Strength: There are a number of solid suggestions for teachers to provide support to ELL students, including writing things on the board, discussion in pairs and small groups, and modeling correct language. **Weakness: there are not many suggestions that include bringing in realia or at least images of the vocabulary that is a focus of the lesson and this can be very helpful for ELL students to make sense of the mathematics.** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Each lesson includes a differentiation suggestion for Intervention, On-Level, and Challenge Activities. Throughout the series there are cartoon avatars in both the Student Instruction book and Problem Solving & Practice book. They are found in the margins and pose questions to students, offer the discussion strategy Pair-Share, and provide tips for problem solving.	**(Reviewer only.)** **X Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson provides a variety of learning styles from Introduction to Discussion to Modeling to Practice. The section of each lesson titled: *Modeled Instruction* uses problems and the section titled: *Guided Instruction* uses exercises. Each is connected specifically to the topic and to each other.	**(Reviewer only.)** **X Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Progression is systematic to help the students gain confidence as they progress to more difficult problems. Each lesson builds intentionally.	**(Reviewer only.)** **X Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Each lesson begins with the mathematical progressions of students, key vocabulary and lesson objectives. In Part 1 of each lesson, there are tips for targeting Mathematical Practices and facilitating mathematical discourse. There is also a step-by-step guide for a teacher that is new to the content or grade level. Student misconceptions are addressed to assist the teacher.	**(Reviewer only.)** **X Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** *Ready Common Core* utilizes many hands-on activities and the materials are usually items (number lines for instance) that are common in classrooms. For example, Lesson 9 utilizes small pieces of paper to represent fractional amounts that can be used as a model for dividing fractional amounts. The students would write the corresponding amounts down that are represented by the paper. Lesson 13's hands on activity uses grid paper for proportional relationships, and Lesson 14 uses Algebra tiles. Each of these can be connected to some iconic or abstract representation.	**(Reviewer only.)** **X Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** The summative assessment tools are fine. Formative assessments seem to be embedded as sidebar questions that students should respond to. The online component does include diagnostic tools. There is also a SBAC format assessment that students can take 3 times in the year. This also includes a scoring guide and rubric.	**(Reviewer only.)** **X Yes** **_____ No**

	The formative assessments are implied and for teachers new to the profession this may not be at first obvious. Identifying in the Teacher Edition where formative assessment tools are would be helpful.	
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Each unit has assessments aligned and scoring guides & rubrics that go along with them.	**(Reviewer only.)** **X Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Everything seems to be unbiased. Course level language is used throughout the text. Assessments include assisted response (choosing correct and incorrect), true false, short written responses, and performance tasks.	**(Reviewer only.)** **X Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** There are 17 individuals listed as teacher advisors including classroom teachers, math coach, reading specialist, research scientist, and curriculum coordinator.	**(Reviewer only.)** **X Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Visually, the layout is clean. The pages are not densely packed with words or images. The margins include cartoon style students that pose questions to consider and suggest methods to do so (Pair/Share). The text is easy to read and make sense of. There are essentially no images taken from real world situations.	**(Reviewer only.)** **X Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Each week is a new lesson, and each lesson in the Practice and Problem Solving book begins with a letter to the Family. Each letter describes the content to be addressed that week along with showing some ways students will be working through the content. There is also an online component. Each lesson includes some procedural work that many parents have experience and are familiar with; there is not an abundance of this problem type and there are no answers in the back. These problems are balanced with more conceptual work and performance tasks.	**(Reviewer only.)** **X Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: Ready Common Core 7**

Publisher: Curriculum Associates Copyright: 2010 **ISBN: 978-1-4957-0487-1**

Reviewer ID # TR DA **Date Review Completed: March 8, 2016**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets _____ Does Not Meet	X Meets _____ Does Not Meet

Non-Negotiable Overall:

X Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet

Alignment Criteria Overall:

_X_ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? X Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

The overall strengths of these materials is the commitment to encouraging the kind of thinking and work that is different in the Common Core standards. Getting away from an emphasis on rote procedure and instead placing more emphasis on conceptual understanding by asking students to think and respond to thoughtful questions and posing questions without obvious answers. The hands on activities are easy to implement as they often use common classroom supplies like paper or cutting paper. A weakness is that the material sometimes does not provide enough of the skill based practice, that procedural fluency piece; it is there, just not as balanced it seems.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Curriculum Associates LLC
Title:	Ready Common Core Mathematics
ISBN #	9780760986431
Grade Level(s) or Course:	8th Grade
Reviewer ID:	TR & TC

RECOMMENDED AS:

___X_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

No assessment items cover anything beyond grade 8 on similarity, congruence, or geometric transformations. Items on similarity, congruence, or geometric transformations can be found in the assessment items referred to as Interim Assessments (Unit tests) and the larger SBAC prep items.

COHERENCE-

There are 31 lessons in the series and 24 of them are devoted to the major work of the grade. This represents 77% which is within the acceptable range.

RIGOR-

Each lesson engages students in a variety of applications and contextual situations as well as some procedural practice. The Problem Solving and Practice book also add problems and exercises dedicating adequate time to the Major Work of the grade. All the lessons utilize an application and certainly a contextual situation at the beginning to ground the math in something real. However, not every lesson (in particular the geometry lessons) includes a real world based problem.

CONCEPTUAL UNDERSTANDING-

There are multi-step problems in most lessons, and it is often in the Connect It section. These sections ask questions that build on one single situation. For example, Lesson 10 shows a non-linear graph and several questions pertaining to the graph, culminating in asking students to summarize what the graph shows. Lesson 13 analyzes student work in a multi-step way and then asks students to choose a preferred method and explain why.

MATHEMATICAL PRACTICES-

Multiple SMPs are embedded throughout the lessons and within each lesson many of them are specifically addressed as major points of emphasis. The vocabulary in the text is taken straight from the SMPs. Page A9 of the TE explains the curriculum's approach to the SMPs.
For example, in Lesson 8, SMP 7 is a focus as a means of predicting linear or nonlinear functions. In Lesson 9, the focus is on SMP 8, repeated reasoning to make some sense of slope and the ratio it is born out of.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

The TE includes a coding method to differentiate instruction (B-basic, M-medium, C-challenging). Each lesson includes either the use of a visual model or some sort of hands-on activity or both. There does seem to be a shortage of models that represent the mathematics compared to a model such as underlining parts of numbers or expressions in certain colors (Lesson 3 and Lesson 5). There are some nice Mathematical Discourse guides within each lesson that helps to tease out of students those ideas that are important. They also include expected responses from students.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** No assessment items cover anything beyond grade 8 on similarity, congruence, or geometric transformations. Items on similarity, congruence, or geometric transformations can be found in the assessment items referred to as Interim Assessments (Unit tests) and the larger SBAC prep items.	**(Reviewer only.)** **X Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Strengths: the items are varied in that there are some assisted response questions, some very in depth questions requiring students to produce writing to support a position, and some are multi-step items requiring moving on from one part to the next.** **Weaknesses: There is not an abundance of problems and exercises for students to work with.** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **X Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

There are 31 lessons in the series and 24 of them are devoted to the major work of the grade. This represents 77% which is within the acceptable range.

(Reviewer only.)

X Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Lessons 28, 29, and 30 all ask students to utilize their knowledge of linear equations and equations of lines and apply it to the supporting standards of scatter plots. This is used to describe a data set and also to predict with an algebraic model.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lessons has at its core a clear 8th grade standard. Each lesson also includes the standards coming before and sets the context for moving into the current standard. For example, Lesson 14 references the 6th grade standard that asks students to generate equivalent expressions and solve one-step equations. Then it references the 7th grade standard that continues the trend of solving more complicated equations. Finally, the lesson extends understanding of solutions to include no solutions and infinite solutions, the 8th grade standard. There is also a reference to where the high school will extend these ideas further. Another example references other 8th grade standards that have been taught earlier in the book and the extension of those into other mathematical areas (Lesson 17). The Teacher Toolbox online allows easy access for reteaching concepts.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson includes a few problems in the lessons from the Instruction book, however, each problem does ask several layered questions surrounding the problem. For example in lesson 11, in the Modeled and Guided Instruction section, the problem is asking students to consider two graphs of lines that are proportional and there are 5 questions all related to the one situation. Finally, there is an exercise that takes all the work and applies it in a similar way but a slightly different situation. There are also several problems/exercises for each lesson in the Practice and Problem solving book.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson utilizes a section called The Learning Progression where the lesson is framed within the context of the standards previously taught and how it relates to the week's lesson. Each lesson includes prerequisite skills and vocabulary.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** At the beginning of each unit, there is a visual of the standards from previous grade levels that the unit is building on (grade 6 and grade 7 standards that are related). Then the unit highlights the content standards that are the focus of the unit. Finally, The standards that students are moving toward from the unit are also listed.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each unit is esse[illegible]lly titled after each of the Domains in the standards (Expressions and Equations Domain is split into 2 units, one focused on exponents and some of the Number System, the other on linear equations). The subsequent lessons are focused around cluster headings. For example, lessons 1, 2, 4, and 5 all support the cluster: Expressions and equations work with radical and integer exponents. In Unit 3 (the other half of the Expressions and Equations Domain), all the lessons in the unit are expressly tied to the proportional relationships and linear equations from the cluster: Understand the connections between proportional relationships, lines, and linear equations.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Topics are taught and then used repeatedly throughout the text. Lessons 23 and 24 both are focused on the Pythagorean theorem, but it is necessary to incorporate the concepts of squares and square roots as well as rational approximations. Lesson 5 focuses on using scientific notation (8.EE.A.4) which requires the overlap of standard 8.EE.A.1, using negative exponents.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths: Many resources available including the I-Ready online tool and the Diagnostic Test. The lessons in the materials focus on the Major Work of the grade in ways that are consistent with the progression. The beginning of each unit and lesson describe the progression that is a focus. This is clear and concise in each unit. The weakness is that each of the standards is treated more individually and explicit connections are not made as often.

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** The use of number lines in Lessons 3 supports the conceptual understanding of irrational numbers and that they exist as a number on the number line. Lesson 6 utilizes the mapping diagram to model the big idea that with a function every input has exactly one output. Lesson 12 uses similar triangles to build understanding of slope.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** The Reflect section asks thoughtful questions that are often stumbling places for students like Lesson 2 where students are asked the difference between dividing 16 by two and finding the square root of 16. In Lesson 12, the analyze question asks to critique another student's work and take a position of agree or disagree and defend it. In Lesson 18 problem 15, students are asked to identify the transformation in a design and then asked to create their own.	

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** The materials use a wide variety of commonly used items such as tables, mapping diagrams and graphs all found in the unit on Functions. Each of these is usually related to a context or situation. The number line is still used to represent rational amounts (unit 1). Scales and balances are used to represent the linear equation (Lesson 14). The students are asked to not only solve but also to explain. The Pair-Share tool is a valuable resource.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Each lesson progresses in similar fashion in that there is an exploration followed by Modeled and Guided Instruction components. In these areas there are still several models to build and underscore conceptual understanding and several places where students are asked to explain thinking. The final pages of the lessons are can be considered more procedural fluency questions offering a variety of question types (MC, open ended, explain thinking).	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** The tutorials in the already online component walk the students through problems. The Try It sections of the lessons are places where students can practice procedural problems and apply what they have learned in the lesson. For Example, in Lesson 13, students are asked to solve a linear equation and the examples provide multiple, efficient methods to arrive at the solution. Lesson 4 poses a question about scientific notation that might lead students to think of a simpler problem to solve, then move into a more efficient strategy to apply to the current problem.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson engages students in a variety of applications and contextual situations as well as some procedural practice. The Problem Solving and Practice book also add problems and exercises dedicating adequate time to the Major Work of the grade. All the lessons utilize an application and certainly a contextual situation at the beginning to ground the math in something real. However, not every lesson (in particular the geometry lessons) includes a real world based problem.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_____ Meets (2)** **X Partially Meets (1)** **____Does Not Meet (0)**

Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are multi-step problems in most lessons, and it is often in the Connect It section. These sections ask questions that build on one single situation. For example, Lesson 10 shows a non-linear graph and several questions pertaining to the graph, culminating in asking students to summarize what the graph shows. Lesson 13 analyzes student work in a multi-step way and then asks students to choose a preferred method and explain why.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** The application problems do stress the Major Work of the grade. All the lessons are focused around making sense of and working through a standard or two. Most of the early work in each lesson is built around some sort of application.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Each lesson in a unit generally builds into the next in a logical progression. Within the lesson, the number sets do begin with manageable values. In Lesson 14, the models used are very simple scales to remind students of the nature of equality especially with linear equations. The models of functions (Lesson 6) also begin in a simple and iconic way with mapping diagrams. When looking at these diagrams, students can begin to formulate their own ideas of similarities and differences and apply that to early ideas of what makes a function.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

The strengths of the materials is in the application and attempts to include contextual problems in the materials. There is a good amount of opportunity to engage students in reflection of the content and trying to make connections within the content. There are many opportunities to include writing (even short) in the lessons and throughout the materials. Weaknesses include the missed opportunities in the Geometry unit to include application problems centered around real world situations. The multi-step problems are a weakness in that the Connect It portion of the lessons is very directed and not very open ended for a variety of student work.

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Multiple SMPs are embedded throughout the lessons and within each lesson many of them are specifically addressed as major points of emphasis. The vocabulary in the text is taken straight from the SMPs. Page A9 of the TE explains the curriculum's approach to the SMPs. For example, in Lesson 8, SMP 7 is a focus as a means of predicting linear or nonlinear functions. In Lesson 9, the focus is on SMP 8, repeated reasoning to make some sense of slope and the ratio it is born out of.	**(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Each SMP is addressed at some point throughout the year. There is a performance task at the end of each unit and it asks students to "Reflect on Mathematical Practices". Each chapter embeds and highlights specific SMPs including the use of a calculator to be used as a tool. Many of the questions posed on the interim assessments address SMP 3, critique reasoning and make viable arguments.	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** The materials treat the SMPs with a fair degree of sophistication at the 8th grade level but still recognizes the value of going to visual models like scales and balances (Lesson 14). In Lesson 15, students are examining different forms of linear systems (tables, graphs, equations) and analyzing them. This example of SMP4 is more sophisticated than the use of number lines or bar models to highlight SMP4.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Each lesson includes specific SMPs that are present and many of them are highlighted in a SMP Tip where the text provides insight into the purpose of the standard within the context of the lesson. For example, SMP Tip for Lesson 16 reminds teachers that modeling a problem can be accomplished by using the graph and the model can be abstract (equation) or visual (graph).	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **X Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Students are given many opportunities to Explore, Reflect, and Model. The Pair-Share prompts students by asking thoughtful questions. Nearly two-thirds of the lessons include specifically SMP3. Most of the interim assessments include some form of SMP3. For example, Lesson 4 asks students to explain the display a student got on a calculator. Lesson 5's Common Core Practice section asks students to compare 2 different students' answers and decide if one, both, or neither are correct and explain. Interim Assessment for Unit 2 has a performance task that explicitly asks students to "critique and argue."	____**Partially Meets (1)** ____**Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** The materials consistently ask students to produce explanations for procedures and underlying concepts. Interim Assessment for Unit 2 has a performance task that explicitly asks students to "critique and argue." Lesson 11 asks students to reflect on proportional relationships and determine if it is possible that all proportional relationships are linear functions but not all linear functions are proportional relationships.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Each Lesson pulls out the specific math vocabulary and uses it contextually, usually in the first part of the lesson. The vocabulary is used in the context of the lesson not just highlighted and written as a list.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

The Standards for Mathematical Practice are evident throughout the materials including many opportunities for writing and critiquing work. There are opportunities for students to create viable arguments in discussions and in open ended responses.

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Many of the lessons include specific ELL support reminding teachers of small things they can do to support ELLs. They use real-life examples like the vending machine in Lesson 6, and often encourage teachers to write things on the board and also to have students recite key words. There is also occasional connection to cognates like linea and lineal and linear (Lesson 8). Many of these strategies, however, do not necessarily seem like they are targeted to ELLs. Writing something down on the board is helpful to all students but is not necessarily focused on ELL learning.	Reviewer only.) ____**Meets (2)** **X Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The *Guided Instruction* sections do a nice job of providing some scaffolding for students that ELLs would benefit from. For example, in Lesson 8, there is a section called Talk About It (always a good idea with ELLs) where students solve problems in group and are given a table to complete as a scaffolded element of instruction.	Reviewer only.) **X Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The TE includes a coding method to differentiate instruction (B-basic, M-medium, C-challenging). Each lesson includes either the use of a visual model or some sort of hands-on activity or both. There does seem to be a shortage of models that represent the mathematics compared to a model such as underlining parts of numbers or expressions in certain colors (Lesson 3 and Lesson 5). There are some nice Mathematical Discourse guides within each lesson that helps to tease out of students those ideas that are important. They also include expected responses from students.	Reviewer only.) **X Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Strength: There are a number of solid suggestions for teachers to provide access to ELL students, including writing things on the board, discussion in pairs and small groups, and modeling correct language.** **Weakness: there are not many suggestions that include bringing in realia or at least images of the vocabulary that is a focus of the lesson and this can be very helpful for ELL students to make sense of the mathematics.** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **X Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)

1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Pacing guide found on Page A14 & A15 of the TE. Recommend 1 lesson per week. The margins pose questions to students, offer the discussion strategy Pair-Share, and provide tips for problem solving. Each lesson includes a differentiation suggestion for Intervention, On-Level, and Challenge Activities. For example, in Lesson 8, the intervention activity uses a table of values that are easy to work with to find and compare rates of change to determine a function or not; the on-level activity asks students to create equations with specific numbers to choose from to form a linear and non-linear equation, and the challenge activity asks students to compare 2 equations that are reciprocal coefficients.	**(Reviewer only.)** **X Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** The section of each lesson titled *Modeled Instruction* uses problems and the section titled: *Guided Instruction* uses exercises. Each is connected specifically to the topic and to each other. Lesson 14 uses a balance to model the principles of balance when solving an equation (*Modeled Instruction*) then the *Guided Practice* provides a scaffold to solving the equations. The Practice and Problem Solving book includes a variety of exercises of varying types of questions. For example, in the same lesson 14, some exercises are multiple choice, some ask for multiple approaches, some ask for critiquing the work of others.	**(Reviewer only.)** **X Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Each lesson builds intentionally. The flow charts "Which Lessons are Students Building Upon?" are helpful.	**(Reviewer only.)** **X Yes** **_____ No**

4. There are separate teacher materials that support and reward [illegible]her study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Each lesson begin[illegible]th the mathematical progressions of students, key vocabulary and lesson objectives. In Part 1 of each lesson, there are tips for targeting Mathematical Practices and facilitating mathematical discourse. There is also a step-by-step guide for teacher that is new to the content or grade level. The answer key gives more than just answers, but also includes brief explanations including alternative solutions and ways to solve, the DOK level, and item analysis.	**(Reviewer only.)** **X Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Many hands-on activities. Materials are ubiquitous and easy to use like cubes to compare functions and rates of change (Lesson7); cubes, tape and string to simulate slope/rate of change (Lesson 9); use of Algebra tiles (Lesson 13); using nickels and pennies to model equations and solve equations (Lesson 14).	**(Reviewer only.)** **X Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** The summative assessment and performance tasks are fine. The online component includes quizzes. There is a comprehensive diagnostic component. There is also a SBAC format assessment that students can take 3 times in the year. This also includes a scoring guide and rubric.	**(Reviewer only.)** **X Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Each unit has assessments aligned and scoring guides & rubrics that go along with them.	**(Reviewer only.)** **X Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Everything seems to be unbiased. Course level language is used throughout the text. Assessments include assisted response (choosing correct and incorrect), true false, short written responses, and performance tasks.	**(Reviewer only.)** **X Yes** **_____ No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** There are 17 individuals listed as teacher advisors including classroom teachers, math coach, reading specialist, research scientist, and curriculum coordinator.	**(Reviewer only.)** **X Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Visually, the layout is clean. The pages are not densely packed with words or images. The margins include cartoon style students that pose questions to consider and suggest methods to do so (Pair/Share). The text is easy to read and make sense of. There are essentially no images taken from real world situations. The choice to use the same shade of green (or blue or orange) might become monotonous.	**(Reviewer only.)** **X Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Each week is a new lesson, and each lesson begins with a letter to the Family. Each letter describes the content to be addressed that week along with showing some ways students will be working through the content. Each lesson includes some procedural work that many parents have experience and are familiar with; there is not an abundance of this problem type and there are no answers in the back. These problems are balanced with more conceptual work and performance tasks.	**(Reviewer only.)** **X Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: Ready Common Core Mathematics / 8th Grade**

Publisher: Curriculum Associates LLC **Copyright: 2014** **ISBN: 9780760986431**

Reviewer ID # TR & TC **Date Review Completed: March 8, 2016**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? X Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

These materials commit to encouraging the kind of thinking and work that is different in the Common Core standards. Getting away from an emphasis on rote procedure and instead placing more emphasis on conceptual understanding by asking students to think and respond to thoughtful questions and posing questions without obvious answers. The hands on activities are easy to implement as they often use common classroom supplies like paper or cutting paper. New teachers would find this to be a good resource. The I-Ready and Teacher toolbox are useful online components. The Diagnostic test would be very useful to assess student grade level.

Weaknesses:

The consumable workbook format may be costly. The materials state that Professional Development is a requirement (at a cost). The material sometimes does not provide enough of the skill based practice (procedural fluency piece); it is there, just not as balanced.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Explore Learning

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

The IMET was ped by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0 load this tool at http://achievethecore.org/IMET

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- **Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Not Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.**

- **Record and explain the evidence upon which the rating is based.**

Proceed to Section 4: Indicators of Quality

- **Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.**

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.
Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.**	**Evidence-** The listed topics are not assessed due to the nature of Reflex as a supplemental component program. Reflex is an adaptive, game-based	**(Reviewer only.)** **__x__ Meets**

• Probabi[illegible]ncluding chance, likely outcomes, probability models. (I[illegible]oduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non- Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	solution focus[illegible]on developing basic math fact fluency for students K-5.	____**Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** _x___**Meets** ____**Does Not Meet** **Strengths/Weaknesses:** The program adapts to the student's knowledge and ability.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:
Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)
Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)
Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.
For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-
Reflex devotes the large majority of time to each grade level Major Work focussing on fluency in mathematical operations.

K.OA.E Fluently add and subtract within 5.

1.OA.F Add and subtract within 20 demonstrating fluency for addition and subtraction within 10.

2.OA.B Represent and solve problems involving addition and subtractions.

2.OA.B Add and subtract within 20 (adding and subtracting 0-10).

3.OA.G Fluently multiply and divide within 100, using strategies such as the relationship

(Reviewer only.)

_x___Meets

____Does Not Meet/

Insufficient Evidence

	between multi ation and division or properties of operations. 4.NBT.D Fluently add and subtract multi-digit whole numbers using the standard algorithm. 5.NBT.E Fluently multiply and divide multi-digit whole numbers using the standard algorithm.	
Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Reflex does not include any Supporting Work; it is intended to build basic math fact fluency.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned.	**Evidence-** The Reflex program has a built-in adaptive component that allows students to work inside their personal knowledge base regardless if it matches the grade level of the student. Content from future grades does not interfere; it isn't even presented to the student until the adaptive lessons filter in the content. The teacher can assign different operational sets based on grade level curriculum and student need.	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**

For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students are presented with fluency problems that lie within fact-families. As students answer the questions, the program adapts to needed areas of focus. A typical session of Reflex lasts 15-20 minutes. Teachers have access to detailed reports.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Reflex will assess fact families that students already know as well as those the students have not yet mastered fluently. The program continually monitors the student's' progress and uses the data to individualize instruction.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The material is not separated into grade levels for the teacher or students. All material is presented as fact families that students may or may not know fluently. Student and teacher reports show where each student is performing and uses unassessed, not fluent, or fluent to delineate student performance.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.**	**Evidence-** There are no posted objectives for separate lessons; however there is an overall objective in	**(Reviewer only.)** **__x__Meets**

How to Find Evidence: Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	the teacher's guide that states to build fluency in mathematical operations. The program supports the following Standards: K.OA.E Fluently add and subtract within 5. 1.OA.F Add and subtract within 20 demonstrating fluency for addition and subtraction within 10. 2.OA.B Represent and solve problems involving addition and subtractions. 2.OA.B Add and subtract within 20 (adding and subtracting 0-10). 3.OA.G Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division or properties of operations. 4.NBT.D Fluently add and subtract multi-digit whole numbers using the standard algorithm. 5.NBT.E Fluently multiply and divide multi-digit whole numbers using the standard algorithm.	**____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The main purpose of Reflex is to build basic math fact fluency. Reflex does touch on commutative property and fact families during the coaching/instructional portion but students are assessed solely on automaticity of fact recall.	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Strength: individualized instruction is provided to master basic math fact fluency within grade level standards.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **__1_Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Reflex teaches math fluency as conceptually as possible by introducing fact families to show students the relationship between numbers and operations; however, conceptual understanding is not the program focus.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Fact families are presented in a variety of games. Conceptual understanding is not the focus of Reflex and so there are not high-quality conceptual problems.	

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** There is no variety in the mathematical representations: 9 x 4 or 4 x 9 is always just that. However, because the program focuses on fact families 9 x 4 and 4 x 9 is presented together with 36 / 9 and 36 / 4. Conceptual understanding is not the focus of Reflex. Other than the introduction of new facts through fact families, Reflex does not identify correspondences across mathematical representations.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **__1__Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The program focuses completely on building student fluency in addition, subtraction, multiplication, and division. Students are exposed to all related facts in a fact family therefore students are exposed to commutative and inverse operations at the same time within their grade level standards.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** This program focuses on instant recall and does not provide opportunistic strategy type problems.	

Do the mat[illegible] in grades K–6 provide repeated practice toward attainment o[illegible]ency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Students have repeated practice toward fluency Standards. Reflex sessions are built to last 15-20 minutes to build basic math fact fluency. Each session includes a diagnostic piece, coaching session, practice session, and constantly assesses and reports progress.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students spend 15-20 minutes in Reflex engaged in games that build their fluency in fact families.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **____Meets (2)** **__1__Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are no multi-step problems, nor are there problems related to real-world situations. Reflex focuses on automaticity; however, as the students progress through the games they are forced to recall basic facts with less attention as to ensure ability to recall facts in other situations.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** All problems are focused on Major Work Standards that stress fluency. During the coaching sessions the students are asked to answer facts with unknown variables based on the fact family being introduced.	

Does model[illegible]uild slowly across K–8, with applications that are relatively sim[illegible] in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Reflex does not provide instruction on modeling problems and does not assess students on modeling problems. It's sole purpose is to build basic math fact fluency.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

__3__Does Not Meet

Strengths/Weaknesses:

Strength: Reflex is intended to be used to build math fact fluency in all operations. Reflex uses student's speed and accuracy to demonstrate mastery of these skills only. The teacher can differentiate addition/subtraction problems versus multiplication/division based on student skill set. Student is progress is continually monitored, updated, and reported to both student and teacher.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

Rating this Criterion
Alignment Criterion 2 is rated as Meets or Does Not Meet.
To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	• Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	three metrics is 6 points. Ideally, all materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** The program does not explicitly address practice standards however it uses fact families and the commutative property as it introduces new math facts and then continuously has students review basic math facts until they demonstrate mastery of fluency. Students may apply practices such as reason abstractly and quantitatively; look for and make use of structure; and look for and express regularity in repeated reasoning.	**(Reviewer only.)** **____Meets (2)** **__1__Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **__1__Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Not all of the practices are present due to the nature of the program as supplemental component program that focuses strictly fluency.	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** The program focuses on instant recall of basic math facts and does not have a strong focus on the practice standards.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** The teacher's guide provides background and implementation strategies but does not focus on the practice standards. It provides a brief tutorial for teachers that is sufficient to know what the program provides for teachers and students.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)** **____Partially Meets (1)** **__0__Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** There are no materials that ask students to construct viable arguments and critique arguments of others.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** There are no explanations, arguments, diagrams, or models as part of the Reflex program.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Mathematical language is present, but none that elicits argument, problem solving, and explanations.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.**		**(Reviewer only.)** **____Meets** **__x__Does Not Meet**

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**Strengths/Weaknesses:** The Reflex program builds fluency during interventions that will help students be able to problem solve and explain their thinking during core class time.
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** The program is available in English, Spanish, and French. Reflex does not require much reading and the characters speak directly to the students. The instructions for the games are simple and easy to comprehend.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow**	**Evidence-** The program builds fluency and adapts to students' learning as they work on their fluency skills with Reflex over time. It reviews mastered facts to maintain retention. Students are introduced to small amounts of materials and must demonstrate	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)**

student demonstrate their mathematical understanding independently. **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	mastery before they are overwhelmed with more instructions.	____**Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Students are given a lesson of mathematical fluency problems followed by a variety of games that focus on the fact families. Reflex automatically individualizes instruction based on students' performance as they complete each activity.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **_6___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**

1. Lesso[illegible]re thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** The Teacher's Guide provides in depth information to implement Reflex. The program itself is self guided for students and adjusts instruction for student needs. It allows the teacher to monitor student growth.	**(Reviewer only.)** __x____ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Students master fluency with a fact family introduced in a sequential method. Facts are introduced and practiced in coaching sessions. As students demonstrate success they can play games that involve recall of the facts in a way that demands more complexity as they continue through the game.	**(Reviewer only.)** ___x___ **Yes** _____ **No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The facts are given until mastered and then revisited to ensure student retention.	**(Reviewer only.)** __x____ **Yes** _____ **No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** There are teacher materials on the website for implementations, monitoring students, class setup, tutorials, and a quick reference guide. Teachers can also print out motivational materials to award student progress.	**(Reviewer only.)** __x____ **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** There are no manipulatives required.	**(Reviewer only.)** ____x__ **Yes** _____ **No**

6. Mater include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** The first time students login they are given a baseline assessment that determines the facts students need to focus on, brief progress checks during Fact Fair to measure retention, and Certificates of achievement when students have mastered their fluency. Each time students login they are presented with fact families from their last session to test and ensure retention.	**(Reviewer only.)** ___x___ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Reflex monitors student progress continually. Teachers can print reports to share with students and parents. The growth chart could be used for RtI purposes.	**(Reviewer only.)** __x____ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Reflex focuses strictly on proficiency for all fact families. At the beginning of each session students are required to type in several numbers so that Reflex can account for typing skills as opposed to fact fluency.	**(Reviewer only.)** ___x___ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Evaluators are present.	**(Reviewer only.)** ___x___ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The visual design completely engages students with characters, cartoon interactions, and minimal reading requirements.	**(Reviewer only.)** ___x___ **Yes** _____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Parents are offered a free parent account to monitor their student's progress.	**(Reviewer only.)** ____x__ **Yes**

		_____ No

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus __x_____ **Meets** _____ **Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** ___x__ **Meets** _____ **Does Not Meet**
Non-Negotiable Overall: __x___ **Meets** _____ **Does Not Meet**	

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __3___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)**	**Points: __2___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
_____ Meets	**_____ Meets**	**___x____ Meets**
___x____ Does Not Meet	**__x_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

_____ Meets **__x___ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes __x___ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths: The Reflex program does a great job accomplishing its objective which is to build basic math fact fluency. The program engages and optimizes each student's individual learning experience. The program is most successful when used for 15-20 minutes each day rather than larger chunks of class or homework time sporadically. It can be accessed anywhere with internet and there is an app available.

Weakness: Reflex was not created to develop conceptual understanding and therefore does not cover requirements needed to meet the necessary evidence required for those categories (Rigor and Balance, Standards of Mathematical Practice).

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Math-A Story of Units
ISBN #	**978-1-63255-650-9**
Grade Level(s) or Course:	Kindergarten
Reviewer ID:	BKC,KC

RECOMMENDED AS:

___x_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Mid module and end of module assessments do not assess any topics before the grade level in which the topic is introduced.

COHERENCE-

More than 70% of the lessons are focused on the major work of the grade level. Major work is also included within the supporting work lessons.

RIGOR-

Program moves through 3 components of a mathematics curriculum. Conceptual understanding is developed first, followed by procedural skill and fluency. Experiences are provided to practice conceptual understanding.

CONCEPTUAL UNDERSTANDING-

Program moves through 3 components of a mathematics curriculum. Conceptual understanding is developed first, followed by procedural skill and fluency. Experiences are provided to practice conceptual understanding.

MATHEMATICAL PRACTICES-

A majority of instruction is allotted to the major work of the grade.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

ELL supports are evident. Notes in the margins of Teacher manuals give teachers scaffolds to use. Lessons have 4 components: fluency practice, concept development, application problems, and student debriefs.

ISBN #: 978-1-63255-650-9 **Copyright** _____

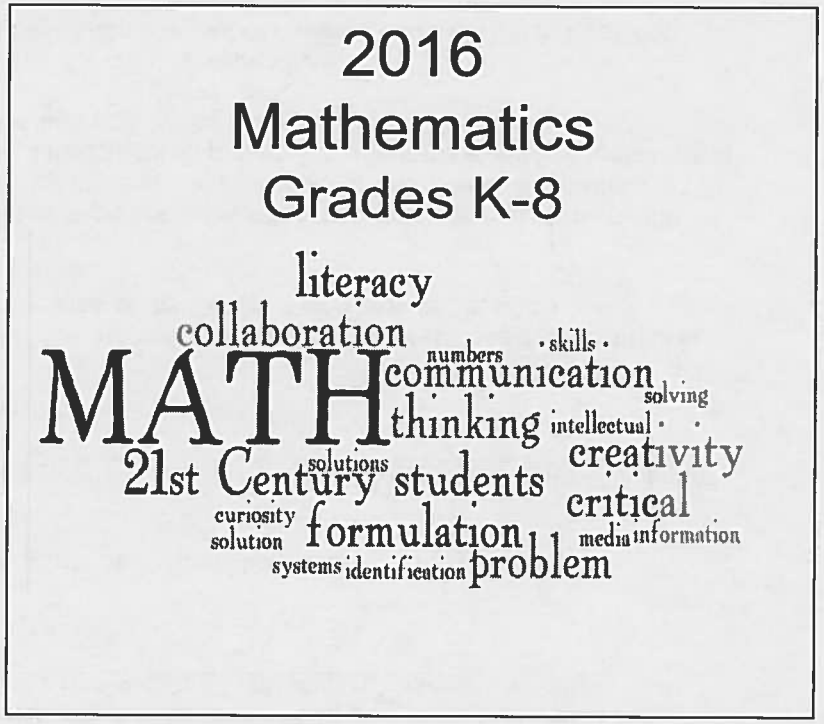
Reviewer ID: BKC KC

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Mid module and en[illegible]module assessments do not assess any topics before the grade level in which the topic is introduced.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **More than 70% of the lessons are focused on the major work of the grade level. Major work is also included within the supporting work lessons.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **All modules taught in their entirety will cover the major work of the grade level. All the supporting work enhances the major work.**	(Reviewer only.) **___x_Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Content progressions are evident in a strong foundation of skills built upon by subsequent modules, and does not interfere with on grade level content.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials g[redacted]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Daily work is on gr[redacted]level content and is sequential from simple to complex with plenty of scaffolding.**	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Program is not a spiraling curriculum it build on each topic so that students develop a deep understanding on previously learned topics. Curriculum builds upon itself.**	(Reviewer only.) ___x_Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Pre-assessment is available to teachers to determine gaps in content knowledge. Teachers can then use this information to drive instruction within the classroom. Teachers are provided with a curriculum overview document so they know responsibilities for the year.**	(Reviewer only.) _x___Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **In the curriculum overview the CCSS major cluster headings are provided.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Major works of each module cover 75% of the major clusters for the grade level. Supporting clusters are also included in modules and interwoven throughout lessons.**	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set [illegible]t expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **Program moves thro[illegible]3 components of a mathematics curriculum. Conceptual understanding is developed first, followed by procedural skill and fluency. Experiences are provided to practice conceptual understanding.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Lessons incorporate 25-35 minutes each day of conceptual development. In lessons, an application problem will follow concept development. Students are urged to apply learning to real world situations. At the end of each lesson is a student debrief where students can reflect and discuss.**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **Lessons flow from concrete to pictorial to abstract representations.**	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Conceptual understa g, procedural skill, fluency and application are interwoven throughout the program.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **A variety of strategies are introduced to students before they are introduced to the algorithm.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Fluency activities are part of the program on a daily basis.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Most lessons have at least one application problem.**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Real world problems are used instead of rote memorization to help students become fluent.**	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **A majority of time is devoted to the major work of the grade. Daily application problems are given in almost every lesson.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Modeling builds slowly and continues and continues across grade levels.**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **A majority of instruction is allotted to the major work of the grade.**	**(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials a[illegible]d to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each qu[illegible]n and rate Metric 2B.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Each CCSS is present in the program. The standards are listed in the beginning of each module.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **The content builds upon itself across grade levels over time. Content grows in complexity each time it is presented.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **Each module has an overview that provides teachers insight into practice standards covered in the module.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Opportunities are given for students to construct arguments and critique others.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Student debrief is for students to reflect on lessons. During the problem set or application problem students are asked to explain their thinking.**	

Do materials explicitly attend to the specialized language of mathematics? language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **In the module review mathematical language is introduced. This language is taught to students in each module, rather than assumed.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

___x_Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]lish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **ELL supports are evi[illegible]. Notes in the margins of Teacher manuals give teachers scaffolds to use.**	**Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **Lessons are in a simple to complex structure. Teacher note boxes provide suggestions for scaffolding student learning.**	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **Lessons have 4 components: fluency practice, concept development, application problems, and student debriefs.**	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **_x___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Lessons are 60 minutes with 4 components. Pacing and Preparation guides are offered as support and on a website. Sprints are also provided for individual goal setting.**	**(Reviewer only.)** **___x___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Problem sets and Application problems are offered on a daily basis to provide understanding of new mathematics. Every problem or exercise has a purpose.**	**(Reviewer only.)** **___x___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Scope and sequence is precise and intentional. Standards at each grade level help students build understanding and make connections with prior knowledge.	(Reviewer only.) ____x__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Teacher supports are evident with student sample works, pacing guides, curriculum overview and video galleries, to name a few.	(Reviewer only.) ____x__ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Partial manipulatives given as pictorials. If hands-on manipulatives are needed, they can be purchased through a separate company, Didax.	(Reviewer only.) ____x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Assessments come in the form of daily exit tickets, mid and end module assessments.	(Reviewer only.) ___x___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- RUBRICS provide a progression towards mastery. Answer keys can be found online. Answers and solutions for assessments can be found at the end of the Teacher Editions.	(Reviewer only.) ____x__ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Assessments are accessible and unbiased using appropriate mathematical language.	(Reviewer only.) ____x__ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Authors are listed.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **There are not distractions that take away from the students' focus as the program is clean and simple with minimal pictures.**	**(Reviewer only.)** **___x___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Parent support page on line has a number of supports to use. Access to the entire curriculum is available to parents online.**	**(Reviewer only.)** **___x___ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
_____x__ Meets _____ Does Not Meet	___x__ Meets _____ Does Not Meet

Non-Negotiable Overall:

___x__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____x__ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet

Alignment Criteria Overall:

___x__ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___x__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Math-A Story of Units
ISBN #	**978-1-63255-692-9**
Grade Level(s) or Course:	First Grade
Reviewer ID:	BKC,SJ

RECOMMENDED AS:

___x_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Mid module and end of module assessments do not assess any topics before the grade level in which the topic is introduced.

COHERENCE-

More than 70% of the lessons are focused on the major work of the grade level. Major work is also included within the supporting work lessons.

RIGOR-

Program moves through 3 components of a mathematics curriculum. Conceptual understanding is developed first, followed by procedural skill and fluency. Experiences are provided to practice conceptual understanding.

CONCEPTUAL UNDERSTANDING-

Program moves through 3 components of a mathematics curriculum. Conceptual understanding is developed first, followed by procedural skill and fluency. Experiences are provided to practice conceptual understanding.

MATHEMATICAL PRACTICES-

A majority of instruction is allotted to the major work of the grade.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

ELL supports are evident. Notes in the margins of Teacher manuals give teachers scaffolds to use. Lessons have 4 components: fluency practice, concept development, application problems, and student debriefs.

OTHER:

Lack of color and graphics lends itself to less engagement.
Recommend that program be adopted in its entirety to lay a good foundation for later grades.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials ref the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Mid module and end module assessments do not assess any topics before the grade level in which the topic is introduced.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **More than 70% of the lessons are focused on the major work of the grade level. Major work is also included within the supporting work lessons.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **All modules taught in their entirety will cover the major work of the grade level. All the supporting work enhances the major work.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Content progressions are evident in a strong foundation of skills built upon by subsequent modules, and does not interfere with on grade level content.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible] students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Daily work is on gra[illegible]evel content and is sequential from simple to complex with plenty of scaffolding.**	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Program is not a spiraling curriculum it build on each topic so that students develop a deep understanding on previously learned topics. Curriculum builds upon itself.**	(Reviewer only.) ___x_Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Pre-assessment is available to teachers to determine gaps in content knowledge. Teachers can then use this Information to drive instruction within the classroom. Teachers are provided with a curriculum overview document so they know responsibilities for the year.**	(Reviewer only.) _x___Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **In the curriculum o[illegible]iew the CCSS major cluster headings are provided.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Major works of each module cover 75% of the major clusters for the grade level. Supporting clusters are also included in modules and interwoven throughout lessons.**	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.		

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set ex[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **Program moves throu[illegible]3 components of a mathematics curriculum. Conceptual understanding is developed first, followed by procedural skill and fluency. Experiences are provided to practice conceptual understanding.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Lessons incorporate 25-35 minutes each day of conceptual development. In lessons, an application problem will follow concept development. Students are urged to apply learning to real world situations. At the end of each lesson is a student debrief where students can reflect and discuss.**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **Lessons flow from concrete to pictorial to abstract representations.**	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Conceptual understa g, procedural skill, fluency and application are interwoven throughout the program.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **A variety of strategies are introduced to students before they are introduced to the algorithm.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Fluency activities are part of the program on a daily basis.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Most lessons have at least one application problem.**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Real world problems are used instead of rote memorization to help students become fluent.**	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **A majority of time is devoted to the major work of the grade. Daily application problems are given in almost every lesson.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Modeling builds slowly and continues and continues across grade levels.**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-
A majority of instruction is allotted to the major work of the grade.

(Reviewer only.)

__x__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Each CCSS is present in the program. The standards are listed in the beginning of each module.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **The content builds upon itself across grade levels over time. Content grows in complexity each time it is presented.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **Each module has an overview that provides teachers insight into practice standards covered in the module.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Opportunities are given for students to construct arguments and critique others.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Student debrief is for students to reflect on lessons. During the problem set or application problem students are asked to explain their thinking.**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **In the module review mathematical language is introduced. This language is taught to students in each module, rather than assumed.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

___x_Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]ish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **ELL supports are evi[illegible]. Notes in the margins of Teacher manuals give teachers scaffolds to use.**	**Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **Lessons are in a simple to complex structure. Teacher note boxes provide suggestions for scaffolding student learning.**	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **Lessons have 4 components: fluency practice, concept development, application problems, and student debriefs.**	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students Materials must provide supports for English Language Learners and other special populations. AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.(Reviewer only.) Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .	(Reviewer only.) _x___Meets ____Does Not Meet Strengths/Weaknesses:

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Lessons are 60 minutes with 4 components. Pacing and Preparation guides are offered as support and on a website. Sprints are also provided for individual goal setting.	(Reviewer only.) ___x___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Problem sets and Application problems are offered on a daily basis to provide understanding of new mathematics. Every problem or exercise has a purpose.	(Reviewer only.) ___x___ Yes _____ No

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Scope and sequence precise and intentional. Standards at each grade level help students build understanding and make connections with prior knowledge.	(Reviewer only.) ____x__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Teacher supports are evident with student sample works, pacing guides, curriculum overview and video galleries, to name a few.	(Reviewer only.) ____x__ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Partial manipulatives given as pictorials. If hands-on manipulatives are needed, they can be purchased through a separate company, Didax.	(Reviewer only.) ____x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Assessments come in the form of daily exit tickets, mid and end module assessments.	(Reviewer only.) ___x___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- RUBRICS provide a progression towards mastery. Answer keys can be found online. Answers and solutions for assessments can be found at the end of the Teacher Editions.	(Reviewer only.) ____x__ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Assessments are accessible and unbiased using appropriate mathematical language.	(Reviewer only.) ____x__ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- Authors are listed.	(Reviewer only.) ____x__ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- There are not distractions that take away from the students' focus as the program is clean and simple with minimal pictures. However, lack of color and graphics contributes to less engagement.	(Reviewer only.) ___x___ Yes _____ No
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	Evidence- Parent support page on line has a number of supports to use. Access to the entire curriculum is available to parents online.	(Reviewer only.) ___x___ Yes _____ No

Alignment Criteria Overall:

___x__ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___x__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Math – A Story of Units Grade 2
ISBN #	978-1-63255662-3
Grade Level(s) or Course:	2
Reviewer ID:	SLL and TG

RECOMMENDED AS:

___X_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Does not assess standards before grade level where they first appear in the standards.

The majority of the lessons are focused the major works of grade 2.

COHERENCE- The majority of the lessons are focused the major works of grade 2.

RIGOR-
Each lesson contains sample discussion dialogue between teacher and student as well as lesson reflection questions in the student debrief. 6 out of the 8 modules are focused on the major clusters. Student spend significant time working different types of problems.

CONCEPTUAL UNDERSTANDING- There is a progression to the types of strategies/models that students use and becoming more efficient by the end of 2nd grade.

MATHEMATICAL PRACTICES- The Mathematical Practices are embedded into the lessons during student debrief and concept development notated on the left side margin with brackets and MP#.

In the module overview, they also list the Focus Standards for Mathematical Practice highlighting which of the practices will be addressed in the module.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Within the lessons, the program refers to scaffolds (margin notes) that address many needs presented by EL students and other special populations. * In the module overview, the program refers to the document "How to Implement *A Story of Units*". **This piece was not included**. Each lesson has 4 steps: fluency practice, application problem, concept development and student debrief. There is a range of strategies, models, and groupings used throughout those four sections. In the module overview, there is a suggested tools and representation section for the teacher. In Module 1, there is a Suggested Methods of Instruction Delivery for teachers.

Due to the rigor of the program, it is recommended to use as a K-5/K-8 program- not just at 2nd.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** They do not teach or assess any of the items listed to the left.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

In each module, they list the focus grade level standards. Overview gives all of the lessons and the standards tied to each lesson. Lessons, homework, and assessments cover the major works of 2nd grade.

(Reviewer only.)

___X_Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Every module has a focus standard. 2 out of the 8 modules focus on the Supporting Clusters. The majority of the work is focused on the Major Clusters.	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Module 1 refers to some foundational standards for review. The rest of the modules solely focus on grade 2 content.	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson has sections on multiple means of engagement, however they seem to be more "teacher notes" rather than explicit differentiation built into the lessons. It states in the TE that there are scaffolds embedded in lessons provide alternatives for how students access information, express/demonstrate their learning. (EL, students with disabilities, students at or above grade level, etc.) It also suggests how to implement a Story of Units, however it was not provided. Instruction on how to differentiate appears to be rather weak. Evidence of differentiation of problems example, extensions, remediation, reteach, extra practice, etc.	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** This was evident in module 1. The overviews of the modules define how its content relates to other module content as well as prior and future learning. Beginning of each lesson has fluency practice at the beginning that reviews concepts from prior grades. A statement such as "students should have learned this in first grade" is included.	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** It is clearly identified that in first grade we did this... In previous learning we did this.... It does not review materials, but if concepts are revisited, is clearly stated in the TE.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each module tells what the cluster heading and is reinforced throughout each topic.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each module has at least 2 clusters that are being worked on and integrated. Module 1 lesson 1 starts with adding and subtracting to make 10, then to 20, then to 100 by lesson 8. These foundations are repeated to be used in future modules.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

___X_Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **__1__Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** They use bundles of ten, place value blocks, hundred Rekenrek, ten frame cards to develop the understanding of place value. They also use a disk model that might be confusing for students. The TE references that this may be confusing for kids.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Each lesson contains sample discussion dialogue between teacher and student as well as lesson reflection questions in the student debrief.	

Do the materials feature opportunities to identify correspondences across mathem representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** In many lessons, the v l explanation, the picture and the equation are all connected and discussed as well as multiple uses of a model. Sometimes students are asked to model a problem in multiple ways and then discuss their thinking with classmates.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Every module contains "Sprints" which focus on efficient and accurate solutions within time limits. Practice is continued throughout assignments, homework and the exit tickets.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** There is a progression to the types of strategies/models that students use and becoming more efficient by the end of 2nd grade. Multiple models are used, compared, and contrasted. (Make 10, arrow math, place value and number line)	

Do the materials in grades K–6 provide repeated practice toward attainment of fl[illegible] Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** The sprints focus on add and subtract within 20 at second grade.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** 6 out of the 8 modules are focused on the major clusters. Student spend significant time working different types of problems.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There is evidence of this. Many lessons have single and eventually multi-step problems. Use of manipulatives and strategies is required to solve the problems.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** There is an application problem for every lesson that is designed to spark conversation around the math concept.	

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Builds on one another from lesson to lesson. Starts simple, gets more complex as the year progresses. An example would be starting with the ten frames and then moving to the disks.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CC[illegible].

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** The Mathematical Practices are embedded into the lessons during student debrief and concept development notated on the left side margin with brackets and MP#. In the module overview, they also list the Focus Standards for Mathematical Practice highlighting which of the practices will be addressed in the module.	**(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__2__Meets (2)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The Mathematical Practices are embedded into the lessons during student debrief and concept development notated on the left side margin with brackets and MP#. In the module overview, they also list the Focus Standards for Mathematical Practice highlighting which of the practices will be addressed in the module.	**____Partially Meets (1)** **____Does Not Meet (0)**

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** The Practice Standards are incorporated appropriately for grade 2. Example: Module 2 Lesson 1, Module 2 Lesson 5, Module 7 Lesson 10	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Alignment of the standards is accurate. In the Focus Standards for Mathematical Practice section in the module overview in the TE, the standards are explained in relation to the content studied in the module.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Each lesson has a student debrief section which is intended to invite reflection and active discussion around the work the students did in the lesson.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Each lesson has a student debrief section which is intended to invite reflection and active discussion around the work the students did in the lesson.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Each lesson has a student debrief section which is intended to invite reflection and active discussion around the work the students did in the lesson. The module overview lists the terminology that will be used by both teacher and students in the lessons.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__6__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-

Within the lessons, the program refers to scaffolds (margin notes) that address many needs presented by EL students and other special populations. * In the module overview, the program refers to the document "How to Implement *A Story of Units*". **This piece was not included**.

Reviewer only.)

__2__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Within the lessons, the program refers to scaffolds (margin notes) that address many needs presented by EL students and other special populations. * In the module overview, the program refers to the document "How to Implement *A Story of Units*". **This piece was not included**. There is no separate practice/enrichment available except for some suggestions in the margin notes.	**Reviewer only.)** **____Meets (2)** **__1__Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Each lesson has 4 steps: fluency practice, application problem, concept development and student debrief. There is a range of strategies, models, and groupings used throughout those four sections. In the module overview, there is a suggested tools and representation section for the teacher. In Module 1, there is a Suggested Methods of Instruction Delivery for teachers.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating.**		**(Reviewer only.)** **__5__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of

Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Each lesson has 4 steps: fluency practice, application problem, concept development and student debrief. There is a range of strategies, models, and groupings used throughout those four sections. Includes a teacher script and possible student answers if needed.	**(Reviewer only.)** **____X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** There is a problem set with each lesson as well as homework. There are also Sprints which address the fluency. Application problem in each lesson allows students to solve new problems. Practice set and homework allow students to practice what was learned.	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Assignments throughout the grade 2 curriculum go from simple to more complex from concrete models to more abstract equations and representations. Each lesson builds on the previous lesson.	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** The TE provides sample dialogue within the concept development section listing possible student answers, teacher to student dialogue, and student to student dialogue. Teach Eureka videos were referred to, but could not access.	**(Reviewer only.)** **__X___ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** The models are appropriate. Black line masters are included and explanations on how to use and what to use for are available. Place value disks?	**(Reviewer only.)** **____X__ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Each lesson has an exit ticket and each module has an assessment provided. The student debrief provides opportunities for student self-assessment as well as peer feedback. No pre-assessment.	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Each end of module assessment contains a 4 point rubric that is a progression toward mastery as well as a 4 point student sample.	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The language used in the end of module assessments and exit tickets match the models, language and pictures used in the lessons.	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Ed reports Louisiana Department of Ed Education Evaluation of the Quality of Instructional Products	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** It is black and white and has lots of print for 2nd grade. The content is clear.	**(Reviewer only.)** **____X__ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** The brief form states that there are parent tip sheets and access to Zearn. They also have Homework Helpers online. There are parent tip sheets to help parents understand what kind of language in order to assist with homework. There are also videos for parents to help support the program.	**(Reviewer only.)** **___X___ Yes** **_____ No**

Non-Negotiable Overall: **___X__ Meets** **_____ Does Not Meet**	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __5___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **___X____ Meets** **_____ Does Not Meet**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **___X____ Meets** **_____ Does Not Meet**	**Points: ___5__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **___X____ Meets** **_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alig ent Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Math – A Story of Units 3
ISBN #	987-63255-701-8
Grade Level(s) or Course:	3
Reviewer ID:	SA, TG

RECOMMENDED AS:

____X____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Each teacher module provides an overview of Standards to be assessed for the unit. It includes focus standards for grade level and for the mathematical practices. For example, in Grade 3 Module 4, Geometric Assessment Measurement: Understand concepts of area and relate area to multiplication and addition. (CCSSM Grade 3).

Each module also includes a mid-module assessment task and rubric to assess progression toward mastery as well as an end of the unit assessment.

COHERENCE-
Instructional modules for each unit breaks down fluency practice, concept development, application problems, and student debriefs. The modules focus the majority of the time on building conceptual understanding for the major standards in third grade. About 70% of lessons, assignments, and homework appear to focus on the major works for grade level. Approximately 75-80% of class time is centered around building concepts and application.

RIGOR-
The first lesson in Module 1 focuses on CCSSM 3.O.A.A.1 to help students interpret products of whole numbers. The fluency practice helps build a foundation for multiplication in its relation to repeated addition. Concept development is built through problems done together in whole group lessons and practice in problem set activities in individual work. Time is spent at the end of each lesson to debrief and reflect on what was learned. Exit tickets are used to demonstrate understanding of concepts. Exit Tickets after each lesson
Mid-Module/End Module Assessments
Concept development modules: Use of manipulatives, pictures, and equations to build understanding.

CONCEPTUAL UNDERSTANDING-
In Module 1, conceptual understanding is built through introducing students to different strategies such as equal groups, count-bys, and arrays to build the conceptual understanding of multiplication. Once strategies have been taught the lessons move into the algorithms of multiplication and division.

