Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** The numbers in the applications reflect the number classes studied in the 6th grade (integers, fractions, decimals, whole numbers). Algebraic equations and expressions also reflect the use of these numbers.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Models are directly provided for students or students are directed to make a specific model.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

(Reviewer only.)

__X__ Meets

____Does Not Meet

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths/Weaknesses:
Procedures and applications are strengths for this textbook. The development of conceptual understanding is a weakness.

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

The textbook is focused on the major work of this grade level, and the Mathematical Practices are woven throughout. The teacher edition identifies the specific instances where the mathematical practices play a role. A problem solving heuristic is reinforced throughout the modules. The one weakness noted is that there are few, if any, opportunities for student developed models of the mathematics. The textbook provides bar models, number lines, and pictures of algebra tiles and explains exactly how the model should be used to solve specific problems. Student reasoning is not a driver of instruction. There are multiple opportunities in each lesson for students to represent problems with equations. MP7 and MP8 are also represented throughout. There is a significant emphasis on the development of mathematics vocabulary. Repeated reference to Essential Questions and Math Talk" reinforce MPractice standards.

(Reviewer only.)

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **See the evidence above with one exception. While a problem solving heuristic is practiced throughout, student sense making of the mathematics is not a significant focus. Throughout the lessons, students are provided procedures for solving problems, both contextualized and decontextualized, but students do not need to rely on their own reasoning. For example, the students are directed to use subtraction when solving addition equations. The standard directs students to use reasoning to find equivalent ratios, but the textbook simply directs the student to "Multiply both terms of the original ratio by the same number to find an equivalent ratio." Very little time is given for students to "discover" the power of a ratio table and to develop proportional reasoning.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Little evidence is provided to determine if this metric meets or does not meet. The Mathematical Practices are appropriately used to meet the expectations for a sixth grade student. The only reference found was publisher statement "Earlier grades develop concepts at a simpler level, while later grades further develop these concepts at more complex level:.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **The teacher edition provides Professional Development in the form of an informational box strategically placed in lessons so that the role of the practice Standards is explained in the context of the 6th grade focus.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **The Higher Order Thinking Questions at the end of each lesson give students an opportunity to reason with grade level mathematics.**	**__X__Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Perhaps the best description for the weakness of this textbook with regard to student reasoning is found in the introductory lesson for finding the area of a parallelogram. The students are directed, step by step, to cut out a parallelogram with a dashed line helpfully identifying the triangle to be cut and attached to the opposite side. Student reasoning is hijacked in this manner. The textbook does give students multiple opportunities to provide explanations (Analyze, explain the error), but these explanations are often nothing more than regurgitation of textbook provided explanations.**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **The textbook makes particular effort to reinforce mathematical language. Mathematical vocabulary is introduced at the beginning of a module and reinforced throughout. All vocabulary is highlighted. A Reading Math segment begins each lesson. TGuide has Connect Vocabulary activities. Students are asked to explain errors in the thinking of fictitious students. Opportunities for Math Talk are identified as well as for the development of mathematical conjectures.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

_X___Does Not Meet

Strengths/Weaknesses:
While the textbook provides authentic connections between content Standards and most Practice Standards, it does not require students to "make sense" of non-routine problems nor to rely on their own mathematical reasoning when learning new mathematics.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** A practice page for each lesson is tailored to meet the needs of English Language Learners through pictures. However, the textbook itself is text dense. For example, the actual CCSS is lifted from the original document and students are expected to "unpack" the standard through a story problem. ELL reading strategies are provided. There is an English/Spanish glossary at the end of the book and an e-glossary includes voiced vocabulary definitions. Unfortunately, our ELL are primarily Arabic speakers.	**Reviewer only.)** **____Meets (2)** **_X___Partially Meets (1)** **_ ___Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The materials provided include differentiated practice pages and an online tutorial in the guise of a Personal Math Trainer. The Personal Math Trainer can also be used for Intervention. Each module assesses readiness and the online software provides enrichment as well as intervention. In the textbook, the students are guided through a procedure and then given an opportunity to perform the same procedure through "Your Turn" problems or prompts. Teacher Edition provides a number sense scaffolded section, a Critical Thinking Challenge,an avoid common error tip, as well as practice supplementation at a variety of levels (A/B, C,D).	**Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Models and a range of questions are provided. Collaborative learning opportunities are provided as well as opportunities for math talk. Opportunities to Check for Understanding through teacher questioning are provided.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__ Meets** **____ Does Not Meet** **Strengths/Weaknesses:** The textbook requires significant reading skills. While notetaking and reading strategies are suggested, a struggling reader or an ELL will need significant support to be successful

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **The series is very teacher or textbook directed as procedures related to the mathematics are provided immediately after the introduction of the topic. There are opportunities for Math Talk and students are asked to self-reflect on the Essential Question. The answers to the Essential Questions are often a description of a procedure. This sequence does not promote active participation.**	**(Reviewer only.)** **_____ Yes** **__X__ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **The material provides both problems and exercises. Unfortunately, problem solving comes at the end of the lesson so there is little opportunity for the students to learn new mathematics through productive struggle with a problem. Procedures are emphasized throughout.**	**(Reviewer only.)** **_____ Yes** **__X__ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Assignments go from Guided Practice, with directions to specific examples from the body of the lesson, to Independent Practice. The assignment ends with higher order thinking questions and applications.	(Reviewer only.) __X__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Each module includes material to support the teacher. Mathematical content is discussed for each lesson. Common errors are identified, with some direction for the teacher as to how to address the common error. Questioning strategies are provided in the margins and the questions are related to the Math Practices. The textbook provides procedures and there is little opportunity for student developed procedures. Consequently, student ways of thinking do not play a role.	(Reviewer only.) __X__ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Specific manipulatives are suggested and used pictorially (algebra tiles). Graph paper and drawings are also suggested. Students are directed as to how to use the tool to solve a given problem. Students may or may not attach the same meaning to the manipulative.	(Reviewer only.) __X__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- All forms of assessment are present, including self-reflection related to the essential question. An Assessment Readiness and Module Quiz is included for each module.	(Reviewer only.) _____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Answer Keys are provided. Performance tasks are identified, but these are essentially a problem with multiple extensions. These are right/wrong answers without the need for a rubric.	(Reviewer only.) _____ Yes _____ No

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Assessment methods are aligned with the instructional methods.**	**(Reviewer only.)** **__X__ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Names of Program Reviewers are listed on the page right after the page of authors.**	**(Reviewer only.)** **__X__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The student edition is colorful with graphics that engage students. The lesson body is easily separated from Guided and Independent Practice. Tips and additional help are provided in the margins. This makes the book a little "busy." If the student text is a consumable format, there is insufficient working space provided on the page.**	**(Reviewer only.)** **__X__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **The online Personal Math Trainer provides an excellent resource for parents as it is essentially a step by step tutor. It also includes guided practice that provides immediate feedback. There were not specific letters provided for parents.**	**(Reviewer only.)** **__X__ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level:** Go Math Middle School Grade 6

Publisher: Houghton Mifflin Harcourt **Copyright:** 2014

ISBN: 978-0-544-06571-0

Reviewer ID # JH **Date Review Completed:** March 5, 2016

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 4 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	_____ Meets	X Meets
_____ Does Not Meet	X Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

_____ Meets __X___ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes ___X___ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

The connections between clusters and the extensive modeling are strengths for this textbook. There seems to be little conceptual development before moving to procedures. Opportunities for student reasoning come after direct instruction on procedures rather than before procedural instruction. This seems to violate the idea that procedural fluency flows from conceptual understanding.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	Algebra 1
ISBN #	**9780544381964**
Grade Level(s) or Course:	Algebra 1
Reviewer ID:	T.T. RW

RECOMMENDED AS:

___X___**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
The textbook was definitely designed around the CCSS and aligns very well.

COHERENCE-
Practices and standards are noted and followed appropriately as noted by standards and Appendix A.

RIGOR-
Problems and lessons apply themselves with a focus to the standards and practices and provide strong structure for the students to follow.

CONCEPTUAL UNDERSTANDING-
The practice problems are written more as story problems and less the traditional way. There is a task performance problem in each homework section, however, the task performance problem is just an extension of a story problem.
Most problems are written to a conceptual understanding and contain many opportunities to develop their learning.

MATHEMATICAL PRACTICES-
The online resources really provide a lot of support when found. This requires extensive researching of the online resources. A lot of diverse lesson approaches.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Materials are provided online for extensive ELL and vocabulary work.

OTHER:
This curriculum meets all the requirements, however it is not necessarily visually appealing to young adults.
Teacher's edition has ideas to promote collaborative learning in the classroom as well as incorporation STEM activities throughout the text.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any [illegible]e course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **67/81 approxi[illegible]ly which is over 50%** **Reviewing tabl[illegible]f contents, units and criterion 1.** **Further clarification can be found in each chapter.**	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** In the traditional pathway, none of the Geometry standards are covered in the Algebra 1 course. Therefore, this metric would not apply to this course. Those items involving geometric principles require algebra skills.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each module begins with an "Are You Ready" section in which they review mathematical skills from grades 6-8, along with previously taught skills from this course to prepare the students for the upcoming content. The problems are at a level of sophistication appropriate to high school. Modules 3,5,8,and 10 seemed to best exemplify this evidence.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Text is aligned to the Idaho Core Standards. Using table of contents, and links, found all the standards represented.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The practice problems are designed in a way in which at first, they are easy to solve and they gradually get more difficult. There is a "H.O.T" section (higher order thinking) that can be used to challenge the students. There is also a "Lesson Performance Task" problem that requires a little bit more knowledge and understanding to complete, but it isn't very difficult. In the margins of the teacher edition, there are notes on "scaffolding support" to help teachers set up the lesson in a way that will help the students understand the material.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The "Are You Ready" section is designed to review skills and knowledge needed to successfully complete the upcoming content.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** At the beginning of each lesson, the teachers edition of the text book notes which CCSS is being covered in that section and has objectives written that mirror the CCSS noted. The text book also notes other strands that are covered and utilized in that section.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Often times throughout the book, clusters in a domain are connected. These might be noted in the beginning of each lesson throughout the whole text, which connects different clusters within the same section in the "teaching" portion of the lesson. The performance questions at the end of the sections utilize this idea. There are also opportunities to do more of these activities in the handouts.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Metric NN 1:** If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses** The textbook was definitely designed around the CCSS and aligns very well.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balance in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** The homework problems are written more like story problems, which require more of a conceptual understanding than traditional books. However, the problems are not very challenging. Example: 3.2-4 p.136, performance tasks.	

Do the materials feature high-quality conceptual problems and conceptu[illegible]cussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** There is a "H.[illegible]" section in the textbook with high order thinking questions that can be used to challenge students. There are performance tasks. Example: 3.2-4 p.136, performance tasks. Limited number, but handouts may contain deeper questions. This may need supplementation	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** There is a mixture of tables, graphs, equations, pictures and stories throughout the textbook. Example ch 11 shows linear relationships and how their intersections demonstrate an occurrence and how solving linear systems and graphs go together.	
AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Many of the problems are written in a way that require students to have a conceptual understanding of the material being taught. Fluency and procedural skills for developing conceptual understanding are definitely interwoven throughout the textbook. For example, ch 20 shows factors, zeros, graphs and leads to ch 21 showing solving the various quadratics**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x − 2)2 = 6x − 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 − 5).	**Evidence-** Problems are present and provide for generic cases to apply to higher learning. For example, in ch 17, polynomials are added with generics and specifics and also in context.	

AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There is a great mixture of single- and multi-step problems throughout the textbook. Students require problem solving strategies to complete many of the problems. Every lesson has this.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are many application problems throughout the textbook and the WAP are apparent throughout the entire textbook. Ex: module 6 lesson 4 275- Problems address application, especially the performance tasks	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Students work with tables, graphs, equations, pictures and story problems throughout the textbook, giving them different strategies for modeling the same content. Ex: module 20 has modeling problems and application of how the development continues	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X__Meets

____Does Not Meet

Strengths/Weaknesses:
The practice problems are written more as story problems and less the traditional way. There is a task performance problem in each homework section, however, the task performance problem is just an extension of a story problem.

Alignment Criterion 2:
Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 2 is rated as Meets or Does Not Meet.
To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **The practice standards are listed throughout the textbook. The MPs are constantly embedded throughout the book and well represented. Example p155 4.1, standard, practice are all there. Notes in TE show where lesson is going and the connections as well as practices and strategies, work shows integration and where skills are as well as connections, see p.162**	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The 8 MPs are present throughout the textbook, both in the lessons and in the homework problems. For example, see end of sections. And beginning. MP are there and listed. All are present and listed in front as well.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** The teacher's edition state the standards being addressed in each unit as well as the mathematical practices being used throughout the unit. Not only are MPs listed, but there is a scaffolding sections. See p. 170 and p.187	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** The textbook requires students to explain their thinking. Using the extra questions in the TE, the strategies and the tasks do this. TE does a good job of providing support for possible directions. See p. 188, supporting students reasoning.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** In the "Reflect" and "Elaborate" portion of the textbook, the students are required to form an argument or give an example as to why something is true or false. Essential questions, (p. 189, 469) and ready to go on, provide for this also.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Reading start ups (see p.476 for ex.) and vocabulary are laid out to provide this. This continues with strategies for connecting vocabulary and reflections type questions, summarizing and evaluating material in the lesson.	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** The 8 MPs are very apparent throughout the textbook.

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **The teachers edition of the textbook lists "Additional Resources" as to help provide more practice to struggling students. The online differentiation for English Learners is available.**	**_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **The teachers edition of the textbook has a lot of helpful strategies to help teachers successfully scaffold the content in a way that will help the students learn and understand the material being taught. As mentioned before, the book lists several resources to help in the scaffolding and differentiation of the. Personal math trainer and scaffolding provided. See p. 196,396 etc., tier intervention, Online version has differentiation and language support**	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3C: **Design lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Multiple representations is used often throughout the book. Students are required to use all type of representations and they are required to form viable arguments for why the math works the way it does and when it is necessary to use certain types of representations. The material is presented in a way in which the students can be learning the information independently, in pairs or in groups. There are peer activities, group activities, individual activities and extra assignments and questions in the handouts. Also, intervention strategies available. p. 403-4 for ex.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** **The online resources really provide a lot of support when found. This requires extensive researching of the online resources.**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)

1. Lessons are thoughtfully structured and support the teacher in guiding the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Lessons have multiple parts and types. Extensively laid out in the margin. See p. 403-4, p. 545, 546	(Reviewer only.) ___X___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Both types exist and are in varied forms, ex 326-329 on inequalities, it begins with fill in blanks, goes to computation, then to evaluation and explanation.	(Reviewer only.) ___X___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Order is certain and leads to a performance task. See 326-334 on inequalities as example.	(Reviewer only.) __X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Digital version offers extras including evaluation, objectives, and differentiation. In fact, digital appears more readily available and easier to access. Videos of some lessons available also.	(Reviewer only.) __X____ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- They are drawn and displayed as they would be in class. Ex. Algebra tiles on p.867, not many more besides tiles.	(Reviewer only.) ____X__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There is opportunities in the explore sections (i.e. section 3 p.137) More questions and a class activity, then practice and assessment. Pre assessment is weak and only at beginning of chapter.	(Reviewer only.) ___X___ Yes _____ No

7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Rubrics are provided. This seems fine. Tough to find, but online is easy. Very deep.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Language appears clean and unbiased.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **9 reviewers. 2 math related and all school related.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Fairly bland, but text is clear and easy to follow.**	**(Reviewer only.)** **_____ Yes** **____X__ No**

Reviewer IMET Evaluation Summary **Title/Level: __Algebra 1_____**

Publisher: ___Houghton Mifflin Harcourt_____ Copyright: ___2015____ ISBN:__ 9780544381964____

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

___X__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

___X__ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: __6__ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: ___6__ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
___X____ Meets	**____X___ Meets**	**____X___ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

___X__ Meets **_____ Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co tandards. **Do the materials meet every Non-Negoti and Alignment Criterion? ___X__ Yes _____**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

This curriculum meets all the requirements, however it is not necessarily visually appealing to young adults.
Teacher's edition has ideas to promote collaborative learning in the classroom as well as incorporation STEM activities throughout the text.

The textbook was definitely designed around the CCSS and aligns very well.

The practice problems are written more as story problems and less the traditional way. There is a task performance problem in each homework section, however, the task performance problem is just an extension of a story problem.

The 8 MPs are very apparent throughout the textbook.

The online resources really provide a lot of support when found. This requires extensive researching of the online resources.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	HMH
Title:	Algebra 2
ISBN #	978 0544 385924
Grade Level(s) or Course:	9th - 12th grade.
Reviewer ID:	PP, DG.

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

NN1 - Over 50% spent on W.A.P.
Functions, Real Numbers, Algebra, Geometry, Probability found throughout.

COHERENCE-

NN1 - Standards are listed in T.E.
Problems are appropriate and uses Depth of Knowledge.
Modules build the units, scaffolding from low skills, based to nigher thinking problems.

RIGOR-

AC1 - F.I.F.B.4- Functions.

CONCEPTUAL UNDERSTANDING-

AC1 - Concepts are built with examples, then practice, then evaluations.

MATHEMATICAL PRACTICES-

AC2 - Homework is aligned as seen throughout.
Examples include p341-342, Finding Out about Polynomials.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

AC3. - Glossary is both in English and Spanish with problems also done in English and Spanish.
Peer to Peer activities.

OTHER:

Video's on P.D for each module
Digital TE
Personal Math Tutor.

Strengths:

1. Glossary in both English and Spanish along with problems worked out in English and Spanish alongside each other.
2. RTI support is helpful.
3. Offering of proffessional development.
4. Student Edition is consummable with space for note taking within pages.

Weaknesses:

1. Index is limited; it doesn't include everything in the book. For example: the word to conjugate is not listed in the index so a person would have to look through each pg.
2. Student Edition is consumable which means that districts would have to purchase Student Editions each year.

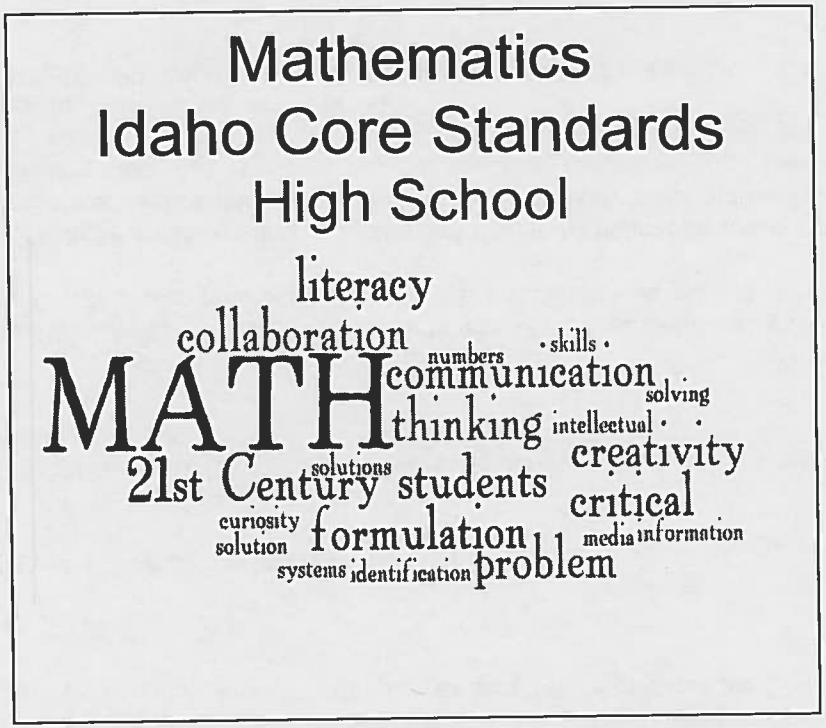
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1 **Focus and Coherence**		
Criterion	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Functions Mod #1, 2, 8, 10 Real #, Mod 11 Algebra, # 2.2, 2.3, Mod 4, Mod 6, Mod 7, Mod 9.	X **Meets** ____ **Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** SE pg 175-188 Exercises throughout Chapters involve areas, perimeters, volumes etc. Trig Functions Circles	X **Meets** ____ **Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** "Are You Ready?" to review located before every Mod. Lesson's throughout are thoughtful ex: 18.1/18.2 stretching graphs→ sin/cos Probability in SE# 1049-1070	X Meets ___Does Not Meet Insufficient Evidence
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Standards listed in TE edition	X Meets ___Does Not Meet Insufficient Evidence
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Problems are appropriate and have depth of knowledge. Ex: Elaborate and H.O.T. problems.	X Meets ___Does Not Meet Insufficient Evidence

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Are you Ready? Pg 64 Ready to go on? pg. 61.	X Meets ___Does Not Meet Insufficient Evidence
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** A.CED.A Solving equations and iequalities throughout. Unit 7-Trig Unit 9-Statistics Unit 8-Probability	X Meets ___Does Not Meet Insufficient Evidence
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Modules build the units Scaffolds from low (one idea) to high (many ideas).	X Meets ___Does Not Meet Insufficient Evidence

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

____ **Does Not Meet**

Strengths/Weaknesses
- Building from basic skill questions to high thinking skills.
- Elaborate
- Are You Ready Sections.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric.** **X Meets (2)** **____ Partially Meets (1)** **____ Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Found throughout F.IF.B.4 Functions	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** See above	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** See above.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** __X__ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** "YourTurn" pg 8,9,11 Engage, Explore, Explain, Elaborate, Evaluate.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving $x2 + 5 = 49 + 5$ or $(3x - 2)2 = 6x - 4$. Generic cases that require efficient and general procedures might include such problems as solving $c + 8 - c2 = 3(c - 1)2 - 5$.	**Evidence-** Concepts are built w/examples, then practice, then evaluation.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** __X__ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout ex: 3.1	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes, ex 4 Rational Functions	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes, pg 225, p 267 "Ready to go on."	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** •Assessments are appropriate. •Apply learning to higher level problems.
Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Homework is aligned, seen throughout. Examples p341-352 Finding out about polynomials.	X **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** X **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Problems are well-related to the standards.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** 1. Pg 204 2. Pg 128 3. Pg 454 4. P 66 5. P 704 6. P 78 7. P 176 8.310	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Essential Q's Are You Ready? Questioning strats Reflect/Elaborate	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Analyze, Formulate, Solve, Justify & Evaluate, Your Turn pg 345-346	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary ex. p. 419	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:
Students justify Concepts learned.
Models "How to"....
Use of Language.

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Spanish vocab, glossary eng/spanish RTI p. 424	X **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Questioning Strats Communicate Math ex 430	X **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Peer to Peer Activities Avoid Common errors found in TE pg 440-441	X **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** through out SE: · engage, preview, integrate tech, questioning strats, avoid common errors Pg 440.	**(Reviewer only.)** _X_ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Clearly Evident.	**(Reviewer only.)** _X_ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Yes, see assessment documents	**(Reviewer only.)** X Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Video's on P.D. pg 339 for each Module. Digital Teacher's Edition. Personal Math Trainer	**(Reviewer only.)** X Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Algebra tiles/graphing calc. Pg 210	**(Reviewer only.)** X Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** embedded throughout.	**(Reviewer only.)** X Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** ex: p 228-230	**(Reviewer only.)** X Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes, see performance task, p. 228	**(Reviewer only.)** X Yes ____ No

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** inside 1st pages	**(Reviewer only.)** X Yes ____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Yes:... boxes or blanks to help Students	**(Reviewer only.)** X Yes ____ No

Reviewer IMET Evaluation Summary **Title/Level:** Algebra 2 9th-12th grade.

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

X **Meets**

____ **Does Not Meet**

Non-Negotiable Overall:

__X__ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6__ **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points:** __6__ **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points:** __6__ **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
__X__ **Meets**	__X__ **Meets**	__X__ **Meets**
_____ **Does Not Meet**	_____ **Does Not Meet**	_____ **Does Not Meet**

Alignment Criteria Overall:

__X__ **Meets** _____ **Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[illegible]tandards. **Do the materials meet every Non-Negotia[illegible] and Alignment Criterion?** _X_ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

1. Glossary in both English and Spanish with problems workout side by side in both English and Spanish.
2. RTI support is helpful.
3. Offering of professional developent.
4. Student Edition is consumable, with blanks to help with Note writing.

Weakness:

1. Index is limited. For example Conjugate is not listed.
2. Student edition is softbound (is it consumable?), so districts would have to purchase each year.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	HMH
Title:	Geometry
ISBN #	978 0 544 38582 5
Grade Level(s) or Course:	9-12th
Reviewer ID:	PPTT

RECOMMENDED AS:

X. **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The textbook was definately designed around around the CCSS and aligns very well.

COHERENCE-
Practices and standards are noted and followed appropriately as noted by standards and Appendix A.

RIGOR-
Problems and lessons apply themselves with a focus to the Standards and practices and provide strong structure for the students to follow.

CONCEPTUAL UNDERSTANDING-
The practice problems are written more as story problems and less the tradional way. There is a task performance problem is just an extension of a story problem.

MATHEMATICAL PRACTICES-
The online resources really provide a lot of support when found. This requires extensive researching of online resources. A lot of diverse lesson approaches.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Materials are provided online for extensive ELL and vocabulary work.

OTHER:
The curriculum meets all requirements, however it is not necessarily appealing to young adults.
Teacher's edition has ideas to promote collaborative learning in the classroom as well as incorporate STEM activities throughout text.

Strengths:

- Completely immersed with CCSS.
- Incrediable online resources.

Weakness:

- Not appealing to young adults.

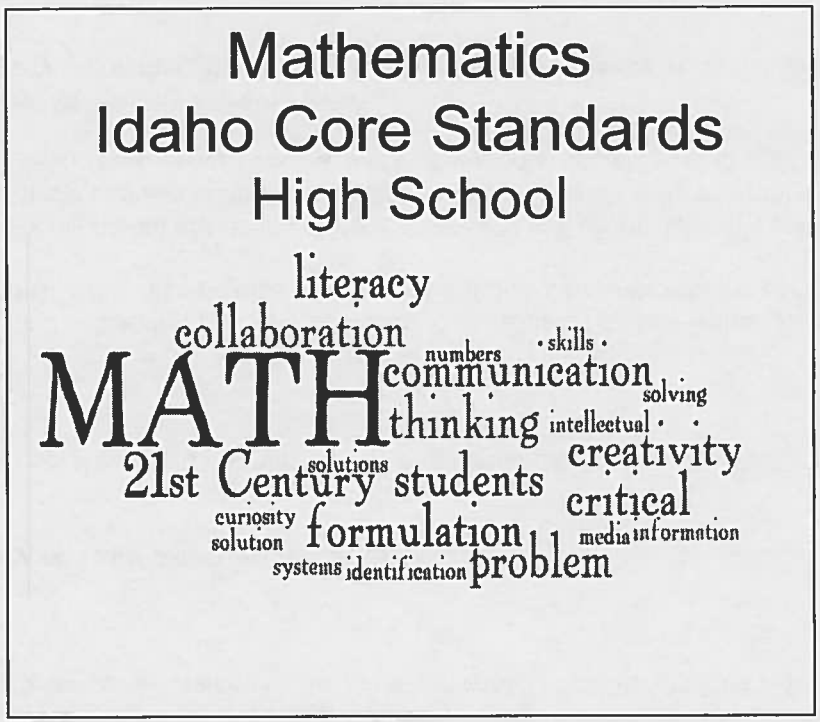
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses
· ~~Examples~~ Standards are listed at the beginning of each section.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Yes, Ex. 3 unit 3, lesson 9. Standards are laid out, questions prepped and learning developed. Proofs develope p. 426.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function $f(t) = 5 - t2$?" or "Is $\sqrt{2}$ a polynomial? How about $\frac{1}{2}(x + \sqrt{2}) + \frac{1}{2}(-x + \sqrt{2})$?"	**Evidence-** Yes, see above and Higher Order Questions and performance tasks listed.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Yes, Example 11.1, pg 577. Students do measurement, complete constructions then continue to applications.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **_X_ Meets (2)** **____ Partially Meets (1)** **____ Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Yes. There are opportunities in each Chapter to practice working problems. See Lesson 4.5	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving $x2 + 5 = 49 + 5$ or $(3x - 2)2 = 6x - 4$. Generic cases that require efficient and general procedures might include such problems as solving $c + 8 - c2 = 3(c - 1)2 - 5)$.	**Evidence-** Yes. See Lesson 4.5.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **_X_ Meets (2)** **____ Partially Meets (1)** **____ Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes, every module has simple questions, multi-step and even performance tasks.	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes, Example 123-126. Transformance Transformations are specifically addressed to the standard.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Performance tasks and multistep problems do this. Ex: p 268 where a bridge is ~~built~~ used, p 266 where benches are used.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** • Performance Tasks.
Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Yes. Examples include p 245, 5.3 Standard, practices are there. Notes in TE show where lesson is going and the connections as well as practices and strategies.	X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Using p. cc9 and tracking down Practices.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** Yes for example, lesson 3.1, Practices are specifically addressed.	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric.** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Using the extra questions in the TE, the strategies and tasks, yes. E See p145, mp.3, p148, Peer, p151, supporting student reasoning.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** p 151, scaffolding performance tasks.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Reading start ups (see p160 forex) and Vocab words are laid out.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:
- Scaffolding in Performance tasks.
- MPIs are fairly strong.

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Yes. Language is broken down and reviewed. Spanish available for parts and other ~~[illegible]~~ resources available online for other ELL.	X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Yes: Personal math trainer and scaffolding provided. See p180	X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Peer activities, group activities, individual actives address this	X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	X **Meets** ___ **Does Not Meet** **Strengths/Weaknesses:** • Online resources for ELL students.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons have multiple parts and types. See p 259, 260, & 277, 278.	**(Reviewer only.)** X **Yes** ___ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Yes. Exercises start out with procedural skills and work into conceptual understanding	**(Reviewer only.)** X **Yes** ___ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Yes. Exercisesets.	(Reviewer only.) X Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- There are videos available to demonstrate, also PD video's. TE has extensive prompts and points. to make. Stem is easily incorporated throughout	(Reviewer only.) X Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Yes. Graphics deplict accurate concepts and pictures	(Reviewer only.) X Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Yes, Chapter reviews, practice tests, midChapter quizzes	(Reviewer only.) X Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Yes. The TE gives instructions. interpreting assessments.	(Reviewer only.) X Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Yes.	(Reviewer only.) X Yes ____ No

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** 9 reviewers and 2 math related.	**(Reviewer only.)** X **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Yes. Text is clear, graphics are clear.	**(Reviewer only.)** X **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** Geometry 9-12th grade.

