aims to meet the needs of all learners. There many attempts at building conceptual understanding that work and some that ultimately end up being procedural in nature. There are plenty of support materials and suggestions for teachers. The student's Record and Practice Journal is a great tool for recording work on the group/partner activities utilized throughout the materials. There are a variety of assessment materials to choose from and including alternative assessments. Each of the assessment items include either an item analysis or a scoring rubric (alternative assessment only). There are plenty of online resources for students to access and a Skills Review and Basic Skills Handbook. This does not however indicate grade level or content standard aligned to the skills. The pacing allows adequate time for students to work through the concepts including many group and partner tasks.

Visually, the book is busy and seems jam-packed. Teachers will need to be selective in what they choose to ask students to work on.

Teachers will need to push students to higher levels of instruction on mathematical practice standards. This is an area of weakness of this text. The standards are present and addressed, but are not pushing students to think critically or apply their own strategies and models to solve.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Big Ideas Math
Title:	Big Ideas Math (ALG I) A Common Core Curriculum
ISBN #	978-1-60840-838-2 2015
Grade Level(s) or Course:	9-12
Reviewer ID:	KB MK

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Strong Connections across Alg I - Functions
NN1 Number Sense well-Addressed (chp 6)

COHERENCE- - Met the "more than 50%" of WAP.
NN1 - Designed for coherence throughout
* "What you learned before"
* Maintain proficiency
* "~~What you learned~~" Connections to prior learning.

RIGOR-
AC1 "Analyze your work"
"How do you see it"
Lauries Notes : Enrichment
* Higher Level items each section.

CONCEPTUAL UNDERSTANDING-
AC1 Read w/vocab to tie concepts used.
"How you see it"
"What you learned before"
Little attention to developing ability to look for and use opportunistic strategies

MATHEMATICAL PRACTICES- Attention to Practice - Clear and guided in teacher Notes
AC2 * Each CCSSM Practice sections in each section

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
AC3 * Students Journal
* ELL Supports
* Online Glossary (different languages)
* Lauries Notes: clear guided diff/enrichment

OTHER:
Strength: Clear Communication and visible connections across clusters/concepts throughout text.

Weakness: little explicit attention to comparing various strategies to develop ability to apply opportunistic strategies - leads to perhaps weaker conceptual understanding of procedures

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Particularly in terms of algebra and functions. (Chs 6 – 11) Number Sense well addressed (Ch. 6)	✓ **Meets** ____ **Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Some geometric shape, coordinate grid, in most every section. Examples of using algebra in geometric ideas are sums of angles of polygons, area, perimeter, coordinate graph analyses.	✓ **Meets** ____ **Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Common Core progressions at the beginning of each chapter connect across MS & HS. Preassessments good for student readiness Particular Examples Mixture problems 4, 3 Atmospheric Pressure 5.4 "Taking Math Deeper" focus good.	✓ **Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Correlation chart & Table of Contents helpful & appropriate. "Connections to Previous Learning" support teachers.	✓ **Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Digital resources to support what is in each lesson. "Need help" & "Got it" suggestions (eg p154) good.	✓ **Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** "What you learned Before" component in each section; with "Maintaining ~~Procedural~~ Proficiency" sets help to address vertical alignment. "Game Closet" could also support additional skills practice.	✓ Meets ____Does Not Meet Insufficient Evidence
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Algebra & Functions clusters strongly represented. Visible in each section through "Laurie's Notes"	✓ Meets ____Does Not Meet Insufficient Evidence
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Particularly across algebra & functions clusters. (CED & REI) Correlation charts in front matter helpful to see connections	✓ Meets ____Does Not Meet Insufficient Evidence

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

Does Not Meet

Strengths/Weaknesses

Fairly traditional Presentation with some adaptation moving towards engaging instruction. "Essential Questions" good structure.

Mostly coordinate across algebra and functions clusters with minimal connection to Geometry

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Some consistent attention to why things make sense (rather than just procedural) Essential Qns good. Multiple activities (eg. p 154)	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Some higher-level items in each section; Assignment Guides, even at Basic Level, include higher-level items. "How You See It" & "Thought Provoking" categories good.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Correspondences between equations and graphs particularly evident. Creating equations as opposed to simply graphing – apply information. Enough practice for both types pp 173-175	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** ____**Meets (2)** _1_**Partially Meets (1)** ____**Does Not Meet (0)** "opportunistic strategies"
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Teacher Notes, higher-level problem types in exercises.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x − 2)2 = 6x − 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 − 5).	**Evidence-** Less attention to helping students develop skill in selecting efficient strategies. Example: missed opportunities in factoring sections.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** _2_**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Mostly ~~scaffolded~~ scaffolded, so few truly open-ended tasks. But materials do go beyond skills into problem solving	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** WAPs evident throughout	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Mainly given a model & asked to evaluate / solve (as opposed to creating a model).	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		✓ **Meets** 5/6 **Does Not Meet** **Strengths/Weaknesses:** Procedural focus could outweigh conceptual. Organization good. Good use of applications.
Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Consistent attention to communicating thinking. ("How Do You See It?" and "Using Structure" problem types) Teacher notes draw attention to practices.	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	In ~~teacher notes; perhaps~~	**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** In teacher notes; perhaps some danger of not developing habits of mind.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** Yes.	

AC Metric 2C: **Materia[illegible]upport the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record [illegible]nce for each question and rate Meti[illegible].** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Error Analysis & Making an Argument problem types.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Might be able to emphasize procedural over conceptual, but most sections include conceptual development.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Use of vocabulary good.	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		✓ **Meets** 6/6 **Does Not Meet** **Strengths/Weaknesses:** Attention to practices in teacher notes – very visible. Can maintain focus on higher-level tasks. Could be vulnerable to a procedural focus.

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** English / Spanish print versions available. Multi language support online ELL notes throughout (eg p 314)	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Student journals & other supports helpful. Overall attention to communication would help all students	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** "Teacher Action Notes" good Desmos (online dynamic graphing tool) activities support exploration	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations.	✓ Meets 6/6 ____ Does Not Meet
AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**Strengths/Weaknesses:** References to resources very visible in teacher materials.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** T 152-155 Connections to Previous Learning Background Notes Laurie's Notes	**(Reviewer only.)** ✓ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Categories of items in each section "Communicate Your Answer" "Error Analysis" "Modeling with Mathematics"	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Exercise sets build from skills to higher-level. (p 158-159 as example)	**(Reviewer only.)** ✓ Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Laurie's Notes Previous Connections Teacher Actions	**(Reviewer only.)** ✓ Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Spaghetti for lines & slope Algebra Tiles	**(Reviewer only.)** ✓ Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Assessment Book / Resources Digital resources good Pre-Assessments for each chapter "Need Help?" & "Got It?" Suggestions	**(Reviewer only.)** ✓ Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Yes - easy to use	**(Reviewer only.)** ✓ Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessments use language used in teaching materials.	**(Reviewer only.)** ✓ Yes ____ No

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Consultants & reviewers are listed.	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Yes. Front matter "How to use your book" x/r Scavenger Hunt	**(Reviewer only.)** ✓ **Yes** ____ **No**

Reviewer ID # KB & MK **Date Review Completed:** 3/7/2016

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

✓ **Meets**

____ **Does Not Meet**

Non-Negotiable Overall:

✓ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 **of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points:** 5 **of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points:** 6 **of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
✓ **Meets**	✓ **Meets**	✓ **Meets**
_____ **Does Not Meet**	_____ **Does Not Meet**	_____ **Does Not Meet**

Alignment Criteria Overall:

✓ **Meets** _____ **Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[redacted]tandards. **Do the materials meet every Non-Negoti[redacted] and Alignment Criterion?** ___✓___ **Yes** _____ **N[redacted]**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Big Ideas Learning, LLC
Title:	Big Ideas Math Geometry
ISBN #	978-1-60840-839-9
Grade Level(s) or Course:	9-12 (Geometry)
Reviewer ID:	CM & DG

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
NNI Good pacing guides and correlation pages
Real life applications throughout
TE pages show correlation to Common Core

COHERENCE-
NNI All WAP covered throughout
Maintaining mathematical proficiency chapter openers are directly related to the standards
Focused, coherent w/ pacing guide of rigorous coursework

RIGOR-
AC1 Quality higher order thinking problems after skills/knowledge developed
Unit/lessons directly related to Common Core
Cumulative assessment @ end of each chapter spirals back.

CONCEPTUAL UNDERSTANDING-
AC1 "How do you see it" questions in every lesson
Drawing pictures, tables, models, writing etc.
"Mathematical Practices" ex p.327 throughout

MATHEMATICAL PRACTICES-
AC2 Vocabulary and core concepts throughout.
Laurie's notes at beginning and end of each lesson are quite helpful
Modeling with Mathematics in Real-life in every lesson

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
AC3 Online glossary in different languages
Spanish/English glossary in SE.
"If students need help" or "If students got it after each lesson.

OTHER:
List of postulates and theorems @ end of text. ← Very awesome
Scaffolding of problems in each lesson.
Dynamic real word applications.
Each chapter begins with a Common Core progression ex T-298
Well developed, particularly if teacher use Laurie's Notes.

No examples or diagrams in glossary

2015-1 Interim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: Big Ideas Learning, LLC

Title of Material: Big Ideas Math Geometry

Author: Larsen and Boswell

ISBN #: 978-1-60840-839-9 **Copyright** 2015

Reviewer ID: CM and DG

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, High School

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** • ***Pacing Guide* and *Correlation pages* demonstrate that students spend significant amounts of time on the WAP.**	**X Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** • Lesson 1.4 – Perimeter and Area in the Coordinate Plane • 2.4 – Algebraic Reasoning • 5.8 – Coordinate Proofs • 6.5 – Triangle Inequality Theorem (finding possible values of the third side of a triangle given the length of the other two) • 9.1 – Pythagorean Theorem • 9.5-9.7 – Using Trigonometric equations to solve triangles • 10.7 – Circles in the Coordinate Plane • Chapter 11 – Circumference, Area, and Volume formulas • Real life applications throughout	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** • Propo nality Chapter 8 – Similarity • TE pg. 666 – Modeling exploration not only reviews basic probability but also hits Mathematical Practice • 10.5 Angles in Circles	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** • **TE pages xxx-xlvii clearly show how the text is based on the Common Core Standards for Mathematics.**	**_X___Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1E:
Materials give all students extensive work with course-level problems.
How to Find the Evidence:
Evaluate both student and teacher materials.
If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth.
For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).
	Evidence-
	• Resources for both struggling and advanced students:
	  ○ *Resources by Chapter* contain extra practice, a student journal, and a *Differentiating the Lesson* handbook for students needing help.
	  ○ *Resources by Chapter* also contain enrichment and extension work for students needing more of a challenge.
	Warm – ups
	End of each unit "If students need help or if students get it"
		_X__Meets
		
		____Does Not Meet Insufficient Evidence

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** • *Maintaining Mathematical Proficiency* chapter openers relate previously learned content to what students will learn in the next chapter. TE Pg. 299 as example. • Problems at the end of each lesson also refer back to the *Maintaining Mathematical Proficiency* model.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** • *Maintaining Mathematical Proficiency* chapter openers are directly related to the Standards for Mathematical Practice and have the particular standard at the top of the page. • Objectives are written from the standards (example: TE pg. 100 "Name and prove properties of congruence).	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN4H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** • It is clear from the *Correlation from Geometry to CCSS for Mathematical Content* pages that most sections of the text address multiple domains within the Geometry standards (pgs. XXX-xxxii)	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Metric NN 1:** If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses** • Strong adherence to CCSS for Mathematics and the Standards for Mathematical Practice • Explicitly states where standards are met throughout the text.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor & Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** • Lessons begin with 1-2 *Explorations* that begin to frame the topic conceptually. Students are given a frame of reference by these explorations, helping them to understand the concept before going into the details of it. • TE has overview to start sections	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** • In addition to traditional algorithm practice, students extend their learning to specific situations and must explain their thinking. Exercises include questions titled Error *Analysis*, *Drawing Conclusions*, *Reasoning*, and Making an Argument. These questions require that students explain the "how" and "why" of problems. • Problem types are differentiated	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** • TE pg. 98 #55 – solve formula, create input-output table, use the table to graph. • TE pg. 104 #16 – use the diagram to prove distances. • TE pg. 235 Example 4 – modeling with a diagram before solving algebraically. • Every exercise section contains a *Modeling with Mathematics* problem that requires students to use the 4-step problem-solving technique.	
AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **_2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress[illegible]rd fluency and procedural skill interwoven with the student's [illegible]ping conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** • TE Le[illegible] 9.3: In the exercises students practice identifying similar triangles, use similarity to find missing parts of triangles, apply similarity to geometric mean, then move into application and conceptual questions based on their previous practice. The vast majority of exercise sections are set up this way.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** • HSA.SSE.B.3 – Lesson 3.5 requires that students transform a linear equation in standard form to slope-intercept form in order to find lines with parallel and perpendicular slopes. o Also using point-slope form to slope-intercept form.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** • The vast majority of sections contain single-step problems for beginning practice. Then the problems increase in complexity as the exercises move on.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** • HSN.Q – Using units is used in Chapter 11 area and volumes • HSS.IC.1 Chapter 12 Probability – making inferences based on probabilities	

Are there ample opportunities for students to engage with modeling problem[illegible] aterials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** • Every [illegible]ercise set contains *Modeling with Mathematics* and/or *Problem Solving* questions, which give students the opportunity to apply the concepts of the lesson to a real-world application. Some of these are single-step problems but the majority of them are multi-step problems requiring students to apply the Mathematical Practice standards. o i.e. TE pg. 567 #23, 24	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**____Meets** **____Does Not Meet** **Strengths/Weaknesses:**	

Alignment Criterion 2:
Stand[illegible]or Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical [illegible]tices to mathematical content in instruction. Thus, materials must de[illegible]strate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 2 is rated [illegible] or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A:
Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Widely Applicable Prerequisites.

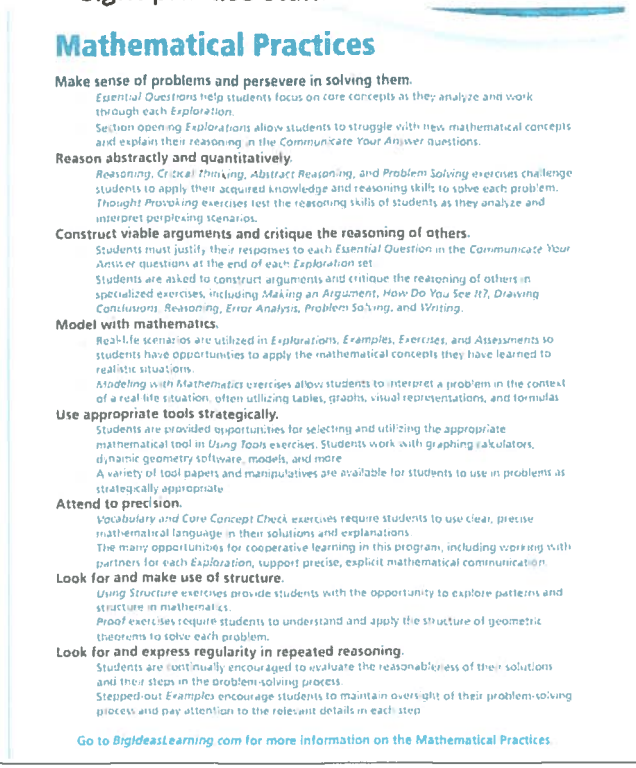
Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course.

NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions.

For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Evidence-

- Page vi of the TE specifically tells which sections of the textbook address each of the eight practice standards.



Mathematical Practices

Make sense of problems and persevere in solving them.
Essential Questions help students focus on core concepts as they analyze and work through each *Exploration*.
Section opening *Explorations* allow students to struggle with new mathematical concepts and explain their reasoning in the *Communicate Your Answer* questions.

Reason abstractly and quantitatively.
Reasoning, Critical Thinking, Abstract Reasoning, and *Problem Solving* exercises challenge students to apply their acquired knowledge and reasoning skills to solve each problem.
Thought Provoking exercises test the reasoning skills of students as they analyze and interpret perplexing scenarios.

Construct viable arguments and critique the reasoning of others.
Students must justify their responses to each *Essential Question* in the *Communicate Your Answer* questions at the end of each *Exploration* set.
Students are asked to construct arguments and critique the reasoning of others in specialized exercises, including *Making an Argument, How Do You See It?, Drawing Conclusions, Reasoning, Error Analysis, Problem Solving,* and *Writing*.

Model with mathematics.
Real-life scenarios are utilized in *Explorations, Examples, Exercises,* and *Assessments* so students have opportunities to apply the mathematical concepts they have learned to realistic situations.
Modeling with Mathematics exercises allow students to interpret a problem in the context of a real-life situation, often utilizing tables, graphs, visual representations, and formulas.

Use appropriate tools strategically.
Students are provided opportunities for selecting and utilizing the appropriate mathematical tool in *Using Tools* exercises. Students work with graphing calculators, dynamic geometry software, models, and more.
A variety of tool papers and manipulatives are available for students to use in problems as strategically appropriate.

Attend to precision.
Vocabulary and Core Concept Check exercises require students to use clear, precise mathematical language in their solutions and explanations.
The many opportunities for cooperative learning in this program, including working with partners for each *Exploration*, support precise, explicit mathematical communication.

Look for and make use of structure.
Using Structure exercises provide students with the opportunity to explore patterns and structure in mathematics.
Proof exercises require students to understand and apply the structure of geometric theorems to solve each problem.

Look for and express regularity in repeated reasoning.
Students are continually encouraged to evaluate the reasonableness of their solutions and their steps in the problem-solving process.
Stepped-out *Examples* encourage students to maintain oversight of their problem-solving process and pay attention to the relevant details in each step.

Go to *BigIdeasLearning.com* for more information on the Mathematical Practices.

_2__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric.** **____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** • Mathematical practice standards are addressed throughout the entire text, in particular in *Mathematical Practices* sections in each chapter. • See AC Metric 2A. • "What you will learn"	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** • *Laurie's Notes* specifically and explicitly address this requirement. (example TE pg. T-63. These begin and end each section.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__2__Meets (2)** **____Partially Meets (1)**

Do the materials support students in constructing viable arguments and critiquing arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** • Two types of problems: *Error Analysis* and *Making an Argument* give students the chance to not only make their own arguments about an exercise but to critique the work of others. • In *Laurie's Notes*, the teacher is encouraged to open a dialogue with students about the approaches taken to solve problems. The implication is that if teachers follow these directions students have ample opportunity to share and critique each others' arguments. • Teacher ideas (p 570, 571)	____Does Not Meet (0)
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** • *Modeling with Mathematics, Real-Life Applications* exercises give students opportunity to use modeling, diagrams, and pictures in support of their solutions. • Embedded throughout	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** • Every lesson begins with a *Vocabulary and Core Concept* check in which students are asked questions about the main ideas of the lesson, paying particular attention to the vocabulary that is tied to these ideas.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X_Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3: **Acces[illegible]he Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure [illegible]tudents are able to meet the Standards. Thus, aligned materials [illegible] provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated [illegible]s or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** • Online glossary in different languages (www.bigideasmath.com) • Vocabulary flashcards • *English Language Learners* support in • the wrap-around area of the TE (example pg. 78, 263) • Book glossary in English and Spanish The absolute value of the difference of a number x and a given value $$\text{absolute deviation} = |x - \text{given value}|$$ Listen Translate from English to Spanish **desviación absoluta** El valor absoluto de la diferencia de un número x y un valor dado Listen	**_2___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** • Laurie's notes at the beginning of each section guide the teacher with step-by-step instructions on how to introduce a lesson and engage students in the material at hand. These include explorations, notes about the explorations, prompts for the beginning teacher who may need coaching, and a connection to what will come next. • Laurie's notes continue along the bottom of each page of every lesson to guide the teacher as he/she presents the material. The teacher is also given ideas to support and foster learning growth throughout the presentation of the lesson in a variety of formats. • There is also an overview at the end of each chapter	**_2___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** • Laurie's notes at the beginning of each section guide the teacher with step-by-step instructions on how to introduce a lesson and engage students in the material at hand. These include explorations, notes about the explorations, prompts for the beginning teacher who may need coaching, and a connection to what will come next. • Laurie's notes continue along the bottom of each page of every lesson to guide the teacher as he/she presents the material. The teacher is also given ideas to support and foster learning growth throughout the presentation of the lesson in a variety of formats. • There are homework checks (ex: p. 178)	**_2___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** • *Laurie's Notes* throughout the entire text.	**(Reviewer only.)** **__X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** • Students are given more difficult problems • Each section begins with exploration	**(Reviewer only.)** **__x___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** • Sequence *Vocabulary and Core Concepts* --> *Monitoring Progress and Modeling with Mathematics* --> Proofs, more advanced modeling, and more difficult problems. • There is a very logical progression in every lesson of core exercises focusing on fluency to problem-solving that requires both new and previously learned mathematics.	**(Reviewer only.)** **__X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** • *Laurie's Notes* o *Motivate:* notes give the teacher tips on how to begin student engagement with the upcoming lesson.	**(Reviewer only.)** **__X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** • *Games Closet* on BigIdeasMath.com are clearly labeled as to which concepts they allow students to review and study. • T-641 net of a cone	**(Reviewer only.)** **__X___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** • Pre-, post-assessments provided online in the *Assessment Book*. • Interactives in the online *Dynamic Classroom* student textbook are linked to the explorations in the standard textbook, with clearly defined objectives for each *Exploration*.	**(Reviewer only.)** **__X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Answer keys provided to properly aligned assessments. Lacks guidelines for interpretation of student performance.	**(Reviewer only.)** **__X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Confirmed with appropriate language.	**(Reviewer only.)** **___x___ Yes** **_____ No**

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** See page V	**(Reviewer only.)** **___x___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** • Uniform setup with a guide in the front of the book detailing the structure of the text.	**(Reviewer only.)** **__X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: __Big Ideas Math Geometry 9-12_____**

Publisher: _Big Ideas Learning, LLC_____ Copyright: ___2015_____

ISBN:_978-1-60840-839-9_____

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.
Non- Negotiable 1: Focus and Coherence **__x___ Meets** **_____ Does Not Meet**

Non-Negotiable Overall:

__x___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **___x____ Meets** **_____ Does Not Meet**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **__x___ Meets** **_____ Does Not Meet**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **__x_____ Meets** **_____ Does Not Meet**

Alignment Criteria Overall:

__x___ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __x___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths

Problems with scaffolding and with differentiation.

Laurie's Notes for beginning and advanced teachers

Spiraling curriculum

Lots of explorations

Weaknesses

- Connection between the written textbook and the online components is not readily apparent within the lessons.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Big Ideas Learning, LLC
Title:	Big-Ideas Algebra 2
ISBN #	978-1-60840-840-5 Copyright 2015
Grade Level(s) or Course:	9-12
Reviewer ID:	KB DG

RECOMMENDED AS:

✓ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- 72% WAP Covered

NNI Functions - Related to real world

Standards Met (Geometry Not Needed to be met)

COHERENCE- Standards Met

NNI Pacing Guide: Concepts well-developed/paced throughout text

Well organized T.O.C.

Clear, easy-to-find objectives.

RIGOR-

- Exploration
- Analyze Problems
- Real World

AC1 - Questions lead to deeper problem solving.

CONCEPTUAL UNDERSTANDING- Ample modeling w/tables/Graphs/Diagrams & writing equations

AC1 Error Analysis embedded throughout.

MATHEMATICAL PRACTICES- Laurie's Notes: Guidance to Teacher

AC2

* Differentiation/Enrichment
* Essential Questions
* Cumulative Assessments each chapter.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

AC3

- Remediation/Enrichment support each section.
- Student Journal
- Online Glossary/activities

OTHER:

Leads w/vocab tying lessons/chapters nicely together.

Appropriate Formatting (i.e. text size)

Well developed

Lots of guidance for teachers w/ Laurie's Notes

Lessons are differentiated for all learners.

No obvious weaknesses

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1 **Focus and Coherence**		
Criterion	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** - Found that students spend more than 50% of time on WAP. - Pacing Guide helped w/ directing pre-requisite opportunities - "What you learned before" sections - Pre-readiness assessment. 55-64 425~~32~~	✓ **Meets** **___Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Geometry standards not addressed/mandated in Alg I	✓ **Meets** NA **___Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Concepts are well-developed throughout text. Concepts build to levels difficulty. - Organized: Pre learning to support new ideas (1) 435-440 Chp 1-2 219-225 Chapter 10-11	✓ Meets ___Does Not Meet Insufficient Evidence
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Pacing Guide provide clear direction to build courses. Cited-Standards Table of Contents well organized	✓ Meets ___Does Not Meet Insufficient Evidence
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** - Enrichment/Remediation sections for each lesson. (Good suggestions). - Student Journal provide students w/ practice and notes for deeper problems	✓ Meets ___Does Not Meet Insufficient Evidence

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** - Mountain Math Proficiency Sections. - Skills Review - Section Assessments/Rev - Cumulative Assess/Rev - Online Practice Opportunities	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Clear Objectives/Easy to find - Objectives for each lesson - Standards/Clusters listed w/ page numbers TE 93-102, 435-440	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** © Page xxviii - xxxi CCSSM - Content pages - correlated to Alg I, Geom, Alg Pacing Guide xliv - xlv	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

Does Not Meet

Strengths/Weaknesses

- Layout - Design
  Easy to find things
- Text size appropriate
- Very well organized.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Layering of concepts is a focus - Pre / Post - Appropriate level problems - Students expected to explain reasoning 4.6, 5.1	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Example: End Behaviors p.159 - "Essential Questions" "Error Analysis" sections "How do You See it?"	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Ample Modeling - tables - Graphs - Diagrams - Writing equations "Error Analysis" Section p.177 Embedded throughout	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Exercise focus on both fluency ~~and~~ leading to deeper problems / Resources provide Extra - Student Journal P. 204	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** Basic question leading to the deepest level of solving. Examples 4.3. 4.4, 4.7. 4.8	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Every Section Lauries Notes Explorations Real-Life Applications Problem Solving	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Exploration Real-life	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Examples Modeling: 4.7, 4.8, 6.1	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets** 6/6

____ **Does Not Meet**

Strengths/Weaknesses:

Covers content well.

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Laurie's Notes Math Practices Each Section Noted: Essential Question Making Arguments Analyze Work Constructing Viable Arguments. Chapter 4	✓ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** ✓ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** -Ample opportunities for Math practices. -Cumulative Assessment each Chapter P. 232	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** - Laurie's Notes - Recommendations -Spanish Glossary- - Online Resources P. 222	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** ✓ **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** "Mathematical Connections" p.74 Each section asks students to look for structure and make arguments. p.107, 109	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** "What you will Learn?" p.270 "Essential Questions" Modeling Problems 1.115 "How do You See It?" p.118	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocab: Core Concepts each Sections Vocab q's P.122	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets** 6/6

___ **Does Not Meet**

Strengths/Weaknesses:

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Laurie's Notes 298,299 Beginning of Each Chapter Laurie give guidance	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Student Journal/online Supports P.308 Remediation/Enrichments Support each section Laurie's: Diff Instruction P.218	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** P. 304 ELL questions/Guidance Each Section: Essential Questions x Pair/Groups/Indiv x Turn Talk/Think-Pair-Share P(97)	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations.	✓ Meets 6/6 ___ Does Not Meet
AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**Strengths/Weaknesses:** Several locations for supporting ELs RTI, Enrichment.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** -ONLine support/Blended Learning opportunities - Laurie's Notes @ Each Section 3.1 TQ2-101	**(Reviewer only.)** ✓ **Yes** ___ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** - Exploration Opportunities p.101 - Apply - Analyze - Essential Questions ⇒ Practice Through Each Section	**(Reviewer only.)** ✓ **Yes** ___ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** p.94, p.99 - Leads with Vocab to Tie concepts together. - Ends w/ Vocab and concepts Clear Objectives	**(Reviewer only.)** ✓ Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Summary with Laurie's Notes p.98 - Vocab/concepts check + Monitoring Progress/Proficiency - Difficulty of Progression - CCSSM noted	**(Reviewer only.)** ✓ Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** * Alg. Tiles * Mirrors for Symmetry * Online resources/digital manipulatives	**(Reviewer only.)** ✓ Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** - Pre/Post Assessments - Cumulative Assessments - Self-Checks -	**(Reviewer only.)** ✓ Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** - Rubrics Provided w/out Bias - Performance Tasks Rubrics - Alternative Assess have Rubrics	**(Reviewer only.)** ✓ Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** P.41 Lexile Measurement - No Bias found ✓ - Course (Age) level ✓ - Assessments measure concepts ✓	**(Reviewer only.)** ✓ Yes ____ No

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Listed Qualified Reviewers at beginning of text.	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Real photos rather than cartoons in some applied problems - Easy to read. - Appropriately sized - Visually appealing.	**(Reviewer only.)** ✓ **Yes** ____ **No**

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Carnegie Learning
Title:	Carnegie Learning Algebra I
ISBN #	978-1-60972-152-7
Grade Level(s) or Course:	Algebra 1
Reviewer ID:	LTE KC

RECOMMENDED AS:

___X_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
The text met all of the widely applicable prerequisites and students spend more than 50% of their time on them. Students are provided with a sufficient amount of course level problems. The Teachers Implementation Guide shows in multiple places how and when each standard is covered within each module.

COHERENCE-
The difficulty level gradually increases within each lesson and from lesson to lesson in each chapter. Prior knowledge acquired in previous grades/courses is required and integrated throughout this text. The materials connect and tie clusters and domain together when it is natural and important.

RIGOR-
This course is rigorous for the 9th grade level, however if this curriculum was adopted starting at a middle school level then the level of rigor would be appropriate. Throughout the text there are high expectations for conceptual understanding, but the lessons do a quality job of gradually *increasing each lesson in difficulty to build the students conceptual knowledge. Contextual* problems require students to problem solve and think critically, but there are also a sufficient number of procedural problems to help build fluency and mathematical skills.

CONCEPTUAL UNDERSTANDING-
The authors provide enough examples within each section and numerous problems so that students can gain a deep conceptual understanding of the mathematics. Though there are many problems in a problem set, they are carefully crafted to address as many different cases as possible.

MATHEMATICAL PRACTICES-
Though the text does not specifically address the mathematical practices, it indirectly addresses all of the math practices throughout the text.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

The online resources make this curriculum accessible to students with a variety of levels of understanding. The text is intentionally written at a Lexile level to allow students with lower reading levels the ability to access the content.

OTHER:

Strengths:
– quality exercises
– covers Widely Applicable Prerequisites, standards, and mathematical practices
– requires the students to write about their thinking and discuss with other students
– extensive online resources

Weaknesses:
– lacks accommodations for English Language Learners and gifted students
– Mathematical Practices are not clearly marked in the teachers or students texts
– paperback, would have to be replaced often or lots of copies would need to be made.
– Multiple books for the students and teachers
– not a good text to picture ratio
– bland and boring in appearance
– There are no examples that are fully worked out so that a student who was absent from class could go back and try and learn the material on their own.

It is worth noting, that in order to adopt Carnegie Learning in high school it would be necessary to adopt the same curriculum in at least grades 6 – 8.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Student work corresponds to standards required for Algebra 1. In the front of the Teachers Implementation Guide in the Modules and Standard section on pagesFM-18 and FM-19 all of the standards that are covered under each module are listed accordingly. Also, at the beginning of each chapter there is an overview section where it lists the standards that are covered in each lesson and On the introduction page to each lesson the standards that are covered in that lesson are listed out and described. Students spend the majority of their time on Widely Applicable Prerequisites. At least 50% of their time would be spent on these prerequisites.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Because this is an Algebra I course, and it is generally taught before geometry it is not applicable to this course.	**____Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The application of previously learned concepts from 6th through 8th grade appears throughout this text. For example, rational number operations, solving equations and graphing linear equations is used and then extended in this text. Another example, eighth grade students are expected to create and solve linear equations. In Chapter 6 of this text students are expected to create and solve a system of linear equations, which is an extension of solving and creating one linear equation.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** An overview of how the standards are addressed in each lesson is provided at the beginning of the Teachers Implementation Guide in the "Modules and Standards" section. Also, each chapter overview provides a summary of which standards are covered in each lesson.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Students are provided with a sufficient amount of course – level problems. A resource is provided to the teachers if they would like more practice problems in the "Student Assignments" book and "Skilled Practice" books. Problems start slow and increased with difficulty in each lesson. In the Skills Practice book worksheets are provided with problems that are fill in the blank or matching to help lower performing students. The problems in the Skills Practice book are more procedural in nature and are intended to increase fluency so that students can access the real world/modeling problems. The answers to the odd problems are also provided in the student text.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Prior knowledge acquired in previous grades or courses is required throughout this text. It might not be explicitly stated, however, it is apparent that prior skills are required. For example, in lesson 14.3 Imaginary and Complex Numbers, students recall the number sets they have learned and expand their knowledge to include imaginary and complex numbers.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Teachers Implementation Guide shows in multiple places how and when the standards are covered in each module. Each chapter contains a Chapter Overview that includes where the CCSSM standards addressed. It is evident from this chart that multiple clusters and even domains are introduced and developed within a single lesson. Also, on the first page of each lesson the standards that are covered in that lesson are listed and described. Each lesson includes the formal language found in the CCSSM standards. The Learning Goals, which could also be called the objectives, use specific language from the standards.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The materials connect and tie clusters within domains together when it is natural and important. For example, in lesson 2.6, within the domain A-CED creating equations clusters 2 and 3 are related and connected as well as domain N-Q and clusters 1 and 2.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X__Meets

____Does Not Meet

Strengths/Weaknesses

Strengths, fully addresses all standards and spans at least more than 50% of the time on the Widely Applicable Prerequisites.

Weaknesses, not a lot of resources for lower achieving students.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Yes, when the standard has a conceptual component the text has exercises to cover it.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function $f(t) = 5 - t2$?" or "Is $\sqrt{2}$ a polynomial? How about $\frac{1}{2}(x + \sqrt{2}) + \frac{1}{2}(-x + \sqrt{2})$?"	**Evidence-** Yes, and the Teachers Implementation Guide in the margins there are Guiding Questions and discussion questions that pertain to the lesson.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Yes, the lesson structure made by Carnegie supports conceptual understanding by requiring students to construct and interpret modules, use multiple representations, compare and contrast concepts, and explain their reasoning.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** This text focuses on fluency and procedural skill when it is required by the CCSSM. The lessons provide the students with the opportunity to slowly build their skills, and then the Skills Practice Worksheets provide more repetition and allow students to practice and improve on procedural skill and fluency.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** Yes the standards that are specifically procedural are covered throughout the text in procedural problems. Example: A-REI.3 - Solve equations and inequalities in one variable can be found on pages 126 to 127 in exercises 2b 3b. Example: A-CED.1 – Create equations and inequalities in one variable can be found on pages 126 and 127 in exercises 1, 2a, and 3a.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **__ X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Carnegie Algebra 1 does a quality job of integrating the use of real world scenarios in lessons to help students recognize and understand the relationship and connection between mass and the real world.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes, materials attend thoroughly to the places in the standards were expectations for multistep and real-world problems are explicit. For an example see Lesson 2.1 Modeling Linear Situations.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The lessons in the student text are structured to provide students with various opportunities to reason, model, and explain their thinking. For example in Chapter 12 students compare and contrast different ways to solve quadratic equations.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: the Student Assignments resource, the text contains lots of contextual problems throughout lessons, and the Student Skills Practice resource.	

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The mathematical practices are not explicitly marked throughout the text, however, each lesson provides opportunities for students to think critically, reason, and communicate their mathematical understanding. For example, in lesson 12.3 Mathematical Practice #1 is addressed because they present multiple ways to think about factoring: factoring with an area model, factoring by trial and error, factoring by using a multiplication table model, and factoring by listing the factors. This obviously enriches the Widely Applicable Prerequisite A-SSE.3.a which is factoring a quadratic expression.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** As previously noted there are many places in the book where exercises require students to try various methods to solve problems, verbalize thinking, use prior learning, solve everyday problems, use appropriate tools, check work, make predictions and explain how they got their answer. For example: MP 1 on page 400 MP 2 on page 78 MP 3 on page 224 MP 4 on page 368 MP 5 on page 145 MP 6 on page 308 MP 7 on page 384 MP 8 on page 284	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** The Mathematical Practice Standards are not explicitly marked in the teacher or student materials. Additionally, a connection is not noted between the practice standards and the Widely Applicable Prerequisites.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **____Meets (2)** **_X___Partially Meets (1)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Yes, there are many exercises that require students to critique other students work and thinking. For example, on page 740 in exercise number 11 students look at the work of three other students and determine who is correct and explain why. They are also asked to make corrections to the two other students who were incorrect. This is a feature that is carried on throughout the student text.	____**Does Not Meet (**
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Yes, throughout the text, exercises require students to make arguments for or against the way a sample student completed the problem. For example see number six on page 753. Also, students are asked to explain their reasoning as evidenced by number 5 on page 756. They are also required to use diagrams and models to find solutions which can be seen on page 734 in problem 2.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** The language of mathematics is present throughout the text. Vocabulary and key mathematical terms are placed at the beginning of each chapter, are used throughout the trapped or, reviewed at the end of the chapter, and contained in a glossary. Students have many opportunities to develop and improve on their mathematical language.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

_X___Meets

____Does Not Meet

Strengths/Weaknesses:
Strengths: the exercises cover all of the Math Practice Standards, quality problems require explanations and various approaches
Weaknesses: the Math Practice Standards are not explicitly marked anywhere in the student or teacher resources.

Alignment Criterion 3:
Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** The lessons in this text are scaffolded in a way to reach lower-level achieving students or ELL students. The text is intentionally written at a Lexile level below ninth grade so that all students can access the content. There are also online resources for teachers to help implement and adapt this text for English Language Learners. However, there really should be more support for English Language Learners, such as a Spanish glossary, Spanish version of the text or worksheets, or worked out explanations in Spanish.	____**Meets (2)** __X__**Partially Meets (1)** ____**Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** In the text there is good support when it comes to discussion questions and possible miss conceptions students might have. Also, suggestions for grouping students are provided when applicable. Support is provided to help teachers plan and differentiate lessons. Possible warm-up problems, assessments, and assignments are provided.	_X___**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Design of lessons are fluid and open for interpretation and integration by the teacher. Throughout the lesson there are suggested guiding questions, discussion questions, grouping techniques, talk the talk, and checks for understanding. These are features that can be found in every lesson.	__X__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: the resources in the Teacher Implementation Guide are extensive, in each lesson the suggestions for discussion questions and grouping techniques are helpful Weaknesses: accommodations for English Language Learners are needed

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons are very well structured and are scaffolded to aid students in gradually progressing through the concepts.	**(Reviewer only.)** **___X___ Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** There are problems and exercises throughout the student text and extra practice problems are provided in the Student Skills Practice and Student Assignments resources for teachers to assign.	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Assignments are organized and progress gradually in difficulty.	**(Reviewer only.)** **__X____ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The following resources are provided for teachers: Teachers Implementation Guide, Student Skills Practice workbook, Student Assignments workbook, and two volumes of Resources and Assessments.	**(Reviewer only.)** **__X____ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** When required manipulatives are suggested. For this course, the authors mainly suggest the use of a graphing calculator.	**(Reviewer only.)** **___X___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** The Resources and Assessments books contain the following for each chapter: pretest, posttest, standardized practice test, mid chapter test, and end of chapter test. The student text serves as a formative assessment.	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Answer keys are provided in the resources, but the reviewers did not find any scoring guidelines or rubrics.	**(Reviewer only.)** **___X___ Yes** **_____ No**

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessment problems are available that allow for multiple solution paths, and supporting a variety of learning styles.	**(Reviewer only.)** __X____ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** The Carnegie Learning materials include an acknowledgment page in the front of the teacher and student text. On that page they list eight individuals that comprise the development team.	**(Reviewer only.)** __X____ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** All of the texts are soft cover. There are only two colors used black and the accent color and the paper is obviously recycled and kind of a tan color. There are not many pictures and the text seems to be a little bit boring. However, that is not as cluttered as a traditional textbook.	**(Reviewer only.)** _____ **Yes** __X____ **No**

Reviewer IMET Evaluation Summary **Title/Level: Carnegie Learning Algebra II**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Focus and Coherence

___X__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

__X___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: ___5__ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: ___5__ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
____X___ Meets	**___X____ Meets**	**___X____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

___X__ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

The strengths of the program are: the writing the students are asked to do as they reflect on, explain, and defend their thinking about the mathematical concepts, the systematic and intentional manner in which the concepts are scaffolded in each section as the concepts are introduced and developed.

One of the concerns that I have is the amount of professional development required for teachers to effectively teach the curriculum. This curriculum is radically different from a traditional textbook and will require to fundamentally alter their teaching practices.

Strengths:
– quality exercises
– covers Widely Applicable Prerequisites, standards, and mathematical practices
– requires the students to write about their thinking and discuss with other students
_ Extensive online resources

Weaknesses:
– lacks accommodations for English Language Learners and gifted students
– Mathematical Practices are not clearly marked in the teachers or students texts
– paperback, would have to be replaced often or lots of copies would need to be made.
– Multiple books for the students and teachers
– not a good text to picture ratio
– bland and boring in appearance
– There are no examples that are fully worked out so that a student who was absent from class could go back and try and learn the material on their own.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Carnegie Learning ~~Geometry~~
Title:	Carnegie Learning Geometry
ISBN #	978-1-60972-216-6
Grade Level(s) or Course:	HS Geometry 9th or 10th
Reviewer ID:	MK & LTE

RECOMMENDED AS:

_✓_ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Covers all geometry standards and 92% of WAAs

COHERENCE- Implementation of van Hiele theory supports natural flow of topics and conceptual development

RIGOR-
Scaffolded approach builds towards high-level investigations and discussions. Communication (writing and speaking) requires deeper reflection on mathematics.

CONCEPTUAL UNDERSTANDING-
Implementation of van Hiele theory
Communicating about the mathematics

MATHEMATICAL PRACTICES-
Good treatment in front matter for both teachers and students; could be more visible throughout.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Intentional written at reading level (slightly below) to allow for consideration of content.

OTHER:
Strengths: Guided discussion
Lesson themes to motivate topics

Weakness: Support for differentiation could be more explicit

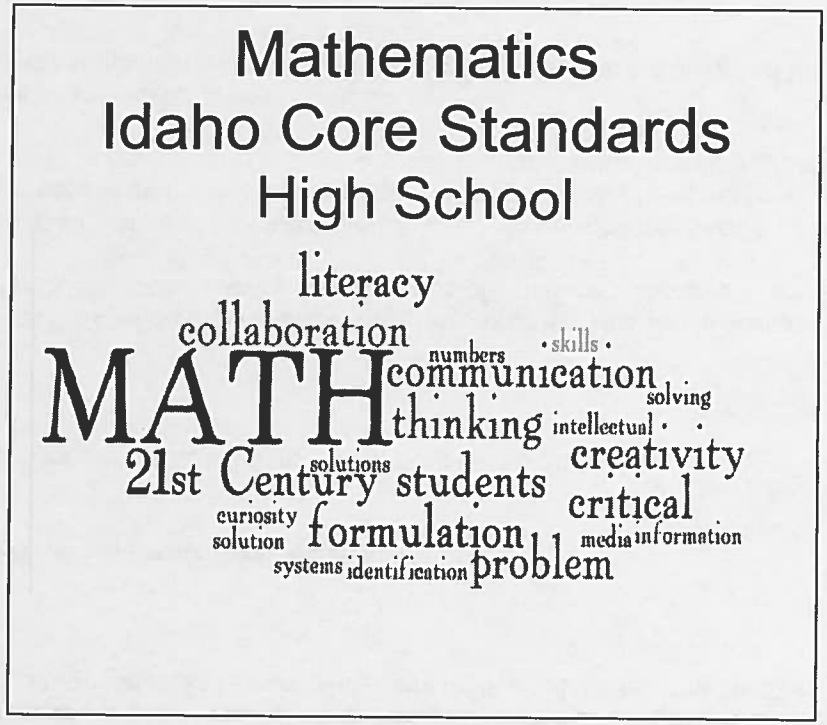
Reviewer ID: MK & LTE

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** 91.76% of lessons address WAPs Focus on developing geometric reasoning	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Apply algebraic reasoning to coordinate geometry problems Lawn Care Task in 12.4 good application of knowledge of circles	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Appropriate implementation of van Hiele theory of geometric thought For example, middle school focuses on measurement of geometric objects & this high school course moves into proof and justifications	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Aligns well with geometry path recommended in App. A.	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Sections are organized for guided learning. Material is scaffolded. Assignment book & skills practice book could allow for creation of balanced assignments Real-world contexts are used to motivate topics.	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**

Metric NN1F: **Materia[illegible]late course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Pre-assessments and warm-ups address this somewhat. Vertical progression could be more explicit. "Crew" tips do prompt recall of previous knowledge – in brief way.	✓ **Meets** **___Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Language of goals is consistent with language in standards. Indicated at beginning of each Chapter. (Ch 3 as example)	✓ **Meets** **___Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Example: Ch 3 Alignment Chart lesson 3.1 addresses standards from 3 clusters. Connections with algebra through coordinate geometry and some use of expressions.	✓ **Meets** **___Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

build step-by-step to conceptual understanding

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

Does Not Meet

Strengths/Weaknesses

Strengths
- guided discussion
- instructional focus
- appropriate attention to WAPs
- Cognitive Tutor online flows well

Weakness:

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric** ✓ **____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Scaffolded approach to each section builds towards conceptual understanding Assignments & Skills Practice blend together	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Assignment manual focuses on Conceptual treatment of topics. Individual lessons designed to promote discussion.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Uses pictures, graphs, equations where appropriate.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Skills Practice book; Cognitive Tutor Academic Glossary in front matter very good – could be more visible throughout. (pp 34-41)	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving $x2 + 5 = 49 + 5$ or $(3x - 2)2 = 6x - 4$. Generic cases that require efficient and general procedures might include such problems as solving $c + 8 - c2 = 3(c - 1)2 - 5)$.	**Evidence-** Problem Types encourage variety of reasoning skills: Worked Examples, Thumbs Up/Down, Who's Correct	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Most sections were multi-step contextual situations for guided discovery. Problem 3 in 4.6 as example of open ended multi-step task	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Example 9 on right triangle trigonometry	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Apply modeling cycle across topics	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		✓ **Meets** 6/6 **___Does Not Meet** **Strengths/Weaknesses:** Focus on discussion/ communication encourages conceptual development Balance btw conceptual & procedural possible →
Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Put in two different boxes

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Overall focus is on developing geometric reasoning. Front matter explanation of SMPs good – and then embedded in problem types – but could be more visible at least in teacher edition.	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Embedded in problem types – could draw teacher's attention throughout so that SMPs not forgotten.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-**	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric.** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Writing & critiquing proofs & arguments Thumbs Up/Down Who's Correct	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Proofs, communication, discussion	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary listed at beginning & bolded in text. More explicit visibly & more support (Teacher Tips) Academic Glossary good- but only in front matter?	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		✓ **Meets** 6/6 **Does Not Meet** **Strengths/Weaknesses:** S: Development of reasoning skills Guiding Questions in margin notes W: Literacy helps could be more explicit

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Design choice that guided discussion is good for all students Includes literacy strategies – could be more explict or visible. Other languages may be supported in online resources (hard to access)	____**Meets (2)** __✓__**Partially Meets (1)** ____**Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Research-based scaffolded design encourages communication & flow of concepts. Activities & assignments can be adapted for individual needs. Cognitive Tutor not only skill practice	__✓__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Variety built in; attention to sharing/communicating Teacher tips in margin notes Academic Glossary practices addressed throughout	__✓__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)** → grouping strategies for examp

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations.	✓ Meets 5/4 ___ Does Not Meet
AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**Strengths/Weaknesses:** Overall approach consistent & research-based. Suggestions for adaptations could be more visible.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Guided discussion is dominant instructional method. Intends to involve all students	**(Reviewer only.)** ✓ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Assignments and Skills Practice address both. Based on van Hiele theory of development of geometric thought	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Student texts flows into Assignment manual. Skills Practice manual available for further support.	**(Reviewer only.)** ✓ Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Essential Ideas & Vocabulary listed for each section but not explained. Standards alignment is clear. Margin notes (particularly Guiding Questions) support SMPs.	**(Reviewer only.)** ✓ Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Construction tools Reference to other manipulatives less visible	**(Reviewer only.)** ✓ Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Student text is essentially a formative assessment Summative assessments in teacher materials	**(Reviewer only.)** ✓ Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Answer keys available & accurate Some attention to formative in teacher margin notes No formal rubrics to assess discussion/Practice	**(Reviewer only.)** ✓ Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Reading level seems appropriate Assessments accessible	**(Reviewer only.)** ✓ Yes ____ No

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Curriculum Development Team identified Research studies shared (more on Algebra course)	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Somewhat monocromatic - not busy so not overwhelming - but may be underwhelming for some Key terms could be made more visible	**(Reviewer only.)** ✓ **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** Carnegie Learning Geometry

Publisher: Carnegie Learning **Copyright:** 2013 **ISBN:** 978-1-60972-216-6

Reviewer ID # MK & LTE **Date Review Completed:** 3/8/14

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

✓ **Meets**

____ **Does Not Meet**

Non-Negotiable Overall:

_____ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** ✓ **Meets** _____ **Does Not Meet**	**Points:** 6 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** ✓ **Meets** _____ **Does Not Meet**	**Points:** 5 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** ✓ **Meets** _____ **Does Not Meet**

Alignment Criteria Overall:

✓ **Meets** _____ **Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[illegible]tandards. **Do the materials meet every Non-Negoti[illegible] and Alignment Criterion?** ✓ **Yes** ____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Guided discussion format & approach good

Consumable materials are appealing & not overwhelming

Lesson themes used to introduce section and carried through

Adaptable for all students through focus on communication

Weaknesses:

Specific helps for ELLs & other needs could be more explicit

Two distinct manuals for Assignments & Skills Practice could be seen as a weakness.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Carnegie Learning
Title:	Carnegie Learning Algebra II
ISBN #	978-1-60972-418-4
Grade Level(s) or Course:	Algebra 2
Reviewer ID:	LTE KC

RECOMMENDED AS:

___X_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
The text met all of the widely applicable prerequisites and students spend more than 50% of their time on them. Students are provided with a sufficient amount of course level problems. The Teachers Implementation Guide shows in multiple places how and when each standard is covered within each module.

COHERENCE-
The difficulty level gradually increases within each lesson and from lesson to lesson in each chapter. Prior knowledge acquired in previous grades/courses is required and integrated throughout this text. The materials connect and tie clusters and domain together when it is natural and important.

RIGOR-
This course is rigorous for the normal level of Algebra 2 students, however if this curriculum was adopted starting at a middle school level then the level of rigor would be appropriate. Throughout the text there are high expectations for conceptual understanding, but the lessons do a quality job of gradually increasing each lesson in difficulty to build the students conceptual knowledge. Contextual problems require students to problem solve and think critically, but there are also a sufficient number of procedural problems to help build fluency and mathematical skills.

CONCEPTUAL UNDERSTANDING-
The authors provide enough examples within each section and numerous problems so that students can gain a deep conceptual understanding of the mathematics. Though there are many problems in a problem set, they are carefully crafted to address as many different cases as possible.

MATHEMATICAL PRACTICES-
Though the text does not specifically address the mathematical practices, it indirectly addresses all of the math practices throughout the text.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

The online resources make this curriculum accessible to students with a variety of levels of understanding. The text is intentionally written at a Lexile level to allow students with lower reading levels the ability to access the content.

OTHER:

Strengths:
– quality exercises
– covers Widely Applicable Prerequisites, standards, and mathematical practices
– requires the students to write about their thinking and discuss with other students
- Extensive online resources

Weaknesses:
– lacks accommodations for English Language Learners and gifted students
– Mathematical Practices are not clearly marked in the teachers or students texts
– paperback, would have to be replaced often or lots of copies would need to be made.
– Multiple books for the students and teachers
– not a good text to picture ratio
– bland and boring in appearance
– There are no examples that are fully worked out so that a student who was absent from class could go back and try and learn the material on their own.

It is worth noting, that in order to adopt Carnegie Learning in high school it would be necessary to adopt the same curriculum in at least grades 6 – 8.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** According to the publisher "The Carnegie Learning High School Math Series instructional materials were developed after the release of the final draft of the common core state standards." A thorough review of the text with the widely applicable prerequisites in mind revealed that at least 50% of the students' time will be spent on the prerequisites. It is important to keep in mind that the teacher plays a part in what they emphasize. However, the text provides the teacher enough material to spend at least 50% of their time on the prerequisites. The Carnegie Learning Algebra 2 text includes 16 chapters and 85 sections within those chapters. In the Teacher's Implementation Guide at the beginning of each chapter, the authors include a table that lists each lesson, the CCSS standards that align with each section, a pacing guide, highlights from section, and a checklist that references models, worked examples, peer analysis, talk the talk, and technology that can be found in each section. A review of the pacing guide reveals that if a teacher sticks closely with it in a standard school year they should be able to get through all 16 chapters. The authors suggest that about half of the sections will require one day and the other half two days of instruction and formative assessment.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric M 3: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Because this is Algebra II course, and it is generally taught after geometry, this text builds upon the learning from geometry to extend algebraic concepts/standards. For example in Lesson 1.2 students used their geometry background while working with patterns. Also, in lesson 12.5 the use of geometric sequences is required.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The problems in this text are advanced for where Algebra 2 students are currently in a traditional run classroom. However, if this type of text was used starting in earlier grades then the level of sophistication would be appropriate. Knowledge and	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** An extensive review of the materials revealed that they cover all the content specified in the Algebra 2 Common Core State Standards. An overview of how the standards are addresses throughout the course can be found in the Teachers Implementation Guide. Each lesson provides the detail of the clusters and standards addressed.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** A main focus of the course – level problems focuses on the students explaining and writing about their understanding of the concepts presented. The Student Text and the Student Assignments books contain a variety of problems that progress in difficulty towards the application level. The texts are very different from a traditional Algebra 2 textbook. The student texts do not include the vast amounts of information, examples, formulas, theorems, and vocabulary terms that might be found in a traditional textbook. However, it appears that the student texts cover and include the essential understandings that are needed to master the Algebra 2 standard/concepts.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** When necessary the authors refer to previous knowledge needed to successfully master the concepts in a given section. For example, on page 326 of the student text It States "the previous function building lessons showed how the factors of a polynomial determine its key characteristics. From the factors, you can determine the type and location of a polynomial's zeros." Additionally, another example relating to prior knowledge can be found on page 374 of the student text, "Remember that a Pythagorean triple is a set of three positive integers such that..." The references to prior knowledge are scattered throughout the text at the appropriate time when they are needed to help the students with the concepts they are learning. The teacher materials mention the "Crew Characters" which is the people in the text that remind the students about prior learning they need to apply or consider with a given exercise.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** At the beginning of the Teachers Implementation Guide the authors have included a table that is a crosswalk between the modules and the Common Core State Standards. At the beginning of each section of the student text, the authors have included learning goals (objectives) that align with the cluster and domain headings of the standards. An example is in the learning goals for section 1.2 it mentions "Determine whether expressions are equivalent" and the cluster heading states "Write expressions and equivalent forms to solve problems." The learning goals use much of the same language as the standards.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** In the Teacher Implementation Guide at the beginning of each chapter there is a table that includes a crosswalk of each section of the chapter and the standards covered in that section. An example is that in section 4.1 Analyzing Polynomial Functions it covers A.SSE1.A, A.CED.3, A.REI 1.1, F.IF.4, and F.IF.6. A review of the Chapter Overviews for each chapter revealed that most of the sections cover multiple standards within a cluster and often multiple domains, clusters, and standards. Another example is in section 5.2 it covers: A.CED.3, F.IF.4, F.IF.5, F.BF.1, and S.ID.6a.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Metric NN 1:** If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses** Strengths: Covers all of the standards and the widely applicable prerequsites.
Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.		
Directions for Alignment Criterion 1 **Rigor and Balance**		

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** The student resources include a Student Text, Student Skills Practice book, and a Student Assignments manual. The Student Text introduces and develops new concepts by walking the students through a series of exercises to get them ready to do the assignment. Often, one section in the student text is 10 to 20 pages long. The authors carefully present the material on a scaffolded manner to build upon prior learning to become proficient with the new concepts. If the teacher recognizes that the students are struggling the Skills Practice book can be used to go back and review skills needed to be successful in a given section. The student text and the student assignments manual include many opportunities for students to write about their conceptual understanding of the topics they are learning. Additionally, they are asked to write about their interpretations of the topics being studied. This curriculum focuses heavily on students talking, writing, and discussing their understanding of the concepts/standards.	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** The lessons are structured in such a way that students have multiple opportunities to model and expand on explanations about mathematical concepts. Throughout the text the students are asked to: look for patterns, estimate, predict, describe, determine, and represent their thinking. Throughout the text, students are asked to discuss their understanding, think for themselves, work with a partner, and share with the class their thinking/understanding about the concepts they are working on. In the student text the authors carefully present the students with questions that scaffold the learning and eventually get them to a deep conceptual understanding. By the time they get to the end of a section they have had numerous opportunities to write about and discuss with their peers their understanding.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Throughout the Algebra 2 text students graphically and algebraically develop an understanding of the subject. For example, in section 10.3 the students are asked to analyze graphs and describe the transformations of functions. Additionally, they are asked to find the domain and range of those functions. Another example is found in Chapter 5: Polynomial Models. Section 5.1 the students focus on solving polynomial inequalities, in section 5.2 they moved to modeling with polynomials, section 5.3 focuses on piecewise functions, 5.4 refers to modeling polynomial data, and section 5.5 the students are asked to compare polynomials in different representations. In this chapter they work with the algebraic and graphical representations of polynomials to model and solve real-world problems.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The lessons are formatted to help students progress through the content in a meaningful way to achieve a conceptual understanding. Additionally, the skills practice worksheets are provided to allow students more practice with procedural problems.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** The Student Assignments manual scaffolds the problems from the fluency and procedural skill level to problems that require students to use opportunistic strategies to solve. The problems at the end of the assignments asked the students to consider, explain, determine, right, and interpret. For these problems students have to draw upon prior knowledge and use opportunistic strategies to solve. An example of this is the assignment for lesson 5.2. This assignment contains one problem with nine separate parts that towards the end asked the students to "predict the years when John's free-throw percentage is at least 70%. Explain your reasoning" and "for what intervals is the model appropriate for the problem situation? Explain your reasoning." And "predict the type of polynomial that you sketched in part H. Explain your reasoning." The text forces the students to think about and explain the reasoning often. To do this they need to have a deep conceptual understanding of the topics.	

AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric** **__ X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Many of the single step, procedural problems are found in the Student Skills Practice book. This is one of the areas in which this textbook excels. Every section in the student text and the student assignments text includes problems that require multiple steps that develop the concepts in a logical progression. The authors of taking great care to lead the students along from a simple to a deep understanding of the concepts. An example of this can be found in section 6.5 of the student text, this section comprises 14 pages. In this section the authors dedicate six pages and 10 questions with multiple steps on one problem related to a student that wants to purchase a laptop for $1000 on a credit card with a 19% interest. In this problem the authors carefully walks the students through each step in which they are asked to write multiple formulas calculate payments and principal interest and at the end culminating in "how much money will Vince end up spending on his $1000 laptop?" At the end of this one problem, the students have a deep conceptual understanding of the topic.	

Do application problems particularly stress applying the Widely Applicable prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Another area in which this text excels is that it makes an effort to show the applications of the math whenever possible. Almost every section refers to the application of the mathematics in a way that is relevant to the interests of the students and written in a language that is easily understood. The many and varied application problems apply and address the widely applicable prerequisites for this course.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The application problems throughout the text address modeling. Some examples are: section 3.1, exploring cubic functions; lesson 5.2, modeling with polynomials; section 7.5, using rational functions to solve problems; section 9.6, solving radical equations; and section 11.5, applications of exponential and logarithmic functions. In each of these sections the application problems focus on the modeling of the mathematics to explain and understand real-world situations.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: Quality number of both procedural and contextual problems.	

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Throughout the text students are required to complete problems that address both the practice standards and the widely applicable prerequisites at the same time. For example, in lesson 3.1 on page 216 #2 covers MP 1-4 and the following standards A.SSE.1, A.APR.1, and F.IF.7.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** At the beginning of the Teachers Implementation Guide and the Student Text the authors reference and discuss the Standards for Mathematical Practice. In the Teacher's Implementation Guide, the authors present each standard with an explanation of how the text supports the practices and they include an example of where each practice is addressed in the text. Practice #1: The text provides multiple opportunities for students to make sense of problems by writing about and discussing their thinking with their classmates. The multiple steps for many of the problems throughout the text require the students to persevere in solving the problems. Practice #2: The students are often asked to explain their reasoning. Practice #3: The text is designed in such a way that some of the examples have two students that explained the reasoning and the students are asked to decide who is correct and to justify the reasoning. Practice #4: the students have multiple opportunities throughout the text to use words, tables, graphs to communicate mathematical ideas. Practice #5: The text refers to and encourages students to use appropriate tools such as calculators, rulers, protractor's, and other manipulatives. Practice #6: The nature of Algebra 2 requires the students to attend to precision to solve problems. However, unique to this text, is the need for students to attend to precision when writing about their understanding of the topics/concepts studied in each section. Practice #7: Students are given multiple opportunities to analyze numeric, geometric, and algebraic patterns. Practice #8: The text includes multiple tables that lead the students along to express regularity in repeated reasoning.	

Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** The teacher materials include an extensive discussion about the role of the practice standards in the classroom and where they can be found throughout the text. Although the math practice standards are not specifically marked in the text the students provided ample opportunities to think, discuss, reason, and write about the mathematics. This text doesn't exceptional job of requiring students to reflect on their understanding of the concepts/standards.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **_X___Meets (2)** **____Partially Meets (1)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Again, this is an area in which this curriculum excels. The Worked Examples in the text allow the students to see the flow of the problem from one step to the next until completion. Throughout these examples the students are asked to reflect on and explain their understanding. The Thumbs Down problems given the incorrect example of how a student solved the problem and then asked the students to explain and show where the student made their mistakes. The Whose Correct problems are an advanced form of correct versus incorrect responses. In these problems to students answer a question differently and the students are asked to decide who's answer is correct and explain their reasoning. Additionally, throughout the text students are asked to explain, describe, and write about their understanding of the concepts. The text also includes for other features that relate to this area. The Discuss to Understand sections ask students to read the problem carefully and then discuss with other students their understanding of the problem. The Think for Yourself sections prompt the students with targeted questions to think through the process of solving the problems. The Work with Your Partner sections ask the students to work through the problem and then discuss their findings with their partner. Finally, the Share with the Class sections ask the students to communicate clearly with the class there reasoning.	____**Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** The "Who's Correct" section in each lesson requires students to think critically and determine which student is correct and then they are required to fix the errors and explain their reasoning.	

Do materials explicitly attend to the specialized language of mathematics the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** At the beginning of the student text, the authors review the different ways that students will be asked to represent their mathematical understanding of the concept their study. Additionally, key terms are given at the beginning of each section and referred to throughout the section. Another feature of the text is that at the beginning of the student text the authors define and give examples related to the following academic terms they will see throughout the text; analyze, explain your reasoning, represent, predict, and describe. Each term is defined in the authors also give examples of the types of questions to ask themselves when they are asked to describe or predict etc. Additionally they give an example of each of the terms and what it looks like in a problem set.	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Strengths: Covers all of the mathematical practices, there is a section at the beginning of the book that reviews the language of writing for mathematics in the Key Terms at the front of the text** **Weaknesses: The mathematical practices were not specifically marked anywhere in the text.**

Alignment Criterion 3: **Access[illegible]he Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure a[illegible]ents are able to meet the Standards. Thus, aligned materials m[illegible]rovide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as[illegible]ts or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** The reviewer did not find any specific mention of how to support English language learners or other special populations such as gifted and talented. However, the entire student text is written in student friendly language and includes examples that are relative to their interests. It appears to the reviewer, that the authors have made a conscious effort to only include the necessary information in the student text. Therefore, it is not as busy and cluttered as many traditional textbooks making it easier to read and understand. It is quite possible that the entire text was written to address the needs of English language learners and other special populations. It is for this reason that I marked it as meets and not partially meets. The text and resource materials should include more support for ELL and other special populations. Additionally, the resources could include a Spanish-English glossary and solutions worked out and explained in Spanish.	**____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** This text provides appropriate scaffolding in each lesson to support a broad range of learners. The Teachers Implementation Guide provided teachers guidance and support in many ways, such as including teacher notes, implementation strategies, graphic organizers, and grouping suggestions.	**_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The lessons include four types of problems: Worked Examples, Thumbs Down, Thumbs Up, and Who's Correct? The Worked Examples ask the students to read through the problem, question their understandings, and think about connections between the steps. The Thumbs Down examples ask the students to read through the incorrect solution and think about where the error was made. The Thumbs Up examples ask the students to read through the correct example and think about connections between the steps. The Who's Correct? Examples ask the students to read through the situation, question the reason or strategy given, and determine which solution is correct and which is incorrect. Additionally, the students are asked to explain their reasoning and write about their understandings and share those understandings with classmates.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criteria Overall:

___X__ Meets **_____ Does Not Meet**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: resources to support teachers Weaknesses: ELL accommodations are lacking, gifted and talented accommodations are lacking

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Each section of the student text assist the teacher with strategically and incrementally leading the students to a deep understanding of the concepts. The sections include multiple opportunities for students to discuss with a partner and share out to the class. The structure of the sections allow the students to talk about and do the learning.	**(Reviewer only.)** **___X___ Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** The problems allow the students to learn new concepts. If the students are struggling with prerequisite concepts the teacher can have the students use the Skills Practice manual to review. Additionally, each problem set includes problems that require students to apply and model the mathematics. Additionally, the students are required to write extensively about their understandings of the concepts. A hallmark of this curriculum is the amount of writing that students do with regards to the concepts in each section.	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The assignments intentionally scaffold the concepts from procedural, to conceptual, to the application level. A traditional textbook might have as many as 80 problems, while this text carefully selects the problems to achieve a deep understanding of the concepts related to each section. For example, the section 10.3 assignment only has three problems with multiple steps that assist the students with reaching a level of proficiency with the targeted concepts of the section. However, the Student Text for section 10.3 comprises 10 pages and allows the teacher and the students to work through 13 exercises with multiple steps so that when they do the assignment they have had many opportunities to practice.	**(Reviewer only.)** **__X____ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The teacher materials include the Teacher's Implementation Guide and the Teacher's Resources & Assessments manual. The teacher materials give numerous suggestions for developing, presenting and reviewing the concepts. The teacher's guide includes suggestions for: presenting concepts, discussing the example problems, suggestions for grouping students, guiding questions, and solutions to the problems. The guiding questions give the teacher a list of questions to ask students as they work through the examples.	**(Reviewer only.)** **__X____ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** The text uses multiple representations to present and develop concepts. Students are asked to interpret graphs, use graphing utilities when appropriate, complete and interpret tables, and construct graphs from functions and tables of data.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** The Teacher's Resources and Assessments manual includes all of the solutions to the assignments, and skills practice problems. Additionally, the assessments include pre-test, post-tests, mid-chapter tests, end of chapter tests and standardized test practice.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** The assessments include answer keys that show all of the steps to solve the problems.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The text is written in student friendly language making it easy to read. Additionally, the text is not nearly as busy as a traditional textbook.	**(Reviewer only.)** __X____ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** The Carnegie Learning Development Team is listed at the beginning of the text.	**(Reviewer only.)** __X____ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The design of the text takes a minimalist approach. The authors only include essential information to master the concepts. The Student Text includes a lot of blank space for the students to write in. The general format is intimidating and not engaging. Lack of graphics in color.	**(Reviewer only.)** __X____ **Yes** _____ **No**

Reviewer IMET Evaluation Summary **Title/Level: Carnegie Learning Algebra II**

Publisher: Carnegie Learning Copyright: 2013 ISBN: 9781609724184

Reviewer ID # Lennart Erickson III **Date Review Completed: February 27, 2016**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.		
Non- Negotiable 1: Focus and Coherence **___X__ Meets** **_____ Does Not Meet**		
Non-Negotiable Overall: **__X___ Meets** **_____ Does Not Meet**		
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.		
Alignment Criterion 1: Rigor and Balance **Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **____X___ Meets** **_____ Does Not Meet**	**Alignment Criterion 2: Standards of Mathematical Practice** **Points: ___5__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **___X____ Meets** **_____ Does Not Meet**	**Alignment Criterion 3: Access to Standards for All Learners** **Points: ___6__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **___X____ Meets** **_____ Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Core standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

The strengths of the program are: the writing the students are asked to do as they reflect on, explain, and defend their thinking about the mathematical concepts, the systematic and intentional manner in which the concepts are scaffolded in each section as the concepts are introduced and developed.

One of the concerns that I have is the amount of professional development required for teachers to effectively teach the curriculum. This curriculum is radically different from a traditional textbook and will require to fundamentally alter their teaching practices.

Strengths:

- Very thorough glossary
- Teachers resources are extensive and helpful
- Covers all of the required Algebra 2 standards
- Applies all of the mathematical practices
- The academic glossary at the beginning of the text
- Quality contextual problems

Weaknesses:

- Soft cover
- Many books
- Lacking ELL accommodations
- Lacking in gifted student accommodations
- There are no examples that are fully worked out so that a student who was absent from class could go back and try and learn the material on their own.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Cengage Learning - *
Title:	Algebra and Trigonometry 9E
ISBN #	978-1-133-95096-7
Grade Level(s) or Course:	9-12
Reviewer ID:	MB + JB

RECOMMENDED AS:

_✓_ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Materials address the Widely Applicable Prerequisites throughout. The problems are at a level of sophistication appropriate to high school students.

COHERENCE- Each lesson includes connections. For example, multiple representations (tables, graphs, equations). Connections are made to prior mathematics throughout.