Each lesson in the modules appears to build on the concept learned in the previous lesson. It is evident that conceptual understanding is built through math talks and practice on skills being taught. Problem Sets, Exit Tickets, and homework provide students with opportunities to apply and show what they have learned,

MATHEMATICAL PRACTICES-
Each Module not only provides the focus standards for the grade level, but highlighted standards for mathematical practice as well. For example, Module 4 covers the mathematical practices for MP .2, MP.3, MP.6, MP.7, and MP.8. All of the mathematical practices are covered in the modules used throughout the year.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Scaffolds are provided throughout the lessons to support learning for ELL, Above and Below grade level, and special education students to succeed.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: Great Minds

Title of Material: Eureka Math- A story of units gr. 3

Author: Great Mind

ISBN #: 978-1-63255-701-8 **Copyright** 2015

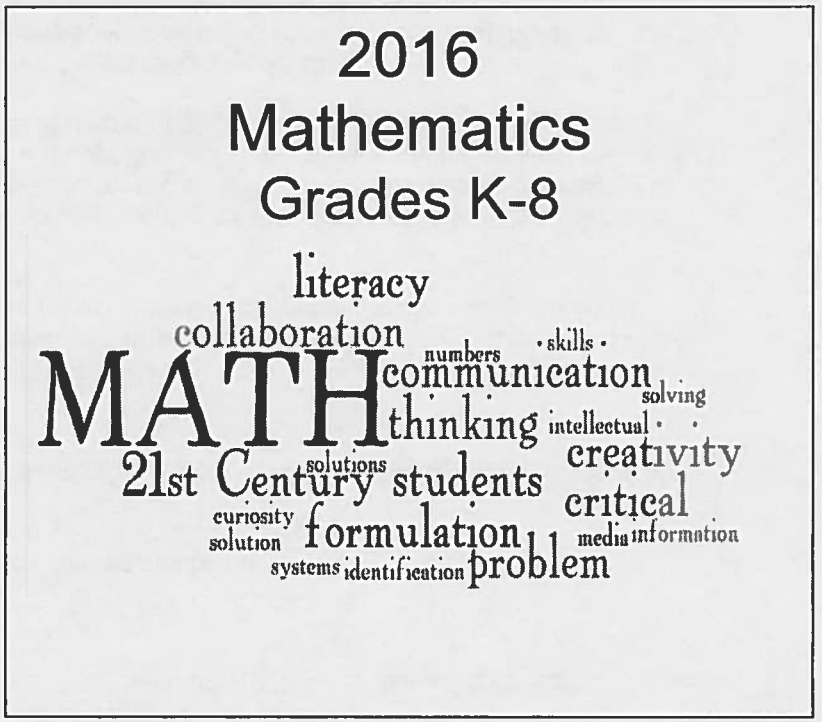
Reviewer ID: T.G. & S.A.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Each teacher module provides an overview of Standards to be assessed for the unit. It includes focus standards for grade level and for the mathematical practices. For example, in Grade 3 Module 4, Geometric Assessment Measurement: Understand concepts of area and relate area to multiplication and addition. (CCSSM Grade 3).** **Each module also includes a mid-module assessment task and rubric to assess progression toward mastery as well as an end of the unit assessment.**	(Reviewer only.) **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **Instructional modules for each unit breaks down fluency practice, concept development, application problems, and student debriefs. The modules focus the majority of the time on building conceptual understanding for the major standards in third grade. About 70% of lessons, assignments, and homework appear to focus on the major works for grade level. Approximately 75-80% of class time is centered around building concepts and application.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Eureka's Module 6 and 7 focus on supporting work in collecting and displaying data and geometry. For example, in Lesson 8 of Module 6, students build on operations and fractions as they create line plots to relate data from a chart on heights of plants. In Module 7 Lesson 17 students enhance understanding of operations as they solve problems involving perimeters with unknown measurements.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Modules relate to the focused grade level documents and teach the standards in order from grade level to grade level. Each module provides the foundational standards on which to build upon from the grade level before.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Problem sets are p[illegible]ded for students after each lesson to practice g[illegible]de level skills. Homework also aligns with the daily lessons. "Scaffolds" are included in each lesson to help support ELL students, students with disabilities, and above and below grade level students' learning.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each Module provides an overview off the standards to be taught in the unit. It includes focus grade level standards as well as foundational standards that are being built upon from the previous grade level. Each lesson builds upon the concepts from the lesson the day before (i.e. understanding equal groups of as multiplication moving into relating multiplication to the array model).**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each module provides a curriculum overview which covers standards to be taught, lesson objectives, terminology, suggested tools and representations, and methods of instructional delivery.** **The Navigator tool online gives you a snapshot of the year-long curriculum overview.**	(Reviewer only.) **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The overviews in each module clearly explain the standards to be taught. Each lesson provides objectives that are tied to the clusters of the Major Work for third grade. For example, in Module 4 on of the focus standards is 3.MD.5. The objective for lesson 1 is to understand area as an attribute of plane figures.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Problems related to area in Module 4 connect 3.MD.7 relating area to properties of multiplication and division to 3.OA.4 determining the whole number in a multiplication or division equation relating three whole numbers. For example _ x 8 = 48 or 48/? =8.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set e[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **The first lesson in M[illegible]e 1 focuses on CCSSM 3.O.A.A.1 to help students interpret products of whole numbers. The fluency practice helps build a foundation for multiplication in its relation to repeated addition.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Concept development is built through problems done together in whole group lessons and practice in problem set activities in individual work. Time is spent at the end of each lesson to debrief and reflect on what was learned. Exit tickets are used to demonstrate understanding of concepts.**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **Exit Tickets after each lesson** **Mid-Module/End Module Assessments** **Concept development modules: Use of manipulatives, pictures, and equations to build understanding.**	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Fluency practice occ in every module at the beginning of each lesson to build fluency in multiplication and division facts to 100. Application problems throughout the Modules as well as the problem sets and homework practice help build conceptual understanding and fluency through daily practice and review.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **In Module 1, conceptual understanding is built through introducing students to different strategies such as equal groups, count-bys, and arrays to build the conceptual understanding of multiplication. Once strategies have been taught the lessons move into the algorithms of multiplication and division.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Fluency is built in daily practice with the sprint and pattern practices. This begins in module 1 and continues through module 7 to give students plenty of opportunity to build conceptual understanding and build fluency.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Application problems are used frequently in the daily lessons to review concepts that have been previously taught. Usually 5-8 minutes of time is planned in each lesson for these problems.**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there are single- and multi-step contextual problems, including non-routine pro[illegible], that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Yes. Application pro[illegible]ns are given in lessons throughout the modules that provide opportunity to solve single and multi-step problems. The problem sets provided at the end of concept building, homework, and assessments also provide the practice students need to build problem solving skills.**	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Yes. Most lessons in each module have application problems to build skills and understanding in the major works for the grade level.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Each lesson in the modules appears to build on the concept learned in the previous lesson. It is evident that conceptual understanding is built through math talks and practice on skills being taught. Problem Sets, Exit Tickets, and homework provide students with opportunities to apply and show what they have learned,**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **Each Teacher Module provides and overview of the standards, which tie in to the major works for the grade level being taught. Each lesson in each module provides fluency practice, application problems, concept building, and problem sets that focus on the major works,**	(Reviewer only.) **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** (Reviewer only.) **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Each Module not only provides the focus standards for the grade level, but highlighted standards for mathematical practice as well. For example, Module 4 covers the mathematical practices for MP .2, MP.3, MP.6, MP.7, and MP.8. All of the mathematical practices are covered in the modules used throughout the year.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Yes. Foundational standards are provided in each module that are to be built upon from the previous grade level. This shows the growth of complexity throughout the practices across each grade level.**	

Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **Yes. In each Module overview provides a summary of each mathematical practice that will be focused on in the module and an example of how students will show they are meeting the standard practice.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Yes. The curriculum spends a majority of the time on building concepts. This is done through problems provided by the teacher where students participate in a great deal of math talk between each other and the teacher as concepts are introduced. Each lesson also has a student debrief that allows them to reflect on and process what they have learned. They have the opportunity to self assess their work as well as classmates and they discuss their solutions in the problem sets they have completed at this time.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Yes. In the student debrief, students are encouraged to share their strategies used to solve problems and explain why they chose the strategies they did and compare them to others.**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Mathematical terminology is evident in each of the Modules. Key terminology is introduced in the first module and continues throughout the remaining modules. Key terms for the module are given in the module overview.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
Scaffolds are provided throughout the lessons to support learning for ELL, Above and Below grade level, and special education students to succeed.

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials pr[illegible]e appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **Scaffolds are provid[illegible]hroughout the lessons to support learning for ELL, Above and Below grade level, and special education students to succeed.**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **Each lesson is broken down into 3 major components:** **Fluency Practice** **Concept Development** **Student Debrief** **Each component provides a variety of instructional approaches from whole group, small group, partners, and individual practice to develop skills. The Exit Tickets and problem sets help check for understanding and any misconceptions that may occur.**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of

Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Students actively participate in their own learning through the fluency practice provided in each lesson. Rich conversations take place among teachers and students as they participate in the concept development portion of the lesson. Students also reflect on their own learning as well as the learning of their classmates as they discuss problems from the problem sets in the student debrief.	(Reviewer only.) ___X___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- The curriculum's lessons are broken up in to 3 main components: Fluency, Concept Development, and Student Debrief. In the fluency piece students help build mastery by practicing skills they have already learned, this occurs in the application problems as well. In Concept development, new concepts are introduced to students that build on concepts they have learned in previous lessons. The problems in each lesson and component have a purpose to help build understanding.	(Reviewer only.) ___X___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Each lesson builds upon the skills and concepts taught in previous lessons throughout each module.	(Reviewer only.) ___X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The Great Minds website offers teacher support through videos, homework helpers, pacing and preparation guides, online communities, curriculum maps and overviews, standards checklists, materials lists, and FAQs.	(Reviewer only.) ___X___ Yes _____ No

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **The Great Minds website offers a list of materials and tools (manipulatives) that tie in with each grade level's lessons for the year that can be purchased.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **The curriculum offers a variety of embedded assessments through the daily fluency practice, discussion in concept development activities and problem sets, and exit tickets. Mid-module and End of module assessments are the summative assessments used within each of the modules.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Teacher editions provide answer keys and rubrics (progression toward mastery) with each module assessment.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Mid-module and end of module assessment tasks use the course level terminology and language to prompt students' thinking.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **In the News section of the Great Minds website, Louisiana State Superintendent of Education recommends the curriculum. Educators Evaluating the Quality of Instructional Products also found many of Eureka's math lessons exemplar through an evaluation process by Achieve.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The modules are printed in black and white and are organized neatly. There are no illustrations aside from those within the problem itself to distract students.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **The Great Minds website provides a parent support page that offers videos, homework helpers, module tip sheets, grade road maps, FAQs, and additional resources to help parents support their children's learning.**	(Reviewer only.) **___X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: _Eureka Math-A Story of Units Grade 3_**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
____X___ Meets	___X__ Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

__X___ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)
____X___ Meets	____X___ Meets	____X___ Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Eureka Math appears to be written specifically with the standards in mind. Each module builds upon concepts learned across lessons and grade levels. It focuses a great deal of time on building conceptual understanding and giving students the opportunities to practice these skills and build on them to mastery. Many supports are provided for teachers, students, and families through the Great Minds website.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Math – A Story of Units 4
ISBN #	987-63255-701-8
Grade Level(s) or Course:	4
Reviewer ID:	SA, SA

RECOMMENDED AS:

____X____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- **Each teacher module provides an overview of Standards to be assessed for the unit. It includes focus standards for grade level and for the mathematical practices. For example, in Grade 4 Module 4, Geometric Measurement: Understand concepts of angles and measure angles. (4.MD.5 4.MD.6 4.MD.7) Each module also includes a mid-module assessment task and rubric to assess progression toward mastery as well as an end of the unit assessment**

COHERENCE- **Instructional modules for each unit breaks down fluency practice, concept development, application problems, and student debriefs. The modules focus the majority of the time on building conceptual understanding for the major standards in fourth grade. About 70% of lessons, assignments, and homework appear to focus on the major works for grade level. Approximately 75-80% of class time is centered around building concepts and application.**

RIGOR- **Conceptual understanding is built through the use of opportunistic strategies before moving into more efficient algorithims. For example, in Module 1 students build a place value chart to build the conceptual understanding of digits representing 10 times the value of what it represents in its place to the right to build a place value chart to one million. They then use efficient algorithms to create multiplication problems.**

CONCEPTUAL UNDERSTANDING- **Concept development is built through problems done together in whole group lessons and practice in problem set activities in individual work. Time is spent at the end of each lesson to debrief and reflect on what was learned. Exit tickets are used to demonstrate understanding of concepts. Exit Tickets after each lesson, Mid-Module/End Module Assessments, Concept development modules: Use of manipulatives, pictures, and equations to build understanding.**

MATHEMATICAL PRACTICES-
Each Module not only provides the focus standards for the grade level, but highlighted standards for mathematical practice as well. For example, Module 4 covers the mathematical practices for MP .2, MP.3, MP.5, and MP.6. All of the mathematical practices are covered in the modules used throughout the year.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Scaffolds are provided throughout the lessons to support learning for ELL, Above and Below grade level, and special education students to succeed.

OTHER: ~~TEPPS~~ It is essential for this curriculum to be adopted in K-6 if it is going to be used in 7-12. Because it is such a rigorous program 7-12 programs need the foundational skills taught in K-6.

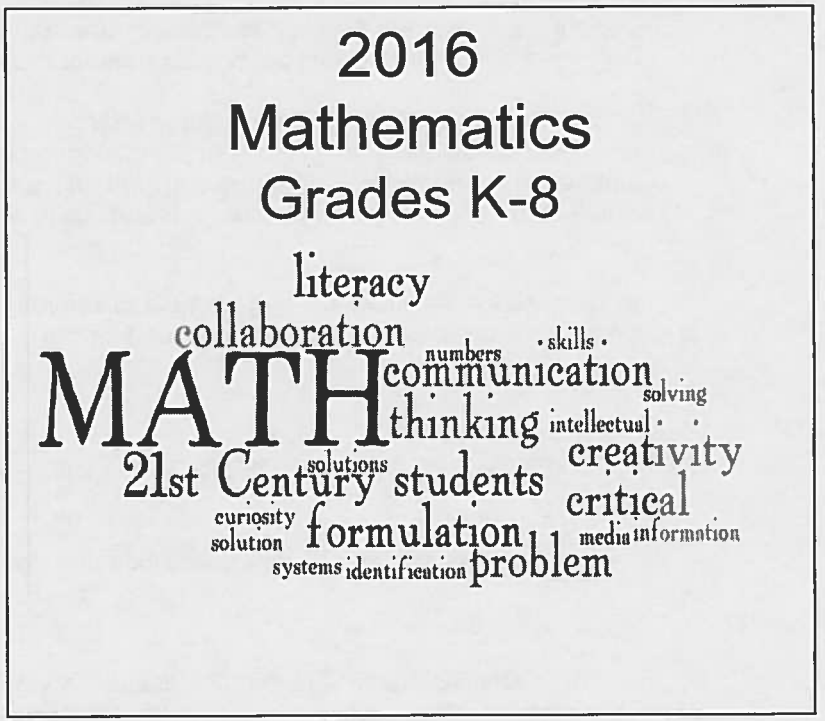
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Each teacher modu[illegible]rovides an overview of Standards to be ass[illegible]ssed for the unit. It includes focus standards for grade level and for the mathematical practices. For example, in Grade 4 Module 4, Geometric Measurement: Understand concepts of angles and measure angles. (4.MD.5 4.MD.6 4.MD.7)** **Each module also includes a mid-module assessment task and rubric to assess progression toward mastery as well as an end of the unit assessment.**	(Reviewer only.) **__X__Meets** **____Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Navigator on the website difficult to navigate through. Teachers need to click on many links to be able to navigate to lessons within the modules.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

Instructional modules for each unit breaks down fluency practice, concept development, application problems, and student debriefs. The modules focus the majority of the time on building conceptual understanding for the major standards in fourth grade. About 70% of lessons, assignments, and homework appear to focus on the major works for grade level. Approximately 75-80% of class time is centered around building concepts and application.

(Reviewer only.)

__X__Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Eureka's Module 5 focuses on supporting work with fractions. Students build on concepts learned in Grade 3 of unit fractions to extend to fraction equivalence and mixed numbers in grade 4.** **Lessons that contain supporting work also incorporate all major clusters in them as well.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Modules relate to the focused grade level documents and teach the standards in order from grade level to grade level. Each module provides the foundational standards on which to build upon from the grade level before.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Problem sets are p[illegible]ded for students after each lesson to practice g[illegible]e level skills. Homework also aligns with the daily lessons. "Scaffolds" are included in each lesson to help support ELL students, students with disabilities, and above and below grade level students' learning.** **3-4 Problem set pgs.** **Exit tickets** **1-2 pgs. Homework** **Sprints/Fluency practice pgs.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each Module provides an overview of the standards to be taught in the unit. It includes focus grade level standards as well as foundational standards that are being built upon from the previous grade level. Each lesson builds upon the concepts from the lesson the day before (i.e. in Grade 4 Module 4 Lesson 1 students learn to identify and draw points, line segments and angles and in lesson 2 they learn how to indentify and draw right angles, obtuse angles, and acute angles.)**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each module provides a curriculum overview which covers standards to be taught, lesson objectives, terminology, suggested tools and representations, and methods of instructional delivery.** **The Navigator tool online gives you a snapshot of the year-long curriculum overview.**	(Reviewer only.) **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The overviews in each module clearly explain the standards to be taught. Each lesson provides objectives that are tied to the clusters of the Major Work for fourth grade. For example, in Module 4 one of the focus standards is 4.MD.5. The objective for lesson 1 is to identify and draw points, lines, line segments, rays and angles. Recognize them in various contexts and familiar figures.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The lessons in Module 7 connect the standards 4.OA Using the four operations with whole numbers to solve problems and 4. MD solving problems involving measurement and conversion of measurements from a larger unit to a smaller unit.** **Assessment rubrics at the end of each module show assessment questions that cover more than one standard. CCSS Standards checklist provides a view of when each standard is assessed.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

_X___Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set e[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **Yes. Conceptual und[illegible]tanding is built through the use of opportunistic strategies before moving into more efficient algorithims. For example, in Module 1 students build a place value chart to build the conceptual understanding of digits representing 10 times the value of what it represents in its place to the right to build a place value chart to one million. They then use efficient algorithms to create multiplication problems.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Concept development is built through problems done together in whole group lessons and practice in problem set activities in individual work. Time is spent at the end of each lesson to debrief and reflect on what was learned. Exit tickets are used to demonstrate understanding of concepts.**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **Exit Tickets after each lesson** **Mid-Module/End Module Assessments** **Concept development modules: Use of manipulatives, pictures, and equations to build understanding.**	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' devel conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Fluency practice occ in every module at the beginning of each lesson to build fluency in multi-digit arithmetic. Application problems throughout the Modules as well as the problem sets and homework practice help build conceptual understanding and fluency through daily practice and review.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **Yes. Conceptual understanding is built through the use of opportunistic strategies before moving into more efficient algorithims. For example, in Module 1 students build a place value chart to build the conceptual understanding of digits representing 10 times the value of what it represents in its place to the right to build a place value chart to one million. They then use efficient algorithms to create multiplication problems.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Fluency is built in daily practice with the sprint and pattern practices. This begins in module 1 and continues through module 7 to give students plenty of opportunity to build conceptual understanding and build fluency.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Application problems are used frequently in the daily lessons to review concepts that have been previously taught. Usually 5-8 minutes of time is planned in each lesson for these problems.**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Yes. Application problems are given in lessons throughout the modules that provide opportunity to solve single and multi-step problems. The problem sets provided at the end of concept building, homework, and assessments also provide the practice students need to build problem solving skills.**	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Yes. Most lessons in each module have application problems to build skills and understanding in the major works for the grade level.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Each lesson in the modules appears to build on the concept learned in the previous lesson. It is evident that conceptual understanding is built through math talks and practice on skills being taught. Problem Sets, Exit Tickets, and homework provide students with opportunities to apply and show what they have learned,**	

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** **AC1** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **Each Teacher Module provides and overview of the standards, which tie in to the major works for the grade level being taught. Each lesson in each module provides fluency practice, application problems, concept building, and problem sets that focus on the major works,**	(Reviewer only.) **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** (Reviewer only.) **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Each Module not only provides the focus standards for the grade level, but highlighted standards for mathematical practice as well. For example, Module 4 covers the mathematical practices for MP .2, MP.3, MP.5, and MP.6. All of the mathematical practices are covered in the modules used throughout the year.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Yes. Foundational standards are provided in each module that are to be built upon from the previous grade level. This shows the growth of complexity throughout the practices across each grade level.**	

Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **Yes. In each Module the overview provides a summary of each mathematical practice that will be focused on in the module and an example of how students will show they are meeting the standard practice.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Yes. The curriculum spends a majority of the time on building concepts. This is done through problems provided by the teacher where students participate in a great deal of math talk between each other and the teacher as concepts are introduced. Each lesson also has a student debrief that allows them to reflect on and process what they have learned. They have the opportunity to self assess their work as well as classmates and they discuss their solutions in the problem sets they have completed at this time.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Yes. In the student debrief, students are encouraged to share their strategies used to solve problems and explain why they chose the strategies they did and compare them to others.**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Mathematical terminology is evident in each of the Modules. Key terminology is introduced in the first module and continues throughout the remaining modules. Key terms for the module are given in the module overview.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
Scaffolds are provided throughout the lessons to support learning for ELL, Above and Below grade level, and special education students to succeed.

Reviewer only.)

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **Scaffolds are provided throughout the lessons to support learning for ELL, Above and Below grade level, and special education students to succeed.**	Reviewer only.) **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **Each lesson is broken down into 3 major components:** **Fluency Practice** **Concept Development** **Student Debrief** **Each component provides a variety of instructional approaches from whole group, small group, partners, and individual practice to develop skills. The Exit Tickets and problem sets help check for understanding and any misconceptions that may occur.**	Reviewer only.) **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		(Reviewer only.) **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of

Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Students actively participate in their own learning through the fluency practice provided in each lesson. Rich conversations take place among teachers and students as they participate in the concept development portion of the lesson. Students also reflect on their own learning as well as the learning of their classmates as they discuss problems from the problem sets in the student debrief.	(Reviewer only.) ___X___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- The curriculum's lessons are broken up in to 3 main components: Fluency, Concept Development, and Student Debrief. In the fluency piece students help build mastery by practicing skills they have already learned, this occurs in the application problems as well. In Concept development, new concepts are introduced to students that build on concepts they have learned in previous lessons. The problems in each lesson and component have a purpose to help build understanding.	(Reviewer only.) ___X___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Each lesson builds upon the skills and concepts taught in previous lessons throughout each module. Rationale for module sequence found on pg. 44-45 of curriculum overview. Scope and sequence provides logical sequence.	(Reviewer only.) ___X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The Great Minds website offers teacher support through videos, homework helpers, pacing and preparation guides, online communities, curriculum maps and overviews, standards checklists, materials lists, and FAQs.	(Reviewer only.) ___X___ Yes _____ No

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **The Great Minds website offers a list of materials and tools (manipulatives) that tie in with each grade level's lessons for the year that can be purchased.**	(Reviewer only.) **___X___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **The curriculum offers a variety of embedded assessments through the daily fluency practice, discussion in concept development activities and problem sets, and exit tickets. Mid-module and End of module assessments are the summative assessments used within each of the modules.**	(Reviewer only.) **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Teacher editions provide answer keys and rubrics (progression toward mastery) with each module assessment.**	(Reviewer only.) **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Mid-module and end of module assessment tasks use the course level terminology and language to prompt students' thinking.**	(Reviewer only.) **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **In the News section of the Great Minds website, Louisiana State Superintendent of Education recommends the curriculum. Educators Evaluating the Quality of Instructional Products also found many of Eureka's math lessons exemplar through an evaluation process by Achieve. EDReports.org and Edweek were also resources that recommend the curriculum.**	(Reviewer only.) **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The modules are printed in black and white and are organized neatly. There are no illustrations aside from those within the problem itself to distract students.**	(Reviewer only.) **___X___ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **The Great Minds website provides a parent support page that offers videos, homework helpers, module tip sheets, grade road maps, FAQs, and additional resources to help parents support their children's learning.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: _Eureka Math-A Story of Units Grade 4_**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
____X___ Meets _____ Does Not Meet	___X__ Meets _____ Does Not Meet

Non-Negotiable Overall:

__X___ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Eureka Math appears to be written specifically with the standards in mind. Each module builds upon concepts learned across lessons and grade levels. It focuses a great deal of time on building conceptual understanding and giving students the opportunities to practice these skills and build on them to mastery. Many supports are provided for teachers, students, and families through the Great Minds website.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Math – A Story of Units Grade 5
ISBN #	978-1-63255704-9
Grade Level(s) or Course:	5
Reviewer ID:	CB, LKE

RECOMMENDED AS:

____X____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- **The pacing guides in the overview of the module topics and lesson objectives provide pacing and logical progression of standards. The majority of time is focused on the major clusters of the grade. Lessons incorporate the major work, the supporting work to enhance student ability.**

COHERENCE- Each new topic in the table of contents gives focus standards, instructional days, and coherence links.

RIGOR- **Concept development is built through problems done together in whole group lessons and practice in problem set activities in individual work. Time is spent at the end of each lesson to debrief and reflect on what was learned. Exit tickets are used to demonstrate understanding of concepts.**

CONCEPTUAL UNDERSTANDING- **Conceptual understanding is built through the use of opportunistic strategies before moving into more efficient algorithms.**

MATHEMATICAL PRACTICES- **Each Module not only provides the focus standards for the grade level, but highlighted standards for mathematical practice as well.**

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Side bar notes for Multiple means of Engagement and representation present in each lesson in all modules. Each lesson lists the standards and lesson objectives.

OTHER:
The curriculum needs to be adopted K-5, or K-6, so that it can be transferred to 7-12. This program starts in kindergarten and follows strict patterns for building foundational skills.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **All standards are re[illegible]ented in all modules except for module 4, which was misprinted as module 6. Module 4 was missing in the teacher edition set.**	**(Reviewer only.)** **__X__Meets** **_____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X___Meets** **_____Does Not Meet** **Strengths/Weaknesses:** **Module 4 is actually module 6. It is unable to be reviewed thoroughly without module 4.**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:
Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-
The pacing guides in the overview of the module topics and lesson objectives provide pacing and logical progression of standards. The majority of time is focused on the major clusters of the grade.

(Reviewer only.)

_X___Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Lessons incorporate the major work, the supporting work to enhance student ability. The major work in multiplying fractions showed the supporting work using data to multiply fractions.**	(Reviewer only.) **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Modules aligned with grade 5 overview. For example, see CCSS page 34.	(Reviewer only.) **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There are 3-4 problem set pages, plus exit tickets and 1-2 pages of homework per lesson.	(Reviewer only.) _X___Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each new topic in the table of contents gives focus standards, instructional days, and coherence links. For example, module 2.D.1.	(Reviewer only.) __X__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** At the beginning of each lesson in fluency practice standards are identified as current or previously learned standards.	(Reviewer only.) _X___ Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Curriculum overview lists standards at the beginning of each module. Each lesson lists the standards and they are noted in the alignment chart.**	(Reviewer only.) **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Assessment rubrics at the end of each module show standards that connect two or more domains.** **For example, lesson 5 of module 1 connects to understanding the place value system.**	(Reviewer only.) **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Student practice is connected to major works of 5th grade.**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **Conceptual understanding is built through the use of opportunistic strategies before moving into more efficient algorithms.** **For example, see grade 5, module 2.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Concept development is built through problems done together in whole group lessons and practice in problem set activities in individual work. Time is spent at the end of each lesson to debrief and reflect on what was learned. Exit tickets are used to demonstrate understanding of concepts.**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **Exit Tickets after each lesson** **Mid-Module/End Module Assessments** **Concept development modules: Use of manipulatives, pictures, and equations to build understanding.**	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Fluency practice occurs in every module at the beginning of each lesson to build fluency in multi-digit arithmetic. Application problems throughout the Modules as well as the problem sets and homework practice help build conceptual understanding and fluency through daily practice and review.** See 1.D.9 of module 1	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** **Conceptual understanding is built through the use of opportunistic strategies before moving into more efficient algorithms. See 3b on page 1.D.12 for module 1 for examples of strategies that use procedures.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Fluency is built in daily practice with the sprint and pattern practices. For example, see 8-9 of module 2, which addresses 5NBT.5.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Application problems are used frequently in the daily lessons to review concepts that have been previously taught. Usually 5-8 minutes of time is planned in each lesson for these problems.**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **_____Partially Meets (1)** **_____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Application problems are given in lessons throughout the modules that provide opportunity to solve single and multi-step problems. The problem sets provided at the end of concept building, homework, and assessments also provide the practice students need to build problem solving skills.**	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Most lessons in each module have application problems to build skills and understanding in the major works for the grade level.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Each lesson in the modules appears to build on the concept learned in the previous lesson. It is evident that conceptual understanding is built through math talks and practice on skills being taught. Problem Sets, Exit Tickets, and homework provide students with opportunities to apply and show what they have learned.**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **Each Teacher Module provides and overview of the standards, which tie in to the major works for the grade level being taught. Each lesson in each module provides fluency practice, application problems, concept building, and problem sets that focus on the major works. The margin notes indicate when each Mathematical Practice is addressed in each lesson. Example Lesson 6 page 1.B.19 Module 1**	**(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **_____Partially Meets (1)** **_____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Each Module not only provides the focus standards for the grade level, but highlighted standards for mathematical practice as well. For example, Module 2VI. All of the mathematical practices are covered in the modules used throughout the year.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Foundational standards are provided in each module that are to be built upon from the previous grade level. This shows the growth of complexity throughout the practices across each grade level.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **In each Module the overview provides a summary of each mathematical practice that will be focused on in the module and an example of how students will show they are meeting the standard practice. Example: Module 2 V lists 4 MP's.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **_____Partially Meets (1)** **_____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **The curriculum spends a majority of the time on building concepts. This is done through problems provided by the teacher where students participate in a great deal of math talk between each other and the teacher as concepts are introduced. Open ended questions let students explain reasoning. Each lesson also has a student debrief that allows them to reflect on and process what they have learned. They have the opportunity to self-assess their work as well as classmates and they discuss their solutions in the problem sets they have completed at this time. Example: Module 3 Grade 5 Lesson 13.**	

Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **In the student debrief, students are encouraged to share their strategies used to solve problems and explain why they chose the strategies they did and compare them to others. The debrief allows for explanation and reflection.**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Mathematical terminology is evident in each of the Modules. Key terminology is introduced in the first module and continues throughout the remaining modules. Key terms for the module are given in the module overview.**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **Multiple means of engagement and representation represented in each lesson in all modules.** **Example: Grade 5 Module 3 Lesson 9.**	**Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Note found in the margin of each lesson for teachers to help with scaffolding student engagement. Example: Lesson 9 Module 3 Grade 5 3.C.16	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **Each lesson is broken down into 3 major components: Fluency Practice, Concept Development, Application problems, Student Debrief, Margin notes for scaffolding. Each component provides a variety of instructional approaches from whole group, small group, partners, and individual practice to develop skills. The Exit Tickets and problem sets help check for understanding and any misconceptions that may occur. This is evident in all modules.**	**Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)

1. Lessons are thoughtfully structured and support the teacher leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Each lesson is a 60 minute structure where students actively participate in their own learning through the fluency practice provided in each lesson. Conversations take place among teachers and students as they participate in the concept development portion of the lesson. Students also reflect on their own learning as well as the learning of their classmates as they discuss problems from the problem sets in the student debrief. Sprints promote individual growth.	(Reviewer only.) ___X___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Problem sets and application problems develop understanding of new mathematics. Homework and application problems plus fluency sessions practice previously learned materials as well as new content learned.	(Reviewer only.) ___X___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Each lesson builds upon the skills and concepts taught in previous lessons throughout each module. Rationale for module sequence is found in the curriculum overview. Scope and sequence provides logical sequence.	(Reviewer only.) ___X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The Great Minds website offers teacher support through The Eureka navigator where they can find embedded demonstration videos, homework helpers, pacing and preparation guides, online communities, curriculum maps and overviews, standards checklists, materials lists, and FAQs.	(Reviewer only.) ___X___ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- The Great Minds website offers a list of materials and tools (manipulatives) that tie in with each grade level's lessons for the year that can be purchased.	(Reviewer only.) ___X____ Yes _____ No

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **The curriculum offers a variety of embedded assessments through the daily fluency practice, discussion in concept development activities and problem sets, and exit tickets. Mid-module and End of module assessments are the summative assessments used within each of the modules.**	**(Reviewer only.)** **__X____ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Teacher editions provide answer keys and rubrics (progression toward mastery) with each module assessment.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Mid-module and end of module assessment tasks use the course level terminology and language to prompt students' thinking.**	**(Reviewer only.)** **__X____ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **In the News section of the Great Minds website, Louisiana State Superintendent of Education recommends the curriculum. Educators Evaluating the Quality of Instructional Products also found many of Eureka's math lessons exemplar through an evaluation process by Achieve. EdReports.org and Ed Week were also resources that recommend the curriculum.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The modules are printed in black and white and are organized neatly. There are no illustrations aside from those within the problem itself to distract students.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **The Great Minds website provides a parent support page that offers videos, homework helpers, module tip sheets, grade road maps, FAQs, and additional resources to help parents support their children's learning.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	**Non- Negotiable 2: Focus and Coherence**
____**X**___ **Meets** _____ **Does Not Meet**	__**X**___ **Meets** _____ **Does Not Meet**

Non-Negotiable Overall:

__**X**___ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: __**6**___ **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** __**X**_____ **Meets** _____ **Does Not Meet**	**Points:** __**6**___ **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** ___**X**____ **Meets** _____ **Does Not Meet**	**Points:** __**6**___ **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** ____**X**___ **Meets** _____ **Does Not Meet**

Alignment Criteria Overall:

__**X**___ **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Eureka Math appears to be written specifically with the standards in mind. Each module builds upon concepts learned across lessons and grade levels. It focuses a great deal of time on building conceptual understanding and giving students the opportunities to practice these skills and build on them to mastery. Many supports are provided for teachers, students, and families through the Great Minds website.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Maths - A Story of Units - Grade 6
ISBN #	978-1-63255-707-0
Grade Level(s) or Course:	6th
Reviewer ID:	AP TS

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The curriculum focuses on the major work of the grade level with supporting work enhancing the major work.

COHERENCE- The coherence of the modules is aligned to the metric. ~~Students learn~~

RIGOR- Materials reflect the expectations for attention to all three aspects of rigor; conceptual understanding, procedural skill and fluency, and applications

CONCEPTUAL UNDERSTANDING- The materials support the development of students' conceptual understanding of key mathmatical concepts

MATHEMATICAL PRACTICES- Materials demonstrate authentic connections between content Standards & Practice Standards.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Excellent scaffolding within each lesson, however more differentiated resources are needed for EL population & Struggling learners.

OTHER: The curriculum is very rigourous. It would be best to adopt K-6 so students have the foundation they need to be successful in subsequent grades.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence- The curriculum has 6 modules based on CCSS. Modules 1-4 cover the major clusters for 6th grade. Module 5 covers supporting clusters and module 6 covers work relating to major and supporting work.

(Reviewer only.)

[X] **Meets**

[ ] **Does Not Meet/**

Insufficient Evidence

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The major work is front-loaded in the sequential modules, with final 2 modules utilizing supporting work to enhance the major work.	(Reviewer only.) X **Meets** ____ **Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The curriculum is aligned with common core Standards. In all teacher manuals it states the prerequisite skills needed that are addressed to build upon with Focus Standards Every module has a focus on grade level Content.	(Reviewer only.) X **Meets** ____ **Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Every lesson is scaffolding from simple to complex in the work & support. There are some suggestions for helping struggling students in margins. (minimal)	(Reviewer only.) X Meets ___ Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each module overview states the foundational (previous) standards addressed in the module that grade level standards build upon. In each lesson the classwork begins with prerequisite skills and builds up to grade level complexity Example: 6.5 module 1 w/ fluency sprint, then naming shapes, and building to finding areas of parallelograms	(Reviewer only.) X Meets ___ Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The teacher overview clearly identifies material from previous grades. Lessons state learning targets in Teacher manual only. Problem sets match learning objectives. Learning objectives are "revealed" to student through lesson	(Reviewer only.) X Meets ___ Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Curriculum Overview provides standards addressed in lessons Module titles, learning outcomes are shaped by CCSS cluster headings	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Assessments rubrics and CCSS standards checklist identify multiple standards being taught in lessons Examples Module 6 – 6.EE.2 w/ 6.SP.1-5 Module 5 - 6.EE.7 w/ 6.NS.8 + 6.G.1-4 Module 4 - 6.EE.1-9 w/ 6.RP.3 & 6.NS.4	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) X Meets ____Does Not Meet **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

☒ **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set ex[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Lessons are scaffolded well - fro[illegible] simple to complex Uses models & diagrams & moves from concrete to abstract to build conceptual understanding Example; Module 1 lesson 3, Mod 2 lesson 1 Exploratory challenges Module 1 lesson 3, Module 5 lesson 2	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Concepts are carried across lessons using 3 lesson types- ~~[illegible]~~ Socratic lessons, Exploration lessons an modeling lessons	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Manipulatives, pictoral models and concepts carried across lessons disclose connections between standards for grade level.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** All lessons build on procedural fluency Use white board exchanges, sprints, and counting activities	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Daily lessons give opportunity to work with multiple methods to solve problems efficiently.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Fewer Problems in lessons then other programs but much more in depth & complex	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Modeling lessons are one of the three types in this curriculum Students get ample practice using models to solve real world problems	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The lessons guide Students through process of working with single digit problems, to multistep problems in all major work,	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** The entire curriculum is focused on the major work of grade 6. Students have ample opportunity to work on application problems with major work Examples: Module 1 lesson 15 Module 4 lesson mid assessment Module 5 lesson 6 unit	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Very strong in modeling throughout and across grade levels.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Mathmatical practices are embedded throughout the curriculum and identified in T.E., They are used to enhance major work

(Reviewer only.)

✓ **Meets (2)**

___ **Partially Meets (1)**

___ **Does Not Meet (0)**

Metric AC2B: **Materials att to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each ques and rate Metric 2B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Math practices are all covered over the course of the year. See CCSS Standards Check list	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** They increase in complexity just like the major work	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Teacher Overviews Provide insight & use relevant to modules	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** lots of discussion, class & partner work where students question & justify their work — Socratic method lessons	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Yes, Excellent discussion sections in every lesson. Students are required to use a variety of diagrams, mathematical models etc	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary is present in lessons, introduced & explored & used.	

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Alignment Criterion 3: Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Differentiation is built into the scaffolding of the lesson, there are marginal notes (minimal) that suggesting elaboration on differentiation	Reviewer only.) ____Meets (2) X Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Great Scaffolding within lessons however there are no additional supports for struggling learners	Reviewer only.) X Meets (2) Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** 3 types of lessons works well to address metric AC3C & variety of approaches to solving problems	Reviewer only.) X Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** 45 minute lesson structure, that can be adjusted to classroom needs. Students working in partners & small groups in Exploratory	**(Reviewer only.)** X **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** lessons follow a sequence (simple to complex)	**(Reviewer only.)** X **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** See Rationale for Module Sequence in Curriculum Overview document.	(Reviewer only.) X Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Teacher manuals give good background information & ideas on preparing lessons. • Teacher support page, Eureka Navigator & Video Series online (must subscribe)	(Reviewer only.) X Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Yes, they are faithful representations	(Reviewer only.) X Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Exit tickets Mid module assessment End of module assessment class discussions for more formative	(Reviewer only.) X Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Answer keys & rubrics w/ Assessments	(Reviewer only.) X Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Some regional vocabulary that needs to be learned ie – tape diagram vs bar models	(Reviewer only.) X Yes ____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** yes Consortium of teachers	**(Reviewer only.)** ✓ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** very straightforward	**(Reviewer only.)** ✓ Yes _____ No
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Parent support page (need more development here)	**(Reviewer only.)** ✓ Yes _____ No

X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

X **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

EVIDENCE SUMMARY:

FOCUS- The materials in this curriculum address all Grade 7 Standards and assess appropriate topics.

COHERENCE- 65% of this curriculum focuses coherently on the major work standards for Grade 7. Major work is further enhanced by supporting work, learning objectives, vocabulary, problems, and activities.

RIGOR- Materials reflect the balances in the standards and help students meet the rigorous expectations. Students will gain a deep understanding of concepts.

CONCEPTUAL UNDERSTANDING- Conceptual understanding is attended to thoroughly throughout the curriculum. Fluency and procedural skills are interwoven throughout. Real-life application creates engaging application for students.

MATHEMATICAL PRACTICES- MPs enrich the major work of Grade 7 throughout the curriculum. MPs develop in each lesson to help students gain a better understanding of content. Vocabulary is provided and appropriate.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Scaffolding is provided throughout the curriculum providing added information, tips, and differentiation ideas for diverse learners. ELL's are rarely specifically mentioned.

OTHER:

Strengths: The curriculum flows and is easy to follow. Discussion opportunities are engaging to students and promote participation. Standards are thoroughly addressed. There are great conceptual activities. Students will gain deep understanding.

Weaknesses: There are minimal ELL supports. Text is not visually appealing. Sometimes skills practice is too intense.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation
Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** The curriculum does not assess anything above grade 7 standards. Example: Module 2 assessments cover 7.NS.A.1, 2, 3 7.EE.B.4a There are seldom extensions that introduce content above grade level. Ex. Module 6 Pg. 35 There extensions are not assessed.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** Approximately 65% of this curriculum focuses on Major Work standards for Grade 7. All of the CCSS for Grade 7 are taught in this curriculum.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The supporting work enhances the focus and coherence of the Major Work throughout the curriculum. Ex. Module 3, Lesson 10 When solving for angle problems, students must set up equations and solve.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The scope and sequence of this curriculum matches the progression of the Grade 7 standards. This curriculum is grade appropriate throughout. This curriculum is very vigorous and would probably work best if it is used as a grades K-8 curriculum.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There is differentiation provided for both low-performing students and high-performing students. Module 4: Each lesson includes an opening exercise, discussion, practice problems/activity, closing, and an exit ticket and worksheet/problem sets. During lessons, scaffolding throughout for lower-performing. Pg. 131, 141, 178, 180, etc. Module 4, Lesson 1 scaffolds for higher-performing students during an activity of finding percents. Pg. 18.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Throughout. Concepts are linked to and extend previous understanding of content. Each module makes connections and builds. Module 3 teaches expressions and equations, then teaches inequalities, and then has students graph inequalities. The TG explains how modules are connected to previous learning. Ex. Ratios/Proportions build on what students learned in Grade 6.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In general, I was unable to find any specific mention of review of material from previous grades; however, I did find mention of it in the module overviews. Curriculum map, module sequence rationale, and alignment chart shows teacher what is taught in each grade.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each module starts with an overview of standards being covered (MP/Vocab) Module 4 Pg. 3-9 Each topic identifies focus standards. Module 4 Pg. 13-14, 104-406, 176-177, 234-235. Each lesson shows student outcomes/learning objectives. Module 4 Pg. 15, 28, 42,, 62, 76, 87, 107, etc.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In general, the curriculum includes problems and activities that serve to connect two or more clusters in a domain throughout. Ex. Equations are used to solve for missing angles in geometry.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__x__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set e expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding it attended to thoroughly throughout the curriculum. Module 1: Pg. 17 "How do you know..." Pg. 25 "How many other ways can the answer be determined" Pg. 40 "What can you infer about..." Pg. 76 "What does that mean..."	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Throughout. Module 6: Pg. 58 "Why do we take time to set u a correspondence?" Pg. 93 Discussion about drawing triangles, "If...Then..."	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Throughout. This curriculum uses a variety of correspondences to represent math including verbal descriptions, diagrams, graphing, and equations. Module 4: Pg. 30 uses a tape diagram and double number line to find the percent equations. Module 2: Pg. 214-235 going from words to equations to expressions.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Do the materials in grades K-6 provide repeated practice toward attainment of fluency Standards?	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Fluency and procedural skills are interwoven with conceptual understanding throughout.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Procedural problems and exercises are present in lessons and problem sets. Module 6 Pg. 282 algorithms for volume. Module 4 Pg. 122 algorithm for percent error.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** N/A	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Real Life Application creates engaging application for students throughout each module. Module 4 Pg. 161 Tax, commissions, fees Module 6 Pg. 298 real world volume problems Module 1 Pg. 81 problem set for proportional relationships with equations. Module 2 Pg. 236 modeling college investments. Module 5 Pg. 178 random sampling with words in books Module 3 Pg. 101 real world distance problems.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout Geometry – finding perimeter, area. Students must write equations, solve, and make sense of real world problems.	

Do application problems particularly stress applying the Major Work of the grade? Eva[illegible]essons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Throughout Example: In module 2: students are introduced to 2-step equations. Later they have to write their own equations to solve angle problems (Module 3). They again apply this major work standard in Module 6 when solving for surface area, area, and volume.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout Module 3 – students model using rectangular arrays. Module 4 – double line graphs	

Alignment Criterion 1:

Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Enrich Major Work of grade 7 throughout. 1. Making sense of problems and persevere in solving. Module 1 Lesson 13 Pg. 117 Completing tables by finding equivalent ratios. 2. Reason abstractly and quantitatively. Module 3 Pg. 241 Ratio for pi. Module 3 Pg. 250 algorithm for area of circle. 3. Construct viable arguments/critique reasoning of others. Module 5 Pg. 71 probabilities of compound events. 4. Model with mathematics. Module 5 Pg. 62 tree diagrams to model sample space 5. Use appropriate tools strategically. Module 6 Pg. 46 protractor for angles Module 6 Pg. 69 compass to draw shapes 6. Attend to precision. Module 2 Pg. 169 applying operations to solve equations 7. Look for and make use of structure. Module 4 Pg. 209 uses scale drawing to find scale factor 8. Look for and express regularity in repeated reasoning. Module 1 Lesson 16 Pg. 142 relating scale drawings to ratios and rates.	(Reviewer only.) __x__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** __x__**Meets (2)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Mathematical practices are shown throughout the curriculum. Every MP is used and MPs are labeled in the guided instruction in the Teacher's Edition.	____**Partially Meets (1)** ____**Does Not Meet (0)**

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Mathematical practices develop in each lesson to help students gain a better understanding of the curriculum.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** The Module Overview explains each mathematical practice and how it is implemented in the lessons. Module 1: Pg. 6 Module 2: Pg. 7-8 Module 3: Pg. 8-9 Module 4: Pg. 7-9 Module 5: Pg. 6 Module 6: Pg. 5-6	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Every lesson includes class discussion that promotes participation and reasoning. Module 3: Pg. 73, 100, 131, 149, etc.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Throughout. Module 4 Pg. 78 using double number line to set up algorithms. Module 4 Pg. 122 students have to explain their reasoning about percent, absolute value, etc. Exit Tickets - throughout	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary is provided in the module overview in every module book and terminology is used throughout. Terminology in module overview Pg. 6-7. Vocab in each lesson Pg. 17, 37, 65, etc. Lesson 8 Pg. 4 has students provide arguments/explanations when finding the difference between theoretical and estimated probabilities.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-

Module 4, Lesson 8, Pg. 122

Out of Modules 4, 5, and 6, this was the only time ELLs were specifically noted.

Reviewer only.)

____Meets (2)

__x__Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials pr[illegible]e appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Scaffolding is provided throughout each lesson and provides teachers with added information, tips, scaffolding ideas, etc.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** There are a wide range of instructional approaches used throughout. Module 1 Lesson 6 has students work in small groups to complete an exploratory challenge where they write a problem, draw a table, draw a graph, and provide an explanation.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Throughout. Curriculum is well structured with supports. Module 4 Lessons contain differentiation, activities/discovery, discussion prompts, links to prior knowledge, vocabulary, guided teacher instruction (every lesson), student reflection, guided questions (every lesson), fluency practice, and exploratory challenges (Module 4 Pg. 250, 316, 326). Module 4 Pg. 61, 66 contains a common misconception.	(Reviewer only.) ___x___ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Throughout. There are problem sets, activities/projects, and exit tickets in every lesson. Each lesson starts with a warm up "Class Work", has practice/application, including real world and skills practice, and ends with a summary "Closing" and exit ticket.	(Reviewer only.) ___x___ **Yes** _____ **No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Curriculum has an intentional sequence that strengthens students understanding of content. Content is introduced, questions scaffold and builds to a better understanding.	(Reviewer only.) ___x___ **Yes** _____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** CD – Teacher Resources DVD – Exam-View Tests Teachers Edition for every module Online: video supports, homework helpers, pacing and preparation guides	(Reviewer only.) ___x___ **Yes** _____ **No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** When manipulatives are suggested in the materials, they are well connected to the content. Online – list of manipulatives helpful for lessons. Manipulatives for Eureka are available by purchase.	**(Reviewer only.)** **___x___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Throughout Summative: Mid module assessment, end of module assessment Formative: exit ticket, activities, projects	**(Reviewer only.)** **___x___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Every module contains rubrics and student examples for the summative tests. Module 3 Rubric Pg. 224-229, 365-370. Student Examples (each mid/end module assessment) Pg. 230-235, 371-376. Answer keys provided for every problem set.	**(Reviewer only.)** **___x___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The language is the same in the curriculum and the assessments. Sentence structure is clear throughout.	**(Reviewer only.)** **___x___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** I was unable to find a list of peer reviewers for this curriculum. EdReports	**(Reviewer only.)** **_____ Yes** **___x___ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The curriculum is not flashy or colorful, but the visual design/pictures/diagrams supports students throughout.	**(Reviewer only.)** **___x___ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Available online: Module Tip Sheets Homework Helpers Videos Grade Roadmaps FAQs	(Reviewer only.) **___x___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: _Eureka Math – A Story of Ratios – Grade 7**

Publisher: _Great Minds_____ Copyright: __2015___ ISBN:__978-1-63255-710-0_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
____x___ Meets _____ Does Not Meet	__x___ Meets _____ Does Not Meet

Non-Negotiable Overall:

__x___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet	Points: ___5__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet

Alignment Criteria Overall:

___x__ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? ___x__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:
Curriculum flows and is easy to follow.
Discussion opportunities are engaging to students and promote student participation.
Standards are thoroughly addressed throughout the curriculum.
Student exercises reinforce conceptual understanding.
Great conceptual knowledge activities.
Deep knowledge and understanding.
Students will get a deep understanding of mathematics.

Weaknesses:
There is minimal ELL supports.
The text is not visually engaging.
Sometimes the skills practice is too intense.

EVIDENCE SUMMARY:

FOCUS- The materials reflect the basic architecture of the Standards by covering all Grade 8 Standards and assessing appropriate topics. Although topics above grade level are introduced, they are not assessed.

COHERENCE- Materials focus coherently on the Major Work standards for Grade 8. Approximately 78% of this curriculum focus on Major Work Standards. Supporting work enhances the focus and coherence of the Major Work throughout the curriculum. MP utilized throughout.

RIGOR- Materials reflect the balances in the Standards with rigorous expectations for the students.

CONCEPTUAL UNDERSTANDING- Conceptual and procedural understanding is attended to throughout the curriculum with discussions, questioning, and concept development activities. Fluency and procedural skills are interwoven with conceptual understanding throughout.

MATHEMATICAL PRACTICES- The MPs are used to enrich the Major Work of Grade 8 standards. MP develop in each lesson to help students gain a deeper understanding of content.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Scaffolding is provided throughout the curriculum and provides added information, tips, and scaffolding techniques / ideas. Scaffolding is helpful for diverse learners; however, specific scaffolds / differentiation for ELL students are rarely listed.

OTHER:

Strengths:

This curriculum flows and is easy to follow. Discussion opportunities are engaging to students and promote participation. Standards are thoroughly addressed and exercises reinforce conceptual understanding.

Weaknesses:

There are minimal ELL supports. The text is not visually engaging. Assessments can be wordy and confusing.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation
Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** This curriculum introduces topics that are above grade level; however, it does not test on them. Everything that is in the assessments is grade 8 standards. While the structure and questions can be advanced, the content being assessed is at grade level.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** Approximately 78% of this curriculum focuses on Major Work standards for Grade 8. All of Module's 1, 2, 3, and 4 are Major Clusters. About 75% of Module 5 is a Major Cluster. About 25% of Module 6 is a Major Cluster. About 50% of Module 7 is a Major Cluster. The Pythagorean theorem is present in several modules.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The supporting work enhances the focus and coherence of the Major Work throughout the curriculum. About 25% of Module 5 is a Supporting Cluster. About 75% of Module 6 is a Supporting Cluster. About 50% of Module 7 is a Supporting Cluster. • 8.F (using functions to solve) is enhanced by 8.G.C 9 (perimeter and area of common and complex shapes) • 8.EE (setting up equations) is enhanced by 8.SP (patterns and fitting lines in scatter plots) • 8.EE and 8.F (solving equations and graphs of functions) is enhanced by 8.SP (linear vs. nonlinear modeling of data) Ex. Lines of best fit is a pattern in bivariate data while using a function to model a relationship between quantities.	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The scope and sequence of this curriculum matches the progression of the Grade 8 standards. This curriculum is grade appropriate throughout and does a great job preparing students for Algebra 1. This curriculum is very vigorous and would probably work best if it is used as a grades K-8 curriculum.	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There is differentiation provided for both low-performing students and high-performing students. Low-performing: Module 7 Pg. 12 provides vocabulary terms and definitions. Module 7 Pg. 13 provides tips to the teacher and suggests using cutouts for the Pythagorean theorem. High-performing: Module 7 Lesson 4 is an optional lesson for simplifying square roots that can be used to help students prepare for Algebra 1. Students work through many exercises during class and on homework that are meant to solidify understanding for grade level content.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Throughout. Concepts are linked to and extend previous understanding of content. Each module makes connections and builds. Module 3 starts with Similarity Proofs, then builds to Similar Triangles, Modeling Similarity, Similar Shapes, and then builds to Dilations, Similarity, and then Proofs and Properties of Dilations. It rarely specifically references previous grade-level content, but students do use previous skills everyday. This is most evident when students have Eureka implemented over several years, not as much as a stand along 8th grade curriculum.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In general, I was unable to find any specific mention of review of material from previous grades; however, I did find mention of it in the module overviews. Module 7 module overview explains expectations for module as a whole and indicates that students will need to have an understanding of standards 6.NS.C.6, 6.NS.B.2, and 7.NS.A.2, 2d to complete the activities and assignments in the module. Teacher can see year-long expectations in the online curriculum map.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The language ties back to the standards/objectives throughout. Every module contains learning objectives throughout. Below is evidence from Module 1. Overview with standards, MP, Vocabulary Pg. 2-4. Each Topic: Focus Standards Pg. 8, 78. Each Lesson: Student Outcomes Pg. 10, 18, 29, 37, 47, 57, 80, 86, 98, 107, 114, 122, 131.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In general, the curriculum includes problems and activities that serve to connect two or more clusters in a domain throughout. Module 6 Pg. 112 has students learning about scatter plots, then learning how to plot the line of best fit, and then finding the equations for the line. Module 6 Pg. 136 has students writing equations/algorithms, interpreting slope, interpreting y-intercept, and then asking conceptual problems about how and why their interpretations make sense.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:
Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materia[illegible]pport the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to [illegible]ate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for [illegible] question and rate Metric 1A.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding it attended to thoroughly throughout the curriculum. Module 1 Pg. 14 asks students, "Why should we bother with exponential notation?" Module 1 Pg. 31 asks, "How is this operation related to the four arithmetic operations?" The discussions during class activities attend to a strong conceptual understanding.	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Throughout. Module 1 SWB contains procedural problem sets and sprints such as on Pg. 43-46 (write in scientific notation) and 94-97 (Simplify exponential function.) All module contain Exit Tickets that check for understanding of conceptual problems such as Module 4 Pg. 283 where it shows equations and graphs and students must find the error, explain the error, and correctly graph the equation. Module 4 Pg. 164 has students find at least 10 solutions to a linear equation. They determine if equations have unique, infinitely many, or no solution. Throughout. (Discussion, questioning, concept development) Module 4 Pg. 124 has students connecting constant speed to constant rate problems. Module 4 Pg. 97 has students applying linear equations by asking what is noticed and how to write the equations.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Throughout. This curriculum uses a variety of correspondences to represent math including verbal descriptions, diagrams, graphing, and equations. Module 6: Verbal description: Pg. 46-49, 180. Diagrams: Pg. 53-54, 132. Equations: Pg. 113, 132, 138. Graphing: Pg. 151, 153. Tables and graphs are often used to help learn/see/show connections.	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Do the materials in grades K-6 provide repeated practice toward attainment of fluency Standards?	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Fluency and procedural skills are interwoven with conceptual understanding throughout. Module 1 Pg. 5-6 Explains how to use 'Rapid White Board Exchanges" and "Fluency Sprints." Pg. 40, 43-46 Sprints with exponents to achieve better procedural skills while students are gaining conceptual understanding by performing operations with exponents. Pg. 136 Rapid white board exchanges to gain procedure understanding of scientific notation while gaining conceptual understanding of operations with scientific notation. Module 7 Pg. 155 Fluency activity for Area and Volume. Pg. 163 Using radicals/roots to solve Area and Volume problems and write equations.	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Throughout. Module 7 Pg. 59 When solving for the unknown side of a triangle using Pythagorean Theorem, have radicals to solve giving practice at operations with radical numbers. Pg. 105 Long division used to determine decimal expansion. Done using another method as well. Module 4 has algorithms used throughout. Pg. 364: ax+by=c Pg. 292, 213, 248: y=mx+b Pg. 248: $y=-\frac{a}{b}x+\frac{c}{b}$ Pg. 254: $\frac{p2-r2}{p1-r1}$	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** N/A	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Real Life Application creates engaging application for students throughout the curriculum. Module 1 Pg. 83 Standard to scientific notation. Pg. 86-87 Population to scientific notation. Pg. 88-93, 100-103, 106-110, 112-113. As the major works are a large part of each module, focus is not lost. Engaging applications are used to develop major works. Converting from Celsius to Fahrenheit 8.EE.C.8c.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout Module 6 Pg. 20 Aging autos (rate of change, interpret initial value, percent increase/decrease). Pg. 68 Relationship for price and quality of athletic shoes. Pg. 146 Relationship between year and population in US.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Applications problems stress applying the Major Work of Grade 8 throughout the curriculum. The Major Work is being focused on about 78% of the time overall in this curriculum.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout Module 5 Pg. 114 Students write rules to express functions related to geometry. Pg. 119 Compare liquid in a solid to volume of a prism.	

Alignment Criterion 1:

Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Enrich Major Work of grade 8 throughout.

1. Making sense of problems and persevere in solving.
   Module 4 Pg. 248-266 Solve linear equations and graph.
   Module 4 Pg. 418 Solving systems of linear equations.
2. Reason abstractly and quantitatively.
   Module 2 Pg. 13 "How" "Do you think" "In other words…"
3. Construct viable arguments/critique reasoning of others.
   Module 3 Pg. 171 Explain properties of similar triangles.
   Module 3 Pg. 91 Informal proofs of dilations.
4. Model with mathematics.
   Module 3 Pg. 164 Similar triangles model real-world.
5. Use appropriate tools strategically.
   Module 2 Pg. 87-91 Transparency for transformations and properties of rigid motion.
6. Attend to precision.
   Module 2 Pg. 39-50 Define properties, label reflections.
7. Look for and make use of structure.
   Module 1 Pg. 18 $x^m \bullet x^n = x^{m+n}$
   Module 1 Pg. 22 $x^m \div x^n = x^{m-n}$
8. Look for and express regularity in repeated reasoning.
   Module 5 Pg. 10 Use repeated computations to
   Pg. 59 determine equations from Pg. 76 graphs/tables.

(Reviewer only.)