Publisher: HMH **Copyright:** 2015 **ISBN:** 978-0-544 38582-5

Reviewer ID # TTPP **Date Review Completed:** 3/8/2016

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

X **Meets**

____ **Does Not Meet**

Non-Negotiable Overall:

_____ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 **of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points:** 6 **of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points:** 6 **of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
X **Meets**	X **Meets**	✓ **Meets**
_____ **Does Not Meet**	_____ **Does Not Meet**	_____ **Does Not Meet**

Alignment Criteria Overall:

X **Meets** _____ **Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[illegible]standards. **Do the materials meet every Non-Negotia[illegible] and Alignment Criterion?** ___X___ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

1. This curriculum meets all requirements.
2. The textbook covers CCSS and aligns well
3. The 8 MP's are apparent throughout the textbook.
4. Online resources are fantastic.

Weakness:

1. Might not be visually appealing to young adults.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	Integrated Mathematics 1
ISBN #	978-0-544-38978-6
Grade Level(s) or Course:	Integrated Mathematics 1
Reviewer ID:	JB & TG

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The materials focus on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the CCSS. Each lesson addresses at least one CCSS and 63.8% cover at least one WAP.

COHERENCE- The materials creates a structure that ties topics together, in a meaningful way. The standards are interwoven as this is an integrated course.

RIGOR- The focus of this text is building procedural skill and fluency and application. The materials address some conceptual understanding.

CONCEPTUAL UNDERSTANDING- Conceptual understanding is required in order for students to do application problems. However, the materials do not specifically address conceptual understanding.

MATHEMATICAL PRACTICES- All eight mathematical practices are addressed throughout the entire text and specifically stated in the text.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- ~~Materials~~ Supports are included in the material to make content accessible to all students.

OTHER:

Strengths

- Teacher resources that are included in the Teacher Edition
- Support materials for special populations
- Task-based learning

- Online resources for teachers & students
- Variety of assessments, including pre-, post, formative & summative

Weakness
- Lacking focus on conceptual understanding

2015-1 nterim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: HMH

Title of Material: Integrated Math 1

Author: Timothy D. Kanold etal.

Reviewer ID: JB * TG

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** In course 1 the HMH Integrated Math program students spend 63.8% of the time on the Widely Applicable Prerequisites of the 94 lessons 60 cover the Widely Applicable Prerequisites. Examples: Unit 1 covers the Widely Applicable Prerequisites in the Number and Quantity conceptual category. Units 2, 3, 5, and 6 cover the Widely Applicable Prerequisites in the Algebra and Function conceptual categories.	**_X___Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** The textbook covers a large amount of geometry standards in Unit 7, Unit 8, and Unit 9. There are opportunities to apply these concepts with contextual and modeling exercises. Example: In lesson 17.4 almost 80% of the homework exercises are modeling problems. Most of the performance tasks in these three units involve application problems with real world situations.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There a[illegible]roblems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** In course 1 [illegible]e HMH Integrated Math program the section called "Are You Ready?" offers problems that require students to apply knowledge and skills from grades 6-8 and the problems are of the high school level. The textbook covers application problems of each of the following as described: • Ratios and proportional relationships. - solving similar triangles (1.2) • Percentage and unit conversions - using dimensional analysis to determine which is great (1.2) • Basic function concepts - linear functions (Unit 2), exponential functions (Unit 6) • Concepts and skills of geometric measurement - finding perimeter and area on the coordinate plane (25.5) • * Concepts and skills of basic statistics and probability - normal distribution (9.4)	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Course 1 of HMH Integrated Math program is based on the content outlined in the standards for the integrated pathway. This textbook consists of 9 units, each unit has 2 - 3 modules, for total of 25 modules, and each module has 2 - 5 lessons. Every lesson is aligned to at least one common core state standard. For example: Module 14 - Geometric Sequences and Exponential Functions • 14.1 covers F - LE.A.2 and F - LE.A.3 • 14.2 covers F-BF.A.1a, F - LE.A.2, and F-BF.A.2 • 14.3 covers F-BF.A.1, F-IF.A.2, and F-IF.C.7e • 14.4 covers F-IF.C7e and F-IF.C.8b • * 14.5 covers F-BF.B.3, F-IF.C.9, and F-BF.A.1b	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Course 1 of the HMH Integrated Math program is designed to help all students access the mathematics. There are response to intervention materials for students that struggle with the mathematics. There is no Honors book but there is a section in the homework called "Focus on Higher Order Thinking". The textbook provides ample opportunities to practice the course-level material through the lesson, assignments, performance tasks, and assessments. Example: Lesson 19.2 has 3 problems in the lesson with 3 "your turn" problems. The homework assignment has 23 problems for more practice. Finally the lesson ends with a performance task.	**_X___Meets** **____Does Not Meet Insufficient Evidence**

Metric NM1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Course 1 of HMH Integrated Math program there are two sections called "Are You Ready?" which offers problems that require students to apply knowledge as well as skills from grades 6-8 and the problems are of the high school level. The other is "Real World Video" which helps students relate real world and prior knowledge to the lesson. The Teacher's Edition also offers a section called "Math Background" which notifies the teacher of prior skills needed for the concepts covered in the lesson. Example: Module 16 assesses angle relationships and distance and midpoints. Then the lessons in module 16 covers constructing a line and a bisector. The next lesson covers constructing an angle and an angle bisector, then students represent and describe transformations.	**_X___Meets** **____Does Not Meet Insufficient Evidence**

Metric NM1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** In course 1 of the HMH Integrated Math program each lesson is designed to meet one of more of the CCSSM. The units are aligned with the standards listed in the integrated pathways. Each lesson begins with common core math standards, mathematical practices, and language objectives. Then each lesson has essential questions that states the goal for that lesson. Example: Lesson 22.3 Triangle Inequalities covers: • CCMS: G-SRT.B.5 • MP: 5 Using Tools • Language Objective: explain how to show the three inequalities generated for a triangle • * Essential Questions: How can you use inequalities to describe the relationships among side lengths and angle measures in a triangle?	**_X___Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Many of the lesson cover one more than one standard. Sometimes these standards are in the same domain and other times they are in different domains. In course 1 of the HMH Integrated Math program the "Assessment Readiness" section is designed to help students make connections between the clusters, domains, and categories. Example: Lesson 5.1 - Understanding Linear Functions covers 5 different standards: F-LE.A.1b, F-LE.A.1a, F-LE.A.2, A-REI.D.10, and F-IF.C.7a. These standards are all related to linear functions and characteristics a linear graph.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Metric NN 1:** If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses** The focus and coherence on the Widely Applicable Prerequisites is met. Alignment to the standards is clear. The sequencing of the lessons make sense to build student understanding. The textbook gives multiple opportunities for students to practice and apply their knowledge. No program or extra work is available for high performing students (honors).

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Procedural understanding is attended to more than the conceptual understanding. Each lesson walks students through the procedure of solving the problems through examples rather than the use of task based learning. Example: According to the text A-REI.A.1 is addressed in two different lessons. The first is Lesson 1.1 - Solving Equations. This lesson involves solving simple one variable equation. Students are given the 4 properties of equality. The first example gives the property and students have do the operation with the equation. After that students are just asked to solve equations by using the properties of equality. However, it does not explicitly state to show each step or justify each step using a property. On a few of the homework questions students are asked to write the property used in each step of an equation that is already solved. The second lesson is 16.4 - Reasoning and Proof which is in the tools of geometry module. In this lesson students are asked to prove theorems. The topic of geometry proofs is introduced by solving one variable equations and justifying each step with properties of equality.	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** The "Performance Tasks" do offer conceptual problems. The Teacher's Edition offers questions to aid in discussions. Example: Lesson 5.1 - Understanding Linear Functions has a Performance Task where students are given a table and have to determine if the function is linear, graph the function, then explain why the function should not be used to predict profit for a long term future.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Minimal use of multiple representations are used. Negative Example: Lesson 1.2 students could have been asked to not only graph the function but also create a table and an equation. Positive Example: Lesson 16.4 - Reasoning and Proof students are asked to prove theorems. The topic of geometry proofs is introduced by solving one variable equations and justifying each step with properties of equality.	
AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Fluency and procedural skills are the main focus of the HMH Integrated Math program. Conceptual understanding is not the main focus. The lessons are structured similar to traditional textbooks where there are examples that explain the procedure and at the end of the lesson there are practice problems on the same topic. Example: Module 5 - three lessons in this module introduce the characteristics of a function such as intercepts and slope. It also shows the relationship between a table and the graph. The next units introduces equations of a line and the relationship with the graph.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x − 2)2 = 6x − 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 − 5).	**Evidence-** Fluency and procedural skills are the main focus of the HMH Integrated Math program. Example: Students are asked to graph linear functions with procedural exercises. There are also real-life problems where students have to identify the slope and y-intercepts using the situation and/or graph.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes, HMH Integrated Math program has both single and multi step contextual problems. See the "Performance Tasks" at the end of each lesson. Example: 9.3 performance task gives students batting averages for two teams. Then students are asked to create a box plot for each team then compare the distribution, then decide which team has a better starting lineup.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes, the application problems stress the Widely Applicable Prerequisites. The application problems consist of the "Performance Task".	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes, modeling problems can be found in the "Ready to Go On" section. Example: Students have the opportunity to model data sets using box plots, histograms, dot plots. Students can visually understand the distribution of the data by making these models.	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	_X___Meets ____Does Not Meet
AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**Strengths/Weaknesses:** This textbook emphasizes the widely applicable prerequisites in many ways. Student have amply opportunities to practice their skills with procedural problems as well as apply their knowledge on contextual problems. There is rigor and balance but the rigor could be increased which would help to support high performing students. However, the text lacks in conceptual understanding opportunities.

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** There is a cl flow to the program and the units are aligned to the standards. The Widely Applicable Prerequisites are addressed in the practice standards. Each lesson states the common core math standard as well as the mathematical practices that are used during the lesson. The homework is categorized into different mathematical practices. In most lessons there are suggestions on how to incorporate more mathematical practice. To address focus and coherence, sometimes the text strengths the focus but other times it detracts. For example, Module 6 addresses forms of linear equations. First students are taught about slope-intercept form then point-slope form, but a connection is not made on how the two equations relate. In the third lesson students are taught about general form and how to get to general form using slope-intercept form and point-slope form. This is an example teaching different ideas instead of developing ideas. On the other hand, in lesson 6.4 students are taught how to vertically transform linear functions compared to the parent function. This same concept is shown in lesson 17.1 when translating a figure. This is an example of making use of structure.	_X___Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** _X___Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Yes. Practice Standards are listed in each lesson and addressed throughout the course. The performance tasks focus on the effective development of the Mathematical Practices. However, each task does not specifically state the practice standard being addressed.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** Yes, the Practice Standards are listed in each lesson. Alignment is accurate. There is a professional development paragraph that explicitly states how to integrate the practice standard into the lesson. Example: Lesson 17.2 states that students will be using tools (MP. 5). The professional development explains that students should use tracing paper, rulers, and protractors to explore reflections.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **_X___Meets (2)** **____Partially Meets (1)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Yes. The Performance Tasks, Journal prompts, and Questioning Strategies require students to construct viable arguments and critique the work of others. Throughout the lesson there are opportunities to reflect on their learning. This provides a guide to students to construct viable arguments. In the homework there is usually an exercise that asks students to communicate mathematical ideas. The performance tasks at the end of each lesson ask for students to explain their reasoning and this is part of the rubric. There are also journal prompts to just students to use mathematical reasoning.	____**Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** There are ample opportunities for students to reason with the mathematics. Application and contextual problems require students to use: arguments, explanations, diagrams, and models. The book scaffolds the concept of creating a course-appropriate argument, explanations, diagrams, mathematical models. Students do not always generate these on their own. Performance tasks not only ask students to solve problems but explain their reasoning. On occasion students are asked to model the mathematics without actually solving the problem. For example: In lesson 12.1 students are asked to write a system of equations that corresponds to the situation but do not solve.	

Do materials explicitly attend to the specialized language of mathemati[illegible] the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Yes, the text[illegible]k and additional resources all use appropriate mathematical language. Each lesson has a "Language Objective", each unit has a "Reading Startup" both of which help students learn the vocabulary. Each lesson has students using the vocabulary in the "Reflect" and "Elaborate" sections. A glossary can be found in the back of the book, multi lingual. There are also suggestions on how to help students visualize and understand the vocabulary. There are also reading strategies for EL students. The vocabulary terms are explained in a way that is mathematically correct and examples are given to help students understand. There are often suggestions on how to connect the vocabulary to student's prior knowledge as well as language support ideas.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Students have ample opportunities students have to write about their understanding. The mathematical practices are incorporated into every lesson, assignment, and task.

The materials do connect the content standards with the practice standards.

Alignment Criterion 3:
Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** HMH Integrated Math 1 offers "Response to Intervention" to help with struggling students. Online there is a section in the Teacher's Resources called "Differentiated Instruction Resources" to help reach all levels. No separate honors program. There is a lot of support for ELL students in this textbook. The dictionary include English, Spanish, and a visual representation for each term. The online resource includes a Spanish edition of the textbook. There are language support ideas in the teacher edition to ensure that all students understand the context of different ideas. There are Spanish editions of the assessments and performance tasks that can be found in the online resources. The textbook also supports other special populations. The response to intervention book provides intervention material for tier 1, tier 2 and tier 3 students. There are modified versions of assessments that have limited multiple choice answers. There are suggestions in the teacher textbook to help all students such as visual cues collaborative learning, and differentiated instruction.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Online there is a section in the Teacher's Resources called "Differentiated Instruction Resources" to help reach all levels. The "Personal Math Trainer" allows for a personalized instruction for individual students. There are interventions strategies for Tier 1, Tier 2, and Tier 3 students. Each lesson usually includes differentiated instructional strategies typically using manipulatives, cognitive strategies, technology, visual cues, or graphic organizers. There are also challenge problems for students that are ready to move on. Each module begins with a pre-assessment that test to see if students have the skills needed to be successful in the module. There is a guide for teachers to know what to reteach if needed. During the lessons students are given examples then a chance to reflect on their learning then a chance to try it on their own. The assignments start with simple examples then move into more complex. Each lessons ends with a performance task for students to demonstrate their knowledge in a new way.	**_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3C: **Design lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** In the Teacher Edition, each lesson is designed to provide the teacher with multiple strategies and techniques that can be used in enhance student learning. Each lesson begins with an essential question to guide the learning. Then there are a variety of strategies suggested such as: questioning strategies, collaborative learning ideas, differentiated instruction, extension activities, and journal prompts. Each homework assignment has a guide that categorizes questions based on depth of knowledge and mathematical practice. The guide also indicates which questions are higher order thinking (H.O.T).	**_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** The HMH Integrated Math program addresses Spanish learners but no other language. There is response to intervention available to support struggling students, but no honors materials. Teachers are provided with multiple supports that will enhance the lessons and make the material accessible to all students.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** The lessons are structured around the 5 E instructional model. Engage, Explore, Explain, Elaborate, Evaluate. Each section is addressed in the Teacher's Edition to support instruction. Each lesson seems to be well thought out and the sequencing of the lessons makes sense according to what students need to learn. Students are asked to be actively involved during the lesson. There are reflection questions after almost every example for students to explain their understanding. There are also several "your turn" problems for students to practice the mathematical concepts. The lesson usually ends with an "elaboration" where students are asked to write about the essential understandings of the lesson.	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson contains multiple problems to help students understand the main concepts of the lesson. Most problems are following by a "your turn" exercise. At the end of each lesson there is an "Evaluate: Homework and Practice" section. This section has several exercises for students to practice and build mastery. Each lesson also has a performance task for students to apply their knowledge.	**(Reviewer only.)** **____X__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The homework assignments follow the same sequencing as the lessons. Each homework assignments have an assignment guide that informs the teacher which problems correspond to the example problems. The lesson is also broken down into depth of knowledge levels. Most assignments begin with a D.O.K. level of 1, recall of information, and then increases from there to skills/concepts, then strategic thinking.	**(Reviewer only.)** __X____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The teacher text provides several supports for teachers. Each chapter begins with a pacing guide for 45 and 90 minute classes. Most lessons include questioning strategies, teaching tips, resources of differentiated instruction, common errors, collaborative learning ideas, journal prompts, language supports, content vocabulary, visual cues and assignment guides. There are also additional teacher supports found online.	**(Reviewer only.)** ___X___ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Limited manipulatives were used, but the use is appropriate. Each use of manipulatives would increase student understanding. Most manipulives are found in the extension activities or differentiated instruction. If students use the online interactive textbook there are several manipulatives that are available, such as algebra tiles, calculators, geometry sketcher, stretch pad, and graphing utilities.	**(Reviewer only.)** ____X__ Yes _____ No

6. Materials include a variety of curriculum-embedded assessme Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Yes, a variety assessments are offered. Each module begins with a pre-assessment called "Are you ready?" which reviews the skills needed to complete the module. Throughout the lesson there are "your turn" problems for students to access their own understanding. At the end of each module there is a practice test in the student text called "Assessment Readiness". There is an entire book of Response to Intervention pre-tests, post-tests, and intervention worksheets. The online recourses have additional assessments. Each unit has 3 forms of the assessment as well as a modified assessment that has mostly limited multiple choice. Each of these assessments come in pdf form or word so it can be edited.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Any assessment/quiz that is in the textbook has answers in the teacher addition. Each performance task has a rubric. The online assessments also include an answer key. Although a rubric is provided it is basically the same for all performance tasks 2 pts for right answer and explaining reason, 1 pt for good understanding but missed something, 0 pts for not showing sufficient understanding.	**(Reviewer only.)** ___X___ **Yes** _____ **No**

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes, the problems in the assessments reflect the math taught in the unit. The language is on grade level. There are a lot of support for teachers to ensure that the mathematics and real world situations are assessable for all students. This includes a dictionary with English, Spanish, and visual representation. Throughout the lessons there are language support suggestions, content vocabulary suggestions, visual cue suggestions all of which are intended to make the math accessible to all learners and all learning types.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** The textbook as 5 authors listed: Kanold, Burger, Dixon, Larson, and Leinwand. There was also a performance task consultant and two STEM consultants. Finally, there are nine reviews from various school districts as teachers or content specialists.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The visual design will draw students interest and the text is easy to navigate.	**(Reviewer only.)** ___X___ **Yes** _____ **No**

Reviewer IMET Evaluation Summary Title/Level: Integrated Math 1

Publisher: HMH Copyright: 2015 ISBN: 978-0-544-38978-6

Reviewer ID # JB and TG Date Review Completed: 3/8/2016

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

___X__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

___X__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: __6___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: ____6_ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
____X___ Meets	**____X___ Meets**	**__X_____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[illegible]tandards. **Do the materials meet every Non-Negotia[illegible] and Alignment Criterion? ___X__ Yes _____ N[illegible]**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths
Lots of extra materials for the teacher.
Extra support materials for special populations
Task based learning
Lots of online resources for students and teachers.
A variety of assessment.

Weaknesses
Not a lot of focus on the conceptual understanding.
Textbook I lacking in color

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Houghton Mifflin Harcourt
Title:	Integrated Math 2
ISBN #	978 0544 389 861
Grade Level(s) or Course:	9-12
Reviewer ID:	TG & DSQ

RECOMMENDED AS:

__/__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- 66% of the time students are focused on the WAT's. 6-8 Skills are prevelent throughout.

COHERENCE-
Eight chapters focus on Geometry.
Content is on course level.

RIGOR-
Rigor is at course level.

CONCEPTUAL UNDERSTANDING-
Procedual skills is main focus leading to conceptual skills.

MATHEMATICAL PRACTICES-
Mathematical practices are address throughout.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Book scaffolds well.

OTHER:
Main focus is procedural skills

Many resources for teachers to use to reach a vairty of learners where their current understanding is. Easy to navigate. Book is allgined with the standards and is easy to find the allginment in the teachers edition. Nice glossary, however it is only supports English and Spanish readers. Focus is on procedual skills. The student edition is consumable however there is an on-line resource.

2015-1 nterim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: Houghton Mufflin Harcourt

Title of Material: Integrated Mathematics 2

Author: TD Kanold, EB Buger, JK Dixon, MR Larson SJ Leinwand

ISBN #: 9780544389861 **Copyright** 2015

Reviewer ID: TG DJQ

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** 89 total lessons 59 cover WAP This is 66.3% of the time students will be ingaged with the WAP	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** There are eight chapters devoted to geometry: Chapters 14-21 provides problems problems, examples, explorations that include algebra skills.	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** "Are You Ready?" offers opportunity for students to work problems at a high school level that apply knowledge and skills from 6-8. Ex: Module 16: Students use their knowledge of ratios & proportions to solve problems.	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each section, example, exploration & problem set corresponds to the standards	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Differentiated Instruction Resources provided for each chapter: Challenge, Reading Strategies, Prerequisit Skills practice, Alternative Strategies Extension Activities	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each Chapter starts with "Are You Ready?"; "These problems are review of skills that are needed to be successful in the coming chapter. The real world video which helps students relate real world and prior knowledge to the lessons.	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each lesson is designed to meet one or more of the CCSSM. The units are aligned with the standards listed in the pathways.	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** "Assessment Readiness" section is designed to help students make connections between clusters, domains and categories Ex: Unit 7 Assessment Readiness" Item 3; 5 relate to other clusters, domains; categories	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

Does Not Meet

Strengths/Weaknesses

Focus & Coherence on the WAP is met. Alignment to the standards is clear.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** ____**Meets (2)** __✓__**Partially Meets (1)** ____**Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Focuses on procedural skills, but tries to draw out the conceptual understandings	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** "Performance" Tasks are conceptual problems; TE offers discussion questions.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Multiple representations are used, however using the same equation across multiple representations is weak.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The flow of the text is procedural to conceptual.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** The procedural problems provide opportunities for students to choose which strategy is best.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The "Performance Task" afford the opportunity for the student to practice single step & multi-step contextual problems.	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The applications problems stress the WAP. The application problems consist of the "Performance Task"	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling problems can be found in the Ready to Go On section.	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

___ **Does Not Meet**

Strengths/Weaknesses: There is rigor & balance.

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The WAP are addressed in the practice standards In the Teacher edition for each set of Homework/ Practice there is a table at the bottom connecting Math Practice to each problem. Ex: 288 bottom	✓ Meets (2) ___ Partially Meets (1) ___ Does Not Meet (0)
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** ✓ Meets (2) ___ Partially Meets (1) ___ Does Not Meet (0)
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Practices are listed in each lesson and addressed throughout. Sometimes this is forced not natural.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** Alignment is accurate and is present in each lesson Tends to take the "I" out of the standards.	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric. ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Performance Tasks. are requires to construct viable arguments & There are Peer to Peer activities. There are Journal prompts.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Application and contextual problems require students to use arguments, explanations, diagrams, mathematical models.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** The language of argument, problem solving and math explanations taught throughout.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

✓ **Meets**

____ **Does Not Meet**

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Strengths/Weaknesses:
The materials do connect content standards to the practice standards

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Glossary has visual where appropriate On-line resources for ~~sta~~ teachers	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Teacher Resources have differentiation resources to help at all levels. The Personal Math Trainer is for personalized instruction	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Variety of strategies are present for each lesson ex. Question Strategies, Collaborative Learning Peer to Peer Active Differentiated Instruction & Language Support.	✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	✓ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** The glossary only supports English and Spanish, however On-line resource for "Success for English Learners"

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** The lessons are structured on engage, Explore, Explain Elaborate, Evaluate.	**(Reviewer only.)** ✓ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** The problem sets start with practice problems then builds to Mastery Problems and Problem Solving questions	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- The lessons are given in an intentional sequence. This helps to strengthens the mathematical understanding for the students.	(Reviewer only.) ✓ Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- There is an on-line teacher Resource that offeres support for teachers.	(Reviewer only.) ✓ Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- There are on-line resources, no kinesthetics	(Reviewer only.) ✓ Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There are a variety of on-line curriculum-embeded assessments.	(Reviewer only.) ✓ Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- There ar rubrics for the Peaformance Assessment.	(Reviewer only.) ✓ Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- The materials assess students proficiency at course level language.	(Reviewer only.) ✓ Yes ____ No

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- yes see inside front of textbook	(Reviewer only.) ✓ Yes ____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- Navagation is clear The design is not too busy. diagrams & pictures are appropriate	(Reviewer only.) ✓ Yes ____ No

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

✓ **Meets**

____ **Does Not Meet**

Non-Negotiable Overall:

_____ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: 5 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points:** 6 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points:** 6 **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
✓ **Meets**	✓ **Meets**	✓ **Meets**
_____ **Does Not Meet**	_____ **Does Not Meet**	_____ **Does Not Meet**

Alignment Criteria Overall:

✓ **Meets** _____ **Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co Standards. **Do the materials meet every Non-Negoti e and Alignment Criterion?** ✓ **Yes** ____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Many resources for the teacher to use to reach students where they are at. Easy to navagate. Book is alligned with the standards and is easy to find the allignment in the teachers edition. Nice Glossary, however it is only supported for English and Spanish. Focus is on procedural skills. The student edition is consumable, however there are on-line resources.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	HMH
Title:	Integrated Math 3
ISBN #	978-0554471263
Grade Level(s) or Course:	High School - Jr or Sr
Reviewer ID:	MK & CJ

RECOMMENDED AS:

✓

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Meets the more than 50% of time on WAPs. Includes more geometry.

COHERENCE- Aligns with the Standards and makes connections across clusters. Attends to (+) Standards. Math Background teacher notes support coherent development of concepts.

RIGOR- Essential Questions & Performance Tasks focus on the mathematics in authentic manner. Higher-order tasks included in each section.

CONCEPTUAL UNDERSTANDING-

Multi-step contextual problems & higher-order thinking tasks encourage communication of & about the mathematics

Contexts are engaging.

MATHEMATICAL PRACTICES-

Teacher materials highlight practices throughout; visible in teacher edition as well.

Persevering in problem solving (MP1) and tool choice (MP5) are perhaps weakest.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Language support visible for all lessons. Scaffolding and differentiation suggestions also easily accessible.

Personal Math Trainer available & user-friendly

Online tools exist as good support.

OTHER:

Inclusion of geometry topics would support accelerated students who would benefit from more of a geometry strand.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1F: **Materia[illegible]late course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** See notes on NN1C[illegible]e about connections to MS standards. Math Background discussions in teacher materials are nice. These are also visible throughout the units (not just at start of unit; "Tracking learning progression" notes included in each lesson). Some discussions may be minimal in terms of the Standards. For example, the Standards ask for seeing polynomials as a system with properties similar to natural numbers (closure, etc.). This idea is discussed briefly in the math background related to complex numbers ("closed algebraically") but not explicitly with respect to polynomials, and not explicitly with respect to complex numbers in the student materials. That is, a teacher could choose to highlight this, but the materials do not make it explicit. Examples: Lesson 5.1: Builds upon the work done in MS and Mathematics I regarding transformation (F-BF.B.3), starting with exploration into translations and then reflections and stretch/compression. Lesson 8.1: Takes the above further and applies transformation rules to the graphs of simple rational functions, exploring end behavior and asymptotes. Lesson 18.3: Using a Pythagorean Identity. Learned previously, the Pythagorean Theorem is applied to trigonometric ratios.	**X Meets** **____Does Not Meet** **Insufficient Evidence**

Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each lesson is targeted at a specific standard and the learning objective is listed explicitly, with no change, in the teacher textbook. References to supporting standards, mathematical process standards, and language objectives are included. The student text does not include the above, but it does start with an essential question that reflects the learning objective. Lessons in both versions of the textbook end with an essential question check-in that expands upon the question by adding any parts of the standard. For instance: Lesson 4.2: G-MG.A.1: Use geometric shapes, their measures, and their properties to describe objects. Essential Question: How can you model real-world situations involving density? Performance task is connected ("find the density of a gold pyramid") Lesson 4.3: Same standard as above. Essential Question: How can you model situations to meet real world constraints? Lesson 8.2: F-IF.C.7d: Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior. Essential Question: What features of the graph of a rational function should identify in order to sketch the graph? How do you identify these features? Lesson 19.4: F-TF.B.5: Choose trig. Functions to model periodic phenomena… Essential Question: How can you model data using a sine function?	**X Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Throughout. For example: A-CED.A.3 (represent constraints and interpret solutions as viable or non-viable in a modeling context) connected with A-REI.A.2 (Solve simple rational…equations…and give examples showing how extraneous solutions may arise) in Lesson 9.3. Students solve rational equations using graphs, tables, and algebraically. Extraneous solutions are discussed as directed questioning is used to justify the inclusion (or exclusion) of a value. The lesson includes application problems with questions about the value of a variable in context. S-ID.B.6a (fit a function to the data…solve problems in the context of the data) connected with F-IF.C.7e (graph exponential…functions, showing intercepts and end behavior) and F-IF.B.4 (For a function that models a relationship…interpret key features of graphs and tables in terms of the quantities) in Lesson 14.1. Students identify sets of data as exponential or not, and then write functions to model the data. After some perfect scenarios, students model data in application problems (such as population statistics, revenue, and fish at a fishery). This work is done manually, and with graphing technology. After creating models, students are tasked with describing behavior in the context of the problem and finding specific values.	**X Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

X Meets

____Does Not Meet

Strengths/Weaknesses

Strengths:
-Essential questions used to launch each lesson, connected to performance tasks
-Dynamic tools available online
-Math background sections are very useful
-Teacher resources are visible, but not overwhelming

Weaknesses:
-Lack of authentic problem solving (does it require perseverance regularly?)