RIGOR- Ample exercises that address procedural fluency and application, with varying degree of difficulty.

CONCEPTUAL UNDERSTANDING- While the text includes modeling problems, there is not enough opportunity to practice conceptual understanding.

MATHEMATICAL PRACTICES- mathematical practices are utilized but not specifically identified.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- This text is not designed for the general student population. The Teacher Edition does include suggestions, remarks, and exploration ideas that could be used.

OTHER: Well organized and logical. Meets the common core 4th year standards.

2015-1 nterim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: Cengage Learning, Inc

Title of Material: Algebra and Trigonometry 9E

Author: Ron Larson

Reviewer ID: MB & JB

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, High School

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Text utilizes widely applicable prerequisites—real numbers, quantities, algebra, functions, geometry, and some work with probability.	**_X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Students have to solve for missing sides and angles in right triangles. Students use algebra to verify trigonometric identities (sections 6.2, 7.2, 8.1, 8.2), Distance Formula (P6), and parallel and perpendicular lines (2.1)	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Use of ratio and proportion to solve right triangles (6.2). Use of unit conversions to change between radians and degrees (6.1). Graph in context—Section 5.3 interpreting a graph in terms of astronomical units and also using geometric measurement. Angle measure section 6.1 Function concepts used throughout text. Probability including the Binomial Theorem, counting principles, and probability rules (sections 11.5-11.7). Rational number fluency expected throughout. Rational expressions (P5 extension of fraction concepts)	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Materials meet or exceed content in the standards. Complex numbers (section 1.5), Vectors (sections 8.3/8.4), Matrices (chapter 10), Systems of Equations (chapter 11), Logarithmic Functions (chapter 5), Composition of Functions (section 2.6), Inverse Functions (section 2.7), Trigonometric Functions and Identities (chapters 6 and 7), Conics (sections 4.3/4.4). Cavalieri's Principle is not addressed, however.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Texts contain problems of varying degree of difficulty. Plenty of opportunity for higher-performing students in "how do you see it" and many types of application problems. Most problem sets contain close to one hundred problems. There are both a Study Guide (for students) and a Note Taking Guide to accompany the text. These may be a way to differentiate course-level content.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Students use long division algorithm when dividing polynomials (section 3.3). Materials connect the equation of a circle with the equation for an ellipse (section 4.3). In Chapter 3, students start with quadratics and move higher-degree polynomials. Prerequisite chapter reviews main concepts before students begin the rest of the course.	**_X___Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** While the text doesn't clearly state "seeing structure in expressions" or other domain headings, the text, TE, student Study Guide, and student Note Taking guide, has objectives shaped by CCSSM domain headings. For example, section 4.1 Rational Functions has the objectives, 1) find the domain of rational functions, 2) find vertical and horizontal asymptotes, 3) use rational functions to model and solve real life problems. These objectives correlate to F-IF.C.7.D and F-BF.A	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each lesson includes connections. For example, in the Graphs of Equations section 1.1, students are asked to construct a table, draw and use a graph from the information in the table, and then interpret he information. Connections to algebra and prior mathematics are used throughout.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Metric NN 1:** If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses** Strengths: high level of rigor in exercises and applications. Knowledge of prior math and ability to apply is essential. Weaknesses: their aren't clear CCSS headings as seen in lower level (algebra & geometry) texts

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is applied to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**".Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric.** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Conceptual understanding is adhered to throughout the materials. For example, standard F.IF.A.1 is addressed in section 2.2. Students have to find domain & range and how to use function notation.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Fluency expectations visible throughout exercise sets. Also included—"Think about it" questions. Example: "the graph of |x-5|<3 can be described as all real numbers less than three units from 5. Give a similar description of |x-10|<8." SectionP1	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Example: "match the description of the situation with its graph" (section 2.5). In section 2.2, students have to find the domain and range of different representations, such as graph, table, verbal description, and equation.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Each exercise set includes skill and application problems, exploration problems, and interpretation problems. Problems have a varying degree of difficulty. For example A-APR.A.1 is addressed in section P.3. Students are asked to perform addition, subtraction, multiplication and division of polynomials.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** Text provides opportunities for opportunistic strategies. Application problems follow procedural generic cases.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there simple- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Example: "The length and width of a rectangular garden are 15 m and 10 m respectively. A walkway of width x surrounds the garden. (a) draw a diagram that gives a visible representation (b) write the equation for the perimeter y in terms of x (c) use a graphing utility to graph the equation for the perimeter (d) determine the slope of the graph in part (c). For each additional one-meter increase in the width of the walkway, determine the increase in perimeter."	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Example—students must use applications from geometry and algebra to determine the maximum volume of a can. Referring to N-Q-A , linear, quadratic, exponential models are used throughout.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Many examples throughout the text. For example, in section 5.5 students are asked to compare models for compound interest and interpret the results. In section 11.6 (counting principles) students have an application related to law enforcement in which they may determine the number of different faces that a software program can produce.	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

_X___Meets 6 points

____Does Not Meet

Strengths/Weaknesses:
Strengths: many problems utilizing procedural fluency and application.

Weaknesses: there could be more conceptual understanding questions.

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Example: students encounter several examples of translations of functions and can then generalize an equation for a particular function (section 2.5). As stated in the criteria F-BF and F-LE are particularly important. F-BF focuses on building functions. This is seen in creating functions to model real life scenarios as well as combining functions. Sections 1.3, 2.6, and 6.7 have examples. F-LE focuses on constructing and comparing linear, exponential, and quadratic functions. Each type of function is discussed—however, students are not asked to determine which type of function would best model the data.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	Example—see above. Students look for and express regularity in repeated reasoning. This is one of several examples.	**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **___Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Practice standards not explicitly stated but are implied and utilized throughout.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** A teacher would need to be familiar with the practice standards to know that they were being used throughout the text. Practice standard alignment is not very clear.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **_ X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Students are given opportunities to construct arguments and reasoning with mathematics.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Students have opportunities to create and interpret diagrams, to use mathematical models in problem solving, and to provide explanations for their mathematical thinking. Each section has an exploration section at the end of the assignment. Often these exercises ask students to construct arguments when answering true/false questions. Students are also asked to apply their knowledge in a different way when completing these questions. However, when an assignment section contains nearly 100 problems, it would be easy for an instructor to overlook or omit these types of problems.	

Do materials explicitly attend to the specialized language of mathematics, the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Clear use of mathematical language throughout. Student Study Guide and student Note Taking Guide also include specific vocabulary sections.	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets 5 points** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: reasoning is clearly emphasized Weaknesses: difficult to identify utilization of practice standards
Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** One has to visit the website www.LarsonPrecalculus.com for tutorials with Spanish audio.	**____Meets (2)** **_X___Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The text is not designed for the general student population, but for a more specific group—namely college-level or college bound. Differentiation for students needing support is found in the student Study Guide. Assignment sections start with basic problems and move to more difficult ones.	**__X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Material in the text could be presented with a mix of instructional approaches. TE includes remarks, suggestions, project ideas, and exploration ideas that could be used in instruction. Examples in the book offer opportunities to check for understanding. Student Study Guide offers other learning strategies.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__X__Meets 5 points** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: variety of instructional approaches available Weaknesses: difficult to access materials for ELL and other special populations

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** TE provides both teacher suggestions and support. Student Study Guide assists students with their own learning. Each lesson has multiple examples with an explanation. The lessons are thoughtfully structured and organized in a way that builds on prerequisite knowledge. For example, in section 8.1 (Law of Sines), explains oblique triangles, states law, multiple examples of solving for missing side, ambiguous case, example of each type, and application problems.	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Numerous problems and exercises in each assignment. Nearly 100 problems/exercises in each unit. In the lesson, problems are used to introduce and explain the new concepts. Assignments following the lesson contain practice exercises.	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** A very logical sequence of exercises is present in each lesson.	**(Reviewer only.)** **__X____ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** In addition to the text, there is a student Study Guide and student Note Taking Guide. Clear evidence focused on student ways of thinking. An example from the Study Guide: "You may be thinking, 'why don't I just graph polynomials on my calculator? Why do I have to mess with the steps in the text'?" The Guide then goes on to explain why graphing polynomials by hand is important. In the TE, there are side notes that include common errors, additional examples, and extra teacher explanations.	**(Reviewer only.)** **___X___ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** No manipulatives, other than a graphing calculator, appear to be used.	**(Reviewer only.)** _____ **Yes** ___X___ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Self-assessment is evident in the "Checkpoint" part of each lesson. Chapter reviews, chapter tests, cumulative reviews, and problem solving are included at the end of chapters. A separate test bank is also included in the materials. In the Student Study and Solution manual there are self-assessments at the end of each chapter with solutions and steps to the solutions. The test bank book includes 6 different forms for each chapter test, all in multiple choice format.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Testbank includes answer keys, but not scoring guidelines or rubrics.	**(Reviewer only.)** _____ **Yes** ___X___ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Course-level language is utilized throughout without bias.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Text is written by Ron Larson and he received assistance from David C. Falvo and there is an additional list of 22 reviewers.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Clear, free of clutter. Visuals are engaging—including color photographs and drawings related to the math content. Clear navigation and progression through text.	**(Reviewer only.)** ___X___ **Yes** _____ **No**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

___X__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

__X___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)**	**Points: __5___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points: _5____ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
____X___ Meets	**____X___ Meets**	**___X____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

- text includes a high level of rigor
- ample problems and exercises
- procedural and application exercises
- well-organized and logical structure
- visually appealing
- meets CCSSM 4th year standards

Weaknesses:

- practice standards and state standards are not readily identifiable
- lacking conceptual understanding problems
- little support for ELL and other special populations
- assessments do not include rubrics are only in multiple-choice format

IDAHO STATE DEPARTMENT OF EDUCATION

Advanced Placement Course: Calculus AB & BC

Content Area: _____

Course Title: _____

Title of Material: Calculus, 10/E, AP® Edition

Author: Larson

Publisher: Cengage

ISBN #: 9781285060309 **Copyright** 2014

Reviewers: C M, P.P

Meets Content Standards Alignment: X **Yes** _____ **No**

Meets Materials Analysis Evaluation: X **Yes** _____ **No**

94.3% **Core Program**

_____ **Other Program**

_____ **Resource/Supplemental**

_____ **Not Recommended**

Advanced Placement:

- ☐ AP Capstone
- ☐ Arts
- ☐ English
- ☐ History & Social Science
- ☐ Math & Computer Science
- ☐ Sciences
- ☐ World Languages & Cultures

Standards Alignment Evaluation Rubric

0 = No Alignment– **Not Evident:** Content as described in the Standards is **not evident**.

.5 = Partial Alignment- **Partially Evident:** Content as described in the Standards is **partially evident** and there are few gaps.

1 = High Alignment – **Clearly Evident:** Content is fully aligned as described in the Standards and repeatedly included to guarantee extensive opportunities for students to work with the content. Alignment is **clearly evident**.

N/A = Not applicable for standard

Note: In the Concept Outline, subject matter that is included only in the BC course is indicated with blue shading.

<tr><td colspan="5">Big Idea 1: Limits
Many calculus concepts are developed by first considering a discrete model and then the consequences of a limiting case. Therefore, the idea of limits is essential for discovering and developing important ideas, definitions, formulas, and theorems in calculus. Students must have a solid, intuitive understanding of limits and be able to compute various limits, including one-sided limits, limits at infinity, the limit of a sequence, and infinite limits. They should be able to work with tables and graphs in order to estimate the limit of a function at a point. Students should know the algebraic properties of limits and techniques for finding limits of indeterminate forms, and they should be able to apply limits to understand the behavior of a function near a point. Students must also understand how limits are used to determine continuity, a fundamental property of functions.</td></tr>

EU 1.1: The concept of a limit can be used to understand the behavior of functions.	**LO 1.1A (a):** Express limits symbolically using correct notation. **LO 1.1A (b):** Interpret limits expressed symbolically.	**EK 1.1A1:** Given a function f, the limit of $f(x)$ as x approaches c is a real number R if $f(x)$ can be made arbitrarily close to R by taking x sufficiently close to c (but not equal to c). If the limit exists and is a real number, then the common notation is $\lim_{x \to c} f(x) = R$. **EXCLUSION STATEMENT (EK 1.1A1):** The epsilon-delta definition of a limit is not assessed on the AP Calculus AB or BC Exam. However, teachers may include this topic in the course if time permits.	Pg 52	1
		EK 1.1A2: The concept of a limit can be extended to include one-sided limits, limits at infinity, and infinite limits.	Pgs. 72-73 (One sided limits and Continuity on a closed interval. Pgs 83-90 infinite Pg 195-205	1
		EK 1.1A3: A limit might not exist for some functions at particular values of . Some ways that the limit might not exist are if the function is unbounded, if the function is oscillating near this value, or if the limit from the left does not equal the limit from the right. **EXAMPLES OF LIMITS THAT DO NOT EXIST:** $\lim_{x \to 0} \frac{1}{x^2} = \infty$ $\lim_{x \to 0} \sin\left(\frac{1}{x}\right)$ *does not exist* $\lim_{x \to 0} \frac{\lvert x \rvert}{x}$ *does not exist* $\lim_{x \to 0} \frac{1}{x}$ *does not exist*	Pg 50-51	1
	LO 1.1B: Estimate limits of functions	**EK 1.1B1:** Numerical and graphical information can be used to estimate limits.	Pg 48-49	1

	LO 1.1C: Determine limits of functions.	**EK 1.1C1:** Limits of sums, differences, products, quotients, and composite functions can be found using the basic theorems of limits and algebraic rules.	Pgs 59-69, (Limits and Their properties) Pg 87 (Theorem 1.15)	1
		EK 1.1C2: The limit of a function may be found by using algebraic manipulation, alternate forms of trigonometric functions, or the squeeze theorem.	Pgs 59-69 (limits and their properties) Pg 87 (Theorem 1.15)	1
		EK 1.1C3: Limits of the indeterminate forms $\frac{0}{0}$ and $\frac{\infty}{\infty}$ may be evaluated using L'Hospital's Rule.	Pg 63, (Dividing Out Technique) Pgs 557-567 (Indeterminant Forms and L'Hopital's Rule).	1
	LO 1.1D: Deduce and interpret behavior of functions using limits.	**EK 1.1D1:** Asymptotic and unbounded behavior of functions can be explained and described using limits.	Pg 83-90 (Infinite Limits)	1
		EK 1.1D2: Relative magnitudes of functions and their rates of change can be compared using limits.	Pgs. 112-113	1
EU 1.2: Continuity is a key property of functions that is defined using limits	**LO 1.2A:** Analyze functions for intervals of continuity or points of discontinuity.	**EK 1.2A1:** A function f is continuous at $x=c$ provided that $f(c)$ exists, $\lim_{x\to c} f(x)$ exists, and $\lim_{x\to c} f(x) = f(c)$.	Pg 70 Definition of Continuity	1
		EK 1.2A2: Polynomial, rational, power, exponential, logarithmic, and trigonometric functions are continuous at all points in their domains.	Pg 75 - Properties of Continuity, (Section above Ex. 6).	1

		EK 1.2A3: Types of discontinuities include removable discontinuities, jump discontinuities, and discontinuities due to vertical asymptotes.	Pg. 71 (Example 1 and paragraph above Example 1).	1
	LO 1.2B: Determine the applicability of important calculus theorems using continuity.	**EK 1.2B1:** Continuity is an essential condition for theorems such as the Intermediate Value Theorem, the Extreme Value Theorem, and the Mean Value Theorem.	Pgs 77-78 (The Intermediate Value Theorem. Pg 101 - Differentiability and Continuity. Pg 162 - Theorem 2.4 Extreme Value Theorem. Pg 172 - Mean Value Theorem)	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 2: Derivatives Using derivatives to describe the rate of change of one variable with respect to another variable allows students to understand change in a variety of contexts. In AP Calculus, students build the derivative using the concept of limits and use the derivative primarily to compute the instantaneous rate of change of a function. Applications of the derivative include finding the slope of a tangent line to a graph at a point, analyzing the graph of a function (for example, determining whether a function is increasing or decreasing and finding concavity and extreme values), and solving problems involving rectilinear motion. Students should be able to use different definitions of the derivative, estimate derivatives from tables and graphs, and apply various derivative rules and properties. In addition, students should be able to solve separable differential equations, understand and be able to apply the Mean Value Theorem, and be familiar with a variety of real-world applications, including related rates, optimization, and growth and decay models.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 2.1: The derivative of a function is defined as the limit of a difference quotient and can be determined using a variety of strategies.	**LO 2.1A:** Identify the derivative of a function as the limit of a difference quotient.	**EK 2.1A1:** The difference quotients $\frac{f(a+h)-f(a)}{h}$ and $\frac{f(x)-f(a)}{x-a}$ express the average rate of change of a function over an interval.	Pg 97 (top). Pg 99 (The Dereviative Function	1

		EK 2.1A2: The instantaneous rate of change of a function at a point can be expressed by $\lim_{h\to 0}\frac{f(a+h)-f(a)}{h}$ or $\lim_{x\to a}\frac{f(x)-f(a)}{x-a}$, provided that the limit exists. These are common forms of the definition of the derivative and are denoted $f'(a)$.	Pg 99 (The derivative of a Function)	1
		EK 2.1A3: The derivative of f is the function whose value at x is $\lim_{h\to 0}\frac{f(x+h)-f(x)}{h}$ provided this limit exists.	Pg 99 (The derivative of a Function)	1
		EK 2.1A4: For $y=f(x)$, notations for the derivative include $\frac{dy}{dx}$, $f'(x)$, and y'.	Pg 99 same as above.	1
		EK 2.1A5: The derivative can be represented graphically, numerically, analytically, and verbally.	Pgs 96-105 (The derivative and the Tangent Line Problem).	1
	LO 2.1B: Estimate derivatives.	**EK 2.1B1:** The derivative at a point can be estimated from information given in tables or graphs.	Pgs 96-98 (The Tangent Line Problem)	1
	LO 2.1C: Calculate derivatives.	**EK 2.1C1:** Direct application of the definition of the derivative can be used to find the derivative for selected functions, including polynomial, power, sine, cosine, exponential, and logarithmic functions.	Pgs 118-128 (Product and Quotient Rules and Higher Order Derivatives) Pg 129-139 (Chain Rule); Pg 369 (Derivatives of Inverse Trig Functions)	1
		EK 2.1C2: Specific rules can be used to calculate derivatives for classes of functions, including polynomial, rational, power, exponential, logarithmic, trigonometric, and inverse trigonometric.	Pgs 106-117 (Basic Differentiation Rules and Rates of Change) Pg 322-323 (Derivative of the Natural Logarithmic Function) Pgs 348-349 (Derivatives of Exponential Functions).	1

		EK 2.1C3: Sums, differences, products, and quotients of functions can be differentiated using derivative rules.	Pgs 106-117 (Basic Differentiation Rules and Rates of Change) Pg 118-128, (Product and Quotient Rules and Higher-Order Derivatives)	1
		EK 2.1C4: The chain rule provides a way to differentiate composite functions.	Pgs 129-139 (The chain Rule)	1
		EK 2.1C5: The chain rule is the basis for implicit differentiation.	Pgs 140-147, Implicit Differentiation	1
		EK 2.1C6: The chain rule can be used to find the derivative of an inverse function, provided the derivative of that function exists.	Pgs 341-342, - Derivative of an Inverse Function	1
		EK 2.1C7: (BC) Methods for calculating derivatives of realvalued functions can be extended to vector-valued functions, parametric functions, and functions in polar coordinates.	Pgs 706-708, Parametric Pgs 719-720, Polar Pgs 824-827, Vector-Valued Functions	1

	LO 2.1D: Determine higher order derivatives.	**EK 2.1D1:** Differentiating f' produces the second derivative f'', provided the derivative of f' exists; repeating this process produces higher order derivatives of f.	Pg 124, Higher-Order Derivatives	1
		EK 2.1D2: Higher order derivatives are represented with a variety of notations. For $y = f(x)$, notations for the second derivative include $\frac{d^2y}{dx^2}$, $f''(x)$, and y''. Higher order derivatives can be denoted $\frac{d^ny}{dx^n}$ or $f^{(n)}(x)$.	Pg 124, Higher-Order Derivatives	1
EU 2.2: A function's derivative, which is itself a function, can be used to understand the behavior of the function.	**LO 2.2A:** Use derivatives to analyze properties of a function.	**EK 2.2A1:** First and second derivatives of a function can provide information about the function and its graph including intervals of increase or decrease, local (relative) and global (absolute) extrema, intervals of upward or downward concavity, and points of inflection.	Pgs 177-186, Increasing/Decreasing Functions and First Derivative Test Pgs 187-194, Concavity and the Second Derivative Test	1
		EK 2.2A2: Key features of functions and their derivatives can be identified and related to their graphical, numerical, and analytical representations.	Pgs 187-214, Concavity, Second Derivative Test, Limits at Infinity, A Summary of Curve Sketching.	1
		EK 2.2A3: Key features of the graphs of f, f', and f'' are related to one another.	Pgs. 206-214 A Summary of curve sketching.	1
		EK 2.2A4: (BC) For a curve given by a polar equation $r = f(\theta)$, derivatives of r, x, and y with respect to θ and first and second derivatives of y with respect to x can provide information about the curve.	Pgs 719-720 Slope and Tangent Lines * Can not find reference to the second derivative.*	.5

	LO 2.2B: Recognize the connection between differentiability and continuity.	**EK 2.2B1:** A continuous function may fail to be differentiable at a point in its domain.	Pgs 101-102, Differentiability and Continuity, more specific AbsoluteValue	1
		EK 2.2B2: If a function is differentiable at a point, then it is continuous at that point.	Pg 101-102, Differentiability and Continuity=Theorem 2.1	1
EU 2.3: The derivative has multiple interpretations and applications including those that involve instantaneous rates of change.	**LO 2.3A:** Interpret the meaning of a derivative within a problem.	**EK 2.3A1:** The unit for $f'(x)$ is the unit for f divided by the unit for x.	None.	0
		EK 2.3A2: The derivative of a function can be interpreted as the instantaneous rate of change with respect to its independent variable.	Pg 99, Derivative of a Function	1
	LO 2.3B: Solve problems involving the slope of a tangent line.	**EK 2.3B1:** The derivative at a point is the slope of the line tangent to a graph at that point on the graph.	Pg 96-98, The Tangent Line Problem	1
		EK 2.3B2: The tangent line is the graph of a locally linear approximation of the function near the point of tangency.	Pgs 96-98, The Tangent Line Problem	1
	LO 2.3C: Solve problems involving related rates, optimization, rectilinear motion, (BC) and planar motion.	**EK 2.3C1:** The derivative can be used to solve rectilinear motion problems involving position, speed, velocity, and acceleration.	Pgs 112-113 Rates of Change Pgs 148-156 Related Rates Pg 173 Example 4	1

		EK 2.3C2: The derivative can be used to solve related rates problems, that is, finding a rate at which one quantity is changing by relating it to other quantities whose rates of change are known.	Pgs 148-156 Related Rates	1
		EK 2.3C3: The derivative can be used to solve optimization problems, that is, finding a maximum or minimum value of a function over a given interval.	Pgs 215-224 Optimization Problems	1
		EK 2.3C4: (BC) Derivatives can be used to determine velocity, speed, and acceleration for a particle moving along curves given by parametric or vector-valued functions.	Pgs 832-840 Velocity and Acceleration	1
	LO 2.3D: Solve problems involving rates of change in applied contexts.	**EK 2.3D1:** The derivative can be used to express information about rates of change in applied contexts.	Pgs 112-113 Rates of Change Pgs 148-156 Related Rates Pg 173 Example 4	1
	LO 2.3E: Verify solutions to differential equations.	**EK 2.3E1:** Solutions to differential equations are functions or families of functions.	Pgs 400-401 Slope Fields Pgs 425 Example 2	1
		EK 2.3E2: Derivatives can be used to verify that a function is a solution to a given differential equation.	Pg 398 Example 1	1
	LO 2.3F: Estimate solutions to differential equations.	**EK 2.3F1:** Slope fields provide visual clues to the behavior of solutions to first order differential equations.	Pgs 400-401 Slope Fields	1

		EK 2.3F2: (BC) For differential equations, Euler's method provides a procedure for approximating a solution or a point on a solution curve.	Pg 402, Euler's Methods	1
EU 2.4: The Mean Value Theorem connects the behavior of a differentiable function over an interval to the behavior of the derivative of that function at a particular point in the interval.	**LO 2.4A:** Apply the Mean Value Theorem to describe the behavior of a function over an interval.	**EK 2.4A1:** If a function f is continuous over the interval $[a, b]$ and differentiable over the interval (a, b), the Mean Value Theorem guarantees a point within that open interval where the instantaneous rate of change equals the average rate of change over the interval.	Pgs 172-173 The Mean Value Theorem	1

Standards & Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 3: Integrals and the Fundamental Theorem of Calculus Integrals are used in a wide variety of practical and theoretical applications. AP Calculus students should understand the definition of a definite integral involving a Riemann sum, be able to approximate a definite integral using different methods, and be able to compute definite integrals using geometry. They should be familiar with basic techniques of integration and properties of integrals. The interpretation of a definite integral is an important skill, and students should be familiar with area, volume, and motion applications, as well as with the use of the definite integral as an accumulation function. It is critical that students grasp the relationship between integration and differentiation as expressed in the Fundamental Theorem of Calculus — a central idea in AP Calculus. Students should be able to work with and analyze functions defined by an integral.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 3.1: Antidifferentiation is the inverse process of differentiation.	**LO 3.1A:** Recognize antiderivatives of basic functions.	**EK 3.1A1:** An antiderivative of a function f is a function g whose derivative is f.	Pgs 244 Antiderivatives	1
		EK 3.1A2: Differentiation rules provide the foundation for finding antiderivatives.	Pgs 246-248 Basic Integration Rules	1
EU 3.2: The definite integral of a function over an interval is the limit of a Riemann sum over that interval and can be calculated using a variety of strategies	**LO 3.2A(a):** Interpret the definite integral as the limit of a Riemann sum.	**EK 3.2A1:** A Riemann sum, which requires a partition of an interval , is the sum of products, each of which is the value of the function at a point in a subinterval multiplied by the length of that subinterval of the partition.	Pgs 266-267 Riemann Sums	1

	LO 3.2A(b): Express the limit of a Riemann sum in integral notation.	**EK 3.2A2:** The definite integral of a continuous function f over the interval $[a, b]$, denoted by $\int_a^b f(x)dx$, is the limit of Riemann sums as the widths of the subintervals approach 0. That is, $\int_a^b f(x)dx = \lim_{\max \Delta x_i \to 0} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$ where x_i^* is a value in the ith subinterval, Δx_i is the width of the ith subinterval, n is the number of subintervals, and $\max \Delta x_i$ is the width of the largest subinterval. Another form of the definition is $\int_a^b f(x)dx = \lim_{n \to \infty} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$, where $\Delta x_i = \frac{b-a}{n}$ and x_i^* is a value in the ith subinterval.	Pgs 268-270 Definite Integrals	1
		EK 3.2A3: The information in a definite integral can be translated into the limit of a related Riemann sum, and the limit of a Riemann sum can be written as a definite integral.	Pgs 268-270 Definite Integrals.	1
	LO 3.2B: Approximate a definite integral.	**EK 3.2B1:** Definite integrals can be approximated for functions that are represented graphically, numerically, algebraically, and verbally.	Pg. 281 Average Value of a Function Pgs. 305-307 The Trapezoid Rule. Pgs. 307-308 Simpson's Rule	1
		EK 3.2B2: Definite integrals can be approximated using a left Riemann sum, a right Riemann sum, a midpoint Riemann sum, or a trapezoidal sum; approximations can be computed using either uniform or nonuniform partitions.	Pgs. 305-307 The Trapezoid Rule Pgs 307-308 Simpson's Rule.	1

	LO 3.2C: Calculate a definite integral using areas and properties of definite integrals.	**EK 3.2C1:** In some cases, a definite integral can be evaluated by using geometry and the connection between the definite integral and area.	Pgs 269-270 Theorem 4.5 and Example 3	1
		EK 3.2C2: Properties of definite integrals include the integral of a constant times a function, the integral of the sum of two functions, reversal of limits of integration, and the integral of a function over adjacent intervals.	Pgs 271-272 Properties of Definite Integrals Pgs 292-304 Integration by Substitution Pgs 515-523 Integration by Parts	1
		EK 3.2C3: The definition of the definite integral may be extended to functions with removable or jump discontinuities.	Not found.	0
	LO 3.2D: (BC) Evaluate an improper integral or show that an improper integral diverges.	**EK 3.2D1:** (BC) An improper integral is an integral that has one or both limits infinite or has an integrand that is unbounded in the interval of integration.	Pg 568, Definition of Improper Integrals with Infinite Integral Limits.	1
		EK 3.2D2: (BC) Improper integrals can be determined using limits of definite integrals.	Pg 568-578 Improper Integrals.	1

EU 3.3: The Fundamental Theorem of Calculus, which has two distinct formulations, connects differentiation and integration.	**LO 3.3A:** Analyze functions defined by an integral.	**EK 3.3A1:** The definite integral can be used to define new functions; for example, $f(x)=\int_a^x e^{-t^2}dt$.	Pgs 283–285 The Second Fundemental Theorem of Calculus	1
		EK 3.3A2: If f is a continuous function on the interval $[a, b]$, then $\frac{d}{dx}\left(\int_a^x f(t)dt\right)=f(x)$, where x is between a and b.	Pgs 283-285 The Second Fundemental Theorem of Calculus-Theorem 4.11	1
		EK 3.3A3: Graphical, numerical, analytical, and verbal representations of a function f provide information about the function g defined as $g(x)=\int_a^x f(t)dt$.	Pgs 277-291 Fundemental Theorem of Calculus.	1
	LO 3.3B(a): Calculate antiderivatives.	**EK 3.3B1:** The function defined by $F(x)=\int_a^x f(t)dt$ is an antiderivative of f.	Pg 244 Antiderivatives	1
	LO 3.3B(b): Evaluate definite integrals.	**EK 3.3B2:** If f is continuous on the interval $[a, b]$ and F is an antiderivative of f, then $\int_a^b f(x)dx=F(b)-F(a)$.	Pgs 277-279 Fundamental Theorem of Calculus	1
		EK 3.3B3: The notation $\int f(x)dx=F(x)+C$ means that $F'(x)=f(x)$, and $\int f(x)dx$ is called an indefinite integral of the function f.	Pg 245 bottom of the page	1
		EK 3.3B4: Many functions do not have closed form antiderivatives.	Pg 245 bottom of the page	1

		EK 3.3B5: Techniques for finding antiderivatives include algebraic manipulation such as long division and completing the square, substitution of variables, (BC) integration by parts, and nonrepeating linear partial fractions.	Pgs 375-382 Inverse Trig Functions Pgs 508-514 Basic Integration Pgs 551-556 Integration by Tables and Other Integration Techniques	1
EU 3.4: The definite integral of a function over an interval is a mathematical tool with many interpretations and applications involving accumulation.	**LO 3.4A:** Interpret the meaning of a definite integral within a problem.	**EK 3.4A1:** A function defined as an integral represents an accumulation of a rate of change.	Pg 441 Intergration as an Accumulation Process	1
		EK 3.4A2: The definite integral of the rate of change of a quantity over an interval gives the net change of that quantity over that interval.	Pgs 286-287 Net Change Theorem	1
		EK 3.4A3: The limit of an approximating Riemann sum can be interpreted as a definite integral.	Pgs 268-270 Definite Integrals	1
	LO 3.4B: Apply definite integrals to problems involving the average value of a function.	**EK 3.4B1:** The average value of a function f over an interval $[a, b]$ is $\frac{1}{b-a}\int_a^b f(x)dx$.	Pg 281 Average Value of a Function.	1
	LO 3.4C: Apply definite integrals to problems involving motion.	**EK 3.4C1:** For a particle in rectilinear motion over an interval of time, the definite integral of velocity represents the particle's displacement over the interval of time, and the definite integral of speed represents the particle's total distance traveled over the interval of time.	Pg 250, Example 9 - Solving Vertical motion. Pg 282, Ex. 5 - speed of sound. Pg 287, Ex. 10 - Solving a particle in motion	1

		EK 3.4C2: (BC) The definite integral can be used to determine displacement, distance, and position of a particle moving along a curve given by parametric or vector-valued functions.	Pg 702, The Tautochrone and Barchistochrone Problems Pg 729 Arc Length in Polar Form Pgs 836-837 Projectile Motion	|
	LO 3.4D: Apply definite integrals to problems involving area, volume, (BC) and length of a curve.	**EK 3.4D1:** Areas of certain regions in the plane can be calculated with definite integrals. (BC) Areas bounded by polar curves can be calculated with definite integrals	Pg 270 Area of Common Geometric Figures Pg 436-445 Area of a Region Between Two Curves	|
		EK 3.4D2: Volumes of solids with known cross sections, including discs and washers, can be calculated with definite integrals.	Pgs 446-456 Volume: Disk Method Pgs 457-465 Volume: Shell Method	|
		EK 3.4D3: (BC) The length of a planar curve defined by a function or by a parametrically defined curve can be calculated using a definite integral.	Pg 729, Arc Length in Polar Form	|
	LO 3.4E: Use the definite integral to solve problems in various contexts.	**EK 3.4E1:** The definite integral can be used to express information about accumulation and net change in many applied contexts.	Pgs 286-287 Net change Theorem Pgs 441 - Integration as an Accumulation Process	|

EU 3.5: Antidifferentiation is an underlying concept involved in solving separable differential equations. Solving separable differential equations involves determining a function or relation given its rate of change.	**LO 3.5A:** Analyze differential equations to obtain general and specific solutions.	**EK 3.5A1:** Antidifferentiation can be used to find specific solutions to differential equations with given initial conditions, including applications to motion along a line, exponential growth and decay, (BC) and logistic growth.	Pg 249 Initial Conditions and Particular Solutions Pg 398-406 Slope Fields and Eulers Method Pgs 415-423 Separation of Variables and the Logistic Equation	1
		EK 3.5A2: Some differential equations can be solved by separation of variables.	Pg 415-418 Separation of Variables	1
		EK 3.5A3: Solutions to differential equations may be subject to domain restrictions.	Pgs 407-414 Differential Equations Growth and Decay. Pgs 415-423 Separation of Variables and Logistic Equations.	1
		EK 3.5A4: The function F defined by $F(x)=c+\int_a^x f(t)dt$ is a general solution to the differential equation $\frac{dy}{dx}=f(x)$, and $F(x)=y_0+\int_a^x f(t)dt$ is a particular solution to the differential equation $\frac{dy}{dx}=f(x)$ satisfying $F(a)=y_0$.	Pg 249 Initial Conditions and Particular Solutions Pg 398-399 General and Particular Solutions	1
	LO 3.5B: Interpret, create and solve differential equations from problems in context.	**EK 3.5B1:** The model for exponential growth and decay that arises from the statement "The rate of change of a quantity is proportional to the size of the quantity" is $\frac{dy}{dt}=ky$.	Pgs 408-411 Growth and Decay Models	1
		EK 3.5B2: (BC) The model for logistic growth that arises from the statement "The rate of change of a quantity is jointly proportional to the size of the quantity and the difference between the quantity and the carrying capacity" is $\frac{dy}{dt}=ky(a-y)$.	Pg 419-420 Logistics Differential Equations	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 4: Series (BC) The AP Calculus BC curriculum includes the study of series of numbers, power series, and various methods to determine convergence or divergence of a series. Students should be familiar with Maclaurin series for common functions and general Taylor series representations. Other topics include the radius and interval of convergence and operations on power series. The technique of using power series to approximate an arbitrary function near a specific value allows for an important connection to the tangent-line problem and is a natural extension that helps achieve a better approximation. The concept of approximation is a common theme throughout AP Calculus, and power series provide a unifying, comprehensive conclusion.				
Enduring Understandings (Students will understand that...)	**Learning Objectives** (Students will be able to...)	**Essential Knowledge** (Students will know that...)		
EU 4.1: The sum of an infinite number of real numbers may converge.	**LO 4.1A:** Determine whether a series converges or diverges.	**EK 4.1A1:** The nth partial sum is defined as the sum of the first n terms of a sequence.	Pg 595, Definitions of Convergent and Divergent Series	1
		EK 4.1A2: An infinite series of numbers converges to a real number S (or has sum S), if and only if the limit of its sequence of partial sums exists and equals S.	Pg 595,	1
		EK 4.1A3: Common series of numbers include geometric series, the harmonic series, and p-series.	Pg 597 Geometric Series Pg 607 p-Series and Harmonic Pg 611 Harmonic Series	1
		EK 4.1A4: A series may be absolutely convergent, conditionally convergent, or divergent.	Pgs 595-604 Convergent and Series Pgs 622-623 Absolute and Conditional Convergence	1
		EK 4.1A5: If a series converges absolutely, then it converges.	Pg 622 Definitions of Absolute and Conditional Convergence	1

		EK 4.1A6: In addition to examining the lim[illegible]f the sequence of partial sums of the series, methods for determining whether a series of numbers converges or diverges are the nth term test, the comparison test, the limit comparison test, the integral test, the ratio test, and the alternating series test. **EXCLUSION STATEMENT (EK 4.1A6):** *Other methods for determining convergence or divergence of a series of numbers are not assessed on the AP Calculus AB or BC Exam. However, teachers may include these topics in the course if time permits.*	Pgs 599-606 nth Term Test for Divergence. Pgs 614-615 Limit Comparison Test Pgs 631-632 Strategies for Testing Series	1
	LO 4.1B: Determine or estimate the sum of a series.	**EK 4.1B1:** If a is a real number and r is a real number such that $\|r\| < 1$, then the geometric series $\sum_{n=0}^{\infty} ar^n = \frac{a}{1-r}$.	Pg 597 Geometric Series Theorem 9.6	1
		EK 4.1B2: If an alternating series converges by the alternating series test, then the alternating series error bound can be used to estimate how close a partial sum is to the value of the infinite series.	Pg 621 Alternating Series Remainder	1
		EK 4.1B3: If a series converges absolutely, then any series obtained from it by regrouping or rearranging the terms has the same value.	Pg 624 Rearrangement of Series	1

EU 4.2: A function can be represented by an associated power series over the interval of convergence for the power series.	**LO 4.2A:** Construct and use Taylor polynomials.	**EK 4.2A1:** The coefficient of the nth-degree term in a Taylor polynomial centered at $x = a$ for the function f is $\frac{f^{(n)}(a)}{n!}$.	Pgs 638 Taylor and Maclaurin Polynomials	1
		EK 4.2A2: Taylor polynomials for a function f centered at $x = a$ can be used to approximate function values of f near $x = a$.	Pgs 636-637 Polynomial Approx. of Elementary Functions	1
		EK 4.2A3: In many cases, as the degree of a Taylor polynomial increases, the nth-degree polynomial will converge to the original function over some interval.	Pg 666 Theorem 9.23 and its Proof	1
		EK 4.2A4: The Lagrange error bound can be used to bound the error of a Taylor polynomial approximation to a function.	Pg 642 Remainder of a Taylor Polynomial and Theorem 9.19	1
		EK 4.2A5: In some situations where the signs of a Taylor polynomial are alternating, the alternating series error bound can be used to bound the error of a Taylor polynomial approximation to the function.		0
	LO 4.2B: Write a power series representing a given function.	**EK 4.2B1:** A power series is a series of the form $\sum_{n=0}^{\infty} a_n(x-r)^n$ where n is a non-negative integer, $\{a_n\}$ is a sequence of real numbers, and r is a real number.	Pg 647 Power Series	1
		EK 4.2B2: The Maclaurin series for $\sin(x)$, $\cos(x)$, and e^x provide the foundation for constructing the Maclaurin series for other functions.	Pg 664-675 Taylor and Maclaurin Polynomials	1

		EK 4.2B3: The Maclaurin series for $\frac{1}{1-x}$ is a geometric series.	No	0
		EK 4.2B4: A Taylor polynomial for $f(x)$ is a partial sum of the Taylor series for $f(x)$.	No	0
		EK 4.2B5: A power series for a given function can be derived by various methods (e.g., algebraic processes, substitutions, using properties of geometric series, and operations on known series such as term-byterm integration or term-by-term differentiation).	Pg 647-656 Power Series Pg 657-664 Representations of Functions by Power Series.	1
	LO 4.2C: Determine the radius and interval of convergence of a power series.	**EK 4.2C1:** If a power series converges, it either converges at a single point or has an interval of convergence.	Pg 648, Theorem 9.20	1
		EK 4.2C2: The ratio test can be used to determine the radius of convergence of a power series.	Pg 649 Ex 2, 3, 4	1
		EK 4.2C3: If a power series has a positive radius of convergence, then the power series is the Taylor series of the function to which it converges over the open interval.	Pg 664 Theorem 9.22	1
		EK 4.2C4: The radius of convergence of a power series obtained by term-by-term differentiation or term-by-term integration is the same as the radius of convergence of the original power series.	Pg 652 Differentiation and Integration of Power Series and Theorem 9.21	1

Indicators of Quality:

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Pacing Guides, tips are given in the Teacher Resource.	(Reviewer only.) X Yes ____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Sect 4.4- Problem set starts with skill problems, moving into problem solving and applying concepts in "How Do You See It"	(Reviewer only.) X Yes ____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- See above	(Reviewer only.) X Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Tips, Common student errors, Suggest assignments.	(Reviewer only.) X Yes ____ No

5. Manipul[illegible]es suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** None given. This is a College Level Course.	**(Reviewer only.)** _____ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** "How Do You See It", Test Banks. Homework Quizzes are resources used throughout the book and Teacher Book.	**(Reviewer only.)** _X_ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** College Level Course.	**(Reviewer only.)** _____ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-**	**(Reviewer only.)** _X_ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Yes,	**(Reviewer only.)** _X_ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Yes. Table of Contents is clearly marked. assigments follow each section. Practice Tests at end of chapter	**(Reviewer only.)** _X_ **Yes** _____ **No**

COMMENTS:

STRENGTHS	WEAKNESSES
• Writing opportunities in "How Do You See It". There are exercises throughout each section that have students explain the concepts. •	• Looks like a college text book that might not engage High School students.

Big Idea 1: Limits

Many calculus concepts are developed by first considering a discrete model and then the consequences of a limiting case. Therefore, the idea of limits is essential for discovering and developing important ideas, definitions, formulas, and theorems in calculus. Students must have a solid, intuitive understanding of limits and be able to compute various limits, including one-sided limits, limits at infinity, the limit of a sequence, and infinite limits. They should be able to work with tables and graphs in order to estimate the limit of a function at a point. Students should know the algebraic properties of limits and techniques for finding limits of indeterminate forms, and they should be able to apply limits to understand the behavior of a function near a point. Students must also understand how limits are used to determine continuity, a fundamental property of functions.

Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		

EU 1.1: The concept of a limit can be used to understand the behavior of functions.	**LO 1.1A (a):** Express limits symbolically using correct notation. **LO 1.1A (b):** Interpret limits expressed symbolically.	**EK 1.1A1:** Given a function f, the limit of $f(x)$ as x approaches c is a real number R if $f(x)$ can be made arbitrarily close to R by taking x sufficiently close to c (but not equal to c). If the limit exists and is a real number, then the common notation is $\lim_{x \to c} f(x) = R$. **EXCLUSION STATEMENT (EK 1.1A1):** The epsilon-delta definition of a limit is not assessed on the AP Calculus AB or BC Exam. However, teachers may include this topic in the course if time permits.	Pg 72, 1.7, "Precise Definition of a Limit." Pg 50-62 Pg 81, Exercises 1-9	)
		EK 1.1A2: The concept of a limit can be extended to include one-sided limits, limits at infinity, and infinite limits.	Pgs 50-59, 231-247, pg 80-82	)
		EK 1.1A3: A limit might not exist for some functions at particular values of . Some ways that the limit might not exist are if the function is unbounded, if the function is oscillating near this value, or if the limit from the left does not equal the limit from the right. **EXAMPLES OF LIMITS THAT DO NOT EXIST:** $\lim_{x \to 0} \frac{1}{x^2} = \infty$ $\lim_{x \to 0} \sin\left(\frac{1}{x}\right)$ *does not exist* $\lim_{x \to 0} \frac{\lvert x \rvert}{x}$ *does not exist* $\lim_{x \to 0} \frac{1}{x}$ *does not exist*	Pg 52, Example 2 Pg 53 Example 4	)
	LO 1.1B: Estimate limits of functions	**EK 1.1B1:** Numerical and graphical information can be used to estimate limits.	P 50-59 P 59-60 P 61, Exercises 27-28	)

	LO 1.1C: Determine limits of functions.	**EK 1.1C1:** Limits of sums, differences, products, quotients, and composite functions can be found using the basic theorems of limits and algebraic rules.	Pg 62-69, Calculating Limits Using Limit Laws.	1
		EK 1.1C2: The limit of a function may be found by using algebraic manipulation, alternate forms of trigonometric functions, or the squeeze theorem.	Pgs 62-69 Pg 69, Squeeze Theorem	1
		EK 1.1C3: Limits of the indeterminate forms $\frac{0}{0}$ and $\frac{\infty}{\infty}$ may be evaluated using L'Hospital's Rule.	Pg 491, 6.8: Indeterminant Forms and L'Hopital's Rule. Pgs 499-503	1
	LO 1.1D: Deduce and interpret behavior of functions using limits.	**EK 1.1D1:** Asymptotic and unbounded behavior of functions can be explained and described using limits.	Pg 56-59 Pg 59-62	1
		EK 1.1D2: Relative magnitudes of functions and their rates of change can be compared using limits.	Pgs 106-113	1
EU 1.2: Continuity is a key property of functions that is defined using limits	**LO 1.2A:** Analyze functions for intervals of continuity or points of discontinuity.	**EK 1.2A1:** A function f is continuous at $x = c$ provided that $f(c)$ exists, $\lim_{x \to c} f(x)$ exists, and $\lim_{x \to c} f(x) = f(c)$.	Pgs 82-91 Pgs 91-94	1
		EK 1.2A2: Polynomial, rational, power, exponential, logarithmic, and trigonometric functions are continuous at all points in their domains.	Pg 86-94	1

		EK 1.2A3: Types of discontinuities inclu[illegible]emovable discontinuities, jump discontinuities, and discontinuities due to vertical asymptotes.	Pgs 83-84, Example 1 Pgs 91-94, Exercises 5-8.	1
	LO 1.2B: Determine the applicability of important calculus theorems using continuity.	**EK 1.2B1:** Continuity is an essential condition for theorems such as the Intermediate Value Theorem, the Extreme Value Theorem, and the Mean Value Theorem.	Pg 90 - Intermediate Value Theorem Pg 206 - Extreme Value Theorem Pg 216 - Mean Value Theorem	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 2: Derivatives Using derivatives to describe the rate of change of one variable with respect to another variable allows students to understand change in a variety of contexts. In AP Calculus, students build the derivative using the concept of limits and use the derivative primarily to compute the instantaneous rate of change of a function. Applications of the derivative include finding the slope of a tangent line to a graph at a point, analyzing the graph of a function (for example, determining whether a function is increasing or decreasing and finding concavity and extreme values), and solving problems involving rectilinear motion. Students should be able to use different definitions of the derivative, estimate derivatives from tables and graphs, and apply various derivative rules and properties. In addition, students should be able to solve separable differential equations, understand and be able to apply the Mean Value Theorem, and be familiar with a variety of real-world applications, including related rates, optimization, and growth and decay models.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 2.1: The derivative of a function is defined as the limit of a difference quotient and can be determined using a variety of strategies.	**LO 2.1A:** Identify the derivative of a function as the limit of a difference quotient.	**EK 2.1A1:** The difference quotients $\frac{f(a+h)-f(a)}{h}$ and $\frac{f(x)-f(a)}{x-a}$ express the average rate of change of a function over an interval.	Pg 106-113 Exercises Pg 113-116.	1

		EK 2.1A2: The instantaneous rate of change of a function at a point can be expressed by $\lim_{h\to 0}\frac{f(a+h)-f(a)}{h}$ or $\lim_{x\to a}\frac{f(x)-f(a)}{x-a}$, provided that the limit exists. These are common forms of the definition of the derivative and are denoted $f'(a)$.	Pgs 106-113 Pgs 113-116	
		EK 2.1A3: The derivative of f is the function whose value at x is $\lim_{h\to 0}\frac{f(x+h)-f(x)}{h}$ provided this limit exists.	Pg 117-125 Pgs 125-130	
		EK 2.1A4: For $y=f(x)$, notations for the derivative include $\frac{dy}{dx}$, $f'(x)$, and y'.	Pgs 106-113	
		EK 2.1A5: The derivative can be represented graphically, numerically, analytically, and verbally.	Pg. 106-113	
	LO 2.1B: Estimate derivatives.	**EK 2.1B1:** The derivative at a point can be estimated from information given in tables or graphs.	Pgs 106-113	
	LO 2.1C: Calculate derivatives.	**EK 2.1C1:** Direct application of the definition of the derivative can be used to find the derivative for selected functions, including polynomial, power, sine, cosine, exponential, and logarithmic functions.	Polynomial Pg 106-113 Log Pgs 428-436 Trig 144-150 Power 792-797	
		EK 2.1C2: Specific rules can be used to calculate derivatives for classes of functions, including polynomial, rational, power, exponential, logarithmic, trigonometric, and inverse trigonometric.	see above	

		EK 2.1C3: Sums, differences, products, and quotients of functions can be differentiated using derivative rules.	Pgs 130-140	1
		EK 2.1C4: The chain rule provides a way to differentiate composite functions.	Pgs 152-158, Chain Rule	1
		EK 2.1C5: The chain rule is the basis for implicit differentiation.	Pgs 161-166, Implicit Differentiation	1
		EK 2.1C6: The chain rule can be used to find the derivative of an inverse function, provided the derivative of that function exists.	Pgs 400-406, Note 2	1
		EK 2.1C7: (BC) Methods for calculating derivatives of realvalued functions can be extended to vector-valued functions, parametric functions, and functions in polar coordinates.	Pgs 895-899 Vectors Pgs 698-708 Polars.	1

	LO 2.1D: Determine higher order derivatives.	**EK 2.1D1:** Differentiating f' produces the second derivative f'', provided the derivative of f' exists; repeating this process produces higher order derivatives of f.	Pg 117-125 Higher Derivatives Derivatives as a Function.	1
		EK 2.1D2: Higher order derivatives are represented with a variety of notations. For $y = f(x)$, notations for the second derivative include $\frac{d^2y}{dx^2}$, $f''(x)$, and y''. Higher order derivatives can be denoted $\frac{d^ny}{dx^n}$ or $f^{(n)}(x)$.	See above	1
EU 2.2: A function's derivative, which is itself a function, can be used to understand the behavior of the function.	**LO 2.2A:** Use derivatives to analyze properties of a function.	**EK 2.2A1:** First and second derivatives of a function can provide information about the function and its graph including intervals of increase or decrease, local (relative) and global (absolute) extrema, intervals of upward or downward concavity, and points of inflection.	See above	1
		EK 2.2A2: Key features of functions and their derivatives can be identified and related to their graphical, numerical, and analytical representations.	See above.	1
		EK 2.2A3: Key features of the graphs of f, f', and f'' are related to one another.	See above.	1
		EK 2.2A4: (BC) For a curve given by a polar equation $r = f(\theta)$, derivatives of r, x, and y with respect to θ and first and second derivatives of y with respect to x can provide information about the curve.	Pg 698-708 Tangents to Polar curves	1

	LO 2.2B: Recognize the connection between differentiability and continuity.	**EK 2.2B1:** A continuous function may fail to be differentiable at a point in its domain.	Pgs 122-123 Higher Derivatives Exercises 47-54 Pg 129	1
		EK 2.2B2: If a function is differentiable at a point, then it is continuous at that point.	See Above	1
EU 2.3: The derivative has multiple interpretations and applications including those that involve instantaneous rates of change.	**LO 2.3A:** Interpret the meaning of a derivative within a problem.	**EK 2.3A1:** The unit for $f'(x)$ is the unit for f divided by the unit for x.	Pg 106-113	1
		EK 2.3A2: The derivative of a function can be interpreted as the instantaneous rate of change with respect to its independent variable.	See above	1
	LO 2.3B: Solve problems involving the slope of a tangent line.	**EK 2.3B1:** The derivative at a point is the slope of the line tangent to a graph at that point on the graph.	See above	1
		EK 2.3B2: The tangent line is the graph of a locally linear approximation of the function near the point of tangency.	See above	1
	LO 2.3C: Solve problems involving related rates, optimization, rectilinear motion, (BC) and planar motion.	**EK 2.3C1:** The derivative can be used to solve rectilinear motion problems involving position, speed, velocity, and acceleration.	Pg 281-282	1

		EK 2.3C2: The derivative can be used to solve related rates problems, that is, finding a rate at which one quantity is changing by relating it to other quantities whose rates of change are known.	pgs 181-188 Related Rates	1
		EK 2.3C3: The derivative can be used to solve optimization problems, that is, finding a maximum or minimum value of a function over a given interval.	pg 258-270 Optimization Problems	1
		EK 2.3C4: (BC) Derivatives can be used to determine velocity, speed, and acceleration for a particle moving along curves given by parametric or vector-valued functions.	pg 108-116	1
	LO 2.3D: Solve problems involving rates of change in applied contexts.	**EK 2.3D1:** The derivative can be used to express information about rates of change in applied contexts.	pgs 169-181 - Rates of Change in the Natural and Social Sciences Extended also in Chapter 3	1
	LO 2.3E: Verify solutions to differential equations.	**EK 2.3E1:** Solutions to differential equations are functions or families of functions.	pg 131-144	1
		EK 2.3E2: Derivatives can be used to verify that a function is a solution to a given differential equation.	pg 630 Exercises 1-5	1
	LO 2.3F: Estimate solutions to differential equations.	**EK 2.3F1:** Slope fields provide visual clues to the behavior of solutions to first order differential equations.	pgs 631-639 Direction fields	1

		EK 2.3F2: (BC) For differential equations, Euler's method provides a procedure for approximating a solution or a point on a solution curve.	Pgs 635-639 Euler's Method	1
EU 2.4: The Mean Value Theorem connects the behavior of a differentiable function over an interval to the behavior of the derivative of that function at a particular point in the interval.	**LO 2.4A:** Apply the Mean Value Theorem to describe the behavior of a function over an interval.	**EK 2.4A1:** If a function f is continuous over the interval $[a, b]$ and differentiable over the interval (a,b), the Mean Value Theorem guarantees a point within that open interval where the instantaneous rate of change equals the average rate of change over the interval.	Pgs 215-222 Mean Value Theorem	1

Standards & Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 3: Integrals and the Fundamental Theorem of Calculus Integrals are used in a wide variety of practical and theoretical applications. AP Calculus students should understand the definition of a definite integral involving a Riemann sum, be able to approximate a definite integral using different methods, and be able to compute definite integrals using geometry. They should be familiar with basic techniques of integration and properties of integrals. The interpretation of a definite integral is an important skill, and students should be familiar with area, volume, and motion applications, as well as with the use of the definite integral as an accumulation function. It is critical that students grasp the relationship between integration and differentiation as expressed in the Fundamental Theorem of Calculus — a central idea in AP Calculus. Students should be able to work with and analyze functions defined by an integral.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 3.1: Antidifferentiation is the inverse process of differentiation.	**LO 3.1A:** Recognize antiderivatives of basic functions.	**EK 3.1A1:** An antiderivative of a function f is a function g whose derivative is f.	Pgs 278-284 3.9-Antiderivatives	1
		EK 3.1A2: Differentiation rules provide the foundation for finding antiderivatives.	- See above	1
EU 3.2: The definite integral of a function over an interval is the limit of a Riemann sum over that interval and can be calculated using a variety of strategies	**LO 3.2A(a):** Interpret the definite integral as the limit of a Riemann sum.	**EK 3.2A1:** A Riemann sum, which requires a partition of an interval , is the sum of products, each of which is the value of the function at a point in a subinterval multiplied by the length of that subinterval of the partition.	Pg 306-319 The Definite Integral	1

	LO 3.2A(b): Express the limit of a Riemann sum in integral notation.	**EK 3.2A2:** The definite integral of a continuous function f over the interval $[a, b]$, denoted by $\int_a^b f(x)dx$, is the limit of Riemann sums as the widths of the subintervals approach 0. That is, $\int_a^b f(x)dx = \lim_{\max \Delta x_i \to 0} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$ where x_i^* is a value in the ith subinterval, Δx_i is the width of the ith subinterval, n is the number of subintervals, and $\max \Delta x_i$ is the width of the largest subinterval. Another form of the definition is $\int_a^b f(x)dx = \lim_{n \to \infty} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$, where $\Delta x_i = \frac{b-a}{n}$ and x_i^* is a value in the ith subinterval.	306-319	1
		EK 3.2A3: The information in a definite integral can be translated into the limit of a related Riemann sum, and the limit of a Riemann sum can be written as a definite integral.	Pg 306-319	1
	LO 3.2B: Approximate a definite integral.	**EK 3.2B1:** Definite integrals can be approximated for functions that are represented graphically, numerically, algebraically, and verbally.	Pgs 306-319	1
		EK 3.2B2: Definite integrals can be approximated using a left Riemann sum, a right Riemann sum, a midpoint Riemann sum, or a trapezoidal sum; approximations can be computed using either uniform or nonuniform partitions.	Pgs 306-319	1

	LO 3.2C: Calculate a definite integral using areas and properties of definite integrals.	**EK 3.2C1:** In some cases, a definite integral can be evaluated by using geometry and the connection between the definite integral and area.	Pgs 306-319	1
		EK 3.2C2: Properties of definite integrals include the integral of a constant times a function, the integral of the sum of two functions, reversal of limits of integration, and the integral of a function over adjacent intervals.	Pgs 306-319	1
		EK 3.2C3: The definition of the definite integral may be extended to functions with removable or jump discontinuities.	Pgs 567-574 574-576 Improper Integrals.	1
	LO 3.2D: (BC) Evaluate an improper integral or show that an improper integral diverges.	**EK 3.2D1:** (BC) An improper integral is an integral that has one or both limits infinite or has an integrand that is unbounded in the interval of integration.	Pgs 567-576	1
		EK 3.2D2: (BC) Improper integrals can be determined using limits of definite integrals.	Pgs 567-576	1

EU 3.3: The Fundamental Theorem of Calculus, which has two distinct formulations, connects differentiation and integration.	**LO 3.3A:** Analyze functions defined by an integral.	**EK 3.3A1:** The definite integral can be used to define new functions; for example, $f(x)=\int_a^x e^{-t^2}dt$.	Pgs 319 - Discovery Project. Pgs 320-330	1
		EK 3.3A2: If f is a continuous function on the interval $[a, b]$, then $\frac{d}{dx}\left(\int_a^x f(t)dt\right)=f(x)$, where x is between a and b.	Pgs 320-330	1
		EK 3.3A3: Graphical, numerical, analytical, and verbal representations of a function f provide information about the function g defined as $g(x)=\int_a^x f(t)dt$.	Pgs 320-330	1
	LO 3.3B(a): Calculate antiderivatives.	**EK 3.3B1:** The function defined by $F(x)=\int_a^x f(t)dt$ is an antiderivative of f.	Pgs 320-330	1
	LO 3.3B(b): Evaluate definite integrals.	**EK 3.3B2:** If f is continuous on the interval $[a, b]$ and F is an antiderivative of f, then $\int_a^b f(x)dx=F(b)-F(a)$.	Pgs 320-330	1
		EK 3.3B3: The notation $\int f(x)dx=F(x)+C$ means that $F'(x)=f(x)$, and $\int f(x)dx$ is called an indefinite integral of the function f.	Pgs 330-339	1
		EK 3.3B4: Many functions do not have closed form antiderivatives.	Pgs 546-47	1

		EK 3.3B5: Techniques for finding antiderivatives include algebraic manipulation such as long division and completing the square, substitution of variables, (BC) integration by parts, and nonrepeating linear partial fractions.	Pgs 340-Substitution Pg 572-518 Integration by Parts Pg 533-43 Division (Partial Fractions)	1
EU 3.4: The definite integral of a function over an interval is a mathematical tool with many interpretations and applications involving accumulation.	**LO 3.4A:** Interpret the meaning of a definite integral within a problem.	**EK 3.4A1:** A function defined as an integral represents an accumulation of a rate of change.	Pg 333-339 Applications	1
		EK 3.4A2: The definite integral of the rate of change of a quantity over an interval gives the net change of that quantity over that interval.	Pg 333-339 Applications	1
		EK 3.4A3: The limit of an approximating Riemann sum can be interpreted as a definite integral.	Pg 306-319 Definite Integrals	1
	LO 3.4B: Apply definite integrals to problems involving the average value of a function.	**EK 3.4B1:** The average value of a function f over an interval $[a, b]$ is $\frac{1}{b-a}\int_a^b f(x)dx$.	Pgs 389-392	1
	LO 3.4C: Apply definite integrals to problems involving motion.	**EK 3.4C1:** For a particle in rectilinear motion over an interval of time, the definite integral of velocity represents the particle's displacement over the interval of time, and the definite integral of speed represents the particle's total distance traveled over the interval of time.	Pgs 281-284 Rectilinear Motion.	1

		EK 3.4C2: (BC) The definite integral can be used to determine displacement, distance, and position of a particle moving along a curve given by parametric or vector-valued functions.	Pgs 689, 10.2 - Calculus with Parametric Curves Pg 910-919 Motion	1
	LO 3.4D: Apply definite integrals to problems involving area, volume, (BC) and length of a curve.	**EK 3.4D1:** Areas of certain regions in the plane can be calculated with definite integrals. (BC) Areas bounded by polar curves can be calculated with definite integrals	Pg 355-364 Area Between Curves Pg 709-114 Polar	1
		EK 3.4D2: Volumes of solids with known cross sections, including discs and washers, can be calculated with definite integrals.	Pg 366-377 Volumes Pg 377-383	1
		EK 3.4D3: (BC) The length of a planar curve defined by a function or by a parametrically defined curve can be calculated using a definite integral.	Pgs 584-590 Arc Lengths	1
	LO 3.4E: Use the definite integral to solve problems in various contexts.	**EK 3.4E1:** The definite integral can be used to express information about accumulation and net change in many applied contexts.	definition Pg 333 Applications 598-608 608-613	1

EU 3.5: Antidifferentiation is an underlying concept involved in solving separable differential equations. Solving separable differential equations involves determining a function or relation given its rate of change.	**LO 3.5A:** Analyze differential equations to obtain general and specific solutions.	**EK 3.5A1:** Antidifferentiation can be used to find specific solutions to differential equations with given initial conditions, including applications to motion along a line, exponential growth and decay, (BC) and logistic growth.	Pg 643 - Trajectory. Pg 650-660 Growth.	1
		EK 3.5A2: Some differential equations can be solved by separation of variables.	Pgs 639-648	1
		EK 3.5A3: Solutions to differential equations may be subject to domain restrictions.	Pgs 626-631	1
		EK 3.5A4: The function F defined by $F(x) = c + \int_a^x f(t)dt$ is a general solution to the differential equation $\frac{dy}{dx} = f(x)$, and $F(x) = y_0 + \int_a^x f(t)dt$ is a particular solution to the differential equation $\frac{dy}{dx} = f(x)$ satisfying $F(a) = y_0$.	Pg 628-631	1
	LO 3.5B: Interpret, create and solve differential equations from problems in context.	**EK 3.5B1:** The model for exponential growth and decay that arises from the statement "The rate of change of a quantity is proportional to the size of the quantity" is $\frac{dy}{dt} = ky$.	Pgs 650-660	1
		EK 3.5B2: (BC) The model for logistic growth that arises from the statement "The rate of change of a quantity is jointly proportional to the size of the quantity and the difference between the quantity and the carrying capacity" is $\frac{dy}{dt} = ky(a - y)$.	Pgs 650-660	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 4: Series (BC) The AP Calculus BC curriculum includes the study of series of numbers, power series, and various methods to determine convergence or divergence of a series. Students should be familiar with Maclaurin series for common functions and general Taylor series representations. Other topics include the radius and interval of convergence and operations on power series. The technique of using power series to approximate an arbitrary function near a specific value allows for an important connection to the tangent-line problem and is a natural extension that helps achieve a better approximation. The concept of approximation is a common theme throughout AP Calculus, and power series provide a unifying, comprehensive conclusion.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 4.1: The sum of an infinite number of real numbers may converge.	**LO 4.1A:** Determine whether a series converges or diverges.	**EK 4.1A1:** The nth partial sum is defined as the sum of the first n terms of a sequence.	Pgs 747-759	1
		EK 4.1A2: An infinite series of numbers converges to a real number S (or has sum S), if and only if the limit of its sequence of partial sums exists and equals S.	Pgs 747-759	1
		EK 4.1A3: Common series of numbers include geometric series, the harmonic series, and p-series.	Pgs 747-759 Pgs 759-767	1
		EK 4.1A4: A series may be absolutely convergent, conditionally convergent, or divergent.	Absolute Pgs 777-784 Conditional Divergent Pgs 747-759	1
		EK 4.1A5: If a series converges absolutely, then it converges.	Pg 777-784	1

		EK 4.1A6: In addition to examining the limit of the sequence of partial sums of the series, methods for determining whether a series of numbers converges or diverges are the nth term test, the comparison test, the limit comparison test, the integral test, the ratio test, and the alternating series test. **EXCLUSION STATEMENT (EK 4.1A6):** *Other methods for determining convergence or divergence of a series of numbers are not assessed on the AP Calculus AB or BC Exam. However, teachers may include these topics in the course if time permits.*	Pgs 772-777 Alternating Pg 761 - Integral Test Pg 767-771 - Comparision Test Pg 779 - Rato Test	1
	LO 4.1B: Determine or estimate the sum of a series.	**EK 4.1B1:** If a is a real number and r is a real number such that $\lvert r\rvert < 1$, then the geometric series $\sum_{n=0}^{\infty} ar^n = \frac{a}{1-r}$.	Pg 750 Pg 756	1
		EK 4.1B2: If an alternating series converges by the alternating series test, then the alternating series error bound can be used to estimate how close a partial sum is to the value of the infinite series.	Pg 772-777	1
		EK 4.1B3: If a series converges absolutely, then any series obtained from it by regrouping or rearranging the terms has the same value.	Pgs 777-784	1

EU 4.2: A function can be represented by an associated power series over the interval of convergence for the power series.	**LO 4.2A:** Construct and use Taylor polynomials.	**EK 4.2A1:** The coefficient of the nth-degree term in a Taylor polynomial centered at $x=a$ for the function f is $\frac{f^{(n)}(a)}{n!}$.	Pg 799-812	1
		EK 4.2A2: Taylor polynomials for a function f centered at $x=a$ can be used to approximate function values of f near $x=a$.	Pg 814-822	1
		EK 4.2A3: In many cases, as the degree of a Taylor polynomial increases, the nth-degree polynomial will converge to the original function over some interval.	Pg 814-822	1
		EK 4.2A4: The Lagrange error bound can be used to bound the error of a Taylor polynomial approximation to a function.	Pg 814-822	1
		EK 4.2A5: In some situations where the signs of a Taylor polynomial are alternating, the alternating series error bound can be used to bound the error of a Taylor polynomial approximation to the function.	Pg 814-822	1
	LO 4.2B: Write a power series representing a given function.	**EK 4.2B1:** A power series is a series of the form $\sum_{n=0}^{\infty} a_n(x-r)^n$ where n is a non-negative integer, $\{a_n\}$ is a sequence of real numbers, and r is a real number.	Pgs 786-792	1
		EK 4.2B2: The Maclaurin series for $\sin(x)$, $\cos(x)$, and e^x provide the foundation for constructing the Maclaurin series for other functions.	Pgs 799-812	1

		EK 4.2B3: The Maclaurin series for $\frac{1}{1-x}$ is a geometric series.	Pgs 799-812
		EK 4.2B4: A Taylor polynomial for $f(x)$ is a partial sum of the Taylor series for $f(x)$.	Pgs 812-822
		EK 4.2B5: A power series for a given function can be derived by various methods (e.g., algebraic processes, substitutions, using properties of geometric series, and operations on known series such as term-byterm integration or term-by-term differentiation).	Pgs 792-798
	LO 4.2C: Determine the radius and interval of convergence of a power series.	**EK 4.2C1:** If a power series converges, it either converges at a single point or has an interval of convergence.	Pgs 786-792
		EK 4.2C2: The ratio test can be used to determine the radius of convergence of a power series.	Pgs 786-792
		EK 4.2C3: If a power series has a positive radius of convergence, then the power series is the Taylor series of the function to which it converges over the open interval.	Pgs 792-798
		EK 4.2C4: The radius of convergence of a power series obtained by term-by-term differentiation or term-by-term integration is the same as the radius of convergence of the original power series.	Pgs 792-797

Indicators of Quality:

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Yes, each Chapter starts with what was learned and where Chapter is going	(Reviewer only.) X Yes ____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Yes. Exercises start with skill development building to exercises that combine skills and understanding concepts.	(Reviewer only.) X Yes ____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Yes, See above	(Reviewer only.) X Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Yes. In TE there are time pacing guides, Points to Stress, Quiz questions, etc.	(Reviewer only.) X Yes ____ No

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Yes. Graphing Calculator symbols indicate and incorporate the use of calculators.	**(Reviewer only.)** X Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Imbedded in TE ~~s~~ are Ap questions	**(Reviewer only.)** X Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Yes, appropriate for college level Course	**(Reviewer only.)** X Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes. Appriopriate for college level Courses	**(Reviewer only.)** X Yes ____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Yes, see xviii and ~~xxii~~ xix	**(Reviewer only.)** X Yes ____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Yes. Graphs are clear.	**(Reviewer only.)** X Yes ____ No

COMMENTS:

STRENGTHS	WEAKNESSES
• The Teacher Resources are fantastic. They will help lead me through suggested group discussions. Scaffolding assignments. • Scope and Sequence was good. Didn't place concepts not learned before students had knowledge. • Student guides were great for extra help with struggling students • Reference pages located in the back of books is perforated and can easily come out and placed in plastic covers.	• Red on white examples will create problems for colorblind students. • Student guides might become expensive if purchased every year. • The perforated reference guides can be taken out by students.