__x__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Mathematical practices are shown throughout the curriculum. Every MP is used and MPs are labeled in the guided instruction in the Teacher's Edition.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Mathematical practices develop in each lesson to help students gain a better understanding of the curriculum.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** The Module Overview explains each mathematical practice and how it is implemented in the lessons. Module 4 Pg. 7 shows module overview containing MP.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Throughout. Module 6 Pg. 37-39 which graph/which function. Explain reasoning. Pg. 39-41 given verbal description, sketch graph of functional relationship. Pg. 42 write story that models situation represented by graph.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Throughout. Module 6 Producing: Pg. 138, 166 Graphing: Pg. 15, 51, 53 Scatter Plot: Pg. 68-70 Two-Way Table: Pg. 151, 167 Critique/Explain: Pg. 10, 20	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary is provided in the module overview in every module book and terminology is used throughout. Evidence from Module 5: Vocabulary: Pg. 6, 21, 23 Explain the strategy for finding the area of the white border.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Although the module contain scaffolding, there is a minimal amount connected to ELL students. Module 5 Pg. 131 "Provide a menu of phrases for ELLs to use to support statements. Module 6 Pg. 66, 69, 77, 83, 84, 93, 95, 97, 107, 128, 147, 149, 168, 176, 179. Module 7 Pg. 12, 140.	**Reviewer only.)** **____Meets (2)** **__x__Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Scaffolding is provided throughout each lesson and provides teachers with added information, tips, scaffolding ideas, etc. Module 4 Pg. 65-67 (...helpful for diverse learners.) Pg. 29, 53 (work bank). Pg. 349.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Module 5 Grouping: Pg. 25 (individual), Pg. 59 (pairs), Pg. 59, 76 (group), Pg. 88 (small group). Strategies: Pg. 23 (input-output machine), Pg. 119 (concrete and hands on experiences), Pg. 142 (modeling and demonstration), Pg. 88 (small group exploratory challenge), Pg. 30 (tables), Pg. 60 (coordinate plane), Pg. 80, 92 (fluency exercises).	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Throughout. Curriculum is well structured with supports. Module 7 Lessons contain differentiation (Pg. 13, 102, 117 – every lesson), activities/discovery (Pg. 8 – rapid white board exchanges), discussion prompts (Pg. 19, 30, 37 – every lesson), links to prior knowledge (Pg. 12 - refers to Modules 2 and 3), vocabulary (Pg. 7, 42), guided teacher instruction (every lesson), student reflection (Pg. 19, 32, 44, 120 - closing), guided questions (Pg. 169, 264 – every lesson), fluency practice (Pg. 155, 252), and exploratory challenges (Pg. 103, 165). Module 1 Pg. 62 contains a common misconception.	**(Reviewer only.)** **___x___ Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Throughout. Module 2 Lesson 8: Pg. 86 – discussion, Pg. 87 – exercises, Pg. 88 – discussion, Pg. 89 – video presentation, Pg. 89 – exercises, Pg. 90 – closing, Pg. 91 – summary, Pg. 92 – exit ticket. Lesson 1: Pg. 10 – concept development, vocabulary, exploratory challenge, Pg. 13 – closing, Pg. 14 – summary, Pg. 14 – exit ticket. Lesson 10: Pg. 105 – classwork, Pg. 107 – video presentation, Pg. 107 – exercises, Pg. 111 – closing, Pg. 112 – exit ticket.	**(Reviewer only.)** **___x___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Curriculum has an intentional sequence that strengthens students understanding of content. Content is introduced, questions scaffold and builds to a better understanding. Module 6: Modeling relationships, rate of change, representing a line, increase/decrease functions. Module 6: Scatter plots, patterns in scatter plots, line of best fit, determining equation of line of best fit.	**(Reviewer only.)** **___x___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** CD – Teacher Resources DVD – Exam-View Tests Teachers Edition for every module Online: video supports, homework helpers, pacing and preparation guides	**(Reviewer only.)** **___x___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** When manipulatives are suggested in the materials, they are well connected to the content. Module 3 Pg. 45 Ruler for figuring similarity. Pg. 18 Compass used for dilations. Pg. 11, 188 Embedded.mov file/video Protractor and calculator used throughout this module. Manipulatives for Eureka are available by purchase.	**(Reviewer only.)** **___x___ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Throughout Module 2 Formative assessments: Exit Ticket Pg. 15, 26, 35, 47, 61, 72, 83, 92, 101, 112, 135, 143, 150, 164, 185, 199. (Each lesson). Activities throughout. Summative assessments (every module): Mid-Assessment Pg. 116-120. End-Assessment Pg. 169-171.	**(Reviewer only.)** **___x___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Every module contains rubrics and student examples for the summative tests. Module 2 Rubric Pg. 121-122, 172-173. Student Examples Pg. 123-127, 174-176. Exit Tickets Answer keys provided for every problem set.	**(Reviewer only.)** **___x___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** I feel that the language is the same with clear sentence structure for the lessons and the assessments, EXCEPT for the mid-assessment in Module 1 Pg. 67-70. I felt that the assessment did not match the content or the language of the lessons.	**(Reviewer only.)** **___x___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** I was unable to find a list of peer reviewers for this curriculum. EdReports	**(Reviewer only.)** **_____ Yes** **___x___ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The curriculum is not flashy or colorful , but the visual design/pictures/diagrams supports students throughout. Module 3 Graphics/Pictures Pg. 10. Dilation Graphics Pg. 19-43, 79-92. Geometric Figures (Modeling/Similarity) Pg. 9, 111-171.	**(Reviewer only.)** **___x___ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Available online: Module Tip Sheets Homework Helpers Videos Grade Roadmaps	**(Reviewer only.)** **___x___ Yes** **_____ No**

Reviewer IMET Evaluation Summary Title/Level: _____

Publisher: _____ Copyright: _____ ISBN:_____

Reviewer ID # _____ Date Review Completed:_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	**Non- Negotiable 2: Focus and Coherence**
____x___ Meets **_____ Does Not Meet**	**__x___ Meets** **_____ Does Not Meet**

Non-Negotiable Overall:

_____ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: ___6__ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **____x___ Meets** **_____ Does Not Meet**	**Points: ___6__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **____x___ Meets** **_____ Does Not Meet**	**Points: ___5__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **____x___ Meets** **_____ Does Not Meet**

Alignment Criteria Overall:

___x__ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? ___x__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:
Curriculum flows and is easy to follow.
Discussion opportunities are engaging to students and promote student participation.
Standards are thoroughly addressed throughout the curriculum.
Student exercises reinforce conceptual understanding.

Weaknesses:
There is minimal ELL supports.
The text is not visually engaging.
Assessment can be wordy and confusing to students.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Math - A Story of Functions - Algebra 1
ISBN #	978-1-63255-324-9
Grade Level(s) or Course:	Algebra 1
Reviewer ID:	K.C. and R.K.

RECOMMENDED AS:

X **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Students spend well over 50% of their time on the Widely Applicable Prerequisites. The language of the titles of the lessons and modules are similar to the language of the standards. In the Module Overview (TE) standards are aligned with each lesson.

COHERENCE-
The modules progress in a logical sequence and also gradually increase in difficulty. Previous knowledge is applied appropriately. Connections are made between categories, domains and clusters when applicable and appropriate.

RIGOR-
Overall this text is rigorous for this grade level, unless vertical alignment is present. However there are many higher-level, challenging exercises, problems and activities.

CONCEPTUAL UNDERSTANDING-
Conceptual understanding is covered throughout the text when a standard requires it. Conceptual problems are integrated into each lesson and placed purposefully.

MATHEMATICAL PRACTICES-
Focus standards for Mathematical Practices can be found at the beginning of each module. Also Mathematical Practices are identified throughout each lesson in the margin. Application problems are designed to cover the required skills from the WAP while also applying the Mathematical Practices.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Scaffolding boxes located in the margins of the TE address needs to support special populations, however the resources are limited.
Lessons are scaffolded, however resources for remediation and enrichment are lacking.

OTHER:

Strengths
- Covers all standards and mathematical practices
- Module Overview useful
- Good conceptual problems
- Scaffolding boxes in TE are helpful
- Appropriate use of prior knowledge

Weaknesses
- Soft cover have to replace or make copies every year
- Weak text to picture ratio
- Heavy on text difficult for lower level reading students and ELL students
- Missing glossary
- Some lessons lacking in procedural problems

Note:
In order for this curriculum to be adopted and be appropriate for the grade level, Great Minds texts would have to have been adopted in earlier grades before this class.

2015-1 nterim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: Great Minds

Title of Material: Eureka Math - A Story of Functions - Algebra 1

Author: Great Minds

ISBN #: 978-1-63255-324-9 **Copyright** 2015

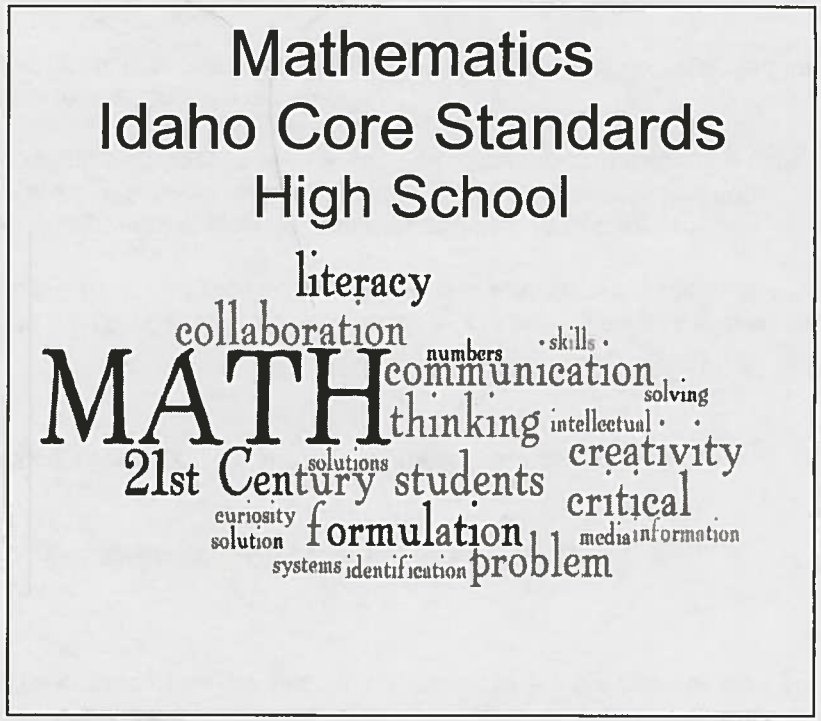
Reviewer ID: K.C. and R.K.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1 **Focus and Coherence**		
Criterion	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Eureka Math materials correspond to the CCSS Standards. Students spend more than 50% of their time on the WAP. In the table of contents Great Minds includes which standards are covered in each lesson and it appears that the standards covered are accurate. Also at the beginning of each module they list the focus standards.	X **Meets** ____**Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Geometry standards are not required in Algebra 1, therefore Eureka meets this metric because they did not need to cover Geometry Standards. However, there are a couple examples that include Geometry concepts. Example #5 pg 104 student edition Module 1 Example: pg 8 of Module 4	X **Meets** ____**Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Overall this text does appear to be rigorous, however if Eureka materials had been used in prior grade levels and gradually implemented it then would be appropriate level of difficulty for Algebra I students. As the modules progress, the level of difficulty challenges all students and gives them the opportunity to grow.	X **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** It is very apparent that Eureka based their materials on the specified standards, looking through the book the language of the titles of the lesson and modules are similar to the language of the standards. There is a scope and sequence to the book where you can see everything is aligned nicely and in a logical sequence.	X **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Problem sets range from simple procedural attainable problems, to difficult in depth critical thinking problems. In the teachers edition there are suggestions for scaffolding lessons for advanced and lower level students. With the use of online support there are more options for both remediation and enrichment.	X **Meets** ___ **Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Throughout the lessons it is necessary to use prior knowledge from earlier grades and courses. For example, when solving and graphing inequalities it is necessary to use prior knowledge of solving equations. Another example is in Module 4 Lessons 17-22 when students are required to use prior knowledge of graphing quadratics and apply to the new concept of translating quadratic graphs.	X **Meets** ____**Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** In the Module Overview in the TE all standards for Algebra I have been intentionally included throughout the text. Also student outcomes are written at the beginning of each lesson and are visibly shaped CCSSM cluster and domain headings. Some standards are included in more than one module to show more emphasis and importance.	X **Meets** ____**Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The lessons throughout this text do a good job of connecting and showing the correlation between clusters, domains and categories. The Table of Contents shows how multiple domains and clusters are covered in each lesson. For example, in Lesson 15 Module 1 students are required to write, solve and then graph a linear inequality. That covers both domains A-CED and A-REI and makes a natural and important connection between the two.	X **Meets** ____**Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses

Strengths
- Uses prior knowledge
- Covers all standards
- Module Overview is useful

Weaknesses
- Rigorous

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Conceptual understanding is covered throughout the text when a standard calls for it. For example, A-REI.D.10 calls for understanding that a graph of an equation is a set of solutions and that conceptual understanding is thoroughly covered in Lessons 20-23 in Module 1	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** This text provides high quality problems and discussion questions in the TE and require students to respond with their conceptual understanding. Example Module 5 Lesson 4 pg 56-59 High quality problems with conceptual applications	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** This text requires students throughout the text to solve problems using multiple representations. For example in Module 1 lesson 23 students solve systems of equations both graphically and algebraically.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Each lesson contains practice sets once conceptual understanding has been generated to develop procedural skill and fluency to master the concept.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** There are sufficient procedural practice problems throughout the text. For example, when solving systems of equations in Module 1 different strategies are suggested, and students are asked to use the most efficient method for each problem.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Single and multi-step conceptual problems can be found throughout the text. For example, in Module 1 SE pg 90-91 there is a large multi-step problem that helps build the students understanding. Then on page 92 there are single step problems that practice that same content.	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Application Problems apply the widely applicable prerequisites to real world scenerios. Example: Lesson 17 Module 2 Example 1	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are many examples of Problems that use the Modeling cycle. Students are required to formulate equations from contextual problems, and then continue on to compute, interpret and validate the solution.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** Strengths - Good conceptual problems to support deeper learning Weaknesses - In some sections the amount of procedural problems is lacking
Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** In the Module Overview the Focus standards for Mathematical Practice are listed at the beginning of each module. Also the Mathematical Practices are identified throughout each lesson in the margin. Application problems are designed to cover the required skills from the WAP while also applying the mathematical practices	X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The presence of the mathematical practices can be found all throughout the text, and are explicitly marked in the margin of the TE. The standards for mathematical practices are listed in the beginning of each module and includes further explanation on where connections are made.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** This text is very good at showing where the mathematical practices are covered. For example on page 172 in Module 1 (TE) in the margins it indicates the section of the lesson that explicitly addresses MP3.	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Materials prompt students to construct viable arguments and critique the arguments and work of others. For example, in Module 1 on page 172 asks students to critique and assess the logic and thought process of other students	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** There are many places in the text that requires students to justify their answers using arguments and/or diagrams. For example, pg 215 Module 4 Lesson 19 TE. Exit tickets are also a great tool for students to show teachers their explanation of their answers.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Eureka presents questions that require students to understand and use appropriate language of mathematics. The Module Overview includes a list of terms used throughout that module.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Strengths
- Covers all mathematical practices and explicitly marks where they are covered

Weaknesses
- No glossary
- Vocabulary not clearly marked throughout lessons

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** The scaffolding boxes that are located in the margin of the TE address needs to support special populations. However, the text doesn't provide enough accomodations specifically for ELL students	____**Meets (2)** X **Partially Meets (1)** ____**Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** There are side notes in the margin in the teachers edition that give suggestions of how to scaffold lessons when necessary. There are also extended resources online for scaffolding purposes.	X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** This textbook uses a specific format that helps use the variety of instructional strategies that helps reach all different types of learners. For example on page 181 in Module 4 TE the activity requires students to model the situation using both tables and graphs. They also have to make conclusions about their findings.	X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** Strengths - Scaffolding suggestion in TE Weaknesses - Lacking in ELL and special populations accomodations - No ~~spa~~ spanish-english glossary

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** There are many helpful notes in the teachers edition that assist with discussion questions and help guide the lesson	**(Reviewer only.)** X **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** The lessons have problems that guide teachers and students through the lessons. And there are procedural and conceptual excercises at the conclusion of each lesson.	**(Reviewer only.)** X **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The information presented follow a good scope and sequence with purpose. The sequence is logical and appropriate for this level of math.	**(Reviewer only.)** X **Yes** ____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The teachers edition provides quality suggestions and support for the teacher. There are also many online resources for teachers.	**(Reviewer only.)** X **Yes** ____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives used are relevent to the process and growth meant for a particular topic.	**(Reviewer only.)** X **Yes** ____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Warm up problems, exit tickets and assessments are included in the materials. There are also more teacher resources online.	**(Reviewer only.)** X **Yes** ____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Assessments contain solutions and End of Module Assessments include "A Progression Toward Mastery" which is a type of rubric.	**(Reviewer only.)** X **Yes** ____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Exit tickets are a good way to assess students in an informal and unbiased way.	**(Reviewer only.)** X **Yes** ____ **No**

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Contributers are listed in front cover of the book	**(Reviewer only.)** X **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Poor visual design. Very plain. Bad text to picture ratio	**(Reviewer only.)** ____ **Yes** X **No**

Reviewer IMET Evaluation Summary **Title/Level:** Eureka Math - A Story of Functions - Algebra I

Publisher: Great Minds **Copyright:** 2015 **ISBN:** 978-1-63255-324-9

Reviewer ID # K.C. and R.K. **Date Review Completed:** _____

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

_____ **Meets**

_____ **Does Not Meet**

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points:** 6 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points:** 5 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
X **Meets**	X **Meets**	X **Meets**
_____ **Does Not Meet**	_____ **Does Not Meet**	_____ **Does Not Meet**

Alignment Criteria Overall:

X **Meets** _____ **Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[illegible]tandards. **Do the materials meet every Non-Negoti[illegible] and Alignment Criterion?** X **Yes** ____ **N**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths: uses good use of prior knowledge, covers all standards, module overview is very useful, good conceptual problems to support deeper learning, covers all mathematical practices and explicitly marks where they are covered, and scaffolding suggestions in teacher edition are helpful.

Weaknesses: Very rigorous, in some areas/sections the amount of procedural problems are lacking, no glossary, vocabulary not clearly marked throughout lessons, lacking in ELL and special populations accomodations, and no spanish/english glossary.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Math - A Story of Functions Geometry
ISBN #	978-1-63255-730-8
Grade Level(s) or Course:	Geometry (H.S.)
Reviewer ID:	AC JH

RECOMMENDED AS:

✓ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Materials reflect the content architecture of the standards by not assessing above grade level. The focus is High School Geometry standards.

COHERENCE-
Materials focus coherently on all ~~major clusters~~ Widely Applicable Geometry standards.

RIGOR- Materials reflect the balances in the standards with rigorous expectations.

CONCEPTUAL UNDERSTANDING-
Conceptual and procedural understanding are attended to throughout the curriculum with deeper thinking problems, socratic discussion, exploratory problems and classwork discussions.

MATHEMATICAL PRACTICES-
MPs are seen throughout this curriculum and make authentic connections between standards. MPs meet the needs of ELLs and diverse learners.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
MPs and content throughout this curriculum meet the needs of ELLs and diverse learners through socratic discussions, scaffolding notes, exploratory challenges, lessons that extend topics (optional).

OTHER:
Strengths of this curriculum are the mathematical practice approach and the conceptual understanding it builds. There are rich application problems and the concrete to abstract learning is seen throughout. The weaknesses are that the text is not as visually

appealing for student engagement, and ~~The~~ navigation is a bit awkward with topics listed small at the bottom instead of ~~color~~ in the colored heading at the top.

Eureka Geometry would be most successful if foundational skills and comprehension are strong to begin with due to Eureka's rigor.

Reviewer ID: AC JH

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any s[illegible]e course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** 33/66 standards met are Widely Applicable Prerequisites. ≈ 50% Module 1: 297 pages } 831 / 1551 = 54% Module 2: 534 pages }	✓ **Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Geometry work with Modeling + applications are found throughout. Module 1, Topic B: Unknown Angles These lessons use algebra to solve for unknown angles. Module 2, Topic A: Scale Drawings Lesson 1: finds Area + Perimeter pg. 26 Lesson 2: scale drawings using ratio method pg. 28 Problem Set - pg. 39-43	✓ **Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Module 1: Builds off 8th grade construction standards but takes it further to constructing bisectors. Module 2: Connects similarity to ratios: Lesson 2 + 16 Module 3: Extends Area + Volume of 3-D objects to How a 3-D Printer Works. Module 4: Extends 8th grade knowledge of ∥+⊥ lines + distance. Module 5: Properties of Circles to Chords, Arcs, Sectors, Tangent + Secant Lines. Assessments assess at grade level.	✓ **Meets** ____**Does Not Meet Insufficient Evidence** Rationale for Module sequence explained in beginning of Module. Ex. Module 1 pg 3-5
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** All Geometry standards were met. All Modules list standards covered in table of contents. Pacing guides are present and helpful.	✓ **Meets** ____**Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Throughout: · Vocabulary · Flexibility of using "part" of Problem Set as differentiated homework (includes notes) · Socratic Discussion · Opening / Exploratory Problems · Practice Problems · Teacher Hints - pg. 9 of Module 1 · Scaffolding - Module 2 pg. 197	✓ **Meets** ____**Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each module begins w/ an overview explaining unit + identifies "foundational standards" pg. from previous grades / lessons. EX. Module 2 pg. 5	✓ **Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Student outcomes at beginning of each lesson. Each Module outlines CCSS covered. Ex. Module 2 pg. 9 identifies that G-SRT.A.1 will be a focus standard. (dilations w/ scale factors) Lesson 2 pg. 27 : Given a figure + scale drawing, students answer questions about scale factor...	✓ **Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Module 2, Topic A : Covers 3-CCSS standards w/ 5 lessons. Also need algebra to solve problems / find scale factors. Connections between domains are strong.	✓ **Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

____Does Not Meet

Strengths/Weaknesses

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is linked to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Module 2, Topic E, Lesson 25 : pg. 389 • Students discover "incredibly useful ratios" in right triangles that lead to trig ratios.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** pg. 414 #5 : Do you agree or disagree? Explain. # 6 How is the new triangle related to the original triangle? Rich in consistent offering Deep problems,	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Conceptual understanding is built through Socratic discussion of problems, or discovery, and/or classwork examples. The lessons build on each other. EX. Module 2 – Lesson 26 relates trig functions to ratios pg. 404-405	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Module 2 - Topic E G-SRT.B.5 Lesson 12: What are Similarity Transformations + why do we need them - conceptual Lesson 17: SAS, SSS Plenty of practice ~~Lesson 18: Angle Bisector Thm~~	} conceptual leads to procedural
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** Module 2 Lesson 16 pg. 250 - Uses ratios to compute unknown side lengths. Opportunistic strategies and generic cases are present throughout.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Contextual problems throughout Module 2 pg. 250-257 #1-2 determine missing side lengths #2 c - find the value of the ratio that compares the height to base #5 real-world problems	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Module 2 pg. 253 # 4+5 G-SRT.A.2 Applying definition of similarity to solve for info in real-world problems.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Ample opportunities engagement modeling problems. Module 2: constructions w/ compass + ruler Lesson 1 pg. 9 Module 3: images 3-D shapes deck of cards stack of coins	Area of 3-D objects.

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Mathematical Practice Standards are explicitly identified & explained + connected to lessons at beginning of each Module. Ex. Module 3 pg. 4 → students use MP7 as they derive volume formulas Module 4 pg. 4 → use MP 8 repeated reasoning to ~~dare~~ divide segments into proportional parts.	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Mathematical Practices are spread thru entire year. Ex. Module 1 pg. 5-6 MP3, MP4, MP5, MP6 Module 4 pg. 4 MP1, MP2, MP4, MP7, MP8	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** Mathematical Practices are clearly identified + explained at the beginning of each module. Ex. Module 1 pg. 5 module 4 pg 4	

AC Metric 2C: **Materia[illegible]upport the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record e[illegible]nce for each question and rate Metr[illegible].** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Most lessons begin w/ an opening exercise that is leads to a socratic discussion. Ex. Mod 5 pg. 10 There are also exploratory challenges they can work w/ partner on Mod 5. pg. 35	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Most opening exercises lead to a socrative discussions. Problems sets require explanations, find the error.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Appropriate language + vocabis used. The lessons in each module build on eachother. Ex Mod. 3 Topic A: Lesson 1 What is Area? 2 Properties of Area 4 Finding the Area of a Disk	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** • curriculum available online in other languages • socratic discussion • visuals • scaffolding notes in teacher edition	✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** • socratic discussions • exploratory challenges • scaffolding notes • lessons that extend topics (optional)	✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** tables, graphs, socratic discussions, open-ended questions	✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations.	✓ Meets ____ Does Not Meet
AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** • classwork - Opener, exploratory challenge • discussion - examples • closing • problem sets Mod 3 pg. 8-23 • exit tickets teacher notes	**(Reviewer only.)** ✓ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson has many exercises in classwork, discussion + problem sets to design independent practice from.	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The practice exercises are sequential as well as the problem sets.	**(Reviewer only.)** ✓ Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** There are separate teacher materials w/ notes to support the teacher. The lesson plan is laid out w/ scaffolding notes and sample student responses.	**(Reviewer only.)** ✓ Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives match: Module 1+2: compass + straightedge → constructions / dilations Mod 3: 3D models → cross sections + volume	**(Reviewer only.)** ✓ Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** • Problem Sets • Exit Tickets • Mid-Module Assessments • End of Module Assessments	**(Reviewer only.)** ✓ Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Every example / problem has answer key w/ sample student work Rubrics are provided for assessments.	**(Reviewer only.)** ✓ Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Language + sentence structure is clear & unbiased.	**(Reviewer only.)** ✓ Yes ____ No

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Couldn't find in texts - think it is available online	**(Reviewer only.)** ____ Yes ✓ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Layout is organized. Font is small Not visually appealing / colorful	**(Reviewer only.)** ____ Yes ✓ No

Reviewer IMET Evaluation Summary **Title/Level:** Great Eureka Math - A Story of Functions Geometry

Publisher: Great Minds **Copyright:** 2015 **ISBN:** 978-1-63255-730-8

Reviewer ID # [redacted] ACJH **Date Review Completed:** 3-8-16

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

✓ **Meets**

____ **Does Not Meet**

Non-Negotiable Overall:

✓ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) ✓ Meets _____ Does Not Meet	Points: 4 of 6 possible. (Materials must receive at least 5 of 6 points to align.) ✓ Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) ✓ Meets _____ Does Not Meet

Alignment Criteria Overall:

✓ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[illegible]tandards. **Do the materials meet every Non-Negoti[illegible] and Alignment Criterion?** ✓ **Yes** _____ **N[illegible]**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Not very visually appealing, and navigation is a bit awkward with topics on the bottom of the page, instead of the top.
Very detailed -

Covers standards → deep not wide

Approach is conceptual understanding-based with rich application problems at every stage of learning.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Math - The Story of Functions - Algebra 2
ISBN #	978-1-63255-734-6
Grade Level(s) or Course:	Algebra 2
Reviewer ID:	K.C. and C.T.

RECOMMENDED AS:

X **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Students spend well over 50% of their time on Widely Applicable Prerequisites. For all standards of Algebra 2 that the CCSSM require are fully attended to. Knowledge and skills from grades 6-8 and earlier high school courses are applied at a level of sophistication appropriate for this course.

COHERENCE-
The Eureka modules exhaustively traverse the widely applicable prerequisites, with nearly all prerequisites being designated in the text as focus standards. The progression through these standards is logical.

RIGOR-
This text supplies a sufficient balance of conceptual and procedural problems and exercises. This is done with high expectations for student learning.

CONCEPTUAL UNDERSTANDING-
Conceptual understanding is achieved as students progress through each lesson. Lessons provide opportunities to expand, develop, apply and practice conceptual understanding.

MATHEMATICAL PRACTICES-
Mathematical Practice Standards are embedded and highlighted throughout the teacher text, providing immediate and relevant connections to the Widely Applicable Prerequisites.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
ELL support can be found throughout the text, however there is no multi-lingual glossary and students may struggle with the extensive amount of text.
The text is slightly lacking in differentiation and intervention resources.

OTHER:

Strengths

- High expectations for all learners
- Covers all standards and Mathematical Practices
- Excellent support for teachers

Weaknesses

- Text to picture ratio; lack of graphics to engage students
- Lack of remediation
- Required vertical alignment for textbook adoption

Of Note:

This is an affordable Cirriculum, however you would have to replace the textbooks or make new copies every year.

* In order for this cirriculum to be adopted and be appropriate for the grade level, Great Minds texts would have to have been adopted in earlier grades before this course.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any s e course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence** (Module-Topic) – Hi ted standards are not explicitly discussed as focus standards A-SSE.A.1a, 1b, 2 (I-AB) A-SSE.B.4 (III-E) A-APR.A.1 A-APR.B.2 (I-B), B.3 (I-B), C.4 (IA), C.5, D.6 (I-BC), D.7 A-CED.A.1 (III-BD), 2, 3, 4 A-REI.A.2 (I-CD), D.11 (III-D) F-IF.B.4 (III-C), B.5 (III-C), B.6 (III-AD) F-IF.C.7b, 7c (I-B), 7e (II-AB, III-CE), 8 (III-DE), 9 (III-DE) F-BF.A.1b (III-DE) S-IC.A.1 (IV-C) Module 1: 40 lessons, Module 2: 17 lessons, Module 3: 33 lessons, Module 4: 30 lessons Students spend at least 50% of their time on WAP. The information above notes where the textbook addresses each of the Algebra II WAPs, as indicated by Module number and topic (for instance, III-BC means Module 3, Topics B and C). Each module starts by highlighting focus standards, extension standards, and foundational standards for the unit of study. Standards are fully integrated throughout the text. The time spent on WAPs approaches 80-90% of instruction in the early modules, and remains high on later modules (>50%). Some examples: -Module 1, Lesson 18: Students rewrite rational expressions in different forms, using methods such as long division, and by inspection, as prescribed in A-APR.D.6. This leads to the next lesson which introduces the remainder theorem. -Module 3, Lesson 7: Students create exponential equations and use these equations to solve problems (A-CED.A.1). Question 5 on the mid module assessment task reinforces this standard as students develop a model for bacterial growth.	**X Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Numerous examples: -Module 1, Lesson 10: Students explore difference two squares in the context of Pythagorean Triples. Example 1, provided during instruction, has students complete a proof algebraically, with scaffolding. In the problem set (#10), continue this line of thinking. -Module 1, Lesson 20: students estimate the cross sectional area of a riverbed using trapezoidal approximations. -Module 1, mid module assessment, problem #3: students write an equation to represent the volume of a rectangular prism. This equation is then solved for a known volume. -Module 1, Lesson 32: Graphing systems of equations. Distance formula as related to equations of circles. -Module 1, Lesson 34: Use of distance formula, find equation of parabola. -Module 2, Lesson 6: Why call it tangent? -Module 3, Lesson 24: Students solve equations involving exponential functions with graphical connections—system of equations, intersection (exercise #4). Students are expected to analyze the meaning of the intersection in the context of the problem.	**X Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There a[illegible]roblems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Examples throughou[illegible]appropriate. Teacher text includes references to earlier lessons wi[illegible]e Eureka curriculum that teachers the MS topics, as well as embedded scaffolding for reteaching and extension. This material is integrated within the curriculum. **Ratios and Proportional Relationships** -Module 1, Lesson 23: Comparison of Ratios (Problem Set #6: population of one city to another) -Module 2, Lesson 7: Proportional relationships for right triangle trigonometry -Module 3: Definition of exponential function includes proportional language ("exponential model changes at a rate proportional to the current value of the function" – Lesson 22) -Module 3, Lesson 25: Common ratio for sequences **Percentage and Unit Conversion** -Module 1, Lesson 21: Modeling Exercise #4-5—students determine the flow of water in cubic feet/min and convert to gallons/min. The exit ticket for this lesson asks students to explain this process. -Module 4, Lesson 22 (and throughout Module 4): Reasoning and application with percentages. For example, students analyze polls and reason about the results, including the comparison of percentages. The entire exercise and lesson focus on applied mathematical literacy that is useful day to day. **Basic Function Concepts** -Module 1, Lesson 1, page 17: "…in this lesson, students continue the theme that began in Grade 6 of evaluating and building expressions." -Throughout: maximum and minimum of a graph, applied. Module 2, Lesson1: students analyze the position of a car on a Ferris wheel, relating student created graphs of movement (height vs time, rotation vs time) to the actual movement of the cars on the Ferris wheel. This lesson is continually referenced throughout the module. -Throughout: analysis of the intercepts, and the meaning of these intercepts within the context of a given problem. For instance, Module 3: Lesson 21, students analyze logarithmic functions and find x- and y-intercepts. Module 1: Lesson 11: zeros of function. -Throughout: Domain and Range of a function. Increasing/Decreasing. **Geometric Measurement** -Module 1, Lesson 16: Students measure a box in preparation to calculate volume, and to model with polynomials for optimization. -Module 1, Lesson 33: As part of study of Newtonian telescope and parabolic mirrors, students measure the distance between the focus of a parabola and points on the parabola, and compare this to measurements between the points on the parabola, and points on the directrix. **Basic Statistics and Probability** -Throughout: modeling data and identifying functions of best fit. This leads to regressions, especially polynomial regression. Module 1. -Throughout Module 4. For instance, Module 4: Lesson 2, construction of two way tables. **Rational Number Arithmetic** -Throughout. In Module 1, Lesson 25, students develop rules for adding and subtracting rational expressions by first exploring the operations for rational numbers. This leads to the development of a specific rule, with number line representations	**X Meets** **____Does Not Meet** **Insufficient Evidence**

Metric NN1D: **Materials use courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Eureka modules exhaustively traverse the widely acceptable prerequisites (as noted above in NN1A), with nearly all prerequisites being designated in the text as focus standards. Those that are not (the highlighted standards in NN1A) are still addressed as foundational standards. The overview for each module and topic provides guidance for the teacher in developing a sense about the progression of the unit. Rubrics, such as the Module 1 End of Module Assessment Task Rubric, include reference to each standard and guidance for rating a student's progression towards mastery. In addition, each module highlights the focus, extension, and foundational standards for the upcoming lessons, as well as a focus on mathematical practice standards (for instance, page 5 of module 2). The descriptions for how the practice standard is addressed are quite detailed and specific for each module. Extension standards (+) are presented in tandem with focus and foundational standard, exposing and preparing students for work in later courses. For instance, lesson 16 of Module 2, Topic B has students prove trigonometric identities supporting F-TF.C.9 (+)—preparation for precalculus and calculus. The lessons towards the end of Module do not assess the Fundamental Theorem of Algebra, but they do support the standard (N-CN.C.9 +). The Great Minds website allows for quick navigation of content across grade levels, in the spirit of the criterion. As stated in criteria 3a, "…online materials that allow students and/or teachers to navigate content across course levels promote coherence…." Teachers have access to all module PDFs on the Great Minds website. These are especially easy to find using the Eureka Navigator (http://greatminds.net/maps/math). Additionally, individual lessons make regular reference to course level content outside the scope of the current course.	**X Meets** **____Does Not Meet** **Insufficient Evidence**

Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Publisher's Criterion states that "...materials often manager unfinished learning from earlier grades and courses inside course-level work." This is true for this title. Aside from the occasional opening exercises that activate prior learning (e.g., Module 1, Lesson 10: practical application of the Pythagorean theorem along with coordinate geometry), any unfinished learning is addressed in tandem with lessons. The unfinished learning would fall into the "foundational standards" category and these standards regularly pop-up throughout the text. As noted above, when necessary, teachers are provided directives to review previous learning in the available Eureka curriculum documents available on the website Eureka Math treats the progression of the course (and the attendance to the standards) as part of the "story of functions", and thorough review of the text indicates appropriate coverage of the standards, with ample work on course-level problems. A simple search of the teaching resources suggests 200+ opportunities for scaffolding for both struggling learners and for extension. These scaffolding opportunities are presented in line with the text (just in time), providing directives for supporting students. Often, the techniques suggested (such as a Frayer model in Lesson 27 of Module 4) also provide strategies for differentiating instruction for students. These type of supports do provide lower performing students an opportunity to engage, and also provide extensions for higher-performing students. Notably, the development of scaffolding (and more importantly, differentiation) for each lesson does rely on the teacher's professional judgement. The introductory text suggests that the teacher develop a story for each module and topic, and work through each lesson to understand the flow of the curriculum. Presumably, the teacher will have a real-world understanding of their classroom, allowing for additional differentiation and more meaningful scaffolding. For each lesson's practice set, the problems increase in difficulty from beginning to end. The teacher has the option of differentiating this practice by assigning different problems to different groups of learners.	**X Meets** **____Does Not Meet** **Insufficient Evidence**

Metric NN1F: **Materia late course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The instructional gui e for teachers regularly refers back to earlier learning, providing r matical background for upcoming learning. Opening exercises are used for some of this reinforcement, as is some scaffolding suggestion. -Module 1, Lesson 12: students explore techniques for factoring polynomial expressions using the quadratic formula and completing the square, techniques first developed in algebra 1 (A-REI.B.4). Suggested instruction includes the reminded students of the GCF. -Module 1, Lesson 31: students extend upon systems of linear equations to also find solutions to systems consisting of a linear equation and a quadratic equation (A-REI.C.7). This continues work that was started in grade 8 (A-REI.C.6) and expanded upon in Algebra 1. -Module 1, Lesson 32: Students begin the lesson by reviewing the connections between the distance formula and the Pythagorean Theorem. This supports the lessons focus on systems of equations for circles, and the distance between centers of circles as related to the number of points of intersection. Additionally, this lesson recalls the graphical and algebraic relationship between perpendicular lines as students find tangents at points along a circle. -Module 2, Lesson 15: Students develop the Pythagorean identity for sin and cos, based upon the Pythagorean theorem. -Module 3, Lesson 22: students analyze data and real-world situations and find functions (linear, quadratic, sinusoidal, and exponential) to use as a model. The lesson provides guidance for selecting a model, including analysis of the rate of the change. This analysis builds on similar analysis that would have occurred in Algebra 1 for linear and quadratic functions (A-CED.A.2,4; F-LE.A.1,3).	**X Meets** **____Does Not Meet** **Insufficient Evidence**

Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each lesson in the teacher resource begins with student outcomes that are clearly shaped by CCSSM. **Trigonometric Functions: Model Periodic Phenomena with TF: F-TF.B.5** -"Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency and midline." -Module 2, Lesson 13: Student outcomes include similar language, such as "model cyclical phenomena", "periodic behavior". Examples and exercises continue to support the standard as student identify the characteristics of sinusoidal graphs based upon data. At the end of the lesson, students are asked to think about why it is useful to use models for sets of data. **Algebra: Reasoning with Equations and Inequalities: A-REI.A.1** -"Explain each step in solving a simple equation....Construct a viable argument to justify a solution method." -Module 1 Mid-Module Assessment task reinforces language through rubric, especially for #3c. The lessons that lead up to this task helps students construct viable arguments (e.g., final question on exit ticket for lesson 20). -Module 1 End of Module Assessment task #2a. "Prove to her algebraically that your answer is...." **Statistics and Probability: Making Inferences and Justifying Conclusions: S-IC.B.3** -"Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each." -Module 4, Lesson 12: In the lesson, sample surveys, observational studies and experiments are defined. A Venn Diagram is suggested for scaffolding these definitions, and the class participates in a reading and summary exercise that supports these terms. Examples are provided of each, and then students are tasked with classifying studies. Discussion of randomization is included in this discussion. The student edition of the resource does not include student outcomes, but student vocabulary, featured at the end of lessons, and lesson summaries both include language that reflect CCSSM cluster and domain headings. -Module 1, Lesson 35: lesson summary ("...geometric figure of parabola...recognized that it involved the graph of an equation we studied in algebra"; "...used algebra to prove that all parabolas...", and "...proved all parabolas are similar using transformations of functions") reflects G-GPE.A.1, 2. Students are directly exposed to standards as a result of teacher actions, but not through the student edition. The language used in questions supports the language of the CCSSM.	**X Meets** **____Does Not Meet** **Insufficient Evidence**

Metric NN1H: **Materia[illegible]clude problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The connections (be[illegible]n standards, clusters, domains, categories) are natural and apparen[illegible]ughout. Eureka's approach to treating the course progress as part of the story of functions contributes to this interconnectedness. The introductory section for each module and each topic provides the teacher an overview for how this interconnectedness manifests within the text. The mid module and end of module tasks don't exist to provide an item-by-item summary of the topics within the module; rather, these tasks focus on combining and extending upon the work done in prior lessons. For instance, the mid module assessment task for Module 1 task students with taking a verbal description and writing this as an equation (#2). The initial task for this question has the student (1) analyze the structure of a polynomial equation and rewrite and (2) use this to prove an observation. This represents a connection within a category between both A-SSE.A.2 ("use the structure of an expression to identify ways to rewrite it"), and A-APR.C.4 ("prove polynomial identities and use them to describe numerical relationships"). Other questions on this task make similar connections between standards, clusters, domains, and categories. #1 relates N-Q.A.2, A-APR.B.2 and 3, F-IF.C.7c. The lessons and student work that lead up to this task support this interconnectedness. This is evident throughout the text, especially in modules 1-3.	**X Meets** **____Does Not Meet Insufficient Evidence**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Metric NN 1:** If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**X Meets** **____Does Not Meet** **Strengths/Weaknesses** Strengths: -Covers all standards extensively, and the story in each module is helpful in preparing teachers to teach the module. Weakness: -More practice problems would be beneficial -The student edition does not include worked examples. -Without direct support from the teacher, students can be disconnected from the standards (the standards themselves are not explicit in the student text). -The above can be summarized as: the student edition is not ideal for a self-directed learner.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Conceptual understanding as is fully attended to throughout the curriculum. Students understand, develop, apply and practice conceptual understanding. Selection of standards addressing conceptual understanding: **A-APR.B.3: "Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function...."** -Module 1, Lesson 11: This lesson focuses on identifying solutions to polynomial functions. Students start by discussing and reviewing polynomials that can be easily factored into linear factors, and the application of the zero product property. The discussion builds to students making connections between the zeros of polynomial functions and the behavior of the graph. This includes comparisons between functions that have similar (or the same) zeros but not the same behavior and degree. The exit ticket has students find the zeros (with multiplicity) of a given polynomial and explain how one knows the degree of the function. -Module 1, mid module assessment task, #1a: students are provided a crude sketch of a graph, and asked to write a polynomial that could represent the curve. **A-REI.D.11: "Explain why the x-coordinates of the points where graphs of the equations y = f(x) and y = g(x) intersect are the solutions of the equation f(x)=g(x); find solutions approximately...."** -Module 3, Lesson 24: Most of the lesson is spent on practice: manipulating and solving exponential functions. Special emphasis is placed on using multiple algebraic techniques, and graphical techniques to find solutions. **F-IF.B.4: "For a function that models a relationship between two quantities, interpret key features...and sketch graphs showing key features given in a verbal description of the relationship."** -Module 1, Lesson 19, Exercise 6 and 7: students disprove that a function is an inverse by exploring the domain and range of a function, and in the next question, students explore examples of inverses of functions that are not themselves functions (such as f(x) = sin x for (-int, inf). -Module 1, Lesson 20: students find key points (at least 5) and sketch logarithmic functions by hand. This is extended as students transform logarithmic functions, sketch the transformation, and describe the relationship. Instructional support is provided throughout this lesson.	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Selection of standards addressing conceptual understanding. Discussion is regularly a feature of these questions: **APR.B.3:** -Module 1, End of Module assessment, #2ab: Students use the graph of a polynomial to prove that an answer is a zero to the given polynomial function. Students then rewrite the given function as a product of linear and quadratic factors. -Module 1, Lesson 15, Exercise 1: Students consider even and odd functions and the relation between these functions and the zeros of the function (specifically, the x-intercepts). This task ends with students drawing a conclusion that relates degree and guaranteed zeros (or lack thereof). **A-REI.D.11:** -Module 3, Lesson 24, Exercises 4: After students justify exponential models generated for sets of data (is this function reasonable?), they are tasked with finding the a solution t where the two models are equal (h(t) = k(t)). After finding a result algebraically, students confirm graphically, making the connection between the intersection and the solution to the system of equations. The discussion that follows asks that student explain the meaning of this intersection. **F-IF.B.4:** -Module 3, Lesson 18: comparison of the growth (and end behavior) of exponential and logarithmic functions. -Module 3, throughout: where do functions intersect? What is the end behavior? What is the domain?	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Throughout. Selection of standards addressing conceptual understanding: **A-APR.B.3:** Module 1, Lesson 11: students make connections between the zeros of a polynomial function and the graph of the given function. Additionally, students relate degree to zeros (and multiplicity) as represented on a graph. **A-REI.D.11:** -Module 3, Lesson 24, Exercise 4: As noted above, students make the connection between the solution to a system of equations and the intersection of the graphs of these two equations and then to the verbal description of two similar situations. **F-IF.B.4:** -Module 1, Lesson 17: Students perform a regression to fit a table and then make connections between the table, the plot of the tabular data, and the modeling function. -Module 3, Lesson 18: As part of the opening exercise, students complete a table for an exponential function, graph the function, and then reflect the graphed function across y = x. Features of the original graph and its image are discussed. -Module 3, Lesson 19: Inverse relationship between exponential functions and logarithmic functions is explore via table and graph with connections made between both. Students verbally describe the behavior in each. -Module 3, end of module task, #11: Functions are presented as verbal descriptions, tables, and graphs. Students classify each function, interpret key features, and compare and contrast each function.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric.** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Throughout each lesson in every module, examples, exercises and problem sets all provide ample practice in developing fluency and procedural skills while also attending to strong development of conceptual understanding. Additional practice for developing procedural skills and fluency would be useful, and this is one noted weakness of this text (not enough so to drop this category to partially meets). Selection of standards addressing fluency and procedural skill: **A-SSE.A.2: "Use the structure of an expression to identify ways to rewrite it."** -Module 1, Lesson 2: students use different procedures for multiplying polynomial expressions (distributive property, tabular). This builds to a generalization that students develop for (x^n – y^n)(x^n – y^n). This generalization provided context for the concept of prime numbers. Student practice for this lesson features multiple opportunities to develop procedural skill as well as conceptual representations of polynomial expressions. -Module 3, Lesson 13: Entire lesson focuses on the process of changing the base of a logarithmic expression, and using this process to solve equations. This is extended to generalizing properties of logarithms, and discussing the natural logarithm. **A-CED.A.4: "Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations."** -Throughout. For instance, rearranging the annuity formula from Module 3, Lesson 30 to find a monthly payment R (Lesson 31). Given an equation, isolate the variable (Module 3, Lesson 6, Problem Set). **N-RN.A.2: "Rewrite expressions involving radicals and rational exponents using the properties of exponents."** -Module 3, Lesson 2: properties of exponents as applied to numbers written in scientific notation. From example 2 on.... Problem set of Lesson 3 continues this work, providing additional practice while discussing rational exponents (positive/negative) conceptually.	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving $x2 + 5 = 49 + 5$ or $(3x - 2)2 = 6x - 4$. Generic cases that require efficient and general procedures might include such problems as solving $c + 8 - c2 = 3(c - 1)2 - 5$).	**Evidence-** At no point in the text are tricks or mnemonics emphasized or used. The teacher edition provides a friendly reminder of why FOIL is not helpful (Module 1, pg 32), and that students must think of these problems as repeated applications of FOIL. As concepts are introduced, and procedures demonstrated, the text purposefully applies properties and techniques in a generalized fashion (not as "this is how you solve this very specific problem"). Selection of standards addressing fluency and procedural skill: **A-SSE.A.2** -Module 3, Lesson 13 and throughout discussion of logarithms in module 3: Change of base is a demonstrated strategy for solving problems involving logarithms. Elsewhere, students rewrite logarithms as exponential expressions (or vice versa) as a strategy to solve problems. **A-CED.A.4** -Module 1, Lesson 28: Isolating the radical in an equation to simplify the process of finding a solution, including cases in which isolation of the radical in one step is not feasible. -Module 3, Lesson 13: Solving logarithms by rewriting as an exponential equation. **N-RN.A.2** -Module 3, Lesson 2 and 3: as part of the discussion of simplifying computations applied to numbers written in scientific notation, exponent rules are treated as an opportunistic strategy. The problem set of lesson 3 emphasizes equivalent expressions as a method for making calculations more efficient.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Nearly all mid- and end-of-module assessment tasks contain multi-step contextual problems that support the mathematics of the course and provide an opportunity to problem solve by applying the previously practiced mathematics. These assessment tasks do not exist in a vacuum, but instead are the culminating task in a series of examples, exercises, and problem sets that provide continuing practice. As noted in the examples below, these tasks do reflect the expectations of the standards. Selection of standards addressing applications: **A-CED.A.3: "Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context."** -Module 1, Lesson 26-29: students work to solve rational equations, checking for extraneous solutions. When appropriate, solutions are verified as viable or non-viable in the context of an application (Lesson 27: exercises 2 and 3, problems 8 and 10). -Module 3, Lesson 26, Example 1: compound interest and growth for money in a bank. Problem set for lesson includes a multistep problem focusing on the comparison of savings accounts at different banks. **F-BF.A.1b: "Combine standard function types using arithmetic operations."** -Module 3, End of Module Assessment Task #10: modeling a car loan, comparison of multiple functions (end behavior, intersection). -Module 3, Lesson 28: Application: Newton's Law of Cooling. Lesson begins with exploration of formula, and then multiple applications included in exercises and problem set.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout the text, and for the standards noted above and below, the application problems stress the widely applicable prerequisites. In particular, the tasks at the end of each module focus on multiple standards in presenting multi-step applications for students to explore. Selection of standards addressing applications: **F-BF.A.1b** -Module 3, End-of-Module task, #13 focuses on the combination of functions (to model medication in the bloodstream) and deriving a formula based upon a geometric series (Table #13b).	

Are there ample opportunities for students to engage with modeling problems? Materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The teacher text incl multiple references to the CCSSM modeling cycle, including replic of the flow chart present within the standards. This cycle is not replicated for students, so the expectation is that the flow chart be presented in lesson, or perhaps posted on the wall. Modeling lessons have students work through each step explicitly (formulate, compute, interpret, validate). Teacher attention is drawn to these modeling activities within the table of contents for each module/topic. Often, single lessons focus on a single step of the modeling cycle, capped by a set of problems reinforcing the application of knowledge from the current module. Module 1, Lesson 20-21: Modeling Riverbeds with Polynomial: Formulate: develop a plan to use the remainder thm to fit a polynomial function to riverbed data. Identify constraints. Compute: Find the polynomial function that fits the data. Find the volumetric flow. Interpret: "How might this data help the EPA?" Module 3, Lesson 29: The mathematics behind a structured savings plan.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**X Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: -Plenty of conceptual and application practice. -Problem sets faithfully attend to standards. Weaknesses: -Could use additional practice sets, especially in developing procedural skills and fluency. -Some problem sets are small. -No worked solutions in student edition.

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Mathematical practice standards are embedded and highlighted throughout the teacher text, providing immediate and relevant connections to the focus standards (which are usually the widely applicable prerequisites). The standards are noted in the margins, and each topic beings with a short description of how specific practice standards are applied. Module 1, Lesson 27: Students work to solve application problems involving rational equations (A-REI.A.2). In exercise 1, students make sense of a problem and come up with a rational equation to represent the situation (MP 4). The design of the tasks attends to students building to a solution, and persevering (MP 1). Later exercises in the lesson continue this emphasis, and also have students reason quantitatively about a rational equation (MP 2). The text rarely emphasizes technology, but it does so it is appropriately (MP 5). Module 2, Lesson 12: After sketching the graphs of the height and co-height of the Ferris wheel, students create a parametric graph on their calculator (MP 5). This continues with quantitative reasoning about the graphs and the representative trigonometric relationships (MP 2). Module 1, Lesson 21: students use Wolfram Alpha to generate an interpolating polynomial, supporting work previously done by hand (MP 5). Module 2, Lesson 14: repeated reasoning as applied to the graph of trigonometric functions (MP 8).	**X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 2B: **Material[illegible]tend to the full meaning of each practice Standar[illegible]** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record e[illegible]nce for each question and rate Met[illegible].** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** A simple search of the teaching edition suggests decently distributed attention to the mathematical practice standards. MP 1: 36 instances MP 2: 68 MP 3: 110 MP 4: 50 MP 5: 26 MP 6: 8 MP 7: 98 MP 8: 68 Each topic of each module begins with a summary of how practice standards are addressed. For instance, Module 4, Topic A lists MP 2, 3, 4, 5 as being addressed in the module. For MP 2, the text states: "Students use data from a sample to estimate a population mean or proportion and generalize from a sample to the population. They associate a margin of error with estimates based on a sample and interpret them in the context of generalizing from a sample to the population. Students also make conjectures or claims about independence and use arguments based on probabilities to support them." MP 6 (attend to precision) is the least highlighted of the practice standards, but attention to precision, reinforcement of vocabulary, and emphasis on demonstrated work that builds to a solution is present throughout the curriculum.	

Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** MP 4: Modeling is emphasized throughout the text, highlighted in specific lessons. These modeling tasks are in line with the modeling standards (starred) as well as the practice standard. MP 5: Module 1, Lesson 21: students find polynomial functions to fit data using multiple techniques and technology is used as just one possibility for finding a modeling function. Module 4, Lesson 15: students use technology to carry out simulations. This lesson treats technology, in this case a calculator, as an essential tool required to carry out simulations. In lesson 19, students use technology to generate samples of size 20 MP 7: Module 3, Lesson 21: students explore *b* for exponential and logarithmic functions, looking for patterns in the graphs of these functions as *b* changes. Later, in Lesson 23, students look for patterns in data to choose appropriate models and relate the values of *a* and *b* for an exponential function to a model. Module 4, Lesson 17, exercise 11: students make conjectures relating sample size and margin of error based upon patterns in previously studies sets of data.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** MP 3: Construct viable arguments and critique the reasoning of others. Student exercises and problem sets often ask that students critique the viability of arguments from fictitious students (M1, Lesson 34, Exer. 14; M1, Lesson 36, Exer 6; M3, Lesson 15, Exer 14; M3, Lesson 3, Problem 4ab; M2, Lesson 13, Problem 6). The development in the lessons, and guided instruction from the instructor, support the creation of viable arguments and the identification of non-viable arguments. Nearly every lesson requires that students construct these arguments, although often these arguments are informal. The work in trigonometry (Module 2) does occasionally discuss and require more formal argumentation in the form of proofs (M2, Lesson 16, Example 1). Proof problems requiring abstract reasoning (MP 2) are used elsewhere (M3, Lesson 16, Problem 11).	

Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Problem sets, exit tickets and assessment tasks regularly ask students to explain solutions and provide support for conclusions in the form of graphs, diagrams and mathematical arguments. Module 1, Lesson 11, Problem Set, S.64-65: "Make a conjecture based on the results of...." This final question is supportive of the focus standards for the unit regarding the remainder theorem (A-APR.B.2). Module 1, Lesson 35, Exit Ticket: "Are the two parabolas defined below similar or congruent or both." The thinking required for this problem would include the property of parabolas that all parabolas are similar. (F-IF.C.7, G-GPE.A.1, MP 7). Module 2, Lesson 7, Problem #4, S.52: "Show that...for all integers k." (F-TF.C.8, F-TF.C.9+). Module 2, Lesson 13, Exit Ticket: "Would a sinusoidal function...be appropriate? Explain your reasoning." Module 3, Lesson 6, Problem #7, S.38: "Can the value of an irrational number raised to an irrational power every rational?" This builds upon previously completed practice problems, requiring the student to provide reasoning for why this statement could be true or false.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Counter examples are used most frequently in refutation of statements made within discussion, or in the contexts of problems. For tasks that have a rubric, full scoring is reserved for students that use mathematical reasoning and precise language when responding to tasks. Throughout Module 2, trigonometric identities are used as justifications for arguments, but this type of attention does not exist, for the most part, in other modules. What does exist is the use of course-level and age appropriate definitions for the language of mathematics. Idiomatic explanations are not used to explain terms, nor are tricks used to shoehorn understanding. Each module (and topic) begin with vocabulary terms that teachers are expected to emphasize (by highlighting in the lesson, and by presenting within the classroom—e.g., a word wall). The progression of most lessons includes a step by step exploration of focus standards, with emphasis on vocabulary (by definition, by example, by demonstration) throughout. Graphical representations of these terms are used throughout, making the connection between verbal description and graphical representation.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

X Meets

____Does Not Meet

Strengths/Weaknesses:

Strengths:
-Mathematical practices are covered and clearly labeled. Teachers are provided overviews for each topics regarding these practices.

Weaknesses:
-No supporting glossary
-Vocabulary terms don't always receive textual emphasis (bold, italic, etc.)
-Mathematic practices aren't always faithfully highlighted in marginalia

Alignment Criterion 3:
Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** English Language Learner support exists as scaffolding notes provided for many lessons. For instance: challenging words are highlighted ("relative" in Module 1, Lesson 14), sentence stems are provided (Module 1, Lesson 34; Module 3, Lesson 21), Frayer Models are suggested (Module 1, Lesson 38; Module 4, Lesson 8), Choral Recitation (Module 2, Lesson 15), Word Walls (Module 3, Lesson 9), visual images for language support (Module 3, Lesson 30; Module 4, Lesson 2), clarification and rehearsal (Module 4, Lesson 1). Additionally, vocabulary terms with multiple meanings are highlighted. Unfortunately, a Spanish-English glossary is not included within the text. Schools and teachers would need to provide this support externally. Additionally, the high levels of exposition in each chapter could greatly impede an ELL student's ability to progress through the material. Beyond explicit support for ELL students, the language used in the text is generally grade-level appropriate and precise in meaning and intent. There is little fluff, and language support is built in for all learners—the above activities are also suggested for whole group opening activities. No evidence of idiomatic language is present. Scaffolding, present throughout the text, provides support for special populations. Differentiation activities are not expressly suggested or provided. The presentation of information throughout the text does provide support for differing learning styles, in the sense that the rule of four multiple representations are regularly and repeatedly reinforced Outside of ELL students, the text does not prevent other special populations (such as those from economically disadvantaged families, individuals with disabilities, teen mothers, and other categories addressed by the Perkins Act) from accessing the material. The language is such that these populations of students are not marginalized by the language and scenarios presented in application and modeling exercises. In scenarios in which the ideas discussed in the problems may be foreign to some students, adequate explanation is provided (e.g., the Ferris Wheel discussion, used throughout Module 2, is inclusionary. Likewise, when the windmills from Don Quixote are discussed, a diagram is provided for students that may not realize that the windmills of yore are quite different from the wind turbines they may see in their backyard). Worth noting: Eureka Math does a good job of emphasizing external resources that are free, and readily available (such as Desmos graphing calculator, Geogebra, Wolfram Alpha, and LibreOffice). Finally, at no point do any of the suggested language supports, scaffolding, or suggested remediation detract from proper attention being given to the standard.	____**Meets (2)** **X Partially Meets (1)** ____**Does Not Meet (0)**

AC Metric 3B:

Material[illegible]ovide appropriate level and type of scaffold[illegible], differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.