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is applied to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Extensive scaffolding sometimes is overwhelming—some of the tasks have very prescribed methods and students are not given an opportunity to persevere through these conceptual understanding pieces. Otherwise, conceptual understanding is fully attended to. Selection of standards addressing conceptual understanding: **A-APR.B.3: "Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function...."** -Lesson 5.4: Student sketch polynomial functions based upon end behavior, turning points, and factors. -Lesson 7.2: Students find zeros of polynomials using the rational root theorem. **F-IF.B.4: "For a function that models a relationship between two quantities, interpret key features...and sketch graphs showing key features given in a verbal description of the relationship."** -Lesson 10.3: Analyzing the key features of the cubic parent function and graphing transformations. This includes examples and practice problems where key features are described, and a graph is sketched. -Lesson 19.1: Stretching, compressing and reflecting sine and cosine graphs. Starting with base graphs for sine and cosine, students develop new graphs based upon transformations by identifying changes to intercepts and asymptotes.	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Questioning strategies included in each lesson to help teachers foster discussion about the concepts in the lesson. These are quite helpful. Selection of standards addressing conceptual understanding: **A-APR.B.3** -Lesson 5.4: Practice 20: sketch the graph of a polynomial function of degree 5. Performance task: after modeling volume using a polynomial, maximize the volume. -Lesson 7.1: Practice 14: explain the error for another student's work creating a polynomial function. **F-IF.B.4** -Lesson 19.1: students construct graphs and describe the changes based upon parameters. This includes reasoning before constructing the graph (what will the graph look like, based upon the parameters?), and exploring the effects of these transformations on domain and range.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Selection of standards addressing conceptual understanding: **A-APR.B.3** -Lesson 5.4: features verbal descriptions, graphs, tables, and algebraic representations of polynomial functions. Students are expected to operate interchangeably. **F-IF.B.4** -Lesson 10.3: Example 1, practice 1-15 all include correspondences across multiple representations. -Lesson 19.1: all rule of four representations included in practice set.	
AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Selection of standards addressing fluency and procedural skill: **A-SSE.A.2: "Use the structure of an expression to identify ways to rewrite it."** -Lesson 6.4: Factoring polynomials. Students explore skills for factoring polynomials, with plenty of opportunity to practice and develop fluency. This is in support of the later modules (polynomial functions, graphing polynomials, modeling with polynomials). **A-CED.A.4: "Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations."** -Lesson 9.2: Multiplying and dividing rational expressions. The procedure for rearranging rational equations is included along with the development of the concept that rational expressions have analogous operations to rational numbers. -Lesson 16.2: Solving exponential equations. Logarithms are used to solve exponential equations, including rearrangement of formulae.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** There are not explicit instructions in opportunistic strategies, but there are multiple examples of generalizing ideas from procedures. When applicable, there are some strategies that pop up as a result of the lesson. Selection of standards addressing fluency and procedural skill: **A-SSE.A.2** -Lesson 6.4: identifying special factoring patterns and factoring by grouping. See practice 3, 7, 13-18. **A-CED.A.4** -Lesson 9.2: See practice 18, and lesson performance task. -Lesson 16.2: Practice 6-9 (solve using logarithms), Practice 12-13 (solve application using logarithms to rearrange).	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **____Meets (2)** **X Partially Meets (1)** **____Does Not Meet (0)**

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Each practice set ends with multi-step contextual problems (both inside the higher order thinking section, and outside) that develop the mathematics of the course. The performance tasks do this as well. Problems are set up formula-style in many cases. Selection of standards addressing applications: **A-CED.A.3: "Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context."** -Lesson 7.1: finding rational solutions of polynomial equations. After providing procedural instruction in using the rational zero theorem, the lesson provides examples of real-world problems, and the necessity to exclude non-viable answers from solutions (complex and negative numbers in this case). Practice problems 13-15, and the lesson performance task are each application problems that develop student understanding of how constraints develop in the context of applications of polynomials. -Lesson 9.3: Similar to the instruction for polynomial functions noted above, this lesson targets rational equations and the application of these equations to real-world problems. Domain restrictions are noted, and applied to applications to determine viability. See practice 13, and 7 on the assessment review (page 516). **F-BF.A.1b: "Combine standard function types using arithmetic operations."** -Lesson 6.1: Students add and subtract polynomials to model situations. See example 3, practice 17-20, and the performance task. -Lesson 9.2: See practice 18-20.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** When appropriate, the application problems directly support whatever standard a lesson is addressing, including the widely applicable prerequisites. For instance, practice 22 in lesson 8.1 requires that students model a situation using a rational function and then find a point of intersection. This aligns with F-IF.C.7d (graph rational functions), A-APR.D.6 (rewrite rational functions in different forms), and A-REI.C.11 (explain why the x-coordinates of the point of intersection is a solution to…). The lesson performance task in lesson 15.2 requires that students model a set of data logarithmically, describing the necessary transformations and creating a graph. This aligns with F-IF.C.7e (graph logarithmic functions), A-CED.A.2 (create equations in two variables), and F-IF.B.4 (for a modeling function, interpret key features of graphs and tables; give a verbal description).	

Are there ample opportunities for students to engage with modeling problem[illegible] materials require students to use both individual parts of the mode[illegible]g cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Every lesson and p[illegible]y every assessment/performance task includes opportunities for s[illegible]ts to engage with modeling situations. At certain point in the text, direct instruction and practice is provided for choosing a model (e.g., Lesson 14.2). The language of the modeling cycle from the CCSSM is not used within this text. Each individual step is generally addressed, but there isn't work in the text, or in the online resources, that requires student to go through the entirety of the modeling cycle in cyclical fashion—the teacher would need to provide this instruction along with support for student struggle and perseverance (MP 1). Almost all modeling problems happen contextually along with the skills required for the problem itself, so students rarely revisit these steps, nor are they provided an opportunity to formulate a plan (which model should I use? How can I find the solution?). Lesson 14.2 is one example in which students are provided direct instruction in choosing a model.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**X Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Strengths:** **-Engaging contexts** **-Videos that support that material** **Weaknesses:** **-Could lower the cognitive level and students would still be able to complete performance tasks because of the extensive scaffolding** **-Application of CCSSM modeling cycle not readily apparent or fully attended to**

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A:

Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Widely Applicable Prerequisites.

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course.

NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions.

For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Evidence-

Mathematical Practice standards are present throughout the text, highlighted in the teacher resource. The text includes an index at the front of the book that cites examples of MP standards (CC11) throughout the book, and each lesson indicates which MP standards are present.

Some concerns regarding two practice standards:
MP 1: Often, scaffolding is present that it detracts from student perseverance. The HOT problems and performance tasks reflect the work in the lesson, meaning that a formula, or a process has already been provided.

MP 5: Tools are often explicitly suggested (e.g., use a graphing calculator on this problem).

The teacher notes for each lesson provides further details about how to focus on the practice standard. For instance:

Lesson 4.2 (Modeling and Density) includes the following Integrate Mathematical Practices note on 222: "Focus on math connections: MP 1: Encourage students to create a table of area and volume formulas they use for reference as they work to find densities. Suggest that they include examples and units labeled."

Lesson 19.1 (Stretching, Compressing, and Reflecting Sine and Cosine Graphs) includes the following note on 973: "Focus on critical thinking: MP 3: Have students analyze the graphs of $f(x) = \sin x$ and $f(x) = \csc x$ to observe the increasing/decreasing relationship that exists between the reciprocal functions. Ask them to explain why the relationship exists. Then have them consider how it is possible for one of the functions to have a bounded range while the other does not."

The support and integration of the practice standards is within the scope of the text—these standards aren't tacked on, and problems aren't created to meet the practice standard.

Examples of this enrichment:

Lesson 2.6 (Subdividing a Segment in a Given Ratio): Students use the tools of geometry to construct partitions of a segment (MP 5) in support of G-GPE.B.6.

Lesson 11.2 (Simplifying Radical Expressions): Students explore patterns of various operations with rational exponents to establish properties of exponents (MP 8). After establishing these properties, students simply and rearrange radical expressions (N-RN.A.2) and model radical functions using graphing technology (F-IF.C.7b).

Lesson 12.1 (Arithmetic Sequences): Students explore the structure of arithmetic sequences (MP 7), write explicit and recursive rules for the sequence, and apply sequences to problems in support of the widely applicable prerequisite A-CED.A.2 (create equations to represent relationships and graph).

____ Meets (2)

X Partially Meets (1)

____Does Not Meet (0)

AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** All show up, perhaps not integrated as seamlessly as possible. Perseverance and tool choice may be the most lacking. Tasks are often scaffolded to the point that students do not develop a problem-solving mindset. Yes. See notes above, and additional examples below: Lesson 18.1 (Angles of Rotation and Radian Measure): Students explore the relationship between the unit circle and radian measure. Repeated reasoning (MP 8) is used to understand that the measures of coterminal angles differ by +- 360 degrees, the use of structure (MP 7) in included examples, such as explore 2 (915), and practice (1-14). Like many of the higher order thinking problems throughout the text, number 25 requires that the student persevere in finding a solution (MP 1) without prescribing a specific method. Lesson 20.1: Students work to answer the essential question: "under what circumstances should a sample statistic be used as an estimator of a population parameter?" supporting S-IC.A.1 (understand stats as a process for making inferences…). Students compute measures of a population manually and then load data into a calculator, or spreadsheet to describe and make predictions about the data (MP 5). Calculators are also used to generate random data. The supporting examples and practice problems require that students use tools appropriately—many practice problems, such as 5, require that the student reason their way through the problem and construct a viable argument (MP 3). When appropriate, tools are used for the collection and operation on data.	

Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** Yes. Included throughout the text in the teacher notes. When presented, the practice standards are attended to faithfully, aligned to the CCSSM standards for the current lesson. Often, the practice standards offer an extension for the daily lesson. For instance: Lesson 5.4: Students predict the behavior of polynomial functions before graphing functions based upon their understanding of polynomials, the degree, and end behavior. This supports MP 3 (making reasonable predictions) and also is a lead-in for using tools appropriately (MP 5): by predicting the behavior of a function, students are prepared to recognize when technology (or the user) fails. Lesson 15.1 suggests that teachers have students explore the formula for atmospheric pressure, discussing the meaning of the variables in the equation, and the signs included (such as the negative in the exponent). This aligns with MP 1 as students are working to understand a formula, not just using it without understanding the mathematical basis for its derivation.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Yes. As noted below, and previously, the text is designed to support students in the development and extension of mathematical reasoning. Nearly every assignment expects that students be able to justify a solution, explain reasoning, and critique an argument while attending to the widely applicable prerequisites. This is especially true for the performance tasks. Question strategies provided for teacher are good at leading discussion and assisting students in constructing viable arguments.	

Do the materials support students in producing not only answers and solutions, also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Lesson 2.1, Practice 5: explain the error problem concerning slope of segments. Lesson 2.5, Practice 18-20: Explain the error, prove the area of a kite is half the product of diagonals (without the use of numerical calculations), justify that the area of a trapezoid is the product of its midsegment and its length. The examples of the lesson preceding the practice set support students in answer these types of question by providing discussion points that emphasize reasoning. Lesson 11.2, Practice 21-22: critique a student's reasoning; show that a property is true. In support of F-IF.C.7b. Lesson 17.1, Performance Task: students must produce a geometric representation of a water molecule and apply knowledge and skills from the lesson/module. Most higher order thinking (HOT) problems at the end of each lesson's practice set requires reasoning beyond just finding a solution.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Module 1, especially Lessons 1.1 and 1.3 provide direct instruction in the language of mathematical argument. The practice problems supporting these lessons include sentence proofs, and the expectation established by the text is that these proofs refer to properties, definitions and theorems and follow a logical line of thought. Future lessons in the textbook (i.e., everything after module 1) continue to expect this reasoning, but much less explicit instruction is provided.	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**X Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: -Practices are visible throughout... Weaknesses: -but, MP 1 and MP 5 could better developed and supported.	

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Throughout. The teacher text generally includes snippets for language support in each lesson, making note of vocabulary and concepts that are challenging for English Language Learners. Additionally, each lesson has a language objective, along with "Connect Vocabulary" instructional recommendations. The text includes a glossary in English and Spanish, and the website provide a glossary with many more languages (some of which are spoken). The videos online include Spanish subtitles. Communication is reinforced throughout. Each lesson also includes scaffolding suggestions, as well as differentiation activities (reteaches, tiered intervention, extensions, questioning strategies). The language used within lessons supports all learners, regardless of background. For examples, exercises and practice problems that describe situations in which a student maybe unfamiliar, adequate background and supporting figures (diagrams, graphs, pictures, etc.) are provided. The text is inclusive for all learners. **Lesson 5.4 (Graphing Polynomial Functions):** Language Objective: "Work with a partner or small group to match functions to their equations or definitions." Connect Vocabulary: "Relate turning point to driving a car north and then turning the car to drive south. Explain that turning point is the point at which the car reverses direction." Connect Vocabulary: provide note cards to students and have students participate in a matching activity. **Lesson 24.2 (Angles in Inscribed Quadrilaterals)** Language Objective: "Work with a small group to decide whether statements about inscribed quadrilaterals are true or false." Connect Vocabulary: remind students about IFF and biconditional statements Differentiate instruction: Describe a method for inscribing a square in a circle and ask students to determine the validity (with explanation). Connect Vocabulary: students write true and false statements about inscribed quadrilaterals on note cards and test their peers.	**X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Scaffolding is most[illegible]n provided at end of module review. Personal Math Trainer is a r[illegible]ddition for supporting students. Example: Module 16 review on page 857 suggests providing students the properties of logarithms and certain formulae necessary to complete the review. Within lessons and student practice sets, scaffolding is also provided by breaking larger questions into smaller chunks that guide the student to the answer. As the lesson progress, this support is gradually removed. Example: In Lesson 8.1, students graph simple rational functions. Initially, students go through each aspect of a rational function to eventually produce a graph (domain, end behavior, table, asymptotes, and then the graphing itself). Tables are provided on later examples that contain the same process in condensed form. Early problems in the practice set focus on singular tasks for graphing rational functions (such as verbally describe the behavior) progressing to complete graphing of a function. The performance task for the lesson tasks students with applying a rational function to a situation involving snowboarding at a ski resort. Differentiation and intervention are detailed in AC3a. A broad range of learners are supported by explicit attention to differing learning styles. Multiple representations are regularly embedded within lesson, but when not, notes direct the teacher to task students with creating additional representations of material in the text. The online version of the text provides additional support in the form of prescriptive practice, video demonstrations of techniques, audio support (text to speech), step-by-step practice, and practice with immediate feedback	**X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3C: **Desig[illegible]lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** As noted previous[illegible]ultiple representations are frequently used within the text (for instan[illegible]ages 251-254, 429-430, 959-962). Teaching suggestions that target a variety of learners are regularly included in the text. Questioning strategies are well implemented. Online toolbox supports multiple representations. Lesson 5.1: Peer-to-peer: students graph functions and compare transformations. Students attempt to predict transformations before graphing on calculator. Lesson 8.1: Differentiate Instruction: students work together to create graphs, tables and verbal representations of a rational functions and then come up with advantages and disadvantages for each method. Lesson 11.1: Differentiate Instruction: students that are struggling with numerator/denominator use descriptive variables to assist in translating rational exponents (write as e/I, e for exponent, i for index) Lesson 14.2: Peer-to-peer: students practice finding regression equations for data sets Lesson 18.1: Whole Class: class measures a variety of circular objects and relates the circumference measure to known formulae and to radian measures. Lesson 18.2: Differentiate Instruction: Kinesthetic Experience—physical representation and manipulation of angles using pencil and paper. Every lesson includes support for all learners in the form of reteach activities, tiered intervention support, and extension activities.	**X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**X Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: -Online tools and glossary; representations easily accessible -support for all learners Weaknesses: -None noted

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons feature a mix of teaching strategies including explorations, class discussions, small group activities, and inclusionary, supportive language. Additionally, lessons highlight common errors, support for English language learners, extension activities and support for struggling learners.	**(Reviewer only.)** **X Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Units start with "Are you ready?" assessments that provide practice and review of previously learned material. Within each lesson, examples support the acquisition of new mathematics. The practice sets are labeled "Evaluate: Homework and Practice", and feature exercises and problems, generally in this order. The RTI resources provide addition exercises to assist students in building mastery.	**(Reviewer only.)** **X Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The flow in every lesson and the following assignment is always intentional. Assignments always start with process problems, building to multistep problems, application problems, critical thinking problems, and then a performance task that reflects the essential question (and learning standard) for the lesson. For instance: **Lesson 16.1:** Practice problems 1-8: apply the properties of logarithms to simplify expressions 9-16: application of logarithms 17: equivalent expressions 18-19: prove properties of logarithms 20. Multistep application 21. Explain the error 22. Communicate mathematical ideas (MP 3) 23. Analyze and reason abstractly Performance task: develop a logarithmic model	**(Reviewer only.)** **X Yes** **_____ No**

4. There are separate teacher materials that support and rewa[illegible]eacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Throughout teacher t[illegible]nd at my.hrw.com. The teacher resource is very supportive in develop[illegible]essons, providing many opportunities for differentiation, guiding questions, and suggestions for cooperative learning (peer-to-peer, small group, whole class). Each unit begins with a pacing guide (for 45 or 90 minute classes), a summary of program resources, and a helpful math background refresher that previews the upcoming learning (e.g., pages 421A-F).	**(Reviewer only.)** **X Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives are generally suggested as a differentiation activity within the textbook (e.g., Lesson 1.1). These manipulatives are faithful representations. Strangely, opportunities that would almost always be associated with a manipulative, such as cross sections and nets, seem to be underdeveloped. For instance, a nice feature for the online textbook would be a manipulative solid with cross sections.	**(Reviewer only.)** **X Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Included on my.hrw.com, including teacher editable files. There are student self-assessment resources embedded into the online textbook (quick checks and similar). Student text includes selected answers for rapid self-assessment. RTI resources include diagnostic assessments for placing students in the most supportive intervention tiers.	**(Reviewer only.)** **X Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Rudimentary (0, 1, or 2) rubrics included for performance tasks at end of each lesson. Answer key in teacher textbook for all examples, exercises and practice set problems. Generally, these keys are quite thorough, including all work for problems. RTI materials include answer key at back of resource, and online. Pre and posttests included for tiered intervention, with recommendations for support based upon student performance.	**(Reviewer only.)** **X Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Questions are unbiased throughout, using appropriate language. See notes for AC3 above, especially 3a. Only concern is that my.hrw.com uses a proprietary text-to-speech reader which means it may not be compatible with third party screen readers that students use as part of accommodation for 504/IEP.	**(Reviewer only.)** **X Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Yes: established record of review by qualified individuals included in front of each version of text.	**(Reviewer only.)** **X Yes** **_____ No**

10. The visual design supports students in engaging thoughtf with the subject. Navigation through the text is clear.	**Evidence-** Clean design with eff use of white space, textual emphasis, and color. Figures are faithful re entations of the material at hand, and the design conventions are consistent throughout: at no point, do design elements subtract from the text, or detract from the lesson at hand. Online materials, especially the interactive student textbook are very good. Negatives: interactive index is hard to find, and complete, single pdf of text is seemingly unavailable. This last point may be personal preference, but full-text pdf search is **much** more effective than using the built-in search at my.hrw.com.	**(Reviewer only.)** **X Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: HMH Integrated Mathematics 3**

Reviewer ID # CJ, MK **Date Review Completed: 03/7/2016**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

X Meets

_____ Does Not Meet

Non-Negotiable Overall:

x Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: 5 of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: 6 of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
x Meets	**x Meets**	**x Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

x Meets **_____ Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Common Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? x Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths: This curriculum is a complete package that addresses the needs of all learners. Differentiation and tiered interventions are provided for every lesson, scaffolding is embedded in the curriculum with appropriate gradual release, language support is well developed, and extensions are provided for accelerated learners. Assistive support is included in the digital curriculum.

The design of the curriculum is consistent throughout the digital and print presentations. Color, white space, and textual emphasis are used effectively to convey information without overwhelming the learner or the teacher (page layout is significantly better than some older textbooks). The digital material, especially the interactive textbooks, is quite useful. The digital glossary, including 10+ languages, is handy.

Weaknesses: The weight of the paper that the textbook is printed on seems low as compared to some other texts. I have no doubt that the material can last six years, but the texture and feel of the paper is off. The size of the textbook is significant (1000+ pages) so this does have the benefit of reducing the total weight of the text. If given the proper support (training and technology), students and teachers will probably prefer the digital edition for day to day reference, so this may be a non-starter.

The digital version of this text are accessible (a plus), but the design of the interactive textbook is concerning. Although developed as an HTML5 application, some material is hidden behind menus and options which means some screen readers may not be able to access the material. This is problematic as students that receive this type of assistive technology may not be able to use their screen reader of choice. Additionally, speech-to-text is not included in the interactive textbook. iOS Dictation does work in the interactive textbook, so this probably isn't an issue for other assistive programs.

One other nitpick: the digital edition is clearly designed for tablet interfaces but common tablet interactions are not recognized, or don't behave as expected. Swiping does not provide navigation between pages of each lesson, and zooming by pinch does not work.

Teachers can download an offline copy of the teacher resources, but it isn't clear if a single pdf download is available for the text. As noted previously, PDF search is more efficient in external programs. If this pdf is available, it isn't easy to find.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	HMH
Title:	Math 180 Course I
ISBN #	978-0-545-58542-2
Grade Level(s) or Course:	Course I (Level 6)
Reviewer ID:	PLB BP

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

__X__**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Standards focus typically on previous grade level standards in order to remediate.

COHERENCE- Majority of curriculum is meant to help students be ready for grade level curriculum.

RIGOR- The curriculum is set up so students progress through multiple levels of learning.

CONCEPTUAL UNDERSTANDING- Students must gain conceptual understanding through reasoning & multiple representations.

MATHEMATICAL PRACTICES- Mathematical Practices are addressed throughout the curriculum and vocabulary reflects that as well.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- The consumable products are available to Bi-Lingual students (Spanish) as is the online resources.

OTHER: The student books are consumables.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Table of Contents C[illegible]y indicates what each Block and Topic are that will be covered.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths, Students and teachers can see exactly what will be covered on any given day.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** 6th grade Major Works: Ratios to solve problems, Number System to multiply and divide fractions, use rational numbers, Expressions and Equations to include single variable expressions and solve them. A majority of time (23/27 topics [5-6 lessons per topic]) claims to work on the major work, but seems to focus on 5th grade versions and difficulty. **Ratios has a single topic in Block 4** devoted to it which could be an issue, but is then readdressed intuitively in several Number Systems topics afterwards. Supporting clusters are a minor part by comparison, Geometry is touched early in the first topic and then again near the last.	**(Reviewer only.)** **___Meets** **_x__Does Not Meet/** Most individual lessons seem to address 5th grade material. Which makes sense considering this is an intervention tool for remediation.

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Factors and Multiples is used to build a foundation in Block 1 to prepare for multiplications and division of fractions in Blocks 4, 5, and 6 (Major Cluster) Area model is used to demonstrate multiplication strategies.	**(Reviewer only.)** **_x_ Meets** **____Does Not Meet/**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Many lessons focus a grade behind. They build to prepare for the grade they are on, but everything remediates to the point of being almost a whole grade behind. A big concern with this is that, while ratios (a major cluster) are touched on, they are not fully addressed until the 7th grade book.	**(Reviewer only.)** **____Meets** **__x__ Does Not Meet/** **Focus is remediation in interventions.**

Metric NN2D: **Materials gi[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students are given o[illegible]tunities to solve previous-grade-level problems. Problems are broken down so that struggling students can see step by step. Gradually moving to problems on grade level material.	**(Reviewer only.)** **____Meets** **__x__Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Math 180 uses concepts of grade school games to help students find and solve equations that apply to the real world. Any mathematical concepts are given a quick reminder and example for students to look off. Grade level concepts are tied in generally.	**(Reviewer only.)** **____Meets** **__x_Does Not Meet/** **Problems focus on below grade concepts and gradually move to general on grade concepts**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students and teachers can see what is expected of them throughout the book. Both can see a general overview in their table of contents for each Block as well as individual page headings. **But,** most of the material addresses previous grade work.	**(Reviewer only.)** **____Meets** **__x__Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Page headings are used to give students an idea of what their learning objectives are. Ex. Course I, Block 4 Topic 1: 148 "Model Fractions as Part of a Whole" These headings easily translate into "I can…" statements for students.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students are initially given problems where they must find the missing number inside the problem (not the solution); and are gradually given variables (in the form of blank spaces or objects and then abstracts like x or y)	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___Meets** **__x__Does Not Meet** **Strengths/Weaknesses:** Some major works are addressed in a way that students may not fully comprehend what they are doing, but they are present, identifiable, and acquired to reasonable efficacy for an intervention program.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__x__ **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set e[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** 6.EE.A.3- Begins being addressed in 8.2.5 Formulas are [illegible]ablished using charts and addressing patterns.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** These patterns lead to fractions patterns and solving for unknowns in 8.3 using questions like: "after spending 4/5 of his money, he has $6.04 left. One taco costs $3.02. How many tacos did he buy?"	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Patterns are initially addressed using decimals with unknowns and develops into using them with fractions and how they mirror the patterns of decimals as well as setting up problems to solve them.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** 7.1.2 Establish rela ships between Fractions (what we know) and Decimals What we don't know. 8.3.5 combines past knowledge with finding unkowns.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Block 8 does not provide lots of procedural practice all by itself. However, it pushes real world application in every lesson and problem.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Block 8 uses constant practice and procedures of *what* the problems is, *what* it looks like as a representation, and *what* the steps look like to solve it.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Every single block uses examples from real life and shows how the topics might be used in real life application for businesses (block 8), medicine (block 5), or even exploration and temperature (block 9).	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **____Meets (2)** **__x_Partially Meets (1)** **____Does Not Meet (0)** Much time is spend on low grade major works to establish proficiency that can be used later in the course of on grade level major works.
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Block 6.3.1-6.3.3 address steps to divide fractions and develop short cuts to use with the representation.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Most all major work is addressed in a single grade level frequently, however, the course seems to be designed to focus less on some (like ratios) and focus more on others (like fractions and decimals).	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Every new topic is addressed with examples as well as work space to follow every step; slowly moving students toward taking fewer steps on paper as they take steps mentally.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Much of the book remediates and thus focuses on below grade level material and establish foundations to build off of.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meet or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Book I begins with below grade level problems to establish foundations to build the at grade level material.

Every major work is directly addressed *except* ratios. While some work is used to touch on them, they seem to be intuitively compared to fractions rather than given their own material.

(Reviewer only.)

____Meets (2)

_x__Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **_x_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Practice is addressed and challenging in every lesson following the model of I do, we do, groups do, you do. Though it seems little homework is provided.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Throughout the material, students spiral into more difficult and critical thinking based problems rather than simple math drills.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **While the common core standards are not explicitly identified in the chapters, the focus of each lesson as well as grade level connections are marked at every lesson entry.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **_x_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Lesson set up allows students to develop reasoning skills for *why* and *how* in solving math problems. Examples are provided in every lesson as well as areas to justify your answer.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Each problem in the book requires justification from the student from *how do you know* to *explain your reasoning.***	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Appropriate vocabulary is identified at the beginning of every unit and lesson. As well as being defined in the chapter when the vocabulary should be taught. Ex. 1.3.3 Associative Property of Multiplication p. 45**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_x_ Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Vocabulary is provided in Spanish. Online material is available in Spanish. Addresses need for the *why* math vocabulary is needed and important.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Extention and review lessons and adaptations are available for every lesson in the Professional Learning book.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Lessons are designed for whole group and smaller groups to maximize student learning styles. Computer groups, teacher instruction, and others are used to help students learn.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-**Lessons are structured: as a group, in pairs, by self. Allowing teachers to spot struggling students as well as allowing students to help one another.	**(Reviewer only.)** **__x__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-**Students are given exact instructions and step by step examples when learning and given story problems to combine exercise with application.	**(Reviewer only.)** **__x__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-**Topic 1: students represent multiplication with pictures and find products before being introduced to the Commutative and Associative Properties of Multiplication. Factors and products help students see the connections.	**(Reviewer only.)** __x__ **Yes** _____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Math 180 includes an entire extra book that encourages teacher prep for assessment as well as extension of materials for advanced students as well as how to help ELL students.	**(Reviewer only.)** __x__ **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence- 1.3.1:** multiplying with 1 digit factors, 3x8 is represented with an area model (3 high, eight across). It shows different ways to count it, add it, multiply it, as well as how the associative property works with it.	**(Reviewer only.)** __x__ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Every lesson has an "exit ticket" requiring students to demonstrate understanding by solving problems *as well as* explaining *why* the math works the way it does. Ex. 1.2.1: Find the product of 7x6. Must be split into 2 more simple problems and an explanation must be given as to *why* this could be helpful.	**(Reviewer only.)** __x__ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** in class assessments contain answer keys, but little else is offered with the exception of online assessments.	**(Reviewer only.)** _____ **Yes** __x__ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Students are tested with appropriate language. Questions for test seem to come from a preapproved set of questions rather than having potential bias from a teacher.	**(Reviewer only.)** __x__ **Yes** _____ **No**

9. Materials are carefully evaluated by qualified individuals, [illegible]se names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Material was compiled and reviewed by various professors and dean o[illegible]ous colleges. Each qualified individual was given multiple responsibilities that overlapped others to ensure complete coverage, accountability, and accuracy.	**(Reviewer only.)** **__x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Bright colors engage students and the application to real world problems shows actual value to the material beyond school.	**(Reviewer only.)** **__x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-**Unable to find any parent engagement.	**(Reviewer only.)** **_____ Yes** **__x__ No**

Reviewer IMET Evaluation Summary **Title/Level:** _____

Publisher: _____ **Copyright:** _____ **ISBN:** _____

Reviewer ID # _____ **Date Review Completed:** _____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
___x___ Meets	_____ Meets
_____ Does Not Meet	___x___ Does Not Meet

Non-Negotiable Overall:

_____ **Meets** ___x___ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___5___ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: ___5___ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: ___6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.)
___x___ Meets	___x___ Meets	___x___ Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

_____ **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes ___x__ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

This course is great for remediating kids. However, some things seem to be are more heavily addressed (fractions) than others (ratios). Homework doesn't seem to be big aspect of the program but regular assessment in class is a great bonus. Failure in the Non-negotiables resulted from much of the time being spend on lower grade major works that build a foundation for on grade level works.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Math 180 HMH
Title:	Math 180
ISBN #	978-0-545-80632-9
Grade Level(s) or Course:	(7) Course II
Reviewer ID:	BP

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

__X__**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Standards focus typically on previous grade level standards in order to remediate.

COHERENCE- Majority of curriculum is meant to help students be ready for grade level curriculum.

RIGOR- The curriculum is set up so students progress thrugh multiple levels of learning.

CONCEPTUAL UNDERSTANDING-
Students must gain conceptual understanding through reasoning and multiple representations.

MATHEMATICAL PRACTICES-
The Mathematical Practices are addressed throughout the curriculum and vocabulary reflects that as well.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Products are available in Spanish and the online resources have a translator option.

OTHER:
The student books are consumables.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials ref[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Table of Contents C[illegible]y indicates what each Block and Topic are that will be covered.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths, Students and teachers can see exactly what will be covered on any given day.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** 7th grade Major Works: Area (proportional relationships), Rational Numbers in expressions and equations, scales and geometry (area, surface area, volume) Almost every lesson is directed to the major works but focus on lower grade major works to build up on grade major works. There are a few lessons spent tying thing together rather than learning new material, but this is expected.	**(Reviewer only.)** **____ Meets** **__x__Does Not Meet/** **Insufficient Evidence** Most individual lessons focus on below grade level material to build a foundation for grade level material. Great for low level interventions.