Standards and Learning Indicators			**Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.**	**Point Value 0/.5/1 (Reviewer)**
Big Idea 1: Limits Many calculus concepts are developed by first considering a discrete model and then the consequences of a limiting case. Therefore, the idea of limits is essential for discovering and developing important ideas, definitions, formulas, and theorems in calculus. Students must have a solid, intuitive understanding of limits and be able to compute various limits, including one-sided limits, limits at infinity, the limit of a sequence, and infinite limits. They should be able to work with tables and graphs in order to estimate the limit of a function at a point. Students should know the algebraic properties of limits and techniques for finding limits of indeterminate forms, and they should be able to apply limits to understand the behavior of a function near a point. Students must also understand how limits are used to determine continuity, a fundamental property of functions.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		

EU 1.1: The concept of a limit can be used to understand the behavior of functions.	**LO 1.1A (a):** Express limits symbolically using correct notation. **LO 1.1A (b):** Interpret limits expressed symbolically.	**EK 1.1A1:** Given a function f, the limit of $f(x)$ as x approaches c is a real number R if $f(x)$ can be made arbitrarily close to R by taking x sufficiently close to c (but not equal to c). If the limit exists and is a real number, then the common notation is $\lim_{x \to c} f(x) = R$. **EXCLUSION STATEMENT (EK 1.1A1):** The epsilon-delta definition of a limit is not assessed on the AP Calculus AB or BC Exam. However, teachers may include this topic in the course if time permits.	**Lessons 1.2 and 1.3** **Definition of limit along with informal definition using tables and graphs.** **Text also includes $\varepsilon - \delta$ definition.**	1
		EK 1.1A2: The concept of a limit can be extended to include one-sided limits, limits at infinity, and infinite limits.	**Lesson 1.4 one-sided limits** **Lesson 1.5 infinite limits** **Lesson 3.5 limits at infinity**	1
		EK 1.1A3: A limit might not exist for some functions at particular values of . Some ways that the limit might not exist are if the function is unbounded, if the function is oscillating near this value, or if the limit from the left does not equal the limit from the right. **EXAMPLES OF LIMITS THAT DO NOT EXIST:** $\lim_{x \to 0} \frac{1}{x^2} = \infty$ $\lim_{x \to 0} \sin\left(\frac{1}{x}\right)$ *does not exist* $\lim_{x \to 0} \frac{\lvert x \rvert}{x}$ *does not exist* $\lim_{x \to 0} \frac{1}{x}$ *does not exist*	**Lesson 1.2 and 1.4** **Pages 50-51 examples 3, 4, and 5 along with table on page 51 "Common Types of Behavior Associated with Nonexistence of a Limit"** **Graphically in exercises 15-22 page 55** **Pages 70 limits failing to exists at a point, left- and right-hand limits are not equal**	1
	LO 1.1B: Estimate limits of functions	**EK 1.1B1:** Numerical and graphical information can be used to estimate limits.	**Lesson 1.2** **Text routinely makes connection between tables and graphs for analyzing limits (e.g. figures 1.5 and 1.6 with tables—page 48)**	1

	LO 1.1C: Determine limits of functions.	**EK 1.1C1:** Limits of sums, differences, products, quotients, and composite functions can be found using the basic theorems of limits and algebraic rules.	**Lesson 1.3 Properties of limits are clearly outlined in Theorem 1.2 on page 59. Limits of polynomial and rational functions (Theorem 1.3, 1.4). Limit of a composite function (Theorem 1.5).**	1
		EK 1.1C2: The limit of a function may be found by using algebraic manipulation, alternate forms of trigonometric functions, or the squeeze theorem.	**All methods are used throughout chapter 1 including multiple techniques such as factoring and division. Trigonometric limits on page 61. Squeeze Theorem introduced in lesson 1.3. Video proof to accompany Squeeze Theorem found at LarsonCalculus.com**	1
		EK 1.1C3: Limits of the indeterminate forms $\frac{0}{0}$ and $\frac{\infty}{\infty}$ may be evaluated using L'Hospital's Rule.	**Lesson 1.3 addresses indeterminate form Lesson 8.7 L'Hopital's rule**	1
	LO 1.1D: Deduce and interpret behavior of functions using limits.	**EK 1.1D1:** Asymptotic and unbounded behavior of functions can be explained and described using limits.	**Lesson 1.5 Definition of infinite limits preceded by tabular example. Definition of limits related to vertical asymptotes (pg 85), horizontal asymptotes (pg 196) with supporting analysis and graphs.**	1
		EK 1.1D2: Relative magnitudes of functions and their rates of change can be compared using limits.	**Comparison of rates of change using limits. Rates of change is addressed in lesson 2.2**	0
EU 1.2: Continuity is a key property of functions that is defined using limits	**LO 1.2A:** Analyze functions for intervals of continuity or points of discontinuity.	**EK 1.2A1:** A function f is continuous at $x = c$ provided that $f(c)$ exists, $\lim_{x \to c} f(x)$ exists, and $\lim_{x \to c} f(x) = f(c)$.	**Lesson 1.4 Definition of continuity at a point and on an open interval (page 70) followed by multiple examples and graphical representations.**	1
		EK 1.2A2: Polynomial, rational, power, exponential, logarithmic, and trigonometric functions are continuous at all points in their domains.	**Lesson 1.4 identifies which functions are continuous at every point in their domains**	1

		EK 1.2A3: Types of discontinuities include removable discontinuities, jump discontinuities, and discontinuities due to vertical asymptotes.	**Lesson 1.4 Discontinuities identified with numerical, analytical and graphical examp Vertical asymptote discontinuity in example 7 on page 76.**	1
	LO 1.2B: Determine the applicability of important calculus theorems using continuity.	**EK 1.2B1:** Continuity is an essential condition for theorems such as the Intermediate Value Theorem, the Extreme Value Theorem, and the Mean Value Theorem.	**Intermediate Value Theorem Lesson 1.4** **Extreme Value Theorem Lesson 3.1** **Mean Value Theorem Lesson 3.2** **Each theorem emphasizes continuity**	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 2: Derivatives Using derivatives to describe the rate of change of one variable with respect to another variable allows students to understand change in a variety of contexts. In AP Calculus, students build the derivative using the concept of limits and use the derivative primarily to compute the instantaneous rate of change of a function. Applications of the derivative include finding the slope of a tangent line to a graph at a point, analyzing the graph of a function (for example, determining whether a function is increasing or decreasing and finding concavity and extreme values), and solving problems involving rectilinear motion. Students should be able to use different definitions of the derivative, estimate derivatives from tables and graphs, and apply various derivative rules and properties. In addition, students should be able to solve separable differential equations, understand and be able to apply the Mean Value Theorem, and be familiar with a variety of real-world applications, including related rates, optimization, and growth and decay models.				
Enduring Understandings (Students will understand that...)	**Learning Objectives** (Students will be able to...)	**Essential Knowledge** (Students will know that...)		
EU 2.1: The derivative of a function is defined as the limit of a difference quotient and can be determined using a variety of strategies.	**LO 2.1A:** Identify the derivative of a function as the limit of a difference quotient.	**EK 2.1A1:** The difference quotients $\frac{f(a+h)-f(a)}{h}$ and $\frac{f(x)-f(a)}{x-a}$ express the average rate of change of a function over an interval.	**Lesson 2.1** **Introduction to the derivative as slope of secant line. Uses Δx instead of h and c instead of a.**	1

		EK 2.1A2: The instantaneous rate of change of a function at a point can be expressed by $\lim_{h\to 0}\frac{f(a+h)-f(a)}{h}$ or $\lim_{x\to a}\frac{f(x)-f(a)}{x-a}$, provided that the limit exists. These are common forms of the definition of the derivative and are denoted $f'(a)$.	**Lesson 2.1** **Text highlights relationship between average rate of change and instantaneous rate of change. Definition of derivative is used throughout 2.1. Alternate definition (page 101). Proof is provided in appendix A. Text emphasizes "provided the limit exists".**	1
		EK 2.1A3: The derivative of f is the function whose value at x is $\lim_{h\to 0}\frac{f(x+h)-f(x)}{h}$ provided this limit exists.	**Lesson 2.1** **As part of EK 2.1A2 above**	1
		EK 2.1A4: For $y=f(x)$, notations for the derivative include $\frac{dy}{dx}$, $f'(x)$, and y'.	**Lesson 2.1** **Five different notations for the derivative are given on page 99 of text**	1
		EK 2.1A5: The derivative can be represented graphically, numerically, analytically, and verbally.	**Lesson 2.1 emphasis on all representations. Derivative is used in throughout text using multiple representations.**	1
	LO 2.1B: Estimate derivatives.	**EK 2.1B1**: The derivative at a point can be estimated from information given in tables or graphs.	**Lesson 2.2 graphical estimation** **Exercise 85 (page 116) students complete table to approximate derivative.**	1
	LO 2.1C: Calculate derivatives.	**EK 2.1C1:** Direct application of the definition of the derivative can be used to find the derivative for selected functions, including polynomial, power, sine, cosine, exponential, and logarithmic functions.	**Lesson 2.2, 2.3, 2.4, 5.1, and 5.4**	1
		EK 2.1C2: Specific rules can be used to calculate derivatives for classes of functions, including polynomial, rational, power, exponential, logarithmic, trigonometric, and inverse trigonometric.	**Lesson 2.2 Power Rule and polynomials, sine and cosine.** **Lesson 2.3 Rational and trigonometric** **Lesson 5.1 Logarithmic** **Lesson 5.4 Logarithmic, exponential** **Lesson 5.6 Inverse trig functions**	1

		EK 2.1C3: Sums, differences, products, and quotients of functions can be differentiated using derivative rules.	**Lesson 2.2 Sum and Difference** **Lesson 2.3 Product and Quotient**	1
		EK 2.1C4: The chain rule provides a way to differentiate composite functions.	**Lesson 2.4 Chain Rule** **References composite functions (page 129)**	1
		EK 2.1C5: The chain rule is the basis for implicit differentiation.	**Lesson 2.5**	1
		EK 2.1C6: The chain rule can be used to find the derivative of an inverse function, provided the derivative of that function exists.	**Lesson 5.3 Explains relationship between differentiability and continuity. Includes and exploration of inverse functions. However, the relationship between the chain rule and derivatives of inverse functions is not emphasized.**	1
		EK 2.1C7: (BC) Methods for calculating derivatives of realvalued functions can be extended to vector-valued functions, parametric functions, and functions in polar coordinates.	**Lesson 10.3 (parametric)** **Lesson 10.4 (polar)**	

	LO 2.1D: Determine higher order derivatives.	**EK 2.1D1:** Differentiating f' produces the second derivative f'', provided the derivative of f' exists; repeating this process produces higher order derivatives of f.	**Lesson 2.3 Higher order derivatives**	1
		EK 2.1D2: Higher order derivatives are represented with a variety of notations. For $y = f(x)$, notations for the second derivative include $\frac{d^2y}{dx^2}$, $f''(x)$, and y''. Higher order derivatives can be denoted $\frac{d^n y}{dx^n}$ or $f^{(n)}(x)$.	**Lesson 2.3 higher order derivatives with multiple representations**	1
EU 2.2: A function's derivative, which is itself a function, can be used to understand the behavior of the function.	**LO 2.2A:** Use derivatives to analyze properties of a function.	**EK 2.2A1:** First and second derivatives of a function can provide information about the function and its graph including intervals of increase or decrease, local (relative) and global (absolute) extrema, intervals of upward or downward concavity, and points of inflection.	**Lesson 3.1 Relative extrema and critical numbers on open and closed intervals.** **Lesson 3.3 Increasing/decreasing functions and first derivative test.** **Lesson 3.4 Concavity and 2nd derivative test**	1
		EK 2.2A2: Key features of functions and their derivatives can be identified and related to their graphical, numerical, and analytical representations.	**Throughout the text, students are expected to use multiple representations of functions and their derivatives including tables, graphs, numerical and analytic methods. Figures 3.27 and 3.31**	1
		EK 2.2A3: Key features of the graphs of f, f', and f'' are related to one another.	**Lesson 3.6 A Summary of Curve Sketching highlights features and characteristics of f, f', and f'' graphs and their relationships**	1
		EK 2.2A4: (BC) For a curve given by a polar equation $r = f(\theta)$, derivatives of r, x, and y with respect to θ and first and second derivatives of y with respect to x can provide information about the curve.	**Lesson 10.4**	

	LO 2.2B: Recognize the connection between differentiability and continuity.	**EK 2.2B1:** A continuous function may fail to be differentiable at a point in its domain.	**Lesson 2.1**	1
		EK 2.2B2: If a function is differentiable at a point, then it is continuous at that point.	**Lesson 2.1**	1
EU 2.3: The derivative has multiple interpretations and applications including those that involve instantaneous rates of change.	**LO 2.3A:** Interpret the meaning of a derivative within a problem.	**EK 2.3A1:** The unit for $f'(x)$ is the unit for f divided by the unit for x.	**Lesson 2.2 not explicitly but by example and discussion**	
		EK 2.3A2: The derivative of a function can be interpreted as the instantaneous rate of change with respect to its independent variable.	**Lesson 2.1 derivative as instantaneous rate of change**	1
	LO 2.3B: Solve problems involving the slope of a tangent line.	**EK 2.3B1:** The derivative at a point is the slope of the line tangent to a graph at that point on the graph.	**Lesson 2.1 Discussion of tangent line problem**	1
		EK 2.3B2: The tangent line is the graph of a locally linear approximation of the function near the point of tangency.	**Lesson 3.9 Linear approximation**	1
	LO 2.3C: Solve problems involving related rates, optimization, rectilinear motion, **(BC)** and planar motion.	**EK 2.3C1:** The derivative can be used to solve rectilinear motion problems involving position, speed, velocity, and acceleration.	**Lesson 2.2 (position, velocity, and acceleration) This concept could be emphasized to a greater extent.**	1

		EK 2.3C2: The derivative can be used to solve related rates problems, that is, finding a rate at which one quantity is changing by relating it to other quantities whose rates of change are known.	**Lesson 2.6** **Guidelines for solving related rates problems on page 149**	1
		EK 2.3C3: The derivative can be used to solve optimization problems, that is, finding a maximum or minimum value of a function over a given interval.	**Lesson 3.7** **Guidelines on page 216**	1
		EK 2.3C4: (BC) Derivatives can be used to determine velocity, speed, and acceleration for a particle moving along curves given by parametric or vector-valued functions.		
	LO 2.3D: Solve problems involving rates of change in applied contexts.	**EK 2.3D1:** The derivative can be used to express information about rates of change in applied contexts.	**Lessons 2.6, 3.2, 3.7, and in other exercises throughout text**	1
	LO 2.3E: Verify solutions to differential equations.	**EK 2.3E1:** Solutions to differential equations are functions or families of functions.	**Lesson 4.1 and 6.1** **Supporting examples on pages 398 and 399**	1
		EK 2.3E2: Derivatives can be used to verify that a function is a solution to a given differential equation.	**Lesson 6.1**	1
	LO 2.3F: Estimate solutions to differential equations.	**EK 2.3F1:** Slope fields provide visual clues to the behavior of solutions to first order differential equations.	**Lesson 6.1**	1

		EK 2.3F2: (BC) For differential equations, Euler's method provides a procedure for approximating a solution or a point on a solution curve.	**Lesson 6.1**	1
EU 2.4: The Mean Value Theorem connects the behavior of a differentiable function over an interval to the behavior of the derivative of that function at a particular point in the interval.	**LO 2.4A:** Apply the Mean Value Theorem to describe the behavior of a function over an interval.	**EK 2.4A1:** If a function f is continuous over the interval $[a, b]$ and differentiable over the interval (a, b), the Mean Value Theorem guarantees a point within that open interval where the instantaneous rate of change equals the average rate of change over the interval.	**Lesson 3.2 Addresses Rolle's Theorem and the Mean Value Theorem for derivatives**	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standard is Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 3: Integrals and the Fundamental Theorem of Calculus Integrals are used in a wide variety of practical and theoretical applications. AP Calculus students should understand the definition of a definite integral involving a Riemann sum, be able to approximate a definite integral using different methods, and be able to compute definite integrals using geometry. They should be familiar with basic techniques of integration and properties of integrals. The interpretation of a definite integral is an important skill, and students should be familiar with area, volume, and motion applications, as well as with the use of the definite integral as an accumulation function. It is critical that students grasp the relationship between integration and differentiation as expressed in the Fundamental Theorem of Calculus — a central idea in AP Calculus. Students should be able to work with and analyze functions defined by an integral.				
Enduring Understandings (Students will understand that...)	**Learning Objectives** (Students will be able to...)	**Essential Knowledge** (Students will know that...)		
EU 3.1: Antidifferentiation is the inverse process of differentiation.	**LO 3.1A:** Recognize antiderivatives of basic functions.	**EK 3.1A1:** An antiderivative of a function f is a function g whose derivative is f.	**Lesson 4.1**	1
		EK 3.1A2: Differentiation rules provide the foundation for finding antiderivatives.	**Lesson 4.1 includes table of Basic Integration Rules**	1
EU 3.2: The definite integral of a function over an interval is the limit of a Riemann sum over that interval and can be calculated using a variety of strategies	**LO 3.2A(a):** Interpret the definite integral as the limit of a Riemann sum.	**EK 3.2A1:** A Riemann sum, which requires a partition of an interval , is the sum of products, each of which is the value of the function at a point in a subinterval multiplied by the length of that subinterval of the partition.	**Lesson 4.3**	1

	LO 3.2A(b): Express the limit of a Riemann sum in integral notation.	**EK 3.2A2:** The definite integral of a continuous function f over the interval $[a, b]$, denoted by $\int_a^b f(x)dx$, is the limit of Riemann sums as the widths of the subintervals approach 0. That is, $\int_a^b f(x)dx = \lim_{\max \Delta x_i \to 0} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$ where x_i^* is a value in the ith subinterval, Δx_i is the width of the ith subinterval, n is the number of subintervals, and $\max \Delta x_i$ is the width of the largest subinterval. Another form of the definition is $\int_a^b f(x)dx = \lim_{n \to \infty} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$, where $\Delta x_i = \frac{b-a}{n}$ and x_i^* is a value in the ith subinterval.	**Lesson 4.3 definite integrals**	1
		EK 3.2A3: The information in a definite integral can be translated into the limit of a related Riemann sum, and the limit of a Riemann sum can be written as a definite integral.	**Lesson 4.3**	1
	LO 3.2B: Approximate a definite integral.	**EK 3.2B1:** Definite integrals can be approximated for functions that are represented graphically, numerically, algebraically, and verbally.	**Lesson 4.3 and 4.4**	1
		EK 3.2B2: Definite integrals can be approximated using a left Riemann sum, a right Riemann sum, a midpoint Riemann sum, or a trapezoidal sum; approximations can be computed using either uniform or nonuniform partitions.	**Lesson 4.2 midpoint rule, uniform partitions, upper and lower sums** **Lesson 4.3 non-uniform partitions (page 266)** **Lesson 4.6 Trapezoidal Rule**	1

	LO 3.2C: Calculate a definite integral using areas and properties of definite integrals.	**EK 3.2C1:** In some cases, a definite integral can be evaluated by using geometry and the connection between the definite integral and area.	**Lesson 4.3 students approximate area with midpoint rule and other geometric formulas like the area of a triangle, or area of a circle identified as areas of common geometric figures** **Lesson 4.6 trapezoidal approximation**	1
		EK 3.2C2: Properties of definite integrals include the integral of a constant times a function, the integral of the sum of two functions, reversal of limits of integration, and the integral of a function over adjacent intervals.	**Lesson 4.3**	1
		EK 3.2C3: The definition of the definite integral may be extended to functions with removable or jump discontinuities.	**Lesson 4.3** **Exercise 57 on page 275**	1
	LO 3.2D: (BC) Evaluate an improper integral or show that an improper integral diverges.	**EK 3.2D1:** (BC) An improper integral is an integral that has one or both limits infinite or has an integrand that is unbounded in the interval of integration.		
		EK 3.2D2: (BC) Improper integrals can be determined using limits of definite integrals.		

EU 3.3: The Fundamental Theorem of Calculus, which has two distinct formulations, connects differentiation and integration.	**LO 3.3A:** Analyze functions defined by an integral.	**EK 3.3A1:** The definite integral can be used to define new functions; for example, $f(x)=\int_a^x e^{-t}\,dt$.	**Lesson 4.4 Second Fundamental Theorem of Calculus**	1
		EK 3.3A2: If f is a continuous function on the interval $[a, b]$, then $\frac{d}{dx}\left(\int_a^x f(t)dt\right)=f(x)$, where x is between a and b.	**Lesson 4.4** **Theorem 4.11 page 284**	1
		EK 3.3A3: Graphical, numerical, analytical, and verbal representations of a function f provide information about the function g defined as $g(x)=\int_a^x f(t)dt$.	**Lesson 4.4** **Section project on page 291 demonstrating the Second Fundamental Theorem. Includes multiple representations.**	1
	LO 3.3B(a): Calculate antiderivatives.	**EK 3.3B1:** The function defined by $F(x)=\int_a^x f(t)dt$ is an antiderivative of f.	**Lesson 4.1 – 4.4**	1
	LO 3.3B(b): Evaluate definite integrals.	**EK 3.3B2:** If f is continuous on the interval $[a, b]$ and F is an antiderivative of f, then $\int_a^b f(x)dx=F(b)-F(a)$.	**Lesson 4.4 Fundamental Theorem of Calculus**	1
		EK 3.3B3: The notation $\int f(x)dx=F(x)+C$ means that $F'(x)=f(x)$, and $\int f(x)dx$ is called an indefinite integral of the function f.	**Lesson 4.1**	1
		EK 3.3B4: Many functions do not have closed form antiderivatives.	**Lesson 4.1** **Not emphasized**	0.5

		EK 3.3B5: Techniques for finding antiderivatives include algebraic manipulation such as long division and completing the square, substitution of variables, (BC) integration by parts, and nonrepeating linear partial fractions.	**Lesson 4.5 change of variables** **Lesson 5.2 long division and u-substitution** **Lesson 5.7 integration by substitution and completing the square** **Lesson 8.2 Integration by parts**	1
EU 3.4: The definite integral of a function over an interval is a mathematical tool with many interpretations and applications involving accumulation.	**LO 3.4A:** Interpret the meaning of a definite integral within a problem.	**EK 3.4A1:** A function defined as an integral represents an accumulation of a rate of change.	**Lesson 7.1**	1
		EK 3.4A2: The definite integral of the rate of change of a quantity over an interval gives the net change of that quantity over that interval.	**Lesson 4.4 Net Change Theorem**	1
		EK 3.4A3: The limit of an approximating Riemann sum can be interpreted as a definite integral.	**Lesson 4.3**	1
	LO 3.4B: Apply definite integrals to problems involving the average value of a function.	**EK 3.4B1:** The average value of a function f over an interval $[a, b]$ is $\frac{1}{b-a}\int_a^b f(x)\,dx$.	**Lesson 4.4**	1
	LO 3.4C: Apply definite integrals to problems involving motion.	**EK 3.4C1:** For a particle in rectilinear motion over an interval of time, the definite integral of velocity represents the particle's displacement over the interval of time, and the definite integral of speed represents the particle's total distance traveled over the interval of time.	**Lesson 4.4**	1

		EK 3.4C2: (BC) The definite integral can be used to determine displacement, distance, and position of a particle moving along a curve given by parametric or vector-valued functions.		
	LO 3.4D: Apply definite integrals to problems involving area, volume, (BC) and length of a curve.	**EK 3.4D1:** Areas of certain regions in the plane can be calculated with definite integrals. (BC) Areas bounded by polar curves can be calculated with definite integrals	**Lesson 4.3 area of common geometric figures** **Lesson 7.1 area between two curves**	1
		EK 3.4D2: Volumes of solids with known cross sections, including discs and washers, can be calculated with definite integrals.	**Lesson 7.2 known cross sections, disk, & washer methods**	1
		EK 3.4D3: (BC) The length of a planar curve defined by a function or by a parametrically defined curve can be calculated using a definite integral.		
	LO 3.4E: Use the definite integral to solve problems in various contexts.	**EK 3.4E1:** The definite integral can be used to express information about accumulation and net change in many applied contexts.	**Student exercises in lesson 7.1** **Section 7.5 Section Project**	1

EU 3.5: Antidifferentiation is an underlying concept involved in solving separable differential equations. Solving separable differential equations involves determining a function or relation given its rate of change.	**LO 3.5A:** Analyze differential equations to obtain general and specific solutions.	**EK 3.5A1:** Antidifferentiation can be used to find specific solutions to differential equations with given initial conditions, including applications to motion along a line, exponential growth and decay, **(BC)** and logistic growth.	**Lesson 4.1 Initial Conditions and Particular Solutions** **Lesson 6.1 Slope Fields** **Lesson 6.2 Differential Equations: growth & decay**	1
		EK 3.5A2: Some differential equations can be solved by separation of variables.	**Lesson 6.3**	1
		EK 3.5A3: Solutions to differential equations may be subject to domain restrictions.	**Lessons 4.1 and 6.3**	1
		EK 3.5A4: The function F defined by $F(x) = c + \int_a^x f(t)\,dt$ is a general solution to the differential equation $\frac{dy}{dx} = f(x)$, and $F(x) = y_0 + \int_a^x f(t)\,dt$ is a particular solution to the differential equation $\frac{dy}{dx} = f(x)$ satisfying $F(a) = y_0$.	**Lesson 6.1 verifying general and particular solutions**	1
	LO 3.5B: Interpret, create and solve differential equations from problems in context.	**EK 3.5B1:** The model for exponential growth and decay that arises from the statement "The rate of change of a quantity is proportional to the size of the quantity" is $\frac{dy}{dt} = ky$.	**Lesson 6.2 explicitly stated at the top of page 408**	1
		EK 3.5B2: (BC) The model for logistic growth that arises from the statement "The rate of change of a quantity is jointly proportional to the size of the quantity and the difference between the quantity and the carrying capacity" is $\frac{dy}{dt} = ky(a - y)$.		

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 4: Series (BC) The AP Calculus BC curriculum includes the study of series of numbers, power series, and various methods to determine convergence or divergence of a series. Students should be familiar with Maclaurin series for common functions and general Taylor series representations. Other topics include the radius and interval of convergence and operations on power series. The technique of using power series to approximate an arbitrary function near a specific value allows for an important connection to the tangent-line problem and is a natural extension that helps achieve a better approximation. The concept of approximation is a common theme throughout AP Calculus, and power series provide a unifying, comprehensive conclusion.				
Enduring Understandings (Students will understand that...)	**Learning Objectives** (Students will be able to...)	**Essential Knowledge** (Students will know that...)		
EU 4.1: The sum of an infinite number of real numbers may converge.	**LO 4.1A:** Determine whether a series converges or diverges.	**EK 4.1A1:** The nth partial sum is defined as the sum of the first n terms of a sequence.		
		EK 4.1A2: An infinite series of numbers converges to a real number S (or has sum S), if and only if the limit of its sequence of partial sums exists and equals S.		
		EK 4.1A3: Common series of numbers include geometric series, the harmonic series, and p-series.		
		EK 4.1A4: A series may be absolutely convergent, conditionally convergent, or divergent.		
		EK 4.1A5: If a series converges absolutely, then it converges.		

		EK 4.1A6: In addition to examining the limit of the sequence of partial sums of the series, methods for determining whether a series of numbers converges or diverges are the nth term test, the comparison test, the limit comparison test, the integral test, the ratio test, and the alternating series test. **EXCLUSION STATEMENT (EK 4.1A6):** *Other methods for determining convergence or divergence of a series of numbers are not assessed on the AP Calculus AB or BC Exam. However, teachers may include these topics in the course if time permits.*		
	LO 4.1B: Determine or estimate the sum of a series.	**EK 4.1B1:** If a is a real number and r is a real number such that $\lvert r\rvert < 1$, then the geometric series $\sum_{n=0}^{\infty} ar^n = \frac{a}{1-r}$.		
		EK 4.1B2: If an alternating series converges by the alternating series test, then the alternating series error bound can be used to estimate how close a partial sum is to the value of the infinite series.		
		EK 4.1B3: If a series converges absolutely, then any series obtained from it by regrouping or rearranging the terms has the same value.		

EU 4.2: A function can represented by an associated power series over the interval of convergence for the power series.	**LO 4.2A:** Construct and use Taylor polynomials.	**EK 4.2A1:** The coefficient of the nth-degree term in a Taylor polynomial centered at $x=a$ for the function f is $\frac{f^{(n)}(a)}{n!}$.		
		EK 4.2A2: Taylor polynomials for a function f centered at $x=a$ can be used to approximate function values of f near $x=a$.		
		EK 4.2A3: In many cases, as the degree of a Taylor polynomial increases, the nth-degree polynomial will converge to the original function over some interval.		
		EK 4.2A4: The Lagrange error bound can be used to bound the error of a Taylor polynomial approximation to a function.		
		EK 4.2A5: In some situations where the signs of a Taylor polynomial are alternating, the alternating series error bound can be used to bound the error of a Taylor polynomial approximation to the function.		
	LO 4.2B: Write a power series representing a given function.	**EK 4.2B1:** A power series is a series of the form $\sum_{n=0}^{\infty} a_n(x-r)^n$ where n is a non-negative integer, $\{a_n\}$ is a sequence of real numbers, and r is a real number.		
		EK 4.2B2: The Maclaurin series for $\sin(x)$, $\cos(x)$, and e^x provide the foundation for constructing the Maclaurin series for other functions.		

		EK 4.2B3: The Maclaurin series for $\frac{1}{1-x}$ is a geometric series.	
		EK 4.2B4: A Taylor polynomial for $f(x)$ is a partial sum of the Taylor series for $f(x)$.	
		EK 4.2B5: A power series for a given function can be derived by various methods (e.g., algebraic processes, substitutions, using properties of geometric series, and operations on known series such as term-byterm integration or term-by-term differentiation).	
	LO 4.2C: Determine the radius and interval of convergence of a power series.	**EK 4.2C1:** If a power series converges, it either converges at a single point or has an interval of convergence.	
		EK 4.2C2: The ratio test can be used to determine the radius of convergence of a power series.	
		EK 4.2C3: If a power series has a positive radius of convergence, then the power series is the Taylor series of the function to which it converges over the open interval.	
		EK 4.2C4: The radius of convergence of a power series obtained by term-by-term differentiation or term-by-term integration is the same as the radius of convergence of the original power series.	

Indicators of Quality:

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Lessons follow a logical progression. AP Calculus is a course requiring much participation and direction by students in their learning path.	(Reviewer only.) ___X___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- The problems are in abundant evidence in the examples throughout the text. Exercises in each section reinforce new mathematics. Students also must apply what they've learned in the How Do You See It? and Writing About Concepts sections. Exercises help build mastery.	(Reviewer only.) ___X___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Exercises follow a logical progression from basic to more complex. Students are also to extend their knowledge through applications. The end of each chapter also includes AP review questions.	(Reviewer only.) ___X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- There is very little teacher support compared to other AP Calculus curriculums. There are some homework quizzes in the support materials binder along with lesson suggestions—very weak. Materials include a cumbersome test bank. There is an online test generator—Exam View, with problems that have not changed in many years.	(Reviewer only.) _____ Yes ___X___ No

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Students at this level of mathematics aren't using manipulatives encountered at lower grade levels. Students are expected to be fluent in the use of a graphing calculator.	(Reviewer only.) ___X___ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- The end of each chapter includes a review, a problem solving section, and AP practice questions.	(Reviewer only.) ___X___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Assessments only include answer keys. No rubrics or scoring guidelines are provided. Students may access CalcChat for worked out solutions to lesson exercises.	(Reviewer only.) _____ Yes ___X___ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Course-level language is used throughout materials. Materials are accessible and unbiased.	(Reviewer only.) ___X___ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- Primary authors are Ron Larson and Bruce Edwards. Both have a great deal of experience in writing calculus texts and materials. More than ten additional qualified individuals reviewed the text.	(Reviewer only.) ___X___ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- The visual design is engaging and appealing. Color photos, graphs, and drawings are included throughout. Navigation is very clear. A positive is that examples are contained on one page – not continued between pages. This makes it very easy to follow the examples for both teacher and student.	(Reviewer only.) ___X___ Yes _____ No

COMMENTS: Overall an outstanding and thorough AP Calculus AB curriculum

STRENGTHS	WEAKNESSES
• Clear and concise design • Multiple representations of concepts are bundled • Examples do not span multiple pages • AP practice exercises included for each chapter • Text promotes higher order thinking skills through the "How do you see it?" and "Writing about Concepts" exercises • AP tips in the margins of the text are useful • Text includes section projects • Useful online support for students and teachers through videos and worked out solutions • Numerous real-world application problems in each lesson • Text uses precise mathematical language	• Supplementary teacher resources are lacking • No glossary in text • Text should include a vocabulary review or preview with key terms emphasized • Assessment materials need to be improved • Interactive materials at LarsonCalculus.com use a deprecated plug-in (NPAPI) – does not work in Chrome or Edge

Standards and Learning Indicators			**Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.**	**Point Value 0/.5/1 (Reviewer)**
Big Idea 1: Limits Many calculus concepts are developed by first considering a discrete model and then the consequences of a limiting case. Therefore, the idea of limits is essential for discovering and developing important ideas, definitions, formulas, and theorems in calculus. Students must have a solid, intuitive understanding of limits and be able to compute various limits, including one-sided limits, limits at infinity, the limit of a sequence, and infinite limits. They should be able to work with tables and graphs in order to estimate the limit of a function at a point. Students should know the algebraic properties of limits and techniques for finding limits of indeterminate forms, and they should be able to apply limits to understand the behavior of a function near a point. Students must also understand how limits are used to determine continuity, a fundamental property of functions.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		

EU 1.1: The concept of a can be used to understand the behavior of functions.	**LO 1.1A (a):** Express limits symbolically using correct notation. **LO 1.1A (b):** Interpret limits expressed symbolically.	**EK 1.1A1:** Given a function f, the limit of $f(x)$ as x approaches c is a real number R if $f(x)$ can be made arbitrarily close to R by taking x sufficiently close to c (but not equal to c). If the limit exists and is a real number, then the common notation is $\lim_{x \to c} f(x) = R$. **EXCLUSION STATEMENT (EK 1.1A1):** The epsilon-delta definition of a limit is not assessed on the AP Calculus AB or BC Exam. However, teachers may include this topic in the course if time permits.	The formal definition of a limit is presented and can be used to determine the behavior of function Pg. 52 (A Formal Definition of Limit)	1
		EK 1.1A2: The concept of a limit can be extended to include one-sided limits, limits at infinity, and infinite limits.	The topic of one-sided limits, limits at infinity and infinite limits are clearly introduced and explored with in depth development of conceptual understanding using correct notation. Pgs. 92-93 (One-Sided Limits and Continuity on a Closed Interval); Pgs. 103-110 (Infinite Limits); Pgs. 235-245 (Limits at Infinity) 92,103,107,241 Horizontal asymptote and limits at infinity in 2.5	1
		EK 1.1A3: A limit might not exist for some functions at particular values of . Some ways that the limit might not exist are if the function is unbounded, if the function is oscillating near this value, or if the limit from the left does not equal the limit from the right. **EXAMPLES OF LIMITS THAT DO NOT EXIST:** $\lim_{x \to 0} \frac{1}{x^2} = \infty$ $\lim_{x \to 0} \sin\left(\frac{1}{x}\right)$ *does not exist* $\lim_{x \to 0} \frac{\lvert x \rvert}{x}$ *does not exist* $\lim_{x \to 0} \frac{1}{x}$ *does not exist*	The content shows multiple representations of limits that do not exist. Pgs. 70-71 (Limits That Fail to Exist) 71,72	1
	LO 1.1B: Estimate limits of functions	**EK 1.1B1:** Numerical and graphical information can be used to estimate limits.	The content shows a clear procedure and multiple representation for the estimation of limits of functions. Pgs. 68-69 (An Introduction to Limits) 65,68	1

	LO 1.1C: Determine limits of functions.	**EK 1.1C1:** Limits of sums, differences, products, quotients, and composite functions can be found u the basic theorems of limits and algebraic rules.	Students are asked to determine limits of functions using basic theorems of limits and algebraic r. Pgs. 79, 83, 84	1
		EK 1.1C2: The limit of a function may be found by using algebraic manipulation, alternate forms of trigonometric functions, or the squeeze theorem	Use of the squeeze theorem and the alternate forms of trigonometric functions Pgs. 83,84,88	1
		EK 1.1C3: Limits of the indeterminate forms $\frac{0}{0}$ and $\frac{\infty}{\infty}$ may be evaluated using L'Hospital's Rule.	Limits of indeterminate forms using L'Hospitals rule – this is an extension for AB and required for BC Pg83,558,562,563	1
	LO 1.1D: Deduce and interpret behavior of functions using limits.	**EK 1.1D1:** Asymptotic and unbounded behavior of functions can be explained and described using limits.	Asymptotic and unbounded behavior is explained using multiple representations with the definition of a limit, and limit theorems. Pgs. 103,105,110	1
		EK 1.1D2: Relative magnitudes of functions and their rates of change can be compared using limits	Comparison of rates of change using limits Pgs. 132-133.	1
EU 1.2: Continuity is a key property of functions that is defined using limits	**LO 1.2A:** Analyze functions for intervals of continuity or points of discontinuity.	**EK 1.2A1:** A function f is continuous at $x = c$ provided that $f(c)$ exists, $\lim_{x \to c} f(x)$ exists, and $\lim_{x \to c} f(x) = f(c)$.	The definition of continuity is presented as a key property Pg. 90	1
		EK 1.2A2: Polynomial, rational, power, exponential, logarithmic, and trigonometric functions are continuous at all points in their domains.	Functions are analyzed for intervals of continuity, points of continuity and points of discontinuity Pg. 95 (Properties of Continuity - section above Example 6)	1

		EK 1.2A3: Types of discontinuities include removable discontinuities, jump discontinuities, and discontinuities due to vertical asymptotes.	Students are asked to differentiate between the different types of discontinuities. Pg. 91 (Example 1 and paragraph above Example 1)	1
	LO 1.2B: Determine the applicability of important calculus theorems using continuity.	**EK 1.2B1:** Continuity is an essential condition for theorems such as the Intermediate Value Theorem, the Extreme Value Theorem, and the Mean Value Theorem.	The intermediate value theorem, extreme value theorem, and mean value theorem are taught and Pgs. 95-96 (Properties of Continuity); Pgs. 97-98 (The Intermediate Value Theorem); Pg. 202 (Theorem 4.1); Pg. 212 (The Mean Value Theorem)	1

Big Idea 2: Derivatives Using derivatives to describe the rate of change of one variable with respect to another variable allows students to understand change in a variety of contexts. In AP Calculus, students build the derivative using the concept of limits and use the derivative primarily to compute the instantaneous rate of change of a function. Applications of the derivative include finding the slope of a tangent line to a graph at a point, analyzing the graph of a function (for example, determining whether a function is increasing or decreasing and finding concavity and extreme values), and solving problems involving rectilinear motion. Students should be able to use different definitions of the derivative, estimate derivatives from tables and graphs, and apply various derivative rules and properties. In addition, students should be able to solve separable differential equations, understand and be able to apply the Mean Value Theorem, and be familiar with a variety of real-world applications, including related rates, optimization, and growth and decay models.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 2.1: The derivative of a function is defined as the limit of a difference quotient and can be determined using a variety of strategies.	**LO 2.1A:** Identify the derivative of a function as the limit of a difference quotient.	**EK 2.1A1:** The difference quotients $\frac{f(a+h)-f(a)}{h}$ and $\frac{f(x)-f(a)}{x-a}$ express the average rate of change of a function over an interval.	The derivative of a function is introduced as the limit of a difference quotient. Pg. 117 (top); Pg. 119 (The Derivative of a Function)	1

		EK 2.1A2: The instantaneous rate of change of a function at a point can be expressed by $\lim_{h\to 0}\frac{f(a+h)-f(a)}{h}$ or $\lim_{x\to a}\frac{f(x)-f(a)}{x-a}$, provided that the limit exists. These are common forms of the definition of the derivative and are denoted $f'(a)$.	The instantaneous rate of change of a function is related to the difference quotient Pg. 119 (The Derivative of a Function)	1
		EK 2.1A3: The derivative of f is the function whose value at x is $\lim_{h\to 0}\frac{f(x+h)-f(x)}{h}$ provided this limit exists.	The existence of a limit is shown to be related to the difference quotient Pg. 119 (The Derivative of a Function)	1
		EK 2.1A4: For $y=f(x)$, notations for the derivative include $\frac{dy}{dx}$, $f'(x)$, and y'.	Derivative notations are shown Pg. 119 (The Derivative of a Function)	1
		EK 2.1A5: The derivative can be represented graphically, numerically, analytically, and verbally.	Multiple representations are present throughout the text. Pgs. 119-125 (The Derivative and the Tangent Line Problem)	1
	LO 2.1B: Estimate derivatives.	**EK 2.1B1**: The derivative at a point can be estimated from information given in tables or graphs	Students are given ample opportunity to estimate derivatives using tables and graphs Pgs. 116-118 (The Tangent Line Problem)	1
	LO 2.1C: Calculate derivatives.	**EK 2.1C1:** Direct application of the definition of the derivative can be used to find the derivative for selected functions, including polynomial, power, sine, cosine, exponential, and logarithmic functions.	Derivatives rules are applied including, the following: Pgs. 139-149 (Product and Quotient Rules and Higher-Order Derivatives); Pgs. 150-164 (The Chain Rule); Pgs. 174-180 (Derivatives of Inverse Functions)	1
		EK 2.1C2: Specific rules can be used to calculate derivatives for classes of functions, including polynomial, rational, power, exponential, logarithmic, trigonometric, and inverse trigonometric.	Derivatives rules are applied including, the following: Pgs. 126-138 (Basic Differentiation Rules and Rates of Change); Pgs. 150-164 (The Chain Rule); Pgs. 174-180 (Derivatives of Inverse Functions)	1
		EK 2.1C3: Sums, differences, products, and quotients of functions can be differentiated using derivative rules.	Derivatives rules are applied including, the following Pgs. 126-138 (Basic Differentiation Rules and Rates of Change); Pgs. 139-149 (Product and Quotient Rules and Higher-Order Derivatives)	1

		EK 2.1C4: The chain rule provides a way to differentiate composite functions.	Derivatives rules are applied including, the following Pgs. 150-164 (The Chain Rule)	1
		EK 2.1C5: The chain rule is the basis for implicit differentiation.	Derivatives rules are applied including, the following :Pgs. 165-172 (Implicit Differentiation)	1
		EK 2.1C6: The chain rule can be used to find the derivative of an inverse function, provided the derivative of that function exists.	Derivatives rules are applied including, the following :Pgs. 174-180 (Derivatives of Inverse Functions).	1
		EK 2.1C7: (BC) Methods for calculating derivatives of realvalued functions can be extended to vector-valued functions, parametric functions, and functions in polar coordinates.	There is very little evidence of vectors in the text, however it is not relevant to AB and only BC. Pgs. 706-708 (Slope and Tangent Lines); Pgs. 719-720 (Slope and Tangent Lines); Pgs. 824-827 (Differentiation of Vector-Valued Functions)	.5

	LO 2.1D: Determine higher order derivatives.	**EK 2.1D1:** Differentiating f' produces the second derivative f'', provided the derivative of f' exists; iterating this process produces higher order derivatives of f.	Content includes conceptual understanding and multiple representations of first and second derivative tests. Pg. 145 (Higher-Order Derivatives)	1
		EK 2.1D2: Higher order derivatives are represented with a variety of notations. For $y = f(x)$, notations for the second derivative include $\frac{d^2y}{dx^2}$, $f''(x)$, and y''. Higher order derivatives can be denoted $\frac{d^n y}{dx^n}$ or $f^{(n)}(x)$.	Higher order derivatives are represented with a variety of notations both in lesson, examples, and assignments. Pg. 145 (Higher-Order Derivatives)	1
EU 2.2: A function's derivative, which is itself a function, can be used to understand the behavior of the function.	**LO 2.2A:** Use derivatives to analyze properties of a function.	**EK 2.2A1:** First and second derivatives of a function can provide information about the function and its graph including intervals of increase or decrease, local (relative) and global (absolute) extrema, intervals of upward or downward concavity, and points of inflection.	Use of functions derivative to understand the behavior of a functinos. Pgs. 217-226 (Increasing and Decreasing Functions and the First Derivative Test); Pgs. 227-234 (Concavity and the Second Derivative Test)	1
		EK 2.2A2: Key features of functions and their derivatives can be identified and related to their graphical, numerical, and analytical representations.	Information about Functions and their Derivatives are used to identify and relate graphs using multiple represntations. Pgs. 217-226 (Increasing and Decreasing Functions and the First Derivative Test); Pgs. 227-234 (Concavity and the Second Derivative Test); Pgs. 235-245 (Limits at Infinity);	1
		EK 2.2A3: Key features of the graphs of f, f', and f'' are related to one another.	Conceptual understanding of curve sketching between f, f', and f'' Pgs. 246-255 (A Summary of Curve Sketching)	1
		EK 2.2A4: (BC) For a curve given by a polar equation $r = f(\theta)$, derivatives of r, x, and y with respect to θ and first and second derivatives of y with respect to x can provide information about the curve.	Pgs. 719-720 (Slope and Tangent Lines). This is a BC topic, but it is well represented in the content	1

	LO 2.2B: Recognize the connection between differentiability and continuity.	**EK 2.2B1:** A continuous function may fail to be differentiable at a point in its domain.	Differentiability and continuity at specific points in the domain Pgs. 121-122 (Differentiability and Continuity)	1
		EK 2.2B2: If a function is differentiable at a point, then it is continuous at that point.	Definition between differentiation and continuity Pgs. 121-122 (Differentiability and Continuity)	1
EU 2.3: The derivative has multiple interpretations and applications including those that involve instantaneous rates of change.	**LO 2.3A:** Interpret the meaning of a derivative within a problem.	**EK 2.3A1:** The unit for $f'(x)$ is the unit for f divided by the unit for x.	The relationship of the derivative of a function is defined	1
		EK 2.3A2: The derivative of a function can be interpreted as the instantaneous rate of change with respect to its independent variable.	The relationship of the derivative with respect to the instantaneous rate of change. Pg. 119 (The Derivative of a Function)	1
	LO 2.3B: Solve problems involving the slope of a tangent line.	**EK 2.3B1:** The derivative at a point is the slope of the line tangent to a graph at that point on the graph.	The relationship between the derivative and the slope of the tangent line at that point Pgs. 116-118 (The Tangent Line Problem)	1
		EK 2.3B2: The tangent line is the graph of a locally linear approximation of the function near the point of tangency.	Local linearization and approximation Pgs. 116-118 (The Tangent Line Problem)	1
	LO 2.3C: Solve problems involving related rates, optimization, rectilinear motion, **(BC)** and planar motion.	**EK 2.3C1:** The derivative can be used to solve rectilinear motion problems involving position, speed, velocity, and acceleration.	There is content relative to related rates, optimization, rectilinear motion and planar motion(BC) Pgs. 133-134 (Rates of Change); Pgs. 181-189 (Related Rates); Pg. 213 (Example 4)	1

		EK 2.3C2: The derivative can be used to solve related rates problems, that is, finding a rate at which one quantity is changing by relating it to other quantities whose rates of change are known.	Related Rates Pgs. 181-189 (Related Rates)	1
		EK 2.3C3: The derivative can be used to solve optimization problems, that is, finding a maximum or minimum value of a function over a given interval.	Optimization involving max and min values Pgs. 256-265 (Optimization Problems)	1
		EK 2.3C4: (BC) Derivatives can be used to determine velocity, speed, and acceleration for a particle moving along curves given by parametric or vector-valued functions.	Planar and rectilinear motion Pgs. 832-840 (Velocity and Acceleration)	1
	LO 2.3D: Solve problems involving rates of change in applied contexts.	**EK 2.3D1:** The derivative can be used to express information about rates of change in applied contexts.	Rates of change in applied contexts Pgs. 133-134 (Rates of Change); Pgs. 181-189 (Related Rates); Pg. 213 (Example 4)	1
	LO 2.3E: Verify solutions to differential equations.	**EK 2.3E1:** Solutions to differential equations are functions or families of functions.	Solutions to differential equations are represented as families of functions, general solutions and particular solutions. Pgs. 382-383 (Slope Fields); Pg. 398 (Example 3); Pgs. 409-415 (The Logistic Equation); Pg. 417 (Example 2)	1
		EK 2.3E2: Derivatives can be used to verify that a function is a solution to a given differential equation.	Pgs. 380-381 (Example 1); Pg. 410 (Example 2)	1
	LO 2.3F: Estimate solutions to differential equations.	**EK 2.3F1:** Slope fields provide visual clues to the behavior of solutions to first order differential equations.	Use of slope fields for solutions to differential equations Pgs. 382-383 (Slope Fields); Pg. 420 (Exercises 15-16); Pgs. 424-425 (Examples 3 and 4);	1
		EK 2.3F2: (BC) For differential equations, Euler's method provides a procedure for approximating a solution or a point		1

		on a solution curve.		
EU 2.4: The Mean Value Theorem connects the behavior of a differentiable function over an interval to the behavior of the derivative of that function at a particular point in the interval.	**LO 2.4A:** Apply the Mean Value Theorem to describe the behavior of a function over an interval.	**EK 2.4A1:** If a function f is continuous over the interval $[a, b]$ and differentiable over the interval (a,b), the Mean Value Theorem guarantees a point within that open interval where the instantaneous rate of change equals the average rate of change over the interval.	Use of the Mean Value theorem to describe and determine behavior of a function over an interval. Pgs. 212-213 (The Mean Value Theorem)	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 3: Integrals and the Fundamental Theorem of Calculus Integrals are used in a wide variety of practical and theoretical applications. AP Calculus students should understand the definition of a definite integral involving a Riemann sum, be able to approximate a definite integral using different methods, and be able to compute definite integrals using geometry. They should be familiar with basic techniques of integration and properties of integrals. The interpretation of a definite integral is an important skill, and students should be familiar with area, volume, and motion applications, as well as with the use of the definite integral as an accumulation function. It is critical that students grasp the relationship between integration and differentiation as expressed in the Fundamental Theorem of Calculus — a central idea in AP Calculus. Students should be able to work with and analyze functions defined by an integral.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 3.1: Antidifferentiation is the inverse process of differentiation.	**LO 3.1A:** Recognize antiderivatives of basic functions.	**EK 3.1A1:** An antiderivative of a function f is a function g whose derivative is f.	The antiderivative as an inverse process Pg. 280 (Antiderivatives)	1
		EK 3.1A2: Differentiation rules provide the foundation for finding antiderivatives.	The connection between the rules of the differentiation rules and foundation for integration Pgs. 282-284 (Basic Integration Rules)	1
EU 3.2: The definite integral of a function over an interval is the limit of a Riemann sum over that interval and can be calculated using a variety of strategies	**LO 3.2A(a):** Interpret the definite integral as the limit of a Riemann sum.	**EK 3.2A1:** A Riemann sum, which requires a partition of an interval , is the sum of products, each of which is the value of the function at a point in a subinterval multiplied by the length of that subinterval of the partition.	Riemann sum and the connection to the definite integral Pgs. 302-303 (Riemann Sums)	1

	LO 3.2A(b): Express the limit of a Riemann sum in integral notation.	**EK 3.2A2:** The definite integral of a continuous function f over the interval $[a, b]$, denoted by $\int_a^b f(x)dx$, is the limit of Riemann sums as the widths of the subintervals approach 0. That is, $\int_a^b f(x)dx = \lim_{\max \Delta x_i \to 0} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$ where x_i^* is a value in the ith subinterval, Δx_i is the widtl of the ith subinterval, n is the number of subintervals, and $\max \Delta x_i$ is the width of the largest subinterval. Another form of the definition is $\int_a^b f(x)dx = \lim_{n \to \infty} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$, where $\Delta x_i = \frac{b-a}{n}$ and x_i^* is a value in the ith subinterval.	Riemann sum in integral notation Pgs. 304-306 (Definite Integrals)	1
		EK 3.2A3: The information in a definite integral can be translated into the limit of a related Riemann sum, and the limit of a Riemann sum can be written as a definite integral.	Translation between definite integral and Riemann sum and vice versa Pgs. 304-306 (Definite Integrals)	1
	LO 3.2B: Approximate a definite integral.	**EK 3.2B1:** Definite integrals can be approximated for functions that are represented graphically, numerically, algebraically, and verbally.	Multiple representations of the definite integral Pgs. 304-306 (Definite Integrals); Pg. 316 (The Mean Value Theorem for Integrals); Pgs. 341-343 (The Trapezoid Rule);	1
		EK 3.2B2: Definite integrals can be approximated using a left Riemann sum, a right Riemann sum, a midpoint Riemann sum, or a trapezoidal sum; approximations can be computed using either uniform or nonuniform partitions.	Left, Right, Midpoint, Reiman sums as well as trap sums with uniform and non uniform partitions Pgs. 341-343 (The Trapezoid Rule); Pgs. 343-344 (Simpson's Rule)	1

	LO 3.2C: Calculate a definite integral using areas and properties of definite integrals.	**EK 3.2C1:** In some cases, a definite integral can be evaluated by using geometry and the connection between the definite integral and area.	Geometric sums with the definite integral Pgs. 305-306 (Theorem 5.5 and Example 3)	1
		EK 3.2C2: Properties of definite integrals include the integral of a constant times a function, the integral of the sum of two functions, reversal of limits of integration, and the integral of a function over adjacent intervals.	Integral of a constant, sum of 2 functions, reversal of limits and other limit rules. Pgs. 307-308 (Properties of Definite Integrals); Pgs. 313-327 (The Fundamental Theorem of Calculus); Pgs. 515-523 (Integration by Parts)	1
		EK 3.2C3: The definition of the definite integral may be extended to functions with removable or jump discontinuities.	Connection between jump and removable discontinuities and integrals	1
	LO 3.2D: (BC) Evaluate an improper integral or show that an improper integral diverges.	**EK 3.2D1:** (BC) An improper integral is an integral that has one or both limits infinite or has an integrand that is unbounded in the interval of integration.	Pg. 568 (Definition of Improper Integrals with Infinite Integration Limits)	1
		EK 3.2D2: (BC) Improper integrals can be determined using limits of definite integrals.	Pgs. 568-578 (Improper Integrals)	1

EU 3.3: The Fundamental Theorem of Calculus, which has two distinct formulations, connects differentiation and integration.	**LO 3.3A:** Analyze functions defined by an integral.	**EK 3.3A1:** The definite integral can be used to define new functions; for example, $f(x)=\int_a^x e^{-t^2}dt$.	Definite integral to define functions Pgs. 319-321 (The Second Fundamental Theorem of Calculus)	1
		EK 3.3A2: If f is a continuous function on the interval $[a, b]$, then $\frac{d}{dx}\left(\int_a^x f(t)dt\right)=f(x)$, where x is between a and b.	Continuous function on the closed interval Pgs. 319-321 (The Second Fundamental Theorem of Calculus - Theorem 5.11)	1
		EK 3.3A3: Graphical, numerical, analytical, and verbal representations of a function f provide information about the function g defined as $g(x)=\int_a^x f(t)dt$.	Multiple representations as required by the college board. Pgs. 313-327 (The Fundamental Theorem of Calculus)	1
	LO 3.3B(a): Calculate antiderivatives.	**EK 3.3B1:** The function defined by $F(x)=\int_a^x f(t)dt$ is an antiderivative of f.	Students are able to calculate antiderivatives Pg. 280 (Antiderivatives)	1
	LO 3.3B(b): Evaluate definite integrals.	**EK 3.3B2:** If f is continuous on the interval $[a, b]$ and F is an antiderivative of f, then $\int_a^b f(x)dx = F(b)-F(a)$.	Evaluation of definite integrals using the FTC Pgs. 313-315 (The Fundamental Theorem of Calculus)	1
		EK 3.3B3: The notation $\int f(x)dx = F(x)+C$ means that $F'(x)=f(x)$, and $\int f(x)dx$ is called an indefinite integral of the function f.	The constant of integration Pg. 281 (bottom of page)	1
		EK 3.3B4: Many functions do not have closed form antiderivatives.	Pg. 281 (bottom of page)	1

		EK 3.3B5: Techniques for finding antiderivatives include algebraic manipulation such as long division and completing the square, substitution of variables, (BC) integration by parts, and nonrepeating linear partial fractions.	Pgs. 357-364 (Inverse Trigonometric Functions: Integration); Pgs. 508-514 (Basic Integration Rules); Pgs. 551-556 (Integration by Tables and Other Integration Techniques)	1
EU 3.4: The definite integral of a function over an interval is a mathematical tool with many interpretations and applications involving accumulation.	**LO 3.4A:** Interpret the meaning of a definite integral within a problem.	**EK 3.4A1:** A function defined as an integral represents an accumulation of a rate of change.	Accumulation of a rate of change Pg. 441 (Integration as an Accumulation Process)	1
		EK 3.4A2: The definite integral of the rate of change of a quantity over an interval gives the net change of that quantity over that interval.	Rate of change connection to net change Pgs. 322-323 (Net Change Theorem)	1
		EK 3.4A3: The limit of an approximating Riemann sum can be interpreted as a definite integral.	Riemann sum connection to definite integral Pgs. 306-308 (Definite Integrals)	1
	LO 3.4B: Apply definite integrals to problems involving the average value of a function.	**EK 3.4B1:** The average value of a function f over an interval $[a, b]$ is $\frac{1}{b-a}\int_a^b f(x)dx$.	Definite integral connection to average Pg. 317 (Average Value of a Function)	1
	LO 3.4C: Apply definite integrals to problems involving motion.	**EK 3.4C1:** For a particle in rectilinear motion over an interval of time, the definite integral of velocity represents the particle's displacement over the interval of time, and the definite integral of speed represents the particle's total distance traveled over the interval of time.	Particle motion over an interval in relation to displacement, speed, total distance Pg. 286 (Example 9); Pg. 318 (Example 5); Pg. 323 (Example 10)	1

		EK 3.4C2: (BC) The definite integral can be used to determine displacement, distance, and position of a particle moving along a curve given by parametric or vector-valued functions.	Limited use of parametric and vectors Pg. 702 (The Tautochrone and Barchi…hrone Problems); Pg. 729 (Arc Length in Polar Form); Pgs. 836-837 (Projectile Motion)	.5
	LO 3.4D: Apply definite integrals to problems involving area, volume, (BC) and length of a curve.	**EK 3.4D1:** Areas of certain regions in the plane can be calculated with definite integrals. (BC) Areas bounded by polar curves can be calculated with definite integrals	Area bound by polar curves with definite integrals Pg. 306 (Area of Common Geometric Figures); Pgs. 436-445 (Area of a Region Between Two Curves)	1
		EK 3.4D2: Volumes of solids with known cross sections, including discs and washers, can be calculated with definite integrals.	Volumes with cross sections, Disk and Shell..even washers Pg. 446-456 (Volume: The Disk Method); Pgs. 457-465 (Volume: The Shell Method)	1
		EK 3.4D3: (BC) The length of a planar curve defined by a function or by a parametrically defined curve can be calculated using a definite integral.	Planar curve with definite integral Pg. 729 (Arc Length in Polar Form)	1
	LO 3.4E: Use the definite integral to solve problems in various contexts.	**EK 3.4E1:** The definite integral can be used to express information about accumulation and net change in many applied contexts.	Accumulation and net change in applied context Pgs. 322-323 (Net Change Theorem); Pgs. 441 441 (Integration as an Accumulation Process)	1

EU 3.5: Antidifferentiation is an underlying concept involved in solving separable differential equations. Solving separable differential equations involves determining a function or relation given its rate of change.	**LO 3.5A:** Analyze differential equations to obtain general and specific solutions.	**EK 3.5A1:** Antidifferentiation can be used to find specific solutions to differential equations with given initial conditions, including applications to motion along a line, exponential growth and decay, (BC) and logistic growth.	Specific solutions given initial conditions with both Slope Fields and Eulers method Pgs. 380-388 (Slope Fields and Euler's Method); Pgs. 397-408 (Differential Equations: Separation of Variables); Pgs. 409-415 (The Logistic Equation)	1
		EK 3.5A2: Some differential equations can be solved by separation of variables.	Separation of Variables with general and particular solutions. Pgs. 397-408 (Differential Equations: Separation of Variables)	1
		EK 3.5A3: Solutions to differential equations may be subject to domain restrictions.	Growth and Decay, linear differential equations Pgs. 389-396 (Differential Equations: Growth and Decay); Pgs. 397-408 (Differential Equations: Separation of Variables); Pgs. 416-422 (First-Order Linear Differential Equations);	1
		EK 3.5A4: The function F defined by $F(x)=c+\int_a^x f(t)dt$ is a general solution to the differential equation $\frac{dy}{dx}=f(x)$, and $F(x)=y_0+\int_a^x f(t)dt$ is a particular solution to the differential equation $\frac{dy}{dx}=f(x)$ satisfying $F(a)=y_0$.	General and Particular solutions Pg. 285 (Initial Conditions and Particular Solutions); Pgs. 380-381 (General and Particular Solutions)	1
	LO 3.5B: Interpret, create and solve differential equations from problems in context.	**EK 3.5B1:** The model for exponential growth and decay that arises from the statement "The rate of change of a quantity is proportional to the size of the quantity" is $\frac{dy}{dt}=ky$.	The connection to growth and decay and the algebraic rate of change Pgs. 390-393 (Growth and Decay Models)	1
		EK 3.5B2: (BC) The model for logistic growth that arises from the statement "The rate of change of a quantity is jointly proportional to the size of the quantity and the difference between the quantity and the carrying capacity" is $\frac{dy}{dt}=ky(a-y)$.	Pgs. 409-415 (The Logistic Equation)	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 4: Series (BC) The AP Calculus BC curriculum includes the study of series of numbers, power series, and various methods to determine convergence or divergence of a series. Students should be familiar with Maclaurin series for common functions and general Taylor series representations. Other topics include the radius and interval of convergence and operations on power series. The technique of using power series to approximate an arbitrary function near a specific value allows for an important connection to the tangent-line problem and is a natural extension that helps achieve a better approximation. The concept of approximation is a common theme throughout AP Calculus, and power series provide a unifying, comprehensive conclusion.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 4.1: The sum of an infinite number of real numbers may converge.	**LO 4.1A:** Determine whether a series converges or diverges.	**EK 4.1A1:** The nth partial sum is defined as the sum of the first n terms of a sequence.	Nth partial sums Pg. 595 (Definitions of Convergent and Divergent Series)	1
		EK 4.1A2: An infinite series of numbers converges to a real number S (or has sum S), if and only if the limit of its sequence of partial sums exists and equals S.	Convergence of infinite series Pg. 595 (Definitions of Convergent and Divergent Series)	1
		EK 4.1A3: Common series of numbers include geometric series, the harmonic series, and p-series.	Geometric, harmonic, p series Pg. 597 (Geometric Series); Pg. 607 (p-Series and Harmonic Series); Pg. 611 (The Harmonic Series)	1
		EK 4.1A4: A series may be absolutely convergent, conditionally convergent, or divergent.	Absolute convergence and divergent, conditional convergence Pgs. 595-604 (Series and Convergence); Pgs. 622-623 (Absolute and Conditional Convergence)	1
		EK 4.1A5: If a series converges absolutely, then it converges.	Absolute convergence. Pg. 622 (Definitions of Absolute and Conditional Convergence)	1

		EK 4.1A6: In addition to examining the limit of the sequence of partial sums of the series, methods for determining whether a series of numbers converges or diverges are the nth term test, the comparison test, the limit comparison test, the integral test, the ratio test, and the alternating series test. **EXCLUSION STATEMENT (EK 4.1A6):** ***Other methods for determining convergence or divergence of a series of numbers are not assessed on the AP Calculus AB or BC Exam. However, teachers may include these topics in the course if time permits.***	Limits of a sequence and partial sums Pgs. 599-600 (nth-Term Test for Divergence); Pgs. 612-613 (Direct Comparison Test); Pgs. 627-629 (The Ratio Test);	1
	LO 4.1B: Determine or estimate the sum of a series.	**EK 4.1B1:** If a is a real number and r is a real number such that $\lvert r\rvert < 1$, then the geometric series $\sum_{n=0}^{\infty} ar^n = \frac{a}{1-r}$.	Geometric Series Pg. 597 (Geometric Series and Theorem 9.6)	1
		EK 4.1B2: If an alternating series converges by the alternating series test, then the alternating series error bound can be used to estimate how close a partial sum is to the value of the infinite series.	Alternating series and alternating series test, and error bound Pg. 621 (Alternating Series Remainder)	1
		EK 4.1B3: If a series converges absolutely, then any series obtained from it by regrouping or rearranging the terms has the same value.	Absolute Convergence Pg. 624 (Rearrangement of Series)	1

EU 4.2: A function can be represented by an associated power series over the interval of convergence for the power series.	**LO 4.2A:** Construct and use Taylor polynomials.	**EK 4.2A1:** The coefficient of the nth-degree term in a Taylor polynomial centered at $x=a$ for the function f is $\frac{f^{(n)}(a)}{n!}$.	Pg. 638 (Taylor and Maclaurin Polynomials)	1
		EK 4.2A2: Taylor polynomials for a function f centered at $x=a$ can be used to approximate function values of f near $x=a$.	Pgs. 636-637 (Polynomial Approximation of Elementary Functions)	1
		EK 4.2A3: In many cases, as the degree of a Taylor polynomial increases, the nth-degree polynomial will converge to the original function over some interval.	Pg. 666 (Theorem 9.23 and it's proof)	1
		EK 4.2A4: The Lagrange error bound can be used to bound the error of a Taylor polynomial approximation to a function.	Pg. 642 (Reminder of a Taylor Polynomial and Theorem 9.19)	1
		EK 4.2A5: In some situations where the signs of a Taylor polynomial are alternating, the alternating series error bound can be used to bound the error of a Taylor polynomial approximation to the function.		1
	LO 4.2B: Write a power series representing a given function.	**EK 4.2B1:** A power series is a series of the form $\sum_{n=0}^{\infty} a_n(x-r)^n$ where n is a non-negative integer, $\{a_n\}$ is a sequence of real numbers, and r is a real number.	Pg. 647 (Power Series)	
		EK 4.2B2: The Maclaurin series for $\sin(x)$, $\cos(x)$, and e^x provide the foundation for constructing the Maclaurin series for other functions.	Pgs. 664-675 (Taylor and Maclaurin Polynomials)	

		EK 4.2B3: The Maclaurin series for $\frac{1}{1-x}$ is a geometric series.	
		EK 4.2B4: A Taylor polynomial for $f(x)$ is a partial sum of the Taylor series for $f(x)$.	
		EK 4.2B5: A power series for a given function can be derived by various methods (e.g., algebraic processes, substitutions, using properties of geometric series, and operations on known series such as term-byterm integration or term-by-term differentiation).	Pgs. 647-656 (Power Series); Pgs. 657-664 (Representations of Functions by Power Series)
	LO 4.2C: Determine the radius and interval of convergence of a power series.	**EK 4.2C1:** If a power series converges, it either converges at a single point or has an interval of convergence.	Pg. 648 (Theorem 9.20)
		EK 4.2C2: The ratio test can be used to determine the radius of convergence of a power series.	Pg. 649 (Examples 2, 3, 4)
		EK 4.2C3: If a power series has a positive radius of convergence, then the power series is the Taylor series of the function to which it converges over the open interval.	Pg. 664 (Theorem 9.22)
		EK 4.2C4: The radius of convergence of a power series obtained by term-by-term differentiation or term-by-term integration is the same as the radius of convergence of the original power series.	Pg. 652 (Differentiation and Integration of Power Series and Theorem 9.21)

Indicators of Quality:

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- The content in this program is structured in such a fashion to benefit the teacher in the role as an instructor and a facilitator to the students through the role of independent and group learning	(Reviewer only.) ____X__ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- The materials included exercises that build on each other as well as modeling and applications that build students conceptual understanding.	(Reviewer only.) ____X__ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Lessons and units lend to a coherent flow of concept introduction, examples, check for understanding, independent learning, group learning, exercises and connections.	(Reviewer only.) ___X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The teacher materials support the teachers role as instructor and facilitator and lend to mathematical discussions and deepening of the conceptual understanding.	(Reviewer only.) __X____ Yes _____ No

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **There are no physical manipulatives for this program, however this course is a college level course and manipulatives are not really appropriate at this level.**	**(Reviewer only.)** **___X__ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **There are self assessments provided in the units, a long with an assessment bank, lesson quizzes, and AP questions.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Answer keys, solutions guides, guided solutions, scoring rubrics for AP questions are provided**	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that **are accessible and unbiased, including the use of course-level language in student prompts.**	**Evidence-** **The content is accessible to all students and no sign of bias is evident in the the lesson material, student text, or teacher materiasl. Appropriate course level language is evident throughout the course.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The material was written and edited by qualified instructors and appear to be free from mathematical error and shows an appropriate course level.**	**(Reviewer only.)** **____X__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Navigation through the text is clear and well organized. The visual graphics and designs are level appropriate and engaging.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

COMMENTS:

STRENGTHS	WEAKNESSES
The Strengths of this curriculum are evident in the AP level questioning techniques and review. There are AP Exam tips, and interactive examples as well as videos of proofs to help students deepen their conceptual understanding. The author does a great job of presenting the material in a graphical, analytical, numerical, and verbal approach. Students are required to use mathematical reasoning and problem solving skills throughout each lesson of the text. There are a lot of historical and biographical information to help students understand the where, why, how and by who questions about calculus.	The only weakness found in the content of this text is the limited exercises, examples and applications with vectors. Vectors typically do not show up until Calculus 3, so while they are mentioned in Calculus BC they are not a necessary content.