How to Find the Evidence:

Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.

Evidence-

As noted in NN1E, s[illegible]lding is readily available in the teaching guide. The notes from abov[illegible] included here for reference:

A simple search of the teaching resources suggests 200+ opportunities for scaffolding for both struggling learners and for extension. These scaffolding opportunities are presented in line with the text (just in time), providing directives for supporting students. Often, the techniques suggested (such as a Frayer model in Lesson 27 of Module 4) also provide strategies for differentiating instruction for students. These type of supports do provide lower performing students an opportunity to engage, and also provide extensions for higher-performing students.

Notably, the development of scaffolding (and more importantly, differentiation) for each lesson does rely on the teacher's professional judgement. The introductory text suggests that the teacher develop a story for each module and topic, and work through each lesson to understand the flow of the curriculum. Presumably, the teacher will have a real-world understanding of their classroom, allowing for additional differentiation and more meaningful scaffolding.

Additionally, the introductory module provides guidance for preparing to teach a lesson (pg. 12) which is a good list of best practices for each lesson. The scaffolding notes, mentioned above, support these best practices. For instance, the text suggests that teachers classify each activity as must do or could do, and then identify anticipated difficulties. These anticipations are supported by the scaffolding within the text.

This lack of differentiation and intervention is concerning. The development of the Eureka Math text suggests that the teacher fill in the gaps and provide differentiated activities for students. For students with especially large gaps, or students that struggle to make it through the provide work, what is the next step? Remediation and review of standards covered in prior grades is included along with the course-level material, but no index is provided to locate this information, nor is there an introductory chapter or appendix providing support. The design of the student material reinforces, greatly, the idea of the teacher as the sole provider of knowledge for struggling kids. **Schools considering this curriculum would need to also consider ancillary support for intervention**.

The suggestion on the Great Minds website is that the digital versions of the resource (including search functionality) are contributory to a tiered support program for remediation. This may well be true, but this could be better developed and supported within the core text. As noted elsewhere: the design of the student resource reinforces the idea that the teacher is the sole provider of knowledge.

X Meets (2)

____ Partially Meets (1)

____Does Not Meet (0)

AC Metric 3C: **Design lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Throughout. Each le deploys varied instructional strategies and questioning techniq scaffolding is provided within the lessons, and students receive support for big questions in the form of building block questions that help students develop responses. Multiple representations are used throughout the text, always in tandem.	**X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**X Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: -Scaffolding within lessons and practice -Extensive teacher notes Weaknesses: -Lacking in some accommodations for ELL students (such as a glossary or auditory supports). -Language is written with high expectations in mind

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons throughout the curriculum feature individual explorations, small group and class discussions, individual and small group activities, and individual performance tasks. Scaffolding notes are provided to include all learners, with special attention paid to English Language Learners. Rarely is student time during lessons spent on long individual explorations—the opportunity exists for the teacher to quickly intervene with guiding questions so students don't fall excessively behind.	**(Reviewer only.)** **X Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Not quite labeled as problem/exercise, but the distinction exists within the text: general lesson cycle presented in text starts with an opening exercise, applying previously learned ideas and offering an opening to the lesson, followed by discussion, examples, exercises, an exit ticket, and a problem set. Exercises are used during the lesson cycle (1) to recall and reinforce content learned previously (within the course, or in prior math courses) and (2) to build understanding in the current standards for learning. The problem sets at the end of lessons (take home, or end of class work) focus on students building mastery in the current learning standards. These problem sets are preceded by lesson summaries to help students recall information.	**(Reviewer only.)** **X Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Throughout. Problem sets are usually about ~10 questions, building in difficulty from the first to the last problem. Often, the early problems focus on specific skills, and the late problems are either applications or more abstract generalization problems. Module 1, Lesson 37, S.229-231: Early problems: Plotting points in the complex plane, arithmetic with complex numbers. Mid: solving for x and y with complex numbers, exponentiation with complex numbers, evaluating polynomials and rational equations with complex numbers. Late: Show by substitution that ___ is a solution, determine equality of radical expressions with complex numbers (construct a viable argument). Module 2, Lesson 12, S.114-115: Early problems: application problems that mirror the modeling done within the lesson. Mid: Given a sinusoidal function, create a graph and explain the meaning of each parameter. Late: Give a sinusoidal function, use the parameters to formulate a real-world situation. Module 4, Lesson 19, S.166: Early problem: Identify smallest standard deviation Mid: discussion of sample means from lesson Late: explain the difference between sample mean and the mean of the sampling distribution.	**(Reviewer only.)** **X Yes** **_____ No**

4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The teacher resources are very thorough, designed to reward teacher study of the material. Great Minds expects teachers to fully prepare for each lesson by identify the "must dos" and the "could dos", while maintaining the full attention to the focus standards. Guiding questions are provided in every lesson, as is a structured flow: opening activity, instruction, guided practice, independent practice, and an exit ticket. This support of teacher study is almost a fault: as differentiation and intervention is not explicitly provided within the curriculum, teachers must be fully prepared to provide support in class and beyond. The teacher text does provide good support for the development of this type of support in the sense that it is very specific in the definition of student learning outcomes. Positively, teachers are provided access to the full range of Great Minds materials and the text includes references to standards from earlier grade levels (and the accompanying modules and lessons). This does provide an avenue for extended support and remediation. This digital functionality is highlighted as a method for support and implementation of RTI tiers. (Caveat: if a school is using Great Minds for all grade levels, and the student didn't understand the material the first time it was presented, this may not be useful.)	**(Reviewer only.)** **X Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** As appropriate, the text make use of tools such as calculators to help students understand the multiple representations present in the text.	**(Reviewer only.)** **X Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** No pre assessments included. Exit tickets and mid-module assessment tasks are formative assessments that allow the teacher to guide learning and provide remediation. Remediation is included in the lesson progression. The formative assessments provide rubrics that help target this remediation and support. Modules end with End-of-Module assessment tasks that function as summative assessments, although they are very similar to the mid-module tasks. There is not an end of course summative included in the curriculum, and students are not provided any way to self-assess because selected answers aren't provided. Teachers would need to provide selected answers for students ahead of time.	**(Reviewer only.)** **_____ Yes** **X No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** The rubrics provided for mid module and end of module tasks are very good—each question is provided with four categories of progress, along with standards alignment. For non-rubric graded tasks, example answers are provided. For exercises and examples, scaffolding is often provided for review of student answers and to provide support.	**(Reviewer only.)** **X Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes. The rubrics for the mid module and end of module performance tasks are well developed, and based up on assessing student learning. The questioning used in these tasks reflects the language of CCSSM, and the tasks are free from bias.	**(Reviewer only.)** **X Yes** **_____ No**

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Not noted in the text, but the Great Minds website does write of the Eureka Math reviewers and accolades. There is not enough information provided within the text itself.	**(Reviewer only.)** _____ **Yes** **X No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Consistent typography and judicious use of white space provide for a clean, although nearly sterile, presentation. The intent is to provide engagement directly through the mathematics, without superfluous elements that would otherwise detract from the intent of each lesson. For the most part, this design is successful. At times, students may tire of the repetitiveness of the design and flow of each lesson. Navigation through the teacher text is very clear. This is **not** true for the student text: there is not a table contents, nor an index, so students are reliant on the teacher providing the direction. Unfortunately, the text includes little to no use of pictures that would help the student engage and build interest in the topic.	**(Reviewer only.)** _____ **Yes** **x No**

Reviewer IMET Evaluation Summary **Title/Level: Eureka Math: Algebra II**

Publisher: Great Minds Copyright: 2015 ISBN: 978-1-63255-734-6

Reviewer ID # CJ, KC **Date Review Completed: 03/07/2016**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

X Meets

_____ Does Not Meet

Non-Negotiable Overall:

X Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: 6 of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: 5 of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
X Meets	**X Meets**	**X Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

X Meets **_____ Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Common Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? X Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Eureka Math: Algebra II represents a math curriculum with high expectations for all learners. This is certainly a strength, but the design of the curriculum could leave struggling learners behind without additional support provided outside of the curriculum. Referring teachers (and students) to earlier curriculum to review and reinforce standards can be useful, but it does not provide support for students that struggled in the same curriculum previously (e.g., the algebra II student that also completed work in Eureka Math: Algebra I).

The text does cover all standards and mathematical practices.

Adoption of this specific title makes sense if a school adopts Eureka math for all grades (or at least all grades addressed within a specific story—A Story of Ratios and Functions is grades 6-12) because all stakeholders become familiar with the nuances and processes of the curriculum.

Additionally, this is a "free" curriculum that can be accessed by anyone online. This is great! That said, schools that purchase this curriculum would either need to buy workbooks each year, or print out the student materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Great Minds
Title:	Eureka Math - A story of Functions Pre-Calculus
ISBN #	978-1-63255-738-4
Grade Level(s) or Course:	Pre-Calculus
Reviewer ID:	KBJH

RECOMMENDED AS:

✓ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The content throughout evidences the majority of the material grounded in the Widely Applicable Prerequisits.
NVI Geometry skills are repeatedly used to model problems ~~rai~~ to boost comprehension of concepts.

COHERENCE- The overall sequencing and the structure of lessons focus on the Widely Appricable Prerequisits in a way
NVI that is consistent with the progression of the Standards.

RIGOR- Problem sets are designed to reinforce procedural skills, with ample practice, while requiring deeper level thinking.
ACI Conceptual understanding is this texts primary focus thrugh rich real-world application problems.

CONCEPTUAL UNDERSTANDING-
ACI The Student edition is designed to lead the students through the entire conceptual process. The overview and summary in TE.

MATHEMATICAL PRACTICES-
AC2 Text, throughout incorporates Mathematical Practices
* Explore, Extend, write, Analyze, question understanding of Topics.
Teachers are given Socratic-Method Questions and other guided help

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
AC3 Assessments use course-level and topic specific vocab and questioning.
There does not seem to be cultural bias in questions on assessments.

OTHER:
The text leads with the "story" of each concept, and leads teacher/students through big ideas toward procedural tasks in a cohesive manner!

Eureka Pre-Calculus would be most successful if prior material ~~is~~ is rigorous in skills and comprehension. It would be a perfect material for STEM courses and motivated learners.

This material would also be a great tool to, possibly, engage "at-risk" students.

Very Rich Material

2015-1 nterim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: Great Minds

Title of Material: Eureka Math - A Story of Functions Pre-Calculus

Author: Great Minds

Reviewer ID: KB JH

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1 **Focus and Coherence**		
Criterion	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The content of this material largely focuses on the Widely Applicable Prerequisits in Algebra Functions, and Geometry. Evidence is found throughout modules, lessons, and assessments.	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** The content repeatedly uses geometry skills as a way to model problems and analyze concepts. Evidence is found throughout the modules.	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The content utilizes the knowledge and skills aquired in previous courses, and requires appropriate sophistication throughout. Evidence is found in transformations where they draw from transformations of rigid objects learned in previous courses.	✓ **Meets** ____ **Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The content incorporates and embeds the standards well throughout this text. Evidence ~~is~~ of as an example Mod 3 with Rational functions and composition are based on standards	✓ **Meets** ____ **Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The content is rich in course level problems and practice. For example Mod 5 lesson 4. Also found throughout.	____ **Meets** ____ **Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each module incorporates and scaffold material from earlier courses very well. For evidence, see Mod 4 Quadrants of Coordinate Graphs page 68. Also found throughout.	✓ **Meets** **___Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Table of Contents and beginning of each Big Topic, the CCSSM standards are clearly stated. Module 2 TE p.15 (example)	✓ **Meets** **___Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Throughout text materials include problems/tasks across domains. Larger connections are made with visuals and deeper questions Module 1 Lesson 16 Transformations Number Sense Geometry	✓ **Meets** **___Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

____ **Does Not Meet**

Strengths/Weaknesses

This text does an exceptional job at covering WAP as well as focusing on conceptual learning.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric** **1 Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** IN Student Book the Focus primarily focuses on concentual undering through real-world problems while providing ample practice for skills. SE Mdo 45	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Lessons: *Problem Sets *Socratic Method questioning Explove opportunities Model Problems	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Digital Manipulatives – Math Model with heavy focus on what is changing on graphs. P.120-121 M5 L10	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Problem Set (Provide Extentions) Links to digital/visual. * Opening * Building * Extention Problems M4 L11 S.87→	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** Problem Sets designed to reinforce procedural skills while asking deeper level thinking. S.59 Exploratory challenges. MS L7 Mod 5 M15	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** All modules/lessons contain problems relating concepts to real-world situations attending to Standing. SE M8 L1 P.55	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Supporting Clusters in lessons address WAP at least 75%. Mod 2 L 27 p.5 2 of 7	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Students have capstone, modeling w/problems and statistics.	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

2 Meets

____Does Not Meet

Strengths/Weaknesses:
The applied problems together with the explore, write and analyze problems give students opportunities for advanced thinking.

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** This text incorporates the practice standards very well to support and develops the Widely Applicable Prerequisites. ~~to focus~~ Evidence is found through out the modules.	✓ Meets (2) ___ Partially Meets (1) ___ Does Not Meet (0)
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** ✓ Meets (2) ___ Partially Meets (1) ___ Does Not Meet (0)
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The course intrinsicly incorporates all the practice standards and continually prompts the development of the habits of mind.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** In every module before the main topics, the practice standards are suggested in the Teacher Edition. See Module Overviews for evidence.	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric.** ✓ **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Often in lesson development, students are promted to build arguments and critique others work. Evidence found in Mod 1 lesson 3.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Throughout the course students have frequent opportunities to produce explanations, diagrams, models in the Widely Applicable Prerequites.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** ~~That~~ The language of mathematics is precise, correctly used, and developed very well throughout all lessons and all modules!	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		✓ **Meets** ___ **Does Not Meet** **Strengths/Weaknesses:** Biggest Strength is connecting ideas over clusters giving students ample practice opportunities.

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** T.E provide ideas to support EL students. Example: "Use a Word Wall". Mod 2 L1 ONLINE/S.E. Spanish Version 2016	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Mod 3 Scaffolding notes for differentiation and enrichment LS p.74 The online platform provides additional RTI supports.	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** M5 L3 p.71 * Discussion opportunities * Visuals Diagrams * opening Excercises p.76 * Writing Prompts - closing Exercise M3LS * Exit Tickets Self-Critique Questions	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	✓ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Designed for teachers to Focus on conceptual teaching rather than time-consuming lesson planning. * Time limit suggestion * Socratic Questioning * Mastery Building	**(Reviewer only.)** ✓ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Throughout text * Modeling problems SE * Exploratory problems * Mastery Building Exercises	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Curriculum Overview Sections * Well sequenced * Purposeful, clear objects Standards met.	**(Reviewer only.)** __i/__ **Yes** _____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Pacing / Prep guides Curriculum Overviews Video Gallery Eureka Navigator (PD materials)	**(Reviewer only.)** __✓__ **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Modeling questions use effective modeling / graphing serve as manipulates. Digital manipulatives.	**(Reviewer only.)** __✓__ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Exit Tickets as Formative Assessment Mid Module / End Module Assessment PARCC Sample tasks	**(Reviewer only.)** __✓__ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Rubrics Offered/Provided 6-12 Ex P. 419	**(Reviewer only.)** __✓__ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessments use course-level appropriate language w/out bias. M2 End of Mod. Assessment p. 470	**(Reviewer only.)** __✓__ **Yes** _____ **No**

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** EQuIP (Ed. Evaluating Quality Inst. Products) Louisiana State University Louisiana State Dept Ed.	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Mathematical diagrams used well to engage students in the thinking / problem solving process. Few distractions. (unnecessary)	**(Reviewer only.)** ✓ **Yes** ____ **No**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

✓ **Meets**

____ **Does Not Meet**

Non-Negotiable Overall:

__✓__ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points:** 6 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points:** 6 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
✓ **Meets**	✓ **Meets**	✓ **Meets**
_____ **Does Not Meet**	_____ **Does Not Meet**	_____ **Does Not Meet**

Alignment Criteria Overall:

__✓__ **Meets** _____ **Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[illegible]tandards. **Do the materials meet every Non-Negoti[illegible] and Alignment Criterion?** ✓ **Yes** ____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths are in the design of the text as a whole, in building on prerequisits, on engaging application problems, in the rigor and approriate level of vocabulary, the lesson designs, the ample procedural practice problems, the authentic assessments, and opportunities to differentiate and extend student learning.

Weaknesses are very few. Navigation was at times slightly awkward with the topic heading at the bottom of the page instead of the top.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	Math Expressions
ISBN #	978-0-547-82486-6
Grade Level(s) or Course:	Kindergarten
Reviewer ID:	~~KJ~~ LC

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Materials for Grade K align the majority of lessons and activities to the major work for Kindergarten follow the learning path to Grade 1. Does not assess outside the major work of the grade.

COHERENCE-

RIGOR-

Materials reflect and support the ~~conceptual~~ rigorous ~~understanding~~ expectations and development of key mathematical practices.

CONCEPTUAL UNDERSTANDING-

Materials reflect and support the conceptual understanding of key mathematical practices.

MATHEMATICAL PRACTICES-

Curriculum ~~must~~ demonstrates authentic connections between content Standards and practice Standards.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Curriculum provides significant support for ELL and other special student populations.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core St[illegible] Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Unit 1: Instructional time is spent focused on Major Works of Kindergarten: Know number names and the count sequence, Count to tell the number of objects; Unit Test/Assessment pages 97-100. Unit 2: Instructional time is spent focused on Major Works of Kindergarten: Know number names and the count sequence, Count to tell the number of objects; Unit Test/Assessment pages 197-200. Unit 3: Instructional time is spent focused on Major Works of Kindergarten: Know number names and the count sequence, Count to tell the number of objects; Compare numbers, Understand addition as putting together and adding to, and understand subtractions as taking apart and taking from, Work with numbers 11-19 to gain foundations for place value; Unit Test/Assessment pages 323-326. Unit 4: Instructional time is spent focused on Major Works of Kindergarten: Know number names and the count sequence, Count to tell the number of objects; Compare numbers, Understand addition as putting together and adding to, and understand subtractions as taking apart and taking from, Work with numbers 11-19 to gain foundations for place value; Unit Test/Assessment pages 455-458 Unit 5: Instructional time is spent focused on Major Works of Kindergarten: Know number names and the count sequence, Count to tell the number of objects; Compare numbers, Understand addition as putting together and adding to, and understand subtractions as taking apart and taking from, Work with numbers 11-19 to gain foundations for place value; Unit Test/Assessment pages 571-574.	**(Reviewer only.)** **_X_Meets** **____Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Materials for Grade K align the majority of lessons and activities to the major work for Kindergarten follow the learning path to Grade 1.

Evidence-

Common Core State Standards for Mathematical Content: Lessons are aligned to grade level standards/major work of the grade; pages xlviii-l.

Units 1-5: Instructional time spent on the following Major works of Kindergarten:

- Know number names and the count sequence
- Count to tell the number of objects
- Compare numbers
- Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from

Units3-5: Instructional time is spent on the following Major Work as well as the above:

- Work with numbers 11-19 to gain foundation for place value

(Reviewer only.)

_X__Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2E **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Unit 1: Majority of lessons focus on major content standards K.CC.2, K.CC.3, K.CC.4a, K.CC.4b, K.CC.5, K.CC.6, K.OA.1, K.OA.2; with lessons from supporting and additional clusters K.MD.3, K.G.1, K.G.2, K.G.3, K.G.4. Unit 2: Majority of lessons focus on major content standards K.CC.1, K.CC.2, K.CC.3, K.CC.4a, K.CC.4b, K.CC.4c, K.CC.5, K.CC.6, K.CC.7, K.OA.1, K.OA.2, K.OA.3, K.OA.4; with lessons from supporting and additional clusters K.MD.3, K.G.1, K.G.2, K.G.3, K.G.5. Unit 3: Majority of lessons focus on major content standards K.CC.1, K.CC.2, K.CC.3, K.CC.4a, K.CC.4b, K.CC.4c, K.CC.5, K.CC.6, K.CC.7, K.OA.1, K.OA.2, K.OA.3, K.OA.5, K.NBT.1; with lessons from supporting and additional clusters K.MD.3, K.G.1, K.G.2, K.G.4, K.G.6. Unit 4: Majority of lessons focus on major content standards K.CC.1, K.CC.2, K.CC.3, K.CC.4a, K.CC.4b, K.CC.4c, K.CC.5, K.CC.6, K.CC.7, K.OA.1, K.OA.2, K.OA.3, K.OA.4, K.OA.5, K.NBT.1; with lessons from supporting and additional clusters K.MD.3, K.G.1, K.G.2, K.G.3, K.G.4, K.G.6. Unit 5: Majority of lessons focus on major content standards K.CC.1, K.CC.2, K.CC.3, K.CC.4, K.CC.4c, K.CC.5, K.CC.6, K.CC.7, K.OA.1, K.OA.2, K.OA.3, K.OA.5, K.NBT.1; with lessons from supporting and additional clusters K.MD.1, K.MD.2.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2C **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content progression is obvious within each unit through lessons and activities. Each Unit Overview provides a learning progressions of the Common Core State Standards and a Content Standards Across the Grades for the following unit lessons and activities. It states current grade level standards, as well as the following grade standards that are incorporated into the unit lessons and activities. The incorporation of future grade level standards does not interfere with current grade level standards and progressions. **Evidence-** Unit 1: K.CC.1-3: Know number names and the count sequence • Standard is extended to the following grade in 1.NBT.1: Extend the counting sequence. Unit 2: K.OA.1-5: Know number names and the count sequence, count to tell the number of objects. • Standard is extended to the following grade in 1.OA.3: Apply properties of operations as strategies to add and subtract. Unit 3: K.NBT.1: Work with numbers 11-19 to gain foundations for place value. • Standard is extended to the following grade in 1.NBT.2-3: Understand place value. Unit 4: K.G.4: Analyze, compare, create, and compose shapes. • Standard is extended to the following grade in 1.G.1-2: Reason with shapes and their attributes. Unit 5: K.OA.1-5: Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from. • Standard is extended to the following grade in 1.OA.1-2: Represent and solve problems involving addition and subtraction.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials provide all students with extensive work with on-grade-level problems. Materials are designed to accommodate a wide range of student learning styles and academic skills. Each lesson has accommodations and resources to incorporate strategies and opportunities for differentiating instruction. On level, and challenge activities are outlined after every lesson with accommodations for ELL students in every lesson as well. **Evidence-** Unit 1: Lesson 10: Lesson focus: identify and classify rectangles by their attributes, with differentiated instruction provided for ELL students on pages 47 and 52; On level, and challenge activities on page 54. Unit 2: Lesson 18: Lesson focus: write numbers 1-10 and compare two numbers, with differentiated instruction provided for ELL students on page 185; On level, and challenge activities on page 186. Unit 3: Lesson 19: Lesson focus: show as group of ten when making a teen number, with differentiated instruction provided for ELL students on page 309; On level, and challenge activities on page 312. Unit 4: Lesson 2: Lesson focus: identify partners of 6, 7 and 10, with differentiated instruction provided for ELL students on page 337; On level, and challenge activities on page 340. Unit 5: Lesson 5: Lesson focus: show numbers 1-20 as a group of ten ones and more ones, with differentiated instruction provided for ELL students on page 483; On level, and challenge activities on page 484.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2E **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Kindergarten curriculu aterials provided may be the first experience students have with the materials and standards. Therefore materials cannot include review of prior standards. The materials do provide learning progressions and content standards across the grade where teachers can see the progression of the Kindergarten curriculum in relation to Grade 1. **Evidence-** Unit 1: K.CC.1-3: Know number names and the count sequence. Provides foundational skills for 1.NBT.1 Count to 120. Unit 2: K.OA.1-5: Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from. Provides foundational skills for 1.OA.3: Apply properties of operations as strategies to add and subtract. Unit 3: K.NBT.1: Work with numbers 11-19 to gain foundations for place value. Provides foundational skills for 1.NBT.2-3: Understand place value. Unit 4: K.G.4: Analyze, compare, create, and compose shapes. Provides foundational skills for 1.G.1-2: Reason with shapes and their attributes. Unit 5: K.MD.1-2: Describe and compare measurable attributes. Provides foundational skills for 1.MD.1-2: Measure lengths indirectly and by iterating length units.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2F **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Kindergarten curriculu aterials provided may be the first experience students have with the materials and standards. Therefore materials cannot include review of prior standards. The materials do provide learning progressions and content standards across the grade where teachers can see the progression of the Kindergarten curriculum in relation to Grade 1. **Evidence-** Unit 1: K.CC.1-3: Know number names and the count sequence. Provides foundational skills for 1.NBT.1 Count to 120. Unit 2: K.OA.1-5: Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from. Provides foundational skills for 1.OA.3: Apply properties of operations as strategies to add and subtract. Unit 3: K.NBT.1: Work with numbers 11-19 to gain foundations for place value. Provides foundational skills for 1.NBT.2-3: Understand place value. Unit 4: K.G.4: Analyze, compare, create, and compose shapes. Provides foundational skills for 1.G.1-2: Reason with shapes and their attributes. Unit 5: K.MD.1-2: Describe and compare measurable attributes. Provides foundational skills for 1.MD.1-2: Measure lengths indirectly and by iterating length units.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each unit has an overview of learning progressions and content standards. Each lesson within the unit has a lesson focus for the lesson taught, mathematical practices covered within the lesson, and the Common Core State Standard covered in the lesson as well. Within the lesson, each activity indicates the Common Core State Standards addressed as well as the Mathematical Practices covered explicitly. **Evidence-** Unit 1: Lesson 1: Lesson focus: Count objects in the classroom and in a counting book; Standard identified: K.CC.4a When counting objects, say the number names in the standard order; K.CC.4b Understand that the last number name said tells the number of objects counted. Mathematical Practices covered: MP.4, MP.6, and MP.7. Unit 2: Lesson 18: Lesson focus: Write numbers 1-10, Compare two numbers; Standards identified: K.CC.1-3 Know number names and the count sequence; K.CC.7 Compare two numbers between 1 and 10 presented as written numerals. Mathematical Practices covered: MP.3, and MP.6. Unit 3: Lesson 8: Lesson focus: Make teen numbers using 5-groups; Standards identified K.CC.5 Count to answer "how many?" questions about as many as 20 things arranged in a line, a rectangular array, or a circle, or as many as 10 things in a scattered configuration; given a number from 1-20, count out that many objects; K.NBT.1 work with numbers 11-19 to gain foundations for place value. Mathematical Practices covered: MP.3, MP.5, MP.6, MP.7 and MP.8. Unit 4: Lesson 2: Lesson focus: Identify partners of 6,7, and 10; Standards identified: K.OA.1-4 Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from. Mathematical Practices covered: MP.1, MP.2, MP.4, and MP.7. Unit 5: Lesson 13: Lesson focus: Count by ones and tens to 100, Find partners of 10 and discuss 7-partners; Standards identified: K.CC.1-2 Count to 100 by ones and by tens, Count forward beginning from a given number; K.OA.2-4 Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from. Mathematical Practices covered: MP.4, MP.7, and MP.7.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2H

Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.

How to Find the Evidence:

In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA).

For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Evidence-

Each unit of the materials adequately connects two or more clusters in a domain or two or more domains in grade one. In most units, lessons exceed expectation to include up to 7 clusters of a domain. The clusters in a domain are combine in a natural and important way as to connect standards, domains, and clusters fluidly.

Evidence-

Domain Counting and Cardinality (K.CC.1-7)

Unit 1:

- Lessons 1-6: combine clusters K.CC.4a and K.CC.4b
- Lessons 7-10: combine clusters K.CC.2, K.CC.4a, K.CC.4b, and K.CC.6
- Lessons 11-14: combine clusters K.CC.3, K.CC.4a, K.CC.4b, K.CC.5, and K.CC.6
- Lessons 15-18: combine clusters K.CC.1, K.CC.3, K.CC.4a, K.CC.4b, K.CC.5, and K.CC.6

Unit 2:

- Lessons 1-5: combine clusters K.CC.1, K.CC.3, K.CC.4a, K.CC.5, and K.CC.6
- Lessons 5-10: combine clusters K.CC.1, K.CC.2, K.CC.3, K.CC.4a, K.CC.4b, K.CC.5, K.CC.6, and K.CC.7
- Lessons 11-15: combine clusters K.CC.1, K.CC.2, K.CC.3, K.CC.4a, K.CC.4b, K.CC.4c, and K.CC.5
- Lessons 16-20: combine clusters K.CC.1, K.CC.2, K.CC.3, K.CC.4a, K.CC.4b, K.CC.4c, K.CC.5, and K.CC.7

Unit 3:

- Lessons 1-9: combine clusters K.CC.1, K.CC.2, K.CC.3, K.CC.4a, K.CC.4b, and K.CC.5
- Lessons 10-12: combine clusters K.CC.2, K.CC.3, K.CC.4c, K.CC.5, K.CC.6, and K.CC.7
- Lessons 13-17: combine clusters K.CC.3, K.CC.4, K.CC.5, and K.CC.7
- Lessons 18-21: combine clusters K.CC.3, K.CC.4, K.CC.4b, and K.CC.5

Unit 4:

- Lessons 1-4: combine clusters K.CC.3, K.CC.4a, K.CC.4b, and K.CC.4c
- Lessons 5-8: combine clusters K.CC.3, K.CC.4, K.CC.4c, K.CC.5, K.CC.6, and K.CC.7
- Lessons 9-15: combine clusters K.CC.2, K.CC.4a, K.CC.4b, K.CC.4c, K.CC.6, and K.CC.7
- Lessons 16-22: combine clusters K.CC.1, K.CC.2, K.CC.3, K.CC.4a, K.CC.4b, K.CC.5, K.CC.6, and K.CC.7

(Reviewer only.)

_X__Meets

____Does Not Meet/

Insufficient Evidence

	Unit 5: • Lessons 1-4: combine clusters K.CC.1, K.CC.3, K.CC.5, and K.CC.7 • Lessons 5-7: combine clusters K.CC.1, K.CC.3, K.CC.4, K.CC.4c, and K.CC.5 • Lessons 8-14: combine clusters K.CC.1, K.CC.2, K.CC.3, and K.CC.5 • Lessons 15-23: combine clusters K.CC.3, K.CC.4, K.CC.4c, K.CC.5, K.CC.6, and K.CC.7	
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Math Talk is a large and widely used feature of the curriculum. It is used in various forms throughout the curriculum – solve and discuss board work, small group discussions. These strategies provide support to students by allowing students to share and talk about the different ways they have solved a problem, which in turn can help other students. The formative assessment at the end of each lesson allows students to explain their reasoning and understanding of a concept instead of just a practice assessment. Curriculum also has Learning Community-Best Practice strategies that incorporate Building Concepts. These prompts focus of building conceptual understanding of standards. Examples: • Unit 1: TE 2, 4, 34, 40 • Unit 2: TE 107, 110 • Unit 3: TE 214, 220, 292 • Unit 4: TE 349, 373, 392, 394, • Unit 5: TE 478, 538, 545	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Examples: • Unit 1, Lesson 13: Subitizing and working with counting mats with numbers 1-10. Unit 1 Test: Exercises 3-4 • Unit 2, Lesson 7: Using the counting mat to build number concepts through 10. Unit 2 Test: Extended Response Exercise 10. • Unit 3, Lesson 7: tell, retell, and solve story problems. Unit 3 Test: Extended Response Exercise 20. • Unit 4, Lesson 2: Show and record partners of 10. Unit 4 Test: Extended Response Exercise 25. • Unit 5, Lesson 17: Visualize a group of a ten in a teen number. Unit 5 Test: Exercises 5-6.	

Do the materials ~~are~~ re opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Examples: • Unit 1, Lesson 13: Subitizing and working with counting mats with numbers 1-10 • Unit 2, Lesson 7: Using the counting mat to build number concepts through 10. • Unit 3, Lesson 7: tell, retell, and solve story problems. • Unit 4, Lesson 2: Show and record partners of 10. • Unit 5, Lesson 17: Visualize a group of a ten in a teen number.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** A Path to Fluency: Kindergarten through Grade 5 is a fluency plan that shows how the curriculum achieves fluency with the Common Core Standards suggested for each grade through targeted practice. This can be found in the Teachers Edition on page xxvi.	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Common Core Standard K.OA.5: Fluently add and subtract within 5 Examples: • Unit 1: Understanding numbers 1-10; development of subitizing skills by relating numbers and objects. • Unit 2: Transition to recognizing 5-groups in numbers 6-10. • Unit 3: Transition to addition and subtraction equations within 5. • Unit 4: Recognizing partners and using drawings to become fluent in addition and subtraction. • Unit 5: Continued support and practice of addition and subtraction.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Curriculum provides repeated practice to attainment of fluency for the standards. • A Path to Fluency: TE page xxvi • Quick Practice: TE opening page to every lesson • Fluency Checks: Assessment Guide pages 78-85 • Daily Routines: TE Volume 1 pages xxxi-xxxii and TE Volume 2 pages xxxi-xxxii.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Curriculum uses a wide range of word problems to expose students to problem solving: understanding the situation, representing the situation, solving the problem with representation, and reflecting on the answer to ensure it makes sense. There are a wide variety of activities to help students understand problems: using math talk, acting out, retelling, etc.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Curriculum encourages student to use math drawings, visual models, and manipulatives as tools to represent problems/situations. Different problem types can be found in the introduction to the curriculum on page xxviii. This table shows how problem types are incorporated across the grades.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Examples: • Unit 1, Lessons 1, 3, 4, 6, 8, 10, 14, 17, 18, unit test • Unit 2, Lessons 1, 3, 5, 6, 10, 11, 13, 15, 17, 20, unit test • Unit 3, Lessons 4, 7, 9, 11, 12, 16, 18, 19, 20, unit test • Unit 4, Lessons 1, 2, 4, 6, 9, 10, 11, 14, 21, unit test • Unit 5, Lessons 1, 4, 6, 12, 15, 16, unit test	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Examples: • Unit 1, Lesson 5: Identify, order and count 1-5; Lesson 12: Identify, order and count 1-10 • Unit 2, Lesson 1: Find groups of 1-10 and identify 5-groups; Lesson 9: Count and make groups of 6-10 with 5-groups • Unit 3, Lesson 1: Find groups of 1-10 and identify partners; Lesson 8: Make teen numbers using 5-groups • Unit 4, Lesson 3: Show teen numbers in a group of ten ones and extra ones; Lesson7: Show teen numbers in a group of ten ones and extra ones and as 10 + a 1-digit number • Unit 5, Lesson 7: Show numbers 1-20; show the teen numbers as a group of ten ones and further ones; Lesson 11: Visualize teen numbers as ten ones and extra ones, and find 10-partners.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** In the overview for the curriculum, each unit includes a Getting Ready to Teach the Unit using the Common Core Standards for Mathematical Practices. This part of the overview for each unit indicates what concepts, skills, and problem solving the students will learn in that unit and how the students will demonstrate their understanding. Mathematical Standards are also identified in each lesson of every unit. Examples: • Unit 1: TE 1V-1XCC • Unit 2: TE 103U-103BB • Unit 3: TE 203X-203EE • Unit 4: TE 329X-329EE • Unit 5: TE 461X-461XEE	**(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **_X__Meets (2)**

Over the course of a given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** At the start of every unit, the curriculum provides an over view of Common Core State Standards for Mathematics that aligns every lesson in the unit with the Mathematical Practices and the standards that will be taught in the unit. Examples: • Unit 1: TE 1I-1N • Unit 2: TE 103D-103E • Unit 3: TE 203N-203Q • Unit 4: TE 329N-329PE • Unit 5: TE 461P-461Q Each unit also includes a Getting Ready to Teach the Unit using the Common Core Standards for Mathematical Practices. This part of the overview for each unit indicates what concepts, skills, and problem solving the students will learn in that unit and how the students will demonstrate their understanding. Mathematical Standards are also identified in each lesson of every unit. Examples: • Unit 1: TE 1V-1XCC • Unit 2: TE 103U-103BB • Unit 3: TE 203X-203EE • Unit 4: TE 329X-329EE • Unit 5: TE 461X-461XEE	____**Partially Meets (1)** ____**Does Not Meet (0)**
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** The following examples provided evidence of the practice standards developing across the grade level in the Getting to Teach the Unit Using the Common Core Standards for Mathematical Practice. Each Mathematical Practice is listed with examples from within the unit as to how they are developing across the grade. Examples: • Unit 1: TE 1V-1XCC • Unit 2: TE 103U-103BB • Unit 3: TE 203X-203EE • Unit 4: TE 329X-329EE • Unit 5: TE 461X-461XEE	

Are there teacher selected materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Within each lesson of the curriculum the Mathematical Practices incorporated have been identified with each activity and has suggestions for the teacher to help implement and support the practices. The last lesson in every unit focuses explicitly on the Mathematical Practice and their practical application for student to solve real world problem. Examples: • Unit 1, Lesson 18 (pages 91-96) • Unit 2, Lesson 20 (pages 191-196) • Unit 3: Lesson 21 (pages 317-322) • Unit 4: Lesson 22 (pages 449-454) • Unit 5: Lesson 23 (pages 565-570)	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Curriculum includes evidence of the progression of Mathematical Practices in the research and background section of the TE. See Teacher Edition pages: 1X. 103W, 203Z, 329Z, 461Z Mathematical Practice 3 – Construct viable arguments and critique the reasoning of others is part of the progression across the grade level curriculum. Mathematical Practices are embedded in every lesson of the curriculum. Evidence of Mathematical Practice 3 is included in the following lessons: • Unit 1 Lessons: 4,6,10,15,18 • Unit 2 Lessons: 1,4,9,16,17,18,19,20 • Unit 3 Lessons: 1,2,3,4,6,9,10,11,12,13,18,19,21 • Unit 4 Lessons: 1,8,9,11,13,17,19,21,22 • Unit 5 Lessons: 1,2,6,12,14,16,17,21,22,23	

Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Curriculum has a Puzzled Penguin throughout the materials that enables students to construct grade-appropriate viable arguments to explain why Puzzled Penguin is wrong and explain how to solve the problem correctly. Examples of Puzzled Penguin found on these pages in the TE: • Unit 2: 105, 121, 142 • Unit 3: 229 • Unit 4: 377, 395 • Unit 5: 489 Examples of Puzzled Penguin in Student Workbook can be found on these pages: • 8, 29, 44, 62, 80, 81, 92, 122, 130, 141, 152, 188, 194, 210, 250, 252 Although it is important to determine why Puzzled Penguin is wrong and construct a grade-appropriate response; it would be helpful if Puzzled Penguin was not always wrong. It would be beneficial for students to construct grade-appropriate arguments to explain why he is right as well.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Curriculum materials provide a word list of math vocabulary words used within each lesson. The vocabulary words can be found on the lesson overview for every lesson where new vocabulary is introduced. Vocabulary words are used repeatedly throughout the materials even though they are no longer considered "new". Examples of vocabulary words: • Unit 1, Lesson 3: group, scene • Unit 2, Lesson 15: tens, ones • Unit 3, Lesson 1: add, subtract, unknown • Unit 4, Lesson 13: 5-frame, Tiny Tumbler, Math Mountain • Unit 5, Lesson 1: partners, addition subtraction, teen number Math Talk is also explicitly used throughout the entire curriculum. It can be found in every lesson within each unit. It is indicated with a red conversation bubble with the words Math Talk. Math Talk allows students to exchange strategies and reasoning with peers to further explain their thinking using precise mathematical vocabulary and Math Talk. Mathematical Practice Standards have been incorporated into all lessons throughout the curriculum. Students are encouraged to use a variety of math drawings, symbols/equations, and models to represent problems and situations. Page xxvii provides an outline of the problem solving processes this curriculum integrates into units and lessons.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X_Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Materials have lessons designed to accommodate a variety of students and academic skills. Each unit has a differentiated instruction overview in the unit planning section where instruction for ELL students is outlined with an overall objective for the unit. Every lesson within the units also has support for ELL students; including leveled support for beginning, intermediate, and advanced ELL students. Examples: • Unit 1: Planning TE 1P-1Q; Lesson 10 page 47 and 52. • Unit 2: Planning TE 103N-103O; Lesson 6 page 129 • Unit 3: Planning TE 203R-203S; Lesson 3 page 221 • Unit 4: Planning TE 329R-329S; Lesson 14 page 441 • Unit 5: Planning TE 461R-461S; Lesson 2 page 473 Support is also provided for other special populations with leveled writing prompts and differentiated instruction cards. Examples: • Unit 1: Lesson 14 page 76 • Unit 2: Lesson 1 page 108 • Unit 3: Lesson 16 page 298 • Unit 4: Lesson 7 page 370 • Unit 5: Lesson 9 page 506	**Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Curriculum has a response to intervention overview page that provides focused instruction on the standards for every unit. There were also two separate books provided with the core curriculum for Tier 1 intervention lessons and Tier 2 and 3 intervention skills, examples and lessons. Each response to intervention book provides opportunities for students to have differentiated instruction based on their specific needs. Examples of response to intervention overview: • Unit 1: Planning TE 1R • Unit 2: Planning TE 103P • Unit 3: Planning TE 203T • Unit 4: Planning TE 329T • Unit 5: Planning TE 461T	**Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3C **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Curriculum provides a variety of methods to enable all students advance. Units are organized into Big Ideas grouping a number of lessons together under one topic. Examples: • Unit 1, Lessons 1-6: Big Idea – Understanding Numbers 1-10, Lesson focus: counting and cardinality 1-5. Each lesson begins with quick practice following daily routines utilizing student leaders. Math background is provided as a resource that can provide conceptual understanding for teachers. • Lesson 1 Activity 1 incorporates whole group discussion with Math Talk discussion points. The lesson uses manipulatives and whole group strategies to engage students. • Lesson 1 Activity 2 Quick Practice Routines: Oral counting, modeling with fingers, creative movement and sounds number practice. • At the end of the lesson is a formative assessment to check for student understanding.	**Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating.**		**(Reviewer only.)** **_X_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Materials provide a clear, thoughtful lesson plan for each lesson. Including math background information, activity focus, differentiated instruction, mathematical practices, Common Core State Standards, quick practice and daily routines. Each lesson provides the teacher with an estimated activity time and focus. Activities have whole class or individual work identified next to the focus strategy so the teacher knows when to allow students to work independently or to continue with a whole group approach. Math talk is encouraged and indicated on the lessons. Group/partner talk is used frequently to encourage interaction with peers enabling them learn from each other not just the teacher. Examples of Math Talk: • Unit 6 Lesson 2 (page 496) Make comparisons using math talk. • Unit 7 Lesson 6 (pages 587-589) Math talk when reasoning with shapes and their attributes. Best practices and class management tools are given to the teacher to use as needed. Differentiation for ELL, intervention, on-level and challenge extension lessons are provided at the end of each lesson so the teacher can easily adapt as needed while teaching. Examples: Unit 3 Lesson 10 (page 250): Activity one lesson duration: 40 minutes. Focus: review the relationship between known and unknown quantities in addition story problems. Differentiation for ELL students (page 251); differentiation for intervention, on-level, and challenge students (page 253) is clearly outlined and examples of activities are provided within the lesson.	**(Reviewer only.)** **_X___ Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Materials are balanced in the number of problems and exercises. The majority of lessons begin with an activity that involves problems that utilize whole class activities and math talk; then the lesson progresses to individual work with exercises to apply knowledge procured in the current and prior lessons. Problems are well thought out; encouraging students to use background knowledge and their own strategies to begin to work through a new concept. Example: • Unit 2 Lesson 3 (page 114-115 of TE) students are working whole group acting out family experiences of addition and subtraction; they will then share them with the class (math talk). • Unit 2 Lesson 5 (page 123-124 of TE) students use knowledge gained in prior lesson 3 act out more family experiences with addition and subtraction adding more detail and answering more complex questions.	**(Reviewer only.)** **__X__ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The materials have an intentional sequence and pacing. Page xxvi provides a Path to Fluency outline for the curriculum from kindergarten to grade 5. Outlining the progressions each grade level will take to provide students with the necessary skills to be fluent. Math Vocabulary builds on words and skills taught. There is no assumption that students know terminology, it is taught. It is often revisited to a deeper level in a later unit/lesson. Example: • Unit 1, Lesson 7: the vocabulary taught is: partners • Unit 2, Lesson 1: vocabulary partners is extended to 5-groups	**(Reviewer only.)** **__X__ Yes** **_____ No**

4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Prior to teaching a lesson, an extensive introduction is provided in the overview of the curriculum (pages xvii-xxix). In the curriculum introduction teacher learning/study is provided on math talk (pages xx-xxi and xviii and xx-xxi), teaching model: an inquiry learning path (page xix), classroom management (page xxii), mathematical practices (pages xxii-xxiv), and algebraic problems that appear in all domains (pages xxiv-xxv). A path to fluency is provided for grades Kindergarten through grade 5 (page xxvi) and a pacing guide for all units and lessons in the Grade 1 curriculum (page xxx). Information is provided on the problem solving process and problem types that will occur within the curriculum (pages xxvii-xxix). Detailed daily routines are outlined for teachers to study and incorporate into their classrooms based on the unit/book volume (pages xxxi-xxxii) Each unit is provided with a detailed overview including learning progressions across grades and content standards across the grades for the prevalent Common Core Standards addressed within it. Response to intervention and cross curricular connections are provided prior to the unit lessons. A putting the research into practice and math background is also provided prior to teaching each unit. Each unit is provided with a "Getting Ready to Teach Unit.." section that provides teachers with examples of common errors students may make and strategies to help teachers further explain a concept/strategy. Examples of teacher support/ study: • Unit 1: Putting Research into Practice (page 1T of TE); teacher study of equity with current research. • Unit 2: Getting Ready to Teach Unit 6; Common Errors (page 103CC of TE); Puzzled Penguin provides examples of possible student misconceptions. • Unit 3: Math Background (pages 203GG-203MM of TE); strategies to anticipate and enhance student learning are provided for each lesson of the unit.	**(Reviewer only.)** **__X__ Yes** **_____ No**

5. Manipulat suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Curriculum materials are a great additional resource but are not a requirement to teach the curriculum.	**(Reviewer only.)** __X__ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Materials provide a Beginning of the Year Inventory Test that tests student prior knowledge. Each lesson has a quick Formative Assessment: Check for Understanding that can be done at the end of every lesson to assess student understanding of lesson concepts. There is a Unit Review and Test at the end of every unit with two alternate tests in the Assessment Guide Book. An End of the Year Test is also provided in the Assessment Guide Book to determine student growth and understanding. Examples: • Formative Assessments: Check for Understanding Unit 3, Lesson 10 page 267 • Unit Review and Test: Unit 4 Review and Test pages 455-458; Alternate Tests: A and B, Assessment Guide Book pages 51-60 • Beginning of the Year Inventory: Assessment Guide Book pages 4-14 • End of the Year Test: Assessment Guide Book: 90-99	**(Reviewer only.)** __X__ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Curriculum review and test for each unit has an answer key, and each question is aligned the Common Core Standards covered during the course of the unit. The TE provides Common Errors student might face and reteach activities that can be done prior to testing or as a form of remediation post assessment. Two alternate tests are provided for each unit test in the Assessment Guide Book in the event that students need an alternate assessment. Examples: • Unit 2 Review and Test: TE 197-200, Alternate Tests: Assessment Guide Book pages 27-34	**(Reviewer only.)** __X__ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-**	**(Reviewer only.)** __X__ **Yes** _____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** The author is clearly indicated on the title page of the teacher's edition. Curriculum was developed from the Children's Math Worlds Research Project conducted by Dr. Karen Fuson (author). The material is based upon work supported by the National Science Foundation and is funded in part by the National Science Foundation.	**(Reviewer only.)** **__X__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Materials are bright and colorful. Student workbook pages are not cluttered with too much text, pictures, or drawings. There is a building repetition to the activities that allows students to understand new concepts/lessons based on prior concepts/lessons. Example: • Unit 1 lessons work with number writing and recognition through 10. These strategies are then built on in Units 3, and 4 with teen numbers.	**(Reviewer only.)** **__X___ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** At the beginning of every unit, in the student handbook, there is a Family Letter that describes the concepts of the upcoming unit. It includes math vocabulary that parents may or may not be familiar with so they can understand the terminology used in the classroom, on workbook pages, and homework. Throughout the rest of the unit there are occasional Family Letters that explain any new math vocabulary or conceptual understandings that have become relevant in the current unit. Examples of Family Letters can be found in the student work book at the start of every new unit: • Unit 1, Student Workbook pages 1, 5, and 19 • Unit 2, Student Workbook page 41 • Unit 3, Student Workbook page 89, 97, 101, 107, and 137 • Unit 4, Student Workbook pages 149, 165, and 175 • Unit 5, Student Workbook pages 205, 211, and 259 Homework can be found in the Homework and Remembering Blackline Masters and each page is aligned with the unit and lesson that is being taught. Homework format, vocabulary, and terminology is consistent with lessons and student workbook pages. Homework is a review of prior lessons/units and does not cover a new concept that has not be explicitly taught in the materials. For example: Unit 2 Lesson 18 Lesson Focus: Write Numbers 1 through 10; Homework for Unit 2 Lesson 18 reviews number writing 1-10 (Unit 2 Lesson 6) (Unit 1, Lessons 8-9)	**(Reviewer only.)** **_X___ Yes** **_____ No**

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet

Alignment Criteria Overall:

__X__ **Meets** _____ **Does Not Meet**

If the mater meet both Non-Negotiables and relevant Alignment Cr ion, they are aligned to the Shifts and major features o e Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** _X_ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths

- Teacher materials allow the teacher to understand the layout of the unit(s) with ease.
- Vocabulary and world problems were engaging and age appropriate.
- Sub, New teachers could easily pick up and teach a lesson w/o too much stress.

Weakness

- It would be nice if Puzzled Penguin is right sometimes to make students think about the complexity of the concept.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	Math Expressions
ISBN #	978-0-547-82479-6
Grade Level(s) or Course:	1st
Reviewer ID:	KJ (LC)

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Materials for Grade 1 align the majority of lessons and activities to the major work for 1st grade follow the learning path to
COHERENCE- Grade 2. Does not assess outside the major work of the grade.

RIGOR-
Materials reflect and support the rigorous expectation and development of key mathematical practices

CONCEPTUAL UNDERSTANDING-
Materials reflect and support the ... of key mathematical

MATHEMATICAL PRACTICES- practices.
Curriculum demonstrates authentic connections between content standards and practice standards

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Curriculum provides significant support for ELL and other special student populations

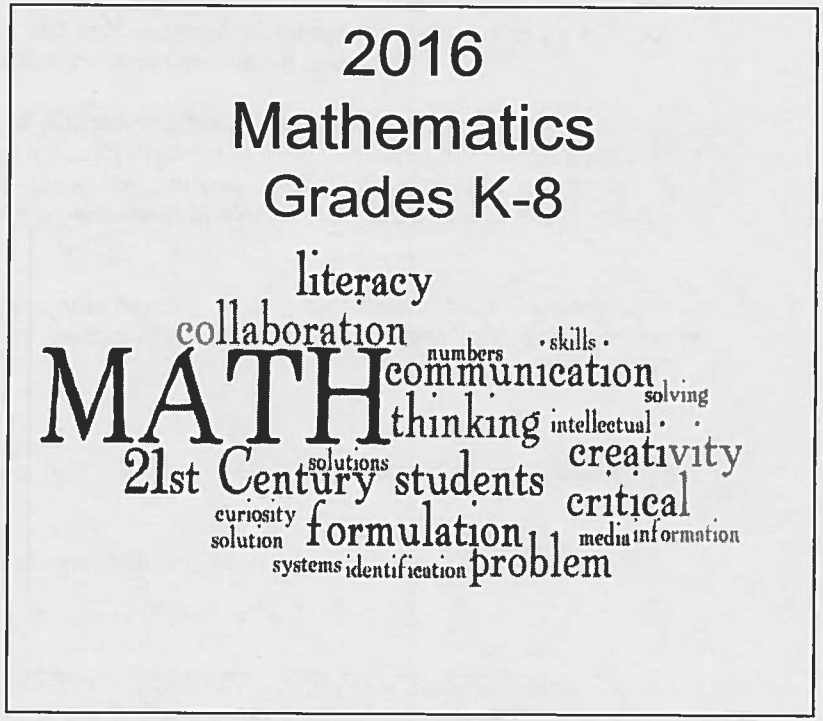
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Unit 1: Instructional time spent on critical focus area 1 of Grade 1. Partner and number patterns through 10. Focus on 1 more and 1 less patterns with addition and subtraction problems. Unit Test/Assessment pages 76-77 Unit 2: Instructional time spent on critical focus area 1 of Grade 1. Addition and subtraction strategies within 10. Recognition of problem types and writing an equation to represent the situation/problem. Practice of true and false equations. Unit Test/Assessment pages 180-182 Unit 3: Instructional time spent on critical focus areas 1 and 2 of Grade 1. Unknown numbers in addition and subtraction within 10. Using various strategies to solve unknown total and unknown partner addition and subtraction situations/problems. Unit Test/Assessment pages 268-270 Unit 4: Instructional time spent on critical focus areas 1 and 2 of Grade 1. Place value concepts; building 2-digit numbers; adding with 1 and 2 digit numbers. Focus of understanding and providing experience of building 2-digit numbers with visuals. Expand to add a 1-digit number to a 2-digit number. Unit Test/Assessment pages 392-394 Unit 5: Instructional time spent on critical focus areas 1 and 2 of Grade 1. Place value situations extending the use of unknown partners in addition and subtraction with larger numbers. Expanding on prior knowledge from working addition and subtraction situations/problems. Unit Test/Assessment pages 484-486 Unit 6: Instructional time spent on critical focus area 3 of Grade 1. Uses comparisons and data organization, representation and interpretation. Supports building on prior knowledge of comparing numbers to build comparison statements for data and solve comparison story problems. Unit Test/Assessment pages 550-552 Unit 7: Instructional time spent on critical focus areas 3 and 4 of Grade 1. Supports geometry, measurement and equal shares; distinguish between defining and non-defining attributes of shapes, shape composition. Basic concepts of	**(Reviewer only.)** **_X_Meets** **____Does Not Meet**

	length measurement a ime measurement is also covered. Unit Test/Assessment pages 654-656 Unit 8: Instructional time spent on critical focus area 2 of Grade 1. Supports two digit addition using skills, place value, and addition concepts to add with 2-digit numbers with and without regrouping. Unit Test/Assessment pages 702-703	
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**(Reviewer only.)** **_X_Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Each unit assesses topics under one or more of the four critical areas of instruction time for first grade. The curriculum does not assess topics above the first grade level. Unit test/assessments have standards for each test question listed and defined in the review and test lesson.**	

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	Materials for Grade 1 [illegible] the majority of lessons and activities to the major work for First Grade so lessons review Kindergarten standards and extend to Grade 2 standards but are not assessed. **Evidence-** *Common Core State Standards for Mathematical Content: Lessons are aligned to grade level standards/major work of the grade; pages xlviii-li Unit 1 & 2: Instructional time spent on critical focus area 1 of Grade 1: developing understanding of addition, subtraction and strategies for addition and subtraction within 20. Unit 3, 4, & 5: Instructional time spent on critical focus areas 1 and 2 of Grade 1: developing understanding of addition, subtraction and strategies for addition and subtraction within 20; developing understanding of whole number relationships and place value, including grouping in tens and ones. Unit 6: Instructional time spent on critical focus area 3 of Grade 1: developing understanding of linear measurement and measuring lengths as iterating length units. Unit 7: Instructional time spent on critical focus areas 3 and 4 of Grade 1: developing understanding of linear measurement and measuring lengths as iterating length units; reasoning about attributes of, and composing and decomposing geometric shapes. Unit 8: Instructional time spent on critical focus areas 1 and 2 of Grade 1: developing understanding of addition, subtraction and strategies for addition and subtraction within 20; developing understanding of whole number relationships and place value, including grouping in tens and ones.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2E **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Unit 1: All lessons focus on major content standards 1.OA.1, 1.OA.3, 1.OA.5, 1.OA.6, and 1.OA.8. Unit 2: Majority of lessons focus on major content standards 1.OA.1, 1.OA.5, 1.OA.6, 1.OA.7 and 1.OA.8 with one lesson supporting major content standard 1.OA.3. Unit 3: Majority of lessons focus on major content standards 1.OA.1, 1.OA.4, 1.OA.5, 1.OA.6 and 1.OA.8 with one lesson supporting major content standard 1.OA.7. Unit 4: Majority of lessons focus on major content standards 1.OA.5, 1.OA.6, 1.OA.8, 1.NBT.1, 1.NBT.2, 1.NBT.2c, and 1.NBT.4 with one lesson supporting major content standards 1.OA.2, 1.OA.3, and one lesson supporting major content standard 1.NBT.5. Unit 5: Majority of lessons focus on major content standards 1.OA.1, 1.OA.4, 1.OA.5, 1.OA.6, 1.OA.8, 1.NBT.1, 1.NBT.2, 1.NBT.2a, 1.NBT.2b, 1.NBT.2c, 1.NBT.3, 1.NBT.4 and 1.NBT.5 with one to two lessons supporting major content standards 1.OA.2, 1.OA.3, 1.NBT.2c, and 1.NBT5. Unit 6: All lessons focus on major content standards 1.OA.1 and 1.OA.2 with lessons connecting supporting content standard 1.MD.4 Unit 7: Only three lessons that focus on major content standards 1.MD.1 and 1.MD.2. Majority of lessons support additional content standards 1.MD.3, 1.G.1, 1.G.2, and 1.G.3 Unit 8: All lessons focus on major content standard 1.NBT.4 with one lesson supporting major content standards 1.NBT.3 and 1.NBT.6.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2C **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Content progression is obvious within each unit through lessons and activities. Each Unit Overview provides a learning progressions of the Common Core State Standards and a Content Standards Across the Grades for the following unit lessons and activities. It states previous grade level standards, as well as the following grade standards that are incorporated into the unit lessons and activities. The incorporation of prior and future grade level standards does not interfere with current grade level standards and progressions. **Evidence-** Unit 1: 1.OA.1: Represent and solve problems involving addition and subtraction. • Standard is introduced in previous grade in standard K.OA.1: Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from. • Standard is extended to the following grade in 2.OA.1: Represent and solve problems involving addition and subtraction. Unit 2: 1.OA.6: Add and subtract within 20 demonstrating fluency for addition and subtraction within 10 using strategies. • Standard is introduced in previous grade in standard K.OA.4: Fluently add and subtract within 5. • Standard is extended to the following grade in 2.OA.2: Add and subtract within 20 using mental strategies. • Unit 3: 1.OA.1: Represent and solve problems involving addition and subtraction. Use addition and subtraction within 20 to solve word problems. • Standard is introduced in previous grade in standard K.OA.2: Solve addition and subtraction word problems within 10. • Standard is extended to the following grade in 2.OA.1: Use addition and subtraction within100 to solve one-and two-step word problems. Unit 4: 1.NBT.3: Compare two two-digit numbers based on meanings of the tens and ones digits, recording the results of comparisons with the symbols >, =, and <. • Standard is introduced in previous grade in standard K.NBT.1: Compost and decompose	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

numbers from 11 to 19 into tens ones and some further ones.
- Standard is extended to the following grade in 2.NBT.4: Compare two three-digit numbers based on meanings of the hundreds, tens, and ones digits, using >, =, and < symbols to record the results.