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Support works and minimal, but are used in conjunction to ratios and proportions	**(Reviewer only.)** **_x_ Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Many lessons focus a grade behind. They build to prepare for the grade they are on, but everything remediates to the point of being almost a whole grade behind. A lot of time is spent reviewing 6th grade material to help solidify new content that matches in 7th grade.	**(Reviewer only.)** **____Meets** **_x_ Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students are given o[illegible]tunities to previous-grade-level problems. Problems are broken down so that struggling students can see step by step. Gradually moving to problems on grade level material.	**(Reviewer only.)** **____Meets** **__x__Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Math 180 uses concepts of grade school games to help students find and solve equations that apply to the real world. Any mathematical concepts are given a quick reminder and example for students to look off. Grade level concepts are tied in generally.	**(Reviewer only.)** **____Meets** **__x_Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students and teachers can see what is expected of them throughout the book. Both can see a general overview in their table of contents for each Block as well as individual page headings. **But,** most of the material addresses previous grade work.	**(Reviewer only.)** **___Meets** **_x_Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Page headings are used to give students an idea of what their learning objectives are. Ex. Course I, Block 4 Topic 1: 214 "Use Percent to Construct Arguments" These headings easily translate into "I can…" statements for students.	(Reviewer only.) **__x_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students are initially given problems where they are solving equations that use fractions and other whole numbers; and are gradually given variables in equations like how x relates to y.	(Reviewer only.) **__x_Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **___Meets** **__x__Does Not Meet** **Strengths/Weaknesses:** Some major works are addressed in a way that students may not fully comprehend what they are doing, but they are present, identifiable, and acquired to reasonable efficacy.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** __x__ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set ex expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Lesson 6.2.1 begin address proportional relationships and prepares for relating x to y.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** The patterns prep for finding slope of any given line. "The height of a skateboard ramp is half the length of its bas. She builds a ramp with a height of 3.5 ft. What is the length of the base of the ramp?"	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Patterns are initially addressed using triangles and transition into simple slopes with a rise and run.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** 6.2.2 Shows the relationship between those triangles and slope on a graph.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Real world application is in every lesson and problem, thought practice on any *lone* topic seems minimal.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Course II uses constant practice and procedures of *what* the problems is, *what* it looks like as a representation, and *what* the steps look like to solve it.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Every single block uses examples from real life and shows how the topics might be used in real life application for hackers/programming (block 8), artists and programmers (block 5), or even doctors (block 9).	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **____Meets (2)** **__x_Partially Meets (1)** **____Does Not Meet (0)**
There are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Block 6.3 addresses steps to interpretive linear equations and all the information one needs to find the equation.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Most all major work is addressed in a single grade level frequently.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Every new topic is addressed with examples as well as work space to follow every step; slowly moving students toward taking fewer steps on paper as they take steps mentally.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

(Reviewer only.)

__x_Meets

____Does Not Meet

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths/Weaknesses:

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Book II begins with below grade level problems to establish foundations to build the at grade level material. Every major work is eventually addressed, though at a lower difficulty.	**(Reviewer only.)** **____Meets (2)** **__x__Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials att to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each ques and rate Metric 2B.** **(Reviewer only.)** **_x_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Practice is addressed and challenging in every lesson following the model of I do, we do, groups do, you do. Though it seems little homework is provided.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Throughout the material, students spiral into more difficult and critical thinking based problems rather than simple math drills.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **While the common core standards are not explicitly identified in the chapters, the focus of each lesson as well as grade level connections are marked at every lesson entry.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **_x_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Lesson set up allows students to develop reasoning skills for *why* and *how* in solving math problems. Examples are provided in every lesson as well as areas to justify your answer.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Each problem in the book requires justification from the student from *how do you know* to *explain your reasoning.***	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Appropriate vocabulary is identified at the beginning of every unit and lesson. As well as being defined in the chapter when the vocabulary should be taught. Ex. Additive Inverse 7.1**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_x_ Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]ish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Vocabulary is provi[illegible] in Spanish. Online material is available in Spanish. Addresses need for the *why* math vocabulary is needed and important.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Extention and review lessons and adaptations are available for every lesson in the professional Learning book.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Lessons are designed for whole group and smaller groups to maximize student learning styles. Computer groups, teacher instruction, and others are used to help students learn.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **_x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-**Lessons are structured: as a group, in pairs, by self. Allowing teachers to spot struggling students as well as allowing students to help one another.	**(Reviewer only.)** **__x__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-**Students are given exact instructions and step by step examples when learning and given story problems to combine exercise with application.	**(Reviewer only.)** **__x__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-**Topic 1: students represent multiplication with pictures and find products before being introduced to the Commutative and Associative Properties of Multiplication. Factors and products help students see the connections.	**(Reviewer only.)** __x__ **Yes** _____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Math 180 includes an entire extra book that encourages teacher prep for assessment as well as extension of materials for advanced students as well as how to help ELL students.	**(Reviewer only.)** __x__ **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence- 1.3.1:** Finding slope is compared to a triangle with visuals.	**(Reviewer only.)** __x__ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Every lesson has an "exit ticket" requiring students to demonstrate understanding by solving problems *as well as* explaining *why* the math works the way it does.	**(Reviewer only.)** __x__ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** in class assessments contain answer keys, but little else is offered with the exception of online assessments.	**(Reviewer only.)** _____ **Yes** __x__ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Students are tested with appropriate language. Questions for test seem to come from a preapproved set of questions rather than having potential bias from a teacher.	**(Reviewer only.)** __x__ **Yes** _____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Material was compiled and reviewed by various professors and dean of various colleges. Each qualified individual was given multiple responsibilities that overlapped others to ensure complete coverage, accountability, and accuracy.	**(Reviewer only.)** **__x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Bright colors engage students and the application to real world problems shows actual value to the material beyond school.	**(Reviewer only.)** **__x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-**Unable to find any parent engagement.	**(Reviewer only.)** **_____ Yes** **__x__ No**

Reviewer IMET Evaluation Summary **Title/Level:** _____

Publisher: _____ **Copyright:** _____ **ISBN:** _____

Reviewer ID # _____ **Date Review Completed:** _____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
__x__ Meets _____ Does Not Meet	_____ Meets __x__ Does Not Meet

Non-Negotiable Overall:

_____ **Meets** __x__ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __5__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __x__ Meets _____ Does Not Meet	Points: __5__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __x__ Meets _____ Does Not Meet	Points: __6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __x__ Meets _____ Does Not Meet

Alignment Criteria Overall:

__x__ **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes __x__ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

This course is great for remediating kids. However, some things seem to be are more heavily addressed than others. Homework doesn't seem to be big aspect of the program but regular assessment in class is a great bonus. Failure in the Non-negotiables resulted from much of the time being spend on lower grade major works that build a foundation for on grade level works.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	LearnBop/Fuel Education
Title:	LearnBop
ISBN #	N/A
Grade Level(s) or Course:	3
Reviewer ID:	JM, CJ

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

__X__**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

LearnBop is intended to be used as a computer based intervention program. It is designed to target and support students' specific needs.

COHERENCE-

LearnBop provides 18 activities developed to the Major Clusters of 3rd grade Content Emphasis

RIGOR-

LearnBop uses a combination of graphics, appropriate mathematical language, and visuals to help develop conceptual understanding. When a student is showing a lack of conceptual understanding, LearnBop also provides additional Hints to break down the standard. All answers, however, are given in the form of multiple choice.

CONCEPTUAL UNDERSTANDING

LearnBop is intended for use as a intervention program and/or one to check for mastery. It is intended to be used to check for mastery of skills after the teacher has taught a lesson and students have had ample opportunity to practice that skill. If a student does not show mastery of that skill, LearnBop provides broken down instruction on the skill being assessed.

MATHEMATICAL PRACTICES-

Mathematic Practices 1, 5, and 6 are present in LearnBop, however, there are no opportunities for mathematical practices 2, 3, and 4, 7 or 8.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

LearnBop requires a fair amount of reading and students do not have the opportunity for questions to be read to them. All materials and information ~~was~~ is provided in English only.

OTHER:

LearnBop is soley a computer based intervention program with multiple choice answers. According to LearnBop's best practices model, a significant amount of teacher time must be invested in order to make this intervention program successful. LearnBop requires a yearly subscription to be purchased.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** LearnBop is designed to be used as an intervention program. It is designed to target and support students' specific needs. LearnBop is not intended for use as a Core Mathematics Program. LearnBop does not introduce standards before appropriate.	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) __X__ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Direct ns for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** LearnBop provides 18 activities devoted to the Major Clusters of 3rd grade Content Emphases. The majority of the major clusters include multiple activities (i.e. Five activities devoted to **develop understanding of fractions as numbers** and four activities devoted to **solve problems involving the four operations, and identify and explain patterns in arithmetic**).	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** LearnBop provides 9 activities devoted to the Supporting Clusters of 3rd grade Content Emphases. LearnBop provides up to three activities devoted to a supporting cluster (i.e. Three activities devoted to **use place value understanding and properties of operations to perform multi-digit arithmetic** and one activity to **represent and interpret data**).	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** LearnBop does a nice job of presenting materials at grade level appropriate times. When students are not accurate with answers, it then breaks down the problem for them with grade level appropriate models, if the student still lack understanding of the concept LearnBop uses below grade level instruction to help the student gain understanding. For example when a student is assigned Standard 3.NBT.A **Use place value understanding and properties of operations to perform multi-digit arithmetic**, there are three lessons presented, the first being **use place value to round**. When students do not answer correctly, the skill is broken down for instruction with third grade level appropriate models is used, if student still struggles, instruction with lower grade level models is presented to student to help achieve understanding.	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2 **Materials g... all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** LearnBop provides ... grade level concepts in the third grade curriculum. Multiple concepts are provided in each domain (measurement & data, number & operations in base ten, number and operations-fractions, operations and algebraic thinking) with the exception of geometry which provides just one concept development activity. LearnBop is an online program giving teachers instant access to reports on a multitude of things. Students can also track their assignments and mastery of concepts.	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** LearnBop requires students to use prior knowledge to demonstrate understanding of grade level concepts. When a student demonstrates a lack of understanding of a concept, LearnBop provides a tutorial that reviews prior knowledge and asks the student to extend that knowledge for the current grade level concept.	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** LearnBop has a Content Suite that provides a very concise and clear explanation as to what is covered in each grade level. The Content Suite is broken down into grade, then domain, then standard, then activity/concept.	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** LearnBop is clearly shaped by the Common Core State Standards for Mathematics. The teacher assigns activities by first choosing the grade, then the CCSM domain, followed by choosing the description of the activity that has the specific standard listed with it.	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** LearnBop is intended to be used as an intervention program. In the third grade curriculum it seems that LearnBop focuses on the standards on an individual basis and covers very limited amounts of information in each assignment in order to ensure student understanding before moving on to another standards. During the instructional portion if a student needs help to understand, there is some evidence of connections between domains.	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X_ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

_X_ Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** LearnBop uses a combination of graphics, appropriate mathematical language, and visuals to help develop conceptual understanding. When a student is showing a lack of conceptual understanding, LearnBop also provides additional Hints to break down the standard for the student.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** LearnBop allows students the opportunity to receive immediate instruction on standards that they are demonstrating difficulty with. All answers, however, are given in the form of multiple choice.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** LearnBop provides videos of instruction for a student that is not understanding individual standards. LearnBop uses a variety of different graphics including pictures, charts, number lines, base ten blocks, etc. to help develop conceptual understanding.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **_X_Partially Meets (1)** **____Does Not Meet (0)**

Is progress to[illegible] fluency and procedural skill interwoven with students' deve[illegible]g conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** LearnBop instructs o[illegible]ach standard independently. The step-by-step tutorial that a student may receive as they complete the assignment for Standard 3.NBT.A.3 Multiply by multiples of tens assists students in attaining the fluencies and procedural skills required.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** LearnBop is intended to be used as an intervention program to gain conceptual understanding, however, there are some opportunities for students to use various strategies for efficient algorithms.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** LearnBop focuses on the conceptual understanding of the CCSSM in third grade. LearnBop provides opportunities for students to practice skills that work toward attainment of the expectation of fluent computation.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** LearnBop is intended for use as an intervention program and/or one to check for mastery. It is intended to be used to check for mastery of skills after the teacher has taught a lesson and students have had ample opportunity to practice that skill. If a student does not show mastery of that skill, LearnBop provides broken down instruction on the skill being assessed.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **____Meets (2)** **_X_Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** LearnBop provides real world problems for students to work through. There is a variety of problems with a various number of steps required for completion and differing amounts of difficulty.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** The majority of the concepts provided in LearnBop are focused on the Major Clusters in the third grade curriculum (18 of 27 concepts provided for third grade). Each of the situation types for the operations in word problems are provided within the LearnBop third grade concepts.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** LearnBop uses appropriate graphics, visuals, models, and vocabulary in the third grade content. Students can easily use what is provided by LearnBop to assist in their conceptual understanding.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

(Reviewer only.)

____Meets

_X_Does Not Meet

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths/Weaknesses:
Reflex is intended to be used to build math fact fluency. Reflex uses student's speed and accuracy to demonstrate mastery of these skills only.

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** LearnBop provides opportunity for students to use Mathematical Practices in the third grade curriculum. LearnBop does this through tutoring with step-by-step instruction, visuals, guided questions, appropriate mathematical vocabulary, graphing tools, number lines, and by presenting problems in a variety of ways. LearnBop does not provide much opportunity for students to look for and express regularity in ~~reapet~~ repeated reasoning (i.e. higher level thinking, explaining, jounaling)	**(Reviewer only.)** **_X_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials a[illegible] to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each qu[illegible] and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **_X_Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** LearnBop presents questions in assignments in a variety of ways as a method of presenting the mathematical practices. The exception is mathematical practice #8.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** LearnBop presents each standard independently and uses the standards to provide appropriate grade level questions and practice standard implementation.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** LearnBop does not provide teacher-directed materials that explain the role of the practice standards.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)** **_X_Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** LearnBop provides tutorials with step-by-step break down of each problem that a student does not show mastery of the concept. Students are required to answer questions for each step of the process to demonstrate understanding. LearnBop provides additional hints for students who continue to lack understanding.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** LearnBop provides a multiple choice answering system so students are not producing arguments, explanations, diagrams, or mathematical models.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** LearnBop uses appropriate mathematical language as far as vocabulary students should know; however, with solely multiple choice answers, LearnBop materials do not explicitly attend to the instruction of mathematical language.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **____Meets** **_X__Does Not Meet** **Strengths/Weaknesses:** LearnBop is not intended to meet this Criterion and is instead meant to be used as an intervention or check for mastery of concepts already instructed on.
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** LearnBop requires a fair amount of reading in the third grade assignments. LearnBop provides visuals and explicit systematic instruction for students who do not show mastery of a standard but this often requires reading as well. Video instruction is provided in English as well.	**Reviewer only.)** ____**Meets (2)** __X__**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** LearnBop provides individualized instructions based on student needs. It provides each student with instruction based on their ability to demonstrate mastery of skills. Students are introduces to small amounts of materials in a step-by-step way and are asked questions during each step in case deeper scaffolding is needed.	**Reviewer only.)** __X__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** LearnBop provides activities to develop concepts in grades K-12. Teachers can assign topics to the whole class or select students who do not demonstrate understanding.	**Reviewer only.)** __X__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strength - LearnBop individualizes instruction based on student performances. Weakness – LearnBop requires a lot of student reading and tutorials are provided in English.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** LearnBop focuses on individual standards one at a time so teachers have the opportunity to make assignments to meet the class' individual needs. Teachers can also assign standards practice to certain groups or the entire class depending on student need.	**(Reviewer only.)** **_X_ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** LearnBop has activities broken down by the standard they are covering. LearnBop uses student's demonstration of mastery to determine where and how much instruction is needed.	**(Reviewer only.)** **_X_ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** LearnBop is clearly set up in the same structure as the Standards. Teachers then assign topics to students based on what is needed to strengthen student understanding.	**(Reviewer only.)** __X__ **Yes** _____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** LearnBop provides teachers with reports on individual student progress and mastery. According to LearnBop, teachers are required to attend an approximate hour long training that focuses on implementing LearnBop.	**(Reviewer only.)** __X__ **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** LearnBop is an online program. There are no manipulatives included for student use. There are visuals of models throughout LearnBop.	**(Reviewer only.)** __X__ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** LearnBop is intended to check for mastery or provide intervention. Teachers have the ability to create their own assessments through the assessment tab in LearnBop with generated questions. Teachers are easily able to check student performance through reports.	**(Reviewer only.)** __X__ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** LearnBop automatically assesses student progress and provides tutoring when necessary. The teacher is then provided data in order to provide students with the necessary practice/instruction as needed to develop the concept.	**(Reviewer only.)** __X__ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessments are developed by the teacher, however, instruction, course-level language and student prompts are appropriate for the grade level.	**(Reviewer only.)** __X__ **Yes** _____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** I found author profiles in the About Us section of the LearnBop website. Each author had a profile that talks about their experience and background in education.	**(Reviewer only.)** __X__ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** LearnBop does include visuals that may help students in answering questions. Navigation, for students, through the site is very straightforward.	**(Reviewer only.)** __X__ **Yes** _____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Students are able to login to LearnBop from home and could show parents their progress and the skills that they have mastered.	**(Reviewer only.)** __X__ **Yes** _____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** LearnBop/Fuel Education

Publisher: LearnBop **Copyright:** 2015 **ISBN:** 978-1-4916-0801-2

Reviewer ID # JM, CJ **Date Review Completed:** 2/13/2016

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 4 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 4 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
_____ Meets	_____ Meets	X Meets
X Does Not Meet	X Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

_____ **Meets** X **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes __X__ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

The LearnBop program can accomplish what it is meant to do. LearnBop was developed to be used as an intervention program and/or a check for mastery of specific skills/standards. LearnBop does this in a way that each student's individual learning experience by providing instruction when needed and progressing without instruction when students demonstrate mastery.

LearnBop
~~Reflex~~ was not created to provide core instruction to students or to develop fluency and therefore does not cover requirements needed to meet the necessary evidence required for those categories.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	FuelEducation
Title:	LearnBop
ISBN #	
Grade Level(s) or Course:	4
Reviewer ID:	CB, LKE, MS

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

__X__**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Assessments were aligned to grade-level standards and reflected problems presented in bops.	**(Reviewer only.)** X **Meets** ___ **Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** X **Meets** ___ **Does Not Meet** **Strengths/Weaknesses:** Assessments and bops aligned to grade-level standards

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

- Major works were focus of lessons
- 100% of 4th + 5th grade lessons + assessments were focus

(Reviewer only.)

X **Meets**

____ **Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting [illegible]k, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** -Supporting works also focused on in bops and assessments - extends experience with major works -100% supporting works represented for 4th + 5th grade	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Progressions match grade level; previous and next grade levels are accessible for progressions No interference from other grade levels because teacher can select specific grade level to assign students	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content catalogue lists grade-level concepts + # of concepts per grade level	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** major works from current + previous grade levels connected with on grade level work	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Because the program is designed by grade level, the teacher can easily choose material from grade levels in content catalogue	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** objectives are clearly labeled within cluster headings	(Reviewer only.) _X_ Meets ____ Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Tutorials reconnect students to several concepts and clusters to current cluster As a component piece, clusters are not connected as lessons, rather, as re-teach opportunities	(Reviewer only.) _X_ Meets ____ Does Not Meet/ Insufficient Evidence
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) _X_ Meets ____ Does Not Meet **Strengths/Weaknesses:** Clusters + objectives are clearly visible + easy to find

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set [redacted] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** extensive use of graphics, videos hints assists ↑learn zillion conceptual understanding	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** As an online program, no discussion was available (unless used as a whole-class teaching tool). Immediate feedback in form of "step-by-step" explanation gives student opportunity for increased conceptual understanding.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Diagrams, models, videos, graphs represent problems in several ways	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Concepts assist with developing procedural fluency. Program does not specifically include fluency practice for basic skills operations	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Fluency comes in form of practicing concepts, but strictly fluency problems not present	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** "Step-by-step" tutorial provides practice with fluency	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Features of program reinforces classroom instruction. "Step-by-step" tutorial re-teaches missed concepts	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are a variety of problems that engage students	

Do application problems particularly stress applying the Major Work of the grade? Eval[illegible]essons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** All problems + assessments are based on major works	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** "step-by-step" breaks down and enhances model. Visual representations assist in scaffolding pattern	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets** 5/6

___ **Does Not Meet**

Strengths/Weaknesses:
more multiple choice than open-ended responses

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

As an online program, students can't construct + evaluate arguments or produce their own models. This limits development of practice standards 3 + 4.

(Reviewer only.)

____**Meets (2)**

__X__**Partially Meets (1)**

____**Does Not Meet (0)**

Metric AC2B: **Materials at to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** X **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** With the exception of MP 3+4, all are attended to throughout the program	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** All standards for practice are aligned across grades	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** There are teacher slideshows but practices are not labelled as practice standards	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** X **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Because this is an online program students are reading about concepts + practices + must respond to "step-by-step" tutorials	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** "Step-by-step" tutorials provide explanations + diagrams and models are presented within tutorials	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Language is not explicitly taught but is used in tutorials. Models are provided for student in tutorials.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets** 5/6

____ **Does Not Meet**

Strengths/Weaknesses:
Practice standards 3+4 are shown to students through tutorials, but students do not construct own arguments + models

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]ish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** no support for ELL + other populations other than pictures + diagrams, + models of concepts that are in most problems	**Reviewer only.)** ____Meets (2) _X_Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** "Step-by-step" tutorials, hints, response feedback provided for answers. ↑incorrect Interventions can be created from teacher dashboard.	**Reviewer only.)** _X_Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** tutorials, multiple choice, remediate, assign work for advancement, technology enhanced bops	**Reviewer only.)** _X_Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** X **Meets** 5/6 ____ **Does Not Meet** **Strengths/Weaknesses:** Explicit language support needed for ELL in addition to graphics

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Bops can be given to entire class. Bops can be used to remediate instruction & practice. Bops can accelerate instruction	**(Reviewer only.)** X **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Bops use specific math language. Graphics, visuals, hints, + videos aid in the development of conceptual understanding	**(Reviewer only.)** X **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises ar[illegible]en in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Does follow the structure and organization of the standards	(Reviewer only.) X **Yes** ____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Explanation of materials and help box provided to help as overview of each lesson concept.	(Reviewer only.) X **Yes** ____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** ~~No manipulatives provided~~ LearnBop authors use models similar to those used in ~~illustrative Mathematics~~ resources from National Council of teachers and mathematics	(Reviewer only.) X **Yes** ____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Assignments inform teacher of mastery of concepts from reports. Teachers can create or assign Pre, post, interim assignments Comprehensive assessments are available to assess students on grade level.	(Reviewer only.) X **Yes** ____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** While rubrics are not provided. Results are provided for immediate feedback, and monitoring options are available	(Reviewer only.) X **Yes** ____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Content written and developed by master educators who understand CCSSM. Graphics are student friendly and questions are developmentally appropriate	(Reviewer only.) X **Yes** ____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Information found on website and tutorials mention the authors.	**(Reviewer only.)** X **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Digital content includes visuals to show math ideas. Good for visual learners as well as all students to use.	**(Reviewer only.)** X **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** reasoning to solve word problems conceptually. Students can login anywhere there is internet access and at home. Parents can see their progress or completion of assignment or concept mastery.	**(Reviewer only.)** X **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** learnbop

Publisher: Fuel Education **Copyright:** _____ **ISBN:** _____

Reviewer ID # CB, LKE, MS **Date Review Completed:** 3/7/16

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

X **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** X **Yes** ____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

More language support for ELL students in addition to graphics necessary.

Strengths are found in tutorials that lead to conceptual understanding; immediate feedback upon submitting student answers.

Because the program is based on multiple choice selections and is presented online, it presents less opportunity for practice standards 3+4.

There are guided hints that help trigger prior knowledge.
Instructional videos provide immediate tutorials.
Targeted interventions
Classroom progress reports on all assignments that show where students have mastered and where students struggle on comprehensive + custom assessments
Teacher access to all graded work.
Comprehensive content catalog with interactive problems.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Fuel Education
Title:	LearnBop
ISBN #	
Grade Level(s) or Course:	5
Reviewer ID:	CB, LKE, MS

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

__X__**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
The clusters were the major focus of the program.

COHERENCE-
Major works follow standards progressions.

RIGOR-
Standards are reflected through different forms of rigorous practice.

CONCEPTUAL UNDERSTANDING-
The programs major focus is on conceptual understanding.

MATHEMATICAL PRACTICES-
Mathematical practices are present throughout program except for MP 3+4, in which students construct + critique arguments. Rather, arguments are presented as

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- reading samples + tutorials. Models + visuals support Ell students. Differentiation and intervention options available to teacher for use.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Assessments were aligned to grade-level standards and reflected problems presented in learning bops.**	(Reviewer only.) **_X___Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **_X___Meets** **____Does Not Meet** **Strengths/Weaknesses: Assessments and learning bops aligned to grade level standards.**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **Major works were focus of learning bops. 100% of 5th grade learning bops and assessments were focus**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Supporting works are focused on in learning bops and assessments-extended experience with major works** **100% supporting works represented for 5th grade**	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Progressions math grade level; previous and next grade levels are accessible for progressions No interference from other grade levels because teacher can select specific grade level to assign students	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible] students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content catalogue[illegible]ts grade-level concepts and number of concepts per grade level	(Reviewer only.) **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Major works from current and previous grade levels connected with on grade level work	(Reviewer only.) **_X___Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Because the program is designed by grade level, the teacher can easily choose material from grade levels in content catalogue	(Reviewer only.) **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Objectives are clearly labeled within cluster headings**	(Reviewer only.) **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Tutorials reconnect students to several concepts and clusters to current cluster** **As a component piece, clusters are not connected as lessons, rather, as re-teach opportunities**	(Reviewer only.) **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Clusters and objectives are clearly visible and easy to find**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Extensive use of graphics, videos, hints assists conceptual understanding Learnzillion is used as a teaching video	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** As an online program, no discussion was available (unless used as a whole-class teaching tool), immediate feedback in form of "step-by-step" explanation gives student opportunity for increased conceptual understanding	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Diagrams, models, videos, graphs represent problems in several ways	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **_X___Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Concepts assist wi eveloping procedural fluency. Program does not specifically include fluency practice for basic skills operations	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Fluency comes in form of practicing concepts, but strictly fluency problems not present	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **"step-by-step" tutorial provides practice with fluency**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Features of program reinforces classroom instruction. "Step-by-step" tutorial reteaches missed concepts	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are a variety of problems that engage students	

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** As an online program, students can't construct and evaluate arguments or produce their own models. This limits development of practice standards 3 and 4.	**(Reviewer only.)** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** All problems and assessments are based on major works	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** "Step-by-step" breaks down and enhances models. Visual representations assist in scaffolding pattern.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:
More multiple choice than open-ended responses

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **___X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **With the exception of MP 3 and 4, all are attended to throughout the program**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **All standards for practice are aligned across grades**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **There are teacher slideshows but practices are not labeled as practice standards**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **___X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Because this is an online program, students are reading about concepts and practices, and must respond to "step-by-step" tutorials**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **"Step-by-step" tutorials provide explanations and diagrams and models are presented within tutorials**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Language is not explicitly taught but is used in tutorials.** **Models are provided for student in tutorials.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:
Practce standards 3 and 4 are shown to students through tutorials, but students do not construct own arguments and models.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]lish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** No support for ELL[illegible]d other populations other than pictures, diagrams, and models of concepts that are in most problems	Reviewer only.) **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** "Step-by-step" tutorials, hints, response feedback provided for incorrect answers. Interventions can be created from teacher dashboard.	Reviewer only.) **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Tutorials, multiple choice, remediation, and assign work for advancement, as well as technology enhanced bops	Reviewer only.) **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Explicit language support needed for ELL in addition to graphics

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Teacher dashboard allows progress monitoring and lessons are scaffolded and go at student pace.**	**(Reviewer only.)** **____X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Exercises provide the opportunity for reteaching. There are some fill in the blank problems with advancement available.**	**(Reviewer only.)** **__X____ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Lessons are scaffolded. Organization of standards is followed.	(Reviewer only.) __X____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Explanation of materials and "help box" are provided. No guide is provided for student responses and thinking. Support is given for teachers to implement Learnbop.	(Reviewer only.) _X_____ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- No manipulatives are provided, but there are models presented visually.	(Reviewer only.) ___X___ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There are various forms of assessments, including a technology enhanced bop, as well as pre, and post assessments. There's a comprehensive assessment.	(Reviewer only.) ___X___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- While rubrics are not provided, there are results available for immediate feedback, as well as progress monitoring options for teacher's use.	(Reviewer only.) ____X__ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Graphics are student-friendly and questions are developmentally appropriate.	(Reviewer only.) __X____ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Contact information is found on the website and tutorials mention individuals.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Visuals are easy to read and are attractive.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **The website is easy for parents to use for assisting their child. There are also tutorials for software use.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary
Title/Level:_Learnbop_5th_____

ISBN:_____

Reviewer ID # __CB, LKE, MS_____ Date Review 3/7/16
Completed:_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	**Non- Negotiable 2: Focus and Coherence**
____X___ Meets	**___X__ Meets**
_____ Does Not Meet	**_____ Does Not Meet**

Non-Negotiable Overall:

___X__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: __6___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)**	**Points: __5___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points: _5____ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
___X____ Meets	**____X___ Meets**	**___X____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

More language support for Ell students in addition to graphics necessary.

Strengths are found in tutorials that lend to conceptual understanding; immediate feedback upon submitting student answers.

Because the program is based on multiple choice selections and is presented online, it presents less opportunity for practices standards 3 and 4.

There are guided hints to help access prior knowledge. Interventions can be targeted to specific skills. Classroom progress reports on all assignments show what students have mastered and what students strengths are. There are comprehensive assessments as well as customizable assessments available. There is total access to all grades K-12. There is a comprehensive content catalog with interactive problems.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	LearnBop / Fuel Education
Title:	Learn Bop 6
ISBN #	
Grade Level(s) or Course:	6
Reviewer ID:	KC + BP

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

__X__**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

(was submitted as a component program)

_____**Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Diagnostic assessment places students at their perceived level. Activities are aligned with CCSS, and work students through tasks.

COHERENCE- Tasks progress through standards, on an "as needed" basis. This is determined by the students' individual performance on the diagnostic and subsequent tasks.

RIGOR- Students receive information through examples and videos. This limits the rigor to the existing levels of the activities.

CONCEPTUAL UNDERSTANDING- Tasks are presented to students, additional "tutor-help" is available as step-by-step notes and explanatory videos. The videos are prompts, and do not give the answer away.

MATHEMATICAL PRACTICES- Students are asked to reason abstractly, but not necessarily reason + justify. There are visual models and digital manipulatives to model mathematics.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- This program is very language heavy. A student with limited English would struggle to benefit from this model.

OTHER: The individualized instruction is helpful as a supplement to core curriculum instruction. My concern is that in isolation, students would not be given ample exposure to the content to reach mastery and deep conceptual understanding.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: LearnBop/Fuel Education

Title of Material: LearnBop (6th)

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Uses diagnostic pre[illegible]essment to place students. This allows students to work where skill improvement is needed. Teachers can also assign specific tasks.**	(Reviewer only.) **__x__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Yes, students spend all their time strengthening their skills. Those in need of remediation are given extra help, students at grade level are given standards they need to succeed, and advanced students are given higher level work to encourage progression.

(Reviewer only.)