IDAHO STATE DEPARTMENT OF EDUCATION

Advanced Placement Course: Calculus AB & BC

Content Area: AP Calculus AB + BC

Course Title: Mathematics

Title of Material: Calculus: Early Transcendental Functions, 6e

Author: Larson

Publisher: Cengage

Standards Alignment Evaluation Rubric

0 = No Alignment– **Not Evident:** Content as described in the Standards is **not evident.**

.5 = Partial Alignment- **Partially Evident:** Content as described in the Standards is **partially evident** and there are few gaps.

1 = High Alignment – **Clearly Evident:** Content is fully aligned as described in the Standards and repeatedly included to guarantee extensive opportunities for students to work with the content. Alignment is **clearly evident.**

N/A = Not applicable for standard

Note: In the Concept Outline, subject matter that is included only in the BC course is indicated with blue shading.

Advanced Placement			**Calculus AB & BC**	
Standards and Learning Indicators			**Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.**	**Point Value 0/.5/1 (Reviewer)**
Big Idea 1: Limits Many calculus concepts are developed by first considering a discrete model and then the consequences of a limiting case. Therefore, the idea of limits is essential for discovering and developing important ideas, definitions, formulas, and theorems in calculus. Students must have a solid, intuitive understanding of limits and be able to compute various limits, including one-sided limits, limits at infinity, the limit of a sequence, and infinite limits. They should be able to work with tables and graphs in order to estimate the limit of a function at a point. Students should know the algebraic properties of limits and techniques for finding limits of indeterminate forms, and they should be able to apply limits to understand the behavior of a function near a point. Students must also understand how limits are used to determine continuity, a fundamental property of functions.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		

EU 1.1: The concept of a limit can be used to understand the behavior of functions.	**LO 1.1A (a):** Express limits symbolically using correct notation. **LO 1.1A (b):** Interpret limits expressed symbolically.	**EK 1.1A1:** Given a function f, the limit of $f(x)$ as x aproaches c is a real number R if $f(x)$ can be made arbitrarily close to R by taking x sufficiently close to c (but not equal to c). If the limit exists and is a real number, then the common notation is $\lim_{x \to c} f(x) = R$. **EXCLUSION STATEMENT (EK 1.1A1):** The epsilon-delta definition of a limit is not assessed on the AP Calculus AB or BC Exam. However, teachers may include this topic in the course if time permits.	**Lesson 2.2 Epsilon-Delta here also**	1
		EK 1.1A2: The concept of a limit can be extended to include one-sided limits, limits at infinity, and infinite limits.	**Lesson 2.4**	1
		EK 1.1A3: A limit might not exist for some functions at particular values of . Some ways that the limit might not exist are if the function is unbounded, if the function is oscillating near this value, or if the limit from the left does not equal the limit from the right. **EXAMPLES OF LIMITS THAT DO NOT EXIST:** $\lim_{x \to 0} \frac{1}{x^2} = \infty$ $\lim_{x \to 0} \sin\left(\frac{1}{x}\right)$ *does not exist* $\lim_{x \to 0} \frac{\lvert x \rvert}{x}$ *does not exist* $\lim_{x \to 0} \frac{1}{x}$ *does not exist*	**Lesson 2.4, 2.5 and Lesson 4.5**	1
	LO 1.1B: Estimate limits of functions	**EK 1.1B1:** Numerical and graphical information can be used to estimate limits.	**Lesson 2.2**	1

	LO 1.1C: Determine limits of functions.	**EK 1.1C1:** Limits of sums, differences, products, quotients, and composite functions can be found using the basic theorems of limits and algebraic rules.	**Lesson 2.3 Lesson 2.5**	1
		EK 1.1C2: The limit of a function may be found by using algebraic manipulation, alternate forms of trigonometric functions, or the squeeze theorem.	**Lesson 2.3 Lesson 2.5**	1
		EK 1.1C3: Limits of the indeterminate forms $\frac{0}{0}$ and $\frac{\infty}{\infty}$ may be evaluated using L'Hospital's Rule.	**Lesson 2.3 Lesson 8.7 BC**	1
	LO 1.1D: Deduce and interpret behavior of functions using limits.	**EK 1.1D1:** Asymptotic and unbounded behavior of functions can be explained and described using limits.	**Lesson 2.5**	1
		EK 1.1D2: Relative magnitudes of functions and their rates of change can be compared using limits.	**Did not find any explicit treatment of this topic in limits or in L'Hopital's Rule 8.7**	0
EU 1.2: Continuity is a key property of functions that is defined using limits	**LO 1.2A:** Analyze functions for intervals of continuity or points of discontinuity.	**EK 1.2A1:** A function f is continuous at $x=c$ provided that $f(c)$ exists, $\lim_{x\to c} f(x)$ exists, and $\lim_{x\to c} f(x)=f(c)$.	**Lesson 2.4**	1
		EK 1.2A2: Polynomial, rational, power, exponential, logarithmic, and trigonometric functions are continuous at all points in their domains.	**Lesson 2.4**	1

		EK 1.2A3: Types of discontinuities include removable discontinuities, jump discontinuities, and discontinuities due to vertical asymptotes.	**Lesson 2.4**	1
	LO 1.2B: Determine the applicability of important calculus theorems using continuity.	**EK 1.2B1:** Continuity is an essential condition for theorems such as the Intermediate Value Theorem, the Extreme Value Theorem, and the Mean Value Theorem.	**Lesson 2.4 Lesson 4.1, 4.2**	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 2: Derivatives Using derivatives to describe the rate of change of one variable with respect to another variable allows students to understand change in a variety of contexts. In AP Calculus, students build the derivative using the concept of limits and use the derivative primarily to compute the instantaneous rate of change of a function. Applications of the derivative include finding the slope of a tangent line to a graph at a point, analyzing the graph of a function (for example, determining whether a function is increasing or decreasing and finding concavity and extreme values), and solving problems involving rectilinear motion. Students should be able to use different definitions of the derivative, estimate derivatives from tables and graphs, and apply various derivative rules and properties. In addition, students should be able to solve separable differential equations, understand and be able to apply the Mean Value Theorem, and be familiar with a variety of real-world applications, including related rates, optimization, and growth and decay models.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 2.1: The derivative of a function is defined as the limit of a difference quotient and can be determined using a variety of strategies.	**LO 2.1A:** Identify the derivative of a function as the limit of a difference quotient.	**EK 2.1A1:** The difference quotients $\frac{f(a+h)-f(a)}{h}$ and $\frac{f(x)-f(a)}{x-a}$ express the average rate of change of a function over an interval.	**Lesson 3.1**	1

		EK 2.1A2: The instantaneous rate of cha of a function at a point can be expressed by $\lim_{h\to 0}\frac{f(a+h)-f(a)}{h}$ or $\lim_{x\to a}\frac{f(x)-f(a)}{x-a}$, provided that the limit exists. These are common forms of the definition of the derivative and are denoted $f'(a)$.	**Lesson 3.1**	**1**
		EK 2.1A3: The derivative of f is the function whose value at x is $\lim_{h\to 0}\frac{f(x+h)-f(x)}{h}$ provided this limit exists.	**Lesson 3.1**	**1**
		EK 2.1A4: For $y=f(x)$, notations for the derivative include $\frac{dy}{dx}$, $f'(x)$, and y'.	**Lesson 3.1 More notation styles were included**	**1**
		EK 2.1A5: The derivative can be represented graphically, numerically, analytically, and verbally.	**Lesson 3.1**	**1**
	LO 2.1B: Estimate derivatives.	**EK 2.1B1: The derivative at a point can be estimated from information given in tables or graphs.**	**Lesson 3.1 Did not see any examples with tables**	**.5**
	LO 2.1C: Calculate derivatives.	**EK 2.1C1:** Direct application of the definition of the derivative can be used to find the derivative for selected functions, including polynomial, power, sine, cosine, exponential, and logarithmic functions.	**Lesson 3.3. 3.4, 3.6**	**1**
		EK 2.1C2: Specific rules can be used to calculate derivatives for classes of functions, including polynomial, rational, power, exponential, logarithmic, trigonometric, and inverse trigonometric.	**Lesson 3.3, 3.4, 3.6**	**1**

		EK 2.1C3: Sums, differences, products, and quotients of functions can be differentiated using derivative rules.	**Lesson 3.2, 3.3**	**1**
		EK 2.1C4: The chain rule provides a way to differentiate composite functions.	**Lesson 3.4**	**1**
		EK 2.1C5: The chain rule is the basis for implicit differentiation.	**Lesson 3.5**	**1**
		EK 2.1C6: The chain rule can be used to find the derivative of an inverse function, provided the derivative of that function exists.	**Lesson 3.6 Very nice presentation of this idea on p. 174**	**1**
		EK 2.1C7: (BC) Methods for calculating derivatives of realvalued functions can be extended to vector-valued functions, parametric functions, and functions in polar coordinates.	**Lesson 10.3, 10.4, Lesson 12.2**	**1**

	LO 2.1D: Determine higher order derivatives.	**EK 2.1D1:** Differentiating f' produces the second derivative f'', provided the derivative of f' exists; repeating this process produces higher order derivatives of f.	**Lesson 3.3**	1
		EK 2.1D2: Higher order derivatives are represented with a variety of notations. For $y = f(x)$, notations for the second derivative include $\frac{d^2y}{dx^2}$, $f''(x)$, and y''. Higher order derivatives can be denoted $\frac{d^ny}{dx^n}$ or $f^{(n)}(x)$.	**Lesson 3.3**	1
EU 2.2: A function's derivative, which is itself a function, can be used to understand the behavior of the function.	**LO 2.2A:** Use derivatives to analyze properties of a function.	**EK 2.2A1:** First and second derivatives of a function can provide information about the function and its graph including intervals of increase or decrease, local (relative) and global (absolute) extrema, intervals of upward or downward concavity, and points of inflection.	**Lesson 4.3, 4.4**	1
		EK 2.2A2: Key features of functions and their derivatives can be identified and related to their graphical, numerical, and analytical representations.	**Lesson 4.3, 4.4, 4.5**	1
		EK 2.2A3: Key features of the graphs of f, f', and f'' are related to one another.	**Lesson 4.6**	1
		EK 2.2A4: (BC) For a curve given by a polar equation $r = f(\theta)$, derivatives of r, x, and y with respect to θ and first and second derivatives of y with respect to x can provide information about the curve.	**Lesson 10.4** **No second derivative formula or applications for polar equations**	.5

	LO 2.2B: Recognize the connection between differentiability and continuity.	**EK 2.2B1:** A continuous function may fail to be differentiable at a point in its domain.	**Lesson 3.1**	**1**
		EK 2.2B2: If a function is differentiable at a point, then it is continuous at that point.	**Lesson 3.1**	**1**
EU 2.3: The derivative has multiple interpretations and applications including those that involve instantaneous rates of change.	**LO 2.3A:** Interpret the meaning of a derivative within a problem.	**EK 2.3A1:** The unit for $f'(x)$ is the unit for f divided by the unit for x.	**Lesson 2.4**	**1**
		EK 2.3A2: The derivative of a function can be interpreted as the instantaneous rate of change with respect to its independent variable.	**Lesson 3.1 No explicit reference is made to independent variables. The text only references the rate of change of one variable to another**	**.5**
	LO 2.3B: Solve problems involving the slope of a tangent line.	**EK 2.3B1:** The derivative at a point is the slope of the line tangent to a graph at that point on the graph.	**Lesson 3.1**	**1**
		EK 2.3B2: The tangent line is the graph of a locally linear approximation of the function near the point of tangency.	**Lesson 3.8 and 4.8**	**1**
	LO 2.3C: Solve problems involving related rates, optimization, rectilinear motion, **(BC)** and planar motion.	**EK 2.3C1:** The derivative can be used to solve rectilinear motion problems involving position, speed, velocity, and acceleration.	**Lesson 3.2, 3.7, 4.2**	**1**

		EK 2.3C2: The derivative can be u to solve related rates problems, that is, finding a rate at which one quantity is changing by relating it to other quantities whose rates of change are known.	**Lesson 3.7**	**1**
		EK 2.3C3: The derivative can be used to solve optimization problems, that is, finding a maximum or minimum value of a function over a given interval.	**Lesson 4.7**	**1**
		EK 2.3C4: (BC) Derivatives can be used to determine velocity, speed, and acceleration for a particle moving along curves given by parametric or vector-valued functions.	**Lesson 12.3**	**1**
	LO 2.3D: Solve problems involving rates of change in applied contexts.	**EK 2.3D1:** The derivative can be used to express information about rates of change in applied contexts.	**Lesson 3.2, 3.7, 4.7**	**1**
	LO 2.3E: Verify solutions to differential equations.	**EK 2.3E1:** Solutions to differential equations are functions or families of functions.	**Lesson 6.1, 6.3, 6.4, 6.5**	**1**
		EK 2.3E2: Derivatives can be used to verify that a function is a solution to a given differential equation.	**Lesson 6.1, 6.5**	**1**
	LO 2.3F: Estimate solutions to differential equations.	**EK 2.3F1:** Slope fields provide visual clues to the behavior of solutions to first order differential equations.	**Lesson 6.1, 6.5, 6.6**	**1**

		EK 2.3F2: (BC) For differential eq ns, Euler's method provides a procedure for approximating a solution or a point on a solution curve.	**Lesson 6.1**	**1**
EU 2.4: The Mean Value Theorem connects the behavior of a differentiable function over an interval to the behavior of the derivative of that function at a particular point in the interval.	**LO 2.4A:** Apply the Mean Value Theorem to describe the behavior of a function over an interval.	**EK 2.4A1:** If a function f is continuous over the interval $[a, b]$ and differentiable over the interval (a, b), the Mean Value Theorem guarantees a point within that open interval where the instantaneous rate of change equals the average rate of change over the interval.	**Lesson 4.2**	**1**

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 3: Integrals and the Fundamental Theorem of Calculus Integrals are used in a wide variety of practical and theoretical applications. AP Calculus students should understand the definition of a definite integral involving a Riemann sum, be able to approximate a definite integral using different methods, and be able to compute definite integrals using geometry. They should be familiar with basic techniques of integration and properties of integrals. The interpretation of a definite integral is an important skill, and students should be familiar with area, volume, and motion applications, as well as with the use of the definite integral as an accumulation function. It is critical that students grasp the relationship between integration and differentiation as expressed in the Fundamental Theorem of Calculus — a central idea in AP Calculus. Students should be able to work with and analyze functions defined by an integral.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 3.1: Antidifferentiation is the inverse process of differentiation.	**LO 3.1A:** Recognize antiderivatives of basic functions.	**EK 3.1A1:** An antiderivative of a function f is a function g whose derivative is f.	**Lesson 5.1**	1
		EK 3.1A2: Differentiation rules provide the foundation for finding antiderivatives.	**Lesson 5.1**	1
EU 3.2: The definite integral of a function over an interval is the limit of a Riemann sum over that interval and can be calculated using a variety of strategies	**LO 3.2A(a):** Interpret the definite integral as the limit of a Riemann sum.	**EK 3.2A1:** A Riemann sum, which requires a partition of an interval , is the sum of products, each of which is the value of the function at a point in a subinterval multiplied by the length of that subinterval of the partition.	**Lesson 5.3**	1

	LO 3.2A(b): Express the limit of a Riemann sum in integral notation.	**EK 3.2A2:** The definite integral of a continuous function f over the interval $[a, b]$, denoted by $\int_a^b f(x)dx$, is the limit of Riemann sums as the widths of the subintervals aporoach 0. That is, $\int_a^b f(x)dx = \lim_{\max \Delta x_i \to 0} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$ where x_i^* is a value in the ith subinterval, Δx_i is the widtl of the ith subinterval, n is the number of subintervals, and $\max \Delta x_i$ is the width of the largest subinterval. Another form of the definition is $\int_a^b f(x)dx = \lim_{n \to \infty} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$, where $\Delta x_i = \frac{b-a}{n}$ and x_i^* is a value in the ith subinterval.	**Lesson 5.3**	1
		EK 3.2A3: The information in a definite integral can be translated into the limit of a related Riemann sum, and the limit of a Riemann sum can be written as a definite integral.	**Lesson 5.3**	1
	LO 3.2B: Approximate a definite integral.	**EK 3.2B1:** Definite integrals can be approximated for functions that are represented graphically, numerically, algebraically, and verbally.	**Lesson 5.3, 5.4, 5.6**	1
		EK 3.2B2: Definite integrals can be approximated using a left Riemann sum, a right Riemann sum, a midpoint Riemann sum, or a trapezoidal sum; approximations can be computed using either uniform or nonuniform partitions.	**Lesson 5.2, 5.6**	1

	LO 3.2C: Calculate a definite integral using areas and properties of definite integrals.	**EK 3.2C1:** In some cases, a definite integral can be evaluated by using geometry and the connection between the definite integral and area.	**Lesson 5.3**	**1**
		EK 3.2C2: Properties of definite integrals include the integral of a constant times a function, the integral of the sum of two functions, reversal of limits of integration, and the integral of a function over adjacent intervals.	**Lesson 5.3, 5.4, 8.2**	**1**
		EK 3.2C3: The definition of the definite integral may be extended to functions with removable or jump discontinuities.	**Did not see this.**	**0**
	LO 3.2D: (BC) Evaluate an improper integral or show that an improper integral diverges.	**EK 3.2D1:** (BC) An improper integral is an integral that has one or both limits infinite or has an integrand that is unbounded in the interval of integration.	**Lesson 8.8**	**1**
		EK 3.2D2: (BC) Improper integrals can be determined using limits of definite integrals.	**Lesson 8.8**	**1**

EU 3.3: The Fundamental Theorem of Calculus, which has two distinct formulations, connects differentiation and integration.	**LO 3.3A:** Analyze functions defined by an integral.	**EK 3.3A1:** The definite integral can be used to define new functions; for example, $f(x)=\int_a^x e^{-t}\,dt$.	**Lesson 5.4**	1
		EK 3.3A2: If f is a continuous function on the interval $[a, b]$, then $\frac{d}{dx}\left(\int_a^x f(t)dt\right)=f(x)$, where x is between a and b.	**Lesson 5.4**	1
		EK 3.3A3: Graphical, numerical, analytical, and verbal representations of a function f provide information about the function g defined as $g(x)=\int_a^x f(t)dt$.	**Lesson 5.4**	1
	LO 3.3B(a): Calculate antiderivatives.	**EK 3.3B1:** The function defined by $F(x)=\int_a^x f(t)dt$ is an antiderivative of f.	**Lesson 5.1**	1
	LO 3.3B(b): Evaluate definite integrals.	**EK 3.3B2:** If f is continuous on the interval $[a, b]$ and F is an antiderivative of f, then $\int_a^b f(x)dx=F(b)-F(a)$.	**Lesson 5.4**	1
		EK 3.3B3: The notation $\int f(x)dx=F(x)+C$ means that $F'(x)=f(x)$, and $\int f(x)dx$ is called an indefinite integral of the function f.	**Lesson 5.1**	1
		EK 3.3B4: Many functions do not have closed form antiderivatives.	**Lesson 5.1 The terminology closed form is missing.**	1

		EK 3.3B5: Techniques for finding antiderivatives include algebraic manipulation such as long division and completing the square, substitution of variables, (BC) integration by parts, and nonrepeating linear partial fractions.	**Lesson 5.5 Lesson 8.2, 8.5**	**1**
EU 3.4: The definite integral of a function over an interval is a mathematical tool with many interpretations and applications involving accumulation.	**LO 3.4A:** Interpret the meaning of a definite integral within a problem.	**EK 3.4A1:** A function defined as an integral represents an accumulation of a rate of change.	**Lesson 7.1**	**1**
		EK 3.4A2: The definite integral of the rate of change of a quantity over an interval gives the net change of that quantity over that interval.	**Lesson 5.4**	**1**
		EK 3.4A3: The limit of an approximating Riemann sum can be interpreted as a definite integral.	**Lesson 5.3**	**1**
	LO 3.4B: Apply definite integrals to problems involving the average value of a function.	**EK 3.4B1:** The average value of a function f over an interval $[a, b]$ is $\frac{1}{b-a}\int_a^b f(x)dx$.	**Lesson 5.4**	**1**
	LO 3.4C: Apply definite integrals to problems involving motion.	**EK 3.4C1:** For a particle in rectilinear motion over an interval of time, the definite integral of velocity represents the particle's displacement over the interval of time, and the definite integral of speed represents the particle's total distance traveled over the interval of time.	**Lesson 5.1, 5.4**	**1**

		EK 3.4C2: (BC) The definite integral can be used to determine displacement, distance, and position of a particle moving along a curve given by parametric or vector-valued functions.	**Lesson 10.2, 10.5, 12.3**	**.5**
	LO 3.4D: Apply definite integrals to problems involving area, volume, (BC) and length of a curve.	**EK 3.4D1:** Areas of certain regions in the plane can be calculated with definite integrals. (BC) Areas bounded by polar curves can be calculated with definite integrals	**Lesson 5.3, 7.1** **Polar Lesson 10.5**	**1**
		EK 3.4D2: Volumes of solids with known cross sections, including discs and washers, can be calculated with definite integrals.	**Lesson 7.2, 7.3**	**1**
		EK 3.4D3: (BC) The length of a planar curve defined by a function or by a parametrically defined curve can be calculated using a definite integral.	**Lesson 10.5**	**1**
	LO 3.4E: Use the definite integral to solve problems in various contexts.	**EK 3.4E1:** The definite integral can be used to express information about accumulation and net change in many applied contexts.	**Lesson 5.4, 7.1**	**1**

EU 3.5: Antidifferentiation is an underlying concept involved in solving separable differential equations. Solving separable differential equations involves determining a function or relation given its rate of change.	**LO 3.5A:** Analyze differential equations to obtain general and specific solutions.	**EK 3.5A1:** Antidifferentiation can be used to find specific solutions to differential equations with given initial conditions, including applications to motion along a line, exponential growth and decay, **(BC)** and logistic growth.	**Lesson 6.1, 6.3, 6.4**	**1**
		EK 3.5A2: Some differential equations can be solved by separation of variables.	**Lesson 6.3**	**1**
		EK 3.5A3: Solutions to differential equations may be subject to domain restrictions.	**Lesson 6.2, 6.3, 6.5** **Most of the solution work was well presented. Domain restrictions were not explicit.**	**.5**
		EK 3.5A4: The function F defined by $F(x)=c+\int_a^x f(t)dt$ is a general solution to the differential equation $\frac{dy}{dx}=f(x)$, and $F(x)=y_0+\int_a^x f(t)dt$ is a particular solution to the differential equation $\frac{dy}{dx}=f(x)$ satisfying $F(a)=y_0$.	**Lesson 5.1, 6.1**	**1**
	LO 3.5B: Interpret, create and solve differential equations from problems in context.	**EK 3.5B1:** The model for exponential growth and decay that arises from the statement "The rate of change of a quantity is proportional to the size of the quantity" is $\frac{dy}{dt}=ky$.	**Lesson 6.2**	**1**
		EK 3.5B2: (BC) The model for logistic growth that arises from the statement "The rate of change of a quantity is jointly proportional to the size of the quantity and the difference between the quantity and the carrying capacity" is $\frac{dy}{dt}=ky(a-y)$.	**Lesson 6.4**	**1**

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 4: Series (BC) The AP Calculus BC curriculum includes the study of series of numbers, power series, and various methods to determine convergence or divergence of a series. Students should be familiar with Maclaurin series for common functions and general Taylor series representations. Other topics include the radius and interval of convergence and operations on power series. The technique of using power series to approximate an arbitrary function near a specific value allows for an important connection to the tangent-line problem and is a natural extension that helps achieve a better approximation. The concept of approximation is a common theme throughout AP Calculus, and power series provide a unifying, comprehensive conclusion.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 4.1: The sum of an infinite number of real numbers may converge.	**LO 4.1A:** Determine whether a series converges or diverges.	**EK 4.1A1:** The nth partial sum is defined as the sum of the first n terms of a sequence.	**Lesson 9.2**	1
		EK 4.1A2: An infinite series of numbers converges to a real number S (or has sum S), if and only if the limit of its sequence of partial sums exists and equals S.	**Lesson 9.2**	1
		EK 4.1A3: Common series of numbers include geometric series, the harmonic series, and p-series.	**Lesson 9.2, 9.3, 9.4**	1
		EK 4.1A4: A series may be absolutely convergent, conditionally convergent, or divergent.	**Lesson 9.2, 9.5**	1
		EK 4.1A5: If a series converges absolutely, then it converges.	**Lesson 9.5**	1

		EK 4.1A6: In addition to examining the li f the sequence of partial sums of the series, methods for determining whether a series of numbers converges or diverges are the nth term test, the comparison test, the limit comparison test, the integral test, the ratio test, and the alternating series test. **EXCLUSION STATEMENT (EK 4.1A6):** *Other methods for determining convergence or divergence of a series of numbers are not assessed on the AP Calculus AB or BC Exam. However, teachers may include these topics in the course if time permits.*	**Lesson 9.2. 9.4, 9.6**	**1**
	LO 4.1B: Determine or estimate the sum of a series.	**EK 4.1B1:** If a is a real number and r is a real number such that $\lvert r\rvert < 1$, then the geometric series $\sum_{n=0}^{\infty} ar^n = \frac{a}{1-r}$.	**Lesson 9.2**	**1**
		EK 4.1B2: If an alternating series converges by the alternating series test, then the alternating series error bound can be used to estimate how close a partial sum is to the value of the infinite series.	**Lesson 9.5**	**1**
		EK 4.1B3: If a series converges absolutely, then any series obtained from it by regrouping or rearranging the terms has the same value.	**Lesson 9.5**	**1**

EU 4.2: A function can be represented by an associated power series over the interval of convergence for the power series.	**LO 4.2A:** Construct and use Taylor polynomials.	**EK 4.2A1:** The coefficient of the nth-degree term in a Taylor polynomial centered at $x = a$ for the function f is $\frac{f^{(n)}(a)}{n!}$.	**Lesson 9.7**	**1**
		EK 4.2A2: Taylor polynomials for a function f centered at $x = a$ can be used to approximate function values of f near $x = a$.	**Lesson 9.7**	**1**
		EK 4.2A3: In many cases, as the degree of a Taylor polynomial increases, the nth-degree polynomial will converge to the original function over some interval.	**Lesson 9.10**	**1**
		EK 4.2A4: The Lagrange error bound can be used to bound the error of a Taylor polynomial approximation to a function.	**Lesson 9.7**	**1**
		EK 4.2A5: In some situations where the signs of a Taylor polynomial are alternating, the alternating series error bound can be used to bound the error of a Taylor polynomial approximation to the function.	**Did not see this reference**	**0**
	LO 4.2B: Write a power series representing a given function.	**EK 4.2B1:** A power series is a series of the form $\sum_{n=0}^{\infty} a_n(x-r)^n$ where n is a non-negative integer, $\{a_n\}$ is a sequence of real numbers, and r is a real number.	**Lesson 9.8**	**1**
		EK 4.2B2: The Maclaurin series for $\sin(x)$, $\cos(x)$, and e^x provide the foundation for constructing the Maclaurin series for other functions.	**Lesson 9.7**	**1**

		EK 4.2B3: The Maclaurin series for $\frac{1}{1-x}$ is a geometric series.	**Lesson 9.9** p. 657	1
		EK 4.2B4: A Taylor polynomial for $f(x)$ is a partial sum of the Taylor series for $f(x)$.	**Lesson 9.10** p. 666 bottom of the page. The reference is easy to miss	1
		EK 4.2B5: A power series for a given function can be derived by various methods (e.g., algebraic processes, substitutions, using properties of geometric series, and operations on known series such as term-byterm integration or term-by-term differentiation).	**Lesson 9.8, 9,10**	1
	LO 4.2C: Determine the radius and interval of convergence of a power series.	**EK 4.2C1:** If a power series converges, it either converges at a single point or has an interval of convergence.	**Lesson 9.8**	1
		EK 4.2C2: The ratio test can be used to determine the radius of convergence of a power series.	**Lesson 9.8**	1
		EK 4.2C3: If a power series has a positive radius of convergence, then the power series is the Taylor series of the function to which it converges over the open interval.	**Lesson 9.10**	1
		EK 4.2C4: The radius of convergence of a power series obtained by term-by-term differentiation or term-by-term integration is the same as the radius of convergence of the original power series.	**Lesson 9.8**	1

Indicators of Quality:

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence-Lessons have content objectives attached to them. Each section is tagged with the learning objectives to help teachers and students. Students have plenty of opportunities to try a wide variety of problems.	(Reviewer only.) __x____ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence-Lessons have problems and chapter structure the moves from simple to complex. Each section starts with mechanical problems and moves to verbal explanations and extenders.	(Reviewer only.) ___x___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence-Lessons and ideas move from simple to complex within and between chapters. Material from chapters 1 and 2 are reused extensively in chapters 3, 4, and 5. Student questions become increasingly more abstract and connect more	(Reviewer only.) __x____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The teacher binder has daily quizzes and teaching tips for new teachers and tips for new teachers addresses common misconceptions and ways to teach students to maximize their learning. The supplementary materials are include AP teaching tips.	(Reviewer only.) ___x___ Yes _____ No

5. Manip[illegible]ves suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- There [illegible]calculator explorations embedded in the student work that demonstrate the concepts and allow students to play with ideas. Application problems make ideas more concrete.	(Reviewer only.) ____x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Students have formal assessments of many types. They also have more informal assessments in the form of the "How do you see it" activities and quizzes in the teacher resource binder as well as AP practice questions and Putnam practice questions to extend assessment for the gifted student.	(Reviewer only.) ____x__ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Did not see rubrics in the traditional text work. Rubrics are available in the " Five steps to a 5" resource book for the free response questions.	(Reviewer only.) _____ Yes _____x_ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Questions do not require any prior knowledge that has not been addressed in the content	(Reviewer only.) _____x_ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- There is an extensive list of reviewers. Authors of the text have been writing textbooks for more than 2 decades	(Reviewer only.) ____x__ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- The book has a pleasing layout. Concepts and vocabulary are easy to find. The text is broken into sections by graphs and pictures and is user friendly.	(Reviewer only.) _____x_ Yes _____ No

MENTS:

STRENGTHS	WEAKNESSES
• The textbook is beautiful and flows well • Good pointers and extenders in the teacher binder. • Text flow is logical. • Lesson progress from simple to complex. • Concepts appear to be in a usable order • Includes opportunities for students to write. • Great additional resources	• Less conceptual and more mechanical • Fewer graphs, more mechanical. • Text is dense for some learners. • It does not include enough table problems.

Standards Alignment Evaluation Rubric

0 = No Alignment– **Not Evident:** Content as described in the Standards is **not evident.**

.5 = Partial Alignment- **Partially Evident:** Content as described in the Standards is **partially evident** and there are few gaps.

1 = High Alignment – **Clearly Evident:** Content is fully aligned as described in the Standards and repeatedly included to guarantee extensive opportunities for students to work with the content. Alignment is **clearly evident.**

N/A = Not applicable for standard

Note: In the Concept Outline, subject matter that is included only in the BC course is indicated with blue shading.

<tr><td colspan="5">Big Idea 1: Limits
Many calculus concepts are developed by first considering a discrete model and then the consequences of a limiting case. Therefore, the idea of limits is essential for discovering and developing important ideas, definitions, formulas, and theorems in calculus. Students must have a solid, intuitive understanding of limits and be able to compute various limits, including one-sided limits, limits at infinity, the limit of a sequence, and infinite limits. They should be able to work with tables and graphs in order to estimate the limit of a function at a point. Students should know the algebraic properties of limits and techniques for finding limits of indeterminate forms, and they should be able to apply limits to understand the behavior of a function near a point. Students must also understand how limits are used to determine continuity, a fundamental property of functions.</td></tr>

EU 1.1: The concept of a limit can be used to understand the behavior of functions.	**LO 1.1A (a):** Express limits symbolically using correct notation. **LO 1.1A (b):** Interpret limits expressed symbolically.	**EK 1.1A1:** Given a function f, the limit of $f(x)$ as x approaches c is a real number R if $f(x)$ can be made arbitrarily close to R by taking x sufficiently close to c (but not equal to c). If the limit exists and is a real number, then the common notation is $\lim_{x \to c} f(x) = R$. **EXCLUSION STATEMENT (EK 1.1A1):** The epsilon-delta definition of a limit is not assessed on the AP Calculus AB or BC Exam. However, teachers may include this topic in the course if time permits.	**Lesson 2.2 Epsilon-Delta here also**	1
		EK 1.1A2: The concept of a limit can be extended to include one-sided limits, limits at infinity, and infinite limits.	**Lesson 2.4**	1
		EK 1.1A3: A limit might not exist for some functions at particular values of . Some ways that the limit might not exist are if the function is unbounded, if the function is oscillating near this value, or if the limit from the left does not equal the limit from the right. **EXAMPLES OF LIMITS THAT DO NOT EXIST:** $\lim_{x \to 0} \frac{1}{x^2} = \infty$ $\lim_{x \to 0} \sin\left(\frac{1}{x}\right)$ *does not exist* $\lim_{x \to 0} \frac{\lfloor x \rfloor}{x}$ *does not exist* $\lim_{x \to 0} \frac{1}{x}$ *does not exist*	**Lesson 2.4, 2.5 and Lesson 4.5**	1
	LO 1.1B: Estimate limits of functions	**EK 1.1B1:** Numerical and graphical information can be used to estimate limits.	**Lesson 2.2**	1

	LO 1.1C: Determine limits of functions.	**EK 1.1C1:** Limits of sums, differences, products, quotients, and composite functions can be found using the basic theorems of limits and algebraic rules.	**Lesson 2.3 Lesson 2.5**	1
		EK 1.1C2: The limit of a function may be found by using algebraic manipulation, alternate forms of trigonometric functions, or the squeeze theorem.	**Lesson 2.3 Lesson 2.5**	1
		EK 1.1C3: Limits of the indeterminate forms $\frac{0}{0}$ and $\frac{\infty}{\infty}$ may be evaluated using L'Hospital's Rule.	**Lesson 2.3 Lesson 8.7 BC**	1
	LO 1.1D: Deduce and interpret behavior of functions using limits.	**EK 1.1D1:** Asymptotic and unbounded behavior of functions can be explained and described using limits.	**Lesson 2.5**	1
		EK 1.1D2: Relative magnitudes of functions and their rates of change can be compared using limits.	**Did not find any explicit treatment of this topic in limits or in L'Hopital's Rule 8.7**	0
EU 1.2: Continuity is a key property of functions that is defined using limits	**LO 1.2A:** Analyze functions for intervals of continuity or points of discontinuity.	**EK 1.2A1:** A function f is continuous at $x = c$ provided that $f(c)$ exists, $\lim_{x \to c} f(x)$ exists, and $\lim_{x \to c} f(x) = f(c)$.	**Lesson 2.4**	1
		EK 1.2A2: Polynomial, rational, power, exponential, logarithmic, and trigonometric functions are continuous at all points in their domains.	**Lesson 2.4**	1

		EK 1.2A3: Types of discontinuities include removable discontinuities, jump discontinuities, and discontinuities due to vertical asymptotes.	**Lesson 2.4**	1
	LO 1.2B: Determine the applicability of important calculus theorems using continuity.	**EK 1.2B1:** Continuity is an essential condition for theorems such as the Intermediate Value Theorem, the Extreme Value Theorem, and the Mean Value Theorem.	**Lesson 2.4 Lesson 4.1, 4.2**	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 2: Derivatives Using derivatives to describe the rate of change of one variable with respect to another variable allows students to understand change in a variety of contexts. In AP Calculus, students build the derivative using the concept of limits and use the derivative primarily to compute the instantaneous rate of change of a function. Applications of the derivative include finding the slope of a tangent line to a graph at a point, analyzing the graph of a function (for example, determining whether a function is increasing or decreasing and finding concavity and extreme values), and solving problems involving rectilinear motion. Students should be able to use different definitions of the derivative, estimate derivatives from tables and graphs, and apply various derivative rules and properties. In addition, students should be able to solve separable differential equations, understand and be able to apply the Mean Value Theorem, and be familiar with a variety of real-world applications, including related rates, optimization, and growth and decay models.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 2.1: The derivative of a function is defined as the limit of a difference quotient and can be determined using a variety of strategies.	**LO 2.1A:** Identify the derivative of a function as the limit of a difference quotient.	**EK 2.1A1:** The difference quotients $\frac{f(a+h)-f(a)}{h}$ and $\frac{f(x)-f(a)}{x-a}$ express the average rate of change of a function over an interval.	**Lesson 3.1**	1

		EK 2.1A2: The instantaneous rate of change of a function at a point can be expressed by $\lim_{h\to 0}\frac{f(a+h)-f(a)}{h}$ or $\lim_{x\to a}\frac{f(x)-f(a)}{x-a}$, provided that the limit exists. These are common forms of the definition of the derivative and are denoted $f'(a)$.	**Lesson 3.1**	**1**
		EK 2.1A3: The derivative of f is the function whose value at x is $\lim_{h\to 0}\frac{f(x+h)-f(x)}{h}$ provided this limit exists.	**Lesson 3.1**	**1**
		EK 2.1A4: For $y=f(x)$, notations for the derivative include $\frac{dy}{dx}$, $f'(x)$, and y'.	**Lesson 3.1 More notation styles were included**	**1**
		EK 2.1A5: The derivative can be represented graphically, numerically, analytically, and verbally.	**Lesson 3.1**	**1**
	LO 2.1B: Estimate derivatives.	**EK 2.1B1: The derivative at a point can be estimated from information given in tables or graphs.**	**Lesson 3.1 Did not see any examples with tables**	**.5**
	LO 2.1C: Calculate derivatives.	**EK 2.1C1:** Direct application of the definition of the derivative can be used to find the derivative for selected functions, including polynomial, power, sine, cosine, exponential, and logarithmic functions.	**Lesson 3.3. 3.4, 3.6**	**1**
		EK 2.1C2: Specific rules can be used to calculate derivatives for classes of functions, including polynomial, rational, power, exponential, logarithmic, trigonometric, and inverse trigonometric.	**Lesson 3.3, 3.4, 3.6**	**1**

		EK 2.1C3: Sums, differences, products, and quotients of functions can be differentiated using derivative rules.	**Lesson 3.2, 3.3**	**1**
		EK 2.1C4: The chain rule provides a way to differentiate composite functions.	**Lesson 3.4**	**1**
		EK 2.1C5: The chain rule is the basis for implicit differentiation.	**Lesson 3.5**	**1**
		EK 2.1C6: The chain rule can be used to find the derivative of an inverse function, provided the derivative of that function exists.	**Lesson 3.6 Very nice presentation of this idea on p. 174**	**1**
		EK 2.1C7: (BC) Methods for calculating derivatives of realvalued functions can be extended to vector-valued functions, parametric functions, and functions in polar coordinates.	**Lesson 10.3, 10.4, Lesson 12.2**	**1**

	LO 2.1D: Determine higher order derivatives.	**EK 2.1D1:** Differentiating f' produces the second derivative f'', provided the derivative of f' exists; repeating this process produces higher order derivatives of f.	**Lesson 3.3**	1
		EK 2.1D2: Higher order derivatives are represented with a variety of notations. For $y = f(x)$, notations for the second derivative include $\frac{d^2y}{dx^2}$, $f''(x)$, and y''. Higher order derivatives can be denoted $\frac{d^ny}{dx^n}$ or $f^{(n)}(x)$.	**Lesson 3.3**	1
EU 2.2: A function's derivative, which is itself a function, can be used to understand the behavior of the function.	**LO 2.2A:** Use derivatives to analyze properties of a function.	**EK 2.2A1:** First and second derivatives of a function can provide information about the function and its graph including intervals of increase or decrease, local (relative) and global (absolute) extrema, intervals of upward or downward concavity, and points of inflection.	**Lesson 4.3, 4.4**	1
		EK 2.2A2: Key features of functions and their derivatives can be identified and related to their graphical, numerical, and analytical representations.	**Lesson 4.3, 4.4, 4.5**	1
		EK 2.2A3: Key features of the graphs of f, f', and f'' are related to one another.	**Lesson 4.6**	1
		EK 2.2A4: (BC) For a curve given by a polar equation $r = f(\theta)$, derivatives of r, x, and y with respect to θ and first and second derivatives of y with respect to x can provide information about the curve.	**Lesson 10.4** **No second derivative formula or applications for polar equations**	.5

	LO 2.2B: Recognize the connection between differentiability and continuity.	**EK 2.2B1:** A continuous function m[illegible]ail to be differentiable at a point in its domain.	**Lesson 3.1**	**1**
		EK 2.2B2: If a function is differentiable at a point, then it is continuous at that point.	**Lesson 3.1**	**1**
EU 2.3: The derivative has multiple interpretations and applications including those that involve instantaneous rates of change.	**LO 2.3A:** Interpret the meaning of a derivative within a problem.	**EK 2.3A1:** The unit for $f'(x)$ is the unit for f divided by the unit for x.	**Lesson 2.4**	**1**
		EK 2.3A2: The derivative of a function can be interpreted as the instantaneous rate of change with respect to its independent variable.	**Lesson 3.1 No explicit reference is made to independent variables. The text only references the rate of change of one variable to another**	**.5**
	LO 2.3B: Solve problems involving the slope of a tangent line.	**EK 2.3B1:** The derivative at a point is the slope of the line tangent to a graph at that point on the graph.	**Lesson 3.1**	**1**
		EK 2.3B2: The tangent line is the graph of a locally linear approximation of the function near the point of tangency.	**Lesson 3.8 and 4.8**	**1**
	LO 2.3C: Solve problems involving related rates, optimization, rectilinear motion, **(BC)** and planar motion.	**EK 2.3C1:** The derivative can be used to solve rectilinear motion problems involving position, speed, velocity, and acceleration.	**Lesson 3.2, 3.7, 4.2**	**1**

		EK 2.3C2: The derivative can be u to solve related rates problems, that is, finding a rate at which one quantity is changing by relating it to other quantities whose rates of change are known.	**Lesson 3.7**	1
		EK 2.3C3: The derivative can be used to solve optimization problems, that is, finding a maximum or minimum value of a function over a given interval.	**Lesson 4.7**	1
		EK 2.3C4: (BC) Derivatives can be used to determine velocity, speed, and acceleration for a particle moving along curves given by parametric or vector-valued functions.	**Lesson 12.3**	1
	LO 2.3D: Solve problems involving rates of change in applied contexts.	**EK 2.3D1:** The derivative can be used to express information about rates of change in applied contexts.	**Lesson 3.2, 3.7, 4.7**	1
	LO 2.3E: Verify solutions to differential equations.	**EK 2.3E1:** Solutions to differential equations are functions or families of functions.	**Lesson 6.1, 6.3, 6.4, 6.5**	1
		EK 2.3E2: Derivatives can be used to verify that a function is a solution to a given differential equation.	**Lesson 6.1, 6.5**	1
	LO 2.3F: Estimate solutions to differential equations.	**EK 2.3F1:** Slope fields provide visual clues to the behavior of solutions to first order differential equations.	**Lesson 6.1, 6.5, 6.6**	1

		EK 2.3F2: (BC) For differential equations, Euler's method provides a procedure for approximating a solution or a point on a solution curve.	**Lesson 6.1**	1
EU 2.4: The Mean Value Theorem connects the behavior of a differentiable function over an interval to the behavior of the derivative of that function at a particular point in the interval.	**LO 2.4A:** Apply the Mean Value Theorem to describe the behavior of a function over an interval.	**EK 2.4A1:** If a function f is continuous over the interval $[a, b]$ and differentiable over the interval (a, b), the Mean Value Theorem guarantees a point within that open interval where the instantaneous rate of change equals the average rate of change over the interval.	**Lesson 4.2**	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 3: Integrals and the Fundamental Theorem of Calculus Integrals are used in a wide variety of practical and theoretical applications. AP Calculus students should understand the definition of a definite integral involving a Riemann sum, be able to approximate a definite integral using different methods, and be able to compute definite integrals using geometry. They should be familiar with basic techniques of integration and properties of integrals. The interpretation of a definite integral is an important skill, and students should be familiar with area, volume, and motion applications, as well as with the use of the definite integral as an accumulation function. It is critical that students grasp the relationship between integration and differentiation as expressed in the Fundamental Theorem of Calculus — a central idea in AP Calculus. Students should be able to work with and analyze functions defined by an integral.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 3.1: Antidifferentiation is the inverse process of differentiation.	**LO 3.1A:** Recognize antiderivatives of basic functions.	**EK 3.1A1:** An antiderivative of a function f is a function g whose derivative is f.	**Lesson 5.1**	**1**
		EK 3.1A2: Differentiation rules provide the foundation for finding antiderivatives.	**Lesson 5.1**	**1**
EU 3.2: The definite integral of a function over an interval is the limit of a Riemann sum over that interval and can be calculated using a variety of strategies	**LO 3.2A(a):** Interpret the definite integral as the limit of a Riemann sum.	**EK 3.2A1:** A Riemann sum, which requires a partition of an interval , is the sum of products, each of which is the value of the function at a point in a subinterval multiplied by the length of that subinterval of the partition.	**Lesson 5.3**	**1**

	LO 3.2A(b): Express the limit of a Riemann sum in integral notation.	**EK 3.2A2:** The definite integral of a continuous function f over the interval $[a, b]$, denoted by $\int_a^b f(x)dx$, is the limit of Riemann sums as the widths of the subintervals approach 0. That is, $\int_a^b f(x)dx = \lim_{\max \Delta x_i \to 0} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$ where x_i^* is a value in the ith subinterval, Δx_i is the width of the ith subinterval, n is the number of subintervals, and $\max \Delta x_i$ is the width of the largest subinterval. Another form of the definition is $\int_a^b f(x)dx = \lim_{n \to \infty} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$, where $\Delta x_i = \frac{b-a}{n}$ and x_i^* is a value in the ith subinterval.	**Lesson 5.3**	**1**
		EK 3.2A3: The information in a definite integral can be translated into the limit of a related Riemann sum, and the limit of a Riemann sum can be written as a definite integral.	**Lesson 5.3**	**1**
	LO 3.2B: Approximate a definite integral.	**EK 3.2B1:** Definite integrals can be approximated for functions that are represented graphically, numerically, algebraically, and verbally.	**Lesson 5.3, 5.4, 5.6**	**1**
		EK 3.2B2: Definite integrals can be approximated using a left Riemann sum, a right Riemann sum, a midpoint Riemann sum, or a trapezoidal sum; approximations can be computed using either uniform or nonuniform partitions.	**Lesson 5.2, 5.6**	**1**

	LO 3.2C: Calculate a definite integral using areas and properties of definite integrals.	**EK 3.2C1:** In some cases, a definite integral can be evaluated by using geometry and the connection between the definite integral and area.	**Lesson 5.3**	**1**
		EK 3.2C2: Properties of definite integrals include the integral of a constant times a function, the integral of the sum of two functions, reversal of limits of integration, and the integral of a function over adjacent intervals.	**Lesson 5.3, 5.4, 8.2**	**1**
		EK 3.2C3: The definition of the definite integral may be extended to functions with removable or jump discontinuities.	**Did not see this.**	**0**
	LO 3.2D: (BC) Evaluate an improper integral or show that an improper integral diverges.	**EK 3.2D1:** (BC) An improper integral is an integral that has one or both limits infinite or has an integrand that is unbounded in the interval of integration.	**Lesson 8.8**	**1**
		EK 3.2D2: (BC) Improper integrals can be determined using limits of definite integrals.	**Lesson 8.8**	**1**

EU 3.3: The Fundamental Theorem of Calculus, which has two distinct formulations, connects differentiation and integration.	**LO 3.3A:** Analyze functions defined by an integral.	**EK 3.3A1:** The definite integral can be used to define new functions; for example, $f(x)=\int_a^x e^{-t}\,dt$.	**Lesson 5.4**	1
		EK 3.3A2: If f is a continuous function on the interval $[a, b]$, then $\frac{d}{dx}\left(\int_a^x f(t)dt\right)=f(x)$, where x is between a and b.	**Lesson 5.4**	1
		EK 3.3A3: Graphical, numerical, analytical, and verbal representations of a function f provide information about the function g defined as $g(x)=\int_a^x f(t)dt$.	**Lesson 5.4**	1
	LO 3.3B(a): Calculate antiderivatives.	**EK 3.3B1:** The function defined by $F(x)=\int_a^x f(t)dt$ is an antiderivative of f.	**Lesson 5.1**	1
	LO 3.3B(b): Evaluate definite integrals.	**EK 3.3B2:** If f is continuous on the interval $[a, b]$ and F is an antiderivative of f, then $\int_a^b f(x)dx=F(b)-F(a)$.	**Lesson 5.4**	1
		EK 3.3B3: The notation $\int f(x)dx=F(x)+C$ means that $F'(x)=f(x)$, and $\int f(x)dx$ is called an indefinite integral of the function f.	**Lesson 5.1**	1
		EK 3.3B4: Many functions do not have closed form antiderivatives.	**Lesson 5.1 The terminology closed form is missing.**	1

		EK 3.3B5: Techniques for finding antiderivatives include algebraic manipulation such as long division and completing the square, substitution of variables, (BC) integration by parts, and nonrepeating linear partial fractions.	**Lesson 5.5 Lesson 8.2, 8.5**	**1**
EU 3.4: The definite integral of a function over an interval is a mathematical tool with many interpretations and applications involving accumulation.	**LO 3.4A:** Interpret the meaning of a definite integral within a problem.	**EK 3.4A1:** A function defined as an integral represents an accumulation of a rate of change.	**Lesson 7.1**	**1**
		EK 3.4A2: The definite integral of the rate of change of a quantity over an interval gives the net change of that quantity over that interval.	**Lesson 5.4**	**1**
		EK 3.4A3: The limit of an approximating Riemann sum can be interpreted as a definite integral.	**Lesson 5.3**	**1**
	LO 3.4B: Apply definite integrals to problems involving the average value of a function.	**EK 3.4B1:** The average value of a function f over an interval $[a, b]$ is $\frac{1}{b-a}\int_a^b f(x)dx$.	**Lesson 5.4**	**1**
	LO 3.4C: Apply definite integrals to problems involving motion.	**EK 3.4C1:** For a particle in rectilinear motion over an interval of time, the definite integral of velocity represents the particle's displacement over the interval of time, and the definite integral of speed represents the particle's total distance traveled over the interval of time.	**Lesson 5.1, 5.4**	**1**

		EK 3.4C2: (BC) The definite integral can be used to determine displacement, distance, and position of a particle moving along a curve given by parametric or vector-valued functions.	**Lesson 10.2, 10.5, 12.3**	**.5**
	LO 3.4D: Apply definite integrals to problems involving area, volume, **(BC)** and length of a curve.	**EK 3.4D1:** Areas of certain regions in the plane can be calculated with definite integrals. (BC) Areas bounded by polar curves can be calculated with definite integrals	**Lesson 5.3, 7.1** **Polar Lesson 10.5**	**1**
		EK 3.4D2: Volumes of solids with known cross sections, including discs and washers, can be calculated with definite integrals.	**Lesson 7.2, 7.3**	**1**
		EK 3.4D3: (BC) The length of a planar curve defined by a function or by a parametrically defined curve can be calculated using a definite integral.	**Lesson 10.5**	**1**
	LO 3.4E: Use the definite integral to solve problems in various contexts.	**EK 3.4E1:** The definite integral can be used to express information about accumulation and net change in many applied contexts.	**Lesson 5.4, 7.1**	**1**

EU 3.5: Antidifferentiation is an underlying concept involved in solving separable differential equations. Solving separable differential equations involves determining a function or relation given its rate of change.	**LO 3.5A:** Analyze differential equations to obtain general and specific solutions.	**EK 3.5A1:** Antidifferentiation can be used to find specific solutions to differential equations with given initial conditions, including applications to motion along a line, exponential growth and decay, **(BC)** and logistic growth.	**Lesson 6.1, 6.3, 6.4**	**1**
		EK 3.5A2: Some differential equations can be solved by separation of variables.	**Lesson 6.3**	**1**
		EK 3.5A3: Solutions to differential equations may be subject to domain restrictions.	**Lesson 6.2, 6.3, 6.5** **Most of the solution work was well presented. Domain restrictions were not explicit.**	**.5**
		EK 3.5A4: The function F defined by $F(x)=c+\int_a^x f(t)dt$ is a general solution to the differential equation $\frac{dy}{dx}=f(x)$, and $F(x)=y_0+\int_a^x f(t)dt$ is a particular solution to the differential equation $\frac{dy}{dx}=f(x)$ satisfying $F(a)=y_0$.	**Lesson 5.1, 6.1**	**1**
	LO 3.5B: Interpret, create and solve differential equations from problems in context.	**EK 3.5B1:** The model for exponential growth and decay that arises from the statement "The rate of change of a quantity is proportional to the size of the quantity" is $\frac{dy}{dt}=ky$.	**Lesson 6.2**	**1**
		EK 3.5B2: (BC) The model for logistic growth that arises from the statement "The rate of change of a quantity is jointly proportional to the size of the quantity and the difference between the quantity and the carrying capacity" is $\frac{dy}{dt}=ky(a-y)$.	**Lesson 6.4**	**1**

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 4: Series (BC) The AP Calculus BC curriculum includes the study of series of numbers, power series, and various methods to determine convergence or divergence of a series. Students should be familiar with Maclaurin series for common functions and general Taylor series representations. Other topics include the radius and interval of convergence and operations on power series. The technique of using power series to approximate an arbitrary function near a specific value allows for an important connection to the tangent-line problem and is a natural extension that helps achieve a better approximation. The concept of approximation is a common theme throughout AP Calculus, and power series provide a unifying, comprehensive conclusion.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 4.1: The sum of an infinite number of real numbers may converge.	**LO 4.1A:** Determine whether a series converges or diverges.	**EK 4.1A1:** The nth partial sum is defined as the sum of the first n terms of a sequence.	**Lesson 9.2**	1
		EK 4.1A2: An infinite series of numbers converges to a real number S (or has sum S), if and only if the limit of its sequence of partial sums exists and equals S.	**Lesson 9.2**	1
		EK 4.1A3: Common series of numbers include geometric series, the harmonic series, and p-series.	**Lesson 9.2, 9.3, 9.4**	1
		EK 4.1A4: A series may be absolutely convergent, conditionally convergent, or divergent.	**Lesson 9.2, 9.5**	1
		EK 4.1A5: If a series converges absolutely, then it converges.	**Lesson 9.5**	1

		EK 4.1A6: In addition to examining the limit of the sequence of partial sums of the series, methods for determining whether a series of numbers converges or diverges are the nth term test, the comparison test, the limit comparison test, the integral test, the ratio test, and the alternating series test. **EXCLUSION STATEMENT (EK 4.1A6):** *Other methods for determining convergence or divergence of a series of numbers are not assessed on the AP Calculus AB or BC Exam. However, teachers may include these topics in the course if time permits.*	**Lesson 9.2. 9.4, 9.6**	**1**
	LO 4.1B: Determine or estimate the sum of a series.	**EK 4.1B1:** If a is a real number and r is a real number such that $\lvert r\rvert < 1$, then the geometric series $\sum_{n=0}^{\infty} ar^n = \frac{a}{1-r}$.	**Lesson 9.2**	**1**
		EK 4.1B2: If an alternating series converges by the alternating series test, then the alternating series error bound can be used to estimate how close a partial sum is to the value of the infinite series.	**Lesson 9.5**	**1**
		EK 4.1B3: If a series converges absolutely, then any series obtained from it by regrouping or rearranging the terms has the same value.	**Lesson 9.5**	**1**

EU 4.2: A function can be represented by an associated power series over the interval of convergence for the power series.	**LO 4.2A:** Construct and use Taylor polynomials.	**EK 4.2A1:** The coefficient of the nth-degree term in a Taylor polynomial centered at $x=a$ for the function f is $\frac{f^{(n)}(a)}{n!}$.	**Lesson 9.7**	**1**
		EK 4.2A2: Taylor polynomials for a function f centered at $x=a$ can be used to approximate function values of f near $x=a$.	**Lesson 9.7**	**1**
		EK 4.2A3: In many cases, as the degree of a Taylor polynomial increases, the nth-degree polynomial will converge to the original function over some interval.	**Lesson 9.10**	**1**
		EK 4.2A4: The Lagrange error bound can be used to bound the error of a Taylor polynomial approximation to a function.	**Lesson 9.7**	**1**
		EK 4.2A5: In some situations where the signs of a Taylor polynomial are alternating, the alternating series error bound can be used to bound the error of a Taylor polynomial approximation to the function.	**Did not see this reference**	**0**
	LO 4.2B: Write a power series representing a given function.	**EK 4.2B1:** A power series is a series of the form $\sum_{n=0}^{\infty} a_n(x-r)^n$ where n is a non-negative integer, $\{a_n\}$ is a sequence of real numbers, and r is a real number.	**Lesson 9.8**	**1**
		EK 4.2B2: The Maclaurin series for $\sin(x)$, $\cos(x)$, and e^x provide the foundation for constructing the Maclaurin series for other functions.	**Lesson 9.7**	**1**

		EK 4.2B3: The Maclaurin series for $\frac{1}{1-x}$ is a geometric series.	**Lesson 9.9 p. 657**	1
		EK 4.2B4: A Taylor polynomial for $f(x)$ is a partial sum of the Taylor series for $f(x)$.	**Lesson 9.10** p. 666 bottom of the page. The reference is easy to miss	1
		EK 4.2B5: A power series for a given function can be derived by various methods (e.g., algebraic processes, substitutions, using properties of geometric series, and operations on known series such as term-byterm integration or term-by-term differentiation).	**Lesson 9.8, 9,10**	1
	LO 4.2C: Determine the radius and interval of convergence of a power series.	**EK 4.2C1:** If a power series converges, it either converges at a single point or has an interval of convergence.	**Lesson 9.8**	1
		EK 4.2C2: The ratio test can be used to determine the radius of convergence of a power series.	**Lesson 9.8**	1
		EK 4.2C3: If a power series has a positive radius of convergence, then the power series is the Taylor series of the function to which it converges over the open interval.	**Lesson 9.10**	1
		EK 4.2C4: The radius of convergence of a power series obtained by term-by-term differentiation or term-by-term integration is the same as the radius of convergence of the original power series.	**Lesson 9.8**	1

Indicators of Quality:

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence-Lessons have content objectives attached to them. Each section is tagged with the learning objectives to help teachers and students. Students have plenty of opportunities to try a wide variety of problems.	(Reviewer only.) __x____ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence-Lessons have problems and chapter structure the moves from simple to complex. Each section starts with mechanical problems and moves to verbal explanations and extenders.	(Reviewer only.) ___x___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence-Lessons and ideas move from simple to complex within and between chapters. Material from chapters 1 and 2 are reused extensively in chapters 3, 4, and 5. Student questions become increasingly more abstract and connect more	(Reviewer only.) __x____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The teacher binder has daily quizzes and teaching tips for new teachers and tips for new teachers addresses common misconceptions and ways to teach students to maximize their learning. The supplementary materials are include AP teaching tips.	(Reviewer only.) ___x___ Yes _____ No

5. Manip[illegible]ves suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- There [illegible]calculator explorations embedded in the student work that demonstrate the concepts and allow students to play with ideas. Application problems make ideas more concrete.	(Reviewer only.) ____x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Students have formal assessments of many types. They also have more informal assessments in the form of the "How do you see it" activities and quizzes in the teacher resource binder as well as AP practice questions and Putnam practice questions to extend assessment for the gifted student.	(Reviewer only.) ____x__ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Did not see rubrics in the traditional text work. Rubrics are available in the " Five steps to a 5" resource book for the free response questions.	(Reviewer only.) _____ Yes ____x_ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Questions do not require any prior knowledge that has not been addressed in the content	(Reviewer only.) ____x_ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- There is an extensive list of reviewers. Authors of the text have been writing textbooks for more than 2 decades	(Reviewer only.) ____x__ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- The book has a pleasing layout. Concepts and vocabulary are easy to find. The text is broken into sections by graphs and pictures and is user friendly.	(Reviewer only.) ____x_ Yes _____ No

C MENTS:

STRENGTHS	WEAKNESSES
• The textbook is beautiful and flows well • Good pointers and extenders in the teacher binder. • Text flow is logical. • Lesson progress from simple to complex. • Concepts appear to be in a usable order • Includes opportunities for students to write. • Great additional resources	• Less conceptual and more mechanical • Fewer graphs, more mechanical. • Text is dense for some learners. • It does not include enough table problems.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Cengage Learning Inc
Title:	College Prep Algebra
ISBN #	978-1-285-18262-9
Grade Level(s) or Course:	9-11th grade
Reviewer ID:	K.C. and C.H.

RECOMMENDED AS:

___X_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Students spend well over 50% of their time on the Widely Applicable Prerequisites. The text covers all required CCSSM for Algebra 1 and Algebra 2. All lessons are directed towards or pertaining to the required standards. The mathematical language in the text is consistent with the language of the CCSSM.

COHERENCE-
Knowledge acquired from previous courses are applied throughout the text. Appropriate connections are made between domains, clusters and standards. Lesson throughout the text are scaffolded and gradually increase in difficulty.

RIGOR-
There are an extensive number of procedural problems that focus on specific concepts that lead into the real-life conceptual problems that are provided towards the end of each lesson. The modeling problems vary in difficulty and require high level critical thinking and problem solving from students.

CONCEPTUAL UNDERSTANDING-
The "Concept Summary Check" provides problems at the end of each lesson requires student to show in depth understanding of the concepts. The "Concept Summary" helps clarify the lesson as a whole and explains the What, How and Why of each lesson.

MATHEMATICAL PRACTICES-
All mathematical practices are covered throughout the text. However, MP5 and MP8 are weak. Also, the Mathematical practices are not explicitly marked throughout the text. The Mathematical Practices are applied appropriately and help enrich the standards when they require it.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
The scaffolding of this text allows for easy accessibility for any level of learner. The problems and exercises gradually increase in difficulty throughout each lesson making every lesson attainable for students. There are online resources that provide tutorials in English and Spanish. However there are no ELL accommodations within the text itself.

OTHER:
Strengths:
- Helpful teachers notes in the margins of the margin of the teachers edition including common misconceptions by students.
- Extensive number of procedural and conceptual problems in each lesson.
- Many examples with different levels of difficulties
- Quality scaffolding in each lesson
- Hard cover, colorful, quality graphics, good text to graphic ratio
- Extensive online resources
- Quality modeling and conceptual problems
- Highlights vocab
- Students spend well over 50% of their time on WAPs

Weaknesses:

- Doesn't cover F-BF.2
- Doesn't cover S-IC.1
- Doesn't cover F-LE.1
- No ELL accommodations throughout text
- Weak on Mathematical Practice 5 and 8
- Mathematical Practices aren't identified
- Connections between clusters and domains is lacking

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **Judging from table of contents and looking through the text it is apparent that the students spend more than 50% of their time on the Widely Applicable Prerequisites. All of the WAP for Algebra 2 are covered and are applied in multiple chapters and lessons.** **Examples:** **N-RN.1, N-RN.2: Chapter 9.1 and 9.2** **N-RN.3: Chapter 9.3** **N-Q: Chapter 9.3** **F-IF: Chapters 4.2, 4.5, 4.6, 10.4, 7.1, 11.1, 11.3** **F-BF: Chapter 4.5**	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** **Even though this isn't a Geometry based text, many Geometry concepts are covered throughout the text. Area, perimeter, volume, and other Geometry concepts appear in conceptual problems throughout the lessons.** **Examples:** **Lesson 3.5 Geometric and Scientific Applications** **Lesson 8.5 Use of Area of a Triangle** **Lesson 6.2 Volume** **Lesson 12.1 Circles** **Lesson 4.4 Parallel and Perpendicular Lines**	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **Each chapter and lesson requires the use of previous knowledge acquired in grades in grades 6-8 and other previous courses. Concepts such as ratios, proportions, real number operations, area, volume, and other important concepts learning in previous grades can be found throughout the text.** **Examples:** **Lesson 3.4: Ratios with Units** **Lesson 3.3: Application of Percentage** **Lesson 3.5: Mixture Problems** **Lesson 9.3: Perimeter** **Chapter 1: Real Number System** **All Chapters: Rational Number Operations**	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **This text covers all of the required standards for Algebra 1 and Algebra 2 as well as multiple Geometry standards. Looking at the table of contents and throughout the text the material is all directed towards teaching the standards. No lessons or concepts are out of place.** **N-RN: Chapters 9.1, 9.2** **N-CN: Chapter 9.6** **N-Q: Chapters 6.5, 7.5, 7.6** **A-SSE: Chapters 2.1, 5.3, 9.1** **F-IF: Chapters 4.3, 7.1, 11.1**	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For conte[illegible]ad Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **In each lesson there are multiple sections of problems called "Exercises Within Reach" and these sections of problems provide scaffolding and include an extensive number of course-level problems for students. There are also tutorial videos online in English and Spanish for lower performing students. Application problems are also included that require students to have a more in depth understanding. Example: Lesson 9.6 (pg 484) there are seven sections of problems sprinkled throughout the lesson. There are a to[illegible]f 128 problems in that one section.**	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **This text does a great job of having a logical progression of lessons that relate to knowledge acquired in previous courses. At the beginning of many lessons the text refers to a previous knowledge learned in the text. For example, in Lesson 10.1 (pg 502) the text refers to a prior concept learned in Lesson 6.5.** **Also, complex numbers are covered which requires knowledge of the number system. And graphing logarithmic and exponential functions requires function notation knowledge.**	**_X___Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **Learning Objectives can be found at the beginning of each section and reflect the language of the CCSSM cluster and domain headings. Also, in the Chapter Summary at the end of each chapter, in the What Did You Learn column, the language of the CCSSM standards are evident.**	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **This text makes many connections between categories, domains, clusters and standards.** **Examples:** **Lesson 2.2 covers both A-SSE.1a and A-SSE.3** **Lesson 7.5 covers A-REI.1 and A-REI.2** **Lesson 4.1 covers N-Q.A.1, A-CED.A.2, A-SSE.1, N-Q.A.1 and A-CED.A.2**	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X__Meets

____Does Not Meet

Strengths/Weaknesses

Strengths:

- **Covers all standards**
- **Extensive practice problems**
- **Appropriate level of difficulty**
- **Chapter Summary helpful**
- **Easily followed examples**

Weaknesses:

- **Does not cover recursive and explicit**
- **Doesn't distinguish between linear and exponential**
- **Standards aren't explicitly marked**

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** **Conceptual Understanding is attended to at the end of every lesson in the Concept Summary section. It explains the What, How and Why of each lesson.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** **High-quality real-life application problems can be found in each lesson in the Extra Practice and Explaining Concepts portions of each lesson. Also suggested discussion prompts for teachers can be found in the margin at the beginning of some lessons. At the end of each the Concept Summary Check also assesses their conceptual understanding.**	

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** **Many places in this text require students to make connections between finding solutions algebraically versus graphically. For example, in Lesson 4.6 students are asked to find the solutions to linear inequalities both algebraically and graphically and relate them together.**	
AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **This text provides many procedural problems in each lesson. At the end of each example procedural problems are given to practice each specific skill. Then at the conclusion of the lesson conceptual problems can be found and are used to relate the skills learned in the procedural problems to real world modeling problems.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** **Purely procedural problems are provided in each section and increase in difficulty throughout the section to allow students to gain confidence and they proceed through each concept.**	

AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Single and multi-step contextual problems can be found throughout each lesson.** **Examples:** **Lesson 10.2**	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Application problems throughout the text pertain to the WAP.** **Examples:** **Lesson 10.1 and 10.2: A-SSE.3.a.b.c** **Lesson 2.1: N-Q.1, N-Q.2, N-Q.3**	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **There are many problems throughout the text that require students to use modeling skills.** **Example:** **Lesson 3.7 Page 157 Example 10**	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Strengths:

- **Quality modeling/real-life application problems**
- **Lessons are scaffolded**
- **Concept Summary**

Weaknesses:

- **Hard to find cluster connections**

Alignment Criterion 2:
Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **Throughout the text when problems cover the Mathematical Practices it is specifically in a meaningful way that helps enrich the WAP.** **Example:** **Lesson 11.1 Page 569 #74 covers MP1, MP2, and MP4 and N-Q.2, A-CED.1 and F-BF.1**	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Throughout the text most Mathematical Practices are meaningfully present.** **MP5 is very weak. Only the use of a graphing calculator as a manipulative is represented.** **MP8 is not present. Students are not required to verbalize or journal about their findings.**	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** **In the teacher-directed materials the Mathematical Practices are not clearly addressed or marked.**	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__X__Meets (2)** **_____Partially Meets (1)** **_____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Mathematical Practice 3 is covered by the problems that are at the end of each section in the Extra Practice and Explaining Concepts Exercises. The exercises provide opportunities for students to make predictions, use prior learning, explain thought processes and express alternate perspectives.**	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** **In the Explaining Concepts portion of each section Reasoning, Number Sense, Analyzing, Writing, Think About It and Analyzing Errors are provided and support students in critical thinking and providing arguments.**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** **This text supports the correct the use of mathematical terminology. Definitions and algebraic properties can be found in boxes throughout each lesson. Also vocabulary is provided and highlighted throughout each section.**	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Strengths:

- **The Explaining Concepts portion of each lesson is useful**

Weaknesses:

- **MP8 weak**
- **MP5 weak**
- **MPs not labeled and hard to find**

Alignment Criterion 3:
Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:

Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
Within the text itself there isn't a Spanish-English Glossary or any other ELL or special population accommodations. However, online they do provide tutorials in Spanish and English.