Unit 5: 1.OA.1: Represent and solve problems involving addition and subtraction.
- Standard is introduced in previous grade in standard K.OA.1: Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from.
- Standard is extended to the following grade in 2.OA.1: Represent and solve problems involving addition and subtraction.

Unit 6: 1.MD.4: Represent and interpret data
- Standard is introduced in previous grade in standard K.MD.3: Classify objects and count the number of object in each category.
- Standard is extended to the following grade in 2.MD.9 and 2.MD.10: Represent and interpret data.

Unit 7: 1.MD.1: Measure lengths indirectly and by iterating length units.
- Standard is introduced in previous grade in standard K.MD.1: Describe and compare measurable attributes.
- Standard is extended to the following grade in 2.MD.1: Measure and estimate lengths in standard units.

Unit 8: 1.NBT.4: Understand and apply properties of operations and the relationship between addition and subtraction.
- Standard is introduced in the previous grade in standard K.NBT.1: Work with numbers 11-19 to gain foundations for place value.
- Standard is extended to the following grade in standard 2.NBT.5: Use place value understanding and properties of operations to add and subtract.

Metric NN2D **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Materials provide all students with extensive work with on-grade-level problems. Materials are designed to accommodate a wide range of student learning styles and academic skills. Each lesson has accommodations and resources to incorporate strategies and opportunities for differentiating instruction. Intervention, on level, and challenge activities are outlined after every lesson with accommodations for ELL students in every lesson as well. **Evidence-** Unit 1: Lesson 8: Lesson focus is adding and subtracting within 10 (1.OA.3), with differentiated instruction provided for ELL students on page 61 and intervention, on level, and challenge activities on page 67. Unit 2: Lesson 4: Lesson focus to represent and solve addition story problems and determine if addition equations are true (1.OA.7), with differentiated instruction provided for ELL students on page 99 and intervention, on level, and challenge activities on page 101. Unit 3: Lesson 10: Lesson focus to solve story problems with unknown partners and totals (1.OA.4), with differentiated instruction provided for ELL students on page 251 and intervention, on level, and challenge activities on page 253. Unit 4: Lesson 1: Lesson focus is working with on-grade-level problems to recognize 10 as a group of ten ones and count decade numbers as groups of ten (1.NBT.2a), with differentiated instruction provided for ELL students on page 275 and intervention, on level, and challenge activities on page 279. Unit 5: Lesson 7: Lesson focus to count large quantities of objects by tens and ones (1.NBT.2), with differentiated instruction provided for ELL students on page 447 and intervention, on level, and challenge activities on page 449. Unit 6: Lesson 5: Lesson focus is to collect, organize, represent, and interpret data with three categories (1.MD.4), with differentiated instruction provided for ELL students on page 517 and intervention, on level, and challenge activities on page 519. Unit 7: Lesson 12: Lesson focus to compare and order objects by length (1.MD.1), with differentiated instruction provided for ELL students on page 637 and intervention, on level, and challenge activities on page 639.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

	Unit 8: Lesson 2: Lesson focus to add 2-digit numbers (1.NBT.4), with differentiated instruction provided for ELL students on page 669 and intervention, on level, and challenge activities on page 673.	

Metric NN2E **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The Overview of each explicitly states the on-grade-level concepts taught in the unit with their relation to prior knowledge from the previous grade. **Evidence-** Unit 1: On-grade-level standard 1.OA.1: Use addition and subtraction within 10 to tell and solve story problems. Building on prior grade level standard K.OA.2: Solve addition and subtraction story problems within 10. Unit 2: On-grade-level standard 1.OA.3: Apply properties of operations as strategies to add and subtract. Building on prior grade level standard K.OA.3: Decompose numbers less than or equal to 10 into pairs in more than one way. Unit 3: On-grade-level standard 1.OA.6: Demonstrate fluency for addition and subtraction within 10. Building on prior grade level standard K.OA.4: Fluently add and subtract within 5. Unit 4: On-grade-level standard 1.NBT.2: Understand that the two digits of a two-digit number represent amounts of tens and ones. Building on prior grade level standard K.NBT.1: Compose and decompose numbers from 11 to 19 into ten ones and some further ones. Unit 5: On-grade-level standard 1.OA.1: Use addition and subtraction within 20 solve story problems. Building on prior grade level standard K.OA.2: Solve addition and subtraction story problems within 10. Unit 6: On-grade-level standard 1.MD.4: organize, represent, and interpret dad with up to three categories. Building on prior grade level standard K.MD.3: Classify objects into given categories; count the numbers of objects in each category and sort the categories by count. Unit 7: On-grade-level standard 1.MD.1: Order objects by length and compare the lengths of two objects indirectly. Building on prior grade level standard K.MD.1: Describe measurable attributes of objects, such as length or weight. Unit 8: On-grade-level standard 1.NBT.4: Add within 100, including adding a 2-digit number and a 1-digit number, and adding a 2-digit number and a multiple of 10. Building on prior grade level standard K.NBT.1: Compose and decompose numbers from 11 to 19 into ten ones and some further ones.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2F **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Unit 1: 1.OA.1: Use addition and subtraction within 10 to tell and solve story problems. Building on prior grade level standard K.OA.2: Solve addition and subtraction story problems within 10. Unit 2: 1.OA.6: Demonstrate fluency for addition and subtraction within 10. Building on prior grade level standard K.OA.4: Fluently add and subtract within 5. Unit 3: 1.OA.1: Use addition and subtraction within 10 to solve story problems. Building on prior grade level standard K.OA1 & K.OA.2: Represent addition and subtraction and solve addition and subtraction story problems within 10. Unit 4: 1.NBT.1-2: Read, write, and represent 2-digit numbers as tens and ones. Building on prior grade level standard K.NBT.1: Compose and decompose numbers from 11-19 into ten ones and some further ones. Unit 5: 1.OA.1-2: Use addition within 20 to solve story problems and problems with three addends. Building on prior grade level standard K.OA.1-2: Represent addition and subtraction and solve addition and subtraction story problems within 10. Unit 6: 1.OA.2: Solve story problems that call for addition of three whole numbers whose total is less than or equal to 20. Building on prior grade level standard K.OA.2: Solve addition and subtraction story problems and add and subtract within 10. Unit 7: 1.MD.1: Order three objects by length and compare the lengths of two objects indirectly. Building on prior grade level standard K.MD.2: Compare two objects with a measurable attribute in common. Unit 8: 1.NBT.4: Add within 100, including adding a 2-digit number and a 1-digit number, and adding a 2-digit number and a multiple of 10. Building on prior grade level standard K.NBT.1: Compose and decompose numbers from 11 to 19 into ten ones and some further ones.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Each unit has an overview of learning progressions and content standards. Each lesson within the unit has a lesson focus for the lesson taught, mathematical practices covered within the lesson, and the Common Core State Standard covered in the lesson as well. Within the lesson, each activity indicates the Common Core State Standards addressed as well as the Mathematical Practices covered explicitly. **Evidence-** Unit 1: Lesson 1: Lesson focus: Represent numbers 1-10; Standard identified: 1.OA.1 Use addition and subtraction within 20 to solve word problems. Mathematical Practices covered: MP. 3, MP.5, MP.6, MP.7, and MP.8. Unit 2: Lesson 6: Lesson focus: Find the total in addition equations; Standards identified: 1.OA.5 Relate counting to addition and subtraction; 1.OA.6 Add and subtract within 20; 1.OA.7 Understand the meaning of the equal sign and determine if equations involving addition and subtraction are true or false. Mathematical Practices covered: MP. 1, MP.2, MP.3, MP.5, MP.6 and MP.8. Unit 3: Lesson 9: Lesson focus: Model and relate addition and subtraction situations; Standards identified 1.OA.5 Relate counting to addition and subtraction; 1.OA.4 Understand subtraction as an unknown-addend problem; 1.OA.8 Determine the unknown whole number in an addition or subtraction equation relating three whole numbers. Mathematical Practices covered: MP. 1, MP.3, MP.4, MP.6, MP.7 and MP.8. Unit 4: Lesson 10: Lesson focus: Use tens and ones to add; Standards identified: 1.OA.6 Add and subtract within 20; 1.OA.8 Determine the unknown whole number in an addition or subtraction equation relating three whole numbers; 1.NBT.1 Extend the counting sequence; 1.NBT.2, 1.NBT.2a, 1.NBT.2b Understand place value; 1.NBT.4 Add within 100 including adding a two-digit number and a multiple of 10. Mathematical Practices covered: MP. 1, MP.2, MP.3, MP.4, MP.5, MP.6, MP. 7 and MP.8. Unit 5: Lesson 7: Lesson focus: Count large quantities of objects by tens and ones; Standards identified: 1.NBT.1 Extend the counting sequence; 1.NBT.2 Understand that the two digits of a two-digit number represent amounts of tens and ones. Mathematical Practices covered: MP.3, MP.5, MP.6, MP.7 and MP.8.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

	Unit 6: Lesson 4: Lesson focus: Organize, represent, and interpret data with three categories; Standards identified: 1.OA.1, 1.OA.2 Represent and solve problems involving addition and subtraction; 1.MD.4 Represent and interpret data. Mathematical Practices covered: MP.1, MP.3, MP.4, MP.5 and MP.6. Unit 7: Lesson 6: Lesson focus: Distinguish between defining and non-defining attributes of squares and other rectangles; Standards identified: 1.G.1 Order three objects by length; compare the lengths of two objects indirectly by using a third object. Mathematical Practices covered: MP.3, MP.5, MP.6, MP.7 and MP.8. Unit 8: Lesson 1: Lesson focus: Add 2-digit numbers; Standards identified: 1.NBT.4 Add within 100 including adding a two-digit number and a one-digit number, and adding a two digit number and a multiple of 10. Mathematical Practices covered: MP.1, MP.2, MP.3, MP.4, MP.6 and MP.8.	

Metric NN2H **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Each unit of the mater adequately connects two or more clusters in a domain or two or more domains in grade one. In most units, lessons exceed expectation to include up to 7-8 clusters of a domain. The clusters in a domain are combine in a natural and important way as to connect standards, domains, and clusters fluidly. **Evidence-** Domain Operations and Algebraic Thinking (1.OA.1-4) Unit 1: • Lessons 1-2: combine clusters 1.OA.1 and 1.OA.5 • Lessons 3-9: combine clusters 1.OA.1, 1.OA.3, 1.OA.5, 1.OA.6 and 1.OA.8 Unit 2: • Lessons 1-4: combine clusters 1.OA.1, 1.OA. 6 and 1.OA.7 • Lessons 5-9: combine clusters 1.OA.3, 1.OA.5, 1.OA.6, and 1.OA.8 • Lessons 10-16: combine clusters 1.OA.1, 1.OA. 6, 1.OA.7, and 1.OA.8 Unit 3: • Lessons 1-5: combine clusters 1.OA.1, 1.OA 5, 1.OA.6 and 1.OA.8 • Lessons 6-8: combine clusters 1.OA.1, 1.OA.4, 1.OA.5, 1.OA.6, and 1.OA.8 • Lessons 9-12: combine clusters 1.OA.1, 1.OA. 4, 1.OA.5, 1.OA.6, 1.OA.7, and 1.OA.8 Unit 4: • Lessons 1-6: combine clusters 1.OA.1, 1.OA.3, 1.OA.5, 1.OA.6, 1.OA.8, 1.NBT.1, 1.NBT.2, 1.NBT.2a, 1.NBT.2b, 1.NBT.2c, 1.NBT.3, and 1.NBT.5 • Lessons 7-12: combine clusters 1.OA.5, 1.OA.6, 1.OA.8 • Lessons 13-18: combine clusters 1.OA.5, Unit 5: • Lessons 1-6: combine clusters 1.OA.1, 1.OA.2, 1.OA.3, 1.OA.4, 1.OA.5, 1.OA.6 and 1.OA.8 • Lessons 7-11: combine clusters 1.OA.1, 1.OA.2, 1.OA.6, Unit 6: • Lessons 1-5: combine clusters 1.OA.1, 1.OA.2 • Lessons 6-9: combine clusters 1.OA.1, 1.OA.2	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standa om the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1 evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Math Talk is a large and widely used feature of the curriculum. It is used in various forms throughout the curriculum – solve and discuss board work, small group discussions. These strategies provide support to students by allowing students to share and talk about the different ways they have solved a problem, which in turn can help other students. The formative assessment at the end of each lesson allows students to explain their reasoning and understanding of a concept instead of just a practice assessment. Curriculum also has Learning Community-Best Practice strategies that incorporate Building Concepts. These prompts focus of building conceptual understanding of standards. Examples: • Unit 1: TE 17, 22, 27, 36, 39, 40, 44, 55, 60 • Unit 2: TE 88, 106, 112, 124, 149, 162, 163, 165, 175 • Unit 3: TE 189, 202, 209, 214, 216, 220, 224, 230 • Unit 4: TE 274, 277, 284, 294, 304, 310, 314, 318, 320, 330, 356, 368, 374 • Unit 5: TE 400, 401, 406, 408, 409, 422, 426, 431, 440 442, 452, 453, 454, 462 • Unit 6: TE 490, 496, 505, 530 • Unit 7: TE 587, 590, 642, 648 • Unit 8: TE 660, 663, 669, 677	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Examples: • Unit 1, Lesson 9: model and recite 1-more and 1-less sequences to 10. Unit 1 Test: Extended Response • Unit 2, Lesson 7: show ways to count on. Unit 2 Test: Extended Response proof drawing. • Unit 3, Lesson 8: Relate methods of solving problems. Unit 3 Test: Extended Response relate addition and subtraction. • Unit 4, Lesson 10: Relating digits in a two-digit number. Unit 4 Test: Extended Response number comparison. • Unit 5, Lesson 5: Reason and understand Puzzled Penguin. • Unit 6, Lesson 7: Solve and discuss with comparison bars. • Unit 7, Lesson 8: Working with equal shares. • Unit 8, Lesson 2: Methods of 2-digit addition	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Examples: • Unit 1, Lesson 9: model and recite 1-more and 1-less sequences to 10. • Unit 2, Lesson 7: show ways to count on. • Unit 3, Lesson 8: Relate methods of solving problems. • Unit 4, Lesson 10: Relating digits in a two-digit number. • Unit 5, Lesson 5: Reason and understand Puzzled Penguin. • Unit 6, Lesson 7: Solve and discuss with comparison bars. • Unit 7, Lesson 8: Working with equal shares. • Unit 8, Lesson 2: Methods of 2-digit addition	

Metric AC1E **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** A Path to Fluency: Kindergarten through Grade 5 is a fluency plan that shows how the curriculum achieves fluency with the Common Core Standards suggested for each grade through targeted practice. This can be found in the Teachers Edition on page xxvi.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Common Core Standard 1.OA.6: Add and subtract within 20, demonstrating fluency for addition and subtraction within 10. Use strategies such as counting on, making ten, decomposing a number leading to a ten, using the relationship between addition and subtraction, and creating equivalent but easier or known sums. Examples: • Unit 1: Patterns with partners through 10. • Unit 2: Transition to equations with unknown addends. • Unit 3: Focus on unknown partners represented as addition and subtraction. • Unit 4: Exploring tens and ones in 2-digit numbers. • Unit 8: Two digit addition	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Curriculum provides repeated practice to attainment of fluency for the standards. • A Path to Fluency: TE page xxvi • Quick Practice: TE opening page to every lesson • Fluency Checks: Assessment Guide pages 136-153 • Daily Routines: TE Volume 1 pages xxxi-xxxiv and TE Volume 2 pages xxxi-xxxiv	

Metric AC1C **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Curriculum uses a wide range of word problems to expose students to problem solving: understanding the situation, representing the situation, solving the problem with representation, and reflecting on the answer to ensure it makes sense. There are a wide variety of activities to help students understand problems: using math talk, acting out, retelling, etc.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Curriculum encourages student to use math drawings, visual models, and manipulatives as tools to represent problems/situations. Different problem types can be found in the introduction to the curriculum on page xxviii. This table shows how problem types are incorporated across the grades.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Examples: • Unit 3, Lessons 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, unit test • Unit 4, Lessons 4, 10, 14, 15, unit test • Unit 5, Lessons 1, 3, 4, 5, 10, unit test	

Does modeling [illegible] slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Examples: • Unit 1, Lesson 5: Partners of 7; Lesson 8: Partners of 10 • Unit 2, Lesson 1: Represent Addition; Lesson 12: Practice with Subtraction • Unit 3, Lesson 1: Explore Unknowns; Lesson 9: Relate Addition and Subtraction Situations • Unit 4, Lesson 3: Represent and Compare Teen Numbers; Lesson 16: Practice with 2-Digit Numbers • Unit 5, Lesson 1: Unknown Partners with Teen Totals; Lesson 10: Add and Subtract Multiples of 10	
Alignment Criterion 1: **Rigor and Balance** **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** **AC1** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

In the overview for the curriculum, each unit includes a Getting Ready to Teach the Unit using the Common Core Standards for Mathematical Practices. This part of the overview for each unit indicates what concepts, skills, and problem solving the students will learn in that unit and how the students will demonstrate their understanding. Mathematical Standards are also identified in each lesson of every unit.

Examples:

- Unit 1: TE 1Q-1X
- Unit 2: TE 79S-79Z
- Unit 3: TE 185Y-185EE
- Unit 4: TE 273T-273AA
- Unit 5: TE 397Q-397X
- Unit 6: TE 489P-489W
- Unit 7: TE 555R-555Y
- Unit 8: TE 659M-659T

Metric AC2B **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **_X__Meets (2)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** At the start of every unit, the curriculum provides an over view of Common Core State Standards for Mathematics that aligns every lesson in the unit with the Mathematical Practices and the standards that will be taught in the unit. Examples: • Unit 1: TE 1H-1I • Unit 2: TE 79J-79K • Unit 3: TE 185H-185I • Unit 4: TE 273D-273E • Unit 5: TE 397H-397I • Unit 6: TE 489H-489I • Unit 7: TE 555J-555K • Unit 8: TE 659C Each unit also includes a Getting Ready to Teach the Unit using the Common Core Standards for Mathematical Practices. This part of the overview for each unit indicates what concepts, skills, and problem solving the students will learn in that unit and how the students will demonstrate their understanding. Mathematical Standards are also identified in each lesson of every unit. Examples: • Unit 1: TE 1Q-1X • Unit 2: TE 79S-79Z • Unit 3: TE 185Y-185EE • Unit 4: TE 273T-273AA • Unit 5: TE 397Q-397X • Unit 6: TE 489P-489W • Unit 7: TE 555R-555Y • Unit 8: TE 659M-659T	**____Partially Meets (1)** **____Does Not Meet (0)**

Do the materials the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** The following examples provided evidence of the practice standards developing across the grade level in the Getting to Teach the Unit Using the Common Core Standards for Mathematical Practice. Each Mathematical Practice is listed with examples from within the unit as to how they are developing across the grade. Examples: • Unit 1: TE 1Q-1X • Unit 2: TE 79S-79Z • Unit 3: TE 185Y-185EE • Unit 4: TE 273T-273AA • Unit 5: TE 397Q-397X • Unit 6: TE 489P-489W • Unit 7: TE 555R-555Y • Unit 8: TE 659M-659T	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Within each lesson of the curriculum the Mathematical Practices incorporated have been identified with each activity and has suggestions for the teacher to help implement and support the practices. The last lesson in every unit focuses explicitly on the Mathematical Practice and their practical application for student to solve real world problem. Examples: • Unit 1, Lesson 9 • Unit 2, Lesson 16 • Unit 3: Lesson 11 • Unit 4: Lesson 18 • Unit 5: Lesson 11 • Unit 6: Lesson 9 • Unit 7: Lesson 14 • Unit 8: Lesson 6	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **_X__Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Curriculum includes evidence of the progression of Mathematical Practices in the research and background section of the TE. See Teacher Edition pages: 1S. 79U, 185S, 273V, 397S, 489R, 555T, and 659O Mathematical Practice 3 – Construct viable arguments and critique the reasoning of others is part of the progression across the grade level curriculum. Mathematical Practices are embedded in every lesson of the curriculum. Evidence of Mathematical Practice 3 is included in the following lessons: • Unit 1 Lessons: 1,2,3,4,5,6,7,8,9 • Unit 2 Lessons: 1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16 • Unit 3 Lessons: 1,2,3,4,6,7,8,9,10,11,12 • Unit 4 Lessons: 1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18 • Unit 5 Lessons: 1,2,3,4,5,6,7,8,9,10,11 • Unit 6 Lessons: 1,2,3,4,5,6,7,8,9 • Unit 7 Lessons: 1,2,3,4,5,6,7,8,9,10,11,12,13,14 • Unit 8 Lessons: 1,2,3,4,5,6	____**Partially Meets (1)** ____**Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Curriculum has a Puzzled Penguin throughout the materials that enables students to construct grade-appropriate viable arguments to explain why Puzzled Penguin is wrong and explain how to solve the problem correctly. Examples of Puzzled Penguin found on these pages in the TE: • Unit 1: 4, 22 • Unit 2: 100, 110, 166 • Unit 3: 236, 251 • Unit 7: 588, 643 • Unit 8: 672 Examples of Puzzled Penguin in Student Workbook can be found on these pages: • 50, 70, 103, 120, 122, 152, 164 ,179, 202, 208, 250 Although it is important to determine why Puzzled Penguin is wrong and construct a grade-appropriate response; it would be helpful if Puzzled Penguin was not always wrong. It would be beneficial for students to construct grade-appropriate arguments to explain why he is right as well.	

Do materials exp attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Curriculum materials provide a word list of math vocabulary words used within each lesson. The vocabulary words can be found on the lesson overview for every lesson where new vocabulary is introduced. Vocabulary words are used repeatedly throughout the materials even though they are no longer considered "new". Examples of vocabulary words: • Unit 1, Lesson 1: more, less, 5-group • Unit 2, Lesson 1: add, partners, plus sign, total • Unit 3, Lesson 1: unknown partner • Unit 4, Lesson 1: decade number, tens, ones, digit • Unit 5, Lesson 1: unknown partner • Unit 6, Lesson 1: sort, data, compare, more, most, fewer, fewest • Unit 7, Lesson 1: clock, hour, minute, hour hand, minute hand • Unit 8, Lesson 1: group Math Talk is also explicitly used throughout the entire curriculum. It can be found in every lesson within each unit. It is indicated with a red conversation bubble with the words Math Talk. Math Talk allows students to exchange strategies and reasoning with peers to further explain their thinking using precise mathematical vocabulary and Math Talk. Mathematical Practice Standards have been incorporated into all lessons throughout the curriculum. Students are encouraged to use a variety of math drawings, symbols/equations, and models to represent problems and situations. Page xxvii provides an outline of the problem solving processes this curriculum integrates into units and lessons.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Materials have lessons designed to accommodate a variety of students and academic skills. Each unit has a differentiated instruction overview in the unit planning section where instruction for ELL students is outlined with an overall objective for the unit. Every lesson within the units also has support for ELL students; including leveled support for beginning, intermediate, and advanced ELL students. Examples: • Unit 1: Planning TE 1J-1K; Lesson 3 page 17. • Unit 2: Planning TE 79L-79M; Lesson 9 page 130 • Unit 3: Planning TE 185J-185K; Lesson 6 page 221 • Unit 4: Planning TE 273P-273Q; Lesson 14 page 361 • Unit 5: Planning TE 397J-397K; Lesson 10 page 469 • Unit 6: Planning TE 489J-489K; Lesson 6 page 531 • Unit 7: Planning TE 555L-555M; Lesson 2 page 563 • Unit 8: Planning TE 659F-659G; Lesson 12 page 637 Support is also provided for other special populations with leveled writing prompts and differentiated instruction cards. Examples: • Unit 1: Lesson 6 page 49 • Unit 2: Lesson 1 page 83 • Unit 3: Lesson 4 page 211 • Unit 4: Lesson 11 page 345 • Unit 5: Lesson 5 page 435 • Unit 6: Lesson 9 page 547 • Unit 7: Lesson 7 page 599 • Unit 8: Lesson 2 page 673	**Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3B **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Curriculum has a response to intervention overview page that provides focused instruction on the standards for every unit. There were also two separate books provided with the core curriculum for Tier 1 intervention lessons and Tier 2 and 3 intervention skills, examples and lessons. Each response to intervention book provides opportunities for students to have differentiated instruction based on their specific needs. Examples of response to intervention overview: • Unit 1: Planning TE 1L • Unit 2: Planning TE 79N • Unit 3: Planning TE 185L • Unit 4: Planning TE 273R • Unit 5: Planning TE 397L • Unit 6: Planning TE 489L • Unit 7: Planning TE 555N • Unit 8: Planning TE 659H	**Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Curriculum provides a variety of methods to enable all students advance. Units are organized into Big Ideas grouping a number of lessons together under one topic with a quick quiz assessment before moving on to the next topic within the unit. Examples: • Unit 1, Lessons 1-2: Big Idea – Numbers through 10, Lesson focus: visualize and represent numbers 1-10. Each lesson begins with quick practice following daily routines utilizing student leaders. Math background is provided as a resource that can provide conceptual understanding for teachers. • Lesson 1 Activity 1 incorporates whole group discussion with the Ask for Ideas discussion points. The lesson uses manipulatives and whole group strategies to engage students. • Lesson 1 Activity 2 incorporates more manipulatives and kinesthetic movement with student hands in a whole group discussion to elicit varied responses. Puzzled Penguin is also included to construct viable arguments and evaluate student reasoning. • At the end of the lesson is a formative assessment to check for student understanding.	**Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)

1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Materials provide a clear, thoughtful lesson plan for each lesson. Including math background information, activity focus, differentiated instruction, mathematical practices, Common Core State Standards, quick practice and daily routines. Each lesson provides the teacher with an estimated activity time and focus. Activities have whole class or individual work identified next to the focus strategy so the teacher knows when to allow students to work independently or to continue with a whole group approach. Math talk is encouraged and indicated on the lessons. Group/partner talk is used frequently to encourage interaction with peers enabling them to learn from each other not just the teacher. Examples of Math Talk: • Unit 6 Lesson 2 (page 496) Make comparisons using math talk. • Unit 7 Lesson 6 (pages 587-589) Math talk when reasoning with shapes and their attributes. Best practices and class management tools are given to the teacher to use as needed. Differentiation for ELL, intervention, on-level and challenge extension lessons are provided at the end of each lesson so the teacher can easily adapt as needed while teaching. Examples: • Unit 3 Lesson 10 (page 250): Activity one lesson duration: 40 minutes. Focus: review the relationship between known and unknown quantities in addition story problems. Differentiation for ELL students (page 251); differentiation for intervention, on-level, and challenge students (page 253) is clearly outlined and examples of activities are provided within the lesson.	**(Reviewer only.)** **__X___ Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Materials are balanced in the number of problems and exercises. The majority of lessons begin with an activity that involves problems that utilize whole class activities and math talk; then the lesson progresses to individual work with exercises to apply knowledge procured in the current and prior lessons. Problems are well thought out; encouraging students to use background knowledge and their own strategies to begin to work through a new concept. Example: • Unit 2 Lesson 5 (page 104) students are working whole group to find an unknown total, students are encouraged to be detectives and use any method they choose to find the total; they will then share them with the class (math talk). • Unit 2 Lesson 6 (page 118) students use knowledge gained in prior lesson to complete exercises in the student workbook to find an unknown total.	**(Reviewer only.)** **__X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The materials have an intentional sequence and pacing. Page xxvi provides a Path to Fluency outline for the curriculum from kindergarten to grade 5. Outlining the progressions each grade level will take to provide students with the necessary skills to be fluent. Math Vocabulary builds on words and skills taught. There is no assumption that students know terminology, it is taught. It is often revisited to a deeper level in a later unit/lesson. Example: • Unit 3, Lesson 1: the vocabulary taught is: unknown partner • Unit 5, Lesson 1: unknown vocabulary is retaught	**(Reviewer only.)** **__X___ Yes** **_____ No**

4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Prior to teaching a lesson, an extensive introduction is provided in the overview of the curriculum (pages xvii-xxx). In the curriculum introduction teacher learning/study is provided on math talk (pages xx-xxi xviii and xx-xxi), teaching model: an inquiry learning path (page xix), classroom management (page xxii), mathematical practices (pages xxii-xxiv), and algebraic problems that appear in all domains (pages xxiv-xxv). A path to fluency is provided for grades Kindergarten through grade 5 (page xxvi) and a pacing guide for all units and lessons in the Grade 1 curriculum (page xxx). Information is provided on the problem solving process and problem types that will occur within the curriculum (pages xxvii-xxix). Detailed daily routines are outlined for teachers to study and incorporate into their classrooms based on the unit/book volume (pages xxxi-xxxiv) Each unit is provided with a detailed overview including learning progressions across grades and content standards across the grades for the prevalent Common Core Standards addressed within it. Response to intervention and cross curricular connections are provided prior to the unit lessons. A putting the research into practice and math background is also provided prior to teaching each unit. Each unit is provided with a "Getting Ready to Teach Unit .." section that provides teachers with examples of common errors students may make and strategies to help teachers further explain a concept/strategy. Examples of teacher support/ study: • Unit 5: Putting Research into Practice (page 397O of TE); teacher study of equity with current research. • Unit 6: Getting Ready to Teach Unit 6; Common Errors (page 489X of TE); Puzzled Penguin provides examples of possible student misconceptions. • Unit 7: Math Background (pages 555AA-555LL of TE); strategies to anticipate and enhance student learning are provided for each lesson of the unit.	**(Reviewer only.)** __X__ **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Curriculum manipulatives are a great additional resource but are not a requirement to teach the curriculum.	**(Reviewer only.)** __X__ **Yes** _____ **No**

6. Materials i de a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Materials provide a Beginning of the Year Inventory Test that tests student prior knowledge. Each lesson has a quick Formative Assessment: Check for Understanding that can be done at the end of every lesson to assess student understanding of lesson concepts. Quick Quizzes are provided for every unit; they fall at the end of a group of lessons that have focused on a Big Idea. There are 1-3 quizzes in each unit. There is a Unit Review and Test at the end of every unit with two alternate tests in the Assessment Guide Book. An End of the Year Test is also provided in the Assessment Guide Book to determine student growth and understanding. Examples: • Formative Assessments: Check for Understanding Unit 6, Lesson 5 page 518 • Quick Quizzes: Unit 7 (3 Quizzes) Assessment Guide Book pages 110-112 • Unit Review and Test: Unit 8 pages 701-703; Alternate Tests: A and B, Assessment Guide Book pages 127-130 • Beginning of the Year Inventory: Assessment Guide Book pages 4-14 • End of the Year Test: Assessment Guide Book: 158-165	**(Reviewer only.)** **__X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Curriculum review and test for each unit has an answer key, and each question is aligned the Common Core Standards covered during the course of the unit. The TE provides Common Errors student might face and reteach activities that can be done prior to testing or as a form of remediation post assessment. Two alternate tests are provided for each unit test in the Assessment Guide Book in the event that students need an alternate assessment. Examples: • Unit 5 Review and Test: TE 483-487, Alternate Tests: Assessment Guide Book pages 82-91	**(Reviewer only.)** **__X__ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-**	**(Reviewer only.)** **__X__ Yes** **_____ No**

9. Materials a[illegible]arefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** The author is clearly indicated on the title page of the teacher's edition. Curriculum was developed from the Children's Math Worlds Research Project conducted by Dr. Karen Fuson (author). The material is based upon work supported by the National Science Foundation and is funded in part by the National Science Foundation.	**(Reviewer only.)** **__X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Materials are bright and colorful. Student workbook pages are not cluttered with too much text, pictures, or drawings. There is a building repetition to the activities that allows students to understand new concepts/lessons based on prior concepts/lessons. Example: • Unit 3 lessons work with unknown addends within 10 using equations and story problems. These strategies are then built on in Units 4, 5, and 6 with numbers within 20.	**(Reviewer only.)** **__X___ Yes** **_____ No**

11. The mate[illegible] engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** At the beginning of every unit, in the student handbook, there is a Family Letter that describes the concepts of the upcoming unit. It includes math vocabulary that parents may or may not be familiar with so they can understand the terminology used in the classroom, on workbook pages, and homework. Throughout the rest of the unit there are occasional Family Letters that explain any new math vocabulary or conceptual understandings that have become relevant in the current unit. Examples of Family Letters can be found in the student work book at the start of every new unit: • Unit 1, Student Workbook pages 1 and 9 • Unit 2, Student Workbook pages 29 and 37 • Unit 3, Student Workbook page 63 • Unit 4, Student Workbook pages 97 and 101 • Unit 5, Student Workbook pages 133 and 157 • Unit 6, Student Workbook pages 171 • Unit 7, Student Workbook pages 195 • Unit 8, Student Workbook pages 241 Homework can be found in the Homework and Remembering Blackline Masters and each page is aligned with the unit and lesson that is being taught. Homework format, vocabulary, and terminology is consistent with lessons and student workbook pages. Homework is a review of prior lessons/units and does not cover a new concept that has not be explicitly taught in the materials. For example: Unit 2 Lesson 6 Lesson Focus: Addition Strategies- Counting On; Homework for Unit 2 Lesson 6 reviews counting on to find the total (Unit 2 Lesson 6) and partners of ten (Unit 1, Lessons 8-9)	**(Reviewer only.)** **__X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level:** Math Expressions Common Core 1st Grade

Publisher: Houghton Mifflin Harcourt Publishing Company **Copyright: 2013** **ISBN:** 978-0-547-82479-6

Reviewer ID # _____ **Date Review Completed:** March 7, 2016

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **__X__ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **__X__ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **__X__ Meets** **_____ Does Not Meet**	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access Standards for All Learners
Points: __6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X___ Meets _____ Does Not Meet	Points: _6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X__ Meets _____ Does Not Meet	Points: __6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X___ Meets _____ Does Not Meet

Alignment Criteria Overall:

_X__ Meets **_____ Does Not Meet**

If the mater meet both Non-Negotiables and relevant Alignment Cr on, they are aligned to the Shifts and major features o e Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths

- Teacher materials allow the teacher to understand the layout of the unit(s) with ease.
- Vocabulary and World Problems were engaging and age appropriate.
- Sub. New teachers could easily pick up and teach a lesson w/o too much stress.

Weakness

- It would be nice if Puzzled Penguin is right sometimes to make students think about the complexity of the concept.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	Math Expressions Common Core
ISBN #	978-0-547-82480-2
Grade Level(s) or Course:	2nd Grade
Reviewer ID:	KS

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

All assessments within the curriculum do not assess standards/topics before the grade level where the standard.

COHERENCE-

Curriculum focus is on the major works of Grade 2 with support from supporting clusters.

RIGOR-

Curriculum expects students to work with high-level, high-quality conceptual problems.

CONCEPTUAL UNDERSTANDING-

Materials provide many opportunities to work across mathematical representations and conceptual discussion questions.

MATHEMATICAL PRACTICES-

Curriculum provides connections across all lessons between Content Standards and the mathematical practice Standards.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Differentiation of all students, ELL, and other Special Populations is provided on ALL lessons in EVERY unit.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Unit 1: Instructional ti[illegible]pent on critical focus area 1 of Grade 2. Building fluency with addition and subtraction. Focus on Strategies for Addition and Subtraction, Addition and Subtraction Situations, Complex Situations. Unit Test/Assessment pages 153-158. Unit 2: Instructional time spent on critical focus areas 1 and 2 of Grade 2. Building fluency with addition and subtraction & Extending Understanding of Base-Ten Notation. Focus on Place Value; Add 2-Digit Numbers, Money and Fluency for Addition within 100. Unit Test/Assessment pages 273-276. Unit 3: Instructional time spent on critical focus area 3 of Grade 2. Using standard units of measure. Focus on length and shapes; estimate, measure and make line plots. Unit Test/Assessment pages 345-348 Unit 4: Instructional time spent on critical focus area 1 of Grade 2. Building fluency with addition and subtraction. Focus on totals of mixed coins and bills, multi-digit subtraction strategies, word problems: addition and subtraction within 100. Unit Test/Assessment pages 501-504 Unit 5: Instructional time spent on critical focus area 3 of Grade 2. Using standard units of measure. Focus on time, graphs, and word problems. Unit Test/Assessment pages 577-580 Unit 6: Instructional time spent on critical focus areas 1 and 2 of Grade 2. Building fluency with addition and subtraction & Extending Understanding of Base-Ten Notation. Focus on understanding numbers to 1,000; adding to 1,000, 3-digit subtraction, 3-digit addition and subtraction. Unit Test/Assessment pages 695-698 Unit 7: Instructional time spent on critical focus areas 3 and 4 of Grade 2. Using standard units of measure, and describing and analyzing shapes. Focus on arrays and equal shares and relate addition and subtraction to length. Unit Test/Assessment pages 759-762	**(Reviewer only.)** **_X_Meets** **____Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X_Meets

____Does Not Meet

Strengths/Weaknesses:

Each unit assesses topics under one or more of the four critical areas of instruction time for first grade. The curriculum does not assess topics above the first grade level. Unit test/assessments have standards for each test question listed and defined in the review and test lesson.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	Materials for Grade 2 align the majority of lessons and activities to the major work for Second Grade so lessons review First Grade standards and extend to Grade 3 standards but are not assessed. **Evidence-** *Common Core State Standards for Mathematical Content: Lessons are aligned to grade level standards/major work of the grade; pages xlviii-li Units 1, 2, 4 & 6: Instructional time spent on critical focus areas 1 and 2 of Grade 2: extending understanding of base-ten notation; building fluency with addition and subtraction. Unit 3, 5 & 7: Instructional time spent on critical focus areas 3 and 4 of Grade 2: using standard units of measure; and describing and analyzing shapes.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Unit 1: All lessons focus on major content standards 2.OA.1, 2.OA.2, 2.OA.3, 2.NBT.5, 2.NBT.6, and 2.NBT.9 Unit 2: Majority of lessons focus on major content standards 2.OA.1, 2.OA.2, 2.NBT.1, 2.NBT.1a, 2.NBT.2, 2.NBT.3, 2.NBT.4, 2.NBT.5, 2.NBT.6, 2.NBT.7, 2.NBT.8, 2.NBT.9, 2.MD.1, 2.MD.2, 2.MD.3, 2.MD.4; with supporting content standards 2.MD.9 and 2.G.1. Unit 3: Majority of lessons focus on major content standards 2.OA.2, 2.NBT.4, 2.NBT.5, 2.NBT.6, 2.MD.1, 2.MD.2, 2.MD.3, and 2.MD.4; with supporting content standards 2.MD.9 and 2.G.1. Unit 4: Majority of lessons focus on major content standards 2.OA.1, 2.OA.2, 2.NBT.1, 2.NBT.1a, 2.NBT.1b, 2.NBT.2, 2.NBT.5, 2.NBT.6, 2.NBT.7, 2.NBT.9, 2.MD.1, 2.MD.3, 2.MD.3, 2.MD.4; with supporting content standards 2.MD.5, 2.MD.8. Unit 5: Majority of lessons focus on major content standards 2.OA.1, 2.OA.2, 2.NBT.2, 2.NBT.4, 2.NBT.5, 2.NBT.6; with supporting content standards 2.MD.7, 2.MD.10, and 2.G.3 Unit 6: All lessons focus on major content standards 2.OA.1, 2.NBT.1, 2.NBT.1a, 2.NBT.1b, 2.NBT.2, 2.NBT.3, 2.NBT.4, 2.NBT.5, 2.NBT.7, and 2.NBT.9, 2; with supporting content standard 2.MD.8 Unit 7: All lessons focus on major content standards 2.OA.1, 2.OA.3, 2.OA.4, 2.OA.5, 2.OA.6, 2.NBT.5, 2.NBT.6, 2.MD.1; with supporting standards 2.G.1, 2.G.2, 2.G.3, 2.MD.5, and 2.MD.6	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Content progression is obvious within each unit through lessons and activities. Each Unit Overview provides a learning progressions of the Common Core State Standards and a Content Standards Across the Grades for the following unit lessons and activities. It states previous grade level standards, as well as the following grade standards that are incorporated into the unit lessons and activities. The incorporation of prior and future grade level standards does not interfere with current grade level standards and progressions. **Evidence-** Unit 1: 2.OA.2: Fluently add and subtract within 20. • Previous grade standard 1.OA.6: Add and subtract within 20 demonstrating fluency within 10. • Standard is extended to the following grade in 3.OA.9: Identify arithmetic patterns and explain them using properties of operations.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Materials provide all students with extensive work with on-grade-level problems. Materials are designed to accommodate a wide range of student learning styles and academic skills. Each lesson has accommodations and resources to incorporate strategies and opportunities for differentiating instruction. Intervention, on level, and challenge activities are outlined after every lesson with accommodations for ELL students in every lesson as well. **Evidence-** Unit 1: Lesson 13: Lesson focus is to solve problems that involve the use of group names and/or have both addends unknown, with differentiated instruction provided for ELL students on page 93 and intervention, on level, and challenge activities on page 97.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2E: **Materials re[illegible]on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The Overview of each unit explicitly states the on-grade-level concepts taught [illegible]e unit with their relation to prior knowledge from the previous grade. **Evidence-** Unit 2: On-grade-level standard 2.NBT.1: Understand that the three digits of a three-digit number represent amounts of hundreds, tens, and ones. Building on prior grade level standard 1.NBT.2: Understand that the two digits of a two-digit number represent amounts of tens and ones.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Unit 3: 2.MD.4: Measure to determine how much longer one object is than another. Building on prior grade level standard 1.MD.2: Express the length of an object as a whole number of length units; by laying multiple copies of a shorter object end to end.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Each unit has an overview of learning progressions and content standards. Each lesson within the unit has a lesson focus for the lesson taught, mathematical practices covered within the lesson, and the Common Core State Standard covered in the lesson as well. Within the lesson, each activity indicates the Common Core State Standards addressed as well as the Mathematical Practices covered explicitly. **Evidence-** Unit 6: Lesson 8 Lesson focus: Use the Add Up method to solve unknown addend problems with 3-digit numbers; Standards identified: 2.OA.1, 2.NBT.7 and 2.NBT.9. Mathematical Practices covered: MP.1, MP.3, MP.6 and MP.8.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Each unit of the materials adequately connects two or more clusters in a domain or two or more domains in grade two. In most units, lessons exceed expectation to include up to 7-8 clusters of a domain. The clusters in a domain are combine in a natural and important way as to connect standards, domains, and clusters fluidly. **Evidence-** Unit 1: • Lessons 1-9: combine clusters 2.OA.1, 2.OA.3 and 2.OA.3, 2.NBT.6, 2.NBT.6, and 2.NBT.9 • Lessons 9-16: combine clusters 1.OA.1, 1.OA.2, 12.NBT.5 and 2.NBT.6 • Lessons 17-21: combine clusters 2.OA.1, 2.OA.2 and 2.OA.3.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**(Reviewer only.)** **_X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set e[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Math Talk is a large an[illegible]dely used feature of the curriculum. It is used in various forms throughout the curriculum – solve and discuss board work, small group discussions. These strategies provide support to students by allowing students to share and talk about the different ways they have solved a problem, which in turn can help other students. The formative assessment at the end of each lesson allows students to explain their reasoning and understanding of a concept instead of just a practice assessment. Curriculum also has Learning Community-Best Practice strategies that incorporate Building Concepts. These prompts focus of building conceptual understanding of standards. Examples: • Unit 4: TE 352, 381, 382, 416, 428, 435, 436, 441, 448, 465	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Examples: • Unit 6, Lesson 8: Word Problems: Unknown Addends.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Examples: • Unit 6, Lesson 13: Relationships between addition and subtraction methods	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** A Path to Fluency: Kindergarten through Grade 5 is a fluency plan that shows how the curriculum achieves fluency with the Common Core Standards suggested for each grade through targeted practice. This can be found in the Teachers Edition on page xxvi.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Common Core Standard 2.OA.2: Add and subtract within 20; Fluently add and subtract within 20 using mental strategies. By the end of Grade 2, know from memory all sums of two one-digit numbers. Examples: • Unit 1: Addition and subtraction within 20 • Unit 2: Use place value and 2-digit numbers • Unit 4: Subtract 2-digit numbers • Unit 6: Addition and Subtraction strategies.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Curriculum provides repeated practice to attainment of fluency for the standards. • A Path to Fluency: TE page xxvi • Quick Practice: TE opening page to every lesson • Fluency Checks: Assessment Guide • Daily Routines: TE Volume 1 pages xxxi-xxxiv and TE Volume 2 pages xxxi-xxxvi	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Curriculum uses a wide range of word problems to expose students to problem solving: understanding the situation, representing the situation, solving the problem with representation, and reflecting on the answer to ensure it makes sense. There are a wide variety of activities to help students understand problems: using math talk, acting out, retelling, etc.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Curriculum encourages student to use math drawings, visual models, and manipulatives as tools to represent problems/situations. Different problem types can be found in the introduction to the curriculum on page xxviii. This table shows how problem types are incorporated across the grades.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Examples: • Unit 3, Lessons 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, unit test • Unit 4, Lessons 4, 10, 14, 15, unit test • Unit 5, Lessons 1, 3, 4, 5, 10, unit test	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Examples: • Unit 1, Lesson 3: Make a ten strategies; Lesson 7: Strategies using doubles. • Unit 2, Lesson 1: Ones, Tens, and Hundreds; Lesson 5: Compare Numbers within 200.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** In the overview for the curriculum, each unit includes a Getting Ready to Teach the Unit using the Common Core Standards for Mathematical Practices. This part of the overview for each unit indicates what concepts, skills, and problem solving the students will learn in that unit and how the students will demonstrate their understanding. Mathematical Standards are also identified in each lesson of every unit. Examples: • Unit 1: TE 1V-1CC • Unit 2: TE 159S-159Z • Unit 3: TE 279Q-279X • Unit 4: TE 351Y-351FF • Unit 5: TE 507Q-507X • Unit 6: TE 583T-583AA • Unit 7: TE 701N-701U	**(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **_X__Meets (2)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** At the start of every unit the curriculum provides an over view of Common Core State Standards for Mathematics that aligns every lesson in the unit with the Mathematical Practices and the standards that will be taught in the unit. Examples: • Unit 1: TE 1B-1D • Unit 2: TE 159B-159C • Unit 3: TE 279B-279C • Unit 4: TE 351B-351E • Unit 5: TE 507B-507C • Unit 6: TE 583B-583C • Unit 7: TE 701B Each unit also includes a Getting Ready to Teach the Unit using the Common Core Standards for Mathematical Practices. This part of the overview for each unit indicates what concepts, skills, and problem solving the students will learn in that unit and how the students will demonstrate their understanding. Mathematical Standards are also identified in each lesson of every unit. Examples: • Unit 1: TE 1V-1CC • Unit 2: TE 159S-159Z • Unit 3: TE 279Q-279X • Unit 4: TE 351Y-351FF • Unit 5: TE 507Q-507X • Unit 6: TE 583T-583AA • Unit 7: TE 701N-701U	**____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** The following examples provided evidence of the practice standards developing across the grade level in the Getting to Teach the Unit Using the Common Core Standards for Mathematical Practice. Each Mathematical Practice is listed with examples from within the unit as to how they are developing across the grade. Examples: • Unit 1: TE 1V-1CC • Unit 2: TE 159S-159Z • Unit 3: TE 279Q-279X • Unit 4: TE 351Y-351FF • Unit 5: TE 507Q-507X • Unit 6: TE 583T-583AA • Unit 7: TE 701N-701U	

Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Within each lesson of the curriculum the Mathematical Practices incorporated have been identified with each activity and has suggestions for the teacher to help implement and support the practices. The last lesson in every unit focuses explicitly on the Mathematical Practice and their practical application for student to solve real world problem. Examples: • Unit 1, Lesson 21 • Unit 2, Lesson 15 • Unit 3: Lesson 9 • Unit 4: Lesson 23 • Unit 5: Lesson 10 • Unit 6: Lesson 15 • Unit 7: Lesson 6	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Curriculum includes evidence of the progression of Mathematical Practices in the research and background section of the TE. Mathematical Practice 3 – Construct viable arguments and critique the reasoning of others is part of the progression across the grade level curriculum. Mathematical Practices are embedded in every lesson of the curriculum. Evidence of Mathematical Practice 3 is included in the following lessons: • Unit 1 Lessons: 1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20, 21 • Unit 2 Lessons: 1,2,3,4,5,6,7,8,9,10,11,12,13,14,15 • Unit 3 Lessons: 1,2,3,4,6,7,8,9 • Unit 4 Lessons: 1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20, 21,22,23 • Unit 5 Lessons: 1,2,3,4,5,6,7,8,9,10 • Unit 6 Lessons: 1,2,3,4,5,6,7,8,9,10,11,12,13,14,15 • Unit 7 Lessons: 1,2,3,4,5,6	

Do the materials support students in producing not only answers and solutions, but also in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Curriculum has a Puzzled Penguin throughout the materials that enables students to construct grade-appropriate viable arguments to explain why Puzzled Penguin is wrong and explain how to solve the problem correctly. Examples of Puzzled Penguin found on these pages in the TE: • Unit 2: 180, 213, 264 • Unit 3: 280, 335 • Unit 4: 386 • Unit 5: 531 • Unit 6: 626, 665,682, • Unit 7: 722 Puzzled Penguin can be found on some Student Workbook pages also. **Although it is important to determine why Puzzled Penguin is wrong and construct a grade-appropriate response; it would be helpful if Puzzled Penguin was not always wrong. It would be beneficial for students to construct grade-appropriate arguments to explain why he is right as well.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Curriculum materials provide a word list of math vocabulary words used within each lesson. The vocabulary words can be found on the lesson overview for every lesson where new vocabulary is introduced. Vocabulary words are used repeatedly throughout the materials even though they are no longer considered "new". Examples of vocabulary words: • Unit 1, Lesson 1: equation, Math Mountain, partners, addends, total, dime, penny, make-a-ten strategy, unknown addend, pairs, pattern, odd, even, addition doubles • Unit 2, Lesson 1: ones, tens, hundreds, decade numbers, quick tens, expanded form, quick hundreds, number name, less than, greater than, equal to • Unit 3, Lesson 1: angle, right angle, square, rectangle, triangle, quadrilateral, pentagon, hexagon, opposite sides Math Talk is also explicitly used throughout the entire curriculum. It can be found in every lesson within each unit. It is indicated with a red conversation bubble with the words Math Talk. Math Talk allows students to exchange strategies and reasoning with peers to further explain their thinking using precise mathematical vocabulary and Math Talk. Mathematical Practice Standards have been incorporated into all lessons throughout the curriculum. Students are encouraged to use a variety of math drawings, symbols/equations, and models to represent problems and situations. Page xxvii provides an outline of the problem solving processes this curriculum integrates into units and lessons.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Materials have lessons designed to accommodate a variety of students and academic skills. Each unit has a differentiated instruction overview in the unit planning section where instruction for ELL students is outlined with an overall objective for the unit. Every lesson within the units also has support for ELL students; including leveled support for beginning, intermediate, and advanced ELL students. Examples: • Unit 1: Planning TE 1P-1Q; Lesson 7 page 49. • Unit 2: Planning TE 159L-159M; Lesson 5 page 195 Support is also provided for other special populations with leveled writing prompts and differentiated instruction cards. Examples: • Unit 1: Lesson 15 page 109 • Unit 2: Lesson 1 page 167	**Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Curriculum has a response to intervention overview page that provides focused instruction on the standards for every unit. There were also two separate books provided with the core curriculum for Tier 1 intervention lessons and Tier 2 and 3 intervention skills, examples and lessons. Each response to intervention book provides opportunities for students to have differentiated instruction based on their specific needs.	**Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Curriculum provides a variety of methods to enable all students advance. Units are organized into Big Ideas grouping a number of lessons together under one topic with a quick quiz assessment before moving on to the next topic within the unit. Examples: • Unit 1, Lessons 1-9: Big Idea – Strategies for Addition and Subtraction. Each lesson begins with quick practice following daily routines utilizing student leaders. Math background is provided as a resource that can provide conceptual understanding for teachers. • Lesson 1 Activity 1 incorporates whole group discussion with the Ask for Ideas discussion points. The lesson uses manipulatives and whole group strategies to engage students. • Lesson 1 Activity 2 incorporates more manipulatives and kinesthetic movement with student hands in a whole group discussion to elicit varied responses. Puzzled Penguin is also included to construct viable arguments and evaluate student reasoning. • At the end of the lesson is a formative assessment to check for student understanding.	**Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__X_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of

Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spri
2

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Materials provide a clear, thoughtful lesson plan for each lesson. Including math background information, activity focus, differentiated instruction, mathematical practices, Common Core State Standards, quick practice and daily routines. Each lesson provides the teacher with an estimated activity time and focus. Activities have whole class or individual work identified next to the focus strategy so the teacher knows when to allow students to work independently or to continue with a whole group approach. Math talk is encouraged and indicated on the lessons. Group/partner talk is used frequently to encourage interaction with peers enabling them learn from each other not just the teacher. Examples of Math Talk: • Unit 2 Lesson 12 (page 244) Skip Count by 5's using math talk. Best practices and class management tools are given to the teacher to use as needed. Differentiation for ELL, intervention, on-level and challenge extension lessons are provided at the end of each lesson so the teacher can easily adapt as needed while teaching. Examples: • Unit 3 Lesson 7 (page 324): Activity one lesson duration: 20 minutes. Focus: estimate and measure length in inches. Differentiation for ELL students (page 326); differentiation for intervention, on-level, and challenge students (page 329) is clearly outlined and examples of activities are provided within the lesson.	**(Reviewer only.)** **__X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Materials are balanced in the number of problems and exercises. The majority of lessons begin with an activity that involves problems that utilize whole class activities and math talk; then the lesson progresses to individual work with exercises to apply knowledge procured in the current and prior lessons. Problems are well thought out; encouraging students to use background knowledge and their own strategies to begin to work through a new concept.	**(Reviewer only.)** **__X___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The materials have an intentional sequence and pacing. Page xxvi provides a Path to Fluency outline for the curriculum from kindergarten to grade 5. Outlining the progressions each grade level will take to provide students with the necessary skills to be fluent. Math Vocabulary builds on words and skills taught. There is no assumption that students know terminology, it is taught. It is often revisited to a deeper level in a later unit/lesson.	**(Reviewer only.)** __X__ **Yes** _____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Prior to teaching a lesson; an extensive introduction is provided in the overview of the curriculum (pages xvii-xxx). In the curriculum introduction teacher learning/study is provided on math talk (pages xx-xxi xviii and xx-xxi), teaching model: an inquiry learning path (page xix), classroom management (page xxii), mathematical practices (pages xxii-xxiv), and algebraic problems that appear in all domains (pages xxiv-xxv). A path to fluency is provided for grades Kindergarten through grade 5 (page xxvi) and a pacing guide for all units and lessons in the Grade 1 curriculum (page xxx). Information is provided on the problem solving process and problem types that will occur within the curriculum (pages xxvii-xxix). Detailed daily routines are outlined for teachers to study and incorporate into their classrooms based on the unit/book volume (pages xxxi-xxxiv) Each unit is provided with a detailed overview including learning progressions across grades and content standards across the grades for the prevalent Common Core Standards addressed within it. Response to intervention and cross curricular connections are provided prior to the unit lessons. A putting the research into practice and math background is also provided prior to teaching each unit. Each unit is provided with a "Getting Ready to Teach Unit .." section that provides teachers with examples of common errors students may make and strategies to help teachers further explain a concept/strategy.	**(Reviewer only.)** __X__ **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives are faithful representations of the mathematical objects they represent. They DO NOT need to be purchased to teach the curriculum with integrity and fidelity.	**(Reviewer only.)** __X__ **Yes** _____ **No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Materials provide a Beginning of the Year Inventory Test that tests student prior knowledge. Each lesson has a quick Formative Assessment: Check for Understanding that can be done at the end of every lesson to assess student understanding of lesson concepts. Quick Quizzes are provided for every unit; they fall at the end of a group of lessons that have focused on a Big Idea. There are 1-3 quizzes in each unit. There is a Unit Review and Test at the end of every unit with two alternate tests in the Assessment Guide Book. An End of the Year Test is also provided in the Assessment Guide Book to determine student growth and understanding.	**(Reviewer only.)** __X___ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Curriculum review and test for each unit has an answer key, and each question is aligned the Common Core Standards covered during the course of the unit. The TE provides Common Errors student might face and reteach activities that can be done prior to testing or as a form of remediation post assessment. Two alternate tests are provided for each unit test in the Assessment Guide Book in the event that students need an alternate assessment.	**(Reviewer only.)** __X__ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** All assessments use student friendly language and are unbiased.	**(Reviewer only.)** __X__ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** The author is clearly indicated on the title page of the teacher's edition. Curriculum was developed from the Children's Math Worlds Research Project conducted by Dr. Karen Fuson (author). The material is based upon work supported by the National Science Foundation and is funded in part by the National Science Foundation.	**(Reviewer only.)** __X___ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Materials are bright and colorful. Student workbook pages are not cluttered with too much text, pictures, or drawings. There is a building repetition to the activities that allows students to understand new concepts/lessons based on prior concepts/lessons.	**(Reviewer only.)** __X___ **Yes** _____ **No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** At the beginning of every unit, in the student handbook, there is a Family Letter that describes the concepts of the upcoming unit. It includes math vocabulary that parents may or may not be familiar with so they can understand the terminology used in the classroom, on workbook pages, and homework. Throughout the rest of the unit there are occasional Family Letters that explain any new math vocabulary or conceptual understandings that have become relevant in the current unit. Homework can be found in the Homework and Remembering Blackline Masters and each page is aligned with the unit and lesson that is being taught. Homework format, vocabulary, and terminology is consistent with lessons and student workbook pages. Homework is a review of prior lessons/units and does not cover a new concept that has not be explicitly taught in the materials.	**(Reviewer only.)** **__X___ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
___X___ Meets _____ Does Not Meet	__X__ Meets _____ Does Not Meet

Non-Negotiable Overall:

__X__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X___ Meets _____ Does Not Meet	Points: _6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X__ Meets _____ Does Not Meet	Points: __6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X___ Meets _____ Does Not Meet

Alignment Criteria Overall:

_X__ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:
Curriculum provides detailed lessons that can be taught by all teachers with ease and fidelity, including first year teachers, new to grade teachers, and substitute teachers. It also provides a detailed coherent across grade level plan so teachers can see the expectation from grade level to grade level. Support for ALL learners can be found on EVERY lesson, allowing teachers to find the applicable level of intervention for their students.