_x_ Meets (2)

____ Partially Meets (1)

____ Does Not Meet (0)

Metric AC2B: **Materials at[illegible] to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each que[illegible]n and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **____Partially Meets (1)** **___x___Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **All standards are integrated in questions and help, but there is little in terms of lesson design other than when students get the question wrong. At which point students are given more instruction on material appropriate to the standard and solving the problem.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Standards are developed and designed for particular grade levels, but are not explicitly identified for students, only the teacher.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **N/A**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **There are small sections addressing this, but most comes from the "tutor help" and correcting your own work.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **If and when students get a wrong answer, the "tutor help" guides students with questions and information based on pasted and current material.**	

Do materials explicitly attend to the specialized language of mathematics? Is language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Yes, each "bop" uses different language to address real world and mathematical vocabulary.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

(Reviewer only.)

____Meets

__x__Does Not Meet

Strengths/Weaknesses:

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Could not find any	**Reviewer only.)** **____Meets (2)** **____Partially Meets (1)** **__x__Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Scaffolding is strong. Steps are broken down for students that need help but are not "spoon fed." Students still receive questions to help them figure it out.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Everything is self learning on a computer, but there are a variety of visuals, charts, videos, etc.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** ____**Meets** __x__**Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Multiple ways of addressing problems are given for students that give incorrect answers.**	**(Reviewer only.)** __x__ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Every exercise focuses on a particular CCSS and moves students to mastery.**	**(Reviewer only.)** __x__ **Yes** _____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** **Scope and sequence clear and logical**	**(Reviewer only.)** **__x__ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** **Teacher interface provides instructional feedback**	**(Reviewer only.)** **__x__ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **Mainpulatives are all digital with drag and drop aspects, but are only available on some problems.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **Assessment is formative and summative.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Assessment is computer scored and can be viewed by teachers.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **All access is online which may inhibit some student access, but language is course appropriate.**	**(Reviewer only.)** **__x__ Yes** **_____ No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Authors have combined total of over 60 years math teaching experience and are, or were, on state education boards.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Navigation is easy and thought out for both teachers and students. Visuals do not clutter the screen but are sufficient allow for clarity in the problem**	**(Reviewer only.)** **__x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **No access for parents beyond accessing student login or print outs from the teacher.**	**(Reviewer only.)** **_____ Yes** **__x__ No**

Reviewer IMET Evaluation Summary **Title/Level:** LearnBOP/6

Reviewer ID # KC & BP **Date Review Completed:** 3/8/16

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
x Meets	x Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

x **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 4 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 4 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
x Meets	_____ Meets	_____ Meets
_____ Does Not Meet	x Does Not Meet	x Does Not Meet

Alignment Criteria Overall:

_____ **Meets** x **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

ELL is not addressed at all. Language heavy material may make it difficult for students with reading abilities. Computer skills needed and may prohibit students without these skill as well as students with special needs that interfere with these skills.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	LearnBop / Fuel Education
Title:	LearnBop
ISBN #	
Grade Level(s) or Course:	7
Reviewer ID:	KC + BP

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

__X__**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

(was submitted as a component program)

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Diagnostic tools Keep students focused on materials on their level. Teachers can assign materials to match classroom materials. Everything is CCSS aligned.

COHERENCE- Scaffolded subjects help guide students through each standard. All students are give instructions that push students to mastery. Standards are tested on an as needed basis.

RIGOR- Concepts build on one another with clear questioning. Speed is dependent on students as the program self accellerates or remediates as needed. Time is spent strengthening individual skills.

CONCEPTUAL UNDERSTANDING- Concepts are clear and initially compartamentalized unless other concepts are explicitly needed. Programs focus on strengthening weak areas as well as building on student assignments from teachers

MATHEMATICAL PRACTICES- No teacher directed material. All CCSS are addressed and taught. Students must reason abstractly, but rarely need to justify answers.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Standards are clearly scaffolded in english. There is currently no ELL resource with this program. Because of computer skill requirements, students with special needs may struggle. While standards are clear, the program is language heavy.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: LearnBop/Fuel Education

Title of Material: Learn Bop (7th)

Author: LearnBop in partnership with K-12 mathematics educators

ISBN #: Various **Copyright** —

Reviewer ID: BP & KC

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Uses diagnostic pr[illegible]essment to place students. This allows students to work where skill improvement is needed. Teachers can also assign specific tasks.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **Dependent of Teacher and Student. Diagnostics determine student needs, but teachers can assign major works.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Lessons are designed to fill gaps students may have in their understanding and push to work students at grade level.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All material progression covers the Standards for every grade.	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students work on [illegible]oblems until mastery is achieved (preset of 90 %).	(Reviewer only.) **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Problems require knowledge and skills from previous grades and lessons. If student gets the question wrong, the program breaks the problem into these smaller parts.	(Reviewer only.) **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Reports show all lessons and the level of mastery each student currently has and their individual performance (# correct without help/# correct with guide).	(Reviewer only.) **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Assignments are o[illegible]ized and labeled with CCSS**	(Reviewer only.) __x__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Assignments focus on a single CCSS and avoid complications, but some problems connect clusters and, if the student gets the problem initially wrong, will break the problem down into smaller parts that may work on connecting domains or earlier grade materials as well.**	(Reviewer only.) __x__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) __x__ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__x__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set e[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Problems are conc[illegible]based scaffolding and adaptive based on student needs.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Students are asked to apply concepts, but as an all online program, it refrains from open ended questioning.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Visuals, Written responses, as well as interactive responses and video all work to connect the student to several mathematical representations.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_x_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** At grades 6 and 7, dents are practicing flexibility rather than fluency.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Problems are mostly problems solving based, but if students answer the initial question wrong, the recorded "tutor" helps to show procedures.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Students continue working on a standard until it is considered "mastered"**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Teachers may review acquisition of skills and may remediate, accelerate, or provide more grade level practice for students, as necessary, to maximize their fluency.**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Every "bop" is different and may have more or less single- to multi-step problems; but every "bop" has at least some of each.	

Do application problems particularly stress applying the Major Work of the grade? Eva[illegible]essons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Yes, grade level w[illegible]is identified and only introduced if and when the student needs it (if a student already has fluency it is only addressed slightly and if a student needs remediation, they will be assigned skills that will build them toward being able to address grade level work. However, teachers may override the diagnostic programing and assign Major Works as need in the class.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** All grade standards (K-12) are integrated and used to build students toward grade level mastery.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__ Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Yes, students spend all their time strengthening their skills. Those in need of remediation are given extra help, students at grade level are given standards they need to succeed, and advanced students are given higher level work to encourage progression.	**(Reviewer only.)** **_x_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **____Partially Meets (1)** **__x__Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **All standards are integrated in questions and help, but there is little in terms of lesson design other than when students get the question wrong. At which point students are given more instruction on material appropriate to the standard and solving the problem.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Standards are developed and designed for particular grade levels, but are not explicitly identified for students, only the teacher.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **N/A**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **There are small sections addressing this, but most comes from the "tutor help" and correcting your own work.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **If and when students get a wrong answer, the "tutor help" guides students with questions and information based on pasted and current material.**	

Do materials explicitly attend to the specialized language of mathematics? Is language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Yes, each "bop" uses different language to address real world and mathematical vocabulary.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

__x__Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Could not find any	**Reviewer only.)** ____**Meets (2)** ____**Partially Meets (1)** __x__**Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Scaffolding is strong. Steps are broken down for students that need help but are not "spoon fed." Students still receive questions to help them figure it out.	**Reviewer only.)** __x__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Everything is self learning on a computer, but there are a variety of visuals, charts, videos, etc.	**Reviewer only.)** __x__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** ____**Meets** __x__**Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Multiple ways of addressing problems are given for students that give incorrect answers.**	**(Reviewer only.)** __x__ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Every exercise focuses on a particular CCSS and moves students to mastery.**	**(Reviewer only.)** __x__ **Yes** _____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Scope and sequence clear and logical	(Reviewer only.) __x__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Teacher interface provides instructional feedback	(Reviewer only.) __x__ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Mainpulatives are all digital with drag and drop aspects, but are only available on some problems.	(Reviewer only.) __x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Assessment is formative and summative.	(Reviewer only.) __x__ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Assessment is computer scored and can be viewed by teachers.	(Reviewer only.) __x__ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- All access is online which may inhibit some student access, but language is course appropriate.	(Reviewer only.) __x__ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Authors have combined total of over 60 years math teaching experience and are, or were, on state education boards.**	(Reviewer only.) __x__ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Navigation is easy and thought out for both teachers and students. Visuals do not clutter the screen but are sufficient allow for clarity in the problem**	(Reviewer only.) __x__ Yes _____ No
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **No access for parents beyond accessing student login or print outs from the teacher.**	(Reviewer only.) _____ Yes __x__ No

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? __x__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

ELL is not addressed at all. Language heavy material may make it difficult for students with reading abilities. Computer skills needed and may prohibit students without these skill as well as students with special needs that interfere with these skills.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	LearnBop / Fuel Education
Title:	Learn Bop 8
ISBN #	NA
Grade Level(s) or Course:	8
Reviewer ID:	

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

__X__**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Covers standards for 8th Grade. Missing in seperate area is 8.6.1. Major clusters are ~~to~~ covered in Expressions, Functions, and Geometry

COHERENCE- The flow of material stays within grade level work and adheres to CCSS for 8th grade. The teacher can select various assignments at different complexity levels to engage all students

RIGOR- The assignment cover all conceptual standards. Concept problems help review material.
There are good discussion problems to develop understanding.

CONCEPTUAL UNDERSTANDING-

The Problems are high level and develop understanding by discussion with computer. There are multistep problems to build understanding.

MATHEMATICAL PRACTICES-

Each lesson engages the student in the Math Practices
Expressions and Equations - attend to precision
In Statistics and Probability - modeling and constructing argument

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

The visuals are designed to help all students "see" what is happening. The problems are free from Bias. Tutorials guide a student to the right answer when it is answered wrong

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Strength- the questions are well broken out in each standard. The teacher can ask from easy to hard questions.

Weakness- there is a lot of navigation that needs to be learned and with time will get easier

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

Major clusters are in expressions, functions, and geometry.

Standards are all of geometry for major cluster And 8.EE.1 and 2 for expressions

Major clusters covered at least 80 % of the time

(Reviewer only.)

__X__Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting [illegible]k, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The other standa[illegible]covered that are supporting work are used by this work to reinforce and build up to the major work. Some of it is laying the groundwork.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The flow of the material stays within the grade level work for 8th grade and adheres well to the standards. No extraneous material viewed from previous or future grades.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The teacher can s[illegible]ect various assignment at different complexity levels to engage all students. In geometry an assessment can be formed using different problems for different levels of student ability. This can be formative and give a teacher feedback on how all students are doing	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each assignment is laid out in relation to the standard for that grade level. A teacher can check standards from earlier grade levels to ensure continuity	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** What the program calls the content suite is marked as to which standard it follows. So if any review is done, that standard will appear with that question.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The breakdown for each assignment shows the heading and how they relate to the clusters. No question for an assignment or assessment are present with cluster heading information	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** An example would be working with Pythagorean theorem and solving functions and equations. Steps involved are similar and are covered in every major cluster.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strength- the work focuses on all exercises and problems relating back to the standards. The supporting work provides the stepping stones to the major work.
The work relates all clusters throughout the program.

Weakness- the material has to be put together by the teacher for each individual, while it can be done it may require much planning and could cause someone not to sue it as efficiently as designed

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

_X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** A good example is the standards FOR Expressions and equations where all are conceptual The assignments cover all of the conceptual standards in this standard as shown by the standard being included on each question in the assignment. When finding the square root they give examples showing that finding the principal square root is sometimes the only one that makes sense in the context of a problem.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** The material features good concept problems in a review of the material. In Compare proportions the preview of the bops shows good discussion problems for concepts and is just an example of the rest.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** This work has borrowed ideas from a work called progressions and integrated the models into the problems to help students. They also use Learn zillion videos which tie across standards and use representations in a great way	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The assignments are well aligned with the standards and use math vocabulary to question and explain answers. Students get much practice to develop fluency	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** The material features good concept problems in a review of the material. In Compare proportions the preview of the bops shows good discussion problems for concepts and is just an example of the rest There is a mix in each assignment of problems and exercises	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Not applicable for 7th grade.	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** With each assignment using the standards as a guide, the major clusters are covered at least 85 percent of the time.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The assignments are varied in each standard to provide exercises and problems that require more than one step to complete. These problems challenge students and help them meet the math practice standards.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Again the problems in the assignments apply the major work and stress appropriate terminology and procedures to accomplish the solution.	

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are videos associated with various lessons to help build understanding and problem solving skills.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strength- repetition and carryover from standards are attained in this work.

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Attending to precision can be seen in assignments in expressions and equations. Working with exponents and fractions and using commas appropriately In statistics and probability modeling and constructing arguments are explored.	**(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The practice standards can be explained in each lesson by the teacher and guide the students in achieving them	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Each grade does become more complex in the reasoning required and the problems that are performed	

Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Each bop has a get help and next step area that acts as the teacher for the student	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** When the student answers a question wrong, the tutorial breaks the argument down for the student and requires them to reason through the solution with the tutorial.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** In several bops models are used for the students to solve problems. In Statistics and probabilities, students are asked to use graphs to construct and answer	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Throughout the bops, the question are asked using proper math terminology. The questions are based on videos and if an answer is not correct, the tutorial explicitly breaks the problem down.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)
Strength- the material is great at providing explanations and definitions for each section

Weakness- students are not taught how to construct models, they are presented for review.

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
Visuals are very evident throughout the lessons. These can be used by the teacher to show what the language is saying in the problem.
The presentation in each problem is eye catching and includes more than just words but color and activity for the eyes.

Reviewer only.)

_X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials pr[illegible]e appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** When the student answers a question wrong, the tutorial breaks the argument down for the student and requires them to reason through the solution with the tutorial. Each bop has a get help and next step area that acts as the teacher for the student.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The questions are presented as "explain the situation", multiple choice, modeling. Questions are diverse enough to ensure a thorough understanding of the material	**Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** Strength- Access is provided for all students, with training even English Language learners can access the problems. Weakness- the visuals in the problem may initially be overwhelming for a student to navigate. **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **_X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons are very well planned and the teacher can modify as needed to help the whole class or individual students. There are also preplanned assignments	**(Reviewer only.)** **____X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** The assignment are varied in each standard to provide exercises and problems that require more than one step to complete. These problems challenge students and help them meet the math practice standards.	**(Reviewer only.)** **__X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The assignments are designed to follow the standards in the order of how they appear. In statistics construct and interpret scatter plots comes before describe data patterns and best line of fit.	**(Reviewer only.)** **__X___ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** There appear to be no separate material for teachers but they can study ahead of the lessons to anticipate student questions.	**(Reviewer only.)** **_____ Yes** **____X_ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** The material uses graphs number lines and other models to represent ideas and help solve problems. The question is alongside the model.	**(Reviewer only.)** **__X__ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** The material gives teachers the ability to design assessments for the whole class and also for each individual student if needed. In the curriculum itself assessments in the form of questions can provide good formative information for the teacher.	**(Reviewer only.)** **___X__ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** The answers to the assessments are in the questions themselves and students can review the argument for the correct response to determine performance.	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The problems are accessible to all students on the program. Each student can access the course on their own computer and work on the problems.	**(Reviewer only.)** **____X__ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** All of the guides are written by Cindy Bryant, LearnBop's Director of Learning. Cindy is a veteran math teacher, former member of the NCTM Board of Directors, former state K–12 Math Director in Missouri, and a Presidential Awardee. Pulled from the website.	**(Reviewer only.)** **__X____ Yes** **_____ No**

10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Visually the program has a nice blend of graphs, tables, and words to stimulate the mind for the problem.	**(Reviewer only.)** **__X____ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Parents can access the work their child is doing and work alongside the program to help the children learn the material.	**(Reviewer only.)** **__X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary Title/Level: _Learnbop_____

Publisher: __learnbop/fuel education Copyright: ____NA____ ISBN:_____NA_

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **___X___ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **___X__ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **___X__ Meets _____ Does Not Meet**	

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: __6__ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **___X___ Meets** **_____ Does Not Meet**	**Points: _6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **__X____ Meets** **_____ Does Not Meet**	**Points: _6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **__X____ Meets** **_____ Does Not Meet**
Alignment Criteria Overall: **___X__ Meets _____ Does Not Meet**		

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

The strength of this program is that it is highly modifiable by the teacher to fit classes and individuals as they need the help. The program is easily accessible for the parents to help their children.

The weakness may be that the teacher will have to work hand in hand with the student to learn how to work the problems available.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	LearnBop/Fueled Education
Title:	LearnBop
ISBN #	N/A
Grade Level(s) or Course:	9-12
Reviewer ID:	KD, JT, LC, MN

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

____X____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

LearnBop is a program designed to meet most of the CCSS. LearnBop spends the majority of the time addressing most of the Widely Applicable Prerequisites (WAP), however there are some WAP not addressed. The following standards are not covered: F.LE.1c, A.REI.10, S.IC.1, A.SEE.4, A.APR.5, 7. These standards will need to be supplemented by the classroom teacher. All content in the LearnBop curriculum is based on the content specified in the CCSS.

COHERENCE-

Standards within the HS LearnBop program have extended the concepts from middle school math. The program allows the teacher to assign "bops" to the students to allow them to work through material in a cohesive manner.

RIGOR-

CONCEPTUAL UNDERSTANDING-

MATHEMATICAL PRACTICES-

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

OTHER:

- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some crit[illegible] cannot be rated without having access to each grade. In a[illegible]ion, each evaluator should have a reference copy of the Co[illegible]n Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Not Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1 **Focus and Coherence**		
Criterion	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A:

In any s[illegible]e course, students spend at least 50% of their time on Widely Applicable Prerequisites.

How to Find the Evidence:

Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Evidence-

The majority of the time is sp[illegible]pecifically on the widely acceptable prerequisites, however, there are some tha[illegible]not covered and will need to be supplemented by the classroom teacher. The following prerequisites are missing:

- F-LE-1c
- A-REI-10
- SIC-1
- A-SSE-4
- A-APR-5, 7

Please see the analysis below of the information provided by LEARNBOP through the roadmap for HS Number and Quantity as compared to the standards in the widely acceptable prerequisites.

=

LearnBop RoadMap		CCSS	
Cluster	**Standards**	**Number & Quantity Standards**	**Widely Acceptable Prerequisite**
Quantities Part 1	Convert Units (HSN-Q.A.1-1)	1. Use units in a way to understand problems and to guide the solution of multi-step problems; choose and interpret the scale and the origin in graphs and data displays.	N-RN, Real Numbers: Both clusters in this domain contain widely applicable prerequisites. N-Q*, Quantities: Every standard in this domain is a widely applicable prerequisite. Note, this domain is especially important in the high school content standards overall as a widely applicable prerequisite.
	Interpret Graphs (HSN-Q.A.1-3)	1. Use units in a way to understand problems and to guide the solution of multi-step problems; choose and interpret the scale and the origin in graphs and data displays.	
The Real Number System	Define Exponents (HSN-RN.A.1)	1. Explain how the definition of the meaning of rational exponents follow from extending the properties of integer exponents to those values, allowing for a notation for radicals in terms of rational exponents.	
	Rewrite Expressions (HSN-RN.A.2)	2. Rewrite expressions involving radicals and rational exponents using the properties of exponents.	
	Explain Rationality of Computations (HSN-RN.B.3)	3. Explain why the sum or product of two rational numbers is rational; that the sum of a rational number and an irrational number is irrational; and that the product of a nonzero rational number and an irrational number is irrational.	
Quantities Part 2	Choose/Interpret Units (HSN-Q.A.1-2)	1. Use units in a way to understand problems and to guide the solution of multi-step problems; choose and interpret the scale and the origin in graphs and data displays. 2. Define appropriate quantities for the purpose of descriptive modeling.	
The Complex Number System	Express Complex Numbers (HSN-CN.A.1	1. Know there is a complex number i such that $i^2 = -1$ and every complex number has the form a + bi with a and b real.	
	Add/Subtract/Multiply Complex Numbers (HSN-CN.A.2)	2. Use the relation $i^2 = -1$ and the communicative, associative, and distributive properties to add, subtract, and multiply complex numbers.	
	Solve Quadratic Equations with Complex Solutions (HSN-CN.C.7)	7. Solve quadratic equations with real coefficients that have complex solutions.	

___ ___**Meets**

___x_**Does Not Meet**
Insufficient Evidence

Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** The program addresses cluster standards in Geometry in the HS-Geometry lessons. See below for number of concepts in each category: HS-Geometry Circles Congruence Expressing Geometric Properties with Equations Geometric Measurement and Dimension Modeling with Geometry Similarity, Right Triangles, & Trigonometry Examples of algebraic content included in the Geometry lessons are: Deriving circle equations, finding circle center and radius given by an equation, deriving parabola equations, etc.	**__x__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Standards are more complex and have built upon those from 6-8. Higher level math concepts within the categories are often neglected specifically if the standard has the (+) sign in the CCSS's. LearnBop does offer the following concepts in Statistics and Probability, which would be applicable for some students, also these are higher level concepts within **Functions:** -Interpreting functions -Trigonometry Functions -Linear, Quadratic, and Exponential Models **Statistics and probability:** -Using probability to make Decisions This program would be more appropriate for Algebra I, Geometry, and Algebra II (although some widely applicable prerequisites were missing and would need to be supplemented).	**_x___Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** LearnBop presents materials in format of a BOP which is linked to a domain, cluster, and standard. Bops are fairly easy identify which standard they belong to as they are clearly identified. Some standards are broken down differently than the CCSS, but are relatively easy to match to the appropriate standard in the CCSS. Students are able to see domains and clusters using the roadmap option on the main menu of their screen. Teachers are able to individually assign content standards or individual standards for students to work on. Materials appear to be aligned closely, but do not cover all of the standards listed in CCSS but do cover the majority of the widely applicable prerequisites. LearnBop course content misses the following standards, according to the course content as provided in the teacher's log in: • F-LE-1c • A-REI-10 • SIC-1 • A-SSE-4 • A-APR-5, 7	**__x__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** As a component program, students would receive instruction through the main curriculum and use this program as a supplement to the primary instruction. Learnbop provides course-level problems in Algebra I, Geometry, and basic Algebra II. Teachers can assign intervention based on student performance on assessments and other course content. Learnbop automatically can assign interventions based on student performance on assessments. Learnbop provides a gradual increase of difficulty in questions embedded within the Bops and assessments. Students who need remediation are able to receive interventions as necessary. This provides differentiation for students at a variety of levels. This program would not be beneficial for students in special population (i.e. ELL, Sp.Ed., 504) who require accommodations with audio. Learnbop should not be used as the primary source of instruction.	**__x__Meets** **__ __Does Not Meet Insufficient Evidence**
Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** According to the program's content catalog, skills build upon one another as specified and required by the CCSS. Standards are clearly identified and are used to organize the content of the LearnBop program. For example in grade 8 students are required to provide linear equations (8.EE.C.7a) and then solve linear equations (8.EE.C.8b-1). In High School Algebra, students are required to create one variable linear equations/inequalities (HSA-CED.A.1-1). This provides a natural progression from solving to creating linear equations, and then continues to progress towards creating multi-variable linear equations.	**__x__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1G:

Material include learning objectives that are visibly shaped by CCSSM cluster and domain headings.

How to Find the Evidence:

Select several clusters from the course being evaluated.

Evaluate teacher and student materials in relation to these clusters.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Evidence-

According to the table of co the content is broken down by grade level and then by concept (domain) bu not necessarily in order according to the CCSS. Obviously, the content can be organized and assigned in the order the teacher sees best fit. There seems to be a minor difference in the layout of the standards and content presented in the program. Not all of the standards in each conceptual categories are addressed with this program, specifically those standards marked with a (+) in the CCSS as necessary for higher level mathematics. Please see evidence (only a snapshot) taken from both the LEARNBOP Content Catalog and the CCSS for HS Algebra for comparison below:

Number of 'Bops'	LEARNBOP HS Algebra	CCSS HS Algebra
	HSA-APR.A Perform arithmetic operations on polynomials. (2)	**Perform arithmetic operations on polynomials**
24 Bops	Polynomial Computation Lin/Quad/Exp Students will be able to add, subtract, multiply polynomials (linear, quadratic, and exponential)	**1. Understand that polynomials form a system of analogous to the integers, namely, they are closed under operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials.**
16 Bops	Polynomial Computation Beyond Quadratic - Students will be able to add, subtract, and multiply polynomials (beyond quadratic)	
	HSA-APR.B Understand the relationship between zeros and factors of polynomials. (2)	**Understand the relationship between zeros and factors of polynomials**
5 Bops	Know/Apply the Remainder Theorem - students will be able to know and apply the Remainder Theorem	**2. Know and apply the remainder theorem: for a polynomial p(x) and a number a, the remainder on division by x-a is p(a) =0 if and only if (x-a) is a factor of p(x).**
15 Bops	Identify/Use Zeros of Polynomials - Students will identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomials	**3. Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function define by the polynomial.**
	HSA-APR.C Use polynomial identities to solve problems.	**Use polynomial identities to solve problems**
8 Bops	Use Polynomial Identities to Describe Numerical Relationships - students will be able to prove polynomial identities and use them to describe numerical relationships.	**4. Prove polynomial identities and use them to describe numerical relationships. For example, the polynomial identify $(x^2 + y^2)^2 = (x^2 - y^2)^2 + (2xy)^2$ can be used to generate Pythagorean triples.**
		5. (+) Know and apply the Binomial Theorem for the expansion of $(x + y)^n$ in powers of x and y for a positive integer n, where x and y are any numbers, with coefficients determined for example by Pascal's Triangle.

__x__Meets

____Does Not Meet Insufficient Evidence

Metric NN1H:

Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.

How to Find the Evidence:

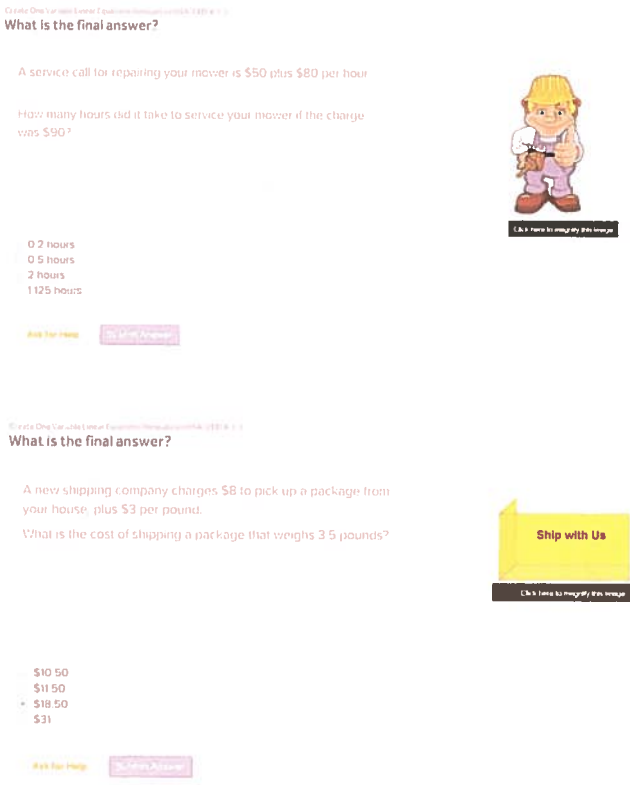
In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important.

Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation.

For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Evidence-

In the problems examined with A-CED and A-REI.11 standards and clusters, LEARNBOP connected both clusters by requiring the student to be able to write equations and then solve them in the given questions. Please see evidence below:



In the event that a student misses a question, the program will walk the student through each step of the problem to work towards answering the question correctly. Students are able to see each cluster and standard being addressed in each of the steps of the problem solving. See evidence below:

__x__Meets

____Does Not Meet Insufficient Evidence

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

____Meets

__x__Does Not Meet

Strengths/Weaknesses:

Strengths - Majority of time was spent working on widely applicable pre-requisites, problems were appropriate for high school algebra I, Geometry, and basic Algebra II, course content was based in the standards and have the ability to address multiple standards at once.

Weaknesses – Program does not meet all of the widely applicable pre-requisites (see NN1A), content is not accessible for ALL students, lacks ability to provide intrinsic accommodations for special populations (specifically students in Sp.Ed. or ELL), requires ALL students to be strong readers.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **__x__Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** According to the Content Cata e program highlights a number of the conceptual standards in the high school programs. The course content is broken down by domain. The following is an example of **A.REI.1 Explain each step in solving a simple equation as follows from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.** Justify each step in solving the following the equation $2x - 3 = \frac{1}{2}(x + 4)$ i. $4x - 6 = x + 4$ ii. $3x - 6 = 4$ iii. $3x = 10$ iv. $x = \frac{10}{3}$ Steps in Solving Equations i. (b); ii. (c); iii. (c); iv. (d) i. (a); ii. (b); iii. (c); iv. (d) i. (a); ii. (b); iii. (b); iv. (f) i. (d); ii. (b); iii. (b); iv. (f) When answered incorrectly, the program walks you through each step of the problem with assistance available (click hint). Words/phrases like justify, support, determine, analyze, which of the following is true, etc. are used in questions. If a student misses the question multiple times an instructional video appears (when available) to explain or provide similar examples and how to solve the problems.	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** The program does provide numerous attempts for students to practice and learn with conceptual problems, however, it is lacking conceptual discussion questions. The majority of the questions are presented in multiple choice format, and learners have the ability to be given hints if they are unsure of the answer or steps to find the answer. According to the website advertising the program, the following question formats are available: fill-in-the-blank, drag-and-drop, multi-select, shading, true/false, graph plotting, and sorting. However, discussion questions, short answer, or essay questions are not present. 	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** LearnBop does provides additional practice of understanding for students across mathematical representations, however the questions are not linked. Students are not able to connect multiple representations of concepts together, because one question appears at a time within the program. Below is an example of one question asking students to utilize a mathematical representation to find a solution. x y 1 -4 2 3 4 7 6 -1	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, **G-SRT.B.5** For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__x__Meets (2)** **__ __Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with the stude developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Learnbop provides students w e ability to practice skills and develop conceptual fluency. Procedural skills are int woven with questions aimed at conceptual understanding. The following question addresses CCSS G-SRT.B.5., and demonstrates procedural skill interwoven with conceptual understanding: Question 2  Students are expected to have a general conceptual understanding of similarity in order to accurately set up a proportional relationship to solve for the unknown side length of the given triangle. Question 2  Due to the set up of LearnBop's program, students get lots of practice on skills and skill building. The program does not offer instructional videos on every topic, therefore there is not really an introduction to all skills being assessed. This is intended for supplemental use rather than curriculum to teach new skills and lead instruction.	

Are purely procedural problems and exercises present that include ca[illegible]n which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x − 2)2 = 6x − 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 − 5).	**Evidence-** Learnbop provides purely proc[illegible]l problems and exercises which can be seen in Bops which require students to solve one step and multi-step equations within the Algebra domain.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, **A-REI.D.11**, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **_x___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Learnbop provides the student access to single and multi-step problems, although they are presented in single screen format. Students are able to access a larger number of practice problem, since this program is set up to be used as a component curriculum. Word problems are present and include multiple steps.	