____Meets (2)

_X___Partially Meets (1)

____Does Not Meet (0)

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **"The Exercises Within Reach" sections are quick, easy, procedural problems that are provided in multiple places throughout the lesson. In the "Extra Practice" section multi-step real-world application problems are provided. Also the Concept Summary portion of each lesson helps summarize the overall concept.**	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **In the teachers notes in the margin, common misconceptions are given and teachers have the opportunity to discuss those with students. Also some discussion topics are suggested. Checks for Understanding help guide students gradually through the lesson. Tutorial videos and worked out solutions are also available online. Finally, the instructors resource binder has ideas with differentiated learning styles.**	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Strengths:** **- Teachers notes throughout TE are helpful** **- Great online resources** **- Scaffolding of each lesson is great** **Weaknesses:** **- No second language accommodations throughout the text**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Each lesson is scaffolded and broken down in to smaller manageable pieces.	(Reviewer only.) ___X___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- The exercises and problems gradually increase in difficulty and there are quality conceptual problems that build mastery at the end of each lesson. All problems and exercises are serving the purpose of learning math and covering the standards and mathematical practices.	(Reviewer only.) ___X___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Throughout each lesson exercises are provided at the end of each example to practice that specific content. Then all of the individual skills acquired through the lesson lead up to the overall understanding of the concept in each lesson.	(Reviewer only.) __X____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The Teachers Edition has helpful notes in the margin. There is a complete solutions manual. Online materials include tutorials. Test Prep Guide provided. And a CD is included with PowerPoint Presentations and Examview.	(Reviewer only.) __X____ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Only graphing calculators are suggested in certain lessons.	(Reviewer only.) _____ Yes ___X___ No

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **An ExamView Test Generator was included. There are cumulative review questions throughout the text. And a chapter test at the end of each lesson.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Complete solutions manual included and solutions to exercises in Teachers Edition.**	**(Reviewer only.)** **__X____ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **The tests include a variety of problems with varying levels of difficulty.**	**(Reviewer only.)** **__X____ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **This information can be found in the preface.**	**(Reviewer only.)** **__X____ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Colorful, great graphics, well organized, table of contents, index, examples are easy to follow.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: _College Prep Algebra 1e_____**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

___X__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

__X___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: __5___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: __5___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
___X____ Meets	**___X____ Meets**	**____X___ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

- Helpful teachers notes in the margins of the margin of the teachers edition including common misconceptions by students.
- Extensive number of procedural and conceptual problems in each lesson.
- Many examples with different levels of difficulties
- Quality scaffolding in each lesson
- Hard cover, colorful, quality graphics, good text to graphic ratio
- Extensive online resources
- Quality modeling and conceptual problems
- Highlights vocab
- Students spend well over 50% of their time on WAPs

Weaknesses:

- Doesn't cover F-BF.2
- Doesn't cover S-IC.1
- Doesn't cover F-LE.1
- No ELL accommodations throughout text
- Weak on Mathematical Practice 5 and 8
- Mathematical Practices aren't identified
- Connections between clusters and domains is lacking

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Cengage Learning Inc,
Title:	Financial Algebra
ISBN #	9781285444857
Grade Level(s) or Course:	10-12
Reviewer ID:	KC TT

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

____X____**Other Mathematics Program-** a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

2015-1[illegible]terim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: Cengage Learning, Inc.

Title of Material: Financial Algebra

Author: Robert Gerver and Richard Sgroi

ISBN #: 9781285444857 **Copyright** 2014

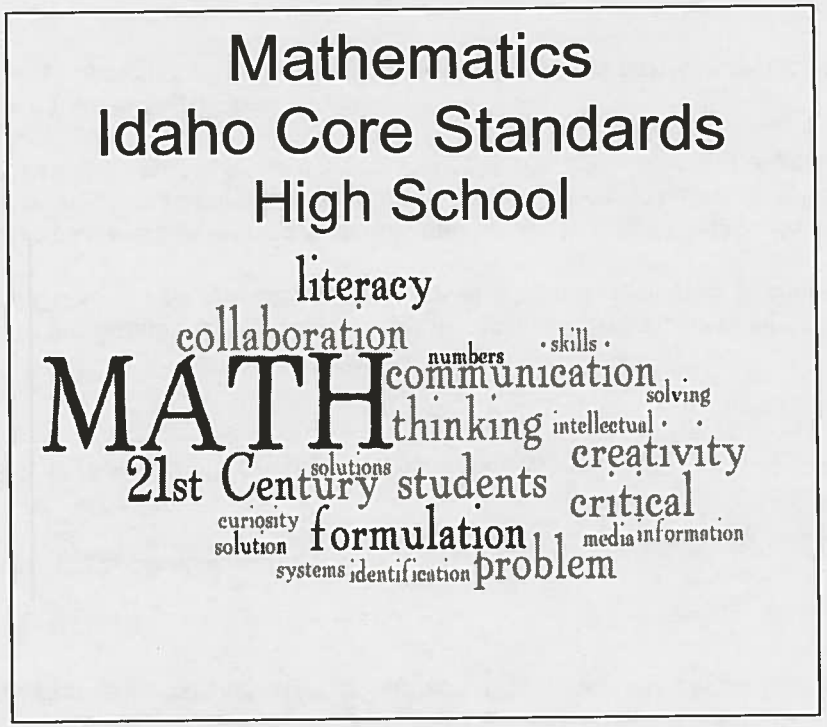
Reviewer ID: K.C. and T.T.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Every chapter lesson is based around the idea of some single step, then multi stop problems. Everything in this text is applicable in the real-world, therefore contextual problems are very important. Ex: p.149 #12, p.295 #14	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** All of the lessons are designed for application problems, and these tie into the WAP. Example 5-5 where slope is practice, then used in various calculations and functions to make evaluations.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Some problems just require students to compute the answer. But often the full modeling cycle is used in the longer multi-step problems and require students to formulate, compute, interpret, validate, and report.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Numerous opportunities for practice with both procedural and contextual problems.	

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** All of the WAPs and practice standards are integrated into the curriculum in a meaningful and purposeful way. The WAPs and MPs work to enhance the financial concepts.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The text integrates all eight MPs throughout each lesson. This can be found in the following aspects of the book: Skills and strategies, Examine the Question, Class Discussing. Check your Understanding, Really? Section, and You Write The Story.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** It is apparent that the mathematical practices are applied throughout, they are not mentioned or noted anywhere.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Argument construction and critiquing of arguments is weak. Some exercises require students to look at the work of others and argue whether or not they agree or disagree with the answer. Also, the class discussion notes in the margin suggest discussion prompts to teachers. It is up to the teacher's discretion to have discussion and require students to construct viable arguments.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** This text supports students in using a variety of solution finding strategies. In multiple places, students are asked to create a chart of diagram, and then make mathematical conclusions from it.	

Do materials explicitly attend to the specialized language of mathematics the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** The specialized language of mathematics and finance can be found in throughout the readings of the text. Vocabulary words are clearly noted and defined within the lesson. Assessments attend to the arguments and evaluations quite readily. For example, see ch 5, p.282	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Provides many real world mathematical application problems Does no note Mathematical Practices. Weak on requiring students to make mathematical arguments.
Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** The lessons are clearly scaffolded and broken down to accommodate lower level students. There are notes in the margin of the TE that offer suggestions to the teacher to help explain the readings to struggling students. Could use more ELL accommodations. Ex: Spanish glossary or footnotes.	**____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** As previously mentioned, the lessons are well scaffolded by the frequent Checks for Understanding. The gradual increase in difficulty of the practice problems allow teachers the opportunity to differentiate assignments depending on the level of students' understanding.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Lessons are scaffolded in a way to reach a variety of learners. Annotations in the margin leave it up to the teacher's discretion to mix instructional approach as also noted in the publisher's own explanation.	**____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**____Meets** **__X__Does Not Meet** **Strengths/Weaknesses:** Scaffolding is strong. ELL is lacking. Support for differing instructional approach is missing.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best p[illegible]ces. A starting list of Indicators of Quality are suggested below. S[illegible]s, districts and others evaluating instructional materials are encou[illegible]d to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Lessons are well structured and scaffolded and include discussion questions, checks for understanding, warm-up problems, and an extensive number of practice problems.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **The skills and strategies sections work out examples, checks for understanding help build mastery, and problem sets provide individual practice.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** **Problems gradually increase in difficulty. Lessons connect concepts correctly.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** There is limited access to support materials. You would have to study more outside the provided materials to take these lessons further. Even their own evidence for this is lacking.	**(Reviewer only.)** **_____ Yes** **___X___ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **Text creates connections between the math and necessary tools such as graphs, calculators, Excel, and Powerpoint.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessme Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **Besides checks understanding in each lesson, there are assessments in the text as well as those provided in supplementary materials. Exam View CD is included.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Answer keys and solutions are provided, however there are no rubrics or scoring guidelines.	**(Reviewer only.)** **_____ Yes** **____X__ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Vocabulary is clear and appropriate to the level of students. Directions are clear and easy to understand.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Authors are accredited and book has been reviewd by other qualified educators.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Engaging and useful diagrams, pictures and graphs are provided in the text. It is very colorful and organized**	**(Reviewer only.)** **___X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: ____Financial Algebra_____**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

___X__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

___X__ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: ___5__ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: __4___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
____X___ Meets	**____X___ Meets**	**_____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**___X____ Does Not Meet**

Alignment Criteria Overall:

_____ Meets **___X__ Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features o. the Cor andards. **Do the materials meet every Non-Negotia and Alignment Criterion? _____ Yes ___X__ N**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

- All standards are met
- More than 50% of the students time is spent on the Widely Applicable Prerequisites
- Connections are made in a purposeful and logical way
- Table of Contents are extremely helpful.
- Numerous opportunities for practice with both procedural and contextual problems.
- Provides many real world mathematical application problems
- Scaffolding within lessons is strong
- General format of book is very engaging and exceptional

Weaknesses:

- Does no note Mathematical Practices
- Weak on requiring students to make mathematical arguments
- ELL accommodations are lacking
- Support for differing instructional approach is missing

Note:

- We believe this curriculum could be very affective as a 4th year course at the high school level if the book is supplemented with resources that are lacking or missing

Standards Alignment Evaluation Rubric

0 = No Alignment– **Not Evident:** Content as described in the Standards is **not evident**.

.5 = Partial Alignment- **Partially Evident:** Content as described in the Standards is **partially evident** and there are few gaps.

1 = High Alignment – **Clearly Evident:** Content is fully aligned as described in the Standards and repeatedly included to guarantee extensive opportunities for students to work with the content. Alignment is **clearly evident**.

N/A = Not applicable for standard

Advanced Placement		**Statistics**	
Standards and Learning Indicators		**Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.**	**Point Value 0/.5/1 (Reviewer)**
Exploring Data			
Describing patterns and departures from patterns			
A. Constructing and interpreting graphical displays of distributions of univariate data (dotplot, stemplot, histogram, cumulative frequency plot)	1. Center and spread	**Chapter 1, Chapter 3**	**1**
	2. Clusters and gaps	**Chapter 1, Chapter 3**	**1**
	3. Outliers and other unusual features	**Chapter 1, Chapter 3, 4.1, 4.3**	**1**
	4. Shape	**Chapter 3**	**1**

B. Summarizi istributions of univariate data	1. Measuring center: median, mean	**Lesson 4.1**	**1**
	2. Measuring spread: range, interquartile range, standard deviation	**Lesson 4.2**	**1**
	3. Measuring position: quartiles, percentiles, standardized scores (z-scores)	**Lesson 4.2, Lesson 4.3, Lesson 4.4**	**1**
	4. Using boxplots	**Lesson 4.3, Lesson 4.4, Lesson 4.5**	**1**
	5. The effect of changing units on summary measures	**Absent**	**0**
C. Comparing distributions of univariate data (dotplots, back-to-back stemplots, parallel boxplots)	1. Comparing center and spread: within group, between group variation	**Chapter 1, Lesson 3, Chapter 5**	**1**
	2. Comparing clusters and gaps	**Chapter 1, Chapter 3, Lesson 2.2**	**1**
	3. Comparing outliers and other unusual features	**Chapter 1, Chapter 3, Lesson 4.1, Lesson 4.3**	**1**
	4. Comparing shapes	**Chapter 1, Chapter 3**	**1**
D. Exploring bivariate data	1. Analyzing patterns in scatterplots	**Lesson 3.4, Lesson 3.5**	**1**
	2. Correlation and linearity	**Lesson 5.1, Lesson 5.5**	**1**
	3. Least-squares regression line	**Chapter 5**	**1**
	4. Residual plots, outliers and influential points	**Lesson 5.3**	**1**
	5. Transformations to achieve linearity: logarithmic and power transformations	**Lesson 5.4**	**1**

E. Exploring categorical data	1. Frequency tables and bar charts	**Chapter 1, Lesson 3.1 Lesson 3.5, Lesson 6.2**	**1**
	2. Marginal and joint frequencies for two-way tables	**Lesson 6.4**	**1**
	3. Conditional relative frequencies and association	**Lesson 6.4**	**1**
	4. Comparing distributions using bar charts	**Lesson 3.1**	**1**
Sampling and Experimentation			
Planning and conducting a study			**1**
A. Overview of methods of data collection	1. Census	**Chapter 1**	**1**
	2. Sample survey	**Chapter 1**	**1**
	3. Experiment	**Chapter 1, Lesson 2.3, Lesson 2.4, Lesson 2.5**	**1**
	4. Observational study	**Lesson 2.1**	**1**
B. Planning and conducting surveys	1. Characteristics of a well-designed and well-conducted survey	**Lesson 2.2, Lesson 2.5**	**1**
	2. Populations, samples and random selection	**Lesson 2.2, Lesson 2.5**	**1**
	3. Sources of bias in sampling and surveys	**Lesson 2.2, Lesson 2.5**	**1**
	4. Sampling methods, including simple random sampling, stratified random sampling and cluster sampling	**Lesson 2.2**	**1**

C. Planning a onducting experiments	1. Characteristics of a well-designed and we conducted experiment	**Chapter 2**	**1**
	2. Treatments, control groups, experimental units, random assignments and replication	**Lesson 2.3, Lesson 2.4, Lesson 2.5**	**1**
	3. Sources of bias and confounding, including placebo effect and blinding	**Lesson 2.3, Lesson 2.4, Lesson 2.5**	**1**
	4. Completely randomized design	**Lesson 2.3, Lesson 2.4**	**1**
	5. Randomized block design, including matched pairs design	**Lesson 2.3, Lesson 2.4**	**.5**
D. Generalizability of results and types of conclusions that can be drawn from observational studies, experiments and surveys		**Chapter 2**	**1**
Anticipating Patterns1			
Exploring random phe1nomena using probability and simulation			
A. Probability	1. Interpreting probability, including long-run relative frequency interpretation	**Lesson 6.1, Lesson 6.2, Lesson 6.3**	**1**
	2. "Law of Large Numbers" concept	**Lesson 6.2, Lesson 6.3**	**1**
	3. Addition rule, multiplication rule, conditional probability and independence	**Lesson 6.3, Lesson 6.4, Lesson 6.5, Lesson 6.6**	**1**
	4. Discrete random variables and their probability distributions, including binomial and geometric	**Lesson 7.1, Lesson 7.2, Lesson 7.5, Lesson 7.6**	**1**
	5. Simulation of random behavior and probability distributions	**Lesson 6.7**	**1**
	6. Mean (expected value) and standard deviation of a random variable, and linear transformation of a random variable	**Lesson 7.1, Lesson 7.2, Lesson 7.3, Lesson 7.4**	**1**
B. Combining independent random variables	1. Notion of independence versus dependence	**Lesson 6.5, Lesson 6.6**	**1**

	2. Mean and standard deviation for sums and differences of independent random variables	**Lesson 7.1, Lesson 7.2, Lesson 7.3, Lesson 7.4**	**1**
C. The normal distribution	1. Properties of the normal distribution	**Lesson 7.6**	**1**
	2. Using tables of the normal distribution	**Lesson 7.6**	**1**
	3. The normal distribution as a model for measurements	**Lesson 7.6**	**1**
D. Sampling distributions	1. Sampling distribution of a sample proportion	**Lesson 8.3**	**1**
	2. Sampling distribution of a sample mean	**Lesson 8.2**	**1**
	3. Central Limit Theorem	**Lesson 8.2**	**1**
	4. Sampling distribution of a difference between two independent sample proportions	**Lesson 11.3, Chapter 10**	**1**
	5. Sampling distribution of a difference between two independent sample means	**Lesson 11.1**	**1**
	6. Simulation of sampling	**Lesson 8.3**	**1**
	7. T-distribution	**Lesson 9.3**	**1**
	8. Chi-square distribution	**Lesson 12.1, Lesson 12.2**	**1**

Statistical Inference			
Estimating population parameters and testing hypotheses			**1**
A. Estimation (point estimators and confidence intervals)	1. Estimating population parameters and margins of error	**Lesson 9.1, Lesson 9.2, Lesson 9.4**	**1**
	2. Properties of point estimators, including unbiasedness and variability	**Lesson 9.1, Lesson 9.2**	**1**
	3. Logic of confidence intervals, meaning of confidence level and confidence intervals, and properties of confidence intervals	**Lesson 9.2, Lesson 9.3**	**1**
	4. Large sample confidence interval for a proportion	**Lesson 9.2, Lesson 9.3**	**1**
	5. Large sample confidence interval for a difference between two proportions	**Lesson 11.3, Lesson 11.4**	**1**
	6. Confidence interval for a mean	**Lesson 9.3**	**1**
	7. Confidence interval for a difference between two means (unpaired and paired)	**Lesson 11.1, Lesson 11.2**	**1**
	8. Confidence interval for the slope of a least-squares regression line	**Lesson 13.1, Lesson 13.2**	**1**
B. Tests of significance	1. Logic of significance testing, null and alternative hypotheses; p-values; one- and two-sided tests; concepts of Type I and Type II errors; concept of power	**Lesson 10.1, Lesson 10.2, Lesson 10.3**	**1**
	2. Large sample test for a proportion	**Lesson 10.3, Lesson 10.4**	**1**
	3. Large sample test for a difference between two proportions	**Lesson 11.2, Lesson 11.3, Lesson 11.4**	**1**
	4. Test for a mean	**Lesson 10.4, 10.5**	**1**
	5. Test for a difference between two means (unpaired and paired)	**Lesson 11.1, 11.2**	**1**

Indicators of Quality:

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Each lesson begins with an introduction, learning objectives, examples and exercises. Each chapter has an activity to engage students in the current topic.	(Reviewer only.) __x____ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- The course is laid out with a logical progression with data analysis. It starts with collecting data and analyzing variability and descriptive statistics and then drawing conclusions that recognizes variability in the data (tests).	(Reviewer only.) ____x__ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Design is created from simple to complex. The book intentionally builds the skills early that it applies at the end of the book.	(Reviewer only.) __x____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Teacher book has a great deal of support and teaching tips. The forward gives a strong overview of the presentation of the concepts to build to the big ideas. Early sections build student intuition using graphics and then apply calculations in later sections. Teachers are encouraged and given software to teach the manipulation of the data.	(Reviewer only.) ___x___ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Teachers do simulation with technology and the book suggests various lab activities to demonstrate some concepts. Applets links are also included in the teacher's book.	(Reviewer only.) ___x___ Yes _____ No

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Students can check their understanding with review exercises. There is a test bank included and online assessments. More assessments are in the instructor's resource binder.	(Reviewer only.) ____x__ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Rubrics are included in the AP preparatory material for free response questions.	(Reviewer only.) ___x___ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Questions are asked using the vocabulary that is used in assignments. Questions reflect concepts in the taught curriculum.	(Reviewer only.) ___x___ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- p. xxiii and xxiv	(Reviewer only.) ____x__ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- The book is visually engaging. The beginning of the text has many graphical representations. Formulas were very easy to find and boxed for easy reference.	(Reviewer only.) ____x__ Yes _____ No

COMMENTS:

STRENGTHS	WEAKNESSES
• Very graphical • Text is broken into many small sections • Formulas and rules are easy to find in colored boxes • Plenty of student problems in each chapter • Organized and accessible for the ordinary student and support the development of conceptual understanding • Analysis emphasized and higher order thinking • Engaging problems	• Difficult to find some concepts in text • Some topics not well represented in exercises

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Cengage
Title:	PreCalculus with Limits 3rd edition
ISBN #	978-1-133-96288-5 copyright 2014
Grade Level(s) or Course:	9-12
Reviewer ID:	*SO and KB*

RECOMMENDED AS:

x

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
NN1:

- Clear objectives
- Summaries tie objectives together.
- Helpful hints for teachers and remediation for students.

COHERENCE-

NN1:

- Clear objectives
- Summaries tie objectives together.
- Helpful hints for teachers and remediation

RIGOR-
AC-1

- Deep spiral of WAP skills.
- Ample opportunities for practice.
- Ample opportunity to construct viable arguments and justify the use of a particular model.
- Conjecture proofs allow students to explore ideas.

CONCEPTUAL UNDERSTANDING-
AC-1

- Deep spiral of WAP skills.
- Ample opportunities for practice.
- Ample opportunity to construct viable arguments and justify the use of a particular model.
- Conjecture proofs allow students to explore ideas.

MATHEMATICAL PRACTICES-
AC-2

- **Focus is on best mathematical practices.**
- **Repetition of applied problems allow students enough practice to master this process.**

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
AC-3

- Supports for Spanish speaking students.
- Various levels of problems for all learners

OTHER:
Strengths:
This curriculum has done a good job of supporting the ideas that are needed to meet the new standards. The WAP are represented in all facets of the text and conceptual understanding and *real life applications are present throughout.*
Weaknesses:
Some of the textbook is old school. There could be more places to pursue " we do" problems and differentiation in higher cognitive problems.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: Cengage

Title of Material: Precalculus w/ Limits 3rd Ed.

Author: Ron Larson

ISBN #: 9781133962885 **Copyright** 2014

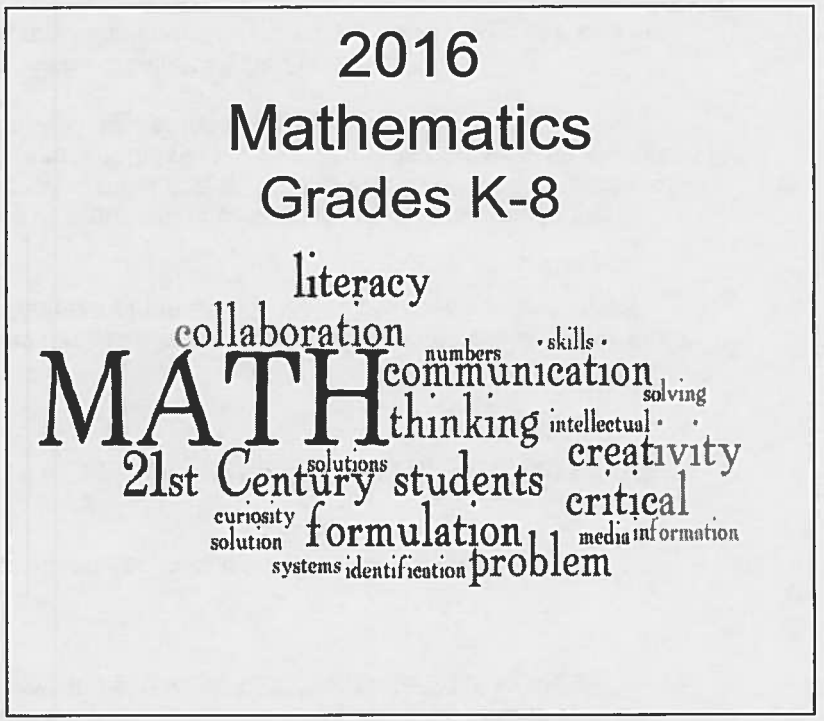
Reviewer ID: SO + KB

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **Skills were evident in Appendix and real life problems and algebra. It meets or exceeds WAP**	**__x__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Geometry evidence from ratios and proportions, percentage and conversions related through functions. Book uses 1.3 parallel perpendicular. Graphs throughout the book. Chapter 10 review graphs of conics. Chapter 2 higher order end behavior. Trigonometry uses prior knowledge from geometry. Special right triangles. Meets or exceeds.	**__x__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** At the end of each section there are real life problems that build or extend conceptual learning. Chapter 13 extends concepts of statistics, data and probability. Throughout the text, there is an opportunity for students to practice rational number skills and maintain prior learning.	**___x_Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The lesson plan guide offers content helpers and each chapter lists objectives based on precalculus content. The appendix covers the Widely Applicable Standards content.	**_x___Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each section offers plenty of practice problems with various levels of rigor. Later problems in each section apply concepts and ask students to prove or explain them. Example of this: section 2.1 Quadratic functions.	**_x___Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materia elate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Prior concepts are evident throughout the text. For example: D nce formula is applied to vectors.	**_X___Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** This is evident throughout the text. Learning objectives are evident in each section and the lesson plan guide. Each unit has a summary that identifies the essential skills that students should master in each section. In the appendix and throughout the text, the author has included boxes that describe common student misconceptions and how to avoid them. Good for new teachers.	**___x_Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The test includes applied problems and explorations. An example of this connection appears on page 129. The student connect algebra, functions and graphing in polynomial functions of higher degree.	**__x__Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Metric NN 1:** If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**___x_Meets** **____Does Not Meet** **Strengths/Weaknesses** **Strengths:** • Clear objectives • Summaries tie objectives together. • Helpful hints for teachers and remediation for students. **Weaknesses:** • **Traditional layout** • **No "we dos"** • **Text is too busy**

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Conceptual understanding is attended throughout the text starting with the clear objectives, common errors and following up with problems where students are expected to explain and interpret.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** These problems are in evidence in various locations. EX. P. 30 the Road grade problem. Students are expected to complete a multistep problem that not only expects solving but interpretation in context. Forensics example on p. A 57	

Do the materials feature opportunities to identify correspondences across m[illegible]atical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** The problems [illegible]ntified in the prior section require graphical, numerical and algebraic work to complete the task. Students are expected to verbally give responses in the context of the problems. Also "How do you see it" also addresses the verbal component.	
AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Bigger extended problems are multistep. The examples from above as well as problems as such as the Suspension Bridge p. 702, and online video and audio for self-check.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** Each section starts with purely procedural problems and progresses to varying degree of difficulty. These various levels allow for differentiation and enrichment. The problems move from concrete to abstract. On pages 32-34, the first problems are mechanical the later problems are analysis and relating the concepts in the How do you see it section	

AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Real life examples from various sciences and other content area – they use CSI, epidemiology, Best Buy sales models and other concepts that are relatable and current.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes. Lesson 3.5 and 7.6 are examples of the WAP being stressed in application problems.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Each section has modeling problems. P 93 is an example of modeling.	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__x__Meets

____Does Not Meet

Strengths/Weaknesses:
Strengths:

- Deep spiral of WAP skills.
- Ample opportunities for practice.
- Ample opportunity to construct viable arguments and justify the use of a particular model.
- Conjecture proofs allow students to explore ideas.
- Chapter review problems are very good and tie ideas together.

Weaknesses:

- **Conceptual problems could be more differentiated for at risk learners.**

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each section uses this WAP in a variety of ways. Citing a particular example doesn't make sense since this is everywhere. The authors paid a great deal of attention to the need to address these concepts in every context.	**__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Students are given problems with the four representations. As they move through the text they develop skills to better describe problems and persevere with new abstractions. P. 85	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** The teacher materials do not list the AP standards, but the materials provide the necessary learning for AP success. Teacher materials such as the lesson plan book and the companion contain information that identifies student learning.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Yes. See references in above sections.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Yes. See other citations and each section offers an exploration section. EX 1.5 on p. 59	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Each section contains proofs. Each learning section identifies necessary vocabulary and the needed context.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

___x_Meets

____Does Not Meet

Strengths/Weaknesses:
Strengths:

- **Focus is on best mathematical practices.**
- **Repetition of applied problems allow students enough practice to master this process.**

Weaknesses:

- **Differentiation could be stronger**

Alignment Criterion 3:
Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Tutorials in English and Spanish are available. www. LarsonPrecalculus.com Each section has audio in Spanish for the DVD No other languages have that stated support.	**_x___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** This class is paced to prepare students for the rigor of AP Calculus. Calcchat is also available to tutor students who struggle. The variety of levels of student problems allows teachers to differentiate instruction.	**___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The variety of levels of student problems allows teachers to differentiate instruction.	**__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations.	__x__Meets ____Does Not Meet
AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**Strengths/Weaknesses:** **Strengths:** • **Supports for Spanish speaking students.** • **Various levels of problems for all learners.** **Weaknesses:** • **No identified supports for other languages.**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Learning objectives throughout the book and the concept summaries at the end of each chapter tie the content to a structure. On line support systems are also available to teachers and students.	**(Reviewer only.)** **___x___ Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** • Vocabula • Check points • Summaries • Expanded objectives • Student guide and online support	**(Reviewer only.)** **___x___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** • Problems are arranged from simple to complex • Side example • Enhanced and extended exercises Examples How do you see it and applied problems	**(Reviewer only.)** **___x__ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** • Teacher edition has guides for differentiated instruction, learning styles. • There is a lesson plan guide, the note taking guide, and digital supports.	**(Reviewer only.)** **_____x_ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** • Digital manipulatives. • Concrete real world examples give a visual example that allows a student to manipulate a seemingly abstract idea with a concept they already understand.	**(Reviewer only.)** **___x___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** • We have a test bank. • Check points. • Students can self assess with odd problems and online.	**(Reviewer only.)** **____x__ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** • Answer keys are present. • Student and instructor solution manuals show step by step work. • No rubrics	**(Reviewer only.)** **_____ Yes** **___x___ No**

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Vocabulary is co[illegible]ent. They are not assessing anything that the students have not been exposed to in the material.	**(Reviewer only.)** __x____ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** There is a list of individuals with a variety of qualifications who are listed as those who reviewed these materials.	**(Reviewer only.)** ____x__ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The book is attractive and has many graphs and pictures. Students know where to find various types of information. Vocabulary is highlighted, rules are boxed and sections have objectives listed.	**(Reviewer only.)** ____x__ **Yes** _____ **No**

Non-Negotiable Overall:

__x___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)
_____x_ Meets	____x___ Meets	_____x__ Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

___x__ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[illegible]tandards. **Do the materials meet every Non-Negotia[illegible] and Alignment Criterion? __x___ Yes _____ N[illegible]**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:
This curriculum has done a good job of supporting the ideas that are needed to meet the new standards. The WAP are represented in all facets of the text and conceptual understanding and real life applications are present throughout.
Weaknesses:
Some of the textbook is old school. There could be more places to pursue " we do" problems and differentiation in higher cognitive problems.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Cengage Learning, Inc.
Title:	Pre Calculus: Mathematics for Calculus, Seventh Edition
ISBN #	978-1-305-11530-9
Grade Level(s) or Course:	11-12
Reviewer ID:	JHW CA

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Throughout the Pre-Calculus text, students spend at least 50% of their time on Widely Applicable Prerequisites. Review is discussed throughout the text.

COHERENCE-

The language is consistent throughout the text. The first chapter in the text is review of fundamentals which are needed to be successful throughout the course.

RIGOR-

The Pre-Calculus materials feature high-quality conceptual problems and conceptual discussion questions. The examples and exercises in the Pre-Calculus text contain single and multiple-step contextual problems, real-life situation problems

CONCEPTUAL UNDERSTANDING-

The Pre-Calculus materials feature high-quality conceptual problems. All exercises contain application problems. At the end of each chapter you will find a focus on Modeling section.

MATHEMATICAL PRACTICES-

The exercises in the Pre-Calculus text provide problems from the lesson that deal with concept, skill, application, discussion, discover, proofs and writting.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

The Pre-Calculus text allows for a variety of different learning styles. Language in which problems are posed is carefully considered. Standards are not specifically listed throughout the text, but are addressed.

OTHER:

The program is well written and easy to follow. Good assessments and teaching components to assist the teacher.

Consistency in lessons and exercises throughout the text.

Organized sequential lessons.
Real world applications and modeling problems.

The Pre-Calculus text does not directly list or address the practice standards; however it does present all of the practice standards within the lessons, exercises, and assessments.

2015-1 Interim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: Cengage Learning, Inc.

Title of Material: PreCalculus: Mathematics for Calculus, Seventh Edition

Author: James Stewart, Lothar Redlin, Saleem Watson

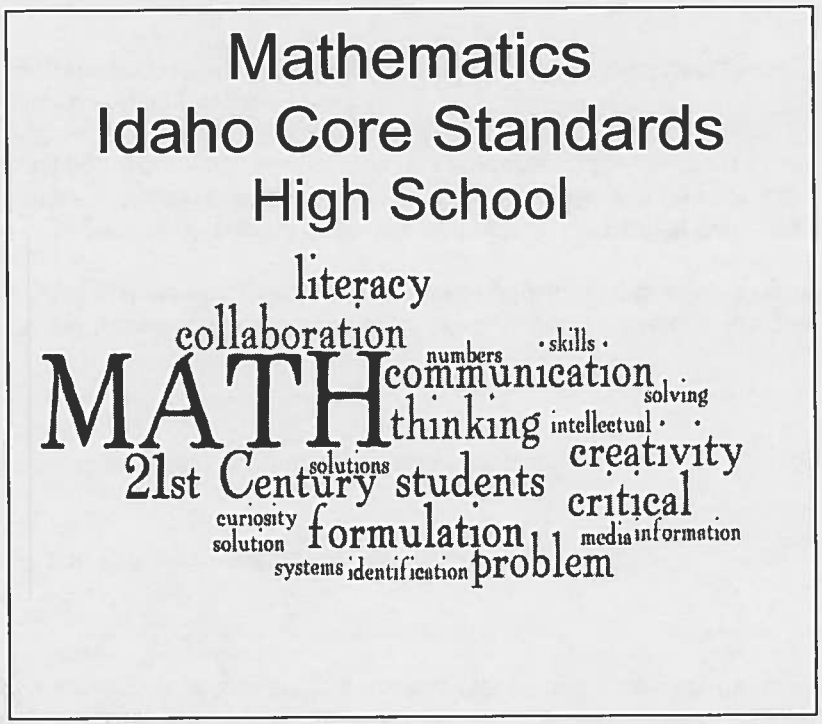
Reviewer ID: JHW CH

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Throughout the Pre-Calculus text, students spend at least 50% of their time on Widely Applicable Prerequisites. Math concepts build on each other. **SE/TE:** 159-170, 212-213, 301-307, 331-334, 699-708.	**_X_ Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Throughout the Pre-Calculus course, students work involves significant work with applications and modeling and problems that use algebra skills. **ST/TE:** 87, 90-91(#109-125), 105(#122-124), 116 (#87-94), 122(#47,48), 139-146, 188-190(#29-38), 237-244.	**_X_ Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The first chapter in the Pre-Calculus text is review of fundamentals which are needed to be successful throughout the course. Review is also discussed throughout the text. **SE/TE:** 1-131, 147, 245, 329, 401, 471, 537, 587, 629, 679.	**__X__ Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Pre-Calculus text covers the content specified in the standards. **SE/TE:** v-ix.	**__X__ Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Pre-Calculus text provides students extensive work with course-level problems. In the side margins of the lessons you will find side notes and boxed lessons to help the students understand the concepts. **SE/TE:** 410, 494, 540, 548, 596, 642, 668, 680.	**__X__ Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The lessons in Pre-Calculus text are designed so that prior knowledge become reorganized and extended to accommodate the new knowledge. **SE/TE:** 65, 122, 190, 246, 370, 445.	**_X_Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Objectives can be found throughout the Pre-Calculus text. **SE/TE:** 1, 147, 245, 329, 401,471, 537, 587, 629, 679, 781, 841, 897, 949.	**_X_Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Pre-Calculus text contains problems in cases where two or more clusters in a domain, or two or more domains in a category, or two or more categories where these connections are natural and important. **SE/TE:** 159-170, 212-213, 301-307, 331-334, 699-708.	**_X_Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X__Meets

____Does Not Meet

Strengths/Weaknesses
Students spend at least 50% of their time on Widely Applicable Prerequisites. Students use modeling and applications. Problems are at course level.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 1 is rated as Meets or Does Not Meet.
To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** In the Pre-Calculus text conceptual understanding is attended to thoroughly where the standards set explicit expectations for understanding or interpreting. Content standards have been incorporated throughout the text in examples, exercises, and assessments. **SE/TE:** 2-9, 10-12, 13-21, 21-24, 25-32, 33-35, 36-42, 43-44, 137-138.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** The Pre-Calculus materials feature high-quality conceptual problems and conceptual discussion questions. **SE/TE:** 159-165, 166-170, 170-178, 178-182.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** The lessons, exercises and assessment materials throughout the Pre-Calculus text feature opportunities to identify correspondences across mathematical representation. **SE/TE:** 159-170, 235-236, 246-254, 323-324, 330-338, 391, 402-409, 465.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** __X__ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The examples, exercises, and assessments in the Pre-Calculus text progress toward fluency and procedural skill interwoven with the students developing conceptual understanding of the skills in question. The exercises start out with concept problems and then progress to skills, applications, discuss, discover, prove, and write. **SE/TE:** 246-251, 251-253, 254-265, 265-268, 311-315, 316-317, 323-324.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** The examples and exercises in the Pre-Calculus text provide opportunistic strategies which are valuable and generic cases that require efficient and general procedural present. **SE/TE:** All exercises progress from concept problems, to skills problems, to applications, discussions, discover, prove and write.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** __X__ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The examples and exercises in the Pre-Calculus text contain single and multi-step contextual problems, real-life situation problems. Real-world applications from other fields also demonstrate the relevance of the field of mathematical study. **SE/TE:** 338, 342(#25), 350, 353(#96), 356, 360(#74), 366, 369(#98), 370(#102).	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The problems in the examples and exercises of the Pre-Calculus text stress applying the Widely Applicable Prerequisites. **SE/TE:** 159-170, 212-213, 301-307, 331-334, 699-708.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout the Pre-Calculus text examples and exercises model real-world situations. All exercises contain application problems. At the end of each chapter you will find a Focus on Modeling section. **SE/TE:** 477, 479-481(#75-94), 485-486, 489-490(#53-71), 517, 522-523(#39-53), 533-536.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**_X_ Meets** **____Does Not Meet** **Strengths/Weaknesses:** Sufficient amount of problems. Content standards have been incorporated throughout the text but are not specifically listed. Multiple conceptual problems and conceptual discussion questions.

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Throughout the Pre-Calculus text the Widely Applicable Prerequisites as well as all of the standards for mathematical practice have been used. Throughout the text students are given real-life application problems and have to solve these problems using abstract and quantitative reasoning. Students are also asked to use technology, modeling, and written argument. **SE/TE:** 159-170, 212-213, 301-307, 331-334, 699, 708.	**__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **____Meets (2)** **__X__ Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The structure of Pre-Calculus lessons clearly distinguishes between examples and exercises. The guided problem solving provides examples focused on the lesson. The exercises provide problems from the lesson that deal with concept, skill, application, discussion, discover, proofs and writing. **SE/TE:** 295-307, 308-310, 311-315, 316-317, 330-335, 336-338.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** The Pre-Calculus text does not directly list or address the practice standards; however it does present all of the practice standards within the lessons, exercises, and assessments.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** The Pre-Calculus text contains exercises that have students explore and produce an argument to support their solution. **SE/TE:** 148-159, 183-190, 190-197, 378-380, 588-593, 734-745.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Throughout the Pre-Calculus text there are Discovery Projects within the lessons. The Discovery Projects encourage students to use mathematical language to construct a viable argument while solving the problem. **SE/TE:** 361, 375, 382, 558, 590, 608, 645, 694.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** The lessons in the Pre-Calculus text explicitly attend to the specialized language of mathematics. Students are encouraged to use correct mathematical terminology throughout the exercises. **SE/TE:** 3, 5, 12(#93), 13, 14, 16, 18, 19, 25(#107), 184, 192, 198, 199, 201, 202, 203, 205, 210(#102-104).	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X_Meets

____Does Not Meet

Strengths/Weaknesses:
Students are asked to use technology, modeling, and written argument. The text consists of real world application problems. The text does not directly list or address the practice standards.

Alignment Criterion 3:
Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.
To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:

Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
The Pre-Calculus course is a high level math course, therefore students must be highly motivated to take the course and be successful. The language in which problems are posed is carefully considered.
SE/TE: 127-130(#35-57), 353-354(#96-105), 619-620(#63-71), 798-799(#65-72), 958-961(#17-94).
TE: xi-xiv, xv-xvii.

__X_Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The Pre-Calculus course is a high level math course, which requires student to be highly skilled and self motivated. The lessons and exercises contain levels of problems in a variety of forms: concepts, skills, skills plus, applications, discuss-discover-prove-write. **SE/TE:** 754-756, 796-799, 805-807, 813-816, 823-824, 829-831.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** All levels of students have different types of learning styles. The Pre-Calculus text allows for a variety of different types of learning styles. The TE has additional in-class materials and alternate examples to help them reach all students. **TE:** 413, 416, 420-429, 432-434, 472-478, 482-487.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Language in which problems are posed is carefully considered. The lessons and exercises contain levels of problems in a variety of forms: concepts, skills, skills plus, applications, discuss-discover-prove-write.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Throughout the Pre-Calculus text chapters contain lessons which are thoughtfully structured and support the teacher in leading the class through the learning using key ideas, theorems, and problem solving examples, which encourage them to think. The TE contains a teacher note section and alternate examples in the margin.	**(Reviewer only.)** **__X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** The lessons throughout the text are supported by examples with step by step solutions. The problems in the exercises are carefully chosen to meet the goals and objectives within the lesson and the problems have a wide range of difficulty. The layout of the text is very user-friendly. The lessons are consistent throughout the text with examples and exercise. The colors and pictures are inviting to the eye.	**(Reviewer only.)** **__X__ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The exercises throughout the Pre-Calculus text are given in intentional sequences with a plentiful amount of problems ranging from easy to difficult, which allows students to strengthen their mathematical understanding.	**(Reviewer only.)** **__X__ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** There is an Instructors Guide for teacher, which contains points to stress, text discussion topics, suggested time to a lot for each lesson, exercise and solutions to group work, workshop and discussion suggestions, and suggested homework problems.	**(Reviewer only.)** **__X__ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Where applicable, manipulatives are used appropriately to represent mathematical objects and are connected to written methods.	**(Reviewer only.)** **__X__ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** At the end of each chapter there is a Review section and Chapter Test, which will help students gauge their learning progress.	**(Reviewer only.)** __X__ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** In the back of the SE there are brief answers to the odd problems in the exercises, reviews, and chapter tests. In the back of the TE there are brief answers to all of the problems in the exercises, reviews, and tests. There is an additional Solution Manual available to students and teachers that provide step by step solutions to all problems in the text.	**(Reviewer only.)** __X__ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** In the Pre-Calculus text course-lever language is used in examples and exercises. Methods used to assess student proficiency are accessible and unbiased.	**(Reviewer only.)** __X__ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** This Pre-Calculus Editions has been reviewed by several instructors, all of whom are listed in the preface of the text.	**(Reviewer only.)** __X__ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The authors' attention to clarity and detail throughout the Pre-Calculus text is very apparent. Concepts are explained clearly throughout the text. Mathematical Modeling is introduced early in the text and is continuously reinforced, which provides students with a solid foundation in the principles of mathematical thinking.	**(Reviewer only.)** __X__ **Yes** _____ **No**

Reviewer IMET Evaluation Summary **Title/Level: Pre-calculus: Mathematics for Calculus, Seventh Edition**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

X Meets

_____ Does Not Meet

Non-Negotiable Overall:

X Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: 5 of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: 6 of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
X Meets	**X Meets**	**X Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

X Meets **_____ Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:
The program is well written and easy to follow.
Good assessments and teaching components to assist the teacher.
Consistency in lessons and exercises throughout the text.
Organized sequential lessons.
Real world applications and modeling problems.

Weakness:
The Pre-Calculus text does not directly list or address the practice standards; however it does present all of the practice standards within the lessons, exercises, and assessments.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Cengage Learning, Inc.
Title:	Pre Calculus: Mathematics for Calculus, Seventh Edition
ISBN #	978-1-305-11530-9
Grade Level(s) or Course:	11-12
Reviewer ID:	

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Throughout the Pre-Calculus text, students spend at least 50% of their time on Widely Applicable Prerequisites. Review is discussed throughout the text.

COHERENCE-

The language is consistent throughout the text. The first chapter in the text is review of fundamentals which are needed to be successful throughout the course.

RIGOR-

The Pre-Calculus materials feature high-quality conceptual problems and conceptual discussion questions. The examples and exercises in the Pre-Calculus text contain single and multiple-step contextual problems, real-life situation problem

CONCEPTUAL UNDERSTANDING-

The Pre-Calculus materials feature high-quality conceptual problems. All exercises contain application problems. At the end of each chapter you will find a Focus on Modeling section.

MATHEMATICAL PRACTICES-

The exercises in the Pre-Calculus text provide problems from the lesson that deal with concept, skill, application, discussion, discover, proofs and writting.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

The Pre-Calculus text allows for a variety of different learning styles. Language in which problems are posed is carefully considered. Standards are not specifically listed throughout the text, but are addressed.

OTHER:

The program is well written and easy to follow. Good assessments and teaching components to assist the teacher.

Consistency in lessons and exercises throughout the text.

Organized sequential lessons.
Real world applications and modeling problems.

The Pre-Calculus text does not directly list or address the practice standards; however it does present all of the practice standards within the lessons, exercises, and assessments.

2015-1 Interim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: Cengage Learning, Inc.

Title of Material: PreCalculus: Mathematics for Calculus, Seventh Edition

Author: James Stewart, Lothar Redlin, Saleem Watson

ISBN #: 978-1-305-11530-9 **Copyright** 2016

Reviewer ID: JHW CH

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1 **Focus and Coherence**		
Criterion	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Throughout the Pre-Calculus text, students spend at least 50% of their time on Widely Applicable Prerequisites. Math concepts build on each other. **SE/TE:** 159-170, 212-213, 301-307, 331-334, 699-708.	**_X_ Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Throughout the Pre-Calculus course, students work involves significant work with applications and modeling and problems that use algebra skills. **ST/TE:** 87, 90-91(#109-125), 105(#122-124), 116 (#87-94), 122(#47,48), 139-146, 188-190(#29-38), 237-244.	**_X_ Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The first chapter in the Pre-Calculus text is review of fundamentals which are needed to be successful throughout the course. Review is also discussed throughout the text. **SE/TE:** 1-131, 147, 245, 329, 401, 471, 537, 587, 629, 679.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Pre-Calculus text covers the content specified in the standards. **SE/TE:** v-ix.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Pre-Calculus text provides students extensive work with course-level problems. In the side margins of the lessons you will find side notes and boxed lessons to help the students understand the concepts. **SE/TE:** 410, 494, 540, 548, 596, 642, 668, 680.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The lessons in Pre-Calculus text are designed so that prior knowledge become reorganized and extended to accommodate the new knowledge. **SE/TE:** 65, 122, 190, 246, 370, 445.	**__X_Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Objectives can be found throughout the Pre-Calculus text. **SE/TE:** 1, 147, 245, 329, 401,471, 537, 587, 629, 679, 781, 841, 897, 949.	**__X_Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Pre-Calculus text contains problems in cases where two or more clusters in a domain, or two or more domains in a category, or two or more categories where these connections are natural and important. **SE/TE:** 159-170, 212-213, 301-307, 331-334, 699-708.	**__X_Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X__Meets

____Does Not Meet

Strengths/Weaknesses
Students spend at least 50% of their time on Widely Applicable Prerequisites. Students use modeling and applications. Problems are at course level.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 1 is rated as Meets or Does Not Meet.
To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** In the Pre-Calculus text conceptual understanding is attended to thoroughly where the standards set explicit expectations for understanding or interpreting. Content standards have been incorporated throughout the text in examples, exercises, and assessments. **SE/TE:** 2-9, 10-12, 13-21, 21-24, 25-32, 33-35, 36-42, 43-44, 137-138.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function $f(t) = 5 - t2$?" or "Is $\sqrt{2}$ a polynomial? How about $\frac{1}{2}(x + \sqrt{2}) + \frac{1}{2}(-x + \sqrt{2})$?"	**Evidence-** The Pre-Calculus materials feature high-quality conceptual problems and conceptual discussion questions. **SE/TE:** 159-165, 166-170, 170-178, 178-182.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** The lessons, exercises and assessment materials throughout the Pre-Calculus text feature opportunities to identify correspondences across mathematical representation. **SE/TE:** 159-170, 235-236, 246-254, 323-324, 330-338, 391, 402-409, 465.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The examples, exercises, and assessments in the Pre-Calculus text progress toward fluency and procedural skill interwoven with the students developing conceptual understanding of the skills in question. The exercises start out with concept problems and then progress to skills, applications, discuss, discover, prove, and write. **SE/TE:** 246-251, 251-253, 254-265, 265-268, 311-315, 316-317, 323-324.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** The examples and exercises in the Pre-Calculus text provide opportunistic strategies which are valuable and generic cases that require efficient and general procedural present. **SE/TE:** All exercises progress from concept problems, to skills problems, to applications, discussions, discover, prove and write.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The examples and exercises in the Pre-Calculus text contain single and multi-step contextual problems, real-life situation problems. Real-world applications from other fields also demonstrate the relevance of the field of mathematical study. **SE/TE:** 338, 342(#25), 350, 353(#96), 356, 360(#74), 366, 369(#98), 370(#102).	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The problems in the examples and exercises of the Pre-Calculus text stress applying the Widely Applicable Prerequisites. **SE/TE:** 159-170, 212-213, 301-307, 331-334, 699-708.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout the Pre-Calculus text examples and exercises model real-world situations. All exercises contain application problems. At the end of each chapter you will find a Focus on Modeling section. **SE/TE:** 477, 479-481(#75-94), 485-486, 489-490(#53-71), 517, 522-523(#39-53), 533-536.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**__X_Meets** **____Does Not Meet** **Strengths/Weaknesses:** Sufficient amount of problems. Content standards have been incorporated throughout the text but are not specifically listed. Multiple conceptual problems and conceptual discussion questions.	

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Throughout the Pre-Calculus text the Widely Applicable Prerequisites as well as all of the standards for mathematical practice have been used. Throughout the text students are given real-life application problems and have to solve these problems using abstract and quantitative reasoning. Students are also asked to use technology, modeling, and written argument. **SE/TE:** 159-170, 212-213, 301-307, 331-334, 699, 708.	**__X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **____Meets (2)** **__X_Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The structure of Pre-Calculus lessons clearly distinguishes between examples and exercises. The guided problem solving provides examples focused on the lesson. The exercises provide problems from the lesson that deal with concept, skill, application, discussion, discover, proofs and writing. **SE/TE:** 295-307, 308-310, 311-315, 316-317, 330-335, 336-338.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** The Pre-Calculus text does not directly list or address the practice standards; however it does present all of the practice standards within the lessons, exercises, and assessments.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__X__ Meets (2)** **____ Partially Meets (1)** **____ Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** The Pre-Calculus text contains exercises that have students explore and produce an argument to support their solution. **SE/TE:** 148-159, 183-190, 190-197, 378-380, 588-593, 734-745.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Throughout the Pre-Calculus text there are Discovery Projects within the lessons. The Discovery Projects encourage students to use mathematical language to construct a viable argument while solving the problem. **SE/TE:** 361, 375, 382, 558, 590, 608, 645, 694.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** The lessons in the Pre-Calculus text explicitly attend to the specialized language of mathematics. Students are encouraged to use correct mathematical terminology throughout the exercises. **SE/TE:** 3, 5, 12(#93), 13, 14, 16, 18, 19, 25(#107), 184, 192, 198, 199, 201, 202, 203, 205, 210(#102-104).	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X_Meets

____Does Not Meet

Strengths/Weaknesses:
Students are asked to use technology, modeling, and written argument. The text consists of real world application problems. The text does not directly list or address the practice standards.

Alignment Criterion 3:
Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.
To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:

Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
The Pre-Calculus course is a high level math course, therefore students must be highly motivated to take the course and be successful. The language in which problems are posed is carefully considered.
SE/TE: 127-130(#35-57), 353-354(#96-105), 619-620(#63-71), 798-799(#65-72), 958-961(#17-94).
TE: xi-xiv, xv-xvii.

__X_Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The Pre-Calculus course is a high level math course, which requires student to be highly skilled and self motivated. The lessons and exercises contain levels of problems in a variety of forms: concepts, skills, skills plus, applications, discuss-discover-prove-write. **SE/TE:** 754-756, 796-799, 805-807, 813-816, 823-824, 829-831.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** All levels of students have different types of learning styles. The Pre-Calculus text allows for a variety of different types of learning styles. The TE has additional in-class materials and alternate examples to help them reach all students. **TE:** 413, 416, 420-429, 432-434, 472-478, 482-487.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Language in which problems are posed is carefully considered. The lessons and exercises contain levels of problems in a variety of forms: concepts, skills, skills plus, applications, discuss-discover-prove-write.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Throughout the Pre-Calculus text chapters contain lessons which are thoughtfully structured and support the teacher in leading the class through the learning using key ideas, theorems, and problem solving examples, which encourage them to think. The TE contains a teacher note section and alternate examples in the margin.	**(Reviewer only.)** __X__ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** The lessons throughout the text are supported by examples with step by step solutions. The problems in the exercises are carefully chosen to meet the goals and objectives within the lesson and the problems have a wide range of difficulty. The layout of the text is very user-friendly. The lessons are consistent throughout the text with examples and exercise. The colors and pictures are inviting to the eye.	**(Reviewer only.)** __X__ **Yes** _____ **No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The exercises throughout the Pre-Calculus text are given in intentional sequences with a plentiful amount of problems ranging from easy to difficult, which allows students to strengthen their mathematical understanding.	**(Reviewer only.)** __X__ **Yes** _____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** There is an Instructors Guide for teacher, which contains points to stress, text discussion topics, suggested time to a lot for each lesson, exercise and solutions to group work, workshop and discussion suggestions, and suggested homework problems.	**(Reviewer only.)** __X__ **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Where applicable, manipulatives are used appropriately to represent mathematical objects and are connected to written methods.	**(Reviewer only.)** __X__ **Yes** _____ **No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** At the end of each chapter there is a Review section and Chapter Test, which will help students gauge their learning progress.	**(Reviewer only.)** __X__ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** In the back of the SE there are brief answers to the odd problems in the exercises, reviews, and chapter tests. In the back of the TE there are brief answers to all of the problems in the exercises, reviews, and tests. There is an additional Solution Manual available to students and teachers that provide step by step solutions to all problems in the text.	**(Reviewer only.)** __X__ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** In the Pre-Calculus text course-lever language is used in examples and exercises. Methods used to assess student proficiency are accessible and unbiased.	**(Reviewer only.)** __X__ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** This Pre-Calculus Editions has been reviewed by several instructors, all of whom are listed in the preface of the text.	**(Reviewer only.)** __X__ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The authors' attention to clarity and detail throughout the Pre-Calculus text is very apparent. Concepts are explained clearly throughout the text. Mathematical Modeling is introduced early in the text and is continuously reinforced, which provides students with a solid foundation in the principles of mathematical thinking.	**(Reviewer only.)** __X__ **Yes** _____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** Pre-calculus: Mathematics for Calculus, Seventh Edition

Publisher: Cengage Learning, Inc. **Copyright:** 2016

ISBN: 978-1-305-11530-9

Reviewer ID # _____ **Date Review Completed:** _____

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

__X__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

__X__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance

Points: __6__ **of 6 possible.**
(Materials must receive at least 5 of 6 points to align.)

__X__ Meets

_____ Does Not Meet

Alignment Criterion 2: Standards of Mathematical Practice

Points: __5__ **of 6 possible.**
(Materials must receive at least 5 of 6 points to align.)

__X__ Meets

_____ Does Not Meet

Alignment Criterion 3: Access to Standards for All Learners

Points: __6__ **of 6 possible.**
(Materials must receive at least 5 of 6 points to align.)

__X__ Meets

_____ Does Not Meet

Alignment Criteria Overall:

__X__ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:
The program is well written and easy to follow.
Good assessments and teaching components to assist the teacher.
Consistency in lessons and exercises throughout the text.
Organized sequential lessons.
Real world applications and modeling problems.

Weakness:
The Pre-Calculus text does not directly list or address the practice standards; however it does present all of the practice standards within the lessons, exercises, and assessments.

Standards Alignment Evaluation Rubric

0 = No Alignment- **Not Evident:** Content as described in the Standards is **not evident**.

.5 = Partial Alignment- **Partially Evident:** Content as described in the Standards is **partially evident** and there are few gaps.

1 = High Alignment - **Clearly Evident:** Content is fully aligned as described in the Standards and repeatedly included to guarantee extensive opportunities for students to work with the content. Alignment is **clearly evident**.

N/A = Not applicable for standard

Note: In the Concept Outline, subject matter that is included only in the BC course is indicated with blue shading.

Standards and Learning Indicators	**Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.**	**Point Value 0/.5/1 (Reviewer)**
Big Idea 1: Limits Many calculus concepts are developed by first considering a discrete model and then the consequences of a limiting case. Therefore, the idea of limits is essential for discovering and developing important ideas, definitions, formulas, and theorems in calculus. Students must have a solid, intuitive understanding of limits and be able to compute various limits, including one-sided limits, limits at infinity, the limit of a sequence, and infinite limits. They should be able to work with tables and graphs in order to estimate the limit of a function at a point. Students should know the algebraic properties of limits and techniques for finding limits of indeterminate forms, and they should be able to apply limits to understand the behavior of a function near a point. Students must also understand how limits are used to determine continuity, a fundamental property of functions.		

Enduring Understandings (Students will understand that...)	**Learning Objectives** (Students will be able to...)	**Essential Knowledge** (Students will know that...)		

EU 1.1: The concept of a limit can be used to understand the behavior of functions.	**LO 1.1A (a):** Express limits symbolically using correct notation. **LO 1.1A (b):** Interpret limits expressed symbolically.	**EK 1.1A1:** Given a function f, the limit of $f(x)$ as x approaches c is a real number R if $f(x)$ can be made arbitrarily close to R by taking x sufficiently close to c (but not equal to c). If the limit exists and is a real number, then the common notation is $\lim_{x \to c} f(x) = R$. **EXCLUSION STATEMENT (EK 1.1A1):** The epsilon-delta definition of a limit is not assessed on the AP Calculus AB or BC Exam. However, teachers may include this topic in the course if time permits.	The formal definition of a limit is presented and can be used to determine the behavior of functio Pg 81, 72	1
		EK 1.1A2: The concept of a limit can be extended to include one-sided limits, limits at infinity, and infinite limits.	The topic of one-sided limits, limits at infinity and infinite limits are clearly introduced and explored with in depth development of conceptual understanding using correct notation. P 77, _ 80	1
		EK 1.1A3: A limit might not exist for some functions at particular values of . Some ways that the limit might not exist are if the function is unbounded, if the function is oscillating near this value, or if the limit from the left does not equal the limit from the right. **EXAMPLES OF LIMITS THAT DO NOT EXIST:** $\lim_{x \to 0} \frac{1}{x^2} = \infty$ $\quad \lim_{x \to 0} \sin\left(\frac{1}{x}\right)$ *does not exist* $\lim_{x \to 0} \frac{\lvert x \rvert}{x}$ *does not exist* $\quad \lim_{x \to 0} \frac{1}{x}$ *does not exist*	The content shows multiple representations of limits that do not exist. Pg 52, 53	1
	LO 1.1B: Estimate limits of functions	**EK 1.1B1:** Numerical and graphical information can be used to estimate limits.	The content shows a clear procedure and multiple representation for the estimation of limits of functions. Pg: 52, 53, 54, 61	1

	LO 1.1C: Determine limits of functions.	**EK 1.1C1:** Limits of sums, differences, products, quotients, and composite functions can be found using the basic theorems of limits and algebraic rules.	Students are asked to determine limits of functions using basic theorems of limits and algebraic rules. Pgs. 62	1
		EK 1.1C2: The limit of a function may be found by using algebraic manipulation, alternate forms of trigonometric functions, or the squeeze theorem	Use of the squeeze theorem and the alternate forms of trigonometric functions Pgs. 65, 69	1
		EK 1.1C3: Limits of the indeterminate forms $\frac{0}{0}$ and $\frac{\infty}{\infty}$ may be evaluated using L'Hospital's Rule.	Limits of indeterminate forms using L'Hospitals rule – this is an extension for AB and required for BC Pg 491	1
	LO 1.1D: Deduce and interpret behavior of functions using limits.	**EK 1.1D1:** Asymptotic and unbounded behavior of functions can be explained and described using limits.	Asymptotic and unbounded behavior is explained using multiple representations with the definition of a limit, and limit theorems. 56,61	1
		EK 1.1D2: Relative magnitudes of functions and their rates of change can be compared using limits	Comparison of rates of change using limits 106	1
EU 1.2: Continuity is a key property of functions that is defined using limits	**LO 1.2A:** Analyze functions for intervals of continuity or points of discontinuity.	**EK 1.2A1:** A function f is continuous at $x = c$ provided that $f(c)$ exists, $\lim_{x \to c} f(x)$ exists, and $\lim_{x \to c} f(x) = f(c)$.	The definition of continuity is presented as a key property 83	1
		EK 1.2A2: Polynomial, rational, power, exponential, logarithmic, and trigonometric functions are continuous at all points in their domains.	Functions are analyzed for intervals of continuity, points of continuity and points of discontinuity 86,88	1

		EK 1.2A3: Types of discontinuities include removable discontinuities, jump discontinuities, and discontinuities due to vertical asymptotes.	Students are asked to differentiate between the different types of discontinuities. 83-84, 941	1
	LO 1.2B: Determine the applicability of important calculus theorems using continuity.	**EK 1.2B1:** Continuity is an essential condition for theorems such as the Intermediate Value Theorem, the Extreme Value Theorem, and the Mean Value Theorem.	The intermediate value theorem, extreme value theorem, and mean value theorem are taught and 90,206,215	1

Standards & Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 2: Derivatives Using derivatives to describe the rate of change of one variable with respect to another variable allows students to understand change in a variety of contexts. In AP Calculus, students build the derivative using the concept of limits and use the derivative primarily to compute the instantaneous rate of change of a function. Applications of the derivative include finding the slope of a tangent line to a graph at a point, analyzing the graph of a function (for example, determining whether a function is increasing or decreasing and finding concavity and extreme values), and solving problems involving rectilinear motion. Students should be able to use different definitions of the derivative, estimate derivatives from tables and graphs, and apply various derivative rules and properties. In addition, students should be able to solve separable differential equations, understand and be able to apply the Mean Value Theorem, and be familiar with a variety of real-world applications, including related rates, optimization, and growth and decay models.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 2.1: The derivative of a function is defined as the limit of a difference quotient and can be determined using a variety of strategies.	**LO 2.1A:** Identify the derivative of a function as the limit of a difference quotient.	**EK 2.1A1:** The difference quotients $\frac{f(a+h)-f(a)}{h}$ and $\frac{f(x)-f(a)}{x-a}$ express the average rate of change of a function over an interval.	The derivative of a function is introduced as the limit of a difference quotient. 110	1

		EK 2.1A2: The instantaneous rate of change of a function at a point can be expressed by $\lim_{h \to 0} \frac{f(a+h)-f(a)}{h}$ or $\lim_{x \to a} \frac{f(x)-f(a)}{x-a}$, provided that the limit exists. These are common forms of the definition of the derivative and are denoted $f'(a)$.	The instantaneous rate of change of a function is related to the difference quotient Pg. 110	1
		EK 2.1A3: The derivative of f is the function whose value at x is $\lim_{h \to 0} \frac{f(x+h)-f(x)}{h}$ provided this limit exists.	The existence of a limit is shown to be related to the difference quotient Pg. 117	1
		EK 2.1A4: For $y = f(x)$, notations for the derivative include $\frac{dy}{dx}$, $f'(x)$, and y'.	Derivative notations are shown Pg. 120	1
		EK 2.1A5: The derivative can be represented graphically, numerically, analytically, and verbally.	Multiple representations are present throughout the text. 106	1
	LO 2.1B: Estimate derivatives.	**EK 2.1B1:** The derivative at a point can be estimated from information given in tables or graphs	Students are given ample opportunity to estimate derivatives using tables and graphs Pgs. 106	1
	LO 2.1C: Calculate derivatives.	**EK 2.1C1:** Direct application of the definition of the derivative can be used to find the derivative for selected functions, including polynomial, power, sine, cosine, exponential, and logarithmic functions.	Derivatives rules are applied including, the following: Pgs. 130,144,428	1
		EK 2.1C2: Specific rules can be used to calculate derivatives for classes of functions, including polynomial, rational, power, exponential, logarithmic, trigonometric, and inverse trigonometric.	Derivatives rules are applied including, the following: Pgs. 144,479,408	1
		EK 2.1C3: Sums, differences, products, and quotients of functions can be differentiated using derivative rules.	Derivatives rules are applied including, the following Pgs. 132	1

		EK 2.1C4: The chain rule provides a way to differentiate composite functions.	Derivatives rules are applied including, the following Pgs. 152	1
		EK 2.1C5: The chain rule is the basis for implicit differentiation.	Derivatives rules are applied including, the following :Pgs. 161	1
		EK 2.1C6: The chain rule can be used to find the derivative of an inverse function, provided the derivative of that function exists.	Derivatives rules are applied including, the following :Pgs. 405	1
		EK 2.1C7: (BC) Methods for calculating derivatives of realvalued functions can be extended to vector-valued functions, parametric functions, and functions in polar coordinates.	689,703,895	1

	LO 2.1D: Determine higher order derivatives.	**EK 2.1D1:** Differentiating f' produces the second derivative f'', provided the derivative of f' exists; repeating this process produces higher order derivatives of f.	Content includes conceptual understanding and multiple representations of first and second derivative tests. Pg. 123,129	1
		EK 2.1D2: Higher order derivatives are represented with a variety of notations. For $y = f(x)$, notations for the second derivative include $\frac{d^2y}{dx^2}$, $f''(x)$, and y''. Higher order derivatives can be denoted $\frac{d^n y}{dx^n}$ or $f^{(n)}(x)$.	Higher order derivatives are represented with a variety of notations both in lesson, examples, and assignments. Pg. 123	1
EU 2.2: A function's derivative, which is itself a function, can be used to understand the behavior of the function.	**LO 2.2A:** Use derivatives to analyze properties of a function.	**EK 2.2A1:** First and second derivatives of a function can provide information about the function and its graph including intervals of increase or decrease, local (relative) and global (absolute) extrema, intervals of upward or downward concavity, and points of inflection.	Use of functions derivative to understand the behavior of a functinos. Pgs. 117	1
		EK 2.2A2: Key features of functions and their derivatives can be identified and related to their graphical, numerical, and analytical representations.	Information about Functions and their Derivatives are used to identify and relate graphs using multiple represntations. Pgs. 117	1
		EK 2.2A3: Key features of the graphs of f, f', and f'' are related to one another.	Conceptual understanding of curve sketching between f, f', and f'' Pgs. 128	1
		EK 2.2A4: (BC) For a curve given by a polar equation $r = f(\theta)$, derivatives of r, x, and y with respect to θ and first and second derivatives of y with respect to x can provide information about the curve.	Pgs. 703	1

	LO 2.2B: Recognize the connection between differentiability and continuity.	**EK 2.2B1:** A continuous function may fail to be differentiable at a point in its domain.	Differentiability and continuity at specific points in the domain Pgs. 122	1
		EK 2.2B2: If a function is differentiable at a point, then it is continuous at that point.	Definition between differentiation and continuity Pgs. 122	1
EU 2.3: The derivative has multiple interpretations and applications including those that involve instantaneous rates of change.	**LO 2.3A:** Interpret the meaning of a derivative within a problem.	**EK 2.3A1:** The unit for $f'(x)$ is the unit for f divided by the unit for x.	The relationship of the derivative of a function is defined P 111	1
		EK 2.3A2: The derivative of a function can be interpreted as the instantaneous rate of change with respect to its independent variable.	The relationship of the derivative with respect to the instantaneous rate of change. Pg. 110	1
	LO 2.3B: Solve problems involving the slope of a tangent line.	**EK 2.3B1:** The derivative at a point is the slope of the line tangent to a graph at that point on the graph.	The relationship between the derivative and the slope of the tangent line at that point Pgs. 106	1
		EK 2.3B2: The tangent line is the graph of a locally linear approximation of the function near the point of tangency.	Local linearization and approximation Pgs. 106	1
	LO 2.3C: Solve problems involving related rates, optimization, rectilinear motion, **(BC)** and planar motion.	**EK 2.3C1:** The derivative can be used to solve rectilinear motion problems involving position, speed, velocity, and acceleration.	There is content relative to related rates, optimization, rectilinear motion and planar motion(BC) Pgs. 281	1

		EK 2.3C2: The derivative can be used to solve related rates problems, that is, finding a rate at which one quantity is changing by relating it to other quantities whose rates of change are known.	Related Rates Pgs. 181	1
		EK 2.3C3: The derivative can be used to solve optimization problems, that is, finding a maximum or minimum value of a function over a given interval.	Optimization involving max and min values Pgs. 258	1
		EK 2.3C4: (BC) Derivatives can be used to determine velocity, speed, and acceleration for a particle moving along curves given by parametric or vector-valued functions.	Planar and rectilinear motion Pgs. 689,895	1
	LO 2.3D: Solve problems involving rates of change in applied contexts.	**EK 2.3D1:** The derivative can be used to express information about rates of change in applied contexts.	Rates of change in applied contexts Pgs. 169,203	1
	LO 2.3E: Verify solutions to differential equations.	**EK 2.3E1:** Solutions to differential equations are functions or families of functions.	Solutions to differential equations are represented as families of functions, general solutions and particular solutions. Pgs. 143, 279, 625	1
		EK 2.3E2: Derivatives can be used to verify that a function is a solution to a given differential equation.	Pgs. 630 Ex 1-5	1
	LO 2.3F: Estimate solutions to differential equations.	**EK 2.3F1:** Slope fields provide visual clues to the behavior of solutions to first order differential equations.	Use of slope fields for solutions to differential equations Pgs. 630	1
		EK 2.3F2: (BC) For differential equations, Euler's method provides a procedure for approximating a solution or a point on a solution curve.	P 635	1