Weakness:
It would be nice if Puzzled Penguin could be right sometimes, instead of always wrong. This would allow students to construct viable arguments as to why he is right.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	Math Expressions
ISBN #	Various
Grade Level(s) or Course:	3rd Grade
Reviewer ID:	EL + PL

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-*
All the standards that are expected to be taught at the 3rd grade level are the only standards being taught.

COHERENCE-*
72% of the lessons are the major works.

RIGOR-*

CONCEPTUAL UNDERSTANDING-
the units and lessons build on previous lessons and units. Every lesson contains Math talk which gets the students sharing their thinking and problem solving.

MATHEMATICAL PRACTICES-
All mathematical practice are taught. However, throughout the unit students are specifically told what tool to use to solve the problem.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
The ELL + RTI component of this program is extensive and reaches all learners.

OTHER:
* The standard algorithm for addition and subtraction is a 4th grade standard. Time in addition and subtraction should be spent:
  - Using strategies
  - Algorithms- based on place value.

- properties of operations
- relationship between addition and subtraction.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **After reviewing the table of contents, chapter tests, and unit tests all standards that are expected to be taught at the 3rd grade level are the only standards being tested.**	(Reviewer only.) **_X_ Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **_X_ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **There are a total of 93 lessons with 67 of them based on the major works of grade 3.** **72% of the lessons are the major works of the grade.**	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Students draw picture graphs and bar graphs to represent data and solve simple put-together, take apart, and compare problems using information in the graph.** **These are seen in every unit 3 which supports unit 7.**	(Reviewer only.) **_X_ Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The assessment for Unit 4 does not explicitly state to use the standard algorithm, yet that is what is taught in the unit.** • **The standard algorithm for addition and subtraction is a 4th grade standard. Time in addition and subtraction should be spent:** ✓ **Using strategies** ✓ **Algorithms (based on place value)** ✓ **Properties of operations** ✓ **Relationship between addition and subtraction** **Unit 6 (area and perimeter) using tangrams to find area of rectangle and decomposing L-shaped figures into rectangles then finding the area of the rectangle. These are beyond the rigor of the core expectations.**	(Reviewer only.) **_X_ Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson has a q[illegible]k practice at the beginning of the lesson to briefly review relevant grade-level content and a remembering page at the end of a lesson to review previously learned grade-level content. In addition the homework page gives additional practice on the lesson.**	(Reviewer only.) __X__ Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **In third grade students are expanding multi-digit addition and subtraction methods that are meaningful to the students. They then use that with visual models and real world situations throughout unit 4 to show problem solving concepts**	(Reviewer only.) __X__ Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **This is found in the Teacher Edition on page xliii**	(Reviewer only.) __X__ Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Every lesson in the teacher's edition is labeled with a domain, major cluster, and specific standard being taught.** **Each unit has Big Ideas which connect clusters and domains together.**	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Unit 3 Lesson 14 connects 3.MD.B with 3.OA.A** **Unit 4 Lesson 17 connects 3.NBT.A with 3.OA.A** **Unit 7 Lesson 9 connects 3.G.A with 3.NF.A**	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X_ Meets** **____ Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** __x__ **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set e expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **Each lesson within the unit uses the previous lessons knowledge to go to a deeper understanding of the concept.** **Each lesson contains a Math Talk. The purpose of these is to have students share their thinking and discuss problem solving.** **Unit 1 (multiplication and division), 2(multiplication and division), & 5 (write equations to solve multiplication, division, addition, and subtraction).** • **Drawings** • **Repeated addition** • **Equal groups** • **Relationship between division and multiplication from the beginning**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Each lesson closes with a formative assessment designed to check students understanding. It asks them to explain their reasoning and understanding of a concept.** **Unit 5 Write equations to solve word problems**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **Every lesson has a class activity where the practices are put to work as a whole class discussion. These activities vary by unit.**	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__x__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **There is fluency practice in the student activity book; quick practices start every lesson and fluency check in the assessment guide throughout the year.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **Within each lesson students are working toward fluency within the class activity. That is followed up by the homework and remembering part of the lesson.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Within each lesson students are working toward fluency within the class activity. That is followed up by the homework and remembering part of the lesson.**	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **In addition to the student activity book there are also practice opportunities with learning stations.** **Math Expressions encourages students to use math drawings and visual models to represent the situation.**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **There are story problems in every lesson.**	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **The problem solving process is used in all of the units.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **In first grade they solve word problems, then in second grade they solve one and two-step word problems, which continue into third grade with more difficult, word problems.**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X_ Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **Mathematical practices are labeled at key points in the lesson instruction to provide an indication of a clear and specific example for teachers to use to draw students attention to the practice without making it overwhelming.** **Example: MP's are outlined in every unit overview. The outline shows which MP's are covered within the unit and how they are used. See Unit 6 overview on pages 651Q – 651X. They are then called out in the teacher's edition throughout the lesson.** **I did not find any callouts in the student edition.**	**(Reviewer only.)** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **_____Meets (2)** **__x__Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence- Unit 1** **MP5: Throughout the unit students are specifically told what tool to use. I found no discussion about why the tool was appropriate or what other choices would make sense. (1)**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **The standards are appropriately treated with an arc of growing sophistication across the grades.**	

Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **The teacher's edition calls out each mathematical practice within the lesson and has dialog or a lesson help to help make sure the practice is covered.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Each lesson contains a Math Talk. The purpose of these is to have students share their thinking and discuss and or defend their problem solving.** **Every unit, every lesson, except unit 5**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Students should be able to use correct logic or reasoning, and should be able to identify incorrect reasoning. There are 2 to 4 situation per unit to use as practice involving the Puzzled Penguin. See the example on page 25 of the student activity book.**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **The student edition presents key vocabulary words and defines them. The words are then reviewed on the unit reviews and the unit tests.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__ Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-

There is ELL Support in the teacher's edition for every lesson. The lessons feature differentiated support for beginning, intermediate, and advanced language proficiency. The activities emphasize oral language development.

Reviewer only.)

__x__ Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials pr[illegible]e appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **There are specifically [illegible]ered lessons to cover all 3 tiers. This is an additional resource separate from the core program.**	Reviewer only.) **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **There is differentiated instruction for each lesson within a chapter. These include hands on activities, writing, whole class, and small group.**	**Reviewer only.)** **__X___ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating.**		**(Reviewer only.)** **__X__ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Each lesson is organized under a six-step plan for instruction: Get ready, math talk, an activity in which they investigate, model, practice and apply, and a formative assessment, then followed up with a homework and remembering assignment.	(Reviewer only.) __X__ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Math Expressions offers a variety of problems and exercises. There are several problems that mimic the examples of the new mathematics that were introduced in the lesson There are also multi-step problems that allow students to combine the math that they learned with previously learned skills.	(Reviewer only.) __X__ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Each lesson is organized under a six-step plan for instruction: Get ready, math talk, an activity in which they investigate, model, practice and apply, and a formative assessment, then followed up with a homework and remembering assignment.	(Reviewer only.) __X__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Everything can be taught from print form; however, www-K6.thinkcentral.com which is the online portal has all of the digital resources in one place including teacher's edition, student edition, math i-tools, and assessment resources.	(Reviewer only.) __x__ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- There are multiple manipulatives to use with the program to help with the visual and kinesthetic learners. They are primarily used during the modeling math part of the lesson.	(Reviewer only.) __x__ Yes _____ No

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **There are quick quizzes during the unit and end of chapter tests in multiple formats for all types of learners. Also there are formative assessments in every lesson.**	(Reviewer only.) **__x__ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Each chapter has a performance activity which includes a rubric for scoring. Also there are answer keys for all assessments.**	(Reviewer only.) **__x__ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **All tests are in student friendly wording (if you teach the academic vocabulary). See example on pages 77-92 in the assessment guide for all Unit 5 Tests.**	(Reviewer only.) **__x__ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Could not find anything other than author information.**	(Reviewer only.) **_____ Yes** **__x__ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The text is colorful and student friendly. The teacher's edition is easy to navigate. The exercises are written so students can relate and to make it more interesting. For examples see pages 65-66 in the student edition.**	(Reviewer only.) **__x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **There are parent letters at the beginning of each chapter to help explain to parents what their child will be learning. There is also an example problem on all homework pages to demonstrate to parents what was learned.**	(Reviewer only.) **__x__ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level:** Math Expressions Common Core Grade 3

Publisher: Houghton Mifflin Harcourt **Copyright:** 2013
ISBN: various

Non-Negotiable 1: Freedom from Obstacles to Focus __X__ Meets _____ Does Not Meet	**Non- Negotiable 2: Focus and Coherence** __X__ Meets ___ Does Not Meet (see NN2C)
Non-Negotiable Overall: __X__ Meets ___ Does Not Meet	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **____X___ Meets** **_____ Does Not Meet**	**Points: __5___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **___X____ Meets** **_____ Does Not Meet**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **___X____ Meets** **_____ Does Not Meet**

Alignment Criteria Overall:

___X__ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion?** ___X___ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Not met because of (NNC2)

The assessment for Unit 4 does not explicitly state to use the standard algorithm, yet that is what is taught in the unit.

- **The standard algorithm for addition and subtraction is a 4th grade standard. Time in addition and subtraction should be spent:**
  - ✓ **Using strategies**
  - ✓ **Algorithms (based on place value)**
  - ✓ **Properties of operations**
  - ✓ **Relationship between addition and subtraction**

Unit 6 (area and perimeter) using tangrams to find area of rectangle and decomposing L-shaped figures into rectangles then finding the area of the rectangle. These are beyond the rigor of the core expectations.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	HMH
Title:	Math Expressions Grade 4
ISBN #	978-0-547-82482-6 + 978-0-547-82490-1
Grade Level(s) or Course:	Grade 4
Reviewer ID:	TS, EM

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Work is focused on grade level standards with emphasis placed on major ~~class~~ grade level clusters.

COHERENCE- Structure and layout is consistant for teacher and students. Differentiation is focused on lesson standards, while supporting a variety of learners.

RIGOR- Rigor is present as work is focused on grade level standards and mathematical practices. Concerned about the amount of time spend on fluency & bare problems.

CONCEPTUAL UNDERSTANDING- Many opportunities for teacher-led whole class development of conceptual understanding. Concerns about opportunities for students to develop conceptual understanding independently.

MATHEMATICAL PRACTICES- Multiple practices interwoven in every lesson with teacher support for implementation & development of practices.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Many supports for students and especially for teachers through ELL support, Tier 1, & 2, & 3 supports, differentiation of activities, cards, etc. Gradual removal of supports.

OTHER:

Teachers will need to ~~create~~ intentionally provide additional opportunities for students to build their own conceptual understanding and possibly bridge conceptual to bare problems for students.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Symmetry is introduced in Unit 8 Lesson 11. There is no evidence that probability or statistical distributions are included in the Grade 4 text, nor are coordinate transformations.	**(Reviewer only.)** X **Meets** ____ **Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

Pacing calendar and content in TE & Student books strongly focuses on the major works of grade 4 for instruction & student activities.

(Reviewer only.)

X **Meets**

____ **Does Not Meet/**

Insufficient Evidence

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students are expected to create line plots in unit 6 of 7 to represent data & use in solving problems. Supporting work does enhance the major work.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All of the major clusters for Grade 4 are located throughout the units in Math Expressions. Each unit provides the teacher with important information about what students will be focusing on & reminds teachers about the math progression, both what students should have learned in the previous grade and where they are headed as they move to the next grade.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Focus is on grade level moments with a variety of resources available/accessible to teacher for interventions & additional practice. Tips for ELL students, use of math talks to expose Sts to ideas & thoughts on how to solve problems - challenges for students who need to be challenged. Differentiation through activity cards, Tier 1, Tier 2 & Tier 3 materials, remembering pages. Digital opportunities to enhance the learning at various levels as well.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students extend their previous knowledge in the work they do with fractions in the Grade 4 Expressions. This is done by building on previous work with whole numbers & using that knowledge as they compare & apply operations to fractions throughout Units Place value, multiplication & division ~~are~~ have similar progressions found.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Stresses what Students should know to be successful on each lesson. Learning progression and content standards across grade in TE. Paragraph for teaches describes the learning path on the CCSS for a particular topic being addressed in the unit.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each unit has multiple big ideas that include lessons that are directly correlated to the 4th grade CCSS. -Big ideas broken into topics that are attached to standards. Most big ideas are tied to cluster headings in CCSS.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Unit 4- equations & word problems -measurement with fractions & decimals were paired Unit 3, Lesson 8 connects CC4.OA.3 w/ CC.4.NBT.3 & CC4.NBT.6 Word problems are provided that require students to utilize their computational skills throughout the program	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

(Reviewer only.)

X Meets

____Does Not Meet

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths/Weaknesses:

Strengths: Progression charts provided for teachers in each unit

-St- many supports provided for teachers to differentiate for students in each lesson

Weakness: some intervention activities have student not working @ grade level

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** ___X___ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

- focus on grade level standards (major work)
- focus on & support of mathematical practices with each lesson
- use of manipulatives to model and develop conceptual understanding
- multiple supports for differentiation (for teacher & student)

Weakness:

- Lack of independent conceptual work (not teacher lead)
- over abundance of time on fluency/bare problems
- Lack of connection from conceptual work to independent & excercises. (connect fluency work w/ conceptual work).

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	HMH
Title:	Math Expressions
ISBN #	
Grade Level(s) or Course:	Grade 5
Reviewer ID:	TB EL

RECOMMENDED AS:

X **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Work is focused on grade level standards with emphasis placed on the major grade level clusters.

COHERENCE- Structure is consistent for both teacher and students. Differentiated materials are cohesive with the general lessons.

RIGOR- Rigor is present as work is focused on the grade level standards & math practices. Concerned about amount of time spent on fluency & bare problems.

CONCEPTUAL UNDERSTANDING-
Many opportunities for whole class discussion, math talks, etc. teacher modeling of conceptual work. Would like to see more opportunities for students to demonstrate independent understanding & practice with conceptual problems.

MATHEMATICAL PRACTICES-
Incorporated & interwoven in all lessons with specific teacher supports for incorporating the MP's in each lesson & unit.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Many supports for teachers & students through EL support, Tier 1, 2 & 3 supports, differentiated activity cards, etc. Math Challenge Center
gradual removal of supports.

OTHER:
- Teachers will need to make intentional decisions in creating more opportunities for students to work on conceptual work at a more independent level.
- Teachers will need to help bridge conceptual work ~~with~~ to fluency work.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: HMH

Title of Material: Math Expressions Grade 5

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1 **Freedom from Obstacles to Focus**		
Criterion	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A:
Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.

- Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7)
- Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6)
- Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8)
- Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4)

How to Find the Evidence:

Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics).

For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.)

In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)

Evidence-

The review of assessments indicates that the program is assessing grade level topics in accordance with CCSS.

There was no evidence of topics beyond grade 5 being assessed.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

- Publisher was cognizant of the shifts in standards and not assessing standards beyond the grade level—such as probability.
-

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

The majority of time in this program is spent on the major clusters for grade 5, specifically 5.NBT and 5.NF.

Units 1-6 focused solely on the major works for Grade 5 CCSS.

(Reviewer only.)

X **Meets**

____ **Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Units 7 and 8 seem to provide supporting work that does enhance the focus and coherence of the major work found in Units 1-6. ex... Connecting line plot data collection into the fraction work in unit 3 and unit 8.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Learning progressions are reviewed at the beginning of each unit for the teacher, connecting the work that will be focused on for each unit.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Most work is giving students time to work on grade level problems. Differentiation is provided through intervention & challenge activities, providing supports as needed. ELL supports, suggestions for extra support are identified.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Connections to prior grade level work are not thorough, but do exist. The progressions chart is presented at the beginning of each unit, but that does not make clear connections to prior knowledge for each lesson.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There is a review of the learning progression in each unit overview. There is also a complete list of units and lessons for the CCSS in the TE. The progressions for the CCSS at the beginning of the units specifies prior learnings that will be utilized in the new unit for the standards	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The focus for each lesson is clearly shaped by the CCSS cluster headings in the TE. The Big Ideas for each unit are also clearly linked to CCSS cluster headings.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Many examples of multiple clusters being connected throughout the program. Connections between domains are also found. Ex. Fractions to decimals & decimals to fractions – Ex.2-Connections in Unit 3 between addition & and multiplication fractions	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

(Reviewer only.)

X Meets

____Does Not Meet

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths/Weaknesses:

S: The front loading provided for teachers at the beginning of each unit (progressions etc.)

S: TE provides many supports throughout each lesson to help teachers meet varying student needs

Weakness:
Sometimes interventions are not expecting the Sts to do 'grade level' work.

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

The program does attend to conceptual understanding through modeling by the teacher and through math talks. There were not a large number of opportunities for students to demonstrate independent conceptual understanding. Most were in whole group activities

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

____**Meets (2)**

X **Partially Meets (1)**

____**Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set e expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** The program does attend to conceptual understanding through modeling by the teacher and use of math talks. There are not a large number of opportunities for students to demonstrate conceptual understanding independently, most are in whole group activities.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** There are some good conceptual problems, but they are almost always presented as whole class, guided instruction work. Very little opportunity for students to attempt independently. Many have "1 answer" & are not conducive to "productive struggle" or multiple answers	- limited opportunities for students to write about their reasoning or explain their thinking.
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Fractions & decimals are represented in many different ways (ie area model, # line, etc) Students are supported in various representations - but mostly in symbolic representations - concern about lack of opportunities for independent work in this area	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** X **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** There are many opportunities for attainment of fluency – it is ~~integrated~~ interwoven w/ conceptual whole group activities but there is concern with whether students are developing the conceptual understanding at an independent level.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Many opportunities to complete purely procedural problems. & fluency checks, quick checks, Remember Pages etc.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Yes – Path to fluency practices, Quick Practices, fluency checks etc. Multi-digit multiplication fluency appears in 14 lessons across 3 units.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **X Meets (2)** **____ Partially Meets (1)** **____ Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The program does provide single and multi-step problems for students to solve in all units, and covering a variety of the grade level content.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** There are lessons that specifically target the MF standards that explicitly target applications: for students to solve word problems w/ fractions using the 4 operations + assessing the reasonableness of their answers. The lessons connect the use of visual models, estimation and reasoning to support sts thinking and checking answers. Not many problems were found on assessments, making it hard to truly assess these standards.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** 4-5 we believe used modeling with 4th having more than 5th. * Only reviewed 4th & 5th.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Strengths: Lots of fluency practice
- very focused on standards
- conceptual is modeled whole year

Weakness - need more opportunities for sts to demonstrate conceptual understanding independently

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

The program weaves all 8 mathematical practices, intentionally, throughout each unit, to support students learning of the content. The mathematical practices are clearly identified & explained for teachers in the introductory, unit planning, getting ready to teach the unit & the introductory page of each lesson, as well as in daily lesson guidelines.

There is a real world application of math content in the final lesson of each unit. These problems allow students opportunity to engage in the math practices on a regular basis as well.

(Reviewer only.)

X **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Practice standards are meaningfully present. Concern is present ~~about~~ that demonstration of practices is more whole group through discussion of math talks – would like to see independent demonstration.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Looking at 4th & 5th we see more development from 4th to 5th	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Each unit explains to tchr where each practice is addressed throughout the unit, – so many opportunities that tchr may need to pick a practice to focus on for in-depth practice/instruction	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** The program is pretty strong in supporting sts in constructing viable arguments, through math talks and the questions provided for teachers to utilize. Critiquing others seems more limited – takes-lower need to provide additional opportunities for this. Lesson is always an error – would like to see sts have chance to decide if error or accurate & explain their thinking.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** There are opportunities for students to explain their work and show their work throughout the program – math talks etc.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary is specific in both TE + St materials. Math Talks provide opportunities for use of specialized math language. Teacher dependent on making sure ALL students are participating + keeping focus on the math language	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:
Sts Makes clear connections for teachers from Standards to mathematical practices.
-opportunities for students to construct arguments through math talks etc.

Weakness: Need more opportunities for critiquing others arguments

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [redacted]lish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** ELL notes + supports are in every unit & lesson. [redacted] provides leveled math writing prompts, RTI Tier 1, 2 + Challenge activities & notes, differentiated instruction cards & the Math Extra Challenge Easel. All facets of support seem tied to the grade level standards	Reviewer only.) X Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The RTI for each unit provides teacher with ideas for scaffolding + differentiating as needed for all students. Provides Tier I, II + III lessons that provide different instruction on the standards a child may be struggling with. Students can move through the tiered intervention, gaining more skills in concepts w/ Tier 3 being on grade level - gradual removal of supports through tiers.	Reviewer only.) X Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Variety of activities for differentiation. Questions are written + 'teaching notes' provided for teachers to use in their instruction. Helpful suggestions are made for modeling and/or use of manipulatives to meet student needs.	Reviewer only.) X Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** S: Many teacher supports for meeting varying needs. S: Providing specific questions to assist teachers for instruction is helpful. Weakness: Would like to see visual learning in every lesson.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** - math talks - many notes & suggestions for tchrs in each lesson in TE - questioning in each lesson - class discussions	**(Reviewer only.)** X **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** - real world problems → tied to standards - exercises (bare problems) - purpose & options for a variety of learners	**(Reviewer only.)** X **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** * Clear sequence w/ spiraling in practice activities. * Easy to see how lessons & units build on each other.	**(Reviewer only.)** X Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-**<br~~There~~ Teacher notes include research-what to expect from students, class management activities for lessons, watch fors, etc. Lots of info connecting lessons to the math practices as well as guidance for math talks	**(Reviewer only.)** X Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Those supplied do support decimals, fractions & geometry Base 10 blocks, fraction bars, math boards etc.	**(Reviewer only.)** X Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** mid unit checks, unit assessments, portfolios, formative, performance assessment	**(Reviewer only.)** X Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Rubrics for performance assessments - keys found at back of assessment guide.	**(Reviewer only.)** X Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Multiple assessment options - aligned w course level language - culturally diverse names utilized throughout	**(Reviewer only.)** X Yes ____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Dr. Karen Fuson & Reagy -supported by National Science Foundation -provided a research pamphlet	**(Reviewer only.)** X **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Very consistent – extensive amount of information could make it difficult for teachers to navigate initially, but once you learn the format it is consistent + easy to follow	**(Reviewer only.)** X **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Routine problems -Parent letters (Eng. & Spanish) that explain in user friendly language what Ss are working on – seemed they would be helpful for helping at home work	**(Reviewer only.)** X **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** Math Expressions 5th

Publisher: HMH **Copyright:** 2013 **ISBN:** _____

Reviewer ID # TD, EL **Date Review Completed:** 3/8/16

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

X **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** X **Yes** ____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:
- focus on grade level standards (major work)
- connections to math practices (focus & support)
- use of manipulatives to model & build a base for conceptual understanding
- multiple supports for differentiation (st. & tch. supports)

Weakness:
- lack of independent conceptual work (not teacher led)
- over abundance of time spent on fluency & bare problem solving.
- lack of connection between conceptual opportunities & independent exercises (connect fluency work w/ the conceptual work)

EVIDENCE SUMMARY:

FOCUS-

The major works were evident throughout the program.

COHERENCE-

The supporting works enhance the ~~major~~ major works.

RIGOR-

It is at an appropriate level for 6th grade and accessible for all learners.

CONCEPTUAL UNDERSTANDING-

Conceptual understanding is taught and supported by fluency, practice, and application.

MATHEMATICAL PRACTICES-

Evident and attended to throughout units and lessons.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Materials are presented in multiple methods with varying strategies. Materials are available to ELL and lower level learners as well as on grade level and gifted learners.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Table of contents a[illegible]essons are all 6th grade clusters**	**(Reviewer only.)** **_X___Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **155/185 days 83% spent on major works of grade level according to pacing guide** **6/9 units (surface area, volume, area of polygons) were supporting works**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Major works are enhanced by the supporting works** **6.G.1-4 Lesson 2-1 supports extension of previous understandings of arithmetic to algebraic expression and represent and analyze relationships between variables**	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The "Get Ready to Teach" and the learning progressions for the common core show the standards previously taught and how they connect to the current standards being taught.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Variety of problem[illegible]pes, practice tables, create own tables, fill in the blank, graphs, explanations, and use of multiple models provides access for all students on various levels	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Math background is explained in lessons and at the beginning of the book, but there are no standards connected. There is a skills trace which shows student progression on standards. Quick practice from 1.1 reviews factor puzzles for multiplication and division strategies from 5th grade. Anytime problems review prior knowledge as it relates to grade level concepts.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There are math background notes that provide teachers with standards and connections from previous years. The standards that are taught and assessed are also listed in the teacher materials for the current year. Skills trace found at the beginning of each unit shows previous, current, and next grade level material. Teaching notes explain connections to learning.	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Unit introductions, lesson introductions, and pacing guides explicitly show cluster headings, objectives, and mathematical practices.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Unit introductions explain extensions. Lessons 5.15-5.17 connect 6.EE.5 to 6.EE.6-8.** **Page 609-660 requires page 759-768 to apply previous skills.**	(Reviewer only.) **_X___Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Standards and clusters were clearly identified when they were being taught. There are multiple opportunities for students to work through the problems.**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Math talk provided students different strategies to learn and practice. There are individual, collaborative, hands-on, writing, and virtual tools available for students to work through. Examples in the teacher edition include pages 75-82, 575-584, 791-808.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Lesson 1.7 has several representations of understanding (completing function tables, creating graphs, puzzled penguin) for practice with concepts.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Students solve problems, create diagrams, models, and explain solutions and thinking.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The program follows phases of learning from conceptual understanding to fluency and application.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Opportunistic strategies found on page 468, 480, 908. There are multiple strategies for learning including use of manipulatives and online tools.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **The program offers a fluency plan and quick practices for the students. For example, IJJ, 211 in the teacher edition and page 19 and 123.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There is ample mathematical thinking required that scaffolds students to independence in solving problems.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Examples of multi-step problems include pages 317-354, 387-392, 953-964.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Problems with procedural fluency extend to more advanced applictions through student created representations. For example, pages 404, 556-557.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling includes representations in books or charts or manipulatives and builds upon initial modeling. Examples include pages 368, 458-459, 466, and 468.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X___Meets

____Does Not Meet

Strengths/Weaknesses:
There is a variety of learning options for students and ancillary materials such as manipulatives, charts, posters are essential.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** The math practice standards are addressed in lessons and in preview materials. Activities also target mathematical practices.	**(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Mathematical practices are presented in assignments, activities, problems, and assessments. Unit introductions lists lessons correlated with practices.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Progressions were found in the teacher edition of page I-IVI. Practices develop across grade levels.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **Unit introductions explained application of units that are being taught.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **The students are supported by math talk, writing prompts, performance tasks, and checks for understanding.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Explanations, Puzzled Penguin, diagrams and models that represent problems and/or explanations support students in producing answers, solutions, and arguments. Examples include pages 20 and 83A-86 in the student edition.**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Vocabulary is highlighted at the introduction of each lesson. The textbook highlights and defines vocabulary. The glossary is also a language resource.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X___Meets

____Does Not Meet

Strengths/Weaknesses:
Standards are clearly listed and there are many opportunities to represent them variable throughout the lessons.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** There is vocabulary each new lesson introduction and in student books. There is an ELL section for beginning, intermediate, and advanced students. There's a family letter for English and Spanish speakers.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** There are print materials, online materials, differentiated instruction, manipulatives, math boards, collaborative activities, math center challenges, and RtI materials.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** There are models, diagrams, graphs, groupings, math talk, and manipulatives to provide a variety of presentations.	**Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** There are multiple methods of learning for all populations.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Students do independent, group, and pair share work, as well as math talk.**	**(Reviewer only.)** **__X____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Problems begin with teacher support and progress through concept mastery, fluency, and application.**	**(Reviewer only.)** **__X____ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** **There is an intentional sequence for the introduction of materials.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** **"Math Background" enriches teacher instruction. Introduction prepares teacher for what to expect and instructs proper use of manuals. There are teacher suggestions for support in the lessons.**	**(Reviewer only.)** **__X____ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **Concrete manipulatives are available in the kit as well as online tools.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **The assessments guide has quick quizzes, two test forms, and a performance test. There are also inventory and tests for the beginning of the year.**	**(Reviewer only.)** **____X__ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Rubrics are provided and sample solutions for student problems.**	**(Reviewer only.)** **X_____ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **There are two test formats (multiple choice and open-ended, as well as extended response options.) The curriculum is accessible for all socio-economic levels of students.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The authors are qualified and listed in the materials.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The visual design and support is appealing to students and is easy to use for both students and teachers.**	**(Reviewer only.)** **__X____ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **The student letter home, and family extensions inform and support parents with aiding their child's learning.**	**(Reviewer only.)** **__X____ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: Math Expressions Common Core, 6th Grade**

Publisher: HMH **Copyright: 2013** **ISBN: 978-0-547-56755-6**

Reviewer ID # CB, AP **Date Review Completed: 3/8/16**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets _____ Does Not Meet	X Meets _____ Does Not Meet

Non-Negotiable Overall:

X Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet

Alignment Criteria Overall:

X Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

All standards were cross referenced throughout introductions and lessons, which made everything easy to find.

The manipulative kit was very useful and is necessary to make the program successful.

The various test forms are beneficial for different learners.

The program flowed seamlessly.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	HMH
Title:	Go Math K
ISBN #	
Grade Level(s) or Course:	K
Reviewer ID:	SJ PS

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

__X__**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- no prob, ~~stat~~, symmetry included on assessments
Chap 5 assess. does ~~Each~~ assess missing # addend

COHERENCE- info from previous & future grades does not interfer w major works. However additional & supporting clusters not integrated or used to enhance mgor works of grade.

RIGOR- Many chances for fluency practice but no assessment to determine fluency and fluency Practice drops after Chap 8 w/ exception of 1 or 2 fluency practice sessions per Chapter.

CONCEPTUAL UNDERSTANDING- Mathematical practices are listed throughout SE & TE. However not deeply integrated w/in curriculum & parts not met such as choose appropriate tools, no chance to critique work of others.

MATHEMATICAL PRACTICES-

Conceptual understanding is there but Procedural is emphasized more

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
This is good throughout. RTI, Go To Centers, ELL & Challenge info is available

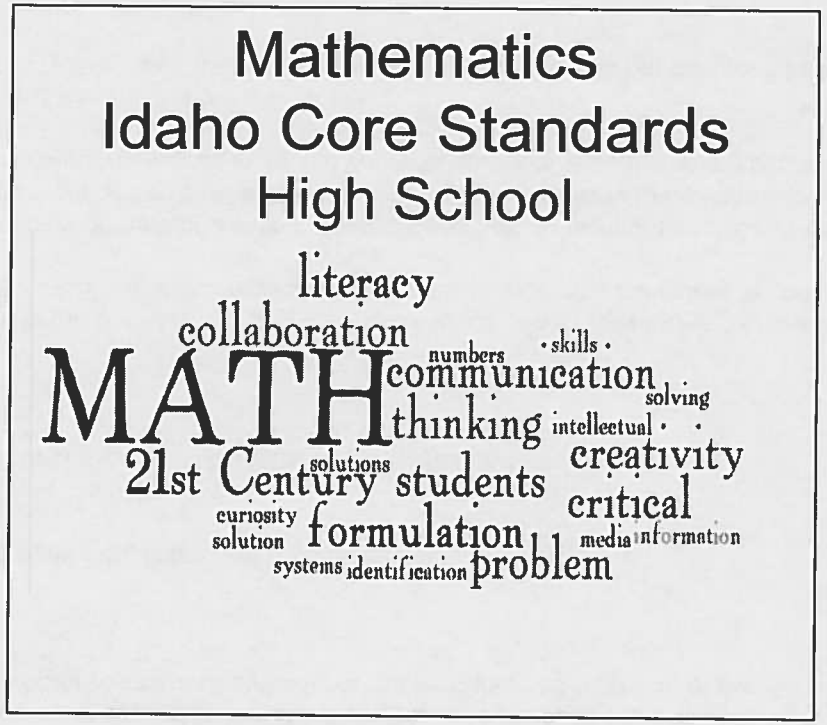
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A:
Materials r[redacted] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.

- Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7)
- Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6)
- Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8)
- Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4)

How to Find the Evidence:

Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics).

For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non- Negotiable 2, Focus and Coherence.)

In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)

Evidence-
Chapter 1 Assessme[redacted]ounting 1-5, Writing Numbers, and Show ways to make 5
Chapter 2 Assessment---Write Number 2-5, Compare Numbers
Chapter 3 Assessment---Count, Circle, Write Numbers 6-9
Chapter 4 Assessment—Count, Draw, Compare Numbers 4-10, 1 Way to make 10
Chapter 5 Assessment—Addition with numbers up to 10*(Addition sentences with missing addends for mastery--.a first grade concept not kindergarten. Kindergarten students are to be given/exposed to missing addends types but not expected to achieve mastery)*
Chapter 6—Subtraction with numbers up to 10 in subtrahend, Draw pictures, Write Number Sentences
Chapter 7 Assessment—Teen numbers (10 plus some more)
Chapter 8 Assessment—County by 10s, Write 11-30, Underline last number, know 83-89
Chapter 9 Assessment—Draw and Recognize two-dimensional shapes
Chapter 10 Assessment—Recognize three-dimensional shapes
Chapter 11 Assessment—Measurement know longer, shorter, different, heavier, lighter, length, taller
Chapter 12 Assessment—Sort and Classify…What set does this belong in? Are these classified correctly?

There is no probability, statistical distributions, Symmetry included on any of the Kindergarten Assessments

___Meets

___Does Not Meet

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

_X___Meets

____Does Not Meet

Strengths/Weaknesses:
Strength: There are none of the non-allowable criteria stated in NN1 in any assessment throughout K Go Math.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each gr[redacted]-8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

- **The Planning [redacted]de—Year-at-a-Glance shows there are 130 lessons with 98 of [redacted]n the major work of the grade 98 out of 130 is 75% of the time spent on the major work of the grade. (It appears that the GoMath program considers the supporting cluster as part of the major work of the grade)**
- **The Planning Guide--Has a getting ready for Grade 1 with 20 lessons (20 days) and 3 days for a Review Project all 23 days are a part of the major work of the grade level. (118 out of 150 is 79%)**
- **Chapter 1 has a Project (that is a part of the major work of the grade) at the beginning that is supposed to take 1 day and 2 lessons that say they should take 1-2 days. With that information you can add 2 more days to the 118 days. (120/152)**
- **Chapter 2 (Major Works) has two lesson that say 1-2 days so add another day (121/153)**
- **Chapter 3 (Major Works) add one day (122/154)**
- **Chapter 4 (Major Works) add one day (123/155)**
- **Chapter 5 (Major Works) add one day (124/156)**
- **Chapter 6 (Major Works) No days added**
- **Chapter 7 (Major Works) Add one day (125/157)**
- **Chapter 8 (Major Works) add one day (126/158)**
- **Chapter 9 (Not a Major Work) Add one day (126/159)**
- **Chapter 10 (Not a Major Work) Add one day (126/160)**
- **Chapter 11(Not a Major Work) Add one day (126/161)**
- **Chapter 12 (Not a Major Work) Add one day (126/162)**

Major Works Approximately 126 Days (78%)
Non Major Works Approximately 36 Days (22%)

X Meets **____Does Not Meet/Insufficient Evidence**

Metric NN2B: **Supporting [redacted], where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Chapter 12 is the supporting work of kindergarten and is the only chapter that has classify and sort data. The supporting work of chapter 12 does work on counting and cardinality in some of the lessons. Also count and write 20.** **Chapters 9-11 Have some counting example: 4 vertices, 3 vertices… They all have lesson checks with spiral reviews and/or practice of the major works of kindergarten** **The standards are not taught as supporting each supporting standard and additional standard has its own unit.** **_X_ Meets ____ Does Not Meet/Insufficient Evidence**

Metric NN2C: **Materials b[redacted]ontent progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence:** **Chapter 1 Assessme[redacted]ounting 1-5, Writing Numbers, and Show ways to make 5** **Chapter 2 Assessment--Write Number 2-5, Compare Numbers** **Chapter 3 Assessment---Count, Circle, Write Numbers 6-9** **Chapter 4 Assessment—Count, Draw, Compare Numbers 4-10, 1 Way to make 10** **Chapter 5 Assessment—Addition with numbers up to 10** *(Addition sentences with missing addends for mastery--.a first grade concept not kindergarten. Kindergarten students are to be given/exposed to missing addends types but not expected to achieve mastery)* **Chapter 6—Subtraction with numbers up to 10 in subtrahend, Draw pictures, Write Number Sentences** **Chapter 7 Assessment—Teen numbers (10 plus some more)** **Chapter 8 Assessment—County by 10s, Write 11-30, Underline last number, know 83-89** **Chapter 9 Assessment—Draw and Recognize two-dimensional shapes** **Chapter 10 Assessment—Recognize three-dimensional shapes** **Chapter 11 Assessment—Measurement know longer, shorter, different, heavier, lighter, length, taller** **Chapter 12 Assessment—Sort and Classify…What set does this belong in? Are these classified correctly?** **Go Math has a logical progression of math content. At the beginning of each chapter Go Math identifies what came before, what is happening during, and what happens after (the next grade level) for the teacher. This information is not shared specifically with the students.** **(It is as Go Math said: Each chapter in the GO MATH! Teacher Edition includes a chart listing the Common Core Learning Progressions)** **_x_ Meets ____Does Not Meet/Insufficient Evidence**
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson is designed for whole group grade level instruction and comes with reteach and an enrichment. The reteach is designed to reteach the lesson and give more practice but it is not designed review or go over unlearned prerequisites. There is an RTI component designed to teach/catch the unfinished learning. There is also an online personal math trainer that is designed to review the specific content being taught not unlearned skills from previous chapters.** **__x__ Meets ____Does Not Meet/Insufficient Evidence**

Metric NN2F: **Materials [illegible]on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Due to the fact that [illegible]are kindergarten materials, there is no earlier grades that the [illegible]erials can relate explicitly to. On the other hand Chapter 7 with teen numbers relates explicitly to chapters 1-4 where students are learning the structure and patterns of numbers 1-10. Chapter 7 relates to chapters 1-4 where students learned the numbers 0-10. Teachers can definitely talk to students about the pattern of numbers and how that same pattern/structure is in the teen numbers but I have not found anything in the teacher's guide or student books that asks such questions.** **___x_Meets ____Does Not Meet/Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Due to the fact that this is Kindergarten materials there is no previous grade level to clearly identify. The Common Core Learning Progressions and the Common Core State Standards that GO MATH shares at the beginning of each chapter identifies the prerequisites and each lesson has a coherence piece that identifies the Kindergarten standard and what First Grade standard follows.** **__x__Meets _____Does Not Meet/Insufficient Evidence**

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Chapter 1 learning o[illegible]ves relate to the cluster heading *Count to tell the number of [illegible]cts* AND *Know number names and the count sequence*** **1.1 Model and count 1 and 2 objects** **1.2 Represent 1 and 2 objects with number names** **1.3 Model and count 3 and 4 with objects** **1.4 Represent 3 and 4 number names with written numerals** **1.5 Model and count up to 5 with objects** **1.6 Represent up to 5 objects with number name and written numeral** **1.7 Use objects and drawings to decompose 5 into pairs in more than one way** **1.8 Know that each successive number refers to a quantity that is one larger** **1.9 Solve problems by using the strategy make a model** **1.10 Represent 0 objects with a number name and a written numeral** **__x__Meets ____Does Not Meet/Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **In chapter 7 students work on numbers 11-19 (K.NBT) and while they are learning those numbers they are working on count to tell the number of objects, know number names, and compare number(K.CC.)** **In chapter 5 students are learning the skills of addition (K.OA.1 and K.OA.2) –subtraction is chapter 6 and they are using their counting and cardinality skills at the same time** **Students are working on K.OA.4 and K.OA.3 while working on K.OA.2 in chapter 5** **(I am not sure where this fits but the required fluency for kindergarten is fluently add and subtract within 5 and there does not seem to be enough opportunities for students to reach that required fluency)….Fluency Builder at the beginning of some lessons** **__X__Meets _____Does Not Meet/Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Weakness: The required fluency (K.OA.A.5 Add/subtract within 5)

Each cluster is taught in a chapter and although there is some review through the spiral review the supporting and additional cluster are not present in the teaching of the focal points. The focal points are not present in the additional and supporting chapters. Basically, the clusters each have their own chapter.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_x___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence- K.CC.4a. 4b. 4c. 5** Count to tell the number of objects Chapter 1—GoMath assumes that children use counting and numbers to determine quantities up to 5 before beginning kindergarten. GoMath also assumes children come to kindergarten with a recognition of letters. If children have not been taught the prerequisite skills before kindergarten they will need extensive interventions before beginning the math program. The program offers a review of prerequisite skills and RtI Tier 2 activities for those kindergarten students matching quantities with the numbers. Within each lesson GoMath give teachers questions and/or activities (the side information) for children to engage in the mathematical practices. Examples: Lesson 1.1 MP2 Reason Abstractly and quantitatively---Have children discuss how one object is one fewer than two objects Lesson 1.1 MP4 Model with mathematics (page 15) not a real life situation Lesson 3.1 (page 120) MP7—Look for and make use of structure…program is looking for the structure of the model rather than focusing on the structure numbers teachers could easily focus the conversation on the structure of numbers but what the program suggests as answers from students does not do that. Lesson 3.1 (page 119) MP5 Use appropriate tools strategically ..ten frame Lesson 3.1 (page 119) MP4 Model with mathematics ..real life situation for students **K.OA Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from** Chapter 5 focuses on addition. Children are shown how to use cubes to find/make addition sentences, students see pictures involving addition sentences and the sentences are below for them to copy over. Throughout chapter five students are given practice with addition sentences There is little time spent with addition sentences where the student reads/hears the story problem and then figures out how to represent the problem on their own. According to the learning progressions and the standards kindergartens should master add to and put together types addition problems GoMath has those types of addition sentences and missing addends addition sentences. Assessments expect kindergarten students to achieve mastery in both types. **Evidence-**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"		

Do the materials feature opportunities to identify correspondences across mathe[illegible]representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Throughout [illegible] lessons students are asked to draw and show what they know and the[illegible]eady to explain their pictures. Chapter 3 The Write way introduction to the chapter (page 1189B teachers book) Lesson 3.1 Math Journal—When finished, allow time for children to communicate about what their drawings show and discuss other possible methods for showing the number 6 (page 122 teachers book) Lesson 3.2 Math Journal—Let children describe their drawings to the class. Throughout the kindergarten curriculum there are math journal questions that connect the verbal description with diagrams and models.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **_X_Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence** **Lesson 8.1… Fluency Builder Add within 5 (page 441B teachers edition)** **Lesson 8.5….Fluency Builder Subtract within 5 (page 453B teachers edition)** **Lesson 8.6….Lesson Check 4-1=3 (page 464)** **Lesson 8.8…Lesson check 4=1+3 (page 476)** **Chapter 9 has similar amount of time as chapter 8 on developing fluencies** **There is some built in review of fluency add and subtract within 5 but not a lot of it.**	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **Lesson 1.3..Place counters on pictures move to 5 frame…Practice and homework both procedural** **Lesson 1.7 Share and Show Procedural the problem solving and application piece encourages students to use their procedural skills in an application problem.** **Lots of procedural practice**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **There is practice of required fluency throughout each chapter but not repeated practice throughout the learning. (Chapter 8 has 4 opportunities for fluency practice and two of them are of only one problem)** **Lesson 8.1… Fluency Builder Add within 5 (page 441B teachers edition)** **Lesson 8.5….Fluency Builder Subtract within 5 (page 453B teachers edition)** **Lesson 8.6….Lesson Check 4-1=3 (page 464)** **Lesson 8.8…Lesson check 4=1+3 (page 476)** **Chapter 9 has similar amount of time as chapter 8 on developing fluencies**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **K.NBT.1 Work with numbers 11-19 to gain foundations for place value** Chapter 7 begins the work of K.NBT.1 Throughout chapter 7 the teen numbers are introduced as a ten and some more. Students use ten frames and beads on a string to help them see that. The learning progressions suggest the use of place value cards to help with their understanding of the teen numbers. There are place value cards in the manipulatives but I did not find reference to using them in chapter 7. There are some application problems (page 391-393) where students are solving problems based on ten and some more. The assessment for chapter 7 works on the teen numbers but explicitly tells students what to do in order for them to solve the problem so it is more procedural than application.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **X Meets (2)** **___ Partially Meets (1)** **___ Does Not Meet (0)**

Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	Lesson 8.1, 8.2, 8.3, and 8.4, review the teen numbers while introducing the number 20. These lessons also have application problems with the teen numbers without the students being explicitly told how to solve the problems. Chapter 7 has procedural problems, even though there are real world problems the chapter explicitly tells students what to do and how to solve.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence- --Sample of chapters** Lesson 3.1 page 122 K.CC Draw, Count, and Show 6 Lesson 3.2 page 128 K.CC.6 less than, greater than 6 Lesson 3.3 page 134 K.CC Draw, Count, and Show 7 Lesson 3.5 page 146 K.CC Draw, Count, and Show 8 Lesson 5.5 page 258 K.OA Addition with word problems BUT the problems are missing addend problems Regarding addition and subtraction problems GoMath treats types of addition problems equally or even more emphasis on First Grade story types rather than Kindergarten types See Lesson 5.5…Chapter 5 and 6 specifically.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Kindergarten chapter 1 begins with counters being placed in the five frame. As chapters progress students move up into 10 frames or two 10 frames to make 11-20. Introduced with the 10 frames are beads on a string (each bead stings have 2 colors each color is in sets of 5 before it changes) They have students count the counters in the 5 and 10 frames and also draw the counters in the 5 and 10 frames. Sample of misunderstanding of MP4--Chapter 1 teacher edition page 15 states that students are working on MP4 yet the problem is not real world application, which could lead to misunderstanding of teacher or student on what exactly MP4 means.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X Meets 5/6

___ Does Not Meet

Strengths/Weaknesses:

Weakness: Children never have the opportunity to choose their appropriate tool or efficient strategy or tool. The book always chooses for them.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials [redacted]s the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** In the Publi[redacted]IMET materials they say there is a Listen and draw feature that suppo[redacted] Standards for Mathematical Practice and enriches the Major Work of the grade. Lesson 12.1 Listen and Draw activity has teachers read a problem to children. (Anita has some shapes. Some shapes are red, some are blue, and some are green. How can she sort and classify them?) The problem leads children to sort and classify by colors and no other way. The next step is to have the children use an assortment of 2-dimensional shapes to do their sorting. Next students are asked to find a flat shape that is blue and put that on the left side of the work space. GOMath suggests this is MP2 Reason abstractly and quantitatively...the activity in itself gives students to opportunity to reason abstractly and quantitatively yet the wording and the directions given to children do not fully allow for student reasoning. Lesson 7.5 (Julia needs 15 strawberries to make her fruit salsa. Use counters to show the strawberries Julia needs.) GoMath says this support MP5 Use appropriate tools strategically...students do not have the opportunity to choose the appropriate tool MP7 Look for and make use of structure—the counters for the 15 strawberries are already placed on a ten frame and students are asked how are all of the rows alike? How is the bottom row different from the other two rows? Students really are being asked to look at the structure of the model not the 10 plus five more to make 15. There are opportunities for use of the Mathematical Practices but teachers will need to set up the problems and questions differently to reach the full intent of the mathematical practices.	**(Reviewer only.)** [redacted] X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** X **Meets (2)**

Over the course of any given year of instruction, is each mathematical [illegible] Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Chapter 5 Addition MP2 Students select the correct operation. Since chapter 5 is all about addition and subtraction is not introduced students do not have the opportunity to select the correct operation. Chapter 6 Subtraction –Students are given the subtraction sign each time and they are not required to choose the correct operation. Chapter 7 has addition and subtraction review problems but each time students are given the operation sign to use. Throughout the teachers edition the mathematical practices are given and questions are included to help support the practices.	**____Partially M[illegible](1)** **____Does Not Meet (0)**
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** In Kindergarten the practices start simply (chapter 1) where students are explicitly told how to solve but then are asked questions to help them make connections. By chapter 8 students are still receiving questions to help support the mathematical practices and they are also being expected to solve application problems where they use their learning from previous chapters and are not explicitly told how to solve.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** The planning guide pages 20-29 give the elementary definition for the mathematical practices. These pages do not explicitly describe what the practices would look and sound like in a kindergarten classroom. Page 23 gives general questions a teacher can ask to support the mathematical practices. Pages 24-29 tells where you will see the different practices at different grade levels (K-2). Each lesson throughout the kindergarten curriculum lists where the students will see or questions to use to help the students use mathematical practices. I have found that is not always accurate is MP 4 where sometimes the curriculum claims MP4 but the problems are not based on real world problems. •	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Lesson 7.1 notes on sidebar "Why does it make sense to use a ten frame to solve problems about the number 11?" Lesson 7.4 asks children to explain how they know that 10 + 3 = 13 Lesson 7.5 has children draw or model five frames and counters to show and answer then explain their model and solution to a partner. Lesson 8.1 has children showing 20 in their math journals and then explaining to a partner their drawing and how it relates to 20. The teacher would need to circulate and listen to child conversations to know if they were successfully using MP3 There are opportunities during application problems where students could critique reasoning and construct viable arguments but the teacher edition does not necessarily instruct teachers to use MP3.	X **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Often times students are asked to use their math journals to prove their answers. Lesson 1.1 (page 12 A-12B teacher edition) students are asked to draw pictures or use numbers to show what the vocabulary words mean, then discuss the words and their pictures with a partner. (I question whether the children will even understand what is being asked) Children use five frames and 10 frames regularly to show numbers and explain their numbers/answers.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** At the beginning of each chapter there is a developing math language/vocabulary builder to introduce the vocabulary. Vocabulary words are used throughout the chapter and then in the rest of the following chapters when appropriate. Students are given vocabulary cards with words on one side and pictures on the other at the beginning of each chapter. Teachers are encouraged to have a math word wall, have children practice as a warm up as each lesson is introduced and to reinforce vocabulary by pointing the word out on the word wall whenever the word appears in the lesson. Teachers need to encourage/help the children use the appropriate vocabulary when they are having math discussion.	

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X Meets 5/6

___ Does Not Meet

Strengths/Weaknesses:

- Not much critiquing of others
- Shows how to use the tool but not choose appropriate tools
- Due to the fact that students are explicitly shown how to solve there is no need for persevere
- Pattern of numbers not stressed or even taught
- The program does attend to precision

Alignment Criterion 3: Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support f[illegible]glish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** All vocabulary cards ha[illegible]th English and Spanish on them. Throughout the curriculum there are ELL Strategy instructions. The ELL strategies would be useful strategies to use with all struggling students.	**Reviewer only.)** __X__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The curriculum provides scaffolding, intervention, and extension in each lesson. The scaffolding includes the following: _____ + _____ = _____ or _____- _____= _____ But does not have the gradual removal.	**Reviewer only.)** ____**Meets (2)** __X__**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Each lesson provides different approaches. The structure from lesson to lesson and unit to unit is similar and the types of questioning is similar. Students use 5 frames, 10 frames, red/yellow counters and connecting cubes. There is no choice given to children about which manipulative or model they are routinely told which to use. Throughout the addition and subtraction chapters students are given _____ + _____ = _____ or _____- _____= _____ I have not found any problems where students make the choice of addition or subtraction.	**Reviewer only.)** __X__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** __X__ Meets __ _Does Not Meet **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** The structure of the lesson is easy for teachers to follow and support the teacher in leading each child the learning. Every student regardless of ability will be able to participate in the lesson. There are collaboration opportunities given (example: lesson 1.4 have teams of four children collaborate to answer the essential question)	**(Reviewer only.)** __x____ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson has a Listen and Draw (problem) Practice and Homework (exercises), Each problem has a purpose, either, practice, problem or review.	**(Reviewer only.)** ____x__ **Yes** _____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Lessons follow in a sequential way and the level of difficulty increases as the unit progresses.	**(Reviewer only.)** **___x___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The teacher edition has the information throughout each lesson showing student look-fors and how to intervene, extend, and differentiate. There are professional development videos to support teachers with their teaching and learning.	**(Reviewer only.)** **___x___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-The two most common manipulatives used throughout Kindergarten GOMath are the red/yellow counters and connecting cubes. The manipulatives are used to encourage student thinking.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Every lesson comes with formative assessment in the teacher's guide with what to look for and things to do intervene or extend the lesson. There is a summative assessment at the end of each chapter with a performance task being a part of it. Self-assessment piece for kindergarten students comes in the draw and explain your picture to another student (of course the teacher will need to help students realize it.)	**(Reviewer only.)** **___x___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Each summative assessment comes with an answer key and, a rubric. Formative assessments throughout the lessons tell teachers what to look for and what to do if students are not mastering the content.	**(Reviewer only.)** **___x___ Yes** **_____ No**

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The language is easy to understand for kindergarten students. They are introduced to the vocabulary at the beginning of each chapter and then the vocabulary is used throughout the lessons so it is not new when students get to the summative assessment.	**(Reviewer only.)** **___x___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Planning Guide pages 16-17	**(Reviewer only.)** **___x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The visual design supports students in engaging thoughtfully with the math through real pictures that show the acting out of the problem, through cartoon pictures that encourage students to really look at what his happening and through use of color to keep students interested.	**(Reviewer only.)** **___x___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Each lesson has a Home Activity that engages the parents in the work their child is doing. The Home Activities are in the student workbook and easy for parents to follow and engage in.	**(Reviewer only.)** **___x___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level:** Go Math

Publisher: HMH **Copyright:** 2015 **ISBN:**

Reviewer ID # SJ PD **Date Review Completed:** March 7

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

_____ **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	HMH
Title:	Go Math
ISBN #	
Grade Level(s) or Course:	1st Gr
Reviewer ID:	SJ BK

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

__X__**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- no assessments outside of grade level

COHERENCE- 71% lessons spent on major works.

RIGOR- fluency practice isn't always about fluency skills for 1st grade +- to 10 more or a daily review of all skills.

CONCEPTUAL UNDERSTANDING- is utilized throughout w/ deeper understanding & questioning.

MATHEMATICAL PRACTICES- are not necessarily taught thoroughly & deeply. They are integrated w/ SE & TE. Sometimes mis identified. No chances to critique of others work or choose tools.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Lots of differentiation ELL info Go To Centers Challenge activities

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Chapter 1—Addition at grade level** **Chapter 2—Subtractions at grade level** **Chapter 3—Addition strategies (doubles, make 10)at grade level** **Chapter 4—Subtraction strategies (count back, subtract from 10, Missing addend) at grade level** **Chapter 5—Addition and Subtraction Relationships at grade level** **Chapter 6—Count and model numbers at grade level** **Chapter 7—Compare Numbers at grade level** **Chapter 8—Two-digit Addition and Subtraction at grade level** **Chapter 9—Measurement at grade level** **Chapter 10—Represent Data at grade level** **Chapter 11—3-dimensional Geometry at grade level** **Chapter 12—2-dimensional Geometry at grade level** **Types of story problem assessed are appropriate for the grade level (i.e. Add To result unknown and change unknown. Take From Result unknown and change unknown.)**	(Reviewer only.) **___x_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **____Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **There are 100 lessons in the First Grade GoMath. 71 lessons focus on the major work of first grade and 29 lessons are the additional and supporting clusters. (71% and 29 %)** **65%-85% of the time is to be devoted to the Major Works of the grade. First grade is supposed to be close to 85% of the time devoted to the major works.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence** It meets the requirement of at least 65% of the time on the major work of the grade but falls short of the 85%.