Do applicating problems particularly stress applying the Widely Applicabl requisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Application problems stress ap the widely applicable prerequisites. In evaluating A.REI.D.11, the problems stress pplying the widely applicable prerequisites. Questions pertaining to this bop, focused on approximating system solutions by graphing. This required students to utilize their knowledge from many of the standards included in the widely-applicable pre-requisites including but not limited to: REI-B-3, REI-C-5,6,7.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Learnbop provides the opportunity for students to engage with modeling problems. In this particular standard within the widely acceptable prerequisites, students are expected to be able to connect the graph with the appropriate equation. Graph Multi-Variable Equations (Exp) HSA.CED.A.2 2a-Exp What is the final answer? Which of the following equations represents the graph if **the scale for the y-axis is 3**? A. $y = 3^x$ B. $y = 3x + 1$ C. $y = \frac{1}{3} \cdot 3^x$ D. $y = x^3$  Click here to magnify this image A B C D Ask for Help Submit Answer	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__x __Meets (5/6)** **__ __Does Not Meet** **Strengths/Weaknesses:** **Strengths** - Program provides single and multi-step conceptual problems, the widely applicable prerequisites are stressed with application problems, program provides students with ample opportunities to engage with modeling problems. **Weaknesses** - Due to nature of this program, students are required to answer questions in a variety of formats that does not include conceptual discussion questions.
Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** MP1 - Learnbop is set up in a [illegible]hat students are required to persevere in problem solving. Students are guided th[illegible]gh BOPS and practice problems. When students answer incorrectly, they are guided step by step through the problem and provided ample opportunities for understanding and problem solving. MP2 - Students are expected to be able to reason abstractly and quantitatively. MP3 - Students are expected to answer questions correctly and meet the requirements of the mastery threshhold, however, students are to work independently. Therefore they are unable to really delve into this practice standard. MP4 - Modeling is available in particular questions throughout the program. Students are required to utilize the tools provided within each question, which is often a visual representation that they must interpret in order to solve the problem accurately. MP5 - Students are provided with the tools required to solve each individual question. Graphs, charts, tables, and other visual representations are given to the student with the question they may pertain to. Students are not required to think strategically of the tools that they should use, because the tool is provided for them as it is embedded in each question's screen. MP6 - Accuracy of the solutions does require an awareness and precision. Questions that require students to input answers using numbers, letter, equations, or formulas require students to be precise. For example, an answer was 30.27, but the only answer approved by the system was 30.3 - precision in rounding was necessary in order for the student to answer the question correctly and be able to count that Bop for mastery. MP7- Students are expected to look for and make use of structure. LearnBop provides students with the ability to practice skills with repetition of similar questions. MP8-With the repetitive nature of the Bops and questions, students are able to look for repeated reasoning.	**____Meets (2)** **__x__Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **____Meets (2)** **__x__Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Although the majority of mathematical practice standards are addressed utilizing this program, not all of the standards are presented. Students are not given the opportunity to critique the reasoning of others since it is primarily an independent program. Students also are given the tools they need to complete each bop and questions, they are not required to use appropriate tool strategically since they are embedded within the question. Mathematical practices are not identified clearly for teachers, nor are they used consistently throughout the program.	

Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** Teacher log in's do provide access to the course content as well as the ability to assign content, assessments, and interventions. The course content does align with the core standards, and LearnBop has made the alignment very visible to students and teachers. Practice standards were not clearly identified, however, it was evident that some of them were being addressed throughout the program.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **____Meets (2)** **____Partially Meets (1)** **__x__Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Learnbop is set up as an individual student program. It is constructed to be done independently, therefore students are not given the opportunity to critique the arguments of others.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Students are expected to complete questions by producing answers and solutions, which are presented in a variety of formats. Formats include but are not limited to: multiple choice, true/false, select all that apply, graphing, and matching. These do include some mathematical modeling through the use of graphs, charts, and diagrams. Students are not required to give arguments or explanations to defend or explain their mathematical reasoning.	

Do materials explicitly attend to the specialized language of mathematics, the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Since this is a supplemental program, the language is not taught but expected (at least for the majority) to be known. There are instructional videos which support learning, however do not necessarily teach new concepts or mathematical terminology.	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**____Meets** **__x__Does Not Meet (2/6)** **Strengths/Weaknesses:** **Strengths** – A majority of the mathematical practice standards are being presented. **Weaknesses** - Not all of the math practice standards are being covered, Students are not given the opportunity to critique other students work due to the independent nature of this program, students are expected to produce answers and solutions because this is not necessarily an interactive program where the student is engaging with peers or a teacher, program is intended for students to have a good grasp on the skills being covered - new language/concept is not being taught

Alignment Criterion 3: **Access the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Interventions are available at all grade levels. The program provides visual representations of mathematics when appropriate, and the tools necessary to solve the problems are embedded in the question screen. Visuals are grade level appropriate and can be useful in solving the problems. Instructional videos are available for some of the standards and questions; however, not all contain instructional videos. Instructional videos contain audio and visual. Bops do not contain an audio component; therefore students are required to have strong reading skills. Therefore special populations (i.e. ELL and Special Education) who require audio accommodations to fulfill federally mandated modifications/accommodations would not be able to access this curriculum without a human reader. There are no teacher materials regarding supports for diverse learners.	**____Meets (2)** **_x___Partially Meets (1)** **____Does Not Meet (0)**

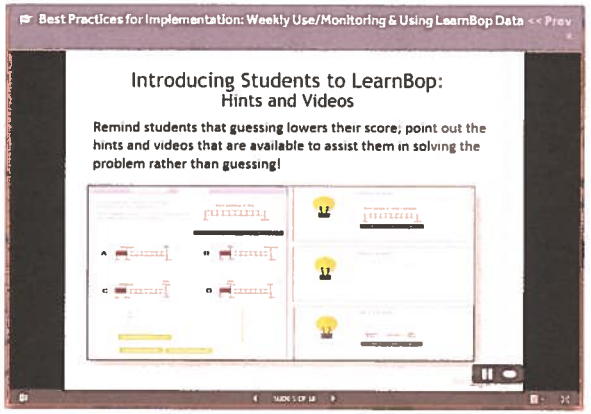
AC Metric 3B:

Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.

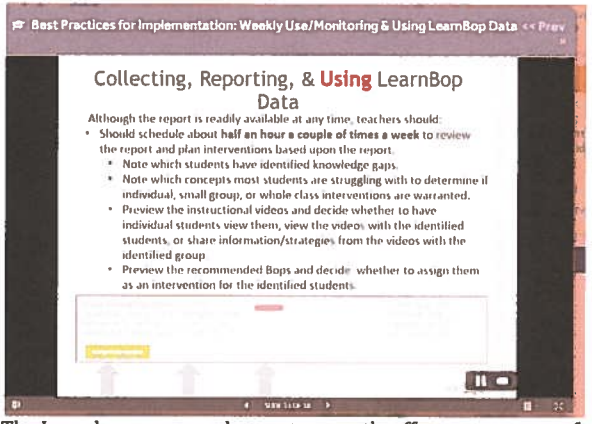
How to Find the Evidence:

Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.

Evidence- Interventions are available for students who are not making adequate progress. Teachers can utilize the intervention tab within the dashboard to identify students who are having difficulty and have gaps that need remediation. Students are able to access optional hints and instructional videos to provide support for content they are not as comfortable with - this is optional and is dependent upon student initiation. LearnBop does contain instructional videos, however, they are not present for every standard.



Interventions can be assigned by the classroom teachers after careful analysis of the data. The program automatically identifies missing prerequisites, so it will recommend interventions - but they must be assigned by the teacher. Interventions are recommended when a student has made at least 3 attempts on the concept and has not shown improvement or the student has not mastered the concept by the assigned due date.



The Learnbop program does not currently offer any resources for non-English speaking students other than what is available for all students. The instructional videos do offer audio, however, there is not an overall audio component, which could impact students in special education who may utilize this program.

Students in TAG programs could benefit from the individualized nature of the program.

____Meets (2)

__x__Partially Meets (1)

____Does Not Meet (0)

AC Metric 3C: **Design lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The program provides instructional videos and bops in question answer formats. This does not facilitate a variety of instructional approaches for a variety of learners.	**____Meets (2)** **____Partially Meets (1)** **_x___Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**____Meets** **_x___Does Not Meet (2/6)** **Strengths/Weaknesses:** Strengths: Interventions are available as assigned by the teacher or automatically assigned by the program when deficits are apparent through the assessments and Bops. Instructional videos are available for certain standards and provide instructional support for remediation. Independent nature of the program provides highly motivated students access to individualized curriculum. Classrooms can be set up to have entire class assignments or provide students with more individualized assignments to meet their individual needs. Weaknesses: Program does not provide a variety of instructional approaches for a variety of learners. LearnBop provides minimal audio components to accommodate special populations with reading deficits.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add

to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons are structured based on the organization of the CCSS unless a teacher assigns them differently. Students work independently through the coursework as the teacher assigns, which gives the teacher a snapshot of student understanding and could be used as a formative assessment tool. Students can be actively involved in their own learning as the program requires independent student work. Teachers could assign BOPS to groups to assess learning, but students would be required to complete the BOP under one, individual student's log in. It would be the teacher's responsibility to incorporate LearnBop into group work, as the intention of Learnbop is to be primarily independent. Therefore, students would not naturally be participating actively in the learning of their classmates.	(Reviewer only.) _____ Yes ___ ___ No ?
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-**The majority of the questions are exercises where students are practicing what they have already learned in order to build mastery. As the focus is supplemental, students should be taught the content using the primary source of curriculum, and this should be used to reinforce the learning.	(Reviewer only.) _____ Yes __x____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Assignments and exercises can follow the CCSS in an order appropriate for the grade and content, unless the teacher assigns them differently. Within the content catalog, some of the clusters are rearranged, but are still presented within the content. Again, teachers can assign the materials as they see best fit for the student's needs and abilities.	(Reviewer only.) __x____ Yes _____ No

4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Teachers are given log ins which provide access to the online program which gives access to classes, content catalogs, the ability to assign interventions, course content, bops for particular standards, help screens and reports. LearnBop does not provide a teacher's guide for instruction. The website is user-friendly, however it not intended to be used as the main form of instruction, but merely as a component. LearnBop provides an implementation guide, which provides resources for teachers in the areas of: the basics, class management, implementation best practices. The program does not provide specific guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	(Reviewer only.) _____ Yes __x____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** No manipulatives are suggested in this program that are not provided in electronic format with the question that it pertains to. All graphs, charts, and diagrams are embedded in the program.	(Reviewer only.) ___x___ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** There are pre-assessments available but only for the younger grades. Custom assessments can be created for high school content. Teachers can customize the threshold at which assignments based off of the assessments are created, for example - the default threshold of 80% means students with a score of less than 80% on a concept will be given an assignment to help them learn it. According to the evaluation done by the publisher, LearnBop has the capability of "assigning Comprehensive Assessments that were created by a team of Math education experts, these assessments will allow you to assess your students based on your grade level," however in the sample log in provided, we were unable to locate these pre-made assessments. Formative assessments are included within the BOPS, if a student misses the question multiple times, it requires them to break down the question into multiple steps. Learnbop provides hints and the ability to watch the instructional video provided to reteach the concept or content. There are not self-assessment resources available in this program.	(Reviewer only.) __x____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Assessments can be created by the teacher to incorporate clusters and standards as he/she may feel would be best suited for the class and content they were studying. Answer keys and scoring guidelines for the assessments were unable to be located within the program. Assessments are scored automatically by the system. Teachers are able to see individual students' progress and how successful they were on each assignment, bop, and assessment, and assign interventions as necessary.	(Reviewer only.) ___x___ Yes _____ No

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** There are assessments included in the program. Below are the questions from the assessment for standard Questions in HSG-C.A.2-1. The assessment gives a variety of questions from various difficulty levels (this assessment contains 3 questions one from each difficulty level: easy, medium, hard). Language is easy to understand and mathematically focused. This may pose some difficulty to students who are ELL or Sp.ed. who have difficulty reading, since there is not an audio component. The LearnBop program does assess student proficiency, however, it does not use methods that are accessible to all students. 	**(Reviewer only.)** _____ **Yes** ___x___ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** None are listed. Customer support is available via email through the Learn Bop program for both teacher and student. The evaluation completed by the publisher lists a qualified individual who oversees assignments of authors and grade level content, however, we could not locate this within the program or website.	**(Reviewer only.)** _____ **Yes** __x____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Graphics are included and some may be a bit elementary for High School students. Navigation through the program is easy and user-friendly. Questions that involve graphics have them available and are able to enlarge if needed.	**(Reviewer only.)** ___x___ **Yes** _____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** LearnBOP/Fuel Education Grades 9-12

Publisher: LearnBop **Copyright:** NA **ISBN:** NA

Reviewer ID # ___JT_____ **Date Review Completed:** ___2016_____

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.		
Non- Negotiable 1: Focus and Coherence _____ **Meets** __x___ **Does Not Meet**		
Non-Negotiable Overall: _____ **Meets** __x___ **Does Not Meet**		
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.		
Alignment Criterion 1: Rigor and Balance **Points: __5___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** _____ **Meets** ___x____ **Does Not Meet**	**Alignment Criterion 2: Standards of Mathematical Practice** **Points: __2___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** _____ **Meets** ___x____ **Does Not Meet**	**Alignment Criterion 3: Access to Standards for All Learners** **Points: ___2__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** _____ **Meets** ___x____ **Does Not Meet**
Alignment Criteria Overall: _____ **Meets** ___x__ **Does Not Meet**		

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co Standards. **Do the materials meet every Non-Negoti e and Alignment Criterion? _____ Yes __x___ N**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths – Majority of time was spent working on widely applicable pre-requisites, problems were appropriate for high school algebra I, Geometry, and basic Algebra II, course content was based in the standards and have the ability to address multiple standards at once. A majority of the mathematical practice standards are being presented. Interventions are available as assigned by the teacher or automatically assigned by the program when deficits are apparent through the assessments and Bops. Instructional videos are available for certain standards and provide instructional support for remediation. Independent nature of the program provides highly motivated students access to individualized curriculum. Classrooms can be set up to have entire class assignments or provide students with more individualized assignments to meet their individual needs.

Weaknesses – Program does not meet all of the widely applicable pre-requisites (see NN1A), content is not accessible for ALL students, lacks ability to provide intrinsic accommodations for special populations (specifically students in Sp.Ed. or ELL), requires ALL students to be strong readers. Not all of the math practice standards are being covered, Students are not given the opportunity to critique other students work due to the independent nature of this program, students are expected to produce answers and solutions because this is not necessarily an interactive program where the student is engaging with peers or a teacher, program is intended for students to have a good grasp on the skills being covered - new language/concept is not being taught. Program does not provide a variety of instructional approaches for a variety of learners. LearnBop provides minimal audio components to accommodate special populations with reading deficits.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	The Math Learning Center
Title:	Bridges in Math - Kindergarten
ISBN #	978-1-60262-508-2
Grade Level(s) or Course:	Kindergarten
Reviewer ID:	~~KJ~~ RO

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

__X__**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

__X__ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Assessment of Standards above the major work of kindergarten.

COHERENCE-

No cluster headings on lessons.

RIGOR-

Curriculum provided a rigorous expectation of students

CONCEPTUAL UNDERSTANDING-

Curriculum provides a variety of conceptual processes for students

MATHEMATICAL PRACTICES-

Does not provide consistent authentic connections between standards and practices.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

There is not ELL and special population support on ALL lessons in ALL units. They are lacking and difficult to find.

OTHER:

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: The Math Learning Center

Title of Material: Bridges in Mathematics 2nd Ed. Kindergarten

Author: Matassa, Rubini, Robert, and Ruttle

Reviewer ID: KS

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Curriculum does not assess the listed topics before grade level. HOWEVER: ***Curriculum assesses patterning in Unit 1 Work Places 1A; Assessment guide page 5. Curriculum states it "supports standard K.OA;" however this is outside the standards and inaccurate.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	Most of the curriculum has lessons related to the major works of Kindergarten. The rest of the lessons focus on supporting standards. Some Sessions under Skills & Concepts list skills as "supporting" a standard although the standard is not the focus. Example: • Unit 1 Module 4 Session 1, Skills & Concepts: Describe, copy, extend, and create simple repetitive patterns with up to 3 elements (ABAB, AABAAB, ABCABC, ABBCABBC and so on) (supports 1.OA)	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting W[illegible]x, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials have Sessi[illegible]where the focus is a combination of Supporting Work and Major Work of the grade simultaneously. Examples: • Unit 8 Module 2 Session 1: Frog Jump Measuring (Major Work: K.CC.1, K.CC.6) (Supporting Work: K.MD.2)	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Curriculum provides a Skills Across the Grade Levels page at the start of every unit. It lists the Major Skills/Concepts taught in the Unit for Kindergarten and the supporting standards from Kindergarten and the continued Standards in Grade 1. It is hard to read as it is, and it would be nice if each standard progression was shown across the grades instead of just listed.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Materials provide work with problems that are on-grade-level. Differentiated Learning provided on most lessons for challenge students, ELL students, and students who need support. However, support is not provided for ALL learners on ALL lessons. A Differentiation chart can be found in the overview for every Unit detailing what support is offered for each Module and Session. **Number Corner MUST be implemented to meet NN2D.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Curriculum provides a Skills Across the Grade Levels page at the start of every unit. It lists the Major Skills/Concepts taught in the Unit for Kindergarten and the supporting standards from Kindergarten and the continued Standards in Grade 1. It is hard to read as it is, and it would be nice if each standard progression was shown across the grades instead of just listed. **Evidence-**	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Each Session lists the Skills & Concepts for the Session.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Learning objectives are not clearly stated within the Curriculum. A table of contents is outlined on the first page of the overview for each Unit. It outlines the main idea for each Module and lists the title of each Session. CCSSM cluster headings are not identified or listed in correlation to each Unit Module and Session. Each Session has a Summary that provides an overview of the lesson, but specific, direct, visible learning objectives are not stated.	**(Reviewer only.)** **_X_ Meets** **_ __Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Materials adequately connect two or more clusters in a domain or two or more domains in Grade One.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **X Meets** **__ Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

____Meets (2)

_X__Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set ex expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Cluster headings were evident within the Modules and Sessions.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Curriculum provides high-quality conceptual problems and discussion questions.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Curriculum provides many opportunities to identify correspondences across mathematical representations.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Procedural skills and fl cy skills are combined throughout the curriculum.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** A variety of problems can be found throughout the Bridges Curriculum and Number Corner. Strategies with tools can be found throughout the curriculum as well as some practice exercises.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Multiple strategies are provided for students to work with addition and subtraction fluency through 5. Although many strategies are taught to the students, there are not as many opportunities for the students to practice the strategies with pencil and paper.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Curriculum works sufficiently with the major work of Kindergarten.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are single and multi-step problems throughout the curriculum.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Curriculum works with application of the standards.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling builds through the Kindergarten curriculum.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Cluster headings are not evident. Written practice should be more evident.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

The Assessment guide provides a section on Assessing the Math Practices (Assessment Guide, Assessment Overview pages 15-22). This resource provides examples o how the Mathematical Practices may be applies by students and what the teacher can look for.

There is no further mention of the Mathematical Practices within the overviews of each Unit or Module. Practices are listed under the Skills and Concepts of each Session, but they are explicitly mentioned/taught within every Session to help guide the teacher.

(Reviewer only.)

____Meets (2)

_X__Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials att[illegible] to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each que[illegible] and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** A detailed plan of how the mathematical practices are met throughout the curriculum is not provided. There is evidence of assessment of the practice standards in the Assessment Guide, but how they are meaningfully taught throughout the curriculum is difficult to determine.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** No evidence is shown within the curriculum providing evidence of how the practice standards develop across grades within the curriculum. Each Session has mathematical practices listed on the Skills & Concepts part of the overview, but not every Session has a Math Practices in Action listed in the margin with teacher focus ideas.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Mathematical Practices are only located in the Assessment Guide for teachers to review. The Assessment Guide provides a section on Assessing the Math Practices (Assessment Guide, Assessment Overview pages 17-24). This resource provides examples of how the Mathematical Practices may be applied by students and what the teacher can look for. This does not provide an in depth explanation of how the practices should be developed within each Unit. Mathematical Practices may be listed on the Skills & Concepts of the Session overview, but are not always identified specifically within the lesson.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Curriculum lists Mathematical Practice 3 as part of the Skill & Concepts, does not always provide the evidence or really ensure students are provided with opportunities to reason with grade level mathematics.	**_X__Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Curriculum supports students in producing grade-appropriate ways to work with a problem to find viable solutions. Diagrams, models, and explanations are used throughout the entire curriculum.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Math Vocabulary is provided on the first page of the Session if there is new vocabulary for the students to learn. A definition is not provided within the lesson, but a reference to the Word Resource Cards is made. These did not come with the materials received, but can be found to print online. Mathematical Practices (if there are any within the Session) can be found in the margin of the Session.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

_X__Does Not Meet

Strengths/Weaknesses:

Mathematical Practices are not consistent across units and modules and sessions.

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Materials do not provide an overview of intervention or differentiations for any student population within the Teachers Guide. Any intervention or differentiation strategies must be looked for within the Unit Module Sessions and not every Session has intervention or differentiation support.	**Reviewer only.)** **____Meets (2)** **____Partially Meets (1)** **_X__Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Materials do not provide an overview of intervention or differentiations for any student population within the Teachers Guide. Any intervention or differentiation strategies must be looked for within the Unit Module Sessions and not every Session has intervention or differentiation support. Some information on differentiation and intervention can be found in the Assessment Guide on pages27-32; but this is just a generic overview. In the Bridges Unit Assessment, support and intervention can be found at the start of the Assessments for each Unit, it is not specific to Modules or Sessions however. There is a note on the top of page 3 of the Bridges Unit Assessments stating that the Bridges Intervention volumes include re-teaching and practice activities and games. This would need to be purchased to provide more comprehensive intervention and differentiation strategies/support.	**Reviewer only.)** **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Teacher directed activities for Sessions called Problems & Investigations. These activities provide a teacher directed lesson and then move to Work Place activities. Work Places provides opportunities for students to work with partners/small group; it's hard to determine how long the Work Places stay the same, when they change, with what frequency, etc. Differentiation is not provided for every Session within the Teachers Guide.	**Reviewer only.)** **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating.**		**(Reviewer only.)** **____Meets** **_X__Does Not Meet** **Strengths/Weaknesses:** Curriculum provides many instructional approaches for student; with opportunities for whole group, small group, and peer learning. Instructional support for ALL learners is not provided for EVERY lesson. Instructional support, differentiation and ELL support are not explicitly provided for all situations.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**

1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Curriculum provides a step by step sequence to each Session. Leaves little room for deviation or student inquiry. Math vocabulary seems like an afterthought, no direct definition is given to students. Lessons seem to underestimate the ability/credibility of the teacher and give them word for word instructions to follow. It is hard to know where to find all the materials for the lesson, some of it will be in the Teacher Materials, some in the Student Book, Home Connect, and Assessment Guide. Teacher must have the ability to make many copies as everything is only a blackline in the Unit Module Binders.	**(Reviewer only.)** _____ **Yes** __X__ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Curriculum does not have both problems and exercises. Curriculum is lacking problems that encourage deeper thinking by students, problems that ask students to prove their work or explain how they came to their answer. There is a large amount of time spent on Work Places (individual work) games that provide some practice exercises.	**(Reviewer only.)** _____ **Yes** __X__ **No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Curriculum seems to be disjointed and lacking a flow from one Session to the next. Example: • Unit 1 Module 1: Focus is classroom routines • Unit 1 Module 2: Focus is 5-frames • Unit 1 Module 3: Focus is 10-frames • Unit 1 Module 4: Focus is patterning The overview of each module does not provide Common Core Standards or Mathematical Practices covered in the Sessions.	**(Reviewer only.)** _____ **Yes** __X__ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Each unit is provided with a brief overview of the Modules and an outline of the Sessions for each Module. Mathematical Background, Teaching Tips, Skills Across Grade Levels, Assessments and Differentiation information is provide.	**(Reviewer only.)** __X__ **Yes** _____ **No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** The materials kits would need to be purchased to fully implement this program. Many of the Sessions require manipulatives that teachers may not have access to in their classrooms.	**(Reviewer only.)** __X___ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Materials provide observation assessments and assessments are listed in the Module Sessions, but you have to go searching for the assessment in the Assessment Guide binder.	**(Reviewer only.)** _X___ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Materials do not provide answer keys for checkpoints in the Unit Module, it usually will be found in the Assessment Guide, Bridges Unit Assessments, in the corresponding Unit, Module, Session. Rubrics and answer keys provide good scoring guidelines but do not provide differentiation lessons to provide for struggling students.	**(Reviewer only.)** _X____ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessments (Checkpoints) are outlined within Unit Modules. • Unit 1 Module 2 Session 5: Teacher Materials T6; Assessment spreadsheet provided. • Unit 6 Module 2 Session 4: Assessment listed but materials must be found in the Assessment Guide page 65 of Bridges Unit Assessments. Assessments are unbiased and follow the language of the materials.	**(Reviewer only.)** __X___ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** There are multiple author, contributing authors, editors, advisors, etc. listed on the Credits and Acknowledgment page of Unit 1. Materials do not list support from the National Science Foundation or any other accreditation.	**(Reviewer only.)** __X___ **Yes** _____ **No**

10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The visual design of the materials is not engaging for students. There is no color to any activities, the few graphics are boring and lack visual appeal to Kindergarten students. There are no student workbook pages until Unit 6, teacher must make copies of all Teach Master, Student Workbook, and Home Connection pages. Some pages have too much text, not age appropriate, too many pictures/drawings and not enough practice. Examples: • Unit 7 Module 4 Session 3; Teacher Master has directions that are not student friendly, practice is short and above grade level standards. Outline for each Module of a Unit is stated on the first page of each Module. Each Module has Sessions (lessons) for each day of the Module. An overview of the Module Sessions is included at that start of each Module. Sessions (Lessons) are hard to read and understand the flow of the lessons there are not estimated times for sessions. Each session does not have support for all learners.	**(Reviewer only.)** **_____ Yes** **__X___ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Homework can be found in the Home Connections tab of each Module of every Unit. There are no letters to parents to inform them of the concepts and processes for mathematics that are being taught within the Teacher's Guide; Family Letters can only be found online. There is an assumption of supplies that will be available in the home to complete the Home Connection homework. Examples: • Unit 2 Module 3 Session 3 Home Connection; Assumption is made that students will have access to toothpicks to complete homework. • Unit 7 Module 3 Session 2 Home Connection; Assumption is made that students will have access to measuring cups and various containers pictured on page 189.	**(Reviewer only.)** **_X____ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level:** Bridges in Mathematics - Kindergarten

Publisher: The Math Learning Center **Copyright: 2016** **ISBN:** 978-1-60260-508-2

Reviewer ID # ___KJ_____RO_____ **Date Review Completed:** March 8, 2016

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus __X___ **Meets** _____ **Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** _ X_ **Meets** _ **Does Not Meet**
Non-Negotiable Overall: __X__ **Meets** _ ___ **Does Not Meet**	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __5__ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **__X___ Meets** **_____ Does Not Meet**	**Points: _3___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **_____ Meets** **___X___ Does Not Meet**	**Points: _2___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **_____ Meets** **__X____ Does Not Meet**

Alignment Criteria Overall:

_____ Meets **__X__ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes __X__ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strength:

Curriculum has a consistent format and many learning through play activities.

Weakness:

Curriculum is hard to navigate and not teacher friendly. On-line materials are difficult to navigate, not hyperlinks to units, modules, sessions, etc.

Lots of teacher prep for workplaces and lot of copying (teacher will need a large copy budget just for math curriculum).

Differentiation for ELL, Support and Challenge are evident, but difficult to find and provide very weak and minimal support.

Cluster heading objectives are not visible throughout each lesson, module, or unit.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	The Math Learning Center
Title:	Bridges in Mathematics Second Edition 1st grade
ISBN #	978-1-60262-332-3
Grade Level(s) or Course:	Frykholm, Fisher, Mattasa, and Roberts
Reviewer ID:	KS 20

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

___X___**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

___X___ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Assessment of standards above the major work of Grade 1.

COHERENCE-

No cluster headings on lessons.

RIGOR-

Curriculum provided a rigiorns expectation of students.

CONCEPTUAL UNDERSTANDING-

Curriculum provides a variety of conceptual processes for students to use.

MATHEMATICAL PRACTICES-

Does not provide consistent authentic connections between standards and practices.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

There is not ELL and Special population support on ALL lessons in ALL units.