EU 2.4: The Mean Value Theorem connects the behavior of a differentiable function over an interval to the behavior of the derivative of that function at a particular point in the interval.	**LO 2.4A:** Apply the Mean Value Theorem to describe the behavior of a function over an interval.	**EK 2.4A1:** If a function f is continuous over the interval $[a, b]$ and differentiable over the interval (a, b), the Mean Value Theorem guarantees a point within that open interval where the instantaneous rate of change equals the average rate of change over the interval.	Use of the Mean Value theorem to describe and determine behavior of a function over an interval. Pgs. 215	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 3: Integrals and the Fundamental Theorem of Calculus Integrals are used in a wide variety of practical and theoretical applications. AP Calculus students should understand the definition of a definite integral involving a Riemann sum, be able to approximate a definite integral using different methods, and be able to compute definite integrals using geometry. They should be familiar with basic techniques of integration and properties of integrals. The interpretation of a definite integral is an important skill, and students should be familiar with area, volume, and motion applications, as well as with the use of the definite integral as an accumulation function. It is critical that students grasp the relationship between integration and differentiation as expressed in the Fundamental Theorem of Calculus — a central idea in AP Calculus. Students should be able to work with and analyze functions defined by an integral.				
Enduring Understandings (Students will understand that...)	**Learning Objectives** (Students will be able to...)	**Essential Knowledge** (Students will know that...)		
EU 3.1: Antidifferentiation is the inverse process of differentiation.	**LO 3.1A:** Recognize antiderivatives of basic functions.	**EK 3.1A1:** An antiderivative of a function f is a function g whose derivative is f.	The antiderivative as an inverse process Pg. 278	1
		EK 3.1A2: Differentiation rules provide the foundation for finding antiderivatives.	The connection between the rules of the differentiation rules and foundation for integration Pgs. 278	1
EU 3.2: The definite integral of a function over an interval is the limit of a Riemann sum over that interval and can be calculated using a variety of strategies	**LO 3.2A(a):** Interpret the definite integral as the limit of a Riemann sum.	**EK 3.2A1:** A Riemann sum, which requires a partition of an interval , is the sum of products, each of which is the value of the function at a point in a subinterval multiplied by the length of that subinterval of the partition.	Riemann sum and the connection to the definite integral Pgs. 306	1

	LO 3.2A(b): Express the limit of a Riemann sum in integral notation.	**EK 3.2A2:** The definite integral of a continuous function f over the interval $[a, b]$, denoted by $\int_a^b f(x)dx$, is the limit of Riemann sums as the widths of the subintervals approach 0. That is, $\int_a^b f(x)dx = \lim_{\max \Delta x_i \to 0} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$ where x_i^* is a value in the ith subinterval, Δx_i is the width of the ith subinterval, n is the number of subintervals, and $\max \Delta x_i$ is the width of the largest subinterval. Another form of the definition is $\int_a^b f(x)dx = \lim_{n \to \infty} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$, where $\Delta x_i = \frac{b-a}{n}$ and x_i^* is a value in the ith subinterval.	Riemann sum in integral notation Pgs. 304-306 (Definite Integrals)	1
		EK 3.2A3: The information in a definite integral can be translated into the limit of a related Riemann sum, and the limit of a Riemann sum can be written as a definite integral.	Translation between definite integral and Riemann sum and vice versa Pgs. 306	1
	LO 3.2B: Approximate a definite integral.	**EK 3.2B1:** Definite integrals can be approximated for functions that are represented graphically, numerically, algebraically, and verbally.	Multiple representations of the definite integral Pgs. 311, 312, 316	1
		EK 3.2B2: Definite integrals can be approximated using a left Riemann sum, a right Riemann sum, a midpoint Riemann sum, or a trapezoidal sum; approximations can be computed using either uniform or nonuniform partitions.	Left, Right, Midpoint, Reiman sums as well as trap sums with uniform and non uniform partitions Pgs. 309	1

	LO 3.2C: Calculate a definite integral using areas and properties of definite integrals.	**EK 3.2C1:** In some cases, a definite integral can be evaluated by using geometry and the connection between the definite integral and area.	Geometric sums with the definite integral Pgs. 313	1
		EK 3.2C2: Properties of definite integrals include the integral of a constant times a function, the integral of the sum of two functions, reversal of limits of integration, and the integral of a function over adjacent intervals.	Integral of a constant, sum of 2 functions, reversal of limits and other limit rules. Pgs. 313	1
		EK 3.2C3: The definition of the definite integral may be extended to functions with removable or jump discontinuities.	Connection between jump and removable discontinuities and integrals P 567	1
	LO 3.2D: (BC) Evaluate an improper integral or show that an improper integral diverges.	**EK 3.2D1:** (BC) An improper integral is an integral that has one or both limits infinite or has an integrand that is unbounded in the interval of integration.	Pg. 567	1
		EK 3.2D2: (BC) Improper integrals can be determined using limits of definite integrals.	Pgs. 567	1

EU 3.3: The Fundamental Theorem of Calculus, which has two distinct formulations, connects differentiation and integration.	**LO 3.3A:** Analyze functions defined by an integral.	**EK 3.3A1:** The definite integral can be used to define new functions; for example, $f(x)=\int_a^x e^{-t^2}\,dt$.	Definite integral to define functions Pgs. 319, 320	1
		EK 3.3A2: If f is a continuous function on the interval $[a, b]$, then $\frac{d}{dx}\left(\int_a^x f(t)\,dt\right)=f(x)$, where x is between a and b.	Continuous function on the closed interval Pgs.326	1
		EK 3.3A3: Graphical, numerical, analytical, and verbal representations of a function f provide information about the function g defined as $g(x)=\int_a^x f(t)\,dt$.	Multiple representations as required by the college board. Pgs. 323, 327	1
	LO 3.3B(a): Calculate antiderivatives.	**EK 3.3B1:** The function defined by $F(x)=\int_a^x f(t)\,dt$ is an antiderivative of f.	Students are able to calculate antiderivatives Pg. 321	1
	LO 3.3B(b): Evaluate definite integrals.	**EK 3.3B2:** If f is continuous on the interval $[a, b]$ and F is an antiderivative of f, then $\int_a^b f(x)\,dx=F(b)-F(a)$.	Evaluation of definite integrals using the FTC Pgs. 324	1
		EK 3.3B3: The notation $\int f(x)\,dx=F(x)+C$ means that $F'(x)=f(x)$, and $\int f(x)\,dx$ is called an indefinite integral of the function f.	The constant of integration Pg. 330	1
		EK 3.3B4: Many functions do not have closed form antiderivatives.	Pg. 546	1

		EK 3.3B5: Techniques for finding antiderivatives include algebraic manipulation such as long division and completing the square, substitution of variables, (BC) integration by parts, and nonrepeating linear partial fractions.	Pgs. 340, 512, 533,	1
EU 3.4: The definite integral of a function over an interval is a mathematical tool with many interpretations and applications involving accumulation.	**LO 3.4A:** Interpret the meaning of a definite integral within a problem.	**EK 3.4A1:** A function defined as an integral represents an accumulation of a rate of change.	Accumulation of a rate of change Pg. 333	1
		EK 3.4A2: The definite integral of the rate of change of a quantity over an interval gives the net change of that quantity over that interval.	Rate of change connection to net change Pgs. 333	1
		EK 3.4A3: The limit of an approximating Riemann sum can be interpreted as a definite integral.	Riemann sum connection to definite integral Pgs. 306	1
	LO 3.4B: Apply definite integrals to problems involving the average value of a function.	**EK 3.4B1:** The average value of a function f over an interval $[a, b]$ is $\frac{1}{b-a}\int_a^b f(x)\,dx$.	Definite integral connection to average Pg. 389	1
	LO 3.4C: Apply definite integrals to problems involving motion.	**EK 3.4C1:** For a particle in rectilinear motion over an interval of time, the definite integral of velocity represents the particle's displacement over the interval of time, and the definite integral of speed represents the particle's total distance traveled over the interval of time.	Particle motion over an interval in relation to displacement, speed, total distance Pg 281	1

		EK 3.4C2: (BC) The definite integral can be used to determine displacement, distance, and position of a particle moving along a curve given by parametric or vector-valued functions.	Limited use of parametric and vectors Pg. 689, 910	.5
	LO 3.4D: Apply definite integrals to problems involving area, volume, **(BC)** and length of a curve.	**EK 3.4D1:** Areas of certain regions in the plane can be calculated with definite integrals. (BC) Areas bounded by polar curves can be calculated with definite integrals	Area bound by polar curves with definite integrals Pg. 356, 709	1
		EK 3.4D2: Volumes of solids with known cross sections, including discs and washers, can be calculated with definite integrals.	Volumes with cross sections, Disk and Shell..even washers Pg. 366, 377	1
		EK 3.4D3: (BC) The length of a planar curve defined by a function or by a parametrically defined curve can be calculated using a definite integral.	Planar curve with definite integral Pg. 584	1
	LO 3.4E: Use the definite integral to solve problems in various contexts.	**EK 3.4E1:** The definite integral can be used to express information about accumulation and net change in many applied contexts.	Accumulation and net change in applied context Pgs. 598,609,613	1

EU 3.5: Antidifferentiation is an underlying concept involved in solving separable differential equations. Solving separable differential equations involves determining a function or relation given its rate of change.	**LO 3.5A:** Analyze differential equations to obtain general and specific solutions.	**EK 3.5A1:** Antidifferentiation can be used to find specific solutions to differential equations with given initial conditions, including applications to motion along a line, exponential growth and decay, **(BC)** and logistic growth.	Specific solutions given initial conditions with both Slope Fields and Eulers meth Pgs. 647, 650	1
		EK 3.5A2: Some differential equations can be solved by separation of variables.	Separation of Variables with general and particular solutions. Pgs. 639	1
		EK 3.5A3: Solutions to differential equations may be subject to domain restrictions.	Growth and Decay, linear differential equations Pgs. 626	1
		EK 3.5A4: The function F defined by $F(x)=c+\int_a^x f(t)dt$ is a general solution to the differential equation $\frac{dy}{dx}=f(x)$, and $F(x)=y_0+\int_a^x f(t)dt$ is a particular solution to the differential equation $\frac{dy}{dx}=f(x)$ satisfying $F(a)=y_0$.	General and Particular solutions Pg.628	1
	LO 3.5B: Interpret, create and solve differential equations from problems in context.	**EK 3.5B1:** The model for exponential growth and decay that arises from the statement "The rate of change of a quantity is proportional to the size of the quantity" is $\frac{dy}{dt}=ky$.	The connection to growth and decay and the algebraic rate of change Pgs. 650, 667	1
		EK 3.5B2: (BC) The model for logistic growth that arises from the statement "The rate of change of a quantity is jointly proportional to the size of the quantity and the difference between the quantity and the carrying capacity" is $\frac{dy}{dt}=ky(a-y)$.	Pgs. 651	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 4: Series (BC) The AP Calculus BC curriculum includes the study of series of numbers, power series, and various methods to determine convergence or divergence of a series. Students should be familiar with Maclaurin series for common functions and general Taylor series representations. Other topics include the radius and interval of convergence and operations on power series. The technique of using power series to approximate an arbitrary function near a specific value allows for an important connection to the tangent-line problem and is a natural extension that helps achieve a better approximation. The concept of approximation is a common theme throughout AP Calculus, and power series provide a unifying, comprehensive conclusion.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 4.1: The sum of an infinite number of real numbers may converge.	**LO 4.1A:** Determine whether a series converges or diverges.	**EK 4.1A1:** The nth partial sum is defined as the sum of the first n terms of a sequence.	Nth partial sums Pg. 748	1
		EK 4.1A2: An infinite series of numbers converges to a real number S (or has sum S), if and only if the limit of its sequence of partial sums exists and equals S.	Convergence of infinite series Pg. 748	1
		EK 4.1A3: Common series of numbers include geometric series, the harmonic series, and p-series.	Geometric, harmonic, p series Pg. 749,753, 762	1
		EK 4.1A4: A series may be absolutely convergent, conditionally convergent, or divergent.	Absolute convergence and divergent, conditional convergence Pgs. 777,778,748	1
		EK 4.1A5: If a series converges absolutely, then it converges.	Absolute convergence. Pg. 777	1

		EK 4.1A6: In addition to examining the limit of the sequence of partial sums of the series, methods for determining whether a series of numbers converges or diverges are the nth term test, the comparison test, the limit comparison test, the integral test, the ratio test, and the alternating series test. **EXCLUSION STATEMENT (EK 4.1A6):** *Other methods for determining convergence or divergence of a series of numbers are not assessed on the AP Calculus AB or BC Exam. However, teachers may include these topics in the course if time permits.*	Limits of a sequence and partial sums Pgs. 761, 769, 772	1
	LO 4.1B: Determine or estimate the sum of a series.	**EK 4.1B1:** If a is a real number and r is a real number such that $\lvert r\rvert < 1$, then the geometric series $\sum_{n=0}^{\infty} ar^n = \frac{a}{1-r}$.	Geometric Series Pg. 750	1
		EK 4.1B2: If an alternating series converges by the alternating series test, then the alternating series error bound can be used to estimate how close a partial sum is to the value of the infinite series.	Alternating series and alternating series test, and error bound Pg. 772	1
		EK 4.1B3: If a series converges absolutely, then any series obtained from it by regrouping or rearranging the terms has the same value.	Absolute Convergence Pg. 782	1

EU 4.2: A function can be represented by an associated power series over the interval of convergence for the power series.	**LO 4.2A:** Construct and use Taylor polynomials.	**EK 4.2A1:** The coefficient of the nth-degree term in a Taylor polynomial centered at $x = a$ for the function f is $\frac{f^{(n)}(a)}{n!}$.	Pg. 799	1
		EK 4.2A2: Taylor polynomials for a function f centered at $x = a$ can be used to approximate function values of f near $x = a$.	Pgs. 814	1
		EK 4.2A3: In many cases, as the degree of a Taylor polynomial increases, the nth-degree polynomial will converge to the original function over some interval.	Pg. 814	1
		EK 4.2A4: The Lagrange error bound can be used to bound the error of a Taylor polynomial approximation to a function.	Pg. 815	1
		EK 4.2A5: In some situations where the signs of a Taylor polynomial are alternating, the alternating series error bound can be used to bound the error of a Taylor polynomial approximation to the function.	815	1
	LO 4.2B: Write a power series representing a given function.	**EK 4.2B1:** A power series is a series of the form $\sum_{n=0}^{\infty} a_n(x-r)^n$ where n is a non-negative integer, $\{a_n\}$ is a sequence of real numbers, and r is a real number.	Pg. 786	
		EK 4.2B2: The Maclaurin series for $\sin(x)$, $\cos(x)$, and e^x provide the foundation for constructing the Maclaurin series for other functions.	Pgs. 810	

		EK 4.2B3: The Maclaurin se for $\frac{1}{1-x}$ is a geometric series.	P 808, Table 1
		EK 4.2B4: A Taylor polynomial for $f(x)$ is a partial sum of the Taylor series for $f(x)$.	P814 11.11 Applications of Taylor Polynomials
		EK 4.2B5: A power series for a given function can be derived by various methods (e.g., algebraic processes, substitutions, using properties of geometric series, and operations on known series such as term-byterm integration or term-by-term differentiation).	Pgs. 792
	LO 4.2C: Determine the radius and interval of convergence of a power series.	**EK 4.2C1:** If a power series converges, it either converges at a single point or has an interval of convergence.	Pg. 789
		EK 4.2C2: The ratio test can be used to determine the radius of convergence of a power series.	Pg. 787, 790
		EK 4.2C3: If a power series has a positive radius of convergence, then the power series is the Taylor series of the function to which it converges over the open interval.	Pg. 794
		EK 4.2C4: The radius of convergence of a power series obtained by term-by-term differentiation or term-by-term integration is the same as the radius of convergence of the original power series.	Pg. 794

Indicators of Quality:

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- The texts encourages students to focus on calculus concepts and processes and aides the teacher in their role as instructor and facilitator.	(Reviewer only.) ____X__ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- The materials included exercises that build on each other as well as modeling and applications that build students conceptual understanding. The overall design of the program supports students as they learn independently and in a group setting.	(Reviewer only.) ____X__ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Lessons and units lend to a coherent flow of concept introduction, examples, check for understanding, independent learning, group learning, exercises and connections.	(Reviewer only.) ___X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The supplemental materials support the teachers role as a facilitator of mathematical discussions and help to strengthen the conceptual understanding of these students.	(Reviewer only.) __X____ Yes _____ No

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- There are no physical manipulatives for this program, however this course is a college level course and manipulatives are not really appropriate at this level.	(Reviewer only.) ___X__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There are self assessments provided in the units, a long with an assessment bank, lesson quizzes, and AP questions. Students are provided examples in step by step fashion with explanatory sentences for self assessment.	(Reviewer only.) ___X___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Answer keys, solutions guides, guided solutions, scoring rubrics for AP questions are provided	(Reviewer only.) ___X___ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- The content is accessible to all students and no sign of bias is evident in the the lesson material, student text, or teacher materiasl. Appropriate course level language is evident throughout the course. Key vocabulary terms are bolded to ensure students understand mathematical terms.	(Reviewer only.) ___X___ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- The material was written and edited by qualified instructors and appear to be free from mathematical error and shows an appropriate course level.	(Reviewer only.) ____X__ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- Navigation through the text is clear and well organized. The visual graphics and designs are level appropriate and engaging.	(Reviewer only.) ___X___ Yes _____ No

COMMENTS:

STRENGTHS	WEAKNESSES
The Strengths of this curriculum are evident in the AP level questioning techniques and review. There are teacher supplements for exercises with full solutions and an available student solution manual that offers only solutions to odd exercises. The rigor of the text and the application and modeling questions are excellent especially with the preparation and mathematical vocabulary and wording for the AP Calculus test.	The on line resource material is weaker for a new teacher. There are supplemental resources for the teacher in the form of study guides, student solutions manual, complete solutions manual, test bank, resource guide and AP test Prep, but these are hard to edit and take time to work through and organize. There is a test bank, but not a test generator.

<tr><td colspan="5">Big Idea 1: Limits
Many calculus concepts are developed by first considering a discrete model and then the consequences of a limiting case. Therefore, the idea of limits is essential for discovering and developing important ideas, definitions, formulas, and theorems in calculus. Students must have a solid, intuitive understanding of limits and be able to compute various limits, including one-sided limits, limits at infinity, the limit of a sequence, and infinite limits. They should be able to work with tables and graphs in order to estimate the limit of a function at a point. Students should know the algebraic properties of limits and techniques for finding limits of indeterminate forms, and they should be able to apply limits to understand the behavior of a function near a point. Students must also understand how limits are used to determine continuity, a fundamental property of functions.</td></tr>

(Students will know that…)</td><td></td><td></td></tr>
</table>

EU 1.1: The concept of a limit can be used to understand the behavior of functions.	**LO 1.1A (a):** Express limits symbolically using correct notation. **LO 1.1A (b):** Interpret limits expressed symbolically.	**EK 1.1A1:** Given a function f, the limit of $f(x)$ as x approaches c is a real number R if $f(x)$ can be made arbitrarily close to R by taking x sufficiently close to c (but not equal to c). If the limit exists and is a real number, then the common notation is $\lim_{x \to c} f(x) = R$. **EXCLUSION STATEMENT (EK 1.1A1):** The epsilon-delta definition of a limit is not assessed on the AP Calculus AB or BC Exam. However, teachers may include this topic in the course if time permits.	**Lesson 2.2 – 2.4** **Students calculate limits using direct substitution and analytical techniques.**	1
		EK 1.1A2: The concept of a limit can be extended to include one-sided limits, limits at infinity, and infinite limits.	**Lesson 2.2 & 2.6** **Students use end behavior and asymptotes to find limits at infinity.** **Definition of one-sided limit is provided in lesson 2.2**	1
		EK 1.1A3: A limit might not exist for some functions at particular values of . Some ways that the limit might not exist are if the function is unbounded, if the function is oscillating near this value, or if the limit from the left does not equal the limit from the right. **EXAMPLES OF LIMITS THAT DO NOT EXIST:** $\lim_{x \to 0} \frac{1}{x^2} = \infty$ $\quad \lim_{x \to 0} \sin\left(\frac{1}{x}\right)$ *does not exist* $\lim_{x \to 0} \frac{\lvert x \rvert}{x}$ *does not exist* $\quad \lim_{x \to 0} \frac{1}{x}$ *does not exist*	**Lesson 2.5** **Students use left- and right-hand limits in the context of continuity.** **Limits that do not exist are discussed in lesson 2.2. Students look at oscillating behavior near a value.**	**0.5** **Some of these concepts were difficult to locate in text.**
	LO 1.1B: Estimate limits of functions	**EK 1.1B1:** Numerical and graphical information can be used to estimate limits.	**Lesson 2.2** **Students find limits by creating a table of values.**	1

	LO 1.1C: Determine limits of functions.	**EK 1.1C1:** Limits of sums, differences, products, quotients, and composite functions can be found using the basic theorems of limits and algebraic rules.	**Lesson 2.3** **Operations with limits referred to as "Limit Laws". Text then refers to them as properties (more familiar terminology)**	1
		EK 1.1C2: The limit of a function may be found by using algebraic manipulation, alternate forms of trigonometric functions, or the squeeze theorem.	**Lesson 2.3** **Squeeze Theorem and algebraic manipulation to find limits**	1
		EK 1.1C3: Limits of the indeterminate forms $\frac{0}{0}$ and $\frac{\infty}{\infty}$ may be evaluated using L'Hospital's Rule.	**Lesson 4.4**	1
	LO 1.1D: Deduce and interpret behavior of functions using limits.	**EK 1.1D1:** Asymptotic and unbounded behavior of functions can be explained and described using limits.	**Lesson 4.5 / Lesson 2.2** **Asymptotic behavior is mentioned in some of the exercises in the problem set.** **Limits approaching infinity is mentioned in lesson 2.2. Text does a thorough job of explaining limits at infinity along horizontal asymptotes. Limits approaching vertical asymptotes to a lesser degree. Text tends to be verbal rather than visual.**	0.5
		EK 1.1D2: Relative magnitudes of functions and their rates of change can be compared using limits.	**Lesson 2.7 & 2.8. 4.4** **Derivatives and tangent lines are introduced using limits. Relative magnitudes and their rates of change is not mentioned until briefly in section 4.4.**	1
EU 1.2: Continuity is a key property of functions that is defined using limits	**LO 1.2A:** Analyze functions for intervals of continuity or points of discontinuity.	**EK 1.2A1:** A function f is continuous at $x = c$ provided that $f(c)$ exists, $\lim_{x \to c} f(x)$ exists, and $\lim_{x \to c} f(x) = f(c)$.	**Lesson 2.5** **Limits are used to explain concept of continuity**	1
		EK 1.2A2: Polynomial, rational, power, exponential, logarithmic, and trigonometric functions are continuous at all points in their domains.	**Lesson 2.5** **These are specifically identified in 7 Theorem on page 120 in Lesson 2.5**	1

		EK 1.2A3: Types of discontinuities include removable discontinuities, jump discontinuities, and discontinuities due to vertical asymptotes.	**Lesson 2.5** **Types of discontinuity are listed by name, example functions, and illustrations.**	1
	LO 1.2B: Determine the applicability of important calculus theorems using continuity.	**EK 1.2B1:** Continuity is an essential condition for theorems such as the Intermediate Value Theorem, the Extreme Value Theorem, and the Mean Value Theorem.	**Continuity is mentioned as the basis for each of the given theorems.** **Intermediate Value Theorem: Lesson 2.5** **Extreme Value Theorem: Lesson 4.1** **Mean Value Theorem: Lesson 4.2**	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 2: Derivatives Using derivatives to describe the rate of change of one variable with respect to another variable allows students to understand change in a variety of contexts. In AP Calculus, students build the derivative using the concept of limits and use the derivative primarily to compute the instantaneous rate of change of a function. Applications of the derivative include finding the slope of a tangent line to a graph at a point, analyzing the graph of a function (for example, determining whether a function is increasing or decreasing and finding concavity and extreme values), and solving problems involving rectilinear motion. Students should be able to use different definitions of the derivative, estimate derivatives from tables and graphs, and apply various derivative rules and properties. In addition, students should be able to solve separable differential equations, understand and be able to apply the Mean Value Theorem, and be familiar with a variety of real-world applications, including related rates, optimization, and growth and decay models.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 2.1: The derivative of a function is defined as the limit of a difference quotient and can be determined using a variety of strategies.	**LO 2.1A:** Identify the derivative of a function as the limit of a difference quotient.	**EK 2.1A1:** The difference quotients $\frac{f(a+h)-f(a)}{h}$ and $\frac{f(x)-f(a)}{x-a}$ express the average rate of change of a function over an interval.	**Explored in lesson 2.7. Definition is given in written form. There is an illustration in text to show concept.**	1

		EK 2.1A2: The instantaneous rate of change of a function at a point can be expressed by $\lim_{h\to 0}\frac{f(a+h)-f(a)}{h}$ or $\lim_{x\to a}\frac{f(x)-f(a)}{x-a}$, provided that the limit exists. These are common forms of the definition of the derivative and are denoted $f'(a)$.	**Lesson 2.7** **Clearly identified—boxed, examples provided, along with written description.**	1
		EK 2.1A3: The derivative of f is the function whose value at x is $\lim_{h\to 0}\frac{f(x+h)-f(x)}{h}$ provided this limit exists.	**Lesson 2.7**	1
		EK 2.1A4: For $y=f(x)$, notations for the derivative include $\frac{dy}{dx}$, $f'(x)$, and y'.	**Lesson 2.8 explores other derivative notation. More notations than the three required.**	1
		EK 2.1A5: The derivative can be represented graphically, numerically, analytically, and verbally.	**Throughout chapter 2 of the text. Also includes exploration using a graphing calculator.**	1
	LO 2.1B: Estimate derivatives.	**EK 2.1B1:** The derivative at a point can be estimated from information given in tables or graphs.	**Lesson 2.7 – students calculate rate of change of national debt based on a table of values. Students estimate the rate of change of a temperature of a turkey after it's removed from an oven by observing a graph.**	1
	LO 2.1C: Calculate derivatives.	**EK 2.1C1:** Direct application of the definition of the derivative can be used to find the derivative for selected functions, including polynomial, power, sine, cosine, exponential, and logarithmic functions.	**Exponential – lesson 3.1, Trigonometric – lesson 3.3, Polynomial & power – lesson 3.1, Logarithmic functions – 3.6**	1
		EK 2.1C2: Specific rules can be used to calculate derivatives for classes of functions, including polynomial, rational, power, exponential, logarithmic, trigonometric, and inverse trigonometric.	**Beginning in chapter 3 and continuing throughout text.**	1

		EK 2.1C3: Sums, differences, products, and quotients of functions can be differentiated using derivative rules.	**Lesson 3.2**	1
		EK 2.1C4: The chain rule provides a way to differentiate composite functions.	**Lesson 3.4**	1
		EK 2.1C5: The chain rule is the basis for implicit differentiation.	**Implicit Differentiation is introduced in lesson 3.5, clearly stated pages 209-210.**	1
		EK 2.1C6: The chain rule can be used to find the derivative of an inverse function, provided the derivative of that function exists.	**Latter part of lesson 3.5 has derivatives of inverse trigonometric functions. No mention is made of derivative of inverse at a point i.e.** $g'(x) = \frac{1}{f'(g(x))}$ **where f and g are inverse functions.**	0.5
		EK 2.1C7: (BC) Methods for calculating derivatives of realvalued functions can be extended to vector-valued functions, parametric functions, and functions in polar coordinates.	**Derivatives of parametric and polar functions explored in chapter 10.**	1

	LO 2.1D: Determine higher order derivatives.	**EK 2.1D1:** Differentiating f' produces the second derivative f'', provided the derivative of f' exists; repeating this process produces higher order derivatives of f.	**Lesson 2.8**	1
		EK 2.1D2: Higher order derivatives are represented with a variety of notations. For $y = f(x)$, notations for the second derivative include $\frac{d^2y}{dx^2}$, $f''(x)$, and y''. Higher order derivatives can be denoted $\frac{d^ny}{dx^n}$ or $f^{(n)}(x)$.	**Other notations for higher order derivatives in lesson 2.8. Leibnitz notation as well as higher order derivatives in parentheses: (4)**	1
EU 2.2: A function's derivative, which is itself a function, can be used to understand the behavior of the function.	**LO 2.2A:** Use derivatives to analyze properties of a function.	**EK 2.2A1:** First and second derivatives of a function can provide information about the function and its graph including intervals of increase or decrease, local (relative) and global (absolute) extrema, intervals of upward or downward concavity, and points of inflection.	**Using derivatives to find extrema in lesson 4.1. Using derivatives to find intervals of increase or decrease introduced in lesson 4.3, along with concavity and points of inflection.**	1
		EK 2.2A2: Key features of functions and their derivatives can be identified and related to their graphical, numerical, and analytical representations.	**Summarized in lesson 4.5 "summary of curve sketching". Tables, graphs, and analytical representations are used.**	1
		EK 2.2A3: Key features of the graphs of f, f', and f'' are related to one another.	**There are some examples of this in the exercises in chapter 4, but not much practice.**	0.5
		EK 2.2A4: (BC) For a curve given by a polar equation $r = f(\theta)$, derivatives of r, x, and y with respect to θ and first and second derivatives of y with respect to x can provide information about the curve.	**First derivatives of polar equations and slope are covered in this text, but no second derivatives.**	0.5

	LO 2.2B: Recognize the connection between differentiability and continuity.	**EK 2.2B1:** A continuous function may fail to be differentiable at a point in its domain.	**Lesson 2.8 explores how a function can fail to be differentiable.**	1
		EK 2.2B2: If a function is differentiable at a point, then it is continuous at that point.	**4 Theorem lesson 2.8**	1
EU 2.3: The derivative has multiple interpretations and applications including those that involve instantaneous rates of change.	**LO 2.3A:** Interpret the meaning of a derivative within a problem.	**EK 2.3A1:** The unit for $f'(x)$ is the unit for f divided by the unit for x.	**Evident in text**	1
		EK 2.3A2: The derivative of a function can be interpreted as the instantaneous rate of change with respect to its independent variable.	**Lesson 2.7**	1
	LO 2.3B: Solve problems involving the slope of a tangent line.	**EK 2.3B1:** The derivative at a point is the slope of the line tangent to a graph at that point on the graph.	**Lesson 2.7**	1
		EK 2.3B2: The tangent line is the graph of a locally linear approximation of the function near the point of tangency.	**Lesson 3.10**	1
	LO 2.3C: Solve problems involving related rates, optimization, rectilinear motion, (BC) and planar motion.	**EK 2.3C1:** The derivative can be used to solve rectilinear motion problems involving position, speed, velocity, and acceleration.	**Lesson 4.9 and others**	1

		EK 2.3C2: The derivative can be used to solve related rates problems, that is, finding a rate at which one quantity is changing by relating it to other quantities whose rates of change are known.	**Lesson 3.9**	1
		EK 2.3C3: The derivative can be used to solve optimization problems, that is, finding a maximum or minimum value of a function over a given interval.	**Lesson 4.7**	1
		EK 2.3C4: (BC) Derivatives can be used to determine velocity, speed, and acceleration for a particle moving along curves given by parametric or vector-valued functions.	**Not a part of this text.**	0
	LO 2.3D: Solve problems involving rates of change in applied contexts.	**EK 2.3D1:** The derivative can be used to express information about rates of change in applied contexts.	**Text includes a special section 3.7, which looks at rates of change in the natural and social sciences, with many applications.**	1
	LO 2.3E: Verify solutions to differential equations.	**EK 2.3E1:** Solutions to differential equations are functions or families of functions.	**Lessons 4.9 and 9.1 look at differential equations and families of functions**	1
		EK 2.3E2: Derivatives can be used to verify that a function is a solution to a given differential equation.	**Lesson 4.9** **Very few examples and problems on differential equations.**	0.5
	LO 2.3F: Estimate solutions to differential equations.	**EK 2.3F1:** Slope fields provide visual clues to the behavior of solutions to first order differential equations.	**Lesson 9.2 Direction Fields**	1

		EK 2.3F2: (BC) For differential equations, Euler's method provides a procedure for approximating a solution or a point on a solution curve.	**Lesson 9.2**	1
EU 2.4: The Mean Value Theorem connects the behavior of a differentiable function over an interval to the behavior of the derivative of that function at a particular point in the interval.	**LO 2.4A:** Apply the Mean Value Theorem to describe the behavior of a function over an interval.	**EK 2.4A1:** If a function f is continuous over the interval $[a, b]$ and differentiable over the interval (a,b), the Mean Value Theorem guarantees a point within that open interval where the instantaneous rate of change equals the average rate of change over the interval.	**Lesson 4.2**	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 3: Integrals and the Fundamental Theorem of Calculus Integrals are used in a wide variety of practical and theoretical applications. AP Calculus students should understand the definition of a definite integral involving a Riemann sum, be able to approximate a definite integral using different methods, and be able to compute definite integrals using geometry. They should be familiar with basic techniques of integration and properties of integrals. The interpretation of a definite integral is an important skill, and students should be familiar with area, volume, and motion applications, as well as with the use of the definite integral as an accumulation function. It is critical that students grasp the relationship between integration and differentiation as expressed in the Fundamental Theorem of Calculus — a central idea in AP Calculus. Students should be able to work with and analyze functions defined by an integral.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 3.1: Antidifferentiation is the inverse process of differentiation.	**LO 3.1A:** Recognize antiderivatives of basic functions.	**EK 3.1A1:** An antiderivative of a function f is a function g whose derivative is f.	**Lesson 4.9**	1
		EK 3.1A2: Differentiation rules provide the foundation for finding antiderivatives.	**Lesson 4.9**	1
EU 3.2: The definite integral of a function over an interval is the limit of a Riemann sum over that interval and can be calculated using a variety of strategies	**LO 3.2A(a):** Interpret the definite integral as the limit of a Riemann sum.	**EK 3.2A1:** A Riemann sum, which requires a partition of an interval , is the sum of products, each of which is the value of the function at a point in a subinterval multiplied by the length of that subinterval of the partition.	**Lesson 5.2 Riemann sums are formally introduced. Prior to this students are given practice approximating the area under a curve using geometry and summation techniques.**	1

	LO 3.2A(b): Express the limit of a Riemann sum in integral notation.	**EK 3.2A2:** The definite integral of a continuous function f over the interval $[a, b]$, denoted by $\int_a^b f(x)dx$, is the limit of Riemann sums as the widths of the subintervals approach 0. That is, $\int_a^b f(x)dx = \lim_{\max \Delta x_i \to 0} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$ where x_i^* is a value in the ith subinterval, Δx_i is the widtl of the ith subinterval, n is the number of subintervals, and $\max \Delta x_i$ is the width of the largest subinterval. Another form of the definition is $\int_a^b f(x)dx = \lim_{n \to \infty} \sum_{i=1}^{n} f(x_i^*)\Delta x_i$, where $\Delta x_i = \frac{b-a}{n}$ and x_i^* is a value in the ith subinterval.	**Lesson 5.2**	1
		EK 3.2A3: The information in a definite integral can be translated into the limit of a related Riemann sum, and the limit of a Riemann sum can be written as a definite integral.	**Lesson 5.2**	1
	LO 3.2B: Approximate a definite integral.	**EK 3.2B1:** Definite integrals can be approximated for functions that are represented graphically, numerically, algebraically, and verbally.	**Parts of chapters 5 and 7**	1
		EK 3.2B2: Definite integrals can be approximated using a left Riemann sum, a right Riemann sum, a midpoint Riemann sum, or a trapezoidal sum; approximations can be computed using either uniform or nonuniform partitions.	**Left- and right-Riemann sums in lesson 5.1, but not very clear. Left- and right- are addressed again in 7.7. Midpoint rule lesson 5.2. Trapezoid rule lesson 7.7.**	0.5

	LO 3.2C: Calculate a definite integral using areas and properties of definite integrals.	**EK 3.2C1:** In some cases, a definite integral can be evaluated by using geometry and the connection between the definite integral and area.	**Lesson 5.1**	1
		EK 3.2C2: Properties of definite integrals include the integral of a constant times a function, the integral of the sum of two functions, reversal of limits of integration, and the integral of a function over adjacent intervals.	**Lessons 4.9-5.2**	1
		EK 3.2C3: The definition of the definite integral may be extended to functions with removable or jump discontinuities.	**Not in this text**	0
	LO 3.2D: (BC) Evaluate an improper integral or show that an improper integral diverges.	**EK 3.2D1:** (BC) An improper integral is an integral that has one or both limits infinite or has an integrand that is unbounded in the interval of integration.	**Lesson 7.8**	1
		EK 3.2D2: (BC) Improper integrals can be determined using limits of definite integrals.	**Lesson 7.8**	1

EU 3.3: The Fundamental Theorem of Calculus, which has two distinct formulations, connects differentiation and integration.	**LO 3.3A:** Analyze functions defined by an integral.	**EK 3.3A1:** The definite integral can be used to define new functions; for example, $f(x)=\int_0^x e^{-t^2}dt$.	**Lesson 5.3**	1
		EK 3.3A2: If f is a continuous function on the interval $[a, b]$, then $\frac{d}{dx}\left(\int_a^x f(t)dt\right)=f(x)$, where x is between a and b.	**Lesson 5.3** **Notation is shown at the bottom of page 398, but not emphasized in the Fundamental Theorem of Calculus box on this page.**	0.5
		EK 3.3A3: Graphical, numerical, analytical, and verbal representations of a function f provide information about the function g defined as $g(x)=\int_a^x f(t)dt$.	**Lesson 5.3**	1
	LO 3.3B(a): Calculate antiderivatives.	**EK 3.3B1:** The function defined by $F(x)=\int_a^x f(t)dt$ is an antiderivative of f.	**Lesson 5.3**	1
	LO 3.3B(b): Evaluate definite integrals.	**EK 3.3B2:** If f is continuous on the interval $[a, b]$ and F is an antiderivative of f, then $\int_a^b f(x)dx=F(b)-F(a)$.	**Lesson 5.3**	1
		EK 3.3B3: The notation $\int f(x)dx=F(x)+C$ means that $F'(x)=f(x)$, and $\int f(x)dx$ is called an indefinite integral of the function f.	**Lesson 5.3**	1
		EK 3.3B4: Many functions do not have closed form antiderivatives.	**Lesson 7.5** **Mentioned at bottom of page 506**	1

		EK 3.3B5: Techniques for finding antiderivatives include algebraic manipulation such as long division and completing the square, substitution of variables, (BC) integration by parts, and nonrepeating linear partial fractions.	**Lesson 7.3 completing the square fo trigonometric substitution** **Lesson 7.7 partial fractions and long division**	1
EU 3.4: The definite integral of a function over an interval is a mathematical tool with many interpretations and applications involving accumulation.	**LO 3.4A:** Interpret the meaning of a definite integral within a problem.	**EK 3.4A1:** A function defined as an integral represents an accumulation of a rate of change.	**Not in text**	0
		EK 3.4A2: The definite integral of the rate of change of a quantity over an interval gives the net change of that quantity over that interval.	**Net Change Theorem Lesson 5.4**	1
		EK 3.4A3: The limit of an approximating Riemann sum can be interpreted as a definite integral.	**Lesson 5.2**	1
	LO 3.4B: Apply definite integrals to problems involving the average value of a function.	**EK 3.4B1:** The average value of a function f over an interval $[a, b]$ is $\frac{1}{b-a}\int_a^b f(x)dx$.	**Lesson 6.5**	1
	LO 3.4C: Apply definite integrals to problems involving motion.	**EK 3.4C1:** For a particle in rectilinear motion over an interval of time, the definite integral of velocity represents the particle's displacement over the interval of time, and the definite integral of speed represents the particle's total distance traveled over the interval of time.	**Lesson 5.4**	1

		EK 3.4C2: (BC) The definite integral can be used to determine displacement, distance, and position of a particle moving along a curve given by parametric or vector-valued functions.	**Lesson 10.2 parametric curve arc length** **Lesson 10. 4 polar arc length**	1
	LO 3.4D: Apply definite integrals to problems involving area, volume, (BC) and length of a curve.	**EK 3.4D1:** Areas of certain regions in the plane can be calculated with definite integrals. (BC) Areas bounded by polar curves can be calculated with definite integrals	**Lesson 6.1 area between two curves** **Lesson 10.4 area of polar curves**	1
		EK 3.4D2: Volumes of solids with known cross sections, including discs and washers, can be calculated with definite integrals.	**Lessons 6.2 & 6.3**	1
		EK 3.4D3: (BC) The length of a planar curve defined by a function or by a parametrically defined curve can be calculated using a definite integral.	**Lesson 10.2 and 10.4**	1
	LO 3.4E: Use the definite integral to solve problems in various contexts.	**EK 3.4E1:** The definite integral can be used to express information about accumulation and net change in many applied contexts.	**Lesson 5.4**	1

EU 3.5: Antidifferentiation is an underlying concept involved in solving separable differential equations. Solving separable differential equations involves determining a function or relation given its rate of change.	**LO 3.5A:** Analyze differential equations to obtain general and specific solutions.	**EK 3.5A1:** Antidifferentiation can be used to find specific solutions to differential equations with given initial conditions, including applications to motion along a line, exponential growth and decay, (BC) and logistic growth.	**Lesson 9.1/9.2 This topic was somewhat hard to find in the text although there are examples and problems on growth and decay using initial conditions.** **Lesson 9.4 logistics growth problems**	1
		EK 3.5A2: Some differential equations can be solved by separation of variables.	**Lesson 9.3**	1
		EK 3.5A3: Solutions to differential equations may be subject to domain restrictions.	**Lesson 9.3**	1
		EK 3.5A4: The function F defined by $F(x)=c+\int_a^x f(t)dt$ is a general solution to the differential equation $\frac{dy}{dx}=f(x)$, and $F(x)=y_0+\int_a^x f(t)dt$ is a particular solution to the differential equation $\frac{dy}{dx}=f(x)$ satisfying $F(a)=y_0$.	**Lesson 9.3**	1
	LO 3.5B: Interpret, create and solve differential equations from problems in context.	**EK 3.5B1:** The model for exponential growth and decay that arises from the statement "The rate of change of a quantity is proportional to the size of the quantity" is $\frac{dy}{dt}=ky$.	**Lesson 9.1 and 9.4**	1
		EK 3.5B2: (BC) The model for logistic growth that arises from the statement "The rate of change of a quantity is jointly proportional to the size of the quantity and the difference between the quantity and the carrying capacity" is $\frac{dy}{dt}=ky(a-y)$.	**Lesson 9.4** **Terminology and use of appropriate language is lacking—"change is jointly proportional". Problems are sufficient.**	1

Standards and Learning Indicators			Publisher/Provider: List units/lessons with specific examples of where standards are Introduced/Taught/Assessed.	Point Value 0/.5/1 (Reviewer)
Big Idea 4: Series (BC) The AP Calculus BC curriculum includes the study of series of numbers, power series, and various methods to determine convergence or divergence of a series. Students should be familiar with Maclaurin series for common functions and general Taylor series representations. Other topics include the radius and interval of convergence and operations on power series. The technique of using power series to approximate an arbitrary function near a specific value allows for an important connection to the tangent-line problem and is a natural extension that helps achieve a better approximation. The concept of approximation is a common theme throughout AP Calculus, and power series provide a unifying, comprehensive conclusion.				
Enduring Understandings (Students will understand that…)	**Learning Objectives** (Students will be able to…)	**Essential Knowledge** (Students will know that…)		
EU 4.1: The sum of an infinite number of real numbers may converge.	**LO 4.1A:** Determine whether a series converges or diverges.	**EK 4.1A1:** The nth partial sum is defined as the sum of the first n terms of a sequence.	**Lesson 11.2**	1
		EK 4.1A2: An infinite series of numbers converges to a real number S (or has sum S), if and only if the limit of its sequence of partial sums exists and equals S.	**Lesson 11.2**	1
		EK 4.1A3: Common series of numbers include geometric series, the harmonic series, and p-series.	**Lesson 11.2 and 11.3**	1
		EK 4.1A4: A series may be absolutely convergent, conditionally convergent, or divergent.	**Lesson 11.6**	1
		EK 4.1A5: If a series converges absolutely, then it converges.	**Lesson 11.6**	1

		EK 4.1A6: In addition to examining the limit of the sequence of partial sums of the series, methods for determining whether a series of numbers converges or diverges are the nth term test, the comparison test, the limit comparison test, the integral test, the ratio test, and the alternating series test. **EXCLUSION STATEMENT (EK 4.1A6):** ***Other methods for determining convergence or divergence of a series of numbers are not assessed on the AP Calculus AB or BC Exam. However, teachers may include these topics in the course if time permits.***	**Lesson 11.3, 11.4, and 11.7**	1
	LO 4.1B: Determine or estimate the sum of a series.	**EK 4.1B1:** If a is a real number and r is a real number such that $\lvert r\rvert < 1$, then the geometric series $\sum_{n=0}^{\infty} ar^n = \frac{a}{1-r}$.	**Lesson 11.2**	1
		EK 4.1B2: If an alternating series converges by the alternating series test, then the alternating series error bound can be used to estimate how close a partial sum is to the value of the infinite series.	**Lesson 11.5**	1
		EK 4.1B3: If a series converges absolutely, then any series obtained from it by regrouping or rearranging the terms has the same value.	**Lesson 11.6**	1

EU 4.2: A function can be represented by an associated power series over the interval of convergence for the power series.	**LO 4.2A:** Construct and use Taylor polynomials.	**EK 4.2A1:** The coefficient of the *n*th-degree term in a Taylor polynomial centered at $x=a$ for the function f is $\frac{f^{(n)}(a)}{n!}$.	**Lesson 11.10**	1
		EK 4.2A2: Taylor polynomials for a function f centered at $x=a$ can be used to approximate function values of f near $x=a$.	**Lesson 11.11**	1
		EK 4.2A3: In many cases, as the degree of a Taylor polynomial increases, the nth-degree polynomial will converge to the original function over some interval.	**Lesson 11.11**	1
		EK 4.2A4: The Lagrange error bound can be used to bound the error of a Taylor polynomial approximation to a function.	**Lesson 11.10** **Remainder theorem is given but not identified as Lagrange error.**	0.5
		EK 4.2A5: In some situations where the signs of a Taylor polynomial are alternating, the alternating series error bound can be used to bound the error of a Taylor polynomial approximation to the function.	**Lesson 11.11** **In the students exercise page 781 problems 27-29.**	1
	LO 4.2B: Write a power series representing a given function.	**EK 4.2B1:** A power series is a series of the form $\sum_{n=0}^{\infty} a_n(x-r)^n$ where n is a non-negative integer, $\{a_n\}$ is a sequence of real numbers, and r is a real number.	**Lesson 11.8**	1
		EK 4.2B2: The Maclaurin series for $\sin(x)$, $\cos(x)$, and e^x provide the foundation for constructing the Maclaurin series for other functions.	**Lesson 11.10**	1

		EK 4.2B3: The Maclaurin s[illegible]s for $\frac{1}{1-x}$ is a geometric series.	**Lesson 11.9/11.10**	1
		EK 4.2B4: A Taylor polynomial for $f(x)$ is a partial sum of the Taylor series for $f(x)$.	**Lesson 11.10**	1
		EK 4.2B5: A power series for a given function can be derived by various methods (e.g., algebraic processes, substitutions, using properties of geometric series, and operations on known series such as term-byterm integration or term-by-term differentiation).	**Lesson 11.9**	1
	LO 4.2C: Determine the radius and interval of convergence of a power series.	**EK 4.2C1:** If a power series converges, it either converges at a single point or has an interval of convergence.	**Lesson 11.8**	1
		EK 4.2C2: The ratio test can be used to determine the radius of convergence of a power series.	**Lesson 11.8**	1
		EK 4.2C3: If a power series has a positive radius of convergence, then the power series is the Taylor series of the function to which it converges over the open interval.	**Lesson 11.10**	1
		EK 4.2C4: The radius of convergence of a power series obtained by term-by-term differentiation or term-by-term integration is the same as the radius of convergence of the original power series.	**Lesson 11.10**	1

Please double check the material's alignment to standards.

Advanced Placement Standards: **93% correlation for AP Calculus AB not BC**

If the material aligns with at least an 80%, move on to: **Material Analysis. If the material has less than an 80% alignment, please notify your team leader.

Indicators of Quality:

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Text is appropriate for level of students taking the course. Students are expected to engage with active participation.	(Reviewer only.) ___X___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Worked out examples in the text provide problems for students to learn new concepts. Exercises provide opportunities for students to practice and apply what they have learned.	(Reviewer only.) ___X___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Problems and exercises go from simple to more complex.	(Reviewer only.) ___X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Binders include teaching tips, opportunities for group work including questions that prompt student thinking. Also recommended—Study Guide to accompany text. This includes student-friendly explanations, practice problems with worked out solutions, and self-checks.	(Reviewer only.) ___X___ Yes _____ No

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **Applied problems include calculator simulations and mental manipulation.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **Study Guide includes self-assesment. Also included with materials is a test bank with multiple versions of exams for each chapter. These are in multiple-choice format but could be adapted for free-response type questions.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Tests just include answer key without rubrics or scoring guidelines. There is an optional "5 Steps to a 5" supplement that includes practice AP tests with scoring guidelines for free response.**	**(Reviewer only.)** **_____ Yes** **___X___ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Course level language is used throughout text without bias.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Text is primarily written by James Stewart who has written numerous AP texts. Team of reviewers also included.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The text is not particularly engaging. Although visually the text is not too appealing, it is a good transitional text to college level texts. Navigation through text could be improved. Some concepts should be located closer together. For example, left- and right-Riemann sums should be alongside definition of integrals. Midpoint and Trapezoid should be closer together as well.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

COMMENTS:

STRENGTHS	WEAKNESSES
• Good verbally in many areas • Uses language that promotes precise understanding • Book is concise • College-level text • Meets or exceeds all requirements for AP • Good supplemental materials—Teacher Resource binder and Study Guide	• Lacking in graphical interpretation of concepts • Difficult to navigate • Fewer problems than many other comparable texts • High reading level • A few concepts are missing—area as an accumulation, solutions to differential equations, and derivatives of inverse functions at a point

Exploring Data			
Describing patterns and departures from patterns			
A. Constructing and interpreting graphical displays of distributions of univariate data (dotplot, stemplot, histogram, cumulative frequency plot)	1. Center and spread	pg. 130-165	1
	2. Clusters and gaps	pg. 69-96	1
	3. Outliers and other unusual features	pg 73-96	1
	4. Shape	pg. 68-96	1

B. Summarizing distributions of univariate data	1. Measuring center: median, mean	Defined on pgs. 130, 134, 143 Taught and assessed throughout	1
	2. Measuring spread: range, interquartile range, standard deviation	pg. 130-149	1
	3. Measuring position: quartiles, percentiles, standardized scores (z-scores)	pg. 149-164	1
	4. Using boxplots	pg. 149-160	1
	5. The effect of changing units on summary measures	Not evident in text	0
C. Comparing distributions of univariate data (dotplots, back-to-back stemplots, parallel boxplots)	1. Comparing center and spread: within group, between group variation	Comparative boxplots – 149-160 Comparative dotplots – 70, stem and leaf plots – 75	1
	2. Comparing clusters and gaps	Not evident in text	0
	3. Comparing outliers and other unusual features	pg. 149-160	1
	4. Comparing shapes	pg. 149-160, 70-75	1
D. Exploring bivariate data	1. Analyzing patterns in scatterplots	pg. 182-186, 192-210, 231-248	1
	2. Correlation and linearity	pg. 182-211, pg. 229-250	1
	3. Least-squares regression line	pg. 200-227	1
	4. Residual plots, outliers and influential points	pg. 211-229	1
	5. Transformations to achieve linearity: logarithmic and power transformations	pg. 231-248	1

E. Exploring categorical data	1. Frequency tables and bar charts	pg. 65-67	1
	2. Marginal and joint frequencies for two-way tables	pg. 708-723	1
	3. Conditional relative frequencies and association	Not evident in text	1
	4. Comparing distributions using bar charts	pg. 62-67	1
Sampling and Experimentation			
Planning and conducting a study			
A. Overview of methods of data collection	1. Census	defined – pg. 13, used throughout text	1
	2. Sample survey	Surveys are addressed implicitly when discussing observational studies	0
	3. Experiment	pg. 24-41	1
	4. Observational study	pg. 13-24	1
B. Planning and conducting surveys	1. Characteristics of a well-designed and well-conducted survey	Not evident in text	0
	2. Populations, samples and random selection	pg. 13-24 Surveys are not explicitly addressed in the text. However, these topics are addressed for observational studies and a survey is a type of observational study. Therefore, we considered these criteria to be met.	1
	3. Sources of bias in sampling and surveys	pg. 19-20 Surveys are not explicitly addressed in the text. However, these topics are addressed for observational studies and a survey is a type of observational study. Therefore, we considered these criteria to be met.	1
	4. Sampling methods, including simple random sampling, stratified random sampling and cluster sampling	pg. 13-24 Surveys are not explicitly addressed in the text. However, these topics are addressed for observational studies and a survey is a type of observational study. Therefore, we considered these criteria to be met.	1

C. Planning and conducting experiments	1. Characteristics of a well-designed and well-conducted experiment	pg. 24-41	1
	2. Treatments, control groups, experimental units, random assignments and replication	pg. 24-41	1
	3. Sources of bias and confounding, including placebo effect and blinding	pg. 34-35	1
	4. Completely randomized design	pg. 24-41	1
	5. Randomized block design, including matched pairs design	pg 28 – randomized block design. No evidence of matched pairs design	0.5
D. Generalizability of results and types of conclusions that can be drawn from observational studies, experiments and surveys		pg 41-46 Observational studies and experiments are addressed explicitly, surveys are addressed implicitly	1
Anticipating Patterns			
Exploring random phenomena using probability and simulation			
A. Probability	1. Interpreting probability, including long-run relative frequency interpretation	pg 269	1
	2. "Law of Large Numbers" concept	pg. 271	1
	3. Addition rule, multiplication rule, conditional probability and independence	pg. 284-316	1
	4. Discrete random variables and their probability distributions, including binomial and geometric	pg. 336-373	1
	5. Simulation of random behavior and probability distributions	pg. 319-325	1
	6. Mean (expected value) and standard deviation of a random variable, and linear transformation of a random variable	pg. 352-263	1
B. Combining independent random variables	1. Notion of independence versus dependence	pg 285	1

	2. Mean and standard deviation for sums ar differences of independent random variables	pg 385-359	1
C. The normal distribution	1. Properties of the normal distribution	pg. 373-399	1
	2. Using tables of the normal distribution	pg. 373-385	1
	3. The normal distribution as a model for measurements	pg. 381-399	1
D. Sampling distributions	1. Sampling distribution of a sample proportion	pg 433-443	1
	2. Sampling distribution of a sample mean	pg. 568-578	1
	3. Central Limit Theorem	pg. 572	1
	4. Sampling distribution of a difference between two independent sample proportions	pg. 542-543	1
	5. Sampling distribution of a difference between two independent sample means	pg. 619	1
	6. Simulation of sampling	pg. 319-323	1
	7. T-distribution	pg. 580-643	1
	8. Chi-square distribution	pg. 643-730	1

Statistical Inference			
Estimating population parameters and testing hypotheses			
A. Estimation (point estimators and confidence intervals)	1. Estimating population parameters and margins of error	pg. 460-462	1
	2. Properties of point estimators, including unbiasedness and variability	pg. 456-460	1
	3. Logic of confidence intervals, meaning of confidence level and confidence intervals, and properties of confidence intervals	pg. 467-484	1
	4. Large sample confidence interval for a proportion	pg. 467-484	1
	5. Large sample confidence interval for a difference between two proportions	pg. 542-550	1
	6. Confidence interval for a mean	pg. 578-591	1
	7. Confidence interval for a difference between two means (unpaired and paired)	pg. 649-654	1
	8. Confidence interval for the slope of a least-squares regression line	pg. 749-752	1
B. Tests of significance	1. Logic of significance testing, null and alternative hypotheses; p-values; one- and two-sided tests; concepts of Type I and Type II errors; concept of power	pg. 469-507, pg. 514-530	1
	2. Large sample test for a proportion	pg. 514-526	1
	3. Large sample test for a difference between two proportions	pg. 550-559	1
	4. Test for a mean	pg. 591-605	1
	5. Test for a difference between two means (unpaired and paired)	pg. 618-654	1

Indicato[illegible]f Quality	Evidence- Giv[illegible]pecific examples.	Rating: (Reviewe[illegible]nly.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Lessons are thoughtfully structured although students might not be actively participating in all aspects of instruction. However, for an AP class, this is appropriate.	(Reviewer only.) __x____ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- The design of the materials includes exercises and not problems, but that is appropriate for this level.	(Reviewer only.) __x____ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Exercises are aligned with the lessons, scaffolded appropriately.	(Reviewer only.) __x____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The teacher's resources contain discussions of the important concepts that will presented in each chapter and gives the teacher strategies for presenting the material and redirecting students when needed.	(Reviewer only.) __x____ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- The text provides the option of using several different types of technology to model the statistical concepts they represent	(Reviewer only.) ___x___ Yes _____ No

STRENGTHS	WEAKNESSES
• Comprehensive AP textbook. Little to no supplementation would be necessary. • Real-world data sets used throughout text • Problems are challenging and prepare students for the exam • Online, print and dvd resources give teachers flexibility to choose which platform to use • Practice AP multiple choice and free response questions included in the resources.	• The topic of surveys is not explicitly addressed in the text. • No support for ELL students

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Cengage Learning
Title:	Trigonometry 9e
ISBN #	9781133954323
Grade Level(s) or Course:	9-12
Reviewer ID:	PP and DJQ

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
NN1 This is a college level course so W.A.P.'s are appropriate

COHERENCE-
NN1 This is a college level course. WAP's are embedded.

RIGOR-
AC1 Starts with procedural skills and works towards Conceptual understandings.

CONCEPTUAL UNDERSTANDING-
AC1 Summarizations at the end of sections. and problem solving sections at the end of Chapters.

MATHEMATICAL PRACTICES-
AC2 Mathematical Practices are used repeatly through the text when students are problem solving towards the end of exercises."

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
AC3 Would like to see more visual aids for ELL students.

OTHER:

Strengths:

1. Scope and sequence.
2. Scaffolding of exercizes.
3. Pictures and illustrations do not distract from content.
4. "Summerizations", How Do You See It", Projects at end of each Chapter, Problem Solving Section
5. The Prerequisit Chapter 1st.
6. Review summerizations at end of each Chapter.
7. Lesson Plan book gives pacing guides, more examples and section objectives.
8. Disc has nice resources

Weakness:

1. ELL
2. Not differential resources for teachers.

2015-1 nterim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: Cengage Learning Inc

Title of Material: Trigonometry 9e

Author: Ron Larson

ISBN #: 9781133954323 **Copyright** 2014

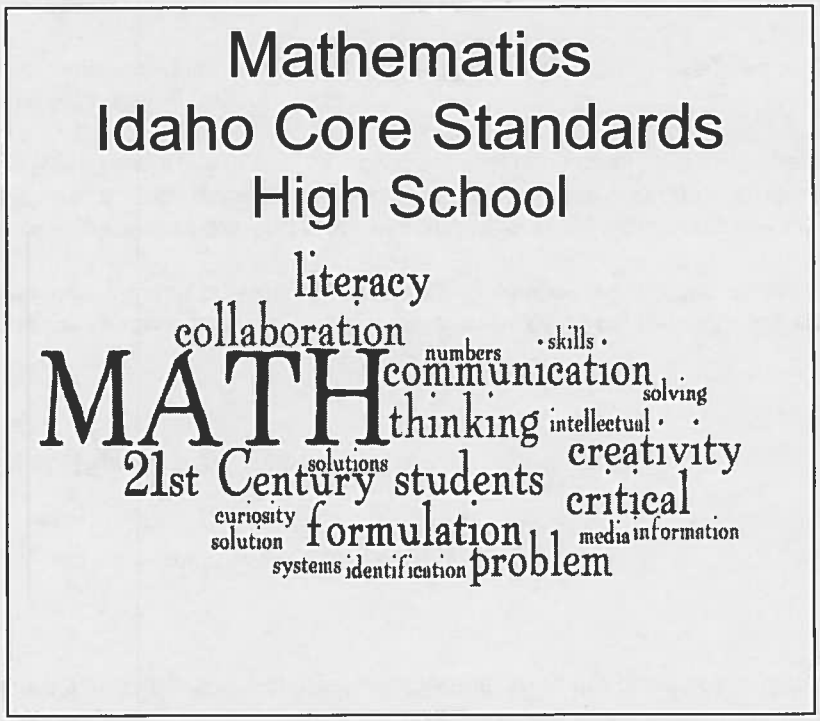
Reviewer ID: PP ½ DJQ

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The 1st Chapter, the P Chapter is all prerequists for this course along with prerequisit embedded through the text. Although the are not listed in the text or referenced in the text, the WAP are obvious.	X **Meets** ____ **Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Because Trig is a subset of Geometry, this text is full of Geometry Standards. PB-Transformation of Functions 1.8- Applications and Modeling. 3.1- Law of Sin, Law of Cos 3.3- Vectors.	X **Meets** ____ **Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** This is a college level course and problems are appropriate to the course level of work.	X **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** This is a college level course and the materials are ~~of~~ appropriate for the content. The text covers content from the standards.	X **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** This is a college level course and problems are appropriate for that level.	X **Meets** ___ **Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** This context relates material to prior knowledge by starting out with a Prerequist Chapter ~~with~~ and prior knowledge is embedded throughout Chapters. Solving Right Triangles	X Meets ____Does Not Meet Insufficient Evidence
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** College level Course. This text doesnot have learning objectives that specifically align with CCSSM. However at the beginning of each section the objectives are stated	X Meets ____Does Not Meet Insufficient Evidence
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Happens throughout the text within Domains and across Domains	X Meets ____Does Not Meet Insufficient Evidence

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses

- Relates concepts to prior knowledge from previous courses and the prerequisit Chapter and extends to new knowledge.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** X **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** The exercises start with skill building leading into higher level "Concept understanding." "Do You See It"	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** See above.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Pg 260, #10 Hours of Daylight.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Starts with procedural skills and works toward conceptual understanding. Exploration and "How Do You See It"	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x − 2)2 = 6x − 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** See Above.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	V See above.	**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes. Start with procedural skills and works toward conceptual understanding	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes. This a college level course where conceptual understanding is addressed in the exercises.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes. Online resources for project based assessments.	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:
- Prerequisit Chapter
- Review at End of Chapter.

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** MP1, MP2, MP5 and MP7 are used repeatedly throughout the text. MP3, MP4, and MP8 are not present because this is a college level course.	X Meets (2) ___Partially Meets (1) ___Does Not Meet (0)
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** ___Meets (2) _1_Partially Meets (1) ___Does Not Meet (0)
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** See Above AC M2A.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** No. This is a college level course.	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** __X__ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Students are given chances to reason through "Do you See It" and in projects. However there are not opportunities for students reasoning with other students.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Yes, see above.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Yes. In Exploration and Problem Solving section of exercises gives students an opportunity to explain and problem solve.	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		__X__ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** - Exploration and Problem Solving sections. - Chapter Summaries at the end of the Chapter.

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** For ELL, Spanish is supported ONLY online, no other special populations	___ **Meets (2)** X **Partially Meets (1)** ___ **Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** This is a college level course and materials are appropriate	X **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Not evident. This is a college level course and materials are appropriate.	X **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** Weakness •Does not support special populations

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Group activities or peer working is not ~~e~~given.	**(Reviewer only.)** ~~X~~ **Yes** X **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** See each exercise set.	**(Reviewer only.)** X **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Exercise sets start with procedural skills and work towards conceptual understanding.	**(Reviewer only.)** X Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Hit and miss. ~~the~~ there are small notations made throughout TE.	**(Reviewer only.)** X Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Online Calculators are good representations	**(Reviewer only.)** X Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Check points for immediate feedback throughout text. Summarizes at the end of each section, projects and Chapter Tests.	**(Reviewer only.)** X Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Answer key yes, Rubics No	**(Reviewer only.)** X Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes, see #6	**(Reviewer only.)** X Yes ____ No

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Pg xiii	**(Reviewer only.)** X **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Yes .	**(Reviewer only.)** X **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** Trigonometry 9/E 9th-12th

Publisher: Cengage **Copyright:** 2014 **ISBN:** 9781133954323

Reviewer ID # DQ PP. **Date Review Completed:** 3/8/2016

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

X **Meets**

____ **Does Not Meet**

Non-Negotiable Overall:

__X__ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points:** 5 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points:** 5 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
X **Meets**	X **Meets**	X **Meets**
_____ **Does Not Meet**	_____ **Does Not Meet**	_____ **Does Not Meet**

Alignment Criteria Overall:

__X__ **Meets** _____ **Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** X **Yes** ____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

1. Relates concepts to prior knowledge throughout text and in Chapter 1
2. Prerequisit Chapter.
3. End of Chapter Review Summary.
4. "How do You See It", "Exploration", "Summarize" and "Problem Solving" Given in each section and/or Chapter.

Weakness:

1. The ELL do only supports Spanish Learners.
2. The red on white can not be seen by some color blind students.

Standards Alignment Evaluation Rubric

0 = No Alignment– **Not Evident:** Content as described in the Standards is **not evident**.

.5 = Partial Alignment- **Partially Evident:** Content as described in the Standards is **partially evident** and there are few gaps.

1 = High Alignment – **Clearly Evident:** Content is fully aligned as described in the Standards and repeatedly included to guarantee extensive opportunities for students to work with the content. Alignment is **clearly evident**.

N/A = Not applicable for standard

Advanced Placement		**Statistics**	
Standards and Learning Indicators		**Publisher/Provider: List units/lessons with specific examples of where standards are introduced/Taught/Assessed.**	**Point Value 0/.5/1 (Reviewer)**
Exploring Data			
Describing patterns and departures from patterns		Pg 42-70	1
A. Constructing and interpreting graphical displays of distributions of univariate data (dotplot, stemplot, histogram, cumulative frequency plot)	1. Center and spread	Pg 42-70	1
	2. Clusters and gaps	Pg 42-70	1
	3. Outliers and other unusual features	Pg 42-70	1
	4. Shape	Pg 42-70	1

B. Summarizing distributions of univariate data	1. Measuring center: median, mean	Pg 89-97	1
	2. Measuring spread: range, interquartile range, standard deviation	Pg 102-113	1
	3. Measuring position: quartiles, percentiles, standardized scores (z-scores)	Pg 121-128, 288-296	1
	4. Using boxplots	Pg 121-128	1
	5. The effect of changing units on summary measures	Pg 127	.5
C. Comparing distributions of univariate data (dotplots, back-to-back stemplots, parallel boxplots)	1. Comparing center and spread: within group, between group variation	Pg 127	.5
	2. Comparing clusters and gaps		0
	3. Comparing outliers and other unusual features		0
	4. Comparing shapes	Limited pg 127	.5
D. Exploring bivariate data	1. Analyzing patterns in scatterplots	528-542	1
	2. Correlation and linearity	534-542 ; Pg 548-560	1
	3. Least-squares regression line	Pg 548-560	1
	4. Residual plots, outliers and influential points	Pg 548-560	1
	5. Transformations to achieve linearity: logarithmic and power transformations	Pg 566-568 within problem set	.5

E. Exploring categorical data	1. Frequency tables and bar charts	Pg 42-52	1
	2. Marginal and joint frequencies for two-way tables	Not Present	0
	3. Conditional relative frequencies and association	Not Present	0
	4. Comparing distributions using bar charts	Pg 59-65	1
Sampling and Experimentation			
Planning and conducting a study			
A. Overview of methods of data collection	1. Census	Pg 22-29	1
	2. Sample survey	Pg 22-29	1
	3. Experiment	Pg 22-29	1
	4. Observational study	Pg 22-29	1
B. Planning and conducting surveys	1. Characteristics of a well-designed and well-conducted survey	Pg 28	.5
	2. Populations, samples and random selection	Pg 4-18	1
	3. Sources of bias in sampling and surveys	Pg 26-29	1
	4. Sampling methods, including simple random sampling, stratified random sampling and cluster sampling	Pg 13-18	1

C. Planning and conducting experiments	1. Characteristics of a well-designed and well-conducted experiment	Pg 22-29	1
	2. Treatments, control groups, experimental units, random assignments and replication	Pg 22-29	1
	3. Sources of bias and confounding, including placebo effect and blinding	Pg 22-29	1
	4. Completely randomized design	Pg 22-29	1
	5. Randomized block design, including matched pairs design	Pg 22-29	1
D. Generalizability of results and types of conclusions that can be drawn from observational studies, experiments and surveys		Pg 2-29	1
Anticipating Patterns			
Exploring random phenomena using probability and simulation			
A. Probability	1. Interpreting probability, including long-run relative frequency interpretation	Pg 142-151	1
	2. "Law of Large Numbers" concept	Pg 146-157	1
	3. Addition rule, multiplication rule, conditional probability and independence	Pg 155-169	1
	4. Discrete random variables and their probability distributions, including binomial and geometric	Pg 196-205, 212-22, 229-237 Pg 242-257	1
	5. Simulation of random behavior and probability distributions	Pg 194	.5
	6. Mean (expected value) and standard deviation of a random variable, and linear transformation of a random variable	Pg 201-205 Not finding linear transform.	.5
B. Combining independent random variables	1. Notion of independence versus dependence	Pg 156-169	1

	2. Mean and standard deviation for sums and differences of independent random variables	Pg 288-296, 299-308, 331	1
C. The normal distribution	1. Properties of the normal distribution	Pg 288-296, 299-308	1
	2. Using tables of the normal distribution	Pg 288-296, 299-308	1
	3. The normal distribution as a model for measurements	Pg 288-296, 299-308	1
D. Sampling distributions	1. Sampling distribution of a sample proportion	Pg 332-339	1
	2. Sampling distribution of a sample mean	Pg 314-327	1
	3. Central Limit Theorem	Pg 314-327	1
	4. Sampling distribution of a difference between two independent sample proportions	Pg 332-339	1
	5. Sampling distribution of a difference between two independent sample means	Pg 314-327	1
	6. Simulation of sampling	Pg 314-327	1
	7. T-distribution	Pg 374-381	1
	8. Chi-square distribution	Pg 620-634	1

Statistical Inference			
Estimating population parameters and testing hypotheses			
A. Estimation (point estimators and confidence intervals)	1. Estimating population parameters and margins of error	Pg 314-319, 360-369	1
	2. Properties of point estimators, including unbiasedness and variability	Pg 320-327, 387-395	1
	3. Logic of confidence intervals, meaning of confidence level and confidence intervals, and properties of confidence intervals	Pg 361-367	1
	4. Large sample confidence interval for a proportion	Pg 390-395	1
	5. Large sample confidence interval for a difference between two proportions	Pg 400-412	1
	6. Confidence interval for a mean	Pg 360-369	1
	7. Confidence interval for a difference between two means (unpaired and paired)	Pg 494-570	1
	8. Confidence interval for the slope of a least-squares regression line	Pg 548-560	1
B. Tests of significance	1. Logic of significance testing, null and alternative hypotheses; p-values; one- and two-sided tests; concepts of Type I and Type II errors; concept of power	Pg 436-447	1
	2. Large sample test for a proportion	Pg 468-474	1
	3. Large sample test for a difference between two proportions	Pg 494-570	1
	4. Test for a mean	Pg 452-462	1
	5. Test for a difference between two means (unpaired and paired)	Pg 479-487	1

	6. Chi-square test for goodness of fit, homogeneity of proportions, and independence (one- and two-way tables)	Pg 623-634, 638-643	1
	7. Test for the slope of a least-squares regression line	Pg 569-588	1

Indicators of Quality:

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Level of course is college. The lessons are structured and are supportive of the teacher in guiding the students in an active learning environment	(Reviewer only.) X Yes ____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- The design of the problems and exercises is appropriate for an AP course.	(Reviewer only.) X Yes ____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- The assignments are purposeful and sequential.	(Reviewer only.) X Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- There is a Teachers Resource Guide that has Teaching Tips for each chapter	(Reviewer only.) X Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- This is a college level course. The manipulatives are calculators & the use of software, which is appropriate for this course.	(Reviewer only.) X Yes ____ No

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There are a variety of assessments that is appropriate for an AP course	(Reviewer only.) 1 Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- There are not rubrics however there guidance for performance is in line with AP course	(Reviewer only.) x Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Course level language is used throughout	(Reviewer only.) x Yes ____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- yes pg xix	(Reviewer only.) x Yes ____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- Not much white space. May be difficult for colour blind student Navagation is logical & clear.	(Reviewer only.) ____ Yes x No

COMMENTS:

STRENGTHS	WEAKNESSES
-Logical flow of content from specific to general. Skill practice to concepuals -Use of real world data sets. -Guided practice in each unit. -Chapter Review problems & the Using Technology at the end of each chapter. help the students tie everything together - "Preparing for the AP Statistics Examination" Supplement help students to become familiar with the exam.	-The use of colour may be difficult for colour blind students. -No ELL support. -No Glossary.