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Chapter 10 is the chapter represent data, which is the supporting work of the grade level. Lesson 10.1 graphs where students compare data through addition and subtraction (yes) 10.2 (no) addition, least to greatest, 10.4 (no) 10.5 (yes) greater than, less than 10.6 (No) 10.7 (No) The supporting and additional clusters are taught separately and given as much importance as the focal points (individual chapters)	**(Reviewer only.)** **____Meets** **__x__Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Chapter 1—Addition** **Chapter 2—Subtraction** **Chapter 3—Addition strategies (doubles, make 10)** **Chapter 4—Subtraction strategies (count back, subtract from 10, Missing addend)** **Chapter 5—Addition and Subtraction Relationships** **Chapter 6—Count and model numbers** **Chapter 7—Compare Numbers** **Chapter 8—Two-digit Addition and Subtraction** **Chapter 9—Measurement** **Chapter 10—Represent Data** **Chapter 11—3-dimensional Geometry** **Chapter 12—2-dimensional Geometry** **(See Planning Guide page 98-99 for accurate progressions of content)** **Go Math has a logical progression of math content. At the beginning of each chapter Go Math identifies what came before, what is happening during, and what happens after (the next grade level) for the teacher. This information is not shared specifically with the students.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson is designed for whole group grade level instruction and comes with reteach and an enrichment. The reteach is designed to reteach the lesson and give more practice but it is not designed review or go over unlearned prerequisites. There is an RTI component designed to teach/catch the unfinished learning. There is also an online personal math trainer that is designed to review the specific content being taught not unlearned skills from previous chapters.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Chapter 6 (1.NBT.1 extend the counting sequence to 120) Students review the work of Kindergarten by counting with smaller numbers and different starting points and then build up to counting up to 120 from any number. At the beginning of each chapter there is a piece that says Common Core State Standards Across the Grades and it show teachers (not students) the connected standards K, 1, & 2. This is not explicit in each lesson but teachers can easily refer back to the Common Core State Standards Across the Grades at the beginning of the chapter.	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Learning Progression at the beginning of the chapter is the place where teachers are informed about concepts prior to grade level knowledge. .	(Reviewer only.) **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **1.NBT.2 &3 Understand Place Value** **1.OA.5 & 6 Add and Subtract within 20** Chapters 6 & 7 cover 1.NBT2 & 3. It would make sense to use the idea of 10 and some more in 1.OA 5 & 6 but they teach them as separate ideas/chapters without the connections.	(Reviewer only.) **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The clusters have their own chapters and in the teachers edition there is no specific connection made, although teachers could easily and explicitly teach their students the connections. The problems students are given are specific to the cluster being taught in that chapter. Students do have a spiral review with problems from previous chapters but the questions do not connect two or more clusters.	(Reviewer only.) **_X_Meets** **__-__Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X_ Meets

___ Does Not Meet

Strengths/Weaknesses:

Each cluster is taught in a chapter and although there is some review through the spiral review the supporting and additional cluster are not present in the teaching of the focal points. The focal points are not present in the additional and supporting chapters. Basically, the clusters each have their own chapter.

No-- Specifically the models. Some models were introduced in kindergarten (ten frame, counters, and matching), when they show up in first grade the teachers edition does not tell teachers this is a previously learned model. When a model (Bar diagram) shows up teachers are not told this is a new model that children have not experienced before.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".) For this section I will choose 1.NBT.B2 Understand place value. According to the Planning Guide this standard is taught in chapter 6. According to the teachers edition this standard is addressed in 6.3, 6.4, 6.5, 6.6, 6.7, and 6.8. (up to 8 days)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **__x__Partially Meets (1)** **____Does Not Meet (0)** (Weakness: Wouldn't it make more sense to do this chapter before you add and subtract within 20 and then connect the two?)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Throughout lessons 6.3-6.8 there are opportunities for students to use their procedural skills. Each lesson provides a Go Deeper with questions for the teacher to ask. Some of the Go Deeper questions push conceptual understanding. When you look at the number 19, how do you know .... If the one in19 means 1 ten, what do you think the 2 in 29 means? How are the numbers ____ & ____ alike? Different? What are two ways to model 20? What patterns do you see_____? There are some conceptual problems but the thought that in 5 lessons children will master the understand place value	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** There are some examples: I am a number less than 50. I have 8 ones and some tens. What numbers can I be? There are 35 cubes. Jun says that there are 3 ones and 5 tens. Rob says there are 3 tens and 5 ones. Who is correct? (With a simple adjustment in the question the teacher could push more conceptually)	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence- Yes** Students use ten frames and written numbers, ten frames and cubes to show the same number, the cubes and place value blocks, always with numbers included. Students are asked to show the numbers in different ways not only 1 ten and 10 ones but also show with different models.	

And then gives a Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Required fluency for 1st grade: Add/Subtract within 10 1.OA.C A add and Subtract Within 20	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** There seems to be a bigger emphasis on procedural rather than on conceptual. Chapter 8 begins with 42 practice problems then is followed by 2 Application problems (conceptual). Next comes 12 practice and 1 conceptual.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **Lesson 8.1 (description above)** Lesson 1.1 begins with pictures showing the concept of putting together and having student draw pictures to show putting together then it goes to story problems/applications. Students then practice putting together with pictures several times so it becomes more procedural. 1.2 moves to connecting cube to show putting together 1.3 goes to drawing circles to represent the story problem and writing number sentences	

Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Chapter 1 has addition practice in every lesson Chapter 2 has subtraction in every lesson plus some addition throughout (not daily) Chapter 3 has addition practice in every lesson plus some subtraction practice (not daily) Chapter has subtraction practice in every lesson plus some addition (not daily) Chapter 5 has addition and subtraction throughout the lessons Chapter 8 has addition and subtraction practice throughout. The other chapters have a daily spiral review in every lesson which sometimes has addition and subtraction practice in them. The curriculum relies on the fluency builder to practice and master addition and subtraction up to 10. Once the topic is not addition and subtraction the fluency practice is limited (0-2 times) per unit.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** 1.OA.A.1 Lesson 1.4 is all addition problem solving that focus on the major work of the grade. There is also a mid-chapter checkpoint with application problems. Lesson 2.4 is all subtraction problem solving that focus on the major work	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_x___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	1.OA.A.2 Lesson 3.11 Problem solving and application Lesson 3.12 Problem Solving Use addition strategies Lesson 4.4 Problem Solving and Applications Subtraction Lesson 4.6 Problem Solving use subtraction strategies	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** 1.OA.A.2 Lesson 3.11 Problem solving and application Lesson 3.12 Problem Solving Use addition strategies Lesson 4.4 Problem Solving and Applications Subtraction Lesson 4.6 Problem Solving use subtraction strategies Chapter 3 Performance Task Chapter 4 Performance Task Chapter 5 Performance Task and assessment 1.OA.A.1 Lesson 1.4 is all addition problem solving that focus on the major work of the grade. There is also a mid-chapter checkpoint with application problems. Lesson 2.4 is all subtraction problem solving that focus on the major work Chapter 1 Performance Task Assessment Chapter 2 Performance Task	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Students use math journals, write addition equations, use bar models, draw pictures, starting with basic and building up.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

____Does Not Meet

Strengths/Weaknesses:

Fluency addition and subtraction essentially stops at chapter 8. There are not performance tasks where students work collaboratively and then discuss whole group.

Strength There is a variety of daily review activities.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence- According to teacher edition** 6.1 MP7 Look for and make use of structure—What patterns do you see (hundreds chart) (only) 6.1 MP2 Reason Abstractly and quantitatively--How did you decide what your first number was? _____, _____, _____, _____, _____, 120 (The problem says use the counting chart so students do not have to do a lot of reasoning --contrived) Lesson 6.2 MP8 Look for and express regularity in repeated reasoning Look at the first column. How is it different from the one you colored? How is it the same? (MP7 instead) Chapter 1-5 students select the correct operation MP2 MP5 Use appropriate tools strategically…Most lesson set up which tools to use so students are not selecting. The teachers edition lists the Mathematical Practices throughout and yet often the work does not fit the listed practice Examples: Mathematical Practice 4 is designed for real life situations but it is not always presented that way Lesson 7.3 MP3 Construct viable book says tell students there can be more than one correct answer but no discussion from there. Lesson 6.4 12.5—MP4 Student use shapes to build more shapes (not MP4)	**(Reviewer only.)** X **Meets (2)** __ **Partially Meets (1)** ____ **Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** MP1—Most problems in a lesson are in the same format so students practice the same format (example 2.4, 1.3, 5.1) and do not have to push themselves beyond the normal. MP2—Through story problems children are asked to select the correct operation, break apart the information to solve, reason and process information. MP4—Solve problems in everyday life. Many of the story and application problems are real life but the teacher edition often suggests that using a model satisfies MP4. MP5—Program most often tells students which tools and models to use.	X **Meets (2)** __ **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Across the grades???? Chapter 1 starts MP4 by looking at pictures and drawing attention to how the picture is modeling the math problem. 1.4 has children use a bar model (more difficult) 12.5 has children has children describe how they use shapes to combine two and make a new shape (MP4 ?????) 12.6 MP4 Shapes again (??) MP1 Make sense of problems and persevere in solving them—Story Problems/Application Problems are given in the same format taught so students do not necessarily have to make sense and persevere to solve.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Planning Guide Program Overview describes the role of the mathematical practices –not specifically how they look in 1st grade but rather overall how they look at different times. The Planning Guide also gives questions to support the Mathematical Practices. It would be important that teachers keep this questions close at hand because those questions are not always in the teacher editions.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Students write in their journals and explain their reasoning/drawings/math work to a classmate. (construct viable arguments) Students could critique the reasoning of other through the journals,(opportunities exist but the program does not explicitly describe) most of the time the teacher would need to plan questions. Teachers can go to page 23 in the Planning Guide to find appropriate questions.	**____Meets (2)** **X Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** The text suggests or specifically tells students which models and manipulatives to use. The teacher edition gives questions for the teacher to ask to promote thinking and arguments. The teacher materials often give possible answers student may have or misconceptions and questions to be asked to help overcome them.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary is introduced to at the beginning of each chapter, games are played to help teach vocabulary and then the vocabulary is used throughout the chapter.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** All vocabulary cards have both English and Spanish on them. Throughout the curriculum there are ELL Strategy instructions. The ELL strategies would be useful strategies to use with all struggling students.	Reviewer only.) __x__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The curriculum provides scaffolding, intervention, and extension in each lesson. The practice and homework is designed to allow students to demonstrate their mathematical independently.	Reviewer only.) __x__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teac[illegible]aterials, noting instructional approaches suggested for whole class[illegible] differentiated lessons and activities.	**Evidence-** Flexible grouping is accomplished when there is reteach, intervention, and extend. The lessons themselves are mostly whole group. The questioning is more student—teacher rather than student—student. The journal writing when they share with a classmate is student-student.	Reviewer only.) __X__Meets (2) __Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **_x___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons are thoughtfully structured, designed to support the teacher in leading the class through the learning. Most of the work of this program is book work there are very few activities that deal with math outside of the textbook.	**(Reviewer only.)** **__X__ Yes** **__ ____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** The design of the materials includes both problems and exercise. Problems that students work through with their teacher and then On Your Own and Homework designed to give students practice to build mastery.	**(Reviewer only.)** **__x____ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Each assignment is given to reflect the new learning, to review previous taught concepts, and to strengthen students mathematical understanding.	**(Reviewer only.)** **__x____ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The teacher edition has the information throughout each lesson showing student look-fors and how to intervene, extend, and differentiate. There are professional development videos to support teachers with their teaching and learning.	**(Reviewer only.)** **___x___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Connecting cubes---used to add and subtract, make and show 10 and some more, pattern blocks used for chapter 12 2-dimensional shapes. These are the main manipulatives used.	**(Reviewer only.)** **__x____ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Every lesson comes with formative assessment in the teacher's guide with what to look for and things to do intervene or extend the lesson. There is a summative assessment at the end of each chapter with a performance task being a part of it. Self-assessment piece for kindergarten students comes in the draw and explain your picture to another student (of course the teacher will need to help students realize it.)	**(Reviewer only.)** **___x___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Each summative assessment comes with an answer key and, a rubric. Formative assessments throughout the lessons tell teachers what to look for and what to do if students are not mastering the content.	**(Reviewer only.)** **__x____ Yes** **_____ No**

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The language is easy to understand for first grade students. They are introduced to the vocabulary at the beginning of each chapter and then the vocabulary is used throughout the lessons so it is not new when students get to the summative assessment	**(Reviewer only.)** **__x____ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Planning Guide pages 16-17	**(Reviewer only.)** **____x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The visual design supports students in engaging thoughtfully with the math through real pictures that show the acting out of the problem, through cartoon pictures that encourage students to really look at what his happening and through use of color to keep students interested.	**(Reviewer only.)** **___x___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	Each lesson has a Home Activity that engages the parents in the work their child is doing. The Home Activities are in the student workbook and easy for parents to follow and engage in.	**(Reviewer only.)** **___x___ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

_____ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	Go Math! Second Grade
ISBN #	
Grade Level(s) or Course:	2
Reviewer ID:	VF and SJ

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

__X__**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Program doesn't assess on listed topics before grade level indicated.

COHERENCE-

Program spends the majority of the time on the major work of second grade.

RIGOR-

Materials have plenty of rigor via problem solving, go deeper, think smarter questions.

CONCEPTUAL UNDERSTANDING-

Materials teach and give students practice with conceptual understanding.

MATHEMATICAL PRACTICES-

Weaker in some areas of mathematical practices such as writing an argument, choosing math tools, and critiquing arguments/errors of others.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Program has a strong RtI, intervention, ELL, reteaching, enrichment supports.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Direc ns for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.
Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.)	**Evidence-** **After reviewing all units in the curriculum, specifically the data and geometry units, I found no evidence of any of these items being assessed in the second grade curriculum.**	**(Reviewer only.)** **Yes! ____ Meets** **____Does Not Meet**

In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)		

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

Yes!____Meets

____Does Not Meet

Strengths/Weaknesses:

All units appear to align with the CCSS for second grade standards. I found no evidence that topics were assessed before introduced in the grade level.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	• From the materials being evaluated: teacher guides, student texts and workbooks	
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **There are five major cluster is second grade math. This curriculum spends 8 out of 11 units (approximately 73%) of the time on these clusters as shown below:** **-Understand place value:** Unit 1: Number Concepts Unit 2: Numbers to 1,000 **- Use place value understanding and properties of operations to add and subtract** **- Represent and solve problems involving addition and subtraction** **- Add and subtract within 20 (CCSS says 100 and 1000)** Unit 3: Basic facts and relationships Unit 4: 2-digit addition Unit 5: 2-digit subtraction Unit 6: 3-digit addition and subtraction **- Measure and estimate lengths in standard units** Unit 8: Length in customary units Unit 9: Length in metric units **- Relate addition and subtraction to length (weaker)** Unit 8: Length in customary units (L5) Unit 9: Length in metric units (L4)	(Reviewer only.) **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.)	**Evidence-** **Supporting clusters are sufficiently covered by units and they support the major clusters of second grade.** **- Work with time and money (Unit 7)** Students are using "Counting On" to count coins, relating	(Reviewer only.) **Yes! ____Meets** **____Does Not Meet/**

Evaluate cha[illegible] and lessons that focus on Supporting Work. NOTE: Example of e[illegible]ting this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	back to place value c[illegible]epts taught in Unit 2. **- Work with equal groups of objects to gain foundations for multiplication** Students are working with equal groups and repeated addition in Unit 3 **- Represent and interpret data (unit 10)** Students are using addition and subtraction concepts from units 3-6 to answer word problems based on graphs. **- Reason with shapes and their attributes (unit 11)** Students are using even/odd numbers (unit 1) to count sides and vertices to find patterns (unit 1) in geometric shapes.	**Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **After thoroughly reviewing the curriculum, I found no discrepancies in the content progression that unduly interfered with grade level content.** **There were a couple times where further grade level concepts were strategically placed, such as repeated addition and equal groups, in the appropriate addition and subtraction unit that build a base for third grade multiplication standards.**	**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater	**Evidence-** **Each lesson of each unit contains on-grade level real world problems to solve that align with the skills stated in the CCSS. In addition, many of the lessons contain 'think smarter' questions which give students the opportunity to problem solve with grade-level problems. Each lesson in each unit contains a reteaching and enrichment pages for differentiated**	**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**

depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**instruction. The reteaching pages still contain on-grade-level problems for lower-performing students to engage in with the guidance of the teacher. The enrichment pages take an on-grade level problem and give the higher-performing students the opportunity to take the day's lesson and go deeper. For example, in Unit 3 lesson 7 the students are working with 'use 10 to subtract.' There is an on-grade-level real world math problem to solve, in addition to 14 more grade level problems. There is one think smarter question where the students are still subtracting from 10, but then have to compare their answer to see if it has the same difference as another equation. The reteaching page has students still working with on-grade-level problems using ten to subtract, but with the guidance of teacher and using unifix cubes for support. The enrich page has higher-performing students creating and solving their own word subtraction from twn problems.**	
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **There are no cluster headings in second grade that specifically state for students to "apply and extend previous understanding."** **Each unit begins with a "show what you know" check up that assesses skills from first grade. Teachers can use this diagnostic assessment to intervene with students who have yet to meet first grade standards.** **Each lesson, in the "lesson at a glance" section contains a "coherence" chart showing the concepts (and standards) from the previous grade, for this lesson, and the link to the after (3rd grade). Example, p. 187 A (Lesson 3.5) shows:** **Standards before: 1.OA.A.1 1.OA.C.6** **Grade 2: 2.OA.B.2** **Grades After: 3.OA.D.8**	**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such.	**Evidence-** **There are no cluster headings in second grade that specifically state for students to "apply and extend previous understanding."** **Each unit begins with a "show what you know" check up that assesses skills from first grade. Teachers can use this diagnostic assessment to intervene with students who have yet to meet first grade standards.** **Each lesson, in the "lesson at a glance" section**	**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**

For context, r[illegible]riterion #5a in the Publishers' Criteria for the Common Core [illegible]ate Standards for Mathematics, Grades K–8 (Spring 2013).	**contains a "coherer[illegible] chart showing the concepts (and standards) fro[illegible]e previous grade, for this lesson, and the link to the after (3rd grade). Example, p. 187 A (Lesson 3.5) shows:** **Standards before: 1.OA.A.1 1.OA.C.6** **Grade 2: 2.OA.B.2** **Grades After: 3.OA.D.8**	
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson has a "lesson at a glance" section that states the CCSSM as well as the learning objective. Eight units in the second grade curriculum focus on the major work clusters. For example, lesson 3.5 states that is meets the CCSS 2.OA.C.3. Fluently add and subtract within 20 using mental strategies. The learning objective is 'Use the inverse relationship of addition and subtraction to recall basic facts.'** **Each unit has a "critical area" section at the beginning of the chapter the shows the major clusters met by each lesson. For example, Unit 3 state the critical area met by the unit is "Building fluency with addition and subtraction." It then break down Lesson 3.8-3.9 meet the major cluster "represent and solve problems involving addition and subtraction." Lessons 3.1-3.7 meet the major cluster "Add and subtract within 20." Lessons 3.10-3.11 meet the supporting cluster "work with equal groups of objects to gain foundations for multiplication."**	**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Example of a connection between clusters in a domain:** In chapter 3, basic facts and relationships, students spend lessons 3.1-3.9 in the OA cluster "Add and subtract within 20." Then it naturally moves students into the OA cluster "work with equal groups of objects to gain foundations for multiplication" by counting equals groups and using repeated addition in lessons 3.10-3.11. Students must use their add and subtract within 20 skills in order to work with equal groups. **Example of a connection between domains:** Students spend the entire chapter 5 in '2-digit subtraction' in the cluster "use addition and subtraction within 100 to solve one- and two-step word problems…" in the Operation and Algebraic Thinking Domain. Then, students use these addition concepts in lessons 8.1-8.7 to "use addition and subtraction within 100 to solve word problems involving	**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**

	lengths…" in the Mea ement and Data Domain.	

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

Yes! ____Meets

____Does Not Meet

Strengths/Weaknesses:

There is multiple evidence, as outlined above, that this programs is strong when it comes to focusing on the major work of second grade and the CCSS.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The authors of this program are listed with their credentials. The reviewers and field test teachers are also listed with their titles. It appears that these are qualified teachers, professors, instructional coaches, interventionists, and principals.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The students work is visually appealing with text clearly and the sections labeled. There are graphs, pictures, models, and so on used to support students learning.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **There is daily homework included in this programs, each contains questions from the lesson, problem solving, and then spiral review questions.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **Yes! ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **- 2.NBT "<u>Understand</u> that the three digits of a three-digit number represent amounts of hundreds, tens, and ones..."** Lesson 1.1 Groups Tens as Hundreds Lesson 2.2 Explore 3-Digit Numbers Lesson 2.3 Model 3-Digit Numbers Lesson 2.4 Hundreds, Tens, and Ones Lesson 2.5 Place Value to 1,000 Lesson 2.6 Number Names Lesson 2.7 Different Forms of Numbers Lesson 2.8 Different Ways to Show Numbers	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** For example, lesson 2.3 from above, has a question that asks the student "There are 2 boxes of 100 pencils and some single pencils on the table. Choose all the numbers that could show how many pencils could be on the table." There are two answers that could be correct and two that could not be correct.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** For example, lesson 2.3 from above, has questions that ask students to write the number for a verbal description of a model. "Write the number for the clue. A model for my number has 2 hundreds blocks, no tens blocks, and 3 ones blocks."	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2,		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **Yes! ____Meets (2)**

4.NBT.B.4, 5.[illegible]B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.E[illegible]a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		____Partially Meets (1) ____Does Not Meet (0)
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **2.OA.2 <u>Fluently</u> add and subtract within 20 using mental strategies.** Unit 3 covers 'basic facts and relationships of addition and subtraction,' teaching mental math strategies such as using doubles **2.NBT.5 <u>Fluently</u> add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction.** Chapter 4 teaches two-digit addition and chapter 5 teaches two-digit subtraction The "Fluency Builder section" at the beginning of certain lessons in each of these chapters is an additional bonus for students to practice fluency, but in my opinion, is not enough practice. I think students will need more practice (like daily). More practice is available on the online component.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Yes, I checked several of the lessons in the chapters listed above, and they all had plenty of purely procedural problems where students could use strategies to solve. For example, lesson 3.5 has students using related facts to solve 4+3 and then 7-3.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** The lessons all appear to have plenty of repeated practice. For example, lesson 3.5, as cited above has 25 problems for students to solve to practice that lesson's concept. Repeated practice is also present on the homework. *Note, there are several more resources (games, flashcards, practice sheets) that came in what appears a separate centers kit and on the online portion, so this is much stronger	

	if these additions are p[illegible]ased.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **Yes! ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are specific problem solving lessons in each chapter. Unit 1, lesson 7 Unit 2, lesson 11 Unit 3, lesson 10 Unit 4, lesson 9 Unit 5, lesson 9, 11 Unit 6, lesson 6 Unit 7, lesson 7 Unit 8, lesson 5 Unit 9, lesson 4 Unit 10, lesson 6 Unit 11, lesson 11 In addition to this, each lesson starts with a single-step "Unlock the Problem" question for students to be guided through problem solving. Furthermore, each lesson contains "Go Deeper" questions which are often two-step and "Think Smarter" questions where students must use what they are learning to solve a related problem.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can	**Evidence-** Chapters 3, 4, 5, 6 are all on addition and subtraction, which is a major work of 2nd grade. Each lesson in each chapter contains several problems to solve via "Unlock the problem – Real	

represent and solve a full range of one-step multiplication and division word problems. Show how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	World" and "Unlock the problem – Applications."	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** I viewed the progress of modeling in addition and subtraction. In second grade, they begin with using counters to double, ten frames to made a ten, number bonds to add 3 addends, and squares to practice basic subtractions. It then builds into 2-digit and then further on 3-digit addition and subtraction with place value blocks.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

Yes! ____Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

Rating this Criterion
Alignment Criterion 2 is rated as Meets or Does Not Meet.
To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will

The Stand require that designers of instructional materials c ect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	• Focus by Grade Leve e grade being evaluated (www.achievethecore.org/foc • From the materials being evaluated: teacher guides, student texts and workbooks	earn all 6 points; materials are judged ve met Alignment Criterion 2 if the materials e or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **addition table** not found – big weak spot **multiplication table** (not found in second grade, but not a major work) **the properties of operations** No specific Lessons found – big weak spot **the relationship between addition and subtraction** Lesson 3.5 Relate Addition and Subtraction **The relationship between multiplication and division** (not found in second grade, but not a major work) **Other:** Students use ten frames to break apart numbers to find sums of ten is lesson 3.3. Students use number bonds in lesson 3.4 to add three addends.	**(Reviewer only.)** **____Meets (2)** **Yes ____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **Yes! ____Meets (2)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The full language of the standards is emphasized through the whole year and are specifically marked in the lessons with red 'mathematical practice' bubble and the number of the mathematical practice. For example, Lesson 1.2 #12 has 'mathematical practice ' red bubble by it and students are asked to use reasoning.	**____Partially Meets (1)** **____Does Not Meet (0)**

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** From what I can tell, yes the practice standards are grade appropriate (this is hard to fully say yes, since I've only looked at two grade levels). For example, the make argument question listed above from lesson 1.2 asks students to use reasoning to figure out the problem "Jacob and Lucas each have the same number of shells. Together they have 16 shells. How many shells do Jacob and Lucas each have?" That is developmentally appropriate for a second grader to use reasoning to solve that problem.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Pages PG20-PG22 fully explains the mathematical standards.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)** **Yes ____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Each lesson contains "Math talk" bubbles where it asks students to describe or explain a math concept. There are also problems called "Make Arguments" where students must explain (make an argument) in order to fully solve and answer a problem. There are also "Think smarter" questions where a student's work is shown on the paper with an error and students must explain the mistake.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Yes, I have stated several times above where students are asked to make arguments, write explanations, and well as use models to solve problems.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** The language of mathematics via the vocabulary is taught at the beginning of each unit. There are plenty of times students are asked to make an argument or write an explanation. However, I did not find where students are specifically taught how to write an argument of explanation.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

Yes ____Does Not Meet

Strengths/Weaknesses:

There are multiple times in each unit/chapter where students are asked to make connections in math via math talk, vocabulary, written explanations and so on. It's lacking on having students choose a tool and critique the work/errors/arguments of others. It's also lacking in using addition and subtraction tables and teaching relationships, which is a major work of second grade.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** In each lesson there is a black and green 'ELL' bubble (in the teacher's edition) with a strategy and an explanation of that strategy to develop vocabulary and understanding within the ELL population.	**Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** In each lesson there is a reteach lesson (for scaffolding and intervention support) as well as an advanced learns and an enrich section (for differentiation of advanced students). In the teacher edition, there is also the ELL section described above, a common errors box, and also the show what you know check-up previously described to make sure students are ready for the third grade instruction. There is also a (separate) tier 2 and tier 3 intervention books. The online component offer additional help for differentiation.	**Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The addition and subtraction units that I focused my time on evaluating had multiple opportunities for hands-on lessons by modeling with counters, squares, ten frames number bonds, and place value blocks. There's also small group and pair-share instructional approaches.	**Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met.		**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Check the fin ing. Then, briefly be the strengths and weaknesses of these materials in light of the above Criterion. ewer only.) **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	This programs includes reteac enrichment, ELL support, RtI intervention components, online support, various instructional strategies, use of models and manipulatives.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each lesson is broken into five parts which instruct the teacher on how to guide and support his/her students through the learning paths.**	**(Reviewer only.)** **Yes_____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Each lesson has guided, as well as on your own section problems for students to solve based on new information learned. Additionally, there's an applications section at the end of the lessons where students have to apply what they have learned in order to solve an exercise.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** **The design of assignments is not haphazard, each lesson has a great flow of sequence and students are building knowledge of knowledge in order to reach a high understanding of the concepts.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**

4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** **Each chapter comes with a teacher book. The teacher book contains:** **- guidance on lesson flow (per lesson)** **- suggestions for ELL, reteaching, enrichment, and differentiated instruction** **- interventions** **- math talk prompts** **- common error alerts** **- developing math language** **- teaching for depth** **- daily classroom management**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **Yes manipulatives are often suggested (without being too much) are help the students to visually understand the concepts they are writing.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **Each chapter contains a pre, mid, and post test summative assessment. In addition, each lesson contains a formative quick-check assessment for daily intervention and enrichment. Each chapter also contains a performance task.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **The summative and formative assessments mentioned above each have a scoring guide that shows teachers where and how to intervene based on which questions were missed, in addition to how to accelerate for high achieving students. The performance task also includes a scoring rubric and samples of student work that received each score.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Based on the tests I reviewed, the assessments in the chapters are accessible and unbiased and the student at this grade level should be able to understand the language used in student prompts.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: Second Grade**

Publisher: Houghton Mifflin Court **Copyright: 2015** **ISBN:_____**

Reviewer ID # VF and SJ **Date Review Completed:2/15/2016**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **Yes! _____ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **Yes! _____ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **Yes! _____ Meets** **_____ Does Not Meet**	

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: 6 of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **Yes_____ Meets** **_____ Does Not Meet**	**Points: 4 of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **_____ Meets** **NO _____ Does Not Meet**	**Points: 6 of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **Yes _____ Meets** **_____ Does Not Meet**

Alignment Criteria Overall: **_____ Meets No _____ Does Not Meet**		

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes NO _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

This program meets all of the non-negotiables and most of the alignment criterion. The program is strong with use of instructional strategies, using manipulatives, vocabulary, ELL support, differentiation, assessment, performance tasks, RtI guides, and homework. The program is lacking in mathematical practices as it is weaker is teaching some addition and subtraction concepts, which is a major work in second grade. It also lacks in critiquing the arguments of others and having students pick their own tools.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	GO Math Grade 3
ISBN #	
Grade Level(s) or Course:	3

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY: Go Math meets all criterion for a Core Math program

FOCUS- Go Math 3 NN1 + 2 - This program does not assess any listed topics before the grade level and focuses on the major work of third grade

COHERENCE- NN2 - GoMath 3 supports all content clusters with respect of previous and future grade level work.

RIGOR- AC1 - GoMath 3 address understanding and fluency through modeling and problem-solving with rigor and balance.

CONCEPTUAL UNDERSTANDING- AC1 - Go Math 3 addresses conceptual understanding throught each chapter and lesson.

MATHEMATICAL PRACTICES- AC2 - Go Math 3 includes and emphasized all mathematical practices in all chapters and lessons

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- AC3 - Go Math provided lesson that are clearly explained for studens and teachers with support for all groups of learners and teachers.

OTHER:
The RTI - Tier I and 3 are very supportive of the RTI process as well as ELL students.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

	various lessons fro rious units) Unit 1: Addition and Subtraction Within 1000 (specifically lesson 12) Unit 3: Understand Multiplication (specifically lesson 4) Unit 4: Multiplication Facts and Strategies(specifically lesson 10) Unit 5: Use Multiplication Facts (specifically lesson 3) Unit 6: Understand Division (specifically lesson 1) Unit 7: Division Facts and Strategies (specifically lesson 10)	
Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Supporting clusters are sufficiently covered by units and they support the major clusters of third grade.** **- Represent and Interpret Data:** Unit 2: Represent and Interpret Data **- Reason with shapes and their attributes** Unit 12: Two-Dimensional Shapes	**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful	**Evidence-** **After thoroughly reviewing the curriculum, I found no discrepancies in the content progression that unduly interfered with grade level content.** **There was a couple times where further grade level concepts were strategically placed. For example, in fractions where students had to find ¼ of 12. This meets the third grade standard of understanding of fraction as a whole partitioned into equal parts, but also develops a base for multiplication of fractions, which is a fourth grade standard.**	**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**

discrepancies; content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson of each unit contains on-grade level real world problems to solve that align with the skills stated in the CCSS. In addition, many of the lessons contain 'think smarter' questions which give students the opportunity to problem solve with grade-level problems. Each lesson in each unit contains a reteaching and enrichment pages for differentiated instruction. The reteaching pages still contain on-grade-level problems for lower-performing students to engage in with the guidance of the teacher. The enrichment pages take an on-grade level problem and give the higher-performing students the opportunity to take the day's lesson and go deeper. For example, in Unit 4 lesson 2 the students are working with 'multiply with 5 and 10.' There are two on-grade-level real world math problems to solve, in addition to 29 more grade level problems. There are two think smarter questions where the students are still multiplying with 5 and 10, but then have to solve more than one multiplication fact, and then add one of them in order to solve. There are also two go deeper questions where the students have to problems with multiple steps. The reteaching page has students still working with on-grade-level problems to multiply, but with the guidance of teacher and using colored tiles for support. The enrich page has higher-performing students solving missing number equations involving multiplying with 5 and 10.**	**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **There are no cluster headings in third grade that specifically state for students to "apply and extend previous understanding."** **Each unit begins with a "show what you know" check-up that assesses skills from second grade. Teachers can use this diagnostic assessment to intervene with students who have yet to meet second grade standards.** **Each lesson, in the "lesson at a glance" section contains a "coherence" chart showing the concepts (and standards) from the previous grade, for this lesson, and the link to the after (4th grade). Example, p. 223 A (Lesson 4.6) shows:** **Standards before: 2.NBT.A.2** **Grade 3: 3.OA.B.5** **Grades After: 4.NBT.B.5**	(Reviewer only.) **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each unit begins with a "show what you know" check up that assesses skills from second grade. Teachers can use this diagnostic assessment to intervene with students who have yet to meet second grade standards.** **Each lesson, in the "lesson at a glance" section contains a "coherence" chart showing the concepts (and standards) from the previous grade, for this lesson, and the link to the after (4th grade). Example, p. 223 A (Lesson 4.6) shows:** **Standards before: 2.NBT.A.2** **Grade 3: 3.OA.B.5** **Grades After: 4.NBT.B.5**	(Reviewer only.) **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson has a "lesson at a glance" section that states the CCSSM as well as the learning objective. Nine units in the third grade curriculum focus on the major work clusters. For example, lesson 4.6 states that it meets the CCSS 3.OA.B.5. Apply properties of operations as strategies to multiply and divide. The learning objective is 'Use the Associative Property of Multiplication to multiply with three factors.'** **Each unit has a "critical area" section at the beginning**	(Reviewer only.) **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**

	of the chapter the s[illegible]s the major clusters met by each lesson. For example, Unit 4 states the critical area met by the unit is "Developing understanding of multiplication and division and strategies for multiplication and division within 100." It then breaks down Lessons 4.1-4.3 meet the major cluster "represent and solve problems involving multiplication and division." Lessons 4.4 and 4.6 meet the major cluster "Understand properties of multiplication and the relationship between multiplication and division.' Lessons 4.5, 4.8, 4.9 meet the major cluster "multiply and divide within 100." Lesson 4.7, 4.10 meet the major cluster "solve problems involving the four operations, and identify and explain patterns in arithmetic."	
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Example of a connection between clusters in a domain:** In chapter 3, understanding multiplication, students spend lessons 3.1-3.5 in the OA cluster "Represent and solve problems involving multiplication and division" by counting equals groups, using repeated addition, skip counting on a number line, and modeling with Arrays. Then it naturally moves students into the OA cluster "understand properties of multiplication" by having students use the multiplication strategies in lessons 3.1-3.5 to solve problems using the commutative property of multiplication in lesson 3.6. **Example of a connection between domains:** Student spend lesson 3.5 'modeling multiplication with arrays' and lesson 4.4 'breaking apart arrays' in the cluster "represent and solve problems involving multiplication and division" in the Operation and Algebraic Thinking Domain. Then, students use these array concepts to understand, measure, model, and problem solve with area in chapter 11, lessons 11.4-11.8 which is in the "Geometric measurement: understand concepts of area and relate area to multiplication and to addition" cluster of the Measurement and Data Domain.	**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**		**(Reviewer only.)** **Yes! ____Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.	**There is multiple evidence, as outlined above, that this programs is strong when it comes to focusing on the major work of third grade and the CCSS.**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1 **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Stan rom the Major Work that is aligned to each aspect of rigor and use i evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A valuate Metric 1A. Record evidence for eac estion and rate Metric 1A.** **Yes! ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **- 3.OA "Understand properties of multiplication and the relationship between multiplication and division."** Lesson 3.6 Commutative Property of Multiplication Lesson 4.4 Distributive Property Lesson 4.6 Associative Property of Multiplication Lesson 5.3 Problem Solving Use the Distributive Property Lesson 6.7 Relate Multiplication and Division Lesson 6.8 Write related multiplication and division facts **3.NBT "Use place value understanding and properties of operations to perform multi-digit arithmetic."** Unit 1 – all lessons meet fluently add and subtract within 1000 Lesson 1.3 Estimate Sums Lesson 1.7 Use Place Value to Add Lesson 1.8 Estimate Differences Lesson 1.10 Use Place Value to Subtract Lesson 1.11 Combine Place Values to Subtract Lesson 5.4multiplication strategies with multiples of 10	

	Lesson 5.5 Multiply digit numbers by multiples of 10 **3.NF "Develop <u>understanding</u> of fractions as numbers."** Unit 8 – all lessons Unit 9 – all lessons **3.MD "Geometric measurement: <u>understand</u> concepts of area and relate area to multiplication and to addition."** Lesson 11.4 Understand Area Lesson 11.5 Measure Area Lesson 11.6 Use Area Models Lesson 11.7 Problem Solving Areaa of Rectangles Lesson 11.8 Area of combined Rectangles	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** For example, lesson 5.5 from above, has a question that asks the student to find a 2-digit number that is a multiple of 10 and has 3 for one of its factors. There are three correct answers the students could find, and then students need to explain how they can solve the problem.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** For example, lesson 5.5 from above, has a question that asks students to use multiplying by 10 (the concept of the lesson) to answer questions from a table. Students will have to find a relationship between numbers in the table. This concept further stretches the relationships in numbers that they which they were taught to do in lesson 4.7 'patterns on the multiplication table' and in 1.1 number patterns.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **Yes ____Meets (2)**

metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		____Partially Meets (1) ____Does Not Meet (0)
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **3.OA.7 <u>Fluently</u> multiply and divide within 100** Unit 3, 4, 5, 6, 7 are all on multiplication and division. Specifically chapter 4 covers 'multiplication facts and strategies,' chapter 5 covers 'use multiplication facts,' and chapter 6 covers 'division facts and strategies,' all which focus on giving students strategies to fluently multiply and divide. **3.NBT.2 <u>Fluently</u> add and subtract within 1000** Chapter 1 covers addition and subtraction within 1,000 students use place value and properties to add. The "Fluency Builder section" at the beginning of certain lessons in each of these chapters is an additional bonus for students to practice fluency, but in my opinion, is not enough practice. I think students will need more practice. The online components have daily fluency practice worksheets in the teacher's section. The triangle cards that come in the manipulatives boxes are fluency practice as well.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** Yes, I checked several of the lessons in the chapters listed above, and they all had plenty of purely procedural problems where students could use strategies to solve. For example, lesson 1.5 has students use strategies to solve 13+26+54 and 57+62+56+43.	

Do the materi[illegible] grades K–6 provide repeated practice toward attainment of [illegible]cy Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** The lessons all appear to have plenty of repeated practice. For example, lesson1.5, as cited above has 13 problems for students to solve to practice that lesson's concept. Repeated practice is also present on the homework. *Note, there are several more resources (games, flashcards, practice sheets) that came in what appears a separate centers kit and on the online portion, so this is much stronger if these additions are purchased.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are specific problem solving lessons in each chapter. Unit 1, lesson 12 Unit 2, lesson 1 Unit 3, lesson 4 Unit 4, lesson 10 Unit 5, lesson 3 Unit 6, lesson 1 Unit 7, lesson 10 Unit 8, lesson 9 Unit 9, lesson 1 Unit 10, lesson 5 Unit 11, lesson 7 Unit 12, lesson 8 In addition to this, each lesson starts with a single-step "Unlock the Problem" question for students to be guided through problem solving. Furthermore, each lesson contains "Go Deeper" questions which are often multi-step and "Think Smarter" questions where students must use what they are learning to solve a related problem.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Chapters 3, 4, 5, 6, 7 are all on multiplication and division, which is a major work of 3rd grade. Each lesson in each chapter contains several problems to solve via "Unlock the problem – Real World" and "Unlock the problem – Applications."	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** I viewed the progress of modeling in multiplication and division. In second grade, students use equal groups and repeated addition to begin modeling multiplication. They them repeat these two in third grade and build off of it to model multiplication with equal groups, repeated addition, skip counting, and arrays. They take it further into division by modeling division with equal groups, bar models, and arrays.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

Yes ____Meets

____Does Not Meet

Strengths/Weaknesses:

This program is full of real world problems, think smarter, and go deeper questions in order for students to meet the standards' rigorous expectations.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **addition table** (not found in third grade, but not a major work) **multiplication table** Lesson 4.7 patterns on the multiplication table **the properties of operations** Lesson 1.5 use properties to add Lesson 3.6 Commutative property of multiplication Lesson 4.4 Distributive property Lesson 4.6 Associative property of multiplication **the relationship between addition and subtraction** (not found in third grade, but not a major work) **The relationship between multiplication and division** Lesson 6.7 Relate Multiplication and division Lesson 6.8 Write Related Facts Another major work for third grade is area. Measurement should demonstrate the understanding of area and relate area to multiplication and division. Ten lessons in chapter 11 are solely devoted to area using array model,	**(Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

	tiling models, distri e property of multiplication.	
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The full language of the standards is emphasized through the whole year and are specifically marked in the lessons with red 'mathematical practice' bubble and the number of the mathematical practice. For example, Lesson 6.2 #9 has 'mathematical practice 3' red bubble by it and students are asked to make arguments.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** From what I can tell, yes, the practice standards are grade appropriate (this is hard to fully say yes, since I've only looked at two grade levels). For example, the make argument question listed above from lesson 6.2 asks students to explain the 28 seashells can be shared equally among the 6 people in her family. That is developmentally appropriate for a third grader to make that argument.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Pages PG20-PG22 fully explains the mathematical standards.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Each lesson contains "Math talk" bubbles where it asks students to describe or explain a math concept. There are also problems called "Make Arguments" such as the one described in lesson 6.2 where students must explain (make an argument) for if sharing a certain number of seashells is possible. There are also "Think smarter" questions where a student's work is shown on the paper with an error and students must explain the mistake.	

Do the materi[illegible]pport students in producing not only answers and solutions, but [illegible] in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Yes, I have stated several times above where students are asked to make arguments, write explanations, and well as use models to solve problems.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** The language of mathematics via the vocabulary is taught at the beginning of each unit. There are plenty of times students are asked to make an argument or write an explanation. However, I did not find where students are specifically taught how to write an argument or explanation.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet** **Strengths/Weaknesses:** **There are multiple times in each unit/chapter where students are asked to make connections in math via math talk, vocabulary, written explanations and so on.**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that

able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.		no single metric can receive a rating of 0 and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** In each lesson there is a black and green 'ELL' bubble (in the teachers edition) with a strategy and an explanation of that strategy to develop vocabulary and understanding within the ELL population. The online resources had many items available in Spanish.	**Reviewer only.)** **Yes____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** In each lesson there is a reteach lesson (for scaffolding and intervention support) as well as an advanced learns and an enrich section (for differentiation of advanced students). In the teacher edition, there is also the ELL section described above, a common errors box, and also the show what you know check-up previously described to make sure students are ready for the third grade instruction. There is also a (separate) tier 2 and tier 3 intervention books. The online resource has an RtI resource with personalized learning paths.	**Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The multiplication, division, and fraction units that I focused my time on evaluating had multiple opportunities for vocabulary and hands-on lessons by modeling with counters, squares, fraction bars, and fraction circles. There is a wide range of questioning and math talk, but flexible group and pair-share could have been a bit stronger.	**Reviewer only.)** **Yes____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special**		**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet**

populati[illegible]. **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**Strengths/Weaknesses:** In each lesson there is a black and green 'ELL' bubble (in the teachers' edition) with a strategy and an explanation of that strategy to develop vocabulary and understanding within the ELL population. In each lesson there is a reteach lesson (for scaffolding and intervention support) as well as an advanced learns and an enrich section (for differentiation of advanced students). In the teacher edition, there is also the ELL section described above, a common errors box, and also the show what you know check up previously described to make sure students are ready for the third grade instruction. There is also a (separate?) tier 2 and tier 3 intervention books.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**

1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Each lesson is broken into five parts which instruct the teacher on how to guide and support his/her students through the learning paths. Lessons are clearly explained in easy to read and practical manners. Teacher Edition for each lesson included the lesson objective, teaching vocabulary, problem of the day, and hands-on investigations of the math concept along with modeling suggestions. Differentiated instruction is also available daily.	(Reviewer only.) Yes! _____ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Each lesson has guided, as well as on your own section problems for students to solve based on new information learned. Additionally, there's an applications section at the end of the lessons where students have to apply what they have learned in order to solve an exercise. There is a comprehensive design which includes a variety of problem solving activities in a lesson, including algorithms, fluency practice, word problems, drawing, matching, tables, number lines base ten blocks, vocabulary cards ,and games.	(Reviewer only.) Yes! _____ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- The design of assignments is not haphazard, each lesson has a great flow of sequence and students are building knowledge in order to reach a high understanding of the concepts. Each unit is building on the previous one, such as addition and subtraction leading into multiplication and division, and then into fractions, measurement, and data. The end of the year resource also has a get ready for fourth grade unit.	(Reviewer only.) Yes! _____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Each chapter comes with a teacher book. The teacher book contains: - guidance on lesson flow (per lesson) - suggestions for ELL, reteaching, enrichment, and differentiated instruction - interventions - math talk prompts - common error alerts - developing math language (vocabulary) - teaching for depth	(Reviewer only.) Yes!_____ Yes _____ No

	- daily classroom management The online resource also includes interactive student and teacher resources.	
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Yes manipulatives are often suggested (without being too much) and are helping the students to visually understand the concepts they are writing. The manipulative are an integral part of the program and enhance learning.	(Reviewer only.) Yes!_____ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Each chapter contains a pre, mid, and post test summative assessment. The end of the unit also includes a chapter review before the post test. In addition, each lesson contains a formative quick-check assessment for daily intervention and enrichment. Each chapter also contains a performance task. There are also portfolio suggestions. There is also a SBAC testing guidebook.	(Reviewer only.) Yes!_____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- The summative and formative assessments mentioned above each have a scoring guide that shows teachers where and how to intervene based on which questions were missed, in addition to how to accelerate for high achieving students. The performance task also includes a scoring rubric and samples of student work that received each score. The online resources includes assessments options for students.	(Reviewer only.) Yes! _____ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Based on the tests I reviewed, the assessments in the chapters are accessible and unbiased and the student at this grade level should be able to understand the language used in student prompts.	(Reviewer only.) Yes! _____ Yes _____ No

9. Materials carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The authors of this program are listed with their credentials in the students and teacher books. The reviewers and field test teachers are also listed with their titles. It appears that these are qualified teachers, professors, instructional coaches, interventionists, and principals.**	**(Reviewer only.)** **Yes! _____ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The students work is visually appealing and engaging with clear text and the sections labeled. There are age-level appropriate graphs, pictures, models, and so on used to support students learning. The online program is also engaging and supporting the subject.**	**(Reviewer only.)** **Yes! _____ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **There is daily homework included in this program, each contains questions from the lesson, problem solving, and then spiral review questions. The homework pages do not include enough information for parents to be able to help their child with the homework (ex: how to do this). It also doesn't state the standard being addressed by the homework. It could also use more fluency practice on the homework. The online resource could help with this.**	**(Reviewer only.)** **Yes! _____ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: Third Grade**

Publisher: Houghton Mifflin Court **Copyright: 2015** **ISBN:_____**

Reviewer ID # VF and DD **Date Review Completed:2/15/2016**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non-Negotiable 2: Focus and Coherence
Yes!_____ Meets _____ Does Not Meet	Yes!_____ Meets _____ Does Not Meet

Non-Negotiable Overall:

Yes!_____ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) Yes!_____ Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) Yes!_____ Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) Yes!_____ Meets _____ Does Not Meet

Alignment Criteria Overall:

Yes!_____ **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? Yes! _____ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

This program meets all the major, supporting, and additional clusters of third grade. It has everything needed to be a core mathematics program.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	GoMath! Premium Classroom Package with SBAC Gr. 4
ISBN #	9780544504493 / 2015
Grade Level(s) or Course:	Gr. 4
Reviewer ID:	LW, KT

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- This program aligns with CCSS. There are no topics/skills assessed that are not required by the grade level standards. Topics build upon prior knowledge from previous grade-levels.

COHERENCE- Program focuses coherently on the Major Works of the grade, in a way that is consistent with the progressions in the standards. Program meets the criteria of "Focus on the Major Work of the grade" 65-85% of the time.

RIGOR- Program meets the requirement for rigor in the areas of conceptual understanding, procedural skill, and fluency, and applications. However, it is noted that the program doesn't provide many opportunities for fluency building + practice throughout. In addition, the program is weak in providing multi-step contextual problems.

CONCEPTUAL UNDERSTANDING- This program thoroughly attends to conceptual understanding. Procedural skill is interwoven with the opportunity for students to build conceptual understanding with high-quality problems + discussion questions with opportunity to interpret mathematics through discussion questions throughout.

MATHEMATICAL PRACTICES- Mathematical Practices are woven throughout the entire program in Teacher's Edition as well as student edition. MP's are clearly marked everywhere they appear for teacher and student. MPs are also infused in the types of problems and discussion points in each lesson. However, completly missing is depth of mathematical reasoning. The language of argument, problem solving and explanation is assumed, not taught.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Variety of instructional approaches included throughout, to support special populations. Thoughtful support is given to make sure all students are able to meet the standards. Ample differentiation materials are included that will allow all learners to engage with on-grade-level content.

OTHER: This program fully supports the teacher to meet the Common Core Standards in a rigorous, conceptual manner, attending to special populations and differentiation, in a very clear, organized, easy to follow manner.

The only areas of weakness noted were lack of multi-step problems, not enough fluency and practice problems, and depth of mathematical reasoning in the areas of constructing arguments effectively and justifying mathematical claims.

Mathematics Evaluation Tool Grades K-8

Publisher: Houghton Mifflin Harcourt

Title of Material: Go Math! Grade 4

Author: _____

ISBN #: 9780544450493 **Copyright** 2015

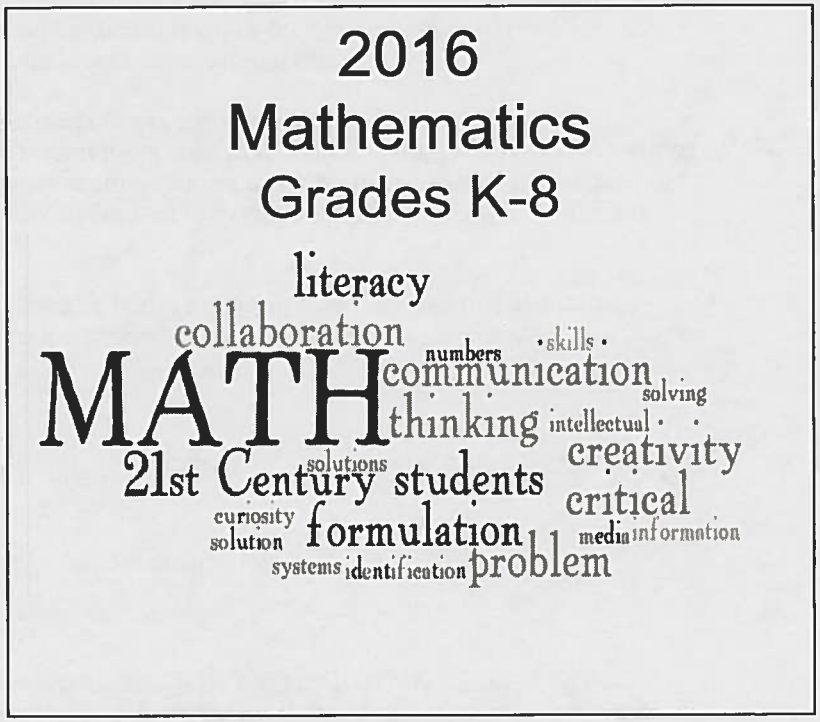
Reviewer ID: LW KT

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.
- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).
- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.
- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.
- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.
Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit,	**Evidence-** **Materials Reviewed: Teacher Edition- Table of Contents,Chapter Tests, and Unit Tests.** **The curriculum aligns with the standards. It builds upon prior knowledge from previous grade levels**	**(Reviewer only.)** **__X_Meets** **____Does Not Meet**

correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**in order to introduce topics required in the standards for 4th grade and assesses those skills only.** **No topics/standards/skills are assessed in this grade level that are not introduced and required by the standards of this grade level.**	
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**(Reviewer only.)** **_X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Strength: The curriculum does a good job of reviewing prior knowledge in order to build new concepts that this grade level requires. It doesn't go beyond the scope of the standards and distract the learner from what the standards require him to know at this grade level.**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A.	Evidence-	(Reviewer only.)
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade. **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Materials Reviewed: Teacher Edition, Student Edition.** **Teacher Edition: Table of Contents - dedicates 58 pgs. (8 lessons) to place value, dedicates 83 pgs. (12 lessons) to OA mult./div., distr. property w/place value dedicates 50 pgs. (7 lessons) to multiplication, 72 pgs. (12 lessons) to division. Dedicates 6 lessons to factors/multiples/ prime/composite/ number patterns.** **Student and Teacher Edition devotes a large amount of time on the MAJOR Clusters:** **Chapter 1 spends a large amount of time on NBT 1-3 a MAJOR Cluster - multiple approaches and sufficient practice/exploration is included.** **Ch. 2 includes NBT 1&3 and OA 1-3 –– uses multiple methods for teaching and solving these problems. Introduction to the concept builds on prior knowledge. Practice and exploration of topics is adequate for a MAJOR Cluster.** **Ch. 3: OA & NBT are both MAJOR CLUSTERS and ch. 3 provides adequate practice/exploration.** **Ch. 4 (OA & NBT MAJOR CLUSTERS) gives adequate practice/exploration using multiple models for division.** **Ch. 5 (Supporting Cluster - factors/multiples) provides 33 pgs. in student guide dedicated to this - about half of what is provided for a major cluster.)** **CH. 6 (fractional equivalence and ordering/comparing MAJOR Cluster) provides 55 pgs. in student.guide dedicated to it.** **CH. 7 (add/subt. fractions) provides 70 pgs. in student guide dedicated to this Major Cluster.** **Ch. 8 multiplying fractions by a whole number is a MAJOR cluster and there are 30 pgs. in student guide dedicated to this.** **Decimal/Fractions is also a Major Cluster, and there are only 44 pgs. in student guide dedicated to the topic. This is a little light for a MAJOR Cluster.** ****The curriculum spends a large amount of time on Geometry/angle measurement. (Ch. 10-13) even though this is listed as an 'ADDITIONAL CLUSTER'** **-- - - -Whereas... - - - -** ****MD4 (represent and interpret data) is a 'Supporting**	**__X_Meets** **____Does Not Meet/** **Insufficient Evidence** **Strength:** **Based on the guideline that the MAJOR Clusters take up 65-85% of the content, this curriculum meets this criterion.** **Weakness: This curriculum focuses quite a large chunk of time on 'additional clusters' (i.e. geometric measurement/geometry MD 5-7 and G1-3)**

	Cluster' and only 5 [illegible]s. in the student guide are dedicated to it.	
Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Factors/Multiples is a supporting cluster. This curriculum uses the study of factors//multiples to strengthen array model study, multiplication fact practice, and simple long division re Ch. 5.** **Measurement and Data is also a supporting cluster. These topics are introduced and graphs and data displays are utilized to build on word problem fluency with the four operations, solve problems involving mixed-measures by converting measurements using the four operations, estimation skills, ratio tables as strategy/method for solving problems, and fractions. Ch. 12**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might	**Evidence-** The content of this program follows the standards progressions for this grade level. Content from previous or future grade levels does not interfere with the grade-level content and focus here. Each teacher's edition clearly shows the standards progression from previous grade levels, this grade level, and future grade levels. Each chapter follows the table of contents' progression of Common Core learning	**(Reviewer only.)** **___X_Meets** **____Does Not Meet/** **Insufficient Evidence**

purposefully ch[illegible] to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	progressions acr[illegible]s the grade.. The units, chapters, and lessons do not contain content that is out of progression of the standards for the grade level. The Planning Guide shows the learning progression.	
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The materials give students opportunity to practice skills with a great number of on grade-level problems. **The materials relate on-grade level concepts explicitly to prior knowledge from earlier grades.** Evidence: Each chapter includes a real-world 'project' where students can use the math skill in a real world situation. Within this project is an 'extension' to the project which allows high level learners to gain a greater depth of the concepts. Each lesson provides several reteach opportunities via resources within the lesson, online activities and 'personal math trainer' videos. The Teacher's Edition provides ways to differentiate - either enrich, reteach, work with advanced learners, or with tiered interventions. Enrichment opportunities are also available in each lesson. Grab-and-Go Centers kit allow for differentiation... deeper understanding and/or	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

	reteach opportunities. RTI materials are available. Reteach materials on-grade level with additional support.	
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each chapter assesses prior knowledge in the first few pages in the section "Show What You Know and assesses knowledge from previous grade levels. Examples: Prior knowledge of place value extends into estimating and solving the four operations. Prior knowledge of 'developing an understanding of fractions as numbers' (3rd gr.) extends into understanding of fraction equivalence and ordering (4th gr.) The standard, "Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers' relies on previous knowledge and understanding of number sense and applying properties. Students extend these skills to fractions by using models and symbols. (Ch. 7) This curriculum includes many models students can use to construct and deconstruct fractions. Multiplication and division is built upon from 3rd grade.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate	**Evidence-** The curriculum clearly shows at the beginning of each chapter a chart with the Core progressions from previous grade level to future grade level. Section at the beginning of each chapter called, 'Show what you Know' accesses prior	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/**

both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	knowledge. This section is clearly identified with, "Check your understanding of important skills" tag-line. In the student edition, it is NOT clearly identified as 'content from previous grades'. It IS clearly identified in the teacher's edition by stating: "Use the Show what you Know section to determine if students need intervention for the chapter's prerequisite skills."	**Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **This curriculum does a good job of listing and referring back to the standards in all of its learning objectives.** **Student Edition shows standards and mathematical practices at the beginning of each lesson.** **Mathematical practice is clearly indicated next to each problem in the student edition.** **The learning objectives for all chapters are listed in the teacher's edition at the beginning of each chapter labeled, "Chapter at a Glance" and each lesson begins with "Lesson at a Glance" which lists cluster standards that will be focused on in that lesson.** **The Learning Objective, Language Objective, and The Essential Question are also focused on the cluster standards.** **Teacher's Table of Contents lists the domain standards for each chapter.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this	**Evidence-** **This curriculum DOES connect clusters in a domain, and domains in a grade.** **Factors and Multiples are connected to Equivalent and Simplified Fractions.** **Multiplication is connected to equivalent fractions. Ch. 6** **Base ten is connected to performing multi-digit operations Ch. 1, and in Ch. 3 for multiplication** **Factors and Multiples are connected to generating and**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**analyzing patterns C[illegible]** **Ch. 9 fractions are connected with decimals.** **Volume is connected with fractions (ch 12)** **Area model connected to multiplication and division (ch. 13)**	

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Strength:
The curriculum builds upon prior knowledge by reviewing and accessing prior knowledge in each lesson before moving into the core topic.