OTHER: Lacking and difficult to find.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric.NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	Curriculum does not assess the listed topics before grade level. HOWEVER: Materials include assessments that should not be assessed in Grade 1 • Unit 8 Module 2 Session 4 Checkpoint Question #3: Assessment includes addition of three whole numbers greater than 20. Grade 1 Standard (1.OA.2): Solve word problems that call for addition of three whole numbers whose sum is less than or equal to 20. • Unit 7 Module 3 Session 5 Assessment Question #1: Scoring Guide states: Identifies and records the value of points on a number line given visual and number clues; Materials relate it to Standard 1.NBT.1. Common Core State Standard 1.NBT.1 reads as: Count to 120, starting at any number less than 120. In this range, read and write numerals and represent a number of objects with a written numeral.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Each Unit Module has various assessments that do meet the major work of Grade 1; however there are assessments that assess standards above the major works of Grade 1.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:
Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric.NN2A: **In each grade 1–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	Curriculum has roughly 78% of lessons related to the four major works of Grade 1. The rest of the lessons focus on supporting standards. Four of the eight units focus on Major Cluster Operations and Algebraic Thinking; Two units focus on Major Cluster Number and Operations in Base Ten; One unit focuses on additional cluster Geometry; Two Modules of one unit are spent on Major Cluster Measure lengths indirectly and by iterating length units, the other two Modules focus on additional and supporting standards. Some Sessions under Skills & Concepts list skills as "supporting" a standard although the standard is not the focus. Example: • Unit 4 Module 2 Session 2, Skills & Concepts: Recognize and extend number patterns (supports 1.OA) 1.OA.1-2: Represent and solve problems involving addition and subtraction, 1.OA3-4: Understand and apply properties of operations and the relationship between addition and subtraction, 1.OA.5-6: Add and subtract within 20, 1.OA.7-8: Work with addition and subtraction equations. • Unit 7 Module Session 5, Skills & Concepts: Count by 5's and 10's to 100 (supports 1.NBT) 1.NTB.1: Extend the counting sequence, 1.NBT.2-3: Understand place value, 1.NBT.4-6: Use place value understanding and properties of operations to add and subtract.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials have Sessions where the focus is a combination of Supporting Work and Major Work of the grade simultaneously. Examples: • Unit 6 Module 4 Session 1: Graphing penguins (Major Work: 1.MD.2) and Compare the data (Supporting Work: 1.MD.4)	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Curriculum provides a Skills Across the Grade Levels page at the start of every unit. It lists the Major Skills/Concepts taught in the Unit for Grade 1 and the supporting standards from Kindergarten and the continued Standards in Grade 2. It is hard to read as it is, and it would be nice if each standard progression was shown across the grades instead of just listed. **Evidence-** • Unit 1 Introduction page v • Unit 2 Introduction page vi-vii • Unit 3 Introduction page iv-v • Unit 4 Introduction page iv-v • Unit 5 Introduction page ix • Unit 6 Introduction page v • Unit 7 Introduction page vi • Unit 8 Introduction page x	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Materials provide work with problems that are on-grade-level. Differentiated L[illegible]ning provided on most lessons for challenge students, ELL students, and students who need support. However, support is not provided for ALL learners on ALL lessons. A Differentiation chart can be found in the overview for every Unit detailing what support is offered for each Module and Session. **Evidence-** • Unit 4 page vi: Differentiation chart for the unit. • Unit 4 Module 2 Session 5: TG pages 23-28 & TM pages T4-T6 provide examples of on-grade-level problems. **Number Corner MUST be implemented to meet NN2D.	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Curriculum provides a Skills Across the Grade Levels page at the start of every unit. It lists the Major Skills/Concepts taught in the Unit for Grade 1 and the supporting standards from Kindergarten. **Evidence-** • Unit 1 Introduction page v • Unit 2 Introduction page vi-vii • Unit 3 Introduction page iv-v • Unit 4 Introduction page iv-v • Unit 5 Introduction page ix • Unit 6 Introduction page v • Unit 7 Introduction page vi • Unit 8 Introduction page x	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Each Session lists the Skills & Concepts for the Session and include review of previous grades standards. **Evidence-** • Unit 1 Module 2 Session 1: Skills & Concepts Review of K.CC.4a and K.CC.5 • Unit 1 Module 2 Session 3: Skills & Concepts Review of K.CC while working on Grade 1 standard 1.OA.6	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Learning objectives are not clearly stated within the Curriculum. A table of contents is outlined on the first page of the overview for each Unit. It outlines the main idea for each Module and lists the title of each Session. CCSSM cluster headings are not identified or listed in correlation to each Unit Module and Session. Each Session has a Summary that provides an overview of the lesson, but specific, direct, visible learning objectives are not stated. **Evidence-** • Unit 6 Overview: Module 1: Story Problems for Basic Addition & Subtraction; Module 2: Combinations & Story Problems; Module 3: Solving for the Unknown in Penguin Stories; Module 4: Measuring & Comparing Emperor & Little Blue Penguins. • Unit 7 Module 3 Session 1: Summary: "This session and next, students bring a bit of comfort and civilization their forest paths by adding fence sections, benches, and potted plants. Fence sections come in lengths of 10 steps benches in lengths of 5 steps, and flowerpots in lengths of 1 step. After the teacher introduces the idea, students work in pairs to find different combinations of these items that total 10 steps."	**(Reviewer only.)** **_X_ Meets** **_____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Materials adequately connect two or more clusters in a domain or two or more domains in Grade One. **Evidence-** • Unit 7 Module 3 Session 2: Combines the following standards: 1.OA.1-3, 1.OA.6, and 1.MD.2. • Unit 6 Module 1 Session 2: Combines the following standards: 1.OA.1, 1.OA.5-8, and 1.NBT.2b • Unit 4 Module 2 Session 2: Combines the following standards: 1.NBT.1 and 1.MD.4	**(Reviewer only.)** **_X_ Meets** **_____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

es Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Cluster headings were not evident within the Modules and Sessions.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Curriculum provides high-quality conceptual problems and discussion questions. • Unit 8 Module 1 Session 1 page 4	

Do the materials feature opportunities to identify correspondences across mathem representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Curriculum provides m opportunities to identify correspondences across mathematical representations. • Unit 8 Module 3 Session 3: Building Gliders.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Procedural skills and fluency skills are combined throughout the curriculum.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** A variety of problems can be found throughout the Bridges Curriculum and Number Corner. Strategies with tools can be found throughout the curriculum as well as some practice exercises.	

Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Multiple strategies are provided for students to work with addition and subtraction fluency through 10. Although many strategies are taught to the students, there are not as many opportunities for the students to practice the strategies with pencil and paper.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Curriculum works sufficiently with the major work of grade 1.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are single and multi-step problems throughout the curriculum.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Curriculum works with application of the standards.	

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling builds throughout the Grade 1 curriculum. • Unit 1: Students are using tools to work with numbers through 10. • Unit 2: Students begin to write equations and use tools to work with numbers through 10.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X__Meets

____Does Not Meet

Strengths/Weaknesses:

Curriculum cluster headings are not evident. Written practice should be more evident.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

• Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)

• Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

• Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)

• From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** The Assessment Guide provides a section on Assessing the Math Practices (Assessment Guide, Assessment Overview pages 17-24). This resource provides examples of how the Mathematical Practices may be applied by student and what the teacher can look for. There is no further mention of the Mathematical Practices within the overviews of each Unit or Module. Practices are listed under the Skills and Concepts of each Session, but they are explicitly mentioned/taught within every Session to help guide the teacher. Examples: • Unit 1 Module 2 Session 3: Math Practices in Action MP.7 on page 13 • Unit 5 Module 1 Session 5: MP.1 and MP.7 are listed in the Skills and Concepts of the Session but nowhere else.	**(Reviewer only.)** **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** A detailed plan of how the mathematical practices are met throughout the curriculum is not provided. There is evidence of assessment of the practice standards in the Assessment Guide, but how they are meaningfully taught throughout the curriculum is difficult to determine.	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** No evidence is shown in the curriculum providing evidence of how the practice standards develop across grades within the curriculum. Each Session has mathematical practices listed on the Skills & Concepts part of the overview, but not every Session has a Math Practices in Action listed in the margin with teacher focus ideas. • Unit 1 Module 2 Session 3: MP.7 on page 13 • Unit 1 Module 2 Session 5: No Mathematical Practices specifically referenced within the Session although MP.5 & MP.7 are listed on the Skills & Concepts.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Mathematical Practices are only located in the Assessment Guide for teachers to review. The Assessment Guide provides a section on Assessing the Math Practices (Assessment Guide, Assessment Overview pages 17-24). This resource provides examples of how the Mathematical Practices may be applied by student and what the teacher can look for. This does not provide an in depth explanation of how the practices should be developed within each Unit. Mathematical Practices may be listed on the Skills & Concepts of the Session overview, but are not always identified specifically within the lesson. • Unit 1 Module 2 Session 3: MP.7 on page 13 • Unit 1 Module 2 Session 5: No Mathematical Practices specifically referenced within the Session although MP.5 & MP.7 are listed on the Skills & Concepts.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Curriculum lists Mathematical Practice 3 as part of the Skill & Concepts, does not always provide the evidence or really ensure students are provided with opportunities to reason with grade level mathematics.	

Do the materials support students in producing not only answers and solutions, but also in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Curriculum supports students in producing grade-appropriate ways to work with a problem to find viable solutions. Diagrams, models, and explanations are used throughout the entire curriculum.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Math Vocabulary is provided on the first page of the Session if there is new vocabulary for the students to learn. A definition is not provided within the lesson, but a reference to the Word Resource Cards is made. These did not come with the materials received, but can be found to print online. • Unit 5 Module 4 Session 1: Vocabulary is listed on page 3, however a specific definition is not given within the lesson. Mathematical Practices (if there are any within the Session) can be found in the margin of the Session. • Unit 1 Module 2 Session 3: MP.7 on page 13 • Unit 1 Module 2 Session 5: No Mathematical Practices specifically referenced within the Session although MP.5 & MP.7 are listed on the Skills & Concepts.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

_X__Does Not Meet

Strengths/Weaknesses:

Mathematical Practices are not consistent across Units, Modules and Sessions.

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as M[illegible]r Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Materials do not provide an overview of intervention or differentiations for any student population within the Teachers Guide. Any intervention or differentiation strategies must be looked for within the Unit Module Sessions and not every Session has intervention or differentiation support. • Unit 8 Module 1 Sessions 1-4: No strategies for differentiation, intervention or ELL students • Unit 1 Module 2 Sessions 1-3: Challenge and support intervention questions/strategies are provided; No ELL support strategies given.	**Reviewer only.)** **____Meets (2)** **____Partially Meets (1)** **_X__Does Not Meet (0)**

Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Materials do not provide an overview of intervention or differentiations for any student population within the Teachers Guide. Any intervention or differentiation strategies must be looked for within the Unit Module Sessions and not every Session has intervention or differentiation support. • Unit 8 Module 1 Sessions 1-4: No strategies for differentiation, intervention or ELL students • Unit 1 Module 2 Sessions 1-3: Challenge and support intervention questions/strategies are provided; No ELL support strategies given. Some information on differentiation and intervention can be found in the Assessment Guide on pages27-32; but this is just a generic overview. In the Bridges Unit Assessment, support and intervention can be found at the start of the Assessments for each Unit, it is not specific to Modules or Sessions however. There is a note on the top of page 3 of the Bridges Unit Assessments stating that the Bridges Intervention volumes include re-teaching and practice activities and games. This would need to be purchased to provide more comprehensive intervention and differentiation strategies/support.	Reviewer only.) **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Teacher directed activities for Sessions called Problems & Investigations. These activities provide a teacher directed lesson and then move to Work Place activities. Work Places provides opportunities for students to work with partners/small group; it's hard to determine how long the Work Places stay the same, when they change, with what frequency, etc. Differentiation is not provided for every Session within the Teachers Guide. • Unit 5 Module 1 Session 1: No ELL support, or differentiation for other students is provided within the Teachers Guide. • Unit 7 Module 4 Sessions 1-3: No ELL support or differentiation for other students is provided within the Teachers Guide.	Reviewer only.) **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **____Meets** **_X__Does Not Meet** **Strengths/Weaknesses:** Curriculum provides many instructional approaches for students; with opportunities for whole group, small group, and peer learning. Instructional support for ALL learners is not provided on EVERY lesson. Instructional support, differentiation and ELL support are not explicitly provided for all situations.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Curriculum provides a step by step sequence to each Session. Leaves little room for deviation or student inquiry. Math vocabulary seems like an afterthought, no direct definition is given to students. Lessons seem to underestimate the ability/credibility of the teacher and give them word for word instructions to follow (this will be great for first year teachers, or teachers working with the program for the first time). It is hard to know where to find all the materials for the lesson, some of it will be in the Teacher Materials, some in the Student Book, Home Connect, and Assessment Guide. Teacher must have the ability to make many copies as everything is only a blackline in the Unit Module Binders.	**(Reviewer only.)** **_____ Yes** **__X___ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Curriculum is lacking problems that encourage deeper thinking by students, problems that ask students to prove their work or explain how they came to their answer. There is a large amount of time spent on Work Places (individual work) games that provide some practice exercises.	**(Reviewer only.)** **_____ Yes** **__X___ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** There is a lack of cohesiveness to the units and modules. There is no major idea or standard mentioned at the start of each unit to help identify what the students will be working on. Below each Unit heading and Module headings are listed. It is difficult to understand what the main idea/major work is for many units and the modules. • Unit 1: Numbers All Around Us; working with numbers through 10, classroom routines, and math models. • Unit 2: Developing Strategies with Dice & Dominoes; working with subitizing, counting on strategies, and the equal sign. • Unit 3: Adding, Subtracting, Counting & Comparing; single-digit sums, tens & teens, equations, place value understanding. • Unit 4: Leapfrogs on the Number Line; Adding and subtracting on a number line, jumping by 5's and 10's, measuring, comparing subtracting with penguins. • Unit 5: Geometry: 2-diminsional shapes, 3-diminsional shapes, putting shapes together & taking them apart, sorting & graphing shapes. • Unit 6: Figure the Facts with Penguins; story problems for basic addition and subtraction, combinations & story problems, solving for the unknown, measuring & comparing emperor and little blue penguins. • Unit 7: One Hundred & Beyond: Grouping sticks & bundles beyond one hundred. Hansel & Gretel's Path on the Number line, Adding and Subtraction 2-digit numbers, place value with money. • Unit 8: Changes, Changes; Time & duration, patterns, structure & change, measurement & data, measuring our growth.	**(Reviewer only.)** **_____ Yes** **__X___ No**

4. There are separate teacher materials that support and reward further study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Each unit is provided with a brief overview of the Modules and an outline of the Sessions for each Module. Mathematical Background, Teaching Tips, Skills Across Grade Levels, Assessments and Differentiation information is provide. Example: • Unit 5 Overview: TG pages i-xi	**(Reviewer only.)** __X___ **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** The materials kits would need to be purchased to fully implement this program. Many of the Sessions require manipulatives that teachers may not have access to in their classrooms.	**(Reviewer only.)** __X___ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Materials provide observation assessments and assessments are listed in the Module Sessions, but you have to go searching for the assessment in the Assessment Guide binder.	**(Reviewer only.)** _X____ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Materials do not provide answer keys for checkpoints in the Unit Module, it usually will be found in the Assessment Guide, Bridges Unit Assessments, in the corresponding Unit, Module, Session. Rubrics and answer keys provide good scoring guidelines but do not provide differentiation lessons to provide for struggling students.	**(Reviewer only.)** __X___ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessments (Checkpoints) are outlined within Unit Modules Overviews. • Unit 4 Module 2 Session 5: Teacher Materials T4-T6; Assessment Guide pages 37-39 • Unit 5 Module 2 Session 5: Teacher Materials T6-T7; Assessment Guide pages 49-51 Assessments are unbiased and follow the language of the materials.	**(Reviewer only.)** _X____ **Yes** _____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** There are multiple authors, contributing authors, editors, advisors, etc. listed on the Credits and Acknowledgment page of Unit 1. Materials do not list support from the National Science Foundation or any other accreditation.	**(Reviewer only.)** **__X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The visual design of the materials is not engaging for students. There is no color to any activities, the few graphics are boring and lack visual appeal to Grade 1 students. Teacher must make copies of all Teach Master, Student Workbook, and Home Connection pages. Some pages have too much text, not age appropriate, too many pictures/drawings and not enough practice. Examples: • Unit 7 Module 3 Session 1; Student Book has directions that are not student friendly, practice is short and above grade level standards. Outline for each Module of a Unit is stated on the first page of each Module. Each Module has Sessions (lessons) for each day of the Module. An overview of the Module Sessions is included at that start of each Module. Sessions (Lessons) are hard to read and understand the flow of the lessons there are not estimated times for sessions. Each session does not have support for ALL learners.	**(Reviewer only.)** **_____ Yes** **__X___ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Homework can be found in the Home Connections tab of each Module of every Unit. There are no letters to parents to inform them of the concepts and processes for mathematics that are being taught within the Teacher's Guide; Family Letters can only be found online. There is an assumption of supplies that will be available in the home to complete the Home Connection homework. Home Connections does not have a consistent layout to provide parents and students with the feeling of understanding when working on Home Connections. Directions on Home Connections are not very detailed and the text is not always Grade 1 appropriate (students could not read the directions on their own). Examples: • Unit 8 Module 3 Session 5 Home Connection; Assumption is made that students will have access to personal photos, drawings, or magazines. • Unit 4 Module 4 Session 5 Home Connection; Directions are too hard for Grade 1 students to complete on their own.	**(Reviewer only.)** **_____ Yes** **__X___ No**

Reviewer IMET Evaluation Summary **Title/Level:** The Math Learning Center

Publisher: Bridges in Mathematics Second Edition, 1st Grade **Copyright:** 2016 **ISBN:** 978-1-60262-332-3

Reviewer ID # KJ RO **Date Review Completed:** March 8, 2016

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	___ Does Not Meet

Non-Negotiable Overall:

X **Meets** ___ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 3 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 2 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	_____ Meets	_____ Meets
_____ Does Not Meet	X Does Not Meet	X Does Not Meet

Alignment Criteria Overall:

____ **Meets** X **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ____ Yes _X___ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

This curriculum feels like you are trying to implement two different curriculums at one time with Bridges and Number Corner. The binders are cumbersome and not very durable (they come open or don't close correctly); the online materials are difficult to manage and maneuver through.

Each Unit should have a main idea that ties to the standards or major work of the grade; the modules within the unit should have standards that are being taught within the Sessions listed in the overview.

Strength:

Curriculum has a consistent format and many learning through play activities.

Weakness:

Curriculum is hard to navigate and not teacher friendly. On-line materials are difficult to navigate, not hyperlinks to units, modules, sessions, etc.

Lots of teacher prep for workplaces and lot of copying (teacher will need a large copy budget just for math curriculum).

Differentiation for ELL, Support and Challenge are evident, but difficult to find and provide very weak and minimal support.

Cluster heading objectives are not visible throughout each lesson, module, or unit.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	The Math Learning Center
Title:	Bridges, 2nd grade
ISBN #	
Grade Level(s) or Course:	2
Reviewer ID:	VF and DD

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

__X__**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

__X__ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

COHERENCE-

RIGOR-

CONCEPTUAL UNDERSTANDING-

MATHEMATICAL PRACTICES- AC – see next page

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- AC3 see next page

OTHER:

Alignment Criterion 2 does not meet the Criterion because students are asked multiple times in each chapter and unit to make connections in math via math talk, vocabulary, written explanations and other. This program does not use or teach additional tables and properties, which is a major work in second grade.

Alignment Criterion 3: access to the standards for all students.

This program is lacking in teaching ELL and practice for ELL students. The number of EL practices ranged from 3 to 14 in 20 lessons. The advanced student practice was limited and incomplete.

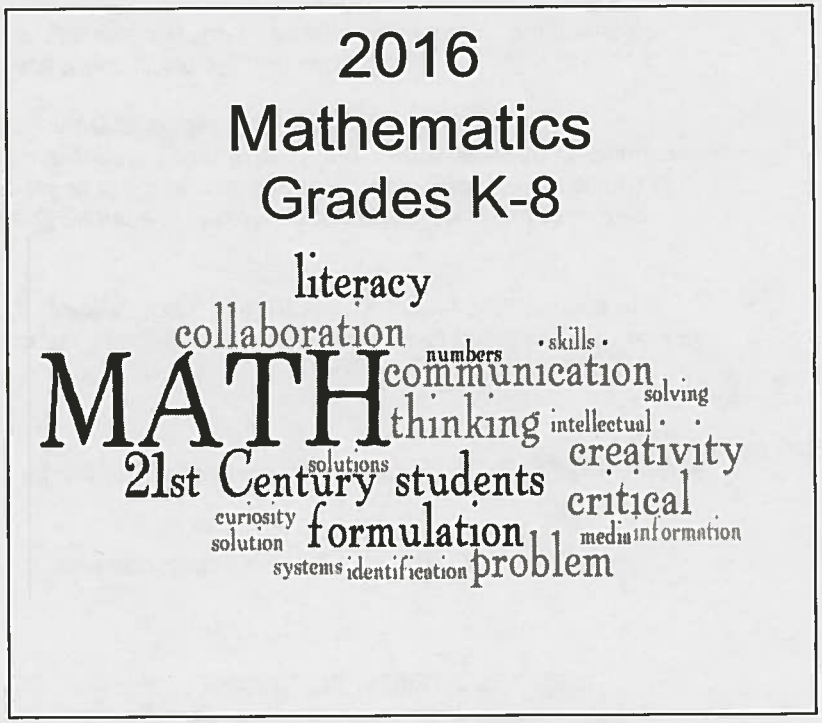
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.
- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).
- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.
- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.
- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterio	Evidence- Give s cific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.
Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **After reviewing all units in the curriculum, specifically the data and geometry units, I found no evidence of any of these items being assessed in the second grade curriculum. Symmetry is taught in Unit 6, module 4, but it is not assessed.**	**(Reviewer only.)** **Yes! ____ Meets** **____Does Not Meet**

Non-Negotiable 1: Materials must reflect the content and architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

Yes!____Meets

____Does Not Meet

Strengths/Weaknesses:

All units appear to align with the CCSS for second grade standards. I found no evidence that topics were assessed before introduced in the grade level.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.		
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **There are five major cluster is second grade math. This curriculum spends 19 out of 32 modules specifically on these clusters as shown below.** This is difficult to fully calculate because many of these major work concepts are intertwined and taught in other units, just not a specific unit or module focus of its own. **-Understand place value:** Unit 2 (module 1) Place Value & Measurement Unit 5 (module 1, 2, 3) Place Value to One Thousand Unit 8 (Module 1) place value & 3-digit computation **- Use place value understanding and properties of operations to add and subtract** **- Represent and solve problems involving addition and subtraction** **- Add and subtract within 20 (CCSS says 100 and 1000)** Unit 1 (module 2, 3, 4) Figure the Facts Unit 2 (module 2, 3) Place Value & Measurement Unit 3 (module 1, 2, 3) Addition and Subtraction Within One Hundred Unit 7 (Module 3) adding & subtracting 3-digit numbers Unit 7 (Module 4) writing & solving story problems *Unit 8 (Module 1) place value & 3-digit computation **- Measure and estimate lengths in standard units** Unit 4 (module 1, 2, 3) Measurement **- Relate addition and subtraction to length (weak)** Unit 2, Module 3, Session 6 - turning vines into ropes Unit 4, Module 3, Session 3 - twice as tall Unit 4, Module 4 (addition and subtraction is in all of these measurement problems solving sessions)	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric N **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Supporting clusters are sufficiently covered by units and they support the major clusters of second grade.** **- Work with time and money** **Unit 5, Module 2: Place Value with Money** Students are taught to intertwine money concepts with place value concepts through the entire Unit 5 Place Value to One Thousand unit. **- Work with equal groups of objects to gain foundations for multiplication** **Unit 2, Module 4: thinking in Twos** **Unit 4, Module 4: thinking in Threes** Students are working with skip counting, arrays, repeated addition, and equal groups of twos and threes respectively to build foundations for multiplication. **- Represent and interpret data** **Unit 1, Module 1: Sorting and Graphing** **Unit 3, Module 4: data & the many colors project** **Unit 8, Module 2, 3, 4: Collecting & Analyzing Data** Students are using addition and subtraction to answer problems based on graphs. **- Reason with shapes and their attributes** **Unit 6, Modules 1, 2, 3: Geometry** Students are counting and adding within 20 to sort shapes based on number of sides.	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as	**Evidence-** **After thoroughly reviewing the curriculum, I found no discrepancies in the content progression that unduly interfered with grade level content.** **There were a couple times where further grade level concepts were strategically placed, such as area and arrays, in the appropriate geometry unit that build a base for third grade multiplication and area standards.**	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**

written rath[illegible]n effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • **Each lesson of each unit contains on-grade level problems to solve through investigations, manipulative, and work places that align with the skills stated in the CCSS.** • **Many, but not all of the lessons, in the unit contains an assessment and differentiation guide, of suggestions for what to do in certain situations for support and challenge. They don't necessarily provide formal differentiations, they are more just quick things to say or have a student do with the whole class on grade-level work.**	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **There are no cluster headings in second grade that specifically state for students to "apply and extend previous understanding."** **Each unit contains a "Skills across the grade level" chart showing the major skills and concepts addresses in that unit and provides a quick snapshot of the skills that were addressed in Grade 1, elsewhere in grade 2, and looking ahead to grade 3.** Example, p. iv in Unit 5 shows that standard 2.NBT.1 'demonstrate an understanding that the digits in a 3-digit number represent amounts of hundreds, tens, and ones' is: Grade 1: introduced Grade 2: Mastered in this Unit 5 (as well as unit 2, 3, 8) Grade 3: reviewed, practiced, or extended to higher levels	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **There are no cluster headings in second grade that specifically state for students to "apply and extend previous understanding."** **Each unit contains a "Skills across the grade level" chart showing the major skills and concepts addresses in that unit and provides a quick snapshot of the skills that were addressed in Grade 1, elsewhere in grade 2, and looking ahead to grade 3.** Example, p. iv in Unit 5 shows that standard 2.NBT.1 'demonstrate an understanding that the digits in a 3-digit	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**

	number represent ar ts of hundreds, tens, and ones' is: Grade 1: introduced Grade 2: Mastered in this Unit 5 (as well as unit 2, 3, 8) Grade 3: reviewed, practiced, or extended to higher levels **In addition, there is an assessment map in the assessment guide that shows where each CCSS is assessed and is shaded to show which unit the student assessment the student is expected to master the specific standard by in second grade. (p.11-15)**	
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson begins with a summary and a skills & concepts section. The summary gives teachers a blurb of what is taught in the session. The skills & concepts give a break down the the CCSS cluster headings and the mathematical practices used in this session. It doesn't point to one specific standard as the focus, just a list of all the standards being touched on, whether the focus/main thing of the lesson or not. For example Unit 5, Module 1, session 3 states that the skills and concepts covered** - **2.NBT.1** - **2.NBT.2** - **2.NBT.3** - **2.NBT.7** - **2.MP.3** - **2.MP.6**	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Example of a connection between clusters in a domain:** In unit 1, figure the facts, students spend time in the OA cluster "Add and subtract within 20." Then it naturally moves students into the OA cluster "work with equal groups of objects to gain foundations for multiplication" by counting equals groups, arrays, and using repeated addition in unit 2, module 4 and unit 4, module 4. Students must use their add and subtract within 20 skills in order to work with equal groups. **Example of a connection between domains:** Students spend a module in unit 1 learning '2-digit subtraction' in the cluster "use addition and subtraction within 100 to solve one- and two-step word problems…" in the Operation and Algebraic Thinking Domain. Then, students use these addition concepts in unit 4, module 4 to "use addition and subtraction within 100 to solve word problems involving lengths…" in the Measurement and	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**

	Data Domain.	
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet** **Strengths/Weaknesses:** **There is multiple evidence, as outlined above, that this programs focuses on the major work of second grade and the CCSS.**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **Yes____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptu[illegible]erstanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **- 2.NBT "<u>Understand</u> that the three digits of a three-digit number represent amounts of hundreds, tens, and ones…"** Unit 2, Module 1 Unit 2, Module 2 Unit 2, Module 3 Unit 5, Module 1 Unit 5, Module 3	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** For example, unit 5, module 1, session 3 has a question where students are told that 999 + 1 and 500 + 500 are two different ways to make 1,000. Students must then show several other ways to make 1,000. They can use addition, subtraction, and even more than two addends.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** For example, unit 5, module 1, session 5 has questions where students must write the number shown from a place value diagram and then write its hundreds, tens, and ones equivalents and also in expanded form.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress[illegible]d fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **2.OA.2 <u>Fluently</u> add and subtract within 20 using mental strategies.** Unit 1 covers 'figure the facts,' teaches mental math strategies such as double facts, doubles plus or minus one (p.iii unit 1) **2.NBT.5 <u>Fluently</u> add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction.** Unit 3 'Addition & Subtraction within One Hundred' teaches addition and subtraction within one hundred using strategies such as subtracting on the number line	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** Yes, I checked several of the lessons in the chapters listed above, and they had purely procedural problems where students could use strategies to solve. For example, unit 1 'figure the facts' module 2 has students using a number rack and double facts to visualize and solve 4+4.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** The lessons all appear to have repeated practice. For example, unit 1, module 2 has a practice page where students use figure the facts strategies to solve 11 problems for students to solve to practice that lesson's concept. Some, but not all sessions have repeated practice homework. *Note, there are several more resources for additional practice that come in a Number Concepts pack - which is an additional program used to supplement Bridges.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **Yes ____Meets (2)**

throughout questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		____**Partially Meets (1)** ____**Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are specific problem solving tasks in these locations. Unit 3, Module 3, Session 4 (single & multi-step) Unit 3, Module 3, Session 5 (single & multi-step) Unit 5, Module 3, Session 4 (single-step) Unit 7, Module 1, Session 1 (multi-step) Unit 7, Module 3, Session 3 (single & multi-step) There are also problem solving task in the Number Corner program that is a supplement to bridges.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** All the specific problem solving tasks from above, have students adding, subtracting, and use place value concepts, which are the major works of second grade.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** I viewed the progress of modeling in addition and subtraction. In second grade, they begin with using the number rack with colored beads to show doubles, counting up and down, tens facts, as well as other addition within 20 facts. It then builds into 2-digit and then further on 3-digit addition and subtraction with place value blocks and number line.	
Alignment Criterion 1: **Rigor and Balance** **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.**		**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet**

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**Strengths/Weaknesses:** This program meets all requirements for Alignment Criterion 2.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **addition table** not found – big weak spot **multiplication table** (not found in second grade, but not a major work) **the properties of operations** No specific Lessons found – big weak spot **the relationship between addition and subtraction** not found - big weak spot **The relationship between multiplication and division** (not found in second grade, but not a major work) **Other:** Students use number rack, tens frames, and other models/materials to practice the major work.	**(Reviewer only.)** **____Meets (2)** **Yes ____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **Yes! ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The full language of the standards is emphasized through the whole year and are specifically marked in the skills & concepts section at the beginning of each session. In addition to this, there are specific 'bigger' problem solving tasks (unit 3, module 3)(unit 7, module 1) that have students fully dive into numerous mathematical practices in order to complete a mathematical task. This is actually much stronger if you include the number corners program (December calendar grid workout)	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** From what I can tell, yes, the practice standards are grade appropriate. For example, the problem from unit 3, module 3 noted above has students 'attending to precision' and 'make sense of problems and persevere in solving them" in order accurately solve the presents and parcel problems. Students will need to communicate their thinking in written form and verbally during this problem. This is developmentally appropriate for second graders to solve this problem.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** The mathematical practice standards are fully explained in (approximately the 4th page in) the grade 2 overview at the beginning of unit 1, as well as page 19-23 in the assessment guide.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)** **Yes ____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Unit 4,module 4, session 4 has students writing explanations in response to questions about thinking in threes. Unit 7, Module 2, Session 4 has students writing an explanation to describe patterns they noticed when ants were sharing cookies. There are many times when students are asked to give reasons, explain their thinking, and/or write an explanation of their work. However, I did not find where students had to critique the arguments or explanations of others.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Yes, I have stated several times above where students are asked write explanations, as well as use models to solve problems. Specific example, in unit 1, module 1, session 5, students must solve the problem, then use mathematical models or diagrams and/or words to explain what they did to solve the addition problem.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that	**Evidence-** The language of mathematics via the vocabulary is taught at the beginning of each session. There are plenty of times students are asked to make write an explanation. However, I did not find where students are specifically taught how to write an argument or explanation.	