EVIDENCE SUMMARY:

FOCUS-
Materials do not assess topics before the grade level in which the topic should be introduced. Kindergarten Ready Common Core only assess grade-level content.

COHERENCE-
At the beginning of every unit, it shows what standards are being taught in every lesson. It shows the progession that students are being prepared for in the next grade-level.

RIGOR-
With Ready common core, the students are using the Practice Standards. All of the practice standards are used throughout the Ready curriculum. There is support for teachers with the practice standards through the curriculum.

CONCEPTUAL UNDERSTANDING-
Students are using the Strategies in the Talk about it questions and whole class questions. Throughout the lessons, students have to present arguments and explanations to use models. why and how questions Language and vocabulary are grade level appropriate.

MATHEMATICAL PRACTICES-
The guided practice portion has students doing multiple representations and models for problems. The modeled instruction, guided practice, and independent practice include the Talk about it questions for pair share and discussion.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Ready common core lessons build from supportive lesson structures to independent. The interactive component allows students to participate in learning. All lessons have problems in the introduction, modeled instruction, and guided instruction.

OTHER:
Manipulatives are not provided with this curriculum. However, it does show what manipulatives to use.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Materials do not **assess** topics **before** the grade level in which the topic should be introduced. The instructional materials do not assess any topics from future grade levels. The assessments are featured online in the teacher toolbox. For most lessons, there are informal assessments and remediation tools. The Kindergarten *Ready Common Core* instructional materials only assess grade-level content. The Curriculum tells the teacher about the prerequisite skills needed for the lesson. It also tells the teachers the progression from Kindergarten to first grade.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

At the beginning of every unit, it shows what standards are taught in every lesson. It also shows the progression that the students are being prepared for in the next grade level.

(Reviewer only.)

_x___Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Overall, the instructional materials do not miss opportunities to connect non-major clusters of standards to major clusters and as a result, the supporting content does engage students in the major work of Kindergarten.	**(Reviewer only.)** **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All of the lessons in the *Ready Common Core* Curriculum align with the common core standards. At the beginning of every unit, the lessons show what standard is being taught and what the progression is for the following year. It also shows the learning progression of that particular content. In the introduction of each lesson, Ready Common Core makes connections to previous lessons.	**(Reviewer only.)** **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials give students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All standards are covered but not extensive work is given.	(Reviewer only.) **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The introduction of each lesson tells the teacher about the connections from previous learning / lessons. This is done with an opening activity.	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The content of Ready Common Core is part of the Major work or supporting work. The introduction of each lesson tells about the prerequisite connections. There is also prerequisite support in the Teacher Toolbox.	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Kindergarten materials include learning objectives visibly shaped by CCSSM cluster objectives. • The chapter overview of the teacher edition identifies each lesson as major or supporting work. • Clusters of Counting and Cardinality for Units 1, 2, 3 and 5 • Clusters of Operations and algebraic thinking for unit 4 • Clusters of Numbers and Operations in Base Ten in unit 5. Clusters of Geometry and Measurement and Data for units 6 and 7.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials include problems and activities that serve to connect two or more clusters in a domain or two or more domains in a grade.	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/ Insufficient Evidence**

Non-Negotiable 2:
Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Throughout the lessons, conceptual understanding is developed through modeled instruction, guided practice, and independent practice.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-**	

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-**	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_x___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The teachers resource book has fluency support for building fluency and fluency practice. The emphasis is adding and subtracting within 5. There are also routines and activities that support the use of strategies. Starting with unit 1, the students are relating counting and quantity through composing and decomposing numbers. This lends itself to addition and subtraction.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-**	

Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Ready Math spends a significant amount of time working on engaging applications. The introduction section and the modeled and guided instruction part of the lessons teach through application. Guided practice	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-**	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-**	

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-**	
Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** **AC1** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** With the Ready Curriculum the students are using the practice standards. All of the practice standards are used throughout the Ready program. There is support for teacher with the practice standards through the curriculum. Some places to find support are in the table of contents, first page of each lesson, and the performance tasks and rubrics at the end of each unit.	**(Reviewer only.)** **_x___Meets (2)** **_____Partially Meets (1)** **_____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **_x___Meets (2)** **_____Partially Meets (1)** **_____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** All of the practice standards are used throughout the Ready program. There is support for teacher with the practice standards through the curriculum. Some places to find support are in the table of contents, first page of each lesson, and the performance tasks and rubrics at the end of each unit.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-**	

Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** In the Ready Curriculum, students are using the strategies in the Talk About It questions and whole class questions. Throughout the lessons, students have to present arguments and explanations to use models. Why and how questions. Language and vocabulary are grade level appropriate. At the beginning of every lesson there is a vocabulary section.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
The use of visual representations are throughout the program for ELL support. There is for many of the lessons an ELL support box for the teachers guidance.

Reviewer only.)

_x___Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials pr e appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Some of the indepen t activities have lots of words. Some of the activities have mostly pictures and models. For assessments it provided teachers with if students do this then try this for remediation.	**Reviewer only.)** **_x___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The guided practice portion has the students doing multiple representations and models for problems. The modeled instruction, guided practice, and independent practice include the Talk About It questions for pair share and discussion. The teacher resource book has materials for hands on activities, intervention, ELL support, and challenge activities. The toolbox has interactive activities.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Ready Common Core lessons build from supportive lesson structure to independent. The interactive component allows students to participate in the learning.	**(Reviewer only.)** **__x____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** All lessons have problems in the introduction, modeled instruction and guided instruction.	**(Reviewer only.)** **___x___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Ready Common Core assignments begin with guided practice questions that support the students understanding and key ideas. It then moves to independent exercises that are basic to more higher thinking questions with some problem solving.	**(Reviewer only.)** **__x____ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** The teacher materials support the teacher. There is a progression chart at the beginning of each unit. There is a learning progression on the first page of every lesson.	**(Reviewer only.)** **___x___ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **Manipulatives were provided with this curriculum.** However, it does show what manipulatives to use.	(Reviewer only.) _____ Yes ___x___ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Ready Common Core provides formal and informal assessments. These are provided in the Teacher Toolbox. The practice and problem solving provides the teacher with opportunities to assess the students as well.	(Reviewer only.) ____x__ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** This is provided in the Teacher ToolBox.	(Reviewer only.) ___x___ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Lessons have multiple methods and representations to learn in multiple ways.	(Reviewer only.) ___x___ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Ready Common Core Kindergarten editors are Danielle Curran, Kathy Kellman, Pam Halloran, and Cynthia Tripp.	(Reviewer only.) ___x___ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Ready Common Core's visual design is very consistent throughout the series. For this reason it makes it easy for students to understand the lessons and navigate the text easily.	(Reviewer only.) ___x___ Yes _____ No

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** There is a family letter for every lesson that explains to the parents what is being taught for the week. It also provides the parents with related activities that parents can do at home.	**(Reviewer only.)** **___x___ Yes** **_____ No**

Alignment Criteria Overall:

X **Meets** _____ **Does Not Meet**

meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core ards. **the materials meet every Non-Negotiable and Alignment Criterion?** X **Yes** ____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths

- The online portion of the curriculum is user friendly.
- Interactive activities are fun and engaging for the students although there are not interactive activities for every lesson.
- Hand on activity in every lesson
- Vertical and horizontally aligned to ccss
- Prerequisite skill for every lesson
- Learning progression always aligned
- Challenge activities
- Justification questions
- Lots of place value activities
- Ten frames and number bonds
- Fluency for most lessons

Weaknesses

- There were no manipulatives provided with the curriculum.
- Geometry and Measurement & Data Units are very brief and short.

You would need to supplement

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Curriculum Associates
Title:	Ready Common Core Mathematics
ISBN #	9781495722721
Grade Level(s) or Course:	1
Reviewer ID:	SCRO

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- This program does an excellent job focusing strongly where the standards focus staying w/in the Major Clusters of 1st grade. There is no evidence of assessment outside the realm of 1st grade. Every CCSS (1st grade) is taught/assessed

COHERENCE- The progression of the standards builds knowledge of the principles over grade levels. It aligns nicely with kindergarten and 2nd grade. Development of ideas progress/align coherently.

RIGOR- The conceptual understanding, procedural skills, fluency, and applications are equally taught/assessed. There is a high expectation of all three components of rigor. The Major Work of 1st grade is taught with rigor and balance and in alignment with the progression of the standards.

CONCEPTUAL UNDERSTANDING- Objectives and CCSS Focus are clearly defined for each lesson. The standards guide the lessons and expectations are stated. Possible error alerts are defined. Students have real-world application of problems and "I Can" Statements are defined for teachers.

MATHEMATICAL PRACTICES- Practices are integrated throughout the Units including lesson practice and games.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- The teacher resource book includes ELL Support activities including suggestions for making text more accessible to ELL students. Activities provide content, background, and vocabulary information to clarify things that might otherwise confuse ELL. The program also includes "Mathematical Discourse" that helps challenge students to require higher level thinking.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[redacted] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** No evidence of [redacted]essment outside the realm of 1st grade standards.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** Materials develop the Major Work of 1st grade including student book, teacher's manual, and pacing guides. The majority of the work is addition and subtraction with geometry and measurement as is appropriate to first grade. See TRB A14/15 and A36/37	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Data used to solve grade level problems and graphing are kid friendly and easy to understand from both the teacher and student point of view.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content is evenly aligned with kindergarten and 2nd grade. Content progression is stated at the beginning of each unit. Units enhance the required learning within in the first grade level.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials gi[illegible] students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students have o[illegible]rtunities to engage in grade level appropriate skills. Extra materials are not required to complete grade level problems.	(Reviewer only.) **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Program relates current teaching to prior knowledge. Basic ideas are extended across standards. Each lesson shows/displays vertical alignment in the Unit Overview as well as Chapter Headings. Learning Progression example TRB pg 161	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson shows/displays vertical alignment in the Unit Overview as well as Chapter Headings. Lesson Objectives are given for students to know what the learning task is for each lesson.	(Reviewer only.) **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials have learning objectives clearly stated. Cluster Headings are listed.	**(Reviewer only.)** __x__Meets ____Does Not Meet/ **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Connections are made between clusters in each domain that make it easy for students and teachers to see progress in learning.	**(Reviewer only.)** __x__Meets ____Does Not Meet/ **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** __x__Meets ____Does Not Meet **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** TRB pg. A13 (Weekly Pacing-One Lesson/Wk) All lessons include structured support.	**(Reviewer only.)** **___x___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Step by Step Implementation Plan is outlined which identify content needs, integrating the content, and measuring student progress. Assessment Remediation offers teacher's possible student errors, and how to remediate.	**(Reviewer only.)** **___x___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Intervention Activities, On-Level Activities, and Challenge Activities are provided at the end of each Lesson to allow a range checking for students understanding.	**(Reviewer only.)** **___x___ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** Teachers Manual include progression chart are easy to follow. Online resource allows for easy access from any location. Mathematical Discourse as well as Error and Misconception Alerts make it easy for teachers to organize content.	**(Reviewer only.)** **__x____ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulates include beans, hundreds chats, counting cubes etc. Easy to find, use, and associate with daily objects. Teacher Tool Box has available manipulatives.	**(Reviewer only.)** **____x__ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Assessments, both informal and formal are found throughout the material. Lesson Quiz, Check for Understanding, Talk About it Questions and Guided Instruction provides a pacing for teacher assessments. Self Check before and after the unit allow students to check for their own understanding.	**(Reviewer only.)** **___x___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Scoring Rubrics are included in each lesson assessment. The PPS Teacher Guide offer detailed solutions to the Assessment Book. Group/Test Data can be gathered on specific assessments for teacher to evaluate. TRB Unit 4 pg. 156157	**(Reviewer only.)** **___x___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Questions are posed using appropriate student language. Vocabulary is specifically taught. Student names are not used, instead words such as "student" or "coach" is used making understanding easier.	**(Reviewer only.)** **__x____ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Teacher Advisors/Acknowledgments Page included in TRB and page A35.	**(Reviewer only.)** **__x____ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Appropriate language is used. Visuals engage students without distraction.	**(Reviewer only.)** **___x___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Pages are listed as "Explore Together", "Learn Together", "Practice Together", and "Practice by Myself." This helps parents see the progression of learning by their child. Fluency in practiced over and over.	**(Reviewer only.)** **___x___ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
____x___ Meets _____ Does Not Meet	___x__ Meets _____ Does Not Meet

Non-Negotiable Overall:

__x___ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet

Alignment Criteria Overall:

___x__ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? __x___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Curriculum Associates LLC
Title:	Ready Common Core Mathematics, Grade 2
ISBN #	9781495705496
Grade Level(s) or Course:	Grade 2
Reviewer ID:	LBTR

RECOMMENDED AS:

____x____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Ready Common Core Mathematics for Grade 2 does not assess any of the topics indicated on the NN1 Metric 1A list.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Maintains a good focus on the major clusters of base ten, place value and number sense. Unit overviews list the Common Core numbers and standards, indicating the alignment of each lesson.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

<table>
<tr>
<td>Metric NN2A:
In each grade 2-8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.
How to Find the Evidence:
Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)
Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)
Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.
For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)</td>
<td>Evidence- Teacher Resource Book, Student Book, Student Practice and Problem Solving Book
There are 28 lessons in the Ready Common Core grade 2 Mathematics program (Ready).
20 lessons attend to standards associated with major clusters,
5 lessons attend to standards associated with supporting clusters, and
3 lessons attend to standards associated with additional clusters.
Materials include 4 units.
Units 1 and 2 are 100% major work of place value, number sense, and one, two, three-digit addition/subtraction.
Unit 3 and 4 are shorter units that focus on measurement, data and geometry.</td>
<td>(Reviewer only.)
__x__Meets
____Does Not Meet/
Insufficient Evidence</td>
</tr>
<tr>
<td>Metric NN2B:
Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.
How to Find the Evidence:
Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.)
Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages.
For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).</td>
<td>Evidence- Teacher Resource Book
Supporting works are the focus of lessons 4, 5, and 23-28.

Metric NN2C: **Materials ba[illegible]ontent progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials are consist[illegible]with the progressions in the Standards. As evidenced in the Teacher Resource Book, Student Textbook and the Practice and Problem Solving Textbook. The Student Practice and Problem Solving book aligns extremely well with the Student Book (Main Common Core Instruction Book).	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book and Teacher's Guide Book The Teacher Resource Book provides suggestions for embedding remediation and challenge into the grade-level work lesson. In addition to lesson activities and problems, each unit has associated games, extra practice and performance tasks. The Key Code Bar of B=Basic, M=Medium, and C=Challenge in the Practice and Problem Solving Teacher's Guide Book is helpful and accurate.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2E: **Materials relate non-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book Lessons are structured in a gradual release model. The lesson introduction includes a "Use What You Know" activity to connect to prior knowledge. For each lesson, the Teacher Resource Book includes progressions showing the related grade 2, grade 3 and grade 1 concepts and skills. The format of student, teacher and parent materials, the cartoon characters and the navigation headings are consistent from grade level to grade level; supporting use as student progress through the program.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Materials connected the general grade 2 content foci and the specific content foci of the lesson to the relevant grade 1 content and to the relevant grade 3 content. (Learning Progression notes found in the Teacher's Resource Book on the Lesson Overview pages) The Pacing Chart shows a clear scope and sequence for the year that matches well with those in the Standards. (Pages A42-A45 in the Teacher Resource Book)	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G:
Materials include learning objectives that are visibly shaped by CCSSM cluster headings.

How to Find the Evidence:
Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters.
For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Evidence- Teacher Resource Book

Learning objectives are visibly shaped by the individual standards.

Example: Lesson 15 overview

Content objective: Develop strategies for adding more than two numbers.

Content Standard 2.NBT.B.6: Add up to four two-digit numbers using strategies based on place value and properties of operations.

Cluster heading: Use place value understanding and properties of operations to add and subtract.

Also included for each lesson is CCSS Focus overview.

(Reviewer only.)

__x__Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2H:
Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.

How to Find the Evidence:
In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA).
For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Evidence- Teacher Resource Book

As well as connections within the lessons, at the end of each of the units is a Math in Action activity that specifically makes domain/cluster connections.

Unit	Associated Domains	Associated Clusters
1	2.OA and 2.NBT	2.OA.Clusters A-C 2.NBT Clusters A-B
2	2.NBT	2.NBT Clusters A-B
3	2.MD	2.MD Clusters A-C
4	2.G	2.G Cluster A

__x__Meets

____Does Not Meet/

Insufficient Evidence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Strengths

Majority of work focuses on the major clusters and pacing seems balanced.

Materials are visibly and coherently aligned to Common Core.

Parent letters are engaging and appropriately detailed for home support. The unit games are compatible and would likely be easy to play at home.

Student Book page formats are user friendly and enhance conceptual understanding and navigation.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__2__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Teacher Resource Book Conceptual understanding is attended to thoroughly where the Standards set explicit expectations for understanding or interpreting. Cluster headings chosen: 2.NBT.A and 2.NBT.B Materials provide students enactive, iconic and symbolic opportunities to develop and communicate understandings of place value and the use of place value when adding and subtracting. Example: Lesson 7, Opening activity "Students use base-ten blocks to add two numbers, exploring the purpose for regrouping 10 ones into 1 ten." Example: Lesson 12, Learn About Students are given an example of two numbers, 467 and 463, shown as "quick drawings" representing base-ten blocks. Example: Lesson 12, Practice Students are given multiple-choice answers written symbolically, e.g. 350 > 305. The Lesson Overview includes alignment of the lesson to Standards and to Standards for Mathematical Practice (SMP). Throughout the components of the lesson are specific connections aligning to the Standards and SMP, e.g. SMP TIP boxes.	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book, SBAC Assessment Booklet The Teacher Resource Book provides teachers with high quality discussion question. Materials include questions targeting conceptual understanding. Example: Lesson 7, Opening activity "So you are telling me that 7 tens and 14 ones is 84? I don't see an 8 anywhere. Where did it come from?" "When you look at two numbers to add, what tells you whether you will have to make another ten?" Example: Lesson 12, Learn About "Ask students how the numbers on this page [352 and 328] could be written as tens and ones." The teacher is provided with an answer. [35 tens and 2ones; 32 tens and 8 ones] The Teacher Resource Book in the "Mathematical Discourse" section supports making connections with leading questions that are helpful and concise. The SBAC Assessment booklet coordinates with the conceptual understanding of the unit lessons.	

Do the materials feature opportunities to identify correspondences across mathema[illegible]epresentations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem S[illegible]ng Book The materials provide many opportunities to identify correspondences between verbal descriptions, diagrams, models and mathematical notation. The materials provide some opportunities to include hands-on/manipulative representations. Examples: Parent letters have diagrams/pictorial representations of skills. Try it sections encourage trying multiple ways. *Model It* usually show two or more mathematical representations in the guided practice section. The questions and problems in student materials are student-friendly, e.g. grapes, soccer games.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Clusters chosen 2.OA.A and 2.OA.B Materials are designed so that students attain the fluencies and procedural skills required by the Standards. Each lesson has a few independent practice exercises at the end of the lesson. The Practice and Problem Solving book has additional practice for each lesson. In the back of the Practice and Problem Solving book is a Fluency section. The Fluency Table of Content accurately represents the targeted skills and fluencies as aligned to the intent of the Standards. The Activity Sheets found in the Teacher Resources Book Appendix also support developing fluencies and procedural skills.	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Materials comprehensively and cohesively connect developing conceptual understanding of the operations with fluency and procedural skills. The teacher is advised how to use the various components of the program to achieve this end.	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Format and design of materials supports fluency and procedural skill with a wider scope than only using standard algorithms.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Materials provide adequate repeated practice toward attainment of fluency Standards provided the teacher uses the Student Book, as well as the Student Practice and Problem Solving Book, including the Fluency Practice as recommended.	

Metric AC1C: **The material[illegible]e designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem S[illegible]ng Book Materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade. Materials provide for a wide variety of problems. Cluster 2.OA.A Applications in the form of word problems are the focus of the following lessons. Lesson 2: solving one-step word problems. Lesson 6: solving two-step word problems. Lesson 9: solving one-step word problems involving two-digit numbers Lesson 25: solving word problems involving money Applications in the form of unit performance tasks are provided for each of the 4 units. Applications, in the form of word problems, are also included in the extra practice for each unit.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each questi[illegible]d rate Metric 1C.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book The format and layout of materials support student engagement. The "speech bubble" hints are concise and well-placed to engage students in problem-solving.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Applications are cohesively focused on the Major Work of grade 2, building upon number sense learned in grade 1 progressing toward the foundations, concepts and skills needed for third grade.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Modeling progression across grades 2 and 3 is age/developmentally appropriate, aligning with the intent of the lesson be it new content or supporting communication of and reasoning with known content.	
Alignment Criterion 1: **Rigor and Balance** **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** **AC1** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strength Scope and pacing of materials attends to the components of conceptual understanding, procedural skill, fluency and applications. The program sets high expectations for all three components throughout the materials for teacher, student and parents.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Standards of Mathematical Practice (SMP) are embedded in each lesson. Each lesson embeds 2 – 8 of the standards. All eight SMPs are embedded in each of the four units. (Table of Contents found in Teacher's Resource Book) Across the lesson, materials give teachers guidance on drawing out mathematical practices. Example: SMP TIP page 2 "Help students recognize the commutative property within the structure of the number bond. Point out that the numbers in the two bottom boxes can be switched. (SMP7)" Example: SMP TIP page 52 "Encourage students to look for patterns and explain their strategies when identifying odd and even numbers. Some examples: doubles and doubles +1, skip counting by 2s, making equal groups, drawing arrays, etc. (SMP4)" The Math in Action Overview for each unit also notes which SMP connections are associated with the tasks.	**(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

	Example: Unit 4 Math in Action p.270a Standards for Mathematical Practice (SMP) Standards 1, 3 and 4 are indicated. Standards 2, 3, 5 and 6 are indicated as additional SMPs. SMPs appear in the student texts as well. Example: Unit 2 Math in Action, page 145  Sentence Starters • I can look for numbers _____ • I can try numbers _____ Use Mathematical Practices Talk about this question with a partner. • Reason with Numbers How can the numbers in the sample answer help you solve this problem?	

Metric AC2B:
Materials att[illegible] to the full meaning of each practice Standard.

How to Find the Evidence:
For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each questi[illegible]d rate Metric 2B.

(Reviewer only.)

__x__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Teacher Resource Book, Student Textbook, Student Practice and Problem Solving Book All Practice Standards are embedded in the instructions usually providing students opportunities for guided and independent engagement with the SMP. Examples Lesson 1: SMP, 2,3,4,7,8 indicated in TRB as being embedded in Lesson 1. SMP2: Teacher leads students in decontextualizing from pictures, p.2, Evidence of students independently engaging in SMP 2 was not apparent to the evaluator. SMP3: SMP TIP p.4, Students independently engage in SMP 3 during the Let's Talk About It activity SMP4: Students are prompted to independently show their mathematical thinking using specified tools, e.g. an open number line (SB p5). Students are prompted to independently interpret a given model, e.g. a counting on table (SB p6) SMP7: SMP TIP p.2, Students are asked, "You want to count on to find 2+6. What number would you start with? Why?" Students are asked to independently fill in number bonds during a guided part of the lesson (SB p.4). Students have opportunities to explain their structural understandings while explaining their computation methods (SB p.7) SMP8: Evidence of students independently engaging in SMP 8 was not apparent to the evaluator. Lesson 14: SMP, 1,2,3,4,6,7 indicated in TRB as being embedded in Lesson 14. SMP1: Challenge Activity: Write subtraction problems for a given difference. "Challenge students to write as many subtraction problems as they can think of in which their number is the difference. Have them record the equations and see if they notice any patterns or consistencies. Have them, describe what they notice." (TRB p133) SMP2: SMP TIP (p 128) "Have students restate problem, making sure they understand the context of the problem, what they need to find, and what number to subtract. (SMP2)" The instructions for the guided lesson are "Read the problem. Then you will model subtraction." SMP3: Students are prompted to critique the work of others. "Invite the class to ask questions of each other, seek clarification, and acknowledge the work of their peers. Highlight innovative strategies or representations as an encouragement for all students to attempt diverse ways of	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** The materials provide the teacher with clear and supportive supports for teachers (including rubrics); however, professional development/training might be necessary for teachers to glean all that the Teacher Resource Book has to offer.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)**

Do the materials support students in constructing viable arguments and critiquing th uments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.

Evidence- Teacher Resource Book, Student Book

Materials support students in constructing viable arguments and critiquing the arguments of others. Each lesson includes discussion and modeling activities as well as explain and support your answer opportunities as well as modeling advice for the teacher (Step by Step notes).

TRB Table of Contents indicates that SMP3 is embedded in 24 of the 28 lessons and in 3 of the 4 Math in Action end of unit activities. Lessons that do not have SMP3 noted are 6,11,16 and 18.

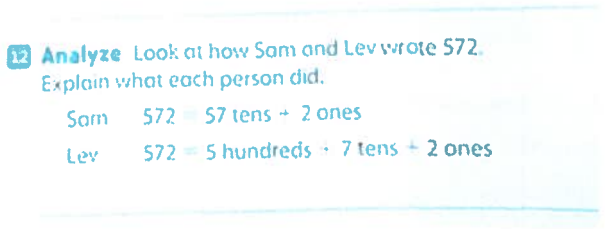
Examples

Lesson 3 (TRB p 19) "Read the Reflect question with the class. Ask students to discuss ideas with a partner before writing an answer. Invite students to share responses with the class, using a model to justify their reasoning." The Reflect question posed is "How can you make a 10 to help you add 8+7?"

Lesson 9 (TRB p 80d) "Invite the class to ask questions of each other, seek clarification, and acknowledge the work of peers. Highlight innovative strategies or representations as an encouragement for all students to attempt diverse ways of thinking."

Lesson 9 (TRB p80) "Why might this be a good model to use for this problem?"

Lesson 10 (SB p94)

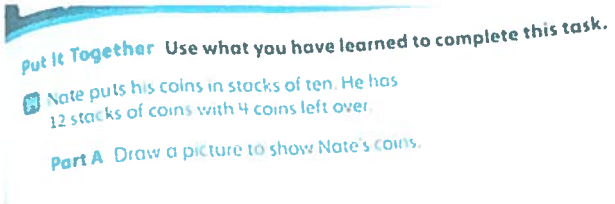


12 **Analyze** Look at how Sam and Lev wrote 572. Explain what each person did.

Sam 572 = 57 tens + 2 ones

Lev 572 = 5 hundreds + 7 tens + 2 ones

Lesson 10 (SB p95)



Put It Together Use what you have learned to complete this task.

14 Nate puts his coins in stacks of ten. He has 12 stacks of coins with 4 coins left over.

Part A Draw a picture to show Nate's coins.

____**Partially Meets (1)**

____**Does Not Meet (0)**

Do the materials support students in producing not only answers and solutions, but al[illegible] a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Teacher Resource Book, Student Book Materials support student in constructing arguments, explanations, etc. See examples above.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book The specialized language of mathematics is attended to in both the Teacher Resource Book and the Student Book. Each lesson includes student supports for vocabulary building in the Student Practice and Problem Solving Book.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths Practice standards are clearly and meaningfully embedded throughout the materials focusing on student development of authentic connections between content Standards and practice Standards. The meaningful connections extend to students, teachers and parents.

Alignment Criterion 3:

Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Teacher Resource Book, Student Book The Teacher Resource Book contains support for English language learners. Sometimes the suggestions are vague/weak; however the model activities are always clear. Example: Lesson 2 p10 The word problem "There are 15 players on a team. There are 7 girls. The rest of the players are boys. How many boys are on the team?" Teacher support for English Language Learners "Some students may struggle to comprehend the language used in a word problem. You may want to type or write the problem on a piece of paper so that each sentence is on a separate line. Cut out the sentences and have the students match each sentence to the appropriate part of the model, then fill in the blanks: ____ are on the team. ___ are girls. ___ are boys." Suggestions for modeling to support English language learners. Lesson 21, TRB p197, English Language Learners "Read problem 12 with students. Then draw a simple diagram that shows a 4-yard piece and a 6-yard piece have been cut from an 18-yard piece of rope. You might also make a drawing of a birdhouse hanging from a 4-yard piece of rope and a swing hanging from a 6-yard piece of rope. Ask students to use the diagrams and pictures to tell what the problem is asking and what they need to find out."	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3B:
Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.

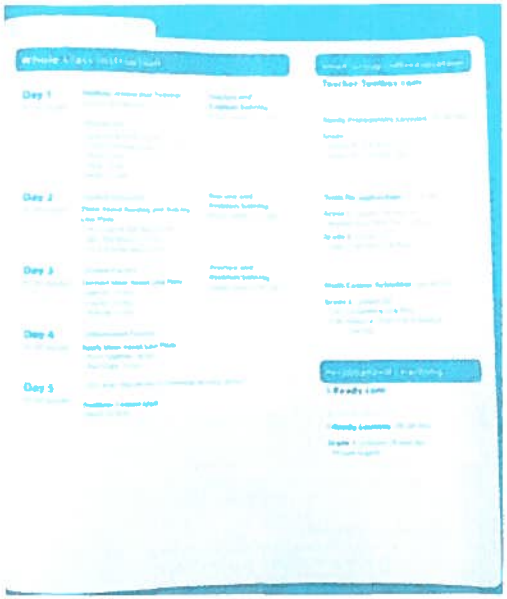
How to Find the Evidence:

Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.

Evidence- Teacher Resource Book,

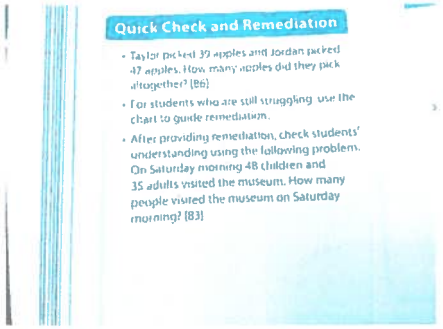
Lessons are designed [redacted] gradual release of responsibility model over the course of several days.

Introduction, Guided instruction, Guided practice, Independent Practice.



Differentiation, remediation and scaffolding support

Example: Lesson 7, TRB p68



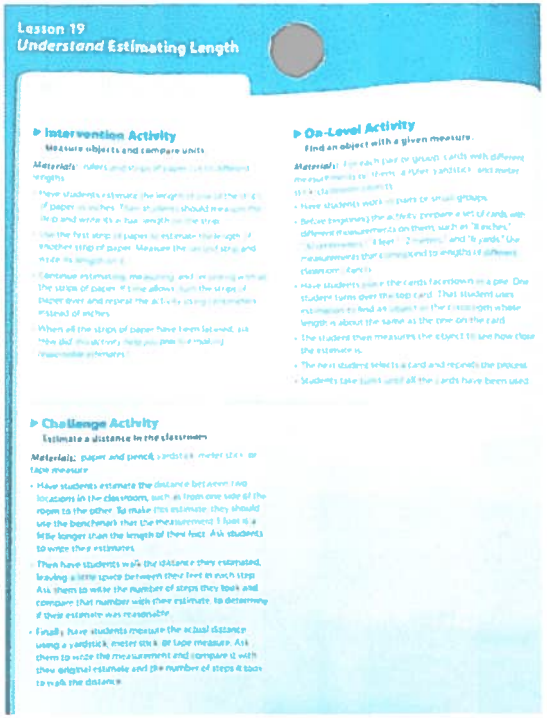
Lesson 19: TRB p181b

Reviewer only.)

___x_Meets (2)

____Partially Meets (1)

____Does Not Meet (0)



Lesson 19
Understand Estimating Length

▶ **Intervention Activity**
Measure objects and compare units.

Materials: rulers and strips of paper cut to different lengths

- Have students estimate the length of one side of a piece of paper in inches. Then students should measure the side and write its exact length on the strip.
- Use the first strip of paper to estimate the length of another strip of paper. Measure the second strip and write its length on it.
- Continue estimating, measuring, and recording with all the strips of paper. If time allows, turn the strips of paper over and repeat the activity using centimeters instead of inches.
- When all the strips of paper have been labeled, put them [illegible] in order from the shortest to the longest.

▶ **On-Level Activity**
Find an object with a given measure.

Materials: [illegible] cards with different measurements to inform, a ruler, yardstick, and meter stick, classroom objects

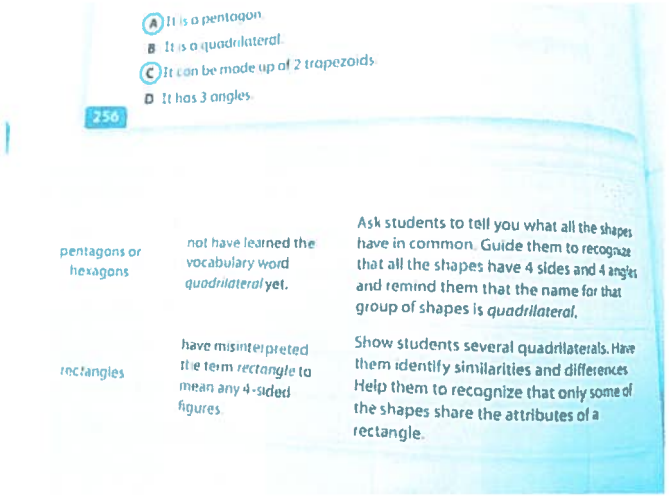
- Have students work in pairs or small groups.
- Before beginning the activity, prepare a set of cards with different measurements on them, such as "8 inches," "1 foot," "2 meters," and "5 yards." Use measurements that correspond to lengths of different classroom objects.
- Have students place the cards facedown in a pile. One student turns over the top card. That student uses estimation to find an object in the classroom whose length is about the same as the one on the card.
- The student then measures the object to see how close the estimate is.
- The next student selects a card and repeats the process.
- Students take turns until all the cards have been used.

▶ **Challenge Activity**
Estimate a distance in the classroom.

Materials: paper and pencil, yardstick, meter stick, or tape measure

- Have students estimate the distance between two locations in the classroom, such as from one side of the room to the other. To make this estimate, they should use the benchmark that the measurement 1 foot is a little longer than the length of their feet. Ask students to write their estimates.
- Then have students walk the distance they estimated, leaving a little space between their feet in each step. Ask them to write the number of steps they took and compare that number with their estimate to determine if their estimate was reasonable.
- Finally, have students measure the actual distance using a yardstick, meter stick, or tape measure. Ask them to write the measurement and compare it with their original estimate and the number of steps it took to walk the distance.

Lesson 26: TRB p256



(A) It is a pentagon.
B It is a quadrilateral.
(C) It can be made up of 2 trapezoids.
D It has 3 angles.

256

pentagons or hexagons	not have learned the vocabulary word *quadrilateral* yet.	Ask students to tell you what all the shapes have in common. Guide them to recognize that all the shapes have 4 sides and 4 angles and remind them that the name for that group of shapes is *quadrilateral*.
rectangles	have misinterpreted the term *rectangle* to mean any 4-sided figures.	Show students several quadrilaterals. Have them identify similarities and differences. Help them to recognize that only some of the shapes share the attributes of a rectangle.

Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Teacher Resource Book, Student Book Across each lesson, teachers are given supports for a variety of approaches. Example: Lesson 13 TRB/Student Book pp 114c-123 Approaches specifically noted in Lesson 13 include, whole group instruction, students working in pairs, using charts and models, extending concepts, hands-on activity and visualizing manipulatives, as well as examples, problems and mathematical discourse targeting multiple DOK levels.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths Modeling is evident throughout the materials. The consistent format and repetitive nature of the language supports ELL students. The differentiation supports provide for ELL students and other special populations.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**

1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Teacher Resource Book, Student Book Teacher supports are in a variety of approaches that follow a gradual release of responsibility progression, i.e. beginning with full teacher support progressing toward student independence. Materials provide supports for both differentiation for both access and extension. Mathematical discourse is supported throughout the lessons.	**(Reviewer only.)** ___x___ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Book The problems and exercise are worth doing. Each aligns to the stated goals of the unit/lesson. The suggested homework, applications and parent supports align to and support the goals of the unit/lesson.	**(Reviewer only.)** ___x___ **Yes** _____ **No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Book Problems and exercises are given in intentional sequences, beginning from what should be known to the student to problems targeting the learning of new concepts and skills and finally to exercises for applying newly learned concepts and practicing newly learned skills.	**(Reviewer only.)** ____x__ **Yes** _____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Book The Teacher Resource Book provides teachers details on how each lesson is situated in a progression of mathematical understanding, including specific prerequisite skills. Supports identify areas of student engagement and thought of which the teacher should be particularly aware. Supports are included for anticipating areas of struggle or possible misconceptions and for providing supports should such struggles or misconceptions become apparent. Teachers will likely need training on fully utilizing/implementing the materials provided. The online iReady component greatly enhances the supports for teachers in the areas of diagnostics, interventions and reporting.	**(Reviewer only.)** ___x___ **Yes** _____ **No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives are true representations of the objects they represent. They are used intentionally toward meeting specific mathematical understandings. Manipulatives used are commonly available (although not included in the program). The supporting activity sheets support the use of manipulatives.	**(Reviewer only.)** **___x___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Book, SBAC Assessment Booklet The TRB provides questions at multiple DOK levels. The teacher is provided with suggestions regarding what to assess as students work and discuss. Each unit includes a summative unit Interim Assessment. A bank of SBAC aligned assessments is provided in the SBAC Edition supplement. Student materials also provide formative assessment opportunities in the form of fluency practice, unit practice, games, and unit performance tasks.	**(Reviewer only.)** **___x___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Teacher Resource Book, SBAC Assessment Booklet Assessments, formal and informal, are accompanied with answer keys, aligned rubrics with scoring guidelines, and support for interpreting student responses. Rubrics are clear and concise.	**(Reviewer only.)** **___x___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Teacher Resource Book, SBAC Assessment Booklet Assessments are varied and provide students with multiple methods and means for demonstrating understanding, and for demonstrating multiple depths of understanding. Language is clear and grade appropriate.	**(Reviewer only.)** **___x___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Teacher Resource Book The publisher listed the names and brief bio on the authors, as well as the names, associated school and location of school of Teacher Advisors in the Mathematics Instruction Teacher's Resource Book.	**(Reviewer only.)** **___x___ Yes** **_____ No**

10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Student Book Each unit and lesson is formatted in a logical and meaningful way. The gradual release model is clear to students. Visual cues in lesson materials lead students across a predictable progression. <u>Progression</u> Using What You Know Find Out More Picture It Model It Connect It Try It Practice Self-Check Materials are student friendly, free of extraneous pictures, graphics and other visuals that would distract from the focus of the lesson.	**(Reviewer only.)** **___x___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Practice and Problem Solving Book Materials include a letter to parents providing the mathematical focus of the lesson, sample problems and methods of solution and guidance on what can be done at home to support the student in learning the associated concepts and skills. Routine problems are provided as practice/homework exercises.	**(Reviewer only.)** **___x___ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
_____x__ Meets _____ Does Not Meet	___x__ Meets _____ Does Not Meet

Non-Negotiable Overall:

___x__ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____x__ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet

Alignment Criteria Overall:

___x__ Meets **_____ Does Not Meet**

If the mater[illegible] meet both Non-Negotiables and relevant Alignment Cr[illegible]ion, they are aligned to the Shifts and major features o[illegible]e Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___x__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strength

Materials comprehensively and coherently align to Content Standards.

Materials comprehensively and coherently attend to and embed Practice Standards in engaging ways for both teacher and students.

Format of materials (teacher, student and parent) enhances engagement, mathematical understandings and navigation of materials.

Diagnostic, formative and summative assessment is well supported.

All levels of DOK are present in meaningful ways.

Materials have useful/purposefully-aligned parent supports.

Weakness

The comprehensive nature of the materials is a strength; however, accompanying this strength is the responsibility of teachers/districts to fully understand the components, supports and learning opportunities found in the materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Curriculum Associates LLC
Title:	Ready Common Core Mathematics, Grade 3
ISBN #	9781495705502
Grade Level(s) or Course:	Grade 3
Reviewer ID:	LBTR

RECOMMENDED AS:

____x____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The program maintains consistent focus on the concepts, skills and processes aligned to the Common Core Content Standards and Mathematical Practices. It is free of extraneous or non-aligned content.

COHERENCE- Mathematics is presented as interrelated concepts and skills. The Teacher Resource Book supports coherence and progressive development of ideas, concepts, skills and processes.

RIGOR- Scope and pacing of materials attends to the components of conceptual understanding, procedural skill, fluency and applications. The program sets high expectations for all three components throughout the materials for teacher, student and parents.

CONCEPTUAL UNDERSTANDING- Conceptual understanding is attended to thoroughly where the Standards set explicit expectations for understanding or interpreting. Materials provide students enactive, iconic and symbolic opportunities to develop and communicate understandings of the major clusters of the grade Standards.

MATHEMATICAL PRACTICES- This is a strength of the program. Standards of Mathematical Practice (SMP) are embedded in each lesson. All Practice Standards are embedded in the instructions usually providing students opportunities for guided and independent engagement with the SMP. Each lesson focuses on 2 – 8 of the standards. All eight SMPs are embedded in each of the four units. Across the lesson, materials give teachers guidance on drawing out mathematical practices. The parent pages help guide parents in mathematical thinking.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Lessons are designed on a gradual release of responsibility model over the course of several days, i.e. Introduction, Guided instruction, Guided practice, Independent Practice. Differentiation, remediation and scaffolding support as well as the variety of approaches give teachers considerable guidance and support accessibility for all students.

OTHER:

The materials are visually appealing. Visuals support navigation, teacher and student engagement, as well as purposeful focus on the mathematics.

It might be difficult for teachers to realize the full breadth and depth of these materials without professional development/training.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Do Not Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Ready Common Core Mathematics for Grade 3 does not assess any of the topics indicated on the NN1 Metric 1A list.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Maintains a good focus on the major clusters of grade 3. Unit overviews list the Common Core numbers and standards, indicating the alignment of each lesson. Indicated alignment is an accurate representation of

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade 3–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:
Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)
Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)
Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.
For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence- Teacher Resource Book, Student Practice and Problem Solving Book

There are 33 lessons in the Ready Common Core grade 3 Mathematics program (Ready).

23 lessons attend to standards associated with major clusters,

6 lessons attend to standards associated with supporting clusters, and

4 lessons attend to standards associated with additional clusters.

The pacing calendar also reflects the devotion of time to Major Works.

(Reviewer only.)

__x__Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B:
Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.

How to Find the Evidence:
Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.)
Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages.
For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Evidence- Teacher Resource Book

Supporting works are the focus of lessons 24-26 and 31-33.

Lesson	Student engagement in Major Work
24	Some engagement with OA.A
25	Some engagement with OA.A
26	Little to none
31	Little to none
32	Little to none
33	Some engagement with NF.A

Additional works are the focus of lessons 8-10 and 30.

Lesson	Student engagement in Major Work
8	Little to none
9	Little to none
10	Some engagement with OA.A, OA.B and OA.C

(Reviewer only.)

__x__Meets

____Does Not Meet/

Insufficient Evidence

	30 | Making connections between area and perimeter All other lessons directly focus on Major Works.	
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Materials are consistent with the progressions in the Standards. As evidenced in the Teacher Resource Book, Student Textbook and the Practice and Problem Solving Textbook. The Student Practice and Problem Solving book aligns extremely well with the Student Book (Main Common Core Instruction Book).	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book and Teacher's Guide Book The Teacher Resource Book provides suggestions for embedding remediation and challenge into the grade-level work lesson. In addition to lesson activities and problems, each unit has associated games, extra practice and performance tasks. The Key Code Bar of B=Basic, M=Medium, and C=Challenge in the Practice and Problem Solving Teacher's Guide Book is helpful and accurate.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2E: **Materials re[illegible]on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book Lessons are structure[illegible]n a gradual release model. The lesson introduction includes a "Use What You Know" activity to connect to prior knowledge. For each lesson, the Teacher Resource Book includes progressions showing the related grade 3, grade 4 and grade 2 concepts and skills. Specific notation of prerequisite skills is helpful as is the reference to where to go in the second grade lessons should remediation be necessary. (Personalized Learning note in TRB) The format of student, teacher and parent materials, the cartoon characters and the navigation headings are consistent from grade level to grade level; supporting use as student progress through the program.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Materials connected the general grade 2 content foci and the specific content foci of the lesson to the relevant grade 1 content and to the relevant grade 3 content. (Learning Progression notes found in the Teacher's Resource Book on the Lesson Overview pages) The Pacing Chart shows a clear scope and sequence for the year that matches well with those in the Standards. (Pages A42-A45 in the Teacher Resource Book)	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book Learning objectives are visibly shaped by the individual standards. Example: Lesson 15 overview Unit Title: Understand Fractions on a Number Line Content objectives: • Understand fractions a numbers on a number line. • Understand how to use number lines to count and identify fractional parts. • Represent fractions on a number line that are less than, equal to, or greater than one.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

	Content Standard 3.N[illegible].A.2 Cluster heading: Understand a fraction as a number on the number line; represent fractions on a number line diagram. Also included for each lesson is CCSS Focus overview.	
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book As well as connections within the lessons, at the end of each of the units is a Math in Action activity that specifically makes domain/cluster connections.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Unit	Associated Domains	Associated Clusters
1	3.OA	2.OA.Clusters A.1-3 2.OA.Clusters B.5-7
2	3.NBT and 3.OA	3.NBT.Clusters A.1-3 3.OA.Clusters B.5 and C.7
3	3.NBT and 3.OA	3.NBT.A.2 3.AO.Clusters A.3, B.5 and D.8
4	3.NF	3.NF. Clusters A.1, 3a, 3b, 3d
5	3.MD, 3.OA, and 3.NBT	3.MD. Clusters A, C and D 3.OA.A 3.NBT.A
6	3.G, 3.MD, and 3.NF	3.G. Clusters A.1-2 3.MD.C.7a 3.NF.A.1

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Strengths
Majority of work focuses on the major clusters and pacing seems balanced.

Materials are visibly and coherently aligned to Common Core, and lead students to conceptual understandings built on prior knowledge.

Mathematical practices are well developed and embedded throughout the materials.

Parent letters are engaging and appropriately detailed for home support. The unit games are compatible and would likely be easy to play at home.

Student Book page formats are user friendly and enhance conceptual understanding and navigation.

Weakness
The richness of the program may be lost if teachers are not adequately trained in using the program as intended.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings. **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.
NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.

Evidence- Teacher Resource Book, Student Book, Student Practice and Problem Solving Book

Conceptual understanding is attended to thoroughly where the Standards set explicit expectations for understanding or interpreting.

Cluster headings chosen: 3.OA.A.1 and 3.OA.A.2

Materials provide student enactive, iconic and symbolic opportunities to represent and solve problems involving multiplication and division (3.OA.A.1) and to understand properties of multiplication and the relationship between multiplication and division (3.OA.A.2).

Example: Lesson 1, Understand the Meaning of Multiplication, Hands-on Activity, TRB p2

"Have students use counters or tiles to build 3 groups of 5 and find the total. Then ask them to use words to fill in the sentence to say aloud what they did. [3 groups of 5 tiles equals 15 tiles]."

Example: Lesson 3, Use What You Know, TRB p20a

Students are given a picture of 6 bunches of carrots. There are 3 carrots in each bunch. The students are asked to determine how many carrots there are altogether. The lesson emphasizes grouping the carrots into a bundle of 5 bunches and using the fact that 3x5=15 to quickly know how many are in that bundle, then add on the 3 from the 6th bundle.

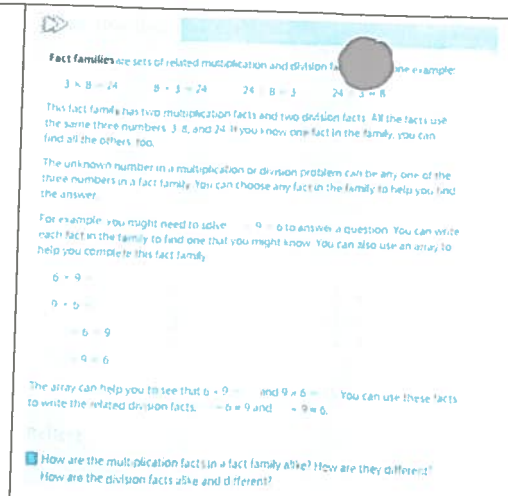
Example: Lesson 3, Practice, Question 5, SB p.29

"There are 9 rows in Mrs. Mitchell's flower garden. Each row has 9 flowers planted in it. How many flowers are planted in the garden? Show how to break apart the numbers to find the answer."

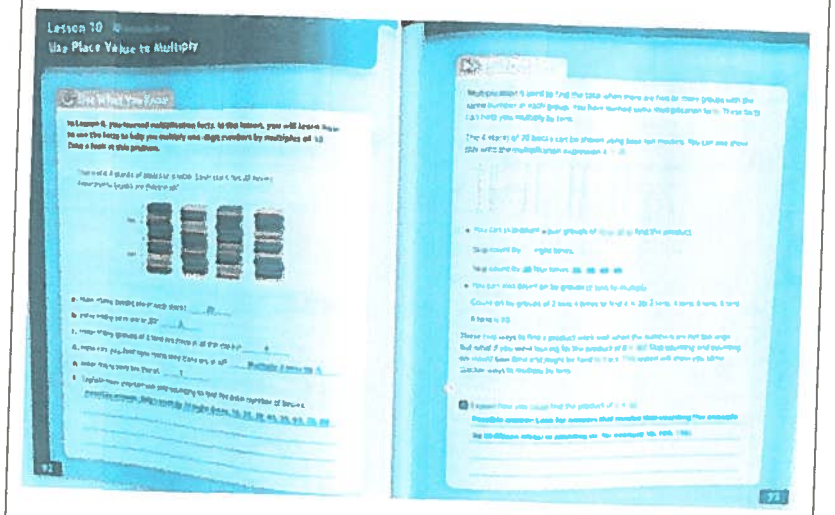
Example: Lesson 4, Understand the Meaning of Division, Hands-on Activity, TRB p30

"Write '12÷2 = ____ ' on the board. Ask student pairs to divide the counters between them so they get equal shares. ... Ask questions such as: 'How did you know the shares were equal?"

Example: Lesson 6: Multiplication and Division Facts, Find Out More, TRB p43



Example: Lesson 10, Using Place Value to Multiply, TRB p92-93



Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book, SBAC Assessment Booklet The Teacher Resource Book provides teachers with high quality discussion question. Notably, the Mathematical Discourse section provides support with leading questions that are helpful and concise.	

Do the materials feature opportunities to identify correspondences across mathema representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Sol Book The materials provide many opportunities to identify correspondences between verbal descriptions, diagrams, models and mathematical notation. The materials provide some opportunities to include hands-on/manipulative representations. Examples: Parent letters have diagrams/pictorial representations of skills. Try it sections encourage trying multiple ways. *Model It* usually show two or more mathematical representations in the guided practice section.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Cluster chosen 3.NBT.A.2 Materials are designed so that students attain the fluencies and procedural skills required by the Standards. Each lesson has a few independent practice exercises at the end of the lesson. The Practice and Problem Solving book has additional practice for each lesson. In the back of the Practice and Problem Solving book is a Fluency section. The Fluency Table of Content accurately represents the targeted skills and fluencies as aligned to the intent of the Standards. The Activity Sheets found in the Teacher Resources Book Appendix also support developing fluencies and procedural skills.	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Materials comprehensively and cohesively connect developing conceptual understanding of the operations with fluency and procedural skills. The teacher is advised how to use the various components of the program to achieve this end.	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Format and design of materials supports fluency and procedural skill with a wider scope than only using standard algorithms.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Materials provide adequate repeated practice toward attainment of fluency Standards provided the teacher uses the Student Book, as well as the Student Practice and Problem Solving Book, including the Fluency Practice as recommended.	

Metric AC1C: **The materia[illegible]e designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Sol[illegible]Book Materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade. Materials provide for a wide variety of problems. Cluster headings chosen: 3.OA.A.3 and 3.OA.D.8 Materials provide student problem solving opportunities to develop and communicate use of multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities (3.OA.A.3) as well as to solve two-step word problems using the four operations; and representing these problems using equations with a letter standing for the unknown quantity (3.OA.D.8). Example: Lesson 3, Practice, Question 5, SB p.29 "There are 9 rows in Mrs. Mitchell's flower garden. Each row has 9 flowers planted in it. How many flowers are planted in the garden? Show how to break apart the numbers to find the answer." Example: Lesson 4, Understand the Meaning of Division, Hands-on Activity, TRB p30 "Write '12÷2 = ____ ' on the board. Ask student pairs to divide the counters between them so they get equal shares. ... Ask questions such as: 'How did you know the shares were equal?"	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each que[illegible]and rate Metric 1C.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there are single- and multi-step contextual problems, including non-routine pro[illegible], that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Sol[illegible] Book Materials provide students with both guided practice and independent practice solving single- and multi-step contextual problems, including non-routine problems. Example: Lesson 11: Solving one-Step Word Problems, Practice, SB p123 "There are 24 different tables to set up for field day. The principal wants the tables set up in equal rows. Should she use 3 rows or 5 rows? Explain." Example: Lesson 13: Solving Two-Step Word Problems, Introduction, TRB p134-135 "The Shirt Shack has 438 T-shirts at the end of the day. Then they receive a delivery of new shirts. The shirts come in 4 different colors. There are 8 shirts of each color. How many T-shirts does the store have now?" The format and layout of materials support student engagement. The "speech bubble" hints are concise and well-placed to engage students in problem-solving.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Applications are cohesively focused on the Major Work of grade 3, building upon number sense learned in grade 2 progressing toward the foundations, concepts and skills needed for fourth grade.	

Does modeling build slowly across K–8, with applications that are relatively simple[illegible]rlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Sol[illegible]Book Modeling progression across grades is age/developmentally appropriate, aligning with the intent of the lesson be it new content or supporting communication of and reasoning with known content.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Strength
Scope and pacing of materials attends to the components of conceptual understanding, procedural skill, fluency and applications. The program sets high expectations for all three components throughout the materials for teacher, student and parents.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Standards of Mathematical Practice (SMP) are embedded in each lesson. Each lesson embeds 2 – 8 of the standards. All eight SMPs are embedded in each of the four units. (Table of Contents found in Teacher's Resource Book) Across the lesson, materials give teachers guidance on drawing out mathematical practices. Example: Lesson 1, SMP TIP, TRB p2 "Asking students to build a concrete model and to use language and symbols to describe it helps students focus on the meaning of quantities and operations, not just on how to compute. (SMP 2)" Example: Lesson 8, SMP TIP, TRB p70 "When rounding numbers, students are looking for and using the structure of place value. Students should	**(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

2013).	know and be able to use the concept that 10 ones make 1 ten and 10 t make 1 hundred. (SMP 7)" Example: Lesson 16, SMP TIP, TRB p169 "Students reason quantitatively about how it takes two or more parts (and smaller parts) to create fractions that are equivalent to 1/2. (SMP 2)"	

Metric AC2B:
Materials at[illegible] to the full meaning of each practice Standard.

How to Find the Evidence:
For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each que[illegible] and rate Metric 2B.

(Reviewer only.)

__x__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Teacher Resource Book, Student Textbook, Student Practice and Problem Solving Book All Practice Standards are embedded in the instructions usually providing students opportunities for guided and independent engagement with the SMP. Examples Lesson 3: SMP 1, 2, 4, 7, 8 indicated in TRB as being embedded in Lesson 3 • SMP1: Students are asked to independently make sense of a word problem, solve it and communicate how he/she came to that solution. SB p27 • SMP2: If the teacher uses the Visual Model suggestion students are given the opportunity to independently contextualize multiple grouping scenarios and strategies for using grouping to multiply. TRB p20 • SMP4: Across the lesson, students are given several opportunities to go from situation to model to mathematics; from model to mathematics; and from mathematics to model. • SMP7 and SMP 8: The Connect It (SR p25): "Madison knows the answer to 4x7. How can this help her multiply 8x7?" Lesson 17: SMP 1, 2, 4, and 6 indicated in TRB as being embedded in Lesson 17 • SMP1: Students are given the opportunity to make sense of problems. (SPPB p194) • SMP2: Across the lesson, students have independent opportunities to contextualize and decontextualize. • SMP4: Students have independent opportunities to model mathematics. (SB p183) • SMP6: Teachers are advised to encourage precision of language. Students are given opportunities to use precise language when explaining their thinking. (TRB, SB p178)	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Materials treat the practice Standards as developmental across grade levels. The sophistication increases from K to 5.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** The materials provide the teacher with clear and supportive supports for teachers (including rubrics); however, professional development/training might be necessary for teachers to glean all that the Teacher Resource Book has to offer.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Teacher Resource Book, Student Book Materials support students in constructing viable arguments and critiquing the arguments of others. Each lesson includes discussion and modeling activities as well as explain and support your answer opportunities as well as modeling advice for the teacher (Step by Step notes). SMP3 is embedded in 16 of the 33 lessons and in all 6 of the Math in Action end of unit activities. Lessons with SMP3 embedded are 1, 2, 4, 11, 13 -16, 18-21, 27, 29, 30, and 32.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Teacher Resource Book, Student Book Materials support student in constructing arguments, explanations, etc.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book The specialized language of mathematics is attended to in both the Teacher Resource Book and the Student Book. Each lesson includes student supports for vocabulary building in the Student Practice and Problem Solving Book. The use of visuals such as drawings, charts, and models support the development of mathematically specific language.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths Practice standards are clearly and meaningfully embedded throughout the materials focusing on student development of authentic connections between content Standards and practice Standards. The meaningful connections extend to students, teachers and parents.

Alignment Criterion 3:

Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Teacher Resource Book, Student Book The Teacher Resource Book contains specific support for English language learners. Example: Lesson 11, TRB p112 The students are writing word problems. The support for English Language Learners is as follows. "Students may struggle with the language needed to write a word problem. You may wish to pair an English language learner with a proficient speaker to perform this task. Another option is to provide students with a problem template to complete. For example: Each team has ____ baseballs. There are ____ teams. How many baseballs do the teams have altogether? ___" Example: Lesson 13, TRB p135 The support for English Language Learners "Help students understand the difference between using mental math and making an estimate. Use the examples in the Student Book or other examples to point out the following distinctions: When you use mental math you use the actual numbers from the problem. You don't use pen and paper, so you might think about how to break apart the numbers to make them easier to work with. The answer you get is the actual answer. When you estimate, you use "friendly numbers" that are close to but not equal to the actual numbers, so that you can compute quickly without pen and paper. The answer you get when you estimate is usually close to, but not equal to, the actual answer." Additionally, the visual format of the student materials, including the consistent headings, provide navigation support for ELL students.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3B:
Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.

Evidence- Teacher Resource Book,

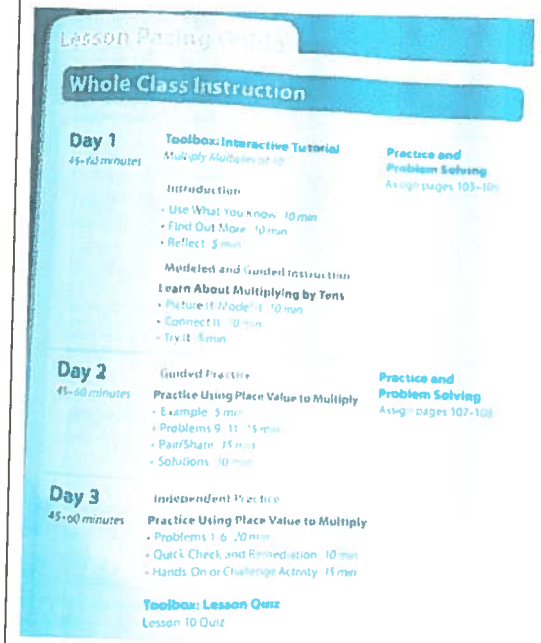
Lessons are designed [illegible] gradual release of responsibility model over the course of several days.

Introduction, Guided instruction, Guided practice, Independent Practice.

Lessons are designed on the gradual release of responsibility model over the course of days.

Introduction, Guided instruction, Guided practice, Independent Practice.

Example: Lesson 10, TRB p92a



Differentiation, remediation and scaffolding support

Example: Lesson 7, TRB p57b

Reviewer only.)

___x_Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Lesson 7
Understand Patterns

Differentiated Instruction

▶ Intervention Activity

Find patterns in a multiplication table.

Materials: blank multiplication table, highlighters

Ask students to fill in the 1 row and the 1 column of the table. Ask: The 1 column has the same products as the 1 row. Why is that so? [The factors for the products in the 1 row and the 1 column are the same, multiplied in a different order.] Remind students that the numbers in the 2 row are the "count by's" of 2. Ask them to fill in this row. Remind them that the 2 column counts in the same products and instruct them to fill it in. Have students fill in the product to for the 3s, 10s, 0s, 5s, and 4s in the same way.

Have students describe the pattern of the even digits in the products in the 5 row and column. [0 and 5 repeat.] Have them circle the 0s and underline the 5s. Ask whether each product is even or odd. [products with 0 in the ones place are even, with 5 are odd.] Ask students to circle or highlight another pattern in the table and describe the patterns.

▶ On-Level Activity

Further explore odd and even numbers using addition tables.

Materials: addition tables with addends to 10, crayons or highlighters

Have students highlight the addends along the side and top of the table in different colors than the sums.

Instruct students to work in pairs or groups. Tell them they will use the addition table to help them explore questions, such as, if you add an odd number to itself (double it), will the sum be even or odd? If you add any two odd numbers on the chart, will the sum be even or odd? You may want to let each group or pair a different question to explore.

Have pairs or groups share their questions and answers. Ask questions such as: Can you give some examples? Do you agree with what [student name] said? Do you think this is true for all whole numbers? Why?

▶ Challenge Activity

Explore patterns using a pattern train.

Materials: 1 inch square paper, scissors, tape

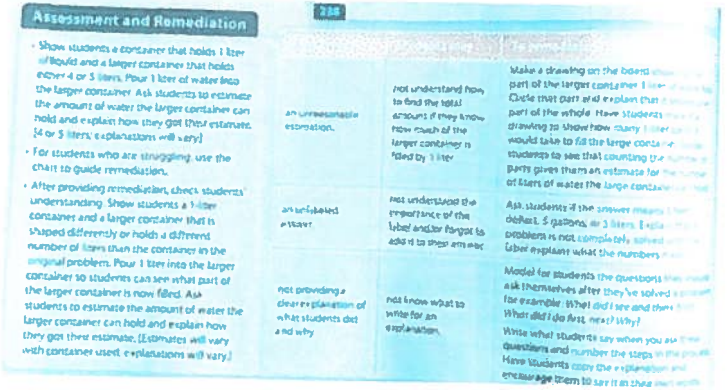
Ask students to work in pairs or small groups. Instruct each student to color every 4th square in the row. Have the students cut out the 4-square sections and tape them together, with no overlap, to create a train at least 3 feet long.

Have students draw a star on the first square to mark it as the front. Have them cut five to eight 3-square sections starting from the front, and place them flat, one above the other and in order, so the green with the star is at the bottom. Have students describe the pattern the colored squares make. [diagonals going from bottom left to top right]

Instruct students to cut off any white squares, if necessary, from the front of the remaining train so that the front square is shaded. Again draw a star on the back square of the train. Have students cut about four or five 4-square sections, starting from the front of the train. Have students place these sections flat, one above the other, and in order, so the piece with the star is at the bottom. Again, have students describe the pattern shown by the colored squares. [all the squares of the first column are shaded]

Ask students to predict what the starred squares will look like if they cut the remaining train into 3-square sections. Then have students test their predictions, making sure their train starts with a shaded square with a star on it on the front. [diagonals going from bottom right to top left] Students can repeat the steps for 7-square sections and 8-square sections. Invite students to share their observations.

Example: Lesson 22, TRB p238



Assessment and Remediation

238

- Show students a container that holds 1 liter of liquid and a larger container that holds either 4 or 5 liters. Pour 1 liter of water into the larger container. Ask students to estimate the amount of water the larger container can hold and explain how they got their estimate. [4 or 5 liters; explanations will vary]
- For students who are struggling, use the chart to guide remediation.
- After providing remediation, check students' understanding. Show students a 1-liter container and a larger container that is shaped differently or holds a different number of liters than the container in the original problem. Pour 1 liter into the larger container so students can see what part of the larger container is now filled. Ask students to estimate the amount of water the larger container can hold and explain how they got their estimate. [Estimates will vary with container used; explanations will vary.]

an unreasonable estimation.	not understand how to find the total amount if they know how much of the larger container is filled by 1 liter	Make a drawing on the board [illegible] part of the larger container 1 liter [illegible]. Circle that part and explain that it [illegible] part of the whole. Have students [illegible] drawing to show how many 1 liter [illegible] would take to fill the large container. [illegible] students to see that counting the [illegible] parts gives them an estimate for the [illegible] of liters of water the large container [illegible]
an unlabeled answer	not understand the importance of the label and/or forget to add it to their answer	Ask students if the answer means 1 liter, [illegible] 5 gallons, or 3 liters. Explain that the problem is not complete [illegible] label explaining what the numbers [illegible]
not providing a clear explanation of what students did and why	not know what to write for an explanation.	Model for students the questions they could ask themselves after they've solved a problem, for example: What did I see and think first? What did I do first, next? Why? Write what students say when you ask these questions and number the steps in the process. Have students copy the explanation and encourage them to try it on their own with

Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Teacher Resource Book, Student Book Across each lesson, teachers are given supports for a variety of approaches. Example: Lesson 8, TRB pp 69c-79 Approaches specifically noted in Lesson 8 include, whole group instruction, students working in pairs, using charts and models, extending the concept, making real-world connections, hands-on activity, using manipulative, as well as examples, problems and mathematical discourse targeting multiple DOK levels.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths Modeling is evident throughout the materials. The consistent format and repetitive nature of the language supports ELL students. The differentiation supports provide for ELL students and other special populations.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)

1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Teacher Resource Book, Student Book Teacher supports are in a variety of approaches that follow a gradual release of responsibility progression, i.e. beginning with full teacher support progressing toward student independence. Materials provide supports for both differentiation for both access and extension. Mathematical discourse is supported throughout the lessons.	**(Reviewer only.)** **___x___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Book The problems and exercise are worth doing. Each aligns to the stated goals of the unit/lesson. The suggested homework, applications and parent supports align to and support the goals of the unit/lesson.	**(Reviewer only.)** **___x___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Book Problems and exercises are given in intentional sequences, beginning from what should be known to the student to problems targeting the learning of new concepts and skills and finally to exercises for applying newly learned concepts and practicing newly learned skills.	**(Reviewer only.)** **____x__ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Book The Teacher Resource Book provides teachers details on how each lesson is situated in a progression of mathematical understanding, including specific prerequisite skills. Supports identify areas of student engagement and thought of which the teacher should be particularly aware. Supports are included for anticipating areas of struggle or possible misconceptions and for providing supports should such struggles or misconceptions become apparent. Teachers will likely need training to fully utilize/implement the materials provided. The online iReady component greatly enhances the supports for teachers in the areas of diagnostics, interventions and reporting.	**(Reviewer only.)** **___x___ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives are true representations of the objects they represent. They are used intentionally toward meeting specific mathematical understandings. Manipulatives used are commonly available (although not included in the program). The supporting activity sheets support the use of manipulatives.	**(Reviewer only.)** ___x___ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Book, SBAC Assessment Booklet The TRB provides questions at multiple DOK levels. The teacher is provided with suggestions regarding what to assess as students work and discuss. Each unit includes a summative unit Interim Assessment. A bank of SBAC aligned assessments is provided in the SBAC Edition supplement. Student materials also provide formative assessment opportunities in the form of fluency practice, unit practice, games, and unit performance tasks.	**(Reviewer only.)** ___x___ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Teacher Resource Book, SBAC Assessment Booklet Assessments, formal and informal, are accompanied with answer keys, aligned rubrics with scoring guidelines, and support for interpreting student responses. Rubrics are clear and concise.	**(Reviewer only.)** ___x___ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Teacher Resource Book, SBAC Assessment Booklet Assessments are varied and provide students with multiple methods and means for demonstrating understanding, and for demonstrating multiple depths of understanding. Language is clear and grade appropriate.	**(Reviewer only.)** ___x___ **Yes** _____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Teacher Resource Book The publisher listed the names and brief bio on the authors, as well as the names, associated school and location of school of Teacher Advisors in the Mathematics Instruction Teacher's Resource Book.	**(Reviewer only.)** **___x___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Student Book Each unit and lesson is formatted in a logical and meaningful way. The gradual release model is clear to students. Visual cues in lesson materials lead students across a predictable progression. <u>Progression</u> Using What You Know Find Out More Picture It Model It Connect It Try It Practice Self-Check Materials are student friendly, free of extraneous pictures, graphics and other visuals that would distract from the focus of the lesson.	**(Reviewer only.)** **___x___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Practice and Problem Solving Book Materials include a letter to parents providing the mathematical focus of the lesson, sample problems and methods of solution and guidance on what can be done at home to support the student in learning the associated concepts and skills. Routine problems are provided as practice/homework exercises.	**(Reviewer only.)** **___x___ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **_____x__ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **___x__ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **___x__ Meets** **_____ Does Not Meet**	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____x__ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet

Alignment Criteria Overall:

___x__ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? ___x__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strength

Materials comprehensively and coherently align to Content Standards.