Common Core Standards and practice standards are very clearly outlined in teacher's edition and student edition.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Standard used for evaluation: NF.A "Why fraction a/b is equivalent to (nxa)/(nxb). Use a fraction model. How do number and size of parts differ?** **Does this curriculum support conceptual understanding of this standard? Yes, it does.** Evidence: The lesson on Fraction Equivalence and Comparison (Unit 6) begins with an "Unlock the Problem" task where students work to solve a problem related to the lesson concept. Students use models, drawings, and manipulatives, along with classroom discussion, ("Math Talk: in each lesson) to develop understanding of the mathematical concept. Conceptual understanding is also taught in the lesson by using number lines and fraction strips to compare and order fractions, students use fraction strips, circles, and pictures to model understanding of addition and subtraction of fractions. The Engage part of the lesson, 'Essential Question' (p.365 Unit 6) asks, "How can you compare fractions?" then asks students to make connections to what they understand about benchmarks to further examine the answer to the question. **Evidence- Conceptual understanding is THOROUGHLY attended to where the standard explicitly states, "Extend understanding of fraction equivalence and ordering", and explain why... justify the conclusions by using a visual fraction model.** Lessons: in the lessons, there are 2 sections called, "Draw Conclusions" and Make Connections where students are asked, "How does the number of the parts relate...", "explain how you know", How could you use a model to show that", "Explain using words how you know one fraction is = to another.", "Explain how you can determine..." All Math Talk sections ask students to explain their thinking. Homework: "Use a model to write an equivalent fraction", "Draw a model to show a fraction that is = to ⅓, and one that is not." Homework is not as strong on justifying student reasoning and clarifying conceptual understanding. It's more procedural and fluency building. Unit assessments: The mid-chapter check up has 50% of questions asking students to justify their thinking and explain their conceptual understanding. The Unit Assessment contains a good balance of procedural, fluency, and conceptual understanding types of questions.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Lessons, classroom discussion 'math talks', and Mid-unit Assessment and End-of-Unit Assessment have a great deal of high-quality conceptual problems and discussion questions. However, the types of questions might not lend themselves to higher level discussions and the curriculum doesn't provide a lot of support for the teacher to understand what type of discourse to	

	develop.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** The materials feature opportunities to identify correspondences across mathematical representations. Lessons: Students explain their understanding with diagrams/models, equations, and verbal/written descriptions. Homework: - The homework focuses mainly on equations, models and diagrams. Not as much reasoning behind understanding. Assessments: Assessments provide a great deal of opportunity for students to use diagrams/models, equations, and verbal/written descriptions to explain their conceptual understanding.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Fluency and Procedural Skill are attended to thoroughly in the lessons, homework, and Assessments.	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets** **__Does Not Meet**

Is progress towa[illegible]ency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Progress toward fluency and procedural skill is interwoven with the development of conceptual understanding. Each lesson provides a good balance with opportunity to practice for fluency and to work with procedural skills. There is a 'fluency builder' section at the beginning of each lesson for the teacher to utilize. Homework provides a great opportunity for procedural skill and fluency. Assessments: Procedural skills are contained in the unit's assessments. Reteach and Enrich materials are available for the teacher to use in order to progress students toward fluency and procedural mastery. Practices frequently connected with manipulatives or diagrams to enhance conceptual understanding.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** The lessons, homework, and assessments all provide an opportunity for both opportunistic strategies to be used by students as well as efficient algorithm strategies. Teacher edition contains the Think Smarter section which promotes proficient problem solving. Sufficient practice with the algorithm is present in the differentiated materials, the lessons, and the homework.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**There are not very many opportunities for fluency building and repeated practice.** **Evidence-** **The only place we found was in the teacher's edition, at the beginning of each lesson, under the Daily Routines section.** **The 10 question Fluency Builder part of each lesson supplies repeated practice toward attainment of fluency standards.** ****The following materials focus ONLY on the concept being taught in that lesson: reteach and enrich**	

	materials, homework and assessments. There is no opportunity in any of these for students to get repeated practice toward fluency of NBT.B.4**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Standard used to evaluate this criterion: OA.A.3 Solving multi-step word problems using the 4 operations The first 5 chapters (out of 13) cover this standard. Ch. 1: addition and subtraction, Ch. 2&3: multiplication, Ch. 4: division, Ch. 5 factors/multiples	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **___Meets (2)** **_X__Partially Meets (1) ** see cell 1** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Lesson: As the lessons progress through the chapter, more opportunities are given for students to engage in multi-step problems. (found in Lesson 2.9 & 2.12) Early in the chapter the focus is on single-step problems. There are ample opportunities for practice in each lesson, and the end of each lesson in the chapter gives a good deal of time to 'problem solving' situations. There should be more multi-step problems in each lesson. Assessment: Great deal of problem solving opportunities, few multi-step problems present** Homework: does develop the mathematics and gives opportunity for problem solving, but the focus is on single-step problems **** Lesson 2.9 has no homework problems that are multi-step, and Lesson 2.12 has only 2 homework problems that involve multi-step.**	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the	**Evidence-** This curriculum does a great job applying the major work of the grade. Using the materials as designed, 4th graders will be able to use the problems provided to connect the concepts, standards, and domains. The situation types vary from result-unknown to change unknown, to start unknown. (see addition/subtraction situations by grade level handout.)	

problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	The lessons provide ample structure and practice, homework provides ample practice, and assessments are a good gauge for mastery of content.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** This curriculum provides a foundation for modeling that is grade-level appropriate. Models are built upon previous grade levels, and prepare students for grade levels beyond. Base Ten Blocks, fraction models, area model, number lines.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:
The strengths of this curriculum are its ability to thoroughly attend to conceptual understanding and its use of discussion questions to further student understanding. The weaknesses of this curriculum lie in the lack of fluency building throughout homework and assessment opportunities, as well as the lack of multi-step problems present in homework and assessments.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** MP 1,2,3,4,6,and 7 are interwoven throughout the text (student and teacher edition) MP5 and 8 are used throughout the chapters just at less frequent intervals (Student and Teacher edition) Depth of understanding is promoted in lessons through the About the Math - Teaching for Depth MPs are also promoted in Unlock the Problem section in the lessons	**(Reviewer only.)** **__X __Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics,		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)**

Grades K–8 (Spring 2013).		
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Practice standards are meaningfully present in activities, assignments, and problems. Example: each standard that a lesson focuses on is outlined in the beginning of the lesson, and then focused upon through 'math talk' bubbles throughout the lesson, and the problems that focus on a practice standard are clearly marked in the lessons. Even though they are not clearly marked in the homework, the practices are still present in the types of problems students solve in the homework and assessments.** **The Share and Show section is a great opportunity to reinforce the MPs.** **Planning guide describes practice standards in detail for the teacher, giving specific examples.**	**___X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Practice standards expectations are grade-level appropriate and reasonable. Questioning is appropriate.** **Chapter At A Glance demonstrates the progression for each chapter.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **Teacher directed materials are in the form of the Planning Guide. It explains the role of the practice standards. In each teacher manual the practice standards are listed in the table of contents for each unit and are explored in each lesson.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **___Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence- There are a few chances for constructing arguments in each type of work:** **Assessments ask: explain how you got your answer, 'show your work', 'explain why the strategy you used works best'.** **In the lesson, it asks: 'What do you notice', 'Is the other student correct? explain'., 'Explain why these are both reasonable estimates'** **Homework: 'explain why it makes sense'** ******Although: the textbook doesn't really explain HOW to construct arguments ****** **The closest it comes is in the TE under 'professional development' in each unit, and math talk, some ELL strategies.** **While the text provides opportunities for students to reason mathematically and share their process through discussion, there is little teacher support on how to help students construct viable arguments.**	**__X__Partially Meets (1)** **see constructing arguments**** **____Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Most of the work students are expected to produce is 'answer-based', not reasoning-based. There is not a lot of constructing arguments, or critiquing the reasoning of others. It does so a good amount of asking for explanations, or showing of work, and diagrams/models in Go Deeper, Think Smarter, Math Journal Prompt, Math Talk and Show and Share. What's missing is students defending WHY their math works, or how they know it works...justifying their claims.********	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **No. There is no language in the curriculum where students are supported in basing arguments on definitions, using the method of providing a counterexample, or recognizing that examples alone do not establish a general statement.**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet**

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Every lesson in TE and in student materials offers help to special populations. The language is considered, as well as the strategies that may be helpful. Teacher can use the 'planning for instruction' for help as well. Chapter Resources -Letter home is also included in Spanish. At the beginning of each chapter is a PD section focused on ELL. Tiered interventions/differentiation strategies and activities are included in each lesson.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Assessment of prior knowledge in beginning of each lesson, differentiation support for teacher in each lesson; activities, enrichment and tiered interventions in each lesson. common error alerts w/ suggestions for teacher. 'Quick checks' in each lesson/ Grab-n-Go differentiated centers kit: activities, games, literature for enrichment or more practice. TE has enrich, advanced learners, and reteach materials in each lesson. Go Deeper, Advanced Learner are also helpful resources.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** This curriculum utilizes a variety of instructional approaches - models, questioning techniques, checks for understanding, grouping, pair/share in each lesson. Whole class, small group, pairings, are used. Manipulatives are used within some of the lessons.	**Reviewer only.)** **___X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Variety of instructional approaches, ample differentiation materials.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **The structure of this program is beneficial for leading students through the learning paths. 'Unlock the problem' and essential questions open up the concepts, then making connections and learning activity explore the concepts, 'share and show' and 'math talks' further explain and explore, quick checks enable teacher to differentiate, and 'elaborate' gives students applications of the concepts. Evaluate finishes it out.** **The 'engage' provides a digital activity.**	**(Reviewer only.)** **____X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Each lesson, Homework assignment, and assessment offers a variety of problems and exercises, although there are more exercises than problems.**	**(Reviewer only.)** **____X__ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** **Teacher Edition clearly shows the design of assignments that follows a logical grade-level sequence that builds from prior knowledge and strengthens student understanding.** **Use of the '5Es' provides a structured sequence for each lesson.**	**(Reviewer only.)** **____X__ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow,**	**Evidence-** **Teacher materials offer professional development blocks with videos, called, 'why teach this' to help build knowledge base, 'Try this' sections for additional materials, strategies for introducing a new lesson.** **Teacher materials discuss student thinking and anticipation of responses, guidance on the flow of the lesson and questions that prompt student**	**(Reviewer only.)** **_____X_ Yes** **_____ No**

guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	thinking/discussion. The following areas support and guide the teacher: About the Math Think Smarter Common Error Math Talk in Action Teaching for Depth Developing Math Language	
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Manipulatives are faithful representations and are connected to the concepts students are learning, purposeful and meaningful to the learning process.	(Reviewer only.) ____X__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- TE and SE provide pre-assessments, formative and summative assessments clearly throughout the curriculum. Evidence: Quick Checks, rubrics, 'evaluate lesson' section.	(Reviewer only.) __X____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Yes, all of these are present in the teacher's edition. Chapter Resources contain answer keys, scoring guidelines, and performance task rubrics. TE gives answer keys and 'within chapter' assessments.	(Reviewer only.) ____X__ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Yes, grade-level appropriate language is used in student prompts and appear to be accessible and unbiased.	(Reviewer only.) ___X___ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Yes, the planning guide identifies references for the professional development section, but is is unclear**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The visual design breaks the text into manageable sections. Navigation is clear.** **While separate chapters may allow for easier adaptation of the instructional sequence, the student resources, such as a glossary of terms, etc. are in a separate book as well. The materials are colorful, engaging, easy to follow.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Yes, homework consists of routine practice problems that parents can easily support, and there is a school home letter with each chapter that includes vocabulary and models.**	**(Reviewer only.)** **_____X_ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **____X___ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **___X__ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **__X___ Meets _____ Does Not Meet**	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __5___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	**Points: ___5__ of 6 possible.** (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet	**Points: __6___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	Go Math!
ISBN #	9780544452152
Grade Level(s) or Course:	5th Grade
Reviewer ID:	KT LW

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The curriculum aligns with the standards. It builds upon prior knowledge from previous grade levels in order to introduce new concepts/topics required in the grade level standards. There is no indication of assessments for probability, statistical distributions, and Grade 8 geometry. A significant portion

COHERENCE- of the instruction focuses on the Major Work for the grade level In addition to the Major Work focus, supporting content within the text enhances the Major Work. The Grade-by-Grade progression for the standards is evident and clearly reinforced. There are discussion, thoughtful questions, and conceptual as well as procedural problems. All lessons and activities clearly identify domains, clusters, standards and learning objectives.

RIGOR- The materials support the development of students' conceptual understanding of key mathematical concepts as determined by the standards for the grade level. This is demonstrated throughout lessons, classroom discussions, and assessments.

CONCEPTUAL UNDERSTANDING- Conceptual understanding is developed by starting with student prior knowledge and creating connections to new grade level concepts/topics. Materials feature opportunities for both teachers and students to identify connection across the mathematical representations. There is sufficient opportunities for procedural practice as well as conceptual development. There is limited discussion support and minimal multi-step prob

MATHEMATICAL PRACTICES- The materials demonstrated authentic connections between the mathematical practices and the content of the instruction. The MPs support the focus on the Major Work for the grade and assist in promoting student development of mathematical habits of mind. The MPs are tailored for grade level appropriateness and are clearly apparent to both teachers and students.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- The materials provide opportunities to reason mathematically and share their thought processes. The mathematical language within the TE and SE honors the mathematical concepts and language development. More support for teachers to guide and facilitate quality student discussion (ie evidence, claims) would be beneficial to the program. However, every

OTHER: lesson provides ample support for differentiation and meeting the needs of all the learners. Homework and letters home engage the parents in being able to successfully support student learning. There is also ample support through the use of manipulatives, diagrams, et

Note: The Engage activity at the start of each lesson is connected with digital resources.

Fact fluency to support the conceptual learning is focused on in the digital materials

The curriculum clearly builds upon prior knowledge

and earlier concepts and then continues the continuum of learning. Domains, standards, and MPs are clearly identified and used meaningfully.
A strength of the curriculum is its attention to the conceptual understanding and use of discussion.
Weaknesses lie in lack of basic fluency building and minimal use of multi-step problems.
Another strength focuses on the variety of instructional approaches and differentiation resources.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a

reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN2 **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The text does connect clusters in a domain and domains in a grade.** **1) Ch. 3 and Ch. 4 connect Number an Operations in Base Ten and work with decimals** **2) Ch. 1 and Ch. 9 connect Operations and Algebraic Thinking with Geometry** **3) Making Connections Ch. 3 p. 152** **4) Ch. 3 connects place values of decimals with multiplying by fractions p. 157** **5) Ch. 5 use of decimals is connected with measurement (lesson 5.1 Engage and real world weight problem on p. 292)** **6) Decimals are connected with money (Ch. 5)** **7) Measurement reinforced in fractions (Ch. 6 p. 406)** **8) Use of operations for converting measurements (Ch. 10)**	(Reviewer only.) **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** **The curriculum clearly builds upon prior knowledge and earlier concepts by reviewing and accessing prior knowledge in each lesson prior to moving on to the core topic.** **The curriculum clearly identifies domains, standards, and mathematical practices throughout the teacher materials. This is also reinforced in the student edition with mathematical practices.**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **5.NF.B – Apply and extend previous understandings of multiplication and division to multiply and divide in fractions.** **1) The chapter on dividing Fractions (Ch. 9) begins with a Teaching for Depth PD section for the teacher that helps make sense of fraction division and gives examples of how to draw diagrams and represent division** **2) Ch. 9 Unlock the Problem asks students to solve a problem related to the lesson concept** **3) Students use models, drawings, manipulatives, and classroom discussions (Math Talk, Share and Show) to develop understanding of the mathematical concept** **4) Conceptual understanding is also taught in the lesson by the use of fractions strips, diagrams, models, and pictures to develop understanding of dividing fractions** **5) Students are provided with the opportunity to see and practice multiple ways to solve problems (Ch. 2, SE pp. 99-100 and TE Ch. 2 99-100). Teacher connects base ten blocks with the area model in Math Talk section.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Lessons, classroom discussion, and Mid-Unit and End-of-Unit assessments have a great deal of high-quality conceptual problems and discussion questions. Problems and discussion questions promote conceptual understanding. However, additional support could be provided to assist teachers in generating quality student responses uses evidence and claims to justify their reasoning.** **1) Lesson at a Glance** **2) Chapter at a Glance** **3) Math Talk** **4) Show and Share** **While the problems are grade level appropriate many of the answers required typically do not generate higher level thinking.**	

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **All materials feature opportunities to identify correspondences across the mathematical representations for teachers and students.** **1) Lessons – students explain their understanding with diagrams/models, equations, and verbal/written descriptions** **2) Homework – focuses more on equations, models, and diagrams, with less emphasis on the reasoning behind the conceptual understanding** **3) Assessments – provide a great deal of opportunity for students to use diagrams/models, equations, and verbal/written descriptions to demonstrate their conceptual understanding** **4) Students are encouraged through the teacher generated discussions in the TE to make connections between different models and problems.** **5) Lessons that use manipulatives assist the student in making connections across mathematical representations.**	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Progress towards fluency and procedural skills is interwoven with the development of conceptual understanding.** **1) Lessons – provide a good balance to practice for fluency and work with procedural skills.** **2) Fluency Builder section at the beginning of each lesson** **3) Spiral Review section in each lesson** **4) Homework – provides additional procedural and fluency practice** **5) Unit Assessments – contain procedural skills** **6) Reteach and Enrich materials for each lesson can provide additional opportunities for grade-level procedural and fluency practice** **7) The sequencing and progression is grade-level and CCSS appropriate. There is sufficient practice in each lesson to promote and develop fluency and procedural skills.** **8) The practice is frequently connected with manipulatives to enhance the conceptual understanding** **9) Additional resources provide further opportunities to develop fluency and conceptual understanding such as the Grab and Go, Strategies and Practices for Skills and Fact Fluency, and the Fluency Builder sections in the TE**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **The lessons, homework, and assessments all provide a nice balance with the opportunity for both opportunistic strategies to be used by students as well as efficient algorithm strategies.** **1) Promotion of efficient problem solving can be found in the TE Think Smarter sections** **2) Sufficient practice with the algorithm is included.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **The text contains practice with algebraic operations and connections are made between the mathematical concepts through the use of algebraic operations. The only fluency builder built into this program is a 10-question practice the teacher can use before each day's lesson (Fluency Builder). Additional opportunities within the text for repeated fluency building would be a welcomed addition.**	

Metric AC1C **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **There is single-step and multi-step problems within the text. The connections to real-world situations are connected but seem to miss the opportunity to pursue depth and multi-step problem solving.** **5.NF.B.6 – there are only five pages tied to the standard according to the publishers Correlation to the Idaho Core Standards for Mathematics (pp. 471-476). This is not sufficient and only involved mixed fractions. However, there may be other multi-step problems within the text.**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **The use of multiple operations with a problem requires multiple steps.** **See notes above.** **1) Homework L8.1 has one multi-step problem** **2) L8.2 (7 and 8) are multi-step problems** **3) L8.3 has two multi-step problems (7 and 10)** **4) Assessment Ch. 8 contains 3 multi-step problems out of 20**	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Students use the CCSS content knowledge to problem solve with emphasis on the Major Work for the grade. In fact, many of the quality multi-step problems use multiple operations. Using the materials as designed, 5th graders will be able to use the problems provided to connect the concepts, standards, and domains.** **1) The situation types vary and the lessons provide ample structure and practice** **2) Homework provides ample practice** **3) Assessments are good gauges for mastery of the mathematical concepts and Major Work for the grade level**	

Does modeling slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Models are built upon previous grade levels and prepare students for existing grade level connections and beyond. Problems and activities are grade level appropriate. Base Ten blocks, fraction tiles, etc.**	
Alignment Criterion 1: **Rigor and Balance** **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **The use of the MPs support the focus on the Major Work for the grade level and provide coherence and connections in both TE and SE. The use of the MPs enhances the Major Work of the grade level** 1) **MP 1, 2, 3, 4, 6, and 7 are woven throughout the text (SE and TE)** 2) **MP 5 and 8 are used throughout the chapters just at less frequent intervals (SE and TE)** 3) **Depth of understanding is promoted in lessons through the About the Math – Teaching for Depth (Ch. 3 p. 181A)** 4) **MPs are also promoted in Unlock the Problem section in lessons (Ch. 3 p. 157)** 5) **The text uses real-world problems** 6) **Students evaluating the reasoning of others** 7) **Students use various strategies and explain their reasoning (Math Talk)** 8) **Each lesson encourages and models the use of manipulatives and diagram/model drawing** 9) **Students write their own word problems**	**(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **_X___Meets (2)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **The MPs are connected to the content in a meaningful way. The problems assist in promoting student development of mathematical habits of mind. Discussions within the lessons support the practice of the MPs in the problem solving process. The teacher has these listed throughout the Planning Guide. The MPs are also present in all assignments and lessons.** **1) Math Talk** **2) Share and Show** **3) Planning Guide** **4) Each lesson outlines a lesson focus which is reinforced throughout the lesson (Math Talk, etc.)** **5) Homework includes practice with the MPs even though they are not clearly marked**	**____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **The text provides material and suggestions for delivering the content in grade appropriate ways. The MPs are tailored for grade level appropriateness and inform teachers of the progression and appropriate grade level implantation.** **Planning Guide (pp. 20-29) provides more information for the teacher on the progression implemented into the lesson structure.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **See above and Chapter at Glance demonstrates the progression for each chapter and TE Table of Contents**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **The text provides opportunities for students to reason mathematically and share their process through discussions, and some of the written work.** **1) Math Talk and Share and Show activities support constructing viable arguments and critiquing the arguments of others; however, there is little teacher support on how to help students construct viable arguments, which can be difficult.** **2) Parts 2, 3, and 4 of each lesson give questioning prompts to help with Math Talk and provide opportunities for students to share their thinking and explain their methods.** **3) Sense of Nonsense allows students to critique the work of others' and explain others' reasoning**	**__X__Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **While the text has supports for students' explanations, justification, and demonstrating their problem solving process, more teacher materials could have supported the discussions and sharing of results to create better students results. Not all teachers have the knowledge or the skill to support such dialogue.** **1) The focus of the written materials is more on the answers, but there are opportunities to offer solutions in the problem solving application within each lesson and through the Math Talk and Show and Share components.** **2) While discussions and explanations are included within the TE, there is no reference in how to teach the students to explain and justify answers with evidence.** **3) See above**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **There are no modifications to the mathematical language within the TE or SE that sacrifice mathematical concepts or language development. However, there is little support that the language or argument, problem solving, and mathematical explanations are taught and not just assumed. More teacher support through PD and in lesson supports would benefit teachers and students in developing evidence and claim style discussion strategies.** **1) Each chapter has vocabulary section to introduce and support the learning of the mathematical language which is then reinforced throughout the activities within the chapter**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **Every lesson in TE and in student materials offers help to special populations. The language is considered as well as the strategies that may be helpful.** **1) The School-Home Letter is in Spanish and English (Chapter Resources p. 1-17, etc.)** **2) ELL strategies on each Explore section in TE (p.7)** **3) Strategies or ELL at the beginning of each chapter in TE (p. 3G)** **4) Planning for Instruction** **5) Tiered interventions/differentiation strategies and activities within each lesson**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **Assessment of prior knowledge in beginning of each lesson, differentiation support for teacher in each lesson (activities, enrichment and tiered interventions).** **1) Identify common misconceptions within TE in the Explore section (p. 18) Common Error** **2) TE contains Quick Check for formative assessments to identify students preparedness** **3) TE contains GoDeeper (p. 25) sections for expanding upon a subject** **4) TE references Chapter Resources pages for reteaching and enriching for each lesson and provides the answers.** **5) Advanced Learner section for each lesson in TE** **6) Tier intervention options are available in the TE (Ch. 5, p. 290)** **7) Grab and Go differentiated centers kist** **8) Enrich, Reteach, and advanced learner supports in each lesson**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **A variety of instructional approaches are utilized. Models, questioning techniques, checks for understanding, grouping, pair/share and other strategies are included in each lesson. Whole class, small group, pairings, and individual practice are included in each lesson.** **1) The five E's of the lesson structure includes class discussion, Math Talk, Share and Show** **2) Most of the lesson is whole group with the Explain portion of the five E's as small group (Ch. 1, p. 3F)** **3) Independent activities provided within the lessons** **4) Manipulatives are used within some of the lessons TE and SE (ex. Ch. 3 with base ten blocks and Ch. 6 with fraction tiles)**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**

1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **The structure of this program is beneficial for leading students through the learning paths. Unlock the Problem and Essential Questions open up the concepts and then make connections. Learning activities explore the concepts.** **1) Share and Show and Math Talk further explain and explore mathematical concepts** **2) Quick Checks enable teachers to differentiate** **3) Elaborate gives the students applications of the concepts** **4) Evaluate provides the opportunity to assess student understanding** **5) The use of the five E's for each lesson provides an opportunity for students a variety of participatory options.** **6) Engage provides discussion and a digital activity to interest the students (only digital)**	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **1) TE includes both exercises and problems, but the problems are weak in their application. They seem more like an exercise in word form.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** **Each lesson, Homework assignment, and assessment offers a variety of problems and exercises that provide an intentional sequence to develop and strengthen students' mathematical understanding.** **1) Each lesson follows the five Es.** **2) Following the five Es for each lesson provides a structure and sequence for each lesson and across the chapters that promotes and strengthens student understanding**	**(Reviewer only.)** **___X___ Yes** **_____ No**

4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** **Design of assignments follows a logical grade-level sequence that builds from prior knowledge and strengthens mathematical behaviors and conceptual understanding** **1) Various PD sections in TE** **2) Videos – Why Teach This develop teacher knowledge base** **3) Try This sections for additional materials and strategies for introducing a new lesson** **4) TE discuss student thinking and provides possible student responses, guidance on the flow of the lesson and questions that prompt student thinking/discussion** **5) About the Math section in the TE (p. 29A) discusses why the math in that lesson is important** **6) Think Smarter suggestions in TE (p. 39) provides ideas with assisting students with developing successful problem solving strategies** **7) Common Error section (p. 50) identifies potential student misconceptions to watch for.** **8) Math Talk in Action (p. 53) example dialogue** **9) Teaching for Depth and Classroom Management (pp. 3E-3F) for each chapter in the TE** **10) Developing Math Language (p. 3H) for math vocabulary instruction** **11) Mathematical Practices in our Classroom (p. 361)** **12) Most of these type of sections are labeled Professional Development** **13) Did not like the separate chapter books for the TE**	**(Reviewer only.)** **__X____ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **Manipulatives are faithful representations of the mathematical objects within the lessons and are connected to the written problem solving methods.** **1) Fraction Tiles in Ch. 6, Ch. 7** **2) Base Ten blocks in Ch. 3** **3) Counters in Ch. 7** **4) Fraction circles in Ch. 7** **5) Number lines Ch. 7**	**(Reviewer only.)** **___X___ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **Curriculum provides a variety of assessments including pre-assessments, formative and summative assessments, and suggestions for using portions of the lessons for checks for understanding** **1) Chapter Resources identifies the different types of assessments available within the text** **2) TE contains additional formative assessments through Quick Check** **3) Additional resources are available for preparing of the SBAC and intervention**	**(Reviewer only.)** **__X____ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Aligned rubrics, answer keys, and scoring guidelines are present in TE and supplemental teacher materials.** **1) Chapter Resources contains answer keys, scoring guidelines, and performance task rubric (pp. 1-47 – 1-62).** **2) TE answer keys for student pages, and within chapter assessments** **3) Project scoring rubric in chapter 1 TE (p. 2)**	**(Reviewer only.)** **__X____ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Grade level appropriate language is used in student prompts and appear to be accessible and unbiased.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Planning Guide identifies references for the Professional Development section. Authors and editors have vetted the materials in an effort to ensure freedom from mathematical errors and grade-level appropriateness.**	**(Reviewer only.)** **__X____ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The visual design breaks the text into manageable sections. Navigation is clear. While the separate chapters may allow for easier adaptation of the instructional sequence, the student resources, such as a glossary of terms, etc. are in a separate book as well.** **1) Colorful, engaging, and easy to follow** **2) Interactive Student Edition is slightly childish for the grade level**	**(Reviewer only.)** **___X___ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **The home materials engage parents in appropriate ways with information for each chapter provided in a School-Home letter for parents followed by appropriate homework assignments for each lesson. The homework consists of routine practice and problems allow parents to easily support their student's learning at home.** **1) School-Home Letter for each chapter with vocabulary and models** **2) Homework**	**(Reviewer only.)** **___X___ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
____X___ Meets _____ Does Not Meet	___X__ Meets _____ Does Not Meet

Non-Negotiable Overall:

___X__ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	Points: __5___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton-Mifflin
Title:	Go Math! 6th grade
ISBN #	9780544295544-5
Grade Level(s) or Course:	6th grade
Reviewer ID:	AS, PL, EW

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

__X__ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

NN1, NN2
FOCUS-
The materials address each of the 6th grade standards. Future grade level concepts are not assessed. The materials do not devote enough time to the Major Works of the grade.

NN2
COHERENCE-
The supporting works enhance and support the Major Works of the grade. All students work on grade-level concepts. Previous grade-level content is not explicitly stated for students. Learning objectives are clear. However, not enough time is devoted to the Major Works of the Grade.

AC1
RIGOR-
The materials are weak in providing attainment of division fluency in 6th grade. The use of multi-step problems is weak, with few problem types presented.

AC1
CONCEPTUAL UNDERSTANDING-
Materials support conceptual understanding, but lack the use of modeling mathematics The materials provide infrequent opportunities for conceptual discussions.

AC2
MATHEMATICAL PRACTICES-
The materials include the mathematical practices, however, time is not spent teaching students what the mathematical practices are. Students are required to reason and produce arguments, but ~~it is~~ done so infrequently.

AC3
ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Although the materials provide resources for students at all levels. The ELL supports are present in all lessons and appropriate strategies are provided. Scaffolding supports are weak and often absent in lessons for below level learners. Instructional strategies used become routine as they do not vary throughout lessons.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	All materials included in [illegible] Math! are aligned to the standards for 6th grade. Future g[illegible]level concepts may be alluded to, but are not assessed. The materials stick to the concepts, skills, and strategies stated in the standards. Each Lesson includes a learning progression for the teacher, which provides connections to previous grade level skills, the current grade level, and then extends to the following grade level. However, these topics are for teacher information only, they are not included in the lesson. The materials address all grade 6 clusters and focus areas. Evidence: • Table of Contents • Standards Correlations in Table of Contents • Teacher Resources • Interim Assessments • Chapter and Lesson Assessments • Planning Guide	**(Reviewer only.)** **_X___Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	Materials for 6th grade, Go Math! devote the majority of lessons and activities to the major works of the grade. With 13 chapters in the text, 8 are devoted to major works, equaling 62%. With a total of 104 lessons days, 43 are devoted to the major work of the grade, equaling 41%. Some lessons are created to last more than one day. • Table of Contents, Correlation to Standards (TE) A42-A43 • Chapter At A Glance **Evidence-** **51 (54%) of the lessons are focal points and 43 (46%) of the lessons are additional and supporting clusters.**	**(Reviewer only.)** **____Meets** **__X__Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Materials provide coherence throughout each lesson in grade 6. The supporting works of the grade are not isolated from the major works. For example, in **Geometry** (a supporting work), connections to using **applying and extending understandings of arithmetic to algebraic expressions** (a major work) are made in most lessons. Connections to **Number and Operations-Fractions** (a major work) are also made within **Measurement and Data** (a supporting work). **Evidence:** • Lesson 10.3: Connects finding the area of a triangle with evaluating expressions with variables as students have to find the missing height of the triangle. SE pg.545-550. The study of equivalent expressions builds toward Grade 7 slope. • Lesson 10.6: Connects finding the areas of polygons with computing fluently with multi-digit numbers. SE pg. 566 • Graphing supports the bridge of positive and negative numbers and area.	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2C: **Materials b[illegible]content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The progressions in th[illegible]terials match those in the Standards. Discrepancies in the content progressions were minimal and used to enhance learning. Each chapter includes a Common Core Learning Progressions Across the Grades (for teacher reference), which provides a connection to the previous grade and subsequent grade. Future grade concepts are not mentioned in the teacher manual, student manual, or online resources. The Planning Guide includes a section on Getting Ready for Grade 7. The content from 5th grade is identified in the prerequisite skills inventory. Chapter 1 is an additional standard and is an extension or review of previous grade level materials (example: common factors and multiples grade 4). Chapter also works on the required fluency of multi-digit division for sixth grade) **Evidence:** • Common Core Learning Progressions Across Grades TE pg. 209J In grade 6, students will... in Grade 5 students.... In Grade 7 students will... • Common Core State Standards Across the Grades TE531J Grade 6 (standards listed) Before (standards listed) After (standards listed).	(Reviewer only.) **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The materials give all students the opportunity to work with on grade level problems. Although materials are provided for intervention and remediation, the program does not focus on these sources as a replacement of the core curriculum. Chapters include a review of prerequisite skills with a Show What you Know diagnostic assessment tool. Suggestions for remediation are given based on students' responses in the assessment. These suggestions are in addition to the student's regular grade level work. **Evidence:** • TE: Chapter 10 p. 531 Show What you Know • TE: Chapter 10 p. 531 Show What You Know Diagnostic Assessment Rubric. P. 532 Intervention Options • TE: Lesson 5.1 Advanced Learners Activity for extension of the lesson content	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2E: **Materials re[illegible]on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The materials explicitly [illegible]te connections to prior knowledge from previous grades. [illegible]eacher edition includes a chart for each lesson, which states what students learned before this lesson, what they will learn in the current lesson, and what will be learned after that lesson. **Evidence:** • Lesson 2.1 SE pg. 69 A place value chart showing decimal place values. • Lesson 1.1 TE 5B Making Connections • Mixed review on the assessment refers back to concepts from previous modules in the course. (EG p. 168) • 6.NS.A,--5th grade students are expected to divide fractions by fractions and whole numbers. There is some review/practice so but not teaching the concept so students are expected to already know how but the text does not explicitly state this to the teacher or the student. • 6.NS.C—The connections to 5th grade are there because students are expected to already have knowledge of connecting fractions to decimals. Neither the teacher nor the student are explicitly told this. • 6.EE.A—Connections to 5th grade are there. Students are expected to know order of operations but the text does not explicitly state that.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	There is a prerequisite skills inventory designed to assess whether or not students have the skills needed for success in sixth grade. The assessment then directs teacher to the skill that is a struggle and tasks/activities for the student.—It only assesses 5th grade standards so if you have a student who is unable to pass any of the prerequisite inventory the teacher may need to bring out the RTI materials and maybe go to a lower grade level to use their skills inventory. Students and teacher can see the specific responsibility but review of materials is not identified for either. Teachers can identify the previous grade content by identifying 5th grade content through review of the standards. **Evidence:** • Personal Math Trainer videos (online) clearly state the standard they correlate to.	**(Reviewer only.)** **____Meets** **__x__Does Not Meet/ Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	A correlation between learning objectives and cluster headings is explicit in the materials. The table of contents explicitly states the standards being taught in each lesson. Each lesson identifies the cluster, which the lesson correlates to. **Evidence:** For example, in sixth grade, a cluster is **applying and extending previous understandings of multiplication and division to divide fractions by fractions.** Lesson 2 2.5-2.10 and 14 (pg TE p. 95A to TE p.128) support the learning of this cluster. Pg 95A states the learning objective as "Use a model to show division of fractions."	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The materials are weak in connecting clusters in a domain as well as the domains. In chapter overview, it states the cluster, and then in the lesson overview, it states the standard the lesson focuses on. However, connections to other standards and/or clusters are rarely made. Student work does involve work, which combines multiple domains, but is not explicitly stated in teacher or student materials. Student materials include a spiral review, which include multiple standards. **Evidence:** • Lesson 13.4 Focus: 6.SP.B.5.c (states the standard) Also 6.SP.A.s, 6.SP.A.3 • Spiral Review SE p. 286 • Instead of having a separate chapter for area, surface area and volume, students could use manipulatives, graph paper, drawing, discussion,... to discover the formula instead of the separation of unit. • (Surface connection rather than deep connection)	**(Reviewer only.)** **____Meets** **__X__Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**(Reviewer only.)** **____Meets** **__X__Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	The materials support conceptual understanding of mathematical concepts through varied conceptual problems and questions. Questions range from low difficulty to requiring students make connections between concepts appropriate for the grade level. **Evidence:** • Connections to previous learning of creating models to combine like terms. Students must also connect their prior knowledge of algebraic expressions. TE 395B • Lesson 1.1 Dividing Multi-Digit Numbers, connections to models, and place value are absent. • Lesson 1.1 Reteach materials focus only on traditional algorithm. Connections to models and place value are absent. • 6.NS.8 Solve real world problems by graphing points in all four quadrants of the coordinate plane Lessons 3.7-3.10. Solving is dependent on reading and using the coordinate plane. The big problem is that once these lessons are finished the coordinate plane is no longer used as a tool for solving. • Division of fractions is taught through use of a number line, drawing pictures, and pattern blocks.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	6.EE.3 Apply the properties of operations to generate equivalent expressions. • Draw a bar model to add 9n and 4n SE pg. 395 • Explain how you bar model shows that your answer is correct. SE pg. 395 • Why is the term 8 not shown in the bar model? TE p. 395 • First, draw a bar model to combine the like terms. Next, use the bar model to simplify the expression. SE pg. 397	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	The materials provide correspondence across mathematical representations. However, the connections are weak and sporadic. Evidence: • Models are used in lesson 7.7: Combining Like Terms SE pg. 395 • Graph the number 3.75 on a number line SE pg. 94 • Lesson 2.5 Use fractions strips to model division SE pg. 95-99 • Using multiplication tables to write equivalent ratios SE pg. 225 • Students relate fractions to decimals on the number line. Lesson 2.1 and 2.2.	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **____Partially Meets (1)** **__X__Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	Student's progression toward fluency is balanced with procedural skills. Practice, and time devoted to fluency of the skill is sufficient. Multiplication and division of fractions is applied throughout the materials. • Lesson checks SE pg. 386 • Spiral Review in homework and practice reviews skills throughout the year. SE pg. 332	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	Purely procedural problems, which encourage the use of strategies, as well as algorithms are present in the materials. At this grade level, the need for efficient algorithms is also apparent in the materials. Evidence: • SE pg 425 Solution of Equations involves using algorithms. • Share and Who SE pg. 109 requires students to use a number line to find the quotient • SE pg 237 Use equivalent ratios to find the unknown value	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	The materials do not provide repeated practice toward the attainment of fluency of NS 2, fluently divide multi-digit numbers using the standard algorithm. Work towards this fluency is limited to Lesson 1.1. Additional practice could be found in Lesson 1.8 & 1.9 of dividing with decimals. Additional practice for fluency toward this standard is found in the Chapter Resources and online materials, but are re-teaching and enrichment activities.	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **____Meets (2)** **_X___Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	Single and multi-step problems are used throughout the materials. The majority of lessons include either single or multi-step word problems in class work, independent practice, and homework. Evidence: • Lesson 8.2 75 is 18 ½ more than a number. SE pg. 429 • Lesson 8.2 Write an equation that could be used to find how many miles a hybrid SUB can travel in the city on 20 gallons of gas. SE pg. 430 • Lesson 8.3 Carlos walked 2 miles on Monday and 5 miles on Saturday. The number of miles he walked on those two days is 3 more than the number of miles he walked on Friday. Write and solve and equation to find the number of miles Carlos walked on Friday. • Lesson 8.7 Carole ordered 4 dresses for $80 each, a $25 sweater, and a coat. The cost of the items without sales tax was $430. What was the cost of the coat. SE pg. 460	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	The major works of the grade are supported through application problems. Varied situation-type problems are used throughout the materials. More variety of situation-type problems need to be represented in the materials. **Evidence:** • Compare Products: Problem Solving SE pg 455 #11 • Unknown Product: SE pg. 460 #2	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	The materials inconsistently and rarely use modeling in lessons. Connections to models from previous grade levels are made sporadically. Examples: • Lack of evidence	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

__X__Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM. **(Reviewer only.)** **____Meets (2)** **_X___Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	The curriculum uses the practice standards to strengthen the focus of the major works as they integrate the practices into all lessons and daily work. The teacher Planning Guide includes extensive resources, connections, and explanation for teachers about the Standards for Mathematical Practices. Evidence: • The mathematical practices are stated at the beginning of the Teacher Planning Guide with explanations (TE pg PG20-22) • Correlations to lessons and explanations of what students will be able to because of each standard. • Mathematical Practices are identified in each lesson at a glance (TE pg 491A) • Mathematical Practice Connections are identified in the student edition with extended explanation in the teacher edition. TE pg 491 Math Talk • MP8 Look for and express regularity in repeated reasoning Lesson 2.2: How does 6/7 compare to 1/2 ? (Could be a good question but the teachers edition suggests an answer of 6/7 > ½ with no reasoning behind it. • Lesson 2.2, 4.3, 5.4, 6.2, both teacher and student are directed to the Mathematical Practices 4 different times, not that each time fit the practice.	

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **_X___Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	The mathematical practice standards are present in each lesson through assignments, activities, and problems. **Evidence:** • SMP are built into the instruction and problems throughout the student book. • Mathematical Practice 1: Describe (SE pg 600) • Math Talk SE pg 657	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	The materials are developed throughout the year. • Teacher Edition • Student Edition	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	The materials provide numerous resources for teachers to strengthen their knowledge and application of the standards for mathematical practice. **Evidence:** • The Lesson at a Glance (TE pg 681A) states the embedded standards for mathematical practice for each lesson. • Chapter Professional Development includes a section on Mathematical Practices as it applies to that chapter TE pg 647E. • Planning Guide-Supporting Mathematical Practices Through Questioning Strategies PG23 • Planning Guide-explanation of each SMP, as well as examples	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	The materials emphasize a student's ability to reason and provides numerous opportunities to practice their reasoning skills. Students must explain, justify, show, or prove their thinking daily. However, the connection is weak and often students are not required to justify their thinking and reasons are supported at a surface level. Evidence: • Lesson 13.1 SE pg. 707 Students must summarize information. Draw conclusions from the data. Analyze a histogram. • Each chapter has a performance task, which requires student to reasoning mathematically. Chapter Resources.	**_X___Partially Meets (1)** **_____Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	The materials require students to produce not only answers but arguments, models, diagrams, and explanations where appropriate. However, the materials do not consistently require students to support their reasoning. Evidence: • SE pg. 364. Explain why the order of operations in necessary. • Most Practice and Homework include a Write about Math question. SE pg. 607 Explain in your own words how the find the surface area of a rectangular prism. • Draw a model to solve Lesson 2.5 SE pg 97	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	The materials are strong in their use and teaching of the language of mathematics. Vocabulary is introduced at the beginning of the chapter and includes activities to practice and apply vocabulary and apply it. **Evidence:** • TE pg 167H Developing Math Language • SE pg. 420 Vocabulary Builder • Individual Student Vocabulary cards	

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

__X__Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3: Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Support for ELLs is provided in the materials through notes in the TE, as well as suggestions for visual models, and visual models in the SE. Each chapter includes a "Strategies for English Language Learners" which includes research as well as suggestions for planning for instruction.
Evidence:

- TE pg 313E Strategies for English Language Learners:
- TE pg. 313F ELL Vocabulary Activity
- ELL Strategy TE pg 719: Rephrase
- Go Math ELL Activity Guide

_X___Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	Through the use of all materials, scaffolding, differentiation and support of diverse learners should be met. Each lesson has a Small Group Differentiation column in the teacher's edition, which guides teachers to supports available in the Teacher Toolbox (online). In the Independent Practice portion of the lesson, teachers are given a quick check and remediation, which provides teachers with a diagnostic chart for remediation, based on a student's answer. Evidence: • Learning Progressions provided in each lesson creates an awareness of what skills students should already have. This can help provide scaffolding for students below grade-level. (TE p. 112a) • Small Group Differentiation (TE p. 112b). • Personalized learning available on iready.com • Quick Check and Remediation (Independent Practice) TE p. 184 • Differentiated Instruction ideas for 3 levels TE pg 165b	Reviewer only.) **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	Numerous instructional approaches are included in the materials. Models, pictures, activities, questions, and pair/share are a few of the strategies used throughout a lesson. However, differentiated instructional strategies are used randomly and inconsistently. Evidence: The following are found in Lesson 16, which is 5 days. • Hands-On Activity (TE p. 167) • Picture It SE p. 168 Use a picture to help understand the problem • Model It SE p. 168 Use a number line to help understand the problem • Visual Model TE p.170 connect the picture and the number line • Pair/Share SE p. 172-173	Reviewer only.) **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **____Meets** **__X__Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	The lessons are set up in a way that begins with an engagement activity, including an essential question, making connections, and learning activity. The Unlock the Problem" begins the lesson making a connection between the real world and the mathematical concept to be learned through exploration. The lesson then transitions to the explanation of the concept through guided practice. Followed up with a formative assessment and independent practice and homework. All lessons are structured in this manner providing students with support and time to become independent. **Evidence:** Lesson at a Glance, Engage, Explore, Digital resources, Explain, Assessments, practice and homework.	**(Reviewer only.)** **__X____ Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	In the Engage, Explore, and Explain sections of the lesson, students participate in solving problems. As students gain experience and practice with the concept, they transition to solving exercises in the practice and homework portion of the lesson.	**(Reviewer only.)** **__X____ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	The materials are designed in a coherent, logical sense, providing connections to previous knowledge. **Evidence:** Lessons begin with making connections and learning activity to provide connections to student's prior knowledge and then transitions to "Explore," which adds to the student's knowledge base and leads to deeper learning (TE pg. 375B-375) Problems increase in difficulty throughout the assignment.	**(Reviewer only.)** **__X____ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	The materials provide teachers support in teaching the lesson as well as providing a deeper understanding of the concepts themselves. **Evidence:** • Common Core Learning Progressions (beginning of each chapter) shows what student are building on and what the lesson is preparing students for (TE pg. 705J) • Teaching for Depth at the beginning of each unit provides teachers with research and background information on the concepts taught throughout the unit. • About the Math at the beginning of each lesson provides specific information about the lesson for. • Professional Development Videos are found in the online materials • Common Errors- provides professional development for teachers regarding errors students typically make. An example is provided, as well as a Springboard to Learning. TE pg. 708 • Math Talk in Action-provides a sample conversation between teacher and student	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	When suggested, materials are appropriate to the grade and content. However, opportunities for manipulatives are often missed.	**(Reviewer only.)** **___X___ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Many opportunities for assessment are provided throughout the materials. The assessments are varied. **Evidence:** • Show what you know, at the beginning of a chapter assess student's knowledge and determines the need for intervention. TE 419 • Quick Check TE pg 423 • Section 5 of each lesson is Evaluate through a formative assessment. Assessments vary. TE pg. 430 • Mid-Chapter Checkpoints • Chapter Tests • Chapter Performance Tasks • Benchmark Tests	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	All assessments for the materials contain rubrics, answer keys, and score guides. **Evidence:** • Chapter Test Answer Keys • Mid-Chapter Checkpoints • Chapter Performance Tasks Rubrics	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Materials used to assess for proficiency are appropriate to the grade level, and are not biased. All students receive the same opportunities to display proficiency.	**(Reviewer only.)** **__X____ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Juli K. Dixon Martha E. Sandoval-Martinez Edward B. Burger Matthew R. Larson Steven J. Leinwand	**(Reviewer only.)** **__X____ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	The materials are designed in a manner which are easy to follow. Some pictures are included, with many tables, graphs, and charts. These items do to distract from the math.	**(Reviewer only.)** **__X____ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	The materials are created to engage parents and support parents and students with math work at home. **Evidence:** The Teacher Resources book includes a School-Home Letter for each chapter which provides an explanation of the methods being used for the chapter skills, as well as an activity to complete at hoe. .	**(Reviewer only.)** **___X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary Title/Level: _Go Math 6th Grade_____

Publisher: _Houghton Mifflin_ Copyright: ___2015_____ ISBN: 978054429544-5

Reviewer ID # __AJ, PL, PW_____ Date Review Completed: March 8, 2016

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	**Non- Negotiable 2: Focus and Coherence**
___X____ Meets **_____ Does Not Meet**	**_____ Meets** **_____ Does Not Meet**

Non-Negotiable Overall:

_____ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: __2___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **_____ Meets** **____X___ Does Not Meet**	**Points: _3____ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **_____ Meets** **____X___ Does Not Meet**	**Points: __4___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **_____ Meets** **___X____ Does Not Meet**

Alignment Criteria Overall:

_____ Meets **__X___ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes __X___ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

Go Math! 6th grade covers all Common Core Standards. The Fluency Builder in each lesson provides students practice with the fluencies and/or previous grade-level fluencies and concepts. The materials provided to support RTI in the classroom provide teachers with materials for intervention and enrichment. The Spiral Review included in each lesson provides students with opportunities to practice previous concepts.

Weaknesses:

Go Math! 6th grade does not spend sufficient time on the Major Works of the grade level. Clear connections between standards are absent. The use of Mathematical Practices in the student materials are not authentic in nature. The materials lack multi-step real world problems and lacks student to student interaction.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	GO Math Middle School Grade 6
ISBN #	978-0-544-06571-0
Grade Level(s) or Course:	MS Grade 6
Reviewer ID:	JHPLW

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

__X__**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The course materials reflect content architecture by assessing topics at the appropriate grade levels In addition, all Grade 6 materials are organized around the 4 major clusters of major Work. Supplemental work supports use of essential topics to tie content together.

COHERENCE- The 6th grade CCSS progressions are a clear hallmark of this program. Clusters are identified at the beginning of each unit. A middle school progression is summarized as well, although ties to K-5 not present

RIGOR- This program is very strong in procedural modeling and practice, as well as extension. Students have multiple opportunities to practice procedures, with fewer activities that promote conceptual understanding through student exploration.

CONCEPTUAL UNDERSTANDING- Lessons include Explore Activities to prompt discussion that promotes conceptual understanding. However, students do not have to rely on own reasoning. Most problems provide direction for appropriate procedure to use.

MATHEMATICAL PRACTICES- The text does provide authentic connections between Content Standards and most MP Practice Standards. It does not require students to "make sense" of problems of a non-routine nature. Students are not required to develop or rely on their own mathematical reasoning when learning new concepts.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- The Student text is somewhat reading dense. Problems require significant reading skills. Some differentiated Reading Strategies and TED: Instruction included, ELL students will require significant support for success.

OTHER:

* Address why AL 2 (Standards of Mathematical Practice) received 4 of 6 points

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Neither probability, similarity, geometric transformations, nor congruence are assessed at this level in this series.** **Materials tied to major work of grade 6, statistical distributions and descriptors are assessed within the grade 6 material.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Neither probability, similarity, geometric transformations, nor congruence are assessed in this level in this series.
Assessment items reflect the content identified for 6th grade CCSS.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

The content is organized around the four critical areas identified in the Standards document. Of the 16 modules, two are related to Supporting or Additional topics of study. Even in those areas, the numbers associated with the geometry and statistics reflect the numbers (whole numbers, decimals, and fractions) studied at the 6th grade level.

(Reviewer only.)

_X_ Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Extensive work with common factors and multiples supports the multiplication and division of fractions.** **Area and volume supports work with expressions.** **Operations with rational numbers are supported with problems involving area, surface area, and volume.** **Work in the Coordinate Plane includes signed numbers, distance and area. Work in this area supports principles associated with integers and area concepts.**	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The textbook is clearly organized around the 6th grade CCSS progressions. The cluster or standards progression underlying each unit are identified at the beginning of the unit. Each module outlines what students will understand, will learn, will learn after (ex. Pg 295) A summary of the middle school progression in each domain is provided. How the 6th grade progressions link to the 5th grade progressions is not provided. There is an assumption made that students do not need to review conceptual basis for fluencies supposedly achieved in the fifth grade. For example, the students immediately begin working with the traditional algorithm for multiplying fractions without any mention of a model.	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All students are p[illegible]ided extensive work with on grade level problems within each lesson. Each unit begins with a pre-assessment (Are You Ready), and also provides for differentiation through Skill Intervention WS and a supplemental Personal Math Trainer which models problems. Differentiated problems for three levels are provided for each lesson- on grade level; above level; and considerably below. Literacy support is provided. The differentiated support for all three levels is related to the focus of 6th grade.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each module begins with a quick review of skills from the fifth grade level that are foundational to work in the module. An online Personal Trainer provides tutorials for students without pre-requisite skills. For example, whole number multiplication and division skills practice precedes the work related to division of fractions. Arithmetic and expressions are purposefully linked in the Generating Equivalent Numerical Expressions module. TG has a chart at the beginning of each module (before, in this, after). A mixed review Assessment is included (TG p. 168) which refers back to concept from previous module.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Teachers Edition provides mathematics background for each standard addressed in a lesson. The background includes links to work from the fifth grade. Each module also provides a chart of what came before, what is in the module, and what comes later. In the student edition, each module begins with "Unpacking the Standard" and an explanation of what it means to the student. In addition;;, Common Core goals are listed in the SE and TE ex. Pg 75), with more expansion on following pages (TE pg. 78).	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Evidence is clearly seen in the Representing Ratios and Rates module that includes three lessons directly linked to the three standards in this cluster. The module on Applying Ratios and Rates provides further evidence.** **The Essential Question guiding each lesson relates to the cluster heading or directly to the standard.(Ex. "Understand the concept of ratio; use ratio language."**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Connections across domains are not a particular strength of this program. However, the book does provide cross-cluster problems identified with a symbol in the teacher's manual. A Number System standard is related with Expressions and Equations in the module focused on relationships in two variables. Many exercises within assignments often combine CCclusters (ex. Extending arithmetic to algebraic expressions). A Number System standard is related with a geometry standard in the module focused on distance and area in the coordinate plane.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X_ Meets

____Does Not Meet

Strengths/Weaknesses:
The content in this series is organized around the four critical areas identified in the CCSS. The clusters are used to provide structure throughout the lessons and modules.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **6.RP.3** **Use ratio and rate reasoning to solve real world and mathematical problems.** **The standard specifically mentions reasoning about tables, tape diagrams, double number lines, diagrams, and equations. The students are "stepped" through two methods for finding equivalent ratios and then given multiple contexts to replicate the demonstrated methods. This is an example of the lack of development of conceptual understanding to a set of procedures to be followed. The same kind of sequence is followed with unit rates.** **Each module begins with "Unpacking the Standard" component, followed by examples, practice, real life application, ending with a revisiting of the essential question.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** There are instances where students are asked conceptual questions- Explain how you could use a diagram like the one below to find the unit rate. Explore activities prompt discussion. Revisiting of the essential question continues development of conceptual mastery; Communicate Mathematical Ideas (pg 3-4-305 example) provide reflection with extends conceptual understanding.	

Do the materials feature opportunities to identify correspondences across mathem[illegible]representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence- Evidence for this criteria can be found in the lessons related to re[illegible]enting independent and dependent variables. Evidence can also be found in the Explore Activity Using Rates to Make Predictions.**	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **While there are fewer examples of conceptual understanding, the textbook is procedurally driven. Each lesson begins with an explore activity, followed by guided examples, guided practice, and independent practice. Students are given multiple opportunities to practice all procedures. Reasoning is provided in conjunction with all procedures.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Evidence of this can be found in the development of the algorithm for division of fractions. Students are quickly provided a rationale for multiplying by the reciprocal. The same is true for decimal by decimal division as well as the long division algorithm.	

Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **The Online Math Tutor provides more practice to build fluency. Practice Book includes extra practice opportunities. A range of strategies is provided for practice.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Applications are focused on the major work of the 6th grade. Volume problems require multiplication of fractions or decimals. Exponents are introduced using whole number bases as well as rational number bases.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Multiple step problems are clearly labeled as such for students and are provided in most application lessons. Almost all modules begin with a real life application. There are few non-routine problems and most problems are somewhat formulaic as they reflect the examples provided in the teacher directed part of the lesson. All lessons provide a range if single-step, milti-step and HOT Problems.