Materials comprehensively and coherently attend to and embed Practice Standards in engaging ways for both teacher and students.

Format of materials (teacher, student and parent) enhances engagement, mathematical understandings and navigation of materials.

Diagnostic, formative and summative assessment is well supported.

All levels of DOK are present in meaningful ways.

Materials have useful/purposefully-aligned parent supports.

Weakness

The comprehensive nature of the materials is a strength; however, accompanying this strength is the responsibility of teachers/districts to fully understand the components, supports and learning opportunities found in the materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Curriculum Associates
Title:	Ready Common Core
ISBN #	
Grade Level(s) or Course:	4th Grade
Reviewer ID:	TJ AJ

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY: Ready Common Core 4th grade meets focus, Rigor and coherence Standards

FOCUS- Ready Common Core 4th grade is aligned to all standards for 4th grade. The majority of lessons are focused on the Major Works of the Grade.

COHERENCE-
The supporting works are clearly identified and support the major work of the grade.

RIGOR- Ready Common Core student materials are presented in an engaging manner to students as they interact with rigorous math problems. Practice toward fluency in fourth grade is weak.

CONCEPTUAL UNDERSTANDING-
Ready Common Core 4th grade uses modeling, guided instruction, and discussions to build students conceptual understanding of math concepts presented.

MATHEMATICAL PRACTICES-
Ready Common Core integrates mathematical practices into all lessons. The materials provide support for teachers in understanding and implementing the mathematical practices.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Ready Common Core provides support for all learners through resources found in the teacher manual. ELL resources provide appropriate supports. Differentiation opportunities are appropriate

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

2015-16 Interim Mathematics Review

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	Ready Math does not [illegible]ess listed topics that are beyond 4th grade on 4th grade assessments. All materials included in Ready Common Core are aligned to the standards for 4th grade. Future grade level concepts may be alluded to, but are not assessed. The materials stick to the concepts, skills, and strategies stated in the standards. In the online tools for multiplications, it mentions the traditional algorithm, but does not teach to it. Each lesson includes a learning progression for the teacher, which provides connections to previous grade levels skills, the current grade level, and then extends to the following grade level. However, these topics are for teacher information only, they are not included in the lesson. **Evidence-** • Table of Contents (TE) A42-A43 • Math Assessment Booklet (SBAC Edition) • Interim Assessments • Lesson Quizzes included in the Teacher Toolbox (online) • Correlation Charts (TE) B3-B7	**(Reviewer only.)** **___X_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X_Meets** **____Does Not Meet** **Strengths/Weaknesses: Focuses on assessing 4th grade standards.**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	The majority of the work is designed as the Major work of 5th grade. The program designates in the table of contents with an "M" if that content is a major work, making it easy for teachers to know what lessons ARE focused on the major work. With 33 lessons in the text, 20 are devoted to major works, equaling 61%. With a total of 137 days, 80 are devoted to the major work of the garde, equaling 58%. When checking areas labeled as "M", it was found that they were indeed part of the major work for 5th grade. **Evidence-** • Year-Long Pacing (TE) A42-A43 • Correlation Charts (TE) B3-B7 • Unit Overviews • Individual Lesson Pacing Guides	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2E **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Supporting work is clearly identified in the table of contents. Materials provide coherence throughout each lesson in grade 4. The supporting works for the grade are not isolated from the major works. For example, in **Measurement and Data** (a supporting work), connections to using **operations with whole numbers to solve problems**(a major work) are made in most lessons. Connections to **Number and Operations-Fractions** (a major work) are also made within Measurement and Data (a supporting work). **Evidence:** • Lesson 25: Connects Measurement and Data with number and operations in fractions. Students convert measurements, by multiplying a whole number by a unit fraction. • Lesson 26: Connects Measurement and Data, using area and perimeter with Number and Operations in Base 10 through multiplying length and width • Lesson 30 Connects Measurement and Data related to angle measurement with Operations and Algebraic Thinking as well as Number and Operations in Base 10 to add and subtract angle measurements.	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2C **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The progressions in the materials match those in the Standards. Discrepancies in the content progressions were minimal and used to enhance learning. Each lesson includes a learning progression (for teacher reference), which may provide a connection to previous lessons (or previous grade), the current lesson, and the subsequent lesson (or subsequent grade). Future grade concepts are to mentioned in the teacher manual, student manual, or online resources. The resources in the Teacher Toolbox (online) refer to future grade level skills/strategies, but do not teach to them. Review of lessons reflects that these overviews coordinate with grade level standards. **Evidence-** • Teacher Toolbox (online) • Lesson unit progressions TE: Lesson 12 p. 122a Division in Grade 3: students gained conceptual understanding of division….In this lesson, students apply their knowledge of basic facts, place value, and properties of operations to solve multi-digit division. In Grade 5, students will find quotients of dividents. • Unit 4: Which lessons are students building upon p. 143A (TE)	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Connections for remediation are at the end of every lesson as quick checks, along with suggestions for remediation, if needed. Both are designed to keep students working at the grade level. Although materials are provided for intervention and remediation, the program does not focus on these sources as a replacement of the core curriculum. Lessons from the previous grade level are also listed that could be used as extra teaching and practice if needed to get students more ready for the current grade level work. Those in Teacher Toolbox (online) are correlated to previous grade level materials and content. Challenge activities are provided as well. The teacher manual makes connections to DOK for problems in the SBR. **Evidence-** • TE: Lesson 19 p. 198 Quick Check and Remediation • TE: Lesson 26 p. 281 Challenge Activity • Online Teacher Toolbox: Reteach tab	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2E **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The prior learnings are explicitly laid out for teachers at the beginning of each unit, as well as in the remediation information. Problems are provided at the beginning of most lessons that encourage students to access prior knowledge. "Use What You Know". Self-checks are included so students can identify skills they already have as they start the unit. Prerequisite skills are listed for the teacher as well. Lessons are identified to pre-teach for those who may not be ready for the new information that is going to be taught in the current lesson. **Evidence-** • Lesson 2: SE p 8 "You have already learned how to compare numbers up to 999. Take a look at this problem that compares numbers in the thousands." • Lesson 1: SE p. 2, does not make a connection • Lesson 6: SE p. 52 In lesson 5, you thought about equations… • Lesson 14: SE p. 150 In the past, you learned to compare fractions using models	**(Reviewer only.)** **___X_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Progressions show previous grade material but it is not the work in this grade. Previous lesson identification is provided for teachers (in the introduction of the lesson) to easily access if needed to help those who are behind. The Teacher Toolbox (online) also clearly identifies content from previous grade levels. **Evidence-** • Lesson 14 Overview (TE) p. 150a Prerequisites skills for the lesson and connections to learning progressions from grade 3. • Teacher Toolbox (online) Reteach Ready Prerequisite lessons	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	A correlation between learning objectives and cluster headings is explicit in the materials. The table of contents explicitly states the standards being taught in each lesson. Each lesson identifies the cluster that the lesson correlates to. **Evidence-** • For examples, in fourth grade, a cluster is extending previous understanding of fraction and equivalence and ordering Lesson 13 and 14 (pg TE p. 144a and TE p. 150a) both support the learning of this cluster. Additionally, Lesson 20 integrates multiple clusters from the number and operation in fractions domain to apply real world problems with fractions.	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The materials doe a sufficient job of connecting clusters in a domain as well as the domains. In the lesson overview, it states the cluster, standards, and then additional domains. In fourth grade, the cluster of **using the four operations with whole numbers to solve problems,** which is an Operations and Algebraic Thinking domain is connected to the Number and Operations in Base Ten domain throughout the materials. **Evidence-** • Lesson 10 TE p. 92a focuses on solving multi-step problems (4.OA.3) with strong connections to 4.NBT.3-6). • In independent practice, SE p 98, problem 1, students must solve a multi-step problem (4.OA.3) using multiplication and addition (4.NBT.4 and 4.NBT.5).	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Strengths:

- Support for teachers in easily accessing the progressions.
- Connections made for students to prior knowledge
- Amount of time spent on major works of the grade

Weaknesses:

- Could be stronger in connecting clusters or domains

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	Conceptual understanding is addressed through the modeling and the guided instruction provided in each lesson, as well as though the Connect It activities. Various conceptual problems and questions are provided. Questions range from low level difficulty to requiring students make connections between concepts appropriate for the grade level. The TRB designates with the word "understand" in the table of contents the lessons that will focus on conceptual understanding. **Evidence-** • Connections to place value are made when teaching multiplication of whole numbers (SE p. 113) established multiplying by multiples of 10 before teaching the concept of multiplication of whole numbers. • Lesson 11 (TE pf. 114) uses the area model to begin the multiplication lesson, and then transitions to partial products. • Connections to place value are made within the area and partial products model. (Lesson 11 SE p. 118, #16 and #17).	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	Students are asked to discuss with partners, write about it and identify when errors were made, etc. Direct questions to be used with class are provided in the TRB. Questions are also provided in the SE and the TRB in the Explain, Compare and Connect it sections. **Evidence-** **4.NF.A Extend Understanding of fraction equivalence and ordering:** • Draw a model of 2/3 and then divide it into a different number of parts to show an equivalent fraction (SE p. 146 #6) • Find the missing numbers to find an equivalent fraction to 5/6 (SE p. 147 #10) • Use different methods to find two fractions that are equivalent to 3/3. (SE p. 148 #13). • Think about the cooking problem below. Fia eeds ¾ of a cup of brown sugar. She only has 1/3 cup measuring cup and a 1/8 cup measuring cup. Which should she use and why? (SE p. 148 #15).	

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	The materials provide correspondence across mathematical representations. However, the connections are weak and sporadic.. **Evidence-** • SE pg 121 #4- Student practice: the question is to identify the model which would represent 45x15. • SE pg 123 When teaching division, the area model is connected to the area model of multiplication • SE pg. 124 Partial Products is used to divide whole numbers, but a connection to partial products for multiplication is not explicitly stated.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **_X___Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	Student's progression toward fluency is balanced with procedural skills. Practice, and time devoted to fluency of the skill is weak. **Evidence-** • In the materials 4.NBT.4, is taught in only 1 lesson, which should last only 5 days. • Practice for mastering fluency is weak and dedicated only to the identified lesson on multiplying multi-digit whole numbers using the traditional algorithm (Lesson 3).	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	There is procedural practice found in the practice and problem solving book……both those that allow opportunistic strategies and those that require more traditional use of algorithms. • SE pg. 22-23 practice problems (#15 would require an algorithm) • Practice and Problem Solving pg 19 encourages students to use place value, rather than an algorithm • Practice and Problem Solving pg 21	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	The materials DO NOT provide repeated practice toward the attainment of fluecy of NBT 45,adding and subtracting multi-digit whole numbers using the standard altorithm. Work towards this fluency is limited to Lessons 3, 9 and 10. Additional practice for fluency is found in the Teacher Toolbox (online materials).	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there are single and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	Problem solving opportunities are plentiful and there is a mix of single step and multi-step problems to be solved. Two lessons (6 days) are explicitly devoted to multi-step word problems. The majority of lessons include either single or multi-step problems in class work, independent practice, and homework. Performance tasks, as well as Math In Action lessons require students work through multi-step problems. **Evidence-** • Math In Action: TE pg. 100E, students examine a complex problem and discuss how it was solved before progressing to solve multi-step problems on their own. • Practice and Problem Solving pg.91: has word problems, which involve multiple steps as well as multiple operations. This is homework practice for Lesson #9 Multi-Step Word Problems • Lesson 5 SE p. 59 #8 story problem: Yao blew up 8 balloons. Flora blew up 2 times as many balloons as Yao. Write an equation that represents the number of balloons Flora blew up.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	The major works of the grade are supported through application problems. Varied situation-type problems are used throughout the materials. The work required builds on prior learning, and is designated for teachers in the TRB. **Evidence-** • Array of Products:Practice and problem Solving p. 134 #4. • Equal Groups of Objects: Practice and Problem Solve p. 135 #2 • Lesson 5 SE begins with arrays, and then moves to all the different problem types.	

Does modeling [illegible] slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	Modeling is a focus using a variety of ways throughout this program. Each lesson provides teachers with guidance to implement modeling into the instruction. Students are expected to utilize models in solving problems as well. Complexity of models is increased as concept complexity increases. Connections to previous models are made as well. **Evidence-** • Lesson 13 SE p. 145 shows fractions equivalence with a model. Throughout the lesson, students are asked to use models to answer questions and support their thinking about fraction equivalence. • Lesson 13 SE p. 146 connects a model for hundredths to tenths. • Practice and Problem Solving p. 158: students are asked how they used the numberline to show how the two fractions compare.	
Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** **AC1** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:** • **Provided many opportunities for multi-step problem solving.** • **Abundance of modeling** **Weakness:** Practice, and time devoted to fluency of the skill is weak.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	The practice standards are clearly identified in each lesson for teachers to help make their use intentional. Students reflect on these standards in performance tasks at the end of units. Support for teachers for practice standards appears in a variety of places and ways in the TRB. **Evidence-** • The mathematical practices are stated at the beginning of the Student Edition with explanation (SE pg SmP1-SMP8) • Lessons integrate the mathematical practices through the Reflect portion. SE pg. 37 Use mathematical practices. As you work through the problem, discus these questions with a partner. Use structure…Use a model…. • In the TE, connections to SMP are provided. TE p. 245 Repeated Reasoning. Point out to students….	**(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	The mathematical practice standards are present in each lesson through assignments, activities and problems. **Evidence-** • SMP are built into the instruction and problems throughout the student book. • Performance Tasks in the Practice and Problem Solving Guide ask students to reflect on Mathematical practices. P. 241 • The mathematical practices are stated at the beginning of the Student Edition with explanations (SE pg SMPi-SMP8)	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	Correlations are in the table of contents of the TRB Materials are developed throughout the year	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	Practice standards are listed with content standards on 1st page of each lesson overview in TRB The materials provide numerous resources for teachers to strengthen their knowledge and application of the standards for mathematical practice. **Evidence-** • The Table of Contents (TE pg A4-A7) state the embedded standards for mathematical practice for each lesson. • On page A16-A17 of the TE, it is stated where each SMP is embedded in daily lessons.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	The materials place a strong emphasis on a student's ability to reason and provides numerous opportunities to practice their reasoning skills. Students must explain, justify, show, or prove their thinking daily. Guided instruction questions and mathematical discourse questions are provided in each lesson for small groups and/or whole class discussions **Evidence-** • In lessons, students are asked to reflect. On SE pg 177, they must explain how they could figure out how many halves are in 3 ½. • In the Practice and Problem Solving book p. 307, the entire exercise focuses on Reasoning and Writing. • Each unit has a performance task, found in the practice and problem solving book, which has a question directly related to reasoning mathematically. P. 341. How did you decide which yard and flower borders Joey should work on? • In daily lessons, students are asked to Pair/Share with another student SE p. 205 Chelsea chose D. How did she get that answer?	**____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	Students are expected to explain, share their thinking, create models and/or diagrams in each lesson. **Evidence-** • Each lesson has a modeling component SE pg. 242 First students are provided a model as an example, and then they create a model. • A connection and/or explanation to the model is also required in most lessons SE p. 298 #15 Look at Model It on the previous page Explain how you could use the number line with arrows to find the difference between the two lengths. • Practice and Problem book p. 158 #5 Explain how you used the models in problem 3 to show how the two fractions compare in problem 4.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	The materials are weak in their use and teaching of the language of mathematics. Vocabulary is stated for each lesson, with those words in bold in student materials. However, there is explicit instruction on language for argument, problem solving, and mathematical explanations. **Evidence-** • TE pg 122a Lesson Vocabulary	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:
Strengths: Consistently present in every lesson.
Clearly laid out for teachers in regards to math practices.

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Support for ELL's is provided in the materials through notes in the TE, as well as suggestions for visual models, and visual models in the SE.

Evidence-

- TE pg 123 English Language Learners note: Be sure students understand the parts of a division problem (includes reference).
- Visual Model (TE p. 144) Explore equivalent fractions on a number line.
- TE pg. 266 ELL hands on exercise to make sure students know what capacity means.

Reviewer only.)

_X___Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	The progression is clearly spelled out There are extensions, challenged, ELL tips, quick checks and remediation tips provided. Lesson progress from modeled and guided instruction to guided practice to independent practices and assessments are available. Practice can be individualized for students by the teacher. Differentiated instruction is found at the end of each lesson. **Evidence-** • Learning Progressions provided in each lesson create an awareness of what skills students should already have This can help provide scaffolding for students below grade-level (TE p. 112a) • Small group differentiation (TE p. 112b) • Personalized learning available on iready.com • Quick check and remediation (independent practice) TE p 184 • Differentiated Instruction ideas for 3 levels TE pg 165b	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	The mix is provided through modeled and guided instruction in each lesson. Activities and visual models in each lesson are provided. The teacher toolbox offers variety as well. Many opportunities to incorporate Pair/Share are available for teachers and students, with questions provided to the teachers. Guided instruction includes questions that have students think about and understand different representations and how they are related. **Evidence-** **The following are found in Lesson 16 which is 5 days:** • **Hands-On Activity (TE p. 167)** • **Picture It SE p. 168. Use a picture to help understand the problem** • **Model It SE p. 168. Use a number line to help understand the problem** • **Visual Model TE p. 170 connect the picture and the number line.** • **Pair/Share SE p. 172-173**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students Materials must provide supports for English Language Learners and other special populations. **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** S: Many supports for ELL, Tier 1, 2 and 3 resources. S: gave teachers guidance on what to do if a student was making a particular mistake or displaying a specific misconception.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Each lesson contains clear progression from whole class instruction to guided practice to independent practice. Much questions and discussion is included in each, as it the use of models to represent the work being done. All lessons are structured in a manner providing students with support and time to become independent. Evidence: Lesson introduction, modeled and guided instruction, guided practice, independent practice, lesson quiz	**(Reviewer only.)** **__X____ Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	Both problems and exercises are provided for each skill and exercises spiral throughout the program. All standards are represented through these problems and exercises. **In the introduction and modeled and guided instruction, students participate in solving problems. As students gain experience and practice with the concept, they transition to solving exercises in the Independent Practice portion of the lesson.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	There is a clear progression, from grade to grade, and throughout each grade's standards. Clearly noted for teachers to see the progression and help them understand the importance of meeting their grade level needs to prepare students for the expectations in the next grade level. Evidence-Lessons begin "Use What You Know" to provide connections to student's prior knowledge and then transitions to "Find Out More" which adds to the student's knowledge base and leads to deeper learning. (SE p 104-105) **Problems in Independent practice increase in difficulty throughout the assignment**	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	The materials provide teachers support in teaching the lesson as well as providing a deeper understanding of the concepts themselves. Evidence: • Progression Chart (beginning of each unit) shows what students are building on and what the lesson is preparing students for (TE p. 239a-b) • Lesson Learning Progression tells teachers what students have done in previous grades, will do in this grade, and the next grade. • Lessons provide real world connections (TE p. 242) • Concept Extensions (TE p. 245) • Mathematical Discourse provides questions teachers can ask to deepen student understanding (TE p. 286) • Quick Check and Remediation provide explanation of why students may have given an incorrect response and how to remediate based on the response (TE p. 308)	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Manipulatives are occasionally shown in both modeled and guided instruction. When suggested, they are appropriate.	**(Reviewer only.)** **_____ Yes** **____X__ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Many options for formative and summative assessments. **Evidence-** • Try It Questions, Guided Practice, Pair/Share, Lesson Quiz-included in each lesson. • At the end of each Lesson is a Quick Check • At the end of each unit is an Interim Assessment • Benchmark Assessment (3 times a year) • Teacher Toolbox (online) has quizzes	**(Reviewer only.)** **__X____ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	All assessments for the materials contain rubrics, answer keys, and score guides. Performance tasks have rubrics as well. **Evidence-** • Interim Assessment Solutions TE p. 236-238a • Quick Check and Remediation TE p. 258	**(Reviewer only.)** **__X____ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Materials used to assess for proficiency are appropriate to the grade level, and are not biased. All students receive the same opportunities to display proficiency.**	**(Reviewer only.)** **____X__ Yes** **____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Teacher advisors and authors are listed in the front of the TE.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The student edition seems to be engaging. The lessons follow a format that is consistent and easy to follow. Some pictures are included, with many tables, graphs, and charts. These items do not distract from the math.	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	The materials are created to engage parents and support parents and students with math work at home. **Evidence-** There are family letters, family activities, practice and problem solving parent pages and an APP that is free that could be used at home with families.	**(Reviewer only.)** **__X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary Title/Level: Fourth Grade Ready Common Core

Publisher: _Curriculum Associates_____ Copyright: __2016
Reviewer ID # ___TJ and AJ_____ Date Review Completed:_3/8/2016_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **___X____ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **__X___ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **__X___ Meets _____ Does Not Meet**	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access Standards for All Learners
Points: ___5__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	**Points: __6___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	**Points: __6___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Curriculum Associates
Title:	Ready Common Core
ISBN #	
Grade Level(s) or Course:	5th grade
Reviewer ID:	TJ AJ

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY: Ready Common Core 5th grade meets focus, rigor, and coherence standards.

FOCUS- Ready Common Core 5th grade is aligned to all standards for 5th grade. The majority of lessons are focused on the Major Works of the grade.

COHERENCE-
The supporting works are clearly identified and support the major work of the grade.

RIGOR-
Ready Common Core student materials are presented in an engaging manner to students as they interact with rigorous math problems. Practice toward fluency in fifth grade is weak.

CONCEPTUAL UNDERSTANDING-
Ready Common Core 5th grade uses modeling, guided instruction, and discussions to build students conceptual understanding of math concepts presented.

MATHEMATICAL PRACTICES-
Ready Common Core integrates mathematical practices into all lessons. The materials provide support for teachers in understanding and implementing the mathematical practices.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Ready Common Core provides support for all learners through resources found in the teacher manual. ELL resources provide appropriate supports. Differentiation opportunities are appropriate.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	Ready Math does not assess listed topics that are beyond 5th grade on 5th grade assessments. All materials included in Ready Common Core are aligned to the standards for 5th grade. Future grade level concepts may be alluded to, but are not assessed. The materials stick to the concepts, skills, and strategies stated in the standards. In the online tools for multiplications, it mentions the traditional algorithm, but does not teach to it. Each lesson includes a learning progression for the teacher, which provides connections to previous grade levels skills, the current grade level, and then extends to the following grade level. However, these topics are for teacher information only, they are not included in the lesson. **Evidence-** • Table of Contents (TE) A42-A43 • Math Assessment Booklet (SBAC Edition) • Interim Assessments • Lesson Quizzes included in the Teacher Toolbox (online) • Correlation Charts (TE) B3-B7	**(Reviewer only.)** **___X_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X_Meets** **____Does Not Meet** **Strengths/Weaknesses: Focuses on assessing 4th grade standards.**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	The majority of the work is designed as the Major work of 5th grade. The program designates in the table of contents with an "M" if that content is a major work, making it easy for teachers to know what lessons ARE focused on the major work. With 31 lessons in the text, 22 are devoted to major works, equaling 71% When checking areas labeled as "M", it was found that they were indeed part of the major work for 5th grade. **Evidence-** • Year-Long Pacing (TE) A42-A43 • Correlation Charts (TE) B3-B7 • Unit Overviews • Individual Lesson Pacing Guides	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Supporting work is clearly identified in the table of contents. Materials provide coherence throughout each lesson in grade 5. The supporting works for the grade are not isolated from the major works. For example, in **Measurement and Data** (a supporting work), connections to using **perform operations with multi-digit whole numbers and with decimals to hundredths** (a major work) are made in most lessons. Connections to **Number and Operations-Fractions** (a major work) are also made within **represent and interpret data** (a supporting work). **Evidence:** • Lesson 21: Connects Measurement and Data with operations with decimals and whole numbers. Students convert measurements, by multiplying a whole number by a decimal, fractions, or whole numbers. • Lesson 23: Connects representing and interpreting data with number and operations in fractions as students use fractions to create line plots, and then answer questions which involves calculations with fractions.	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Before each unit is a chart that shows "which lessons are students building on". This chart shows previous grade lessons that led to the relevant 5th grade lessons in the unit. It also shows what lessons the 5th grade lessons are preparing students for as they proceed to 6th grade. Prerequisite skills are also specified in the lesson overviews for each lesson along with a statement made on the learning progression that includes prior year, now and next year's information. Review of lessons reflects that these overviews coordinate with grade level standards. **Evidence-** • Teacher Toolbox (online) • Lesson unit progressions TE: Lesson 22 p. 222a previously students….in this lesson..in Grade 6…. • Unit 2: Which lessons are students building upon p. 93A (TE)	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials g[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Connections for remediation are at the end of every lesson as quick checks, alo[illegible]with suggestions for remediation, if needed. Both are designed to keep students working at the grade level. Lessons from the previous grade level are also listed that could be used as extra teaching and practice if needed to get students more ready for the current grade level work. Challenge activities are provided as well. The teacher manual makes connections to DOK for problems in the SBR. **Evidence-** • TE: Lesson 10 p. 102 Quick Check and Remediation • TE: Lesson 18 p. 167 Challenge Activity • Online Teacher Toolbox: Reteach tab	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The prior learnings are explicitly laid out for teachers at the beginning of each unit, as well as in the remediation information. Problems are provided at the beginning of most lessons that encourage students to access prior knowledge. "Use What You Know". Self-checks are included so students can identify skills they already have as they start the unit. Prerequisite skills are listed for the teacher as well. Lessons are identified to pre-teach for those who may not be ready for the new information that is going to be taught in the current lesson. **Evidence-** • Lesson 16: SE p 142 "Now that you have learned how to multiply fractions, take a look at this problem." • Lesson 91: SE p. 180, "You know about the order of operations. Now you will see how using parentheses in an expression can change the value of the expression." • Lesson 5: SE p. 34 In grade 4, you multiplies…	**(Reviewer only.)** **___X_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Progressions show previous grade material but it is not the work in this grade. Previous lesson identification is provided for teachers (in the introduction of the lesson) to easily access if needed to help those who are behind. The Teacher Toolbox (online) also clearly identifies content from previous grade levels. **Evidence-** • Lesson 8 Overview (TE) p. 600a Prerequisites skills for the lesson and connections to learning progressions from grade 4. • Teacher Toolbox (online) Reteach Ready Prerequisite lessons	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Objectives are directly shaped by CCSS cluster headings. Correlations are identified for teachers in each lesson. **Evidence-** • Clusters within Operations and Algebraic Thinking: Primary Instruction in Unit 3; Applied and extended in Unit 4. • Cluster is extending previous understanding of multiplication and division to multiply and divide fractions. Lessons 10-14 (pf TE p 94a support the learning of this cluster)	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Math In Action lessons in each unit help students in how to tackle complex problems, like performance tasks. These lessons are connecting clusters. In the lesson overview, it states the cluster, standards, and then additional domains. In fifth grade, the cluster of perform operations with multi-digit whole numbers and with decimals to hundredths which is the Number and Operations in Base 10 domain is connected to the Operation and Algebraic Thinking and Number and Operations-Fractions domains throughout the materials. Topics are combined on the interim assessments at the end of units as well.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Strengths:

- **Support for teachers in easily accessing the progressions.**
- **Connections made for students to prior knowledge**
- **Amount of time spent on major works of the grade**

Weaknesses:

- **Could be stronger in connecting clusters or domains**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set ex[illegible]expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	Conceptual understanding is addressed through the modeling and the guide[illegible]struction provided in each lesson, as well as though the Connect It activities. The TRB designates with the word "understand" in the table of contents the lessons that will focus on conceptual understanding. **Evidence-** • Connections to place value are made when teaching about the powers of ten (SE p. 8) • Lesson 6 (SE pf. 43) uses the area model to begin the division lesson, and then transitions to partial quotients.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	Students are asked to discuss with partners, write about it and identify when errors were made, etc. Direct questions to be used with class are provided in the TRB. Questions are also provided in the SE and the TRB in the Explain, Compare and Connect it sections. **Evidence-** **5.NBT.6** • The area model shows 345 divided by 15 (SE pg. 43) • "How is dividing with an area model similar to multiplying with an area model?" (SE pg. 43) • "Use the relationship between multiplication and division to estimate the quotient in a division problem (SE pg. 44) • Which equation cannot be represented by the model below? (SE pg. 48) • SE pg 95 "Write a multiplication equation that shows how the denominators of ¼ and ½ are related. Explain how this equation helps you write ½ as an equivalent fraction with a denominator of 4.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	Opportunities to identify correspondences are provided throughout with discussions, mathematical discourse, picture it, model it, connect it opportunities. **Evidence-** • SE pg 95 Explain why you chose the type of model you did to solve this problem. • TE pg 35 Use the area model to illustrate the standard algorithm • SE pg. 34 'Why is the area model divided into six sections?" • SE pg. 37 "How do the three partial products in each multiplication equation….relate to the three sections in each row of the area model?"	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **_X___Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	Student's progression toward fluency is balanced with procedural skills. Practice, and time devoted to fluency of the skill is weak. **Evidence-** • In the materials 5.NBT.5, is taught in only 1 lesson, which should last only 3 days. • Practice for mastering fluency is weak and dedicated only to the identified lesson on multiplying multi-digit whole numbers using the traditional algorithm (Lesson 5). • Additional practice is found in the online materials.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	There is procedural practice found in the practice and problem solving book……both those that allow opportunistic strategies and those that require more traditional use of algorithms. • Fluency pages 352 and 353 in Practice/Problem Solving Book, opportunistic: problem 3 and 19 • SE pg. 58 practice problems (*3 would require an algorithm) • Practice and Problem Solving pg 61 would require algorithms • Practice and Problem Solving pg 178 would support the use of a model to solve the story problem.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	The materials DO NOT provide repeated practice toward the attainment of fluecy of NBT 5, multiplying multi-digit whole numbers using the standard algorithm. Work towards this fluency is limited to Lesson 5. Additional practice for fluency is found in the Teacher Toolbox (online materials).	

Metric AC1C: **The material[illegible]e designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Yes, through the Introduction[illegible] the modeled and guided instruction, students and teachers spend a significant amount of time with engaging applications, focused on the major work. Fifth grade standards that call for application specifically are 5.FB.6 and 5.NF.B.7c 5.NF.B.7c is addressed in Lesson 18, on pages 158 a-167.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each quest[illegible]nd rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	Problem solving opportunities are plentiful and there is a mix of single step and multi-step problems to be solved. The majority of lessons include either single or multi-step problems in class work, independent practice, and homework. Performance tasks, as well as Math In Action lessons require students work through multi-step problems. **Evidence-** • Math In Action: TE pg. 82A students examine a complex problem and discuss how it was solved before progressing to solve multi-step problems on their own. • "Mr. Bernstein will cut 8 pies into pieces that are each 1/6 of the whole. After he cuts the 8 pies, how many pieces will Mr. Bernstein have" SE pg. 16. • Practice and Problem Solving pg. 254: Using data in the line plot to solve. IF Miguel uses 2 of each length strip to make a line, how long would it be?	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	The major works of the grade are supported through application problems. Varied situation-type problems are used throughout the materials. The work required builds on prior learning, and is designated for teachers in the TRB. **Evidence-** • Practice and problem Solving • "Corrine picked ¼ gallon of blackberries. She poured the berries equally into 4 containers. What fraction of a gallon is in each container? (SE pg. 164) • A sticker is ½ centimeters wide. How many stickers will fit edge to edge on a strip of paper that is 108 centimeters long? (SE pg. 80).	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	Modeling is a focus using a variety of ways throughout this program. Each lesson provides teachers with guidance to implement modeling into the instruction. Students are expected to utilize models in solving problems as well. Complexity of models is increased as concept complexity increases. Connections to previous models are made as well. **Evidence-** • Lesson 9 SE p. 72 shows a bar model to represent dividing a decimal by a whole number. SE pg. 74 shows 100 grids, dividing decimals. • Lesson 13 SE p. 122 uses the area model to show multiplying a fraction by a fraction. • Practice and Problem Solving p. 168! Students are asked to use the number line to solve 3 divided by 1/3.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X___Meets

____Does Not Meet

Strengths/Weaknesses:

- **Provided many opportunities for multi-step problem solving.**
- **Abundance of modeling**

Weakness:
Practice, and time devoted to fluency of the skill is weak.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** The practice standards are clearly identified in each lesson for teachers to help make their use intentional. Students reflect on these standards in performance tasks at the end of units. Support for teachers for practice standards appears in a variety of places and ways in the TRB. - Correlations in the table of contents (SE pg. SMPi-SPM8) - descriptors on page A9 of TRB - Content standards are on the first page of each lesson - tips highlighting different practice standards in each lesson are provided -	**(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	The mathematical practice standards are present in each lesson through assignments, activities and problems. **Evidence-** • SMP are built into the instruction and problems throughout the student book. • Performance Tasks in the Practice and Problem Solving Guide ask students to reflect on Mathematical practices. P. 185 • The mathematical practices are stated at the beginning of the Student Edition with explanations (SE pg SMPi-SMP8)	

Do the materials treat the practice Standards as developing across grades or gra[illegible]ds? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	Correlations are in the table of contents of the TRB	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	Practice standards are listed with content standards on 1st page of each lesson overview in TRB **Evidence-** • pg 8a and 168a in TRB • There are detailed descriptions on P. A16-A17 of TRB • The Table of Contents (TE pg A4-A7) state the embedded standards for mathematical practice for each lesson.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	The materials place a strong emphasis on a student's ability to reason and provides numerous opportunities to practice their reasoning skills. Students must explain, justify, show, or prove their thinking daily. Guided instruction questions and mathematical discourse questions are provided in each lesson for small groups and/or whole class discussions **Evidence-** • pgs. 142-147 TRB • In lessons, students are asked to reflect. On SE pg 105, they must explain which estimate makes more sense to them and why • Each unit has a performance task, found in the practice and problem solving book, which has a question directly related to reasoning mathematically. P. 185. How did you make sure that you had enough sunflower seeds for all your batches of snack mi? • In daily lessons, students are asked to Pair/Share with another student SE p. 133 Does Ollie's answer make sense?	**____Partially Meets (1)** **____Does Not Meet (0)**

Do the materials support students in producing not only answers and solutions, but also in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	Students are expected to explain, share their thinking, create models and/or diagrams each lesson. **Evidence-** • pair share/ pgs. 148 and 149 • Mathematical discourse questions page 146 • Let's Talk About it page 139 • Let's Explore the idea page 138 • Reflect, page 137 • Justify page 156 • Each lesson has a modeling component SE pg. 106 First students are provided a model as an example, and then they create a model. • Show that ½ divided by 3 = 1/6 by using a model. Explain why the result is less than the number you started with, ½.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	The materials are weak in their use and teaching of the language of mathematics. Vocabulary is stated for each lesson, with those words in bold in student materials. However, there is explicit instruction on language for argument, problem solving, and mathematical explanations. **Evidence-** • TE pg 190a Lesson Vocabulary • Practice and Problem Solving Vocabulary pages pg. 93-100	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** ELL tips are provided in many lessons, such as TRB pg 168 and202. Visual representations are used throughout the program, in modeled instruction and in practice work Visual models are provided in TRB frequently (TE p 113) demonstrate the connection between the two diagrams. Language is presented in student friendly way throughout Students are encouraged to answer questions verbally and in their own words Tips are provided for visual models to be used in instruction	**Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	The progression is clearly spelled out There are extensions, challenged, ELL tips, quick checks and remediation tips provided. Lesson progress from modeled and guided instruction to guided practice to independent practices and assessments are available. Practice can be individualized for students by the teacher. Differentiated instruction is found at the end of each lesson. **Evidence-** • Learning Progressions provided in each lesson create an awareness of what skills students should already have This can help provide scaffolding for students below grade-level (TE p. 120a) • Small group differentiation (TE p. 142b) • Personalized learning available on iready.com • Quick check and remediation (independent practice) TE p 166	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	The mix is provided through modeled and guided instruction in each lesson. Activities and visual models in each lesson are provided. The teacher toolbox offers variety as well. Many opportunities to incorporate Pair/Share are available for teachers and students, with questions provided to the teachers. Guided instruction includes questions that have students think about and understand different representations and how they are related. **Evidence-** **The following are found in Lesson 10 in 5 days:** • **Hands-On Activity (TE p. 94)** • **Picture It SE p. 96. Use a picture to help understand the problem** • **Model It SE p. 96. Use a number line to add fractions.** • **Visual Model TE p. 95 Relate halves to fourths.** • **Pair/Share SE p. 100-101** • **Concept Extension TE pg. 96** • **Differentiated Instruction 247 B**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Each lesson contains clear progression from whole class instruction to guided practice to independent practice. Much questions and discussion is included in each, as it the use of models to represent the work being done. All lessons are structured in a manner providing students with support and time to become independent. Evidence: Lesson introduction, modeled and guided instruction, guided practice, independent practice, lesson quiz	(Reviewer only.) __X____ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	Both problems and exercises are provided for each skill and exercises spiral throughout the program. All standards are represented through these problems and exercises. **In the introduction and modeled and guided instruction, students participate in solving problems. As students gain experience and practice with the concept, they transition to solving exercises in the Independent Practice portion of the lesson.**	(Reviewer only.) ___X___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	There is a clear progression, from grade to grade, and throughout each grade's standards. Clearly noted for teachers to see the progression and help them understand the importance of meeting their grade level needs to prepare students for the expectations in the next grade level. Evidence-Lessons begin "Use What You Know" to provide connections to student's prior knowledge and then transitions to "Find Out More" which adds to the student's knowledge base and leads to deeper learning. (SE p 104-105) **Problems in Independent practice increase in difficulty throughout the assignment**	(Reviewer only.) ___X___ Yes _____ No

4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	The materials provide teachers support in teaching the lesson as well as prov[illegible]g a deeper understanding of the concepts themselves. Evidence: • Progression Chart (beginning of each unit) shows what students are building on and what the lesson is preparing students for (TE p. 424 a-b) • Lesson Learning Progression tells teachers what students have done in previous grades, will do in this grade, and the next grade. • Concept Extensions (TE p. 264) • Mathematical Discourse provides questions teachers can ask to deepen student understanding (TE p. 266) • Quick Check and Remediation provide explanation of why students may have given an incorrect response and how to remediate based on the response (TE p. 22)	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Manipulatives are occasionally shown in both modeled and guided instruction. When suggested, they are appropriate.	**(Reviewer only.)** **_____ Yes** **____X__ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Many options for formative and summative assessments. **Evidence-** • Try It Questions, Guided Practice, Pair/Share, Lesson Quiz-included in each lesson. • At the end of each Lesson is a Quick Check • At the end of each unit is an Interim Assessment • Benchmark Assessment (3 times a year) • Teacher Toolbox (online) has quizzes	**(Reviewer only.)** **__X____ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	All assessments for the materials contain rubrics, answer keys, and score guides. Performance tasks have rubrics as well. **Evidence-** • Interim Assessment Solutions TE p. 208-210a • Quick Check and Remediation TE p. 166	**(Reviewer only.)** **__X____ Yes** **_____ No**

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Materials used to assess for proficiency are appropriate to the grade level, and are not biased. All students receive the same opportunities to display proficiency.**	**(Reviewer only.)** **____X__ Yes** **____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Teacher advisors and authors are listed in the front of the TE.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The student edition seems to be engaging. The lessons follow a format that is consistent and easy to follow. Some pictures are included, with many tables, graphs, and charts. These items do not distract from the math.	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	The materials are created to engage parents and support parents and students with math work at home. **Evidence-** There are family letters, family activities, practice and problem solving parent pages and an APP that is free that could be used at home with families.	**(Reviewer only.)** **__X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: __ Ready Common Core_____**

Publisher: _____ Copyright: __2016

Reviewer ID # ___TJ and AJ_____ Date Review Completed:_3/8/2016_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **___X___ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **__X___ Meets** **_____ Does Not Meet**

Non-Negotiable Overall:

__X___ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: ___5__ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **____X___ Meets** **_____ Does Not Meet**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **____X___ Meets** **_____ Does Not Meet**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **___X____ Meets** **_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

EVIDENCE SUMMARY:

FOCUS- The program maintains consistent focus on the concepts, skills and processes aligned to the Common Core Content Standards and Mathematical Practices. It is free of extraneous or non-aligned content.

COHERENCE- Mathematics is presented as interrelated concepts and skills. The Teacher Resource Book supports coherence and progressive development of ideas, concepts, skills and processes.

RIGOR- Scope and pacing of materials attends to the components of conceptual understanding, procedural skill, fluency and applications. The program sets high expectations for all three components throughout the materials for teacher, student and parents.

CONCEPTUAL UNDERSTANDING- Conceptual understanding is attended to thoroughly where the Standards set explicit expectations for understanding or interpreting. Materials provide students enactive, iconic and symbolic opportunities to develop and communicate understandings of the major clusters of the grade 6 Standards.

MATHEMATICAL PRACTICES- This is a strength of the program. Standards of Mathematical Practice (SMP) are embedded in each lesson. All Practice Standards are embedded in the instructions usually providing students opportunities for guided and independent engagement with the SMP. Each lesson focuses on 2 – 8 of the standards. All eight SMPs are embedded in each of the five units. Across the lesson, materials give teachers guidance on drawing out mathematical practices. The parent pages help guide parents in mathematical thinking.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Lessons are designed on a gradual release of responsibility model over the course of several days, i.e. Introduction, Guided instruction, Guided practice, Independent Practice. Differentiation, remediation and scaffolding support as well as the variety of approaches give teachers considerable guidance and support accessibility for all students.

OTHER:

The curriculum has easy navigation, teacher and student engagement, as well as purposeful focus on the mathematics.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: Curriculum Associates

Title of Material: Ready Common Core Mathematics, Grade 6

Author: Curriculum Associates

ISBN #: 9780760986417 **Copyright** 2014

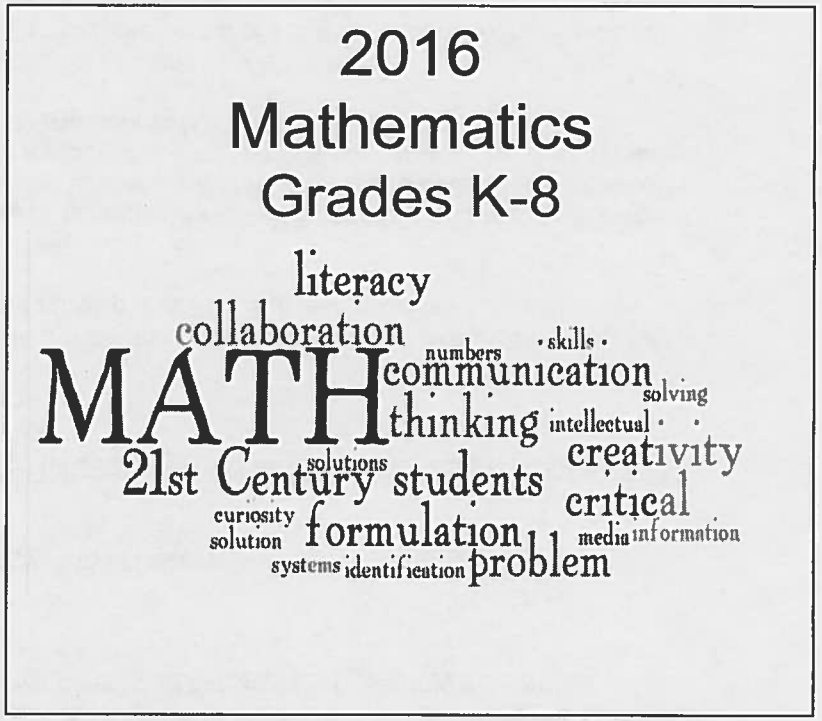
Reviewer ID: TS HC

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Differentiation is p[illegible]ided through online videos and intervention lessons for students without prerequisite knowledge. The teacher's manual includes Assessment and Remediation activities as well as Challenge Activities. The online Teachers Toolbox also provides extension activities for higher achieving students. Models and step by step procedures are provided throughout most lessons. The sequence is Picture It, Model It, Connect It, and Try It. This instructional pattern almost gives the sense that this textbook could be used as an intervention rather than as a core textbook. There is an opportunity for guided practice and independent practice within each lesson. The Practice and Problem Solving Workbook provides more opportunities for practice. Related games are also opportunities for on grade level practice.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson begins with a reminder of what the student learned in previous grades or in a previous lesson. For example, the lesson on Common Factors and Multiples reminds the students they have worked with factors in the past. Students are invited to "Use the math you already know to solve this problem," in the Explore It section of each lesson. Another example can be found in the reminder to use what the students know about place value when extending the division algorithm to decimal division. Example: p. 90 student workbook p. 102 student workbook p. 206 student workbook	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The structure of the lessons ensures that the students and the teacher are reminded of previous learning and then pointed to "Find out More." The content progressions provided for the teacher at the beginning of each unit clearly delineate the responsibility for learning at the sixth grade. The assessments, particularly the Common Core Assessment, also help students and teachers understand the learning responsibility for the sixth grade. There are no content standards taught outside of 6th grade content in this curriculum.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Evidence- The Ready Math Content is organized to reflect the domain sequence and the cluster to cluster sequence of the CCSS. The lesson objectives are essentially lifted from the CCSS clusters. For example, "Understand the concept of a ratio as a way of expressing relationships between quantities."	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Evidence- Lessons build towards application and problem solving. While there is not extensive evidence of an effort to connect clusters, the operations within the geometry unit and the coordinate graphing of polygons connect to work completed from Number System clusters. There is also some connections with proportional reasoning with percentages in the development of box and whiskers plots.	**(Reviewer only.)** **__X__Meets (but weak)** **____Does Not Meet/ Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X
____Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **___X_Meets (2)** **___Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding is attended to throughout the curriculum. Teacher manual p. 17 – Students are working with ratios and gaining a conceptual understanding of the relationship between ratios fractions and division and real world problems.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** The Concept Extension questions (see TRB pg. 31,90, 131) do provide for conceptual discussion questions. Hands on activities also enhance conceptual development. (p. 30, 47, 69) In the Practice and Problem Solving workbook, the students are given word problems and are directed to use a model to solve the problem. The students are asked to critique the reasoning of other fictitious students during practice.	

Do the materials feature opportunities to identify correspondences across mathema[illegible]epresentations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** A strength of this p[illegible]ram is that it continuously asks students to make correspondences across multiple representations. Students use ratio tables, bar models, double number lines, and grids throughout the lessons on 6.RP. They are asked to connect these representations and to connect the representations with words. p.117, 125, 136-137, 156, 298, 316	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	Evidence- 6.NS.B.2 Emphasis is place place value in the development of the division algorithm. Hands on activities are suggested along with opportunities for mathematical discourse through a discussion question. Students are asked to connect the partial quotients model with the standard algorithm. There is a question related to the use of halving and doubling. There is an emphasis on estimation/number sense. 6.NS.B.3 Again there is an emphasis on place value and estimation. Students are asked to consider the commutative and associative properties in adding decimals. Hands on activities and discussion questions are provided. Students are asked to find the errors in the work of fictitious students. Lessons 15-17 cover standards 6.EE.A with procedural skills interwoven with developing conceptual understanding.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** 6.NS.A – Students are taught how to perform operations with rational numbers using models, and number lines and algorithm. The use these opportunistic strategies to solve real world problems. Example: Student Workbook p. 59-64	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	Evidence- Multiple opportunities for practice are provided during the lesson and in the Practice Workbook. The workbook includes contextual problems as well as pages of "naked number" problems called fluency practice.	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All applications are connected to the major work. Lessons include visual models, math discourse, real world connections, hands on activities and challenge activities. Example:Teacher Manual- p. 222-230	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** 6.RP.A.3 Students are provided contexts with real world applications but are provided a series of questions to walk them through a path to the solution. Towards the end of the lesson, students are given problems similar to the ones they have just walked through. The Interim Assessments and the Performance task do provide an opportunity for multiple step problems as well as non-routine problems.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	Evidence- The application lessons are linked directly to the Major Work of sixth grade. All lessons have real world applications that link directly to the Major Work. Assessments include application problems and the performance tasks provide non-routine application of the Major Work.	

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The students are provided extensive instruction in the use of common models associated with the grade level content. Students are asked to make sense of models the book provides and are asked to provide models when given a context. Students are asked to use multiple representations throughout the Major Work lessons.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X___Meets

____Does Not Meet

Strengths/Weaknesses:
The program is very strong in application. The major weakness is in the area of conceptual understanding. The conceptual lessons are very "step by step" and do not rely on student thinking. Instead, student thinking is funneled by the textbook provided questions. This instruction tends to send a message to students that mathematics is less about them mathematizing their world and more about figuring out the author's reasoning. The procedural lessons are less problematic but are very directed toward developing the traditional algorithm. There is little consideration given to asking students to recognize when the traditional algorithm is the most efficient method.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** The Practice Standards are explained for the teacher in the Teacher Resource Book. There are also references to the Practice Standards associated with each lesson in the Teacher Resource Book. While not directly stated, the students are given the opportunity to demonstrate the Practice Standards within the lessons and within the Performance tasks. The students are not specifically made aware of this mathematical behavior. The students are asked to look for regularity in repeated reasoning as they develop algorithms for dividing decimals. Fluency practice in the Practice and Problem Solving workbook are actually labeled Repeated Reasoning and ask the students to find and use patterns.	**(Reviewer only.)** **_X_ Meets (2)** **___ Partially Meets (1)** **___ Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **___Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	Evidence- Students are asked to use multiple representations throughout lessons. There are opportunities for mathematical reasoning and for critiquing the reasoning of fictitious others. As the authors state: "Each Ready lesson leads students through new problems by using what they already know, demonstrates multiple approaches and access points, and gives encouraging tips and opportunities for cooperative dialogue.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	Evidence- Yes	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	Evidence- This information is comprehensively provided in the Teacher Resource Book in the introduction and in each lesson.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	Evidence- Students are given multiple opportunities to demonstrate MP3 through questioning strategies during small group discussions as well as in whole group discussions. Students also are required to explain their thinking in assignments and to critique and respond to fictitious students.	

Do the materials support students in producing not only answers and solutions, but also a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	Evidence- Students are asked to provide explanations, diagrams, and models throughout lessons and assignments. The use of models and diagrams is a strength of this program.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	Evidence- Each lesson provides the teacher with specific suggestions for teaching the associated vocabulary with a link to MP6. The Student Practice and Problem Solving Workbook includes a section on vocabulary associated with a lesson. Examples: Student Workbook p. 55, 155, 241, 293, 347	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:
Teachers are provided instruction related to the Standards for Mathematical Practices. Unfortunately, the students are not provided explicit instruction related to these standards. There is somewhat of a misalignment between Ready's interpretation of MP1 and that of the Publisher's Criteria. E

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** ELL support is specifically provided in the Ready lessons. Opportunities to address the needs of struggling or below grade level learners is provided in the Teachers Toolbox, through hands on activities, and in differentiated activities at the end of each lesson. Examples: Teacher Manual pgs. 113, 129, 139, 159	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Differentiation activities are provided at the end of each lesson and hands on activities are suggested at strategic points in the lesson. The Teachers Toolbox provides below grade level lessons and extension activities. The idea of gradual release is foundational to the program. Examples: Teacher Manual pgs. 166, 178, 210	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Evidence can be found throughout lessons- multiple representations are provided; questions are used to guide student thinking; questions include both high and low level (DOK 1, 2, & 3); multiple opportunities for small group and pair work. Example: Cognitive Rigor Matrix A11	**Reviewer only.)** **_X_ Meets (2)** **___Partially Meets (1)** **___Does Not Meet (0)**

Alignment Criterion 3:

Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .

(Reviewer only.)

_X_ Meets

___Does Not Meet

Strengths/Weaknesses:
An effort has been made by the publisher to ensure all students have access to grade level content, with particular focus on providing for gradual release. If anything, too much support is provided.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)

1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Lessons are thoroughly structured and lead the student through step by step learning. Student engagement is enhanced through questioning (student workbook- p. 59, 71) and opportunities for reflection (p 149, 153). Students are also asked to connect modeling with all operations and with concepts (p. 41, 45, 59)	**(Reviewer only.)** **__X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	Evidence- Students use both procedural and conceptual skills to solve problems and exercises throughout this curriculum. p. 83, 143, 145	**(Reviewer only.)** **__X__ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Assignments are aligned with the sequence of the cluster headings and standards. The assignments themselves build so that scaffolded support is withdrawn after extensive modeling and step by step sequencing. The SBAC Edition assessments reflect the rigor of the SBAC released items.	**(Reviewer only.)** **__X__ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	Evidence- Teacher materials include the Teacher Resource Book and the Teacher Toolbox. Progression charts are provided for each lesson and progression information is provided within some lessons. Teachers are alerted to opportunities and explanations for models as well as Error Alerts. The identified Step by Step flow of the lesson is identified and could serve as a source of professional learning. The Teacher Toolbox provides intervention and remediation, which directs teachers to content from previous grade levels. The progression charts and within lesson progression information helps the teacher see where the content is headed in the 7th and 8th grades. Refer to A13-A45 in Teacher Manual	**(Reviewer only.)** **__X__ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Hands On activities are suggested throughout the lessons, including extensive work with models. The models are directly related to the content and associated written methods. Teachers Manual- p. 69, 77, 87	(Reviewer only.) __X__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Formative Assessment is provided through the extensive use of questioning. Teachers are able to use verbal responses as well as student reflective responses to ascertain student achievement along progressions. Students are invited to self-assess at the beginning of a lesson. End of Unit Interim and SBAC Edition assessments are provided.	(Reviewer only.) __X__ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Performance tasks include aligned rubrics. Answer keys and scoring guides are provided. The iReady Assessments provide teachers with data for interpretation of student performance. The SBAC Edition assessments are aligned with the item types identified by SBAC.	(Reviewer only.) __X__ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- For the most part, the prompts reflect contexts typical students would have some familiarity with. The vocabulary of the cluster headings are used in the prompts. (examples: student workbook- p. 88, 98, 110)	(Reviewer only.) __X__ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- A list of Teacher Advisors is provided in the Teacher Resource Book. The name of the project manager is also provided. A separate document, The Research behind Ready: Building an effective Common Core Program, provides further evidence.	(Reviewer only.) __X__ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- The student material has very little color and has the flavor of a practice workbook. Salmon colored shading is used to highlight directions, thinking or specific problems. The book makes extensive use of models.	(Reviewer only.) __X__ Yes _____ No

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	Evidence- Each lesson in the Practice and Problem Solving Student book includes a letter to the parent with exemplary problems and models. (Examples: student workbook p. 97, 109, 119)	**(Reviewer only.)** **X** **_____ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: Ready Common Core Mathematics Grade 6**

Publisher: Curriculum Associates **Copyright: 2014**
ISBN: 9780760986417

Reviewer ID # [redacted] TS HC **Date Review Completed: March 5, 2016**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

X Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths: Fully aligned to standards, conceptual understanding attended to throughout, teacher and student friendly, vertical alignment charts, helps for differentiation

Weakness: Do not care for the salmon color paper.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Curriculum Associates
Title:	Ready Common Core
ISBN #	978-1-4957-0487-1
Grade Level(s) or Course:	7th
Reviewer ID:	DA TR

RECOMMENDED AS:

____X___**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
There are 33 lessons in the series and 18 of them are devoted to the major work of the grade. This represents 55% which is a bit below the lower acceptable range of 65%. However, two things are worth mentioning, the Major Work of the grade includes 4 of the 9 clusters (44%) and At least three other lessons (Lessons 18, 22, and 23) directly incorporate components of the major work like using expressions and equations and rational number sets. This pushes the percentage closer to 66% which is acceptable.

COHERENCE-

At the beginning of each unit, there is a visual of the standards from previous grade levels that the unit is building on (grade 6 and also grade 7 standards that are related). Then the unit highlights the content standards that are the focus of the unit. Finally, The standards that students are moving toward from the unit are also listed.

RIGOR-

The application problems do stress the Major Work of the grade. All the lessons are focused around making sense of and working through a standard or two. Some of the lessons overlap such as the angles measures in Geometry and expressions and equations. By the end of the year, students should come away with a strong sense of early equations and expressions work and a solid foundation of proportional reasoning. Application problems are also evident in Common Core part 5 practice.

CONCEPTUAL UNDERSTANDING-

Ready Common Core progresses through Picture It→ Model It→ Connect It→ Try It to help students attain conceptual understanding. *Ready Common Core* provides ample time for students to discuss questions and includes a pair-share section to encourage discussion.

MATHEMATICAL PRACTICES-

All Mathematical Practices are evident throughout the book labeled in TE as SMP Tips. Multiple SMPs are embedded throughout the lessons and within each lesson many of are specifically addressed as major points of emphasis.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Materials provide a range of learning styles support to help all students be successful.
The *Guided Instruction* sections do a nice job of providing some scaffolding for students that ELLs would benefit from. The lessons in general remove supports for students giving greater opportunity for independent work in places like the Common Core Practice section.

OTHER:

The materials are in a consumable workbook format which may be a significant cost. The series

also states that Professional Development is a requirement (at a cost).

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: Curriculum Associates

Title of Material: Ready Common Core

Reviewer ID: DATR

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble of the materials necessary for the evaluation. It is essential evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.
- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).
- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.
- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.
- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.
Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations.	**Evidence-** No assessment items cover any grade 8 items on similarity, congruence, or geometric transformations. Probability standards for grade 7 are addressed in the assessment items both what are referred to as Interim Assessments (Unit tests) and the larger SBAC prep items.	**(Reviewer only.)** **X Meets** **____Does Not Meet**

(Introduced in CCSSM in grade 8)
• Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4)

How to Find the Evidence:
Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics).

For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.)

In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Strengths:

The Ready Common Core materials do assess the topics listed above in varied ways including SBAC style items such as choosing true or false for multiple items, multiple correct and assisted response questions and open-ended free response questions.

Weakness: There are not a lot of problems for students to work with.

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** There are 33 lessons in the series and 18 of them are devoted to the major work of the grade. This represents 55% which is a bit below the lower acceptable range of 65%. However, two things are worth mentioning, the Major Work of the grade includes 4 of the 9 clusters (44%) and At least three other lessons (Lessons 18, 22, and 23) directly incorporate components of the major work like using expressions and equations and rational number sets. This pushes the percentage closer to 66% which is acceptable.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** At least three other lessons (Lessons 18, 22, and 23) directly incorporate components of the major work like using expressions and equations and rational number sets. Support work is blended with the Major Work	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might	**Evidence-** Each lessons has at its core a clear 7th grade standard. Each lesson also includes the standards coming before and sets the context for moving into the current standard. For example, Lesson 14 references the 6th grade standard that asks students to solve a one-step equation. The lesson goes on to tackle the multi-step equation from the 7th grade standard.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**

purposefully cho[illegible]o explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson includes a few problems in the lessons from the Instruction book, however, each problem does ask several layered questions surrounding the problem. For example in lesson 21, in the Modeled and Guided Instruction section, the problem is asking about areas of circles and rectangles and there are 6 questions all related to the one situation. Finally, there is an exercise that takes all the work and applies it in a similar way but a slightly different situation. There are also several problems/exercises for each lesson in the Practice and Problem solving book.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson utilizes a section called The Learning Progression where the lesson is framed within the context of the standards previously taught and how it relates to the week's lesson. An example is Lesson 20 where students are asked to find area, volume, and surface area of composed figures. The explicit work leading to this is the area and volume of independent figures (triangles, prisms, special quadrilaterals) from grade 6.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2F **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** At the beginning of each unit, there is a visual of the standards from previous grade levels that the unit is building on (grade 6 and also grade 7 standards that are related). Then the unit highlights the content standards that are the focus of the unit. Finally, The standards that students are moving toward from the unit are also listed.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each unit is titled after each of the Domains in the standards. The subsequent lessons are focused around cluster heading. For example the cluster heading: Analyze proportional relationships and use them to solve real-world and mathematical problems is from Unit 2. The first lesson in unit 2 focuses on complex fractions which is right out of the first standard under the cluster and the remaining lessons in Unit 2 are all focused on proportional relationships.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Lesson 8 students solve multi-step problems and in Lesson 18 students are representing the angle measure with an expression that is then used as part of an equation to find angle measures. Many of the lessons include supporting standards that are explicitly stated along the with focus standard and the SMPs for the lesson. Connections are made bringing previous knowledge into newly taught concepts.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths: the lessons in the materials focus on the Major Work of the grade in ways that are consistent with the progression. The beginning of each unit and lesson describe the progression that is a focus. This is clear and concise in each unit. The weakness is that each of the standards is treated more individually and explicit connections are not made as often.

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

X Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual u[illegible]tanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** *Ready Common Core* progresses through Picture It→ Model It→ Connect It→ Try It to help students attain conceptual understanding. The use of number lines in Lessons 1-3, and 7 support the conceptual understanding of operations with integers and rational numbers. The questions asked and problems posed ask students to make connections to the concept and also to work forward and backward in problems, helping to generalize the idea of addition and subtraction. The subtraction, however, does tend to rely on the procedure of changing subtraction expressions into related addition expressions. While this is not a major error, it does not conceptually underscore the notion of subtraction as distance between 2 points on the number line.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** *Ready Common Core* provides ample time for students to discuss questions and includes a pair-share section to encourage discussion. There are several questions asking students to explain the relationship of one operation is to another: "how is _____similar/different to _____". There is nice question generalizing position on the number line and their sum (p 6, Analyze).	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Many lessons use different mathematical representations (tables, graphs, pictures, models). The materials seem to put a premium on number line but do use other models like bar model, coordinate plane, and equations to connect the concepts together. Lesson 3, for example uses number line, bar model, and an equation to represent a contextual problem.	

Metric AC1E **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to [illegible]ate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Each lesson progresses in similar fashion in that there is an exploration followed by Modeled and Guided Instruction components. In these areas there are still several models to build and underscore conceptual understanding and several places where students are asked to explain thinking. The final pages of the lessons are can be considered more procedural fluency questions offering a variety of question types (MC, open ended, explain thinking). Multiple practice opportunities can be found in the Practice and Problem Solving book.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Practice and problems solving is included with each lesson. In Lesson 14 in the Practice and Problem Solving book, there are procedural exercises that present students with opportunities to experience the "long way" to do things along with the more efficient strategy like using the distributive property. In the same lesson, are asked to work the distributive property in reverse which requires understanding of the property and an efficiency to produce the correct expression.	

Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson engages students in a variety of applications and contextual situations as well as some procedural practice. The Problem Solving and Practice book also add problems and exercises dedicating adequate time to the Major Work of the grade.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** All lessons have problems from basic practice to multi-step problems.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are	**Evidence-** The application problems do stress the Major Work of the grade. All the lessons are focused around making sense of and working through a standard or two. Some of the lessons overlap such as the angles measures in Geometry and expressions and equations. By the end of the year, students should come away with a strong sense of early equations and expressions work and a solid	

natural and imp[illegible]. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	foundation of prop[illegible]onal reasoning. Application problems are also evident in Common Core part 5 practice.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Each lesson in a unit generally builds into the next in a logical progression. Students are encouraged to think independently and discuss their method of solving a problem. Within the lesson, the number sets do begin with manageable values. For example in lesson 12, the percents used in the early application and problems are more benchmark like 25%, 5%, and 10%. They do become more complicated using 8% and 2% as a commission rate. The previous models from earlier work in the lesson (like the bar model) can be useful in working these exercises.	

Alignment Criterion 1:
Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

(Reviewer only.)

X Meets

____Does Not Meet

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths/Weaknesses:

The strengths of the materials is in the application and attempts to include contextual problems in the materials. There is a good amount of opportunity to engage students in reflection of the content and trying to make connections within the content. There are many opportunities to include writing (even short) in the lessons and throughout the materials. A weakness is that there are occasional procedures that are emphasized where a deeper conceptual understanding should be encouraged, in particular the notion of subtracting integers as being a difference rather than encouraging adding the opposite as the primary means of arriving at the difference. Also, the multi-step problem seems mainly to be deconstructing a single problem rather than taking a single situation and ask students to work with in various ways looking at different problems to solve.

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** All Mathematical Practices are evident throughout the book labeled in TE as SMP Tips. Multiple SMPs are embedded throughout the lessons and within each lesson many of are specifically addressed as major points of emphasis. For example, attention is given explicitly to SMPs 1, 3, 4, and 7 in lessons 9, 10, 11, and 12.	**(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Each SMP is addressed at some point throughout the year. Each chapter embeds and highlights specific SMPs including the use of a calculator to be used as a tool. Many of the questions posed on the interim assessments address SMP 3, critique reasoning and make viable arguments.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** In the 7th grade the SMPs are continually being developed. For example, students are asked to compare and contrast in writing some of the major topics in proportional reasoning and at other times students are asked to examine and find error with another student's work.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Each lesson includes specific SMPs that are present and many of them are highlighted in a SMP Tip where the text provides insight into the purpose of the standard within the context of the lesson. For example, SMP 5 is highlighted in the statistics unit as a way to utilize calculators as a tool and in Lesson 12 SMP 1 is highlighted to be aware that students need encouragement when the problems become difficult and necessary information is not so obvious.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.**

Common Core Standards for Mathematics, Grades K–8 (Spring 2013).		(Reviewer only.) X Meets (2)
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** *Ready Common Core* allows for students to discuss and critique others through justification and reasoning. Nearly two-thirds of the lessons include specifically SMP 3. Most of the interim assessments include some form of SMP 3. For example, Unit 1 interim assessment asks students to describe the factors considered when making a certain choice of stocks (constructing a viable argument). There are also many Pair/Share questions that encourage SMP 3 such as asking students to explain how an estimate shows an answer is reasonable.	____Partially Meets (1) ____Does Not Meet (0)
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** The materials consistently ask students to produce explanations and justification for procedures and underlying concepts. Some of them are questions posed in the margins like: "how do you know the answer is negative?" (Lesson 7) and others are part of a longer problem set asking students to "explain how to find the number of people that can ride in a rollercoaster with 10 cars?" (Lesson 11).	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Each Lesson pulls out the specific math vocabulary and uses it contextually, usually in the first part of the lesson. The vocabulary is used in the context of the lesson not just highlighted and written as a list.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice**		(Reviewer only.) X Meets

Standards **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **The Standards for Mathematical Practice are evident throughout the materials including many opportunities for writing and critiquing work. There are opportunities for students to create viable arguments in discussions and in open ended responses. The weakness is the lack SMP 5 being utilized in more of the chapters focusing on the Major Work of the grade level and instead is emphasized in the supporting standards.** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports	**Evidence-** Many of the lessons include specific ELL support reminding teachers of small things they can do to support ELLs. For example, lesson 9 encourages that the teacher explicitly write down the unit 1 pound on the board and describe what we measure in pounds. This helps ELL by being able	**Reviewer only.)** **X Meets (2)** **____Partially Meets (1)**

offered for spec pulations.	to see the word in t and have examples. This is a frequent strategy but should also include not just describing what we measure in pounds but also to show images of items and also related words.	____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Materials provide a range of learning styles support to help all students be successful. The *Guided Instruction* sections do a nice job of providing some scaffolding for students that ELLs would benefit from. The lessons in general remove supports for students giving greater opportunity for independent work in places like the Common Core Practice section.	**Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Each lesson includes either the use of a visual model or some sort of hands-on activity or both. Modeling, Guided Instruction, Questions, Try It questions , Pair-Share, and Guided Practice are all evident. There are Mathematical Discourse guides within each lesson that helps to tease out of students those ideas that are important. They also include expected responses from students.	**Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**		**(Reviewer only.)** **X Meets** **____Does Not Meet** **Strengths/Weaknesses:**