examples a[illegible]o not establish a general statement.		
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **____Meets** **NO ____Does Not Meet** **Strengths/Weaknesses:** **There are multiple times in each unit/chapter where students are asked to make connections in math via math talk, vocabulary, written explanations and so on. However, the program is lacking in using/teaching addition tables and properties, which is a major work in second grade.**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** In some, but not all sessions, there is a chart that includes information on adaptations to support the ELL students (in the teacher's masters). Example: Unit 2 The following sessions have an ELL guide: module 1, session 2 module 2, session 4 module 3, session 3 module 4 - none This is 3/20 sessions that have an ELL support guide.	**Reviewer only.)** **____Meets (2)** **Yes ____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** In some sessions there is a guide for differentiation - offering ideas for support and challenge. There is also the ELL supports described above. I couldn't find any intervention materials.	**Reviewer only.)** **____Meets (2)** **Yes ____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The addition and subtraction as well as the place value units that I focused my time on evaluating had multiple opportunities for hands-on lessons by modeling with manipulatives and models such as counters, squares, ten frames number bonds, and place value blocks. The work place section in each module offers small group and pair work.	**Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.**		**(Reviewer only.)** **____Meets** **NO ____Does Not Meet** **Strengths/Weaknesses:**

AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	The program is lacking in ELL and differentiation support.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each lesson is broken into a numbered list with instruction to the teacher on how to guide and support his/her students through the learning paths.**	**(Reviewer only.)** **Yes_____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Each lesson has guided instruction, as well as independent problems for students to solve based on new information learned.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** **The design of assignments seems to have an intentional sequence. It's a bit difficult to see because this program does not have the normal list of discrete skills. Many things are intertwined and mixed in with other skills.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the**	**Evidence-** **Each chapter comes with a teacher book. The teacher book contains some of the following items as**	**(Reviewer only.)** **Yes _____ Yes**

mathema point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	information to/for the her: - guidance on lesson flow (per lesson) - suggestions for ELL, support, and challenge - math talk prompts - common error alerts - vocabulary - work centers	_____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- This program uses an abundance of manipulatives and they are faithful and accurate representative of the methods taught. Please note: this program could NOT be used without the purchase of numerous manipulatives and supplies for the classroom.	(Reviewer only.) Yes _____ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Each unit contains a pre, mid, and post test summative assessment. In addition, lessons contain suggestions and tables for formative assessments during instruction and work place (centers).	(Reviewer only.) Yes _____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- The pre and post summative assessments mentioned above each have a scoring guide that shows teachers how to score (points) as well as designate a proficiency level.	(Reviewer only.) Yes _____ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Based on the tests I reviewed, the assessments in the chapters are accessible and unbiased and the student at this grade level should be able to understand the language used in student prompts.	(Reviewer only.) Yes _____ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- The author and consulting mathematics editor of this program are both listed with their credentials and they appear to be qualified to write a math program. Other authors and editors are listed, but without their credentials.	(Reviewer only.) Yes _____ Yes

		_____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The student work is visually appealing with clear text. There are graphs, pictures, models, and so on used to support students learning.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **There is homework included in this program that contains routine problems, extra practice, and fluency-building exercises.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**

Reviewer MET Evaluation Summary **Title/Level: Bridges Second Grade**

Publisher: The Math Learning Center **Copyright: 2016** **ISBN:_____**

Reviewer ID # VF and DD **Date Review Completed: 2/27/2016**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **Yes! _____ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **Yes! _____ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **Yes! _____ Meets** **_____ Does Not Meet**	

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.		
Alignment Criterion 1: Rigor and Balance **Points: 6 of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **Yes _____ Meets** **_____ Does Not Meet**	**Alignment Criterion 2: Standards of Mathematical Practice** **Points: 4 of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **_____ Meets** **No _____ Does Not Meet**	**Alignment Criterion 3: Access to Standards for All Learners** **Points: 4 of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **_____ Meets** **No _____ Does Not Meet**
Alignment Criteria Overall: **_____ Meets** **No _____ Does Not Meet**		

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes NO! _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

This program meets every non-negotiable. However, it is lacking in some addition support (such as the addition tables and addition properties). Additionally, the ELL and differentiation support is severely lacking. Furthermore, the organization of the program is cumbersome and this program could not be implemented without the purchase of manipulatives and supplies.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	The Math Learning Center
Title:	Bridges,
ISBN #	
Grade Level(s) or Course:	3rd grade
Reviewer ID:	VF ~~LBD~~

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

__X__**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

__X__ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.
Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.)	**Evidence-** **After reviewing all units in the curriculum, specifically the data and geometry units, I found no evidence of any of these items being assessed in the third grade curriculum.**	**(Reviewer only.)** **Yes! ____ Meets** **____Does Not Meet**

In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)		
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **Yes!____Meets** **____Does Not Meet** **Strengths/Weaknesses:** **All units appear to align with the CCSS for third grade standards. I found no evidence that topics were assessed before introduced in the grade level.**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	• From the materials evaluated: teacher guides, student texts and workbooks	
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **There are six major cluster in third grade math. This curriculum spends 19 out of 32 modules specifically on these clusters as shown below.** This is difficult to fully calculate because many of these major work concepts are intertwined and taught in other units, just not a specific unit or module focus of its own. **-Represent and solve problems involving multiplication and division** **- Understand properties of multiplication and the relationship between multiplication and division** **- Multiply and divide within 100:** Unit 2, Module 1: Multiplication in Context Unit 2, Module 2: Multiplying with Arrays & Number Lines Unit 2, Module 3: Ratio Tables & the Multiplication Table Unit 5, Module 1: Linking Multiplication & Division Unit 5, Module 2: Multiplication & Division Families Unit 5, Module 3: Division Practice Unit 7, Module 1: Multiplication beyond the basics Unit 7, Module 2: one-by-two digit multiplication **- Develop understanding of fractions as numbers:** Unit 4, Module 3: Fractions as Fair Shares Unit 4, Module 4: Fractions on a Line Plot Unit 6, Module 4: Shapes & Fractions Unit 7, Module 3: Fractions as parts of a whole & parts of a set Unit 7, Module 4: Fractions at Work **- Solve problems involving measurement and estimation of intervals of time, liquid volumes, and masses of objects:** Unit 4, Module 1: Measuring Time & Mass	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**

	Unit 4, Module 2: Mea[illegible]e volume **- Geometric measurement: understand concepts of area and relate area to multiplication and to addition:** Unit 5, Module 4: Introducing Area Unit 6, Module 3: Perimeter & Area **- Solve problems involving the four operations, and identify and explain patterns in arithmetic (pulled into various lessons from various units)** Unit 1 Module 4: Story Problems & Strategies Unit 2, Module 4: Story Problems with Graphs & Multiple Operations	
Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Supporting clusters are sufficiently covered by units and they support the major clusters of third grade.** **- Represent and Interpret Data:** Unit 8, Modules 1-4: Data Collection & Analysis **- Reason with shapes and their attributes** Unit 6, Module 1: Investigating Polygons Unit 6, Module 2: Quadrilaterals	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful	**Evidence-** **After thoroughly reviewing the curriculum, I found discrepancies in the content progression that unduly interfered with grade level content.** **In Unit 7, Module 2, it has the students completing one-digit-by two digit multiplication. It is spending the entire module two multiplication such as 4x33, 4x25, 16x14, and so on when the third grade standard is multiply one-digit whole number by mutlipes of 10 in the range of 10-90 (e.g., 9x80, 5x60) (3.NBT.3). The module doesn't focus on the multiples of 10, it's actually a 4th grade standard 4.NBT.5 multiply a 2-digit whole number by a 1-digit whole number. It assessing**	**(Reviewer only.)** **____Meets** **No _____Does Not Meet/** **Insufficient Evidence**

discrepancies. Content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**on this 4th grade standard as well.**	
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • **Each lesson of each unit contains on-grade level problems to solve through investigations, manipulative, and work places that align with the skills stated in the CCSS.** • **Many, but not all of the lessons, in the unit contains an assessment and differentiation guide, of suggestions for what to do in certain situations for support and challenge. They don't necessarily provide formal differentiations, they are more just quick things to say or have a student do with the whole class on grade-level work.**	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **There are no cluster headings in third grade that specifically state for students to "apply and extend previous understanding."** **Each unit contains a "Skills across the grade level" chart showing the major skills and concepts addresses in that unit and provides a quick snapshot of the skills that were addressed in Grade 2, elsewhere in grade 3, and looking ahead to grade 4.** Example, p. vii in Unit 7 shows that standard 3.OA.7 'fluently multiply with products to 100 using strategies ' is: Grade 1: not addressed Grade 2: Developed in this Unit 5 (as well as unit 2, 3, 8) Grade 3: reviewed, practiced, or extended to higher levels	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such.	**Evidence-** **There are no cluster headings in third grade that specifically state for students to "apply and extend previous understanding."** **Each unit contains a "Skills across the grade level" chart showing the major skills and concepts addresses in that unit and provides a quick snapshot of the skills that were addressed in Grade 2, elsewhere in grade 3,**	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**

For context, [illegible] Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**and looking ahead t[illegible]ade 4.** Example, p. vii in Unit 7 shows that standard 3.OA.7 'fluently multiply with products to 100 using strategies ' is: Grade 1: not addressed Grade 2: Developed in this Unit 5 (as well as unit 2) Grade 3: reviewed, practiced, or extended to higher levels **In addition, there is an assessment map in the assessment guide that shows where each CCSS is assessed and is shaded to show which unit the student assessment the student is expected to master the specific standard by in third grade. (p.11-16)**	
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson begins with a summary and a skills & concepts section. The summary gives teachers a blurb of what is taught in the session. The skills & concepts give a break down the the CCSS cluster headings and the mathematical practices used in this session. It doesn't point to one specific standard as the focus, just a list of all the standards being touched on, whether the focus/main thing of the lesson or not. For example Unit 4, Module 1, session 2 states that the skills and concepts covered** - **3.MD.1** - **3.MP.6** - **3.MP.8**	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Example of a connection between clusters in a domain:** In unit 2, module 2, multiplying with arrays and number lines, students spend time in the OA cluster "fluently multiply and divide within 100 using strategies" by counting equals groups, using repeated addition, and skip counting on a number line, and modeling with Arrays. Then it naturally moves students into the OA cluster "Represent and solve problems involving multiplication and division" by having students use the multiplication strategies in lessons unit 2, module 2 to solve problems in unit 5, module 1. **Example of a connection between domains:** Student spend unit 2, module 2 'multiplying with arrays' in the cluster "represent and solve problems involving multiplication and division" in the Operation and Algebraic Thinking Domain. Then, students use these array concepts to understand, measure, model, and problem solve with area in unit 5, module 4 which is in the "Geometric measurement: understand concepts of area and relate area	**(Reviewer only.)** **Yes ____Meets** **____Does Not Meet/** **Insufficient Evidence**

	to multiplication and t[illegible]dition" cluster of the Measurement and Data Domain.	
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**(Reviewer only.)** **____Meets** **No____Does Not Meet** **Strengths/Weaknesses:** **There is multiple evidence, as outlined above, that this programs focuses on the major work of third grade and the CCSS. However, it spends an entire module on a 4th grade standard and doesn't focus enough time on the similar third grade standard.**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **Yes____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **- 3.OA "<u>Understand</u> properties of multiplication and the relationship between multiplication and division** Unit 5, Module 1 Linking multiplication and division Unit 5, Module 2 Multiplication & Division Fact Families **-3.NBT "Use place value <u>understanding</u> and properties of operations to perform multi-digit arithmetic."** Unit 3, Multi-digit addition and subtraction **3.NF "Develop <u>understanding</u> of fractions as numbers."** Unit 4, Module 3 Fractions as Fair Shares Unit 4, Module 4 Fractions on a Line Plot Unit 6, Module 4 Shapes and Fractions **3.MD "Geometric measurement: <u>understand</u> concepts of area and relate area to multiplication and to addition."** Unit 2, Module 2 - multiplying with arrays Unit 4, Module 4 - introducing area Unit 6, Module 3 - Perimeter & Area	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** For example, unit 4, module 3, session 3 has a question where students are told that a certain shape is ½ of the whole shape, Students have to draw what the whole shape could look like, and find more than one solution.	

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** For example, unit 4, module 3, session 5, students use a double number line to mark fractions as well as its equivalents.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **3.OA.7 <u>Fluently</u> multiply and divide within 100** Unit 2, 5, 7 all cover multiplication and division, giving students strategies to fluently multiply and divide. **3.NBT.2 <u>Fluently</u> add and subtract within 1000** Unit and 3 both cover addition and subtraction with 1000, giving students patterns and strategies to fluently add and subtract.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Yes, I checked several of the lessons in the chapters listed above, and they had purely procedural problems where students could use strategies to solve. For example, students are taught the strategy of doubling as not only a subtraction strategy, but a multiplying by 2 strategy.	

Do the materials for grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** The lessons all appear to have repeated practice. For example, unit 5, module 3 has a practice page where students use multiplication strategies to solve 32 problems for students to solve to practice that lesson's concept. Some, but not all sessions have repeated practice homework. *Note, there are several more resources for additional practice that come in a Number Concepts pack - which is an additional program used to supplement Bridges.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are specific problem solving tasks in these locations. Unit 1, Module 4, Session 4 (single) Unit 3, Module 2, Session 1 (single) Unit 3, Module 4, Session 4 (single-step) Unit 7, Module 1, Session 3 (multi-step) Unit 7, Module 2, Session 4 (multi-step) There are also problem solving task in the Number Corner program that is a supplement to bridges.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see	**Evidence-** Most of the problem solving tasks from above, have students multiplying and dividing, which are the major works of third grade.	

Situation Ty[illegible] the Operations in Word Problems		
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** I viewed the progress of modeling in fractions. They begin by modeling fractions in third grade as fair shares. They - in the very next lesson - sort those fractions and order them from least to greatest, which is faster than I'm use to introducing comparing and ordering fractions. They then model fractions with pattern blocks, on the number line, and further into fractions as parts of a whole and set, using egg cartons.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

Yes ____Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

Rating this Criterion
Alignment Criterion 2 is rated as Meets or Does Not Meet.
To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	• Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **addition table** Unit 1, Module 1, Session 4 & 5 Plus it has students working on a subtraction table in Unit 1, Module 2, Sessions 1 & 2 **multiplication table** Unit 2, Module 3 **the properties of operations** unit 7, module 5 has some lessons on the distributive and associative property, although for the distributive property, it is using multiplication out of the 4th grade standards, not 3rd (one-digit by two-digit multiplication) **the relationship between addition and subtraction** not found - not a major work in 3rd grade **The relationship between multiplication and division** Unit 5, module 1 & 2: linking multiplication & division; multiplication & division fact families **Other:** Students use number lines, arrays, and ratio table to multiply.	**(Reviewer only.)** **____Meets (2)** **Yes ____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **Yes! ____Meets (2)**

Over the co[illegible] any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The full language of the standards is emphasized through the whole year and are specifically marked in the skills & concepts section at the beginning of each session. In addition to this, there are specific 'bigger' problem solving tasks (unit 3, module 3, session 4)(unit 6, module 3, session 2) that have students fully dive into numerous mathematical practices in order to complete a mathematical task. This is actually much stronger if you include the number corners program (September calendar grid workout)	**____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** The practice standards are grade appropriate. For example, the problem from unit 6, module 3 noted above has students 'look for and make use of structure,' 'construct viable arguments,' 'model with mathematics,' and 'make sense of problems and persevere in solving them" in order accurately solve create tale to seat exactly 20 friends. They have to find more than one solution, use square tiles, and create a chart to share their information. This is developmentally appropriate for a third grader to do.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** The mathematical practice standards are fully explained in (approximately the 4th page in) the grade 3 overview at the beginning of unit 1, as well as page 18-20 in the assessment guide.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Unit 2,module 1, session 2 has students writing explanations in response to multiplication questions, such as 'explain how you can use 2x8 to find 4x8.'. Unit 4, Module 3, Session 3 has students writing an explanation to describe how they know pattern block fractions. For example, if the hexagon is 1, the triangle is ___ because_____. There are many times when students are asked to give reasons, explain their thinking, and/or write an explanation of their work. However, I did not find where students had to specifically/formally critique the arguments or explanations of others, other than in everyday class discuss.	**Yes ____Partially Meets (1)** **____Does Not Meet (0)**

Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Yes, I have stated several times above where students are asked write explanations, as well as use models to solve problems. Specific example, in unit 2, module 1, session 2, students must solve the problem by using an array model and an equation, and then words to explain what they did to solve the multiplication problem..	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** The language of mathematics via the vocabulary is taught at the beginning of each session. There are plenty of times students are asked to make write an explanation. <u>However, I did not find where students are specifically taught how to write an argument or explanation.</u>	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **Yes ____Meets** **NO ____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for

requires th[illegible]ntful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.		special population, while at the same tim[illegible]suring that no single metric can receive a rating of ze[illegible] and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** In some, but not all sessions, there is a chart that includes information on adaptations to support the ELL students (in the teacher's masters). Example: Unit 2 The following sessions have an ELL guide: module 1, session 1, 5, 6 module 2, session 1-5 module 3, session 1, 4 module 4 - 1-4 This is 14/20 sessions that have an ELL support guide in one unit. Some units have even less ELL support, for example, Unit 7 only has 3/20 ELL supports.	**Reviewer only.)** **____Meets (2)** **Yes ____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** In some, but not all, sessions there is a guide for differentiation - offering ideas for support and challenge. There is also the ELL supports described above. I couldn't find any intervention materials.	**Reviewer only.)** **____Meets (2)** **Yes ____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The multiplication and division as well as the fraction units that I focused my time on evaluating had multiple opportunities for hands-on lessons by modeling with manipulatives and models such as number lines, arrays, equal groups, paper-cut fractions, and pattern blocks. The work place section in each module offers small group and pair work.	**Reviewer only.)** **Yes ____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **____Meets** **NO ____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each lesson is broken into a numbered list with instruction to the teacher on how to guide and support his/her students through the learning paths.**	**(Reviewer only.)** **Yes_____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Each lesson has guided instruction, as well as independent problems for students to solve based on new information learned.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**

3. Design assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- The design of assignments seems to have an intentional sequence. It's a bit difficult to see because this program does not have the normal list of discrete skills. Many things are intertwined and mixed in with other skills.	(Reviewer only.) Yes _____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Each chapter comes with a teacher book. The teacher book contains some of the following items as information to/for the teacher: - guidance on lesson flow (per lesson) - suggestions for ELL, support, and challenge - math talk prompts - common error alerts - vocabulary - work centers	(Reviewer only.) Yes _____ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- This program uses an abundance of manipulatives and they are faithful and accurate representative of the methods taught. Please note: this program could NOT be used without the purchase of numerous manipulative and supplies for the classroom.	(Reviewer only.) Yes _____ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Each unit contains a pre, mid, and post test summative assessment. In addition, lessons contain suggestions and tables for formative assessments during instruction and work place (centers). Even tables for students to evaluate their own work.	(Reviewer only.) Yes _____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- The pre and post summative assessments mentioned above each have a scoring guide that shows teachers how to score (points) as well as designate a proficiency level.	(Reviewer only.) Yes _____ Yes _____ No

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Based on the tests I reviewed, the assessments in the chapters are accessible and unbiased and the student at this grade level should be able to understand the language used in student prompts.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The author and consulting mathematics editor of this program are both listed with their credentials and they appear to be qualified to write a math program. Other authors and editors are listed, but without their credentials.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The student work is visually appealing with clear text. There are graphs, pictures, models, and so on used to support students learning.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **There is homework included in this program that contains routine problems, extra practice, and fluency-building exercises.**	**(Reviewer only.)** **Yes _____ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: Bridges Third Grade**

Publisher: The Math Learning Center **Copyright: 2016** **ISBN:_____**

Reviewer ID # VF and DD **Date Review Completed: 2/27/2016**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **Yes _____ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **_____ Meets** **NO _____ Does Not Meet**
Non-Negotiable Overall: **_____ Meets NO _____ Does Not Meet**	

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.		
Alignment Criterion 1: Rigor and Balance **Points: 6 of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **Yes _____ Meets** **_____ Does Not Meet**	**Alignment Criterion 2: Standards of Mathematical Practice** **Points: 4 of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **_____ Meets** **NO _____ Does Not Meet**	**Alignment Criterion 3: Access to Standards for All Learners** **Points: 4 of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **_____ Meets** **NO _____ Does Not Meet**
Alignment Criteria Overall: **_____ Meets NO _____ Does Not Meet**		

If the materials meet both Non-Negotiables and relevant Alignment Criteria, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes NO _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

This program meets most of the components of a core program, however it teaches and assesses above grade level material, and it is also lacking in ELL and differentiation support. Furthermore, the organization of the materials in binder is cumbersome and districts must purchase many additional manipulatives and supplies in order to fully implement.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	The Math Learning Center
Title:	Bridges in Mathematics - Second Edition, Grade 4
ISBN #	978-1-60262-572-9
Grade Level(s) or Course:	4
Reviewer ID:	AM & DB

RECOMMENDED AS:

X **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

✓ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Materials focus on major works, includes pre-d post assessments, growth checks throughout

COHERENCE- Each unit begins with an introduction of mathematical content. Assessment map in Assessment guide

RIGOR- Students continually work on fluency, applying that to real-world contextual problems.

CONCEPTUAL UNDERSTANDING-
Students solve problem in context and apply learned concepts to real world contextual problems.

MATHEMATICAL PRACTICES-
Standard mathematical practices are integrated and explicitly tied to the activities.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Lessons contain multiple differentiation options to address the needs of a broad range of learners

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** • Content + practice standards. • assessments included grade level standards • growth checks within units (check points). • Symmetry - unit 3	**(Reviewer only.)** X **Meets** ____ **Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** S • pre & post assessments S • growth checks W • post assessment doesn't always match pre-assessment pre-assess covers more material

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

- major works/clusters focus instruction and practice - more than 85%.
  (+,-, place value, fractions, multiplication & division of multi-digit #'s)
- cross domain - (word problems involving measurement.

(Reviewer only.)

X **Meets**

____ **Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting [illegible]k, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Supporting clusters support major clusters • progression of learning is evident · students move from enactive, to iconic, then symbolic • unit to module to daily lessons. • all units/modules include contextual problems	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Begin year with review & move through progression (re • Chart at beginning of each unit shows standards introduced. • Beginning 4th grade · revisit arrays, build upon for larger numbers moving from enactive, to iconic & then symbolic.	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • each unit has chart with suggestions for support, challenge & ELL, aims with home connection for differentiation. • "Work Place" individual practice to improve skills / small group activities	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Multi-digit multiplication/div. in six out of 8 units. • Mult & dividing major instr in units 2 & 6. • Progression is evident as strategies introduced in previous grade levels - used as an introduction then moved through progression.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Does not promote simply reviewing then marginally extending Unit 1 Intro "Review of key x/÷ skills & concepts from grade 3 include ...." then explains 4th grade expectations • Assessment guide provides progression of standards	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** . Each unit begins w/ introduction of mathematical content. - instructional sequence - examples - skills across grade level • Assessment map in Section 2 1) Assessment guide-(progression of standards	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Each session + number corners correlated to the content standards - domains are clustered. • Unit 4 - covers NBT, MD & OA - contextual problems include measurement with multiplication to solve.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) X Meets ____Does Not Meet **Strengths/Weaknesses:** • lacking (at time) sufficient practice in student wkbk before moving to independent • Strengths- corners connect within clusters and across domains

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** 4NF.A.1 - Unit 3, Module 1, Session 3, area models/ # lines Unit 3, module 1, session 6.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** conceptual problems incorporated all units as well as #corners. • Math forums - Unit 1, Mod 1, Session 6 - students explain & critique	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Conceptual understanding present. presented with models & diagrams, expressions to show varies strategies for solving. • money, area models, number lines	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** • Number corners computational fluency monthly • student book (daily practice) • Home connection- independent homework	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** • algorithms for adding and subtracting multi digit #'s through hundred thousand. • Independent work seems limited in time.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** • Number corners class practice for fluency • daily practice pages. • Home connections have monthly fluency practice	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Story problems in Number Corners • lessons include - whole group - small group - partner work - independent practice - hands-on activities	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assessments.	**Evidence-** • contextual story problems all units + assessments • Number corners- multi-step word problems.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** • application problems reflect major work of the grade • curriculum focuses on students having a deep understanding • consistent practices with various strategies	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** • Modeling moves students through concrete → iconic → symbolic • fractions & decimals modeled with this pattern • real-life problems solved in multiple ways - drawings, charts, lists, equations	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:
quality of work on conceptual understanding
• opportunities to practice various strategies
• opportunities to offer students through progression of enactive → iconic → symbolic

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

- many examples of program coherence
- repeated reasoning > SMP
- use of structure

ex:

- multiplication w/arrays then ~~a~~connected to numbers
  Unit 2, Module 1, 5
- all lessons leads students to discussion
- Teacher Guide - Assessments - role of the teacher in using practices

Metric AC2B: **Materials att[illegible] to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each q[illegible]tion and rate Metric 2B.** **(Reviewer only.)** ~~X~~ **Meets (2)** X **Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** • each unit assess a number corner has a skills & concept list that includes a focus on 2 math practices • practices encourage rigor	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** • each lesson has a least one math practice • sidebar in teachers guide addres specific ways to address SMP	Note - not many practice standards addressed / identified in each unit.
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** • information found in the grade level introduction of the Teachers Guide, and the assessment guide	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** X **Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** • multiple opportunities for reasoning decimal challenge - unit 3, mode 3 session 4 Assessment rubric - teachers can asses viable arguments.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** • multiple opportunities • ex: double digit multiplication - contextual problems focus students on producing arguments - Unit 8, Mod 2, Session 1	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** • content vocabulary cards provided for sessions & number corner workout to develop math language	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

multiple opportunities for reason with conceptual problems

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]ish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** • all materials offered in Spanish • no other language offered for ELL	Reviewer only.) ____Meets (2) __X__Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** • differentiation for learners in Teacher's guide - scaffolding & Challenging • independent pace available through daily activities Note- not all lessons offer differentiation	Reviewer only.) __X__Meets (2) __X__Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** • lessons begin with concrete practice (small manipulatives) moving to iconic then symbolic • students work independently, partners, small group & whole group daily	Reviewer only.) __X__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** ~~X~~ **Meets** X **Does Not Meet** **Strengths/Weaknesses:** W- only spanish option S- different on page available for each session - variety of strategies & modeling.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** • each session with actual items to guide teacher • easy to follow lesson • units have teacher guide, teacher copies, student books, home connection	**(Reviewer only.)** X **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** • gradual release of accountability to students	**(Reviewer only.)** X **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** • lesson begins with teacher led & move toward students' independence	**(Reviewer only.)** X **Yes** ____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** • professional development provided • internet blog designed to help teachers with various issues • sample student responses • step by step directions • text sometimes wordy and difficult to follow	**(Reviewer only.)** X **Yes** ____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** great manipulatives - game boards, spinners, - for a class of 30	**(Reviewer only.)** X **Yes** ____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Assessments include pre & post assessment, lesson check-ups, intervention assessments available	**(Reviewer only.)** X **Yes** ____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** • All assessments include - answer key - rubric / scoring guide - student reflection sheet on pre-assessment	**(Reviewer only.)** X **Yes** ____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Questions align to practice contextual word problems after concrete tangible items to visualize & represent	**(Reviewer only.)** X **Yes** ____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** names of creators and reviewers provided	**(Reviewer only.)** X **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** - Navigation through text is labeled well, easy to follow, explicit content	**(Reviewer only.)** X **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** - Homework always aligns to practice done in class. - home connections incorporated into curriculum twice a week.	**(Reviewer only.)** X **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** Bridges. Grade 4

Publisher: The Math Learning Center **Copyright:** 2016 **ISBN:** 978-1-60262-512-9

Reviewer ID # AM & DB **Date Review Completed:** March 9, 2016

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 4 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	~~X~~ Meets
_____ Does Not Meet	_____ Does Not Meet	X Does Not Meet

Alignment Criteria Overall:

~~X~~ **Meets** X **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** ~~X~~ **Yes** X **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths-
- Number corners connect within clusters and across domains
- Progression of work from concrete to iconic to symbolic throughout units
- Conceptual/Real world multi-step problems throughout

Weaknesses:
- Insufficient practice in student workbooks
- Spanish is the only option for ELL.
- practice standards not sufficiently addressed.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	The Math Learning Center
Title:	Bridges in Mathematics Second Edition
ISBN #	Baker, Chandler, Fisher, Harris, Montgue, Rattle
Grade Level(s) or Course:	Grade 5
Reviewer ID:	AM & DB

RECOMMENDED AS:

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

✓ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- materials focus on major works, includes pre & post assessments, growth checks throughout.

COHERENCE- Each unit begins with an introduction of mathematical content. Assessment map in assessment guide.

RIGOR- Students continually work in fluency, applying learned concepts to real-world contextual problems.

CONCEPTUAL UNDERSTANDING- Students solve problems in context and apply learned concepts to real world contextual problems.

MATHEMATICAL PRACTICES- Standard mathematical practices are integrated and explicitly tied to the activities.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- lessons contain multiple differentiation options to address the needs of a broad range of learners.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A:
Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.

- Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7)
- Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6)
- Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8)
- Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4)

How to Find the Evidence:

Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics).

For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.)

In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)

Evidence-

- Content + practice Standards
- assessments include grade level standards
- growth checks within units checkpoints

ex: Unit 1, Mod. 3, Session 2 - MD.3.,
Unit 1, M3, Sess 2 - MD5a - rectangular prism corner checkpoint - Oct pg 4 of.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

- pre + post test assessments
- growth checks
- skills addressed in pre + post are not always the same.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** ◦ major work/clusters focus instruction meet the requirement. ◦ place value, multi-digit w/decimal hundredths, ×, ÷, +, - fractions. (numerous work with fractions & decimals throughout the units)	**(Reviewer only.)** **X Meets** **____ Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Set-up of program unit → module ⇒ sessions (daily lessons). • all units include contextual problems • reinforced through number corners.	(Reviewer only.) X Meets ____Does Not Meet/ **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Spend 2-3 weeks reviewing previous year move to grade level. • Skills across the grade level chart unit introduction shows ~~the~~ teachers standards introduced. • Number corners introduce reinforce, extend skills & concepts. • Unit 4 - Mod 3, Session 5 → Standard algorithm	(Reviewer only.) X Meets ____Does Not Meet/ **Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Each unit has a chart with suggestions for support, challenge. • Intervention sets also assist to move through grade level material as building on prior knowledge	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Prior knowledge built upon • practice with equivalent fractions extended (Unit 2, module 1, session 2) • Colored fractions strips, comparing fractions clocks (Unit 2, module 1, session 3). • Progression contains with number lines (Unit 2, module 1, session 3).	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Assessment Guide provides progression of standards. • Does not promote simply reviewing then marginally extending • Eighteen modules in Bridges involve 2 or more sessions relating to NBT.B • One number corner workout from S[illegible] through April -NBT B.	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Each unit begins with a section of mathematical content. • Assessment guide, section 2, pg 11-17 describes where standards are assessed through year	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • Program definately clusters several domains within lessons • Number corner unit 8, 5.NBT.7, 5.NF.1. • Number corners connect within clusters and across domains	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) X Meets ____Does Not Meet **Strengths/Weaknesses:** • Journals for resources (notes) • Number corners connecting domains • Assessment guide shows Standards assessed.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

X Meets (2)

____ Partially Meets (1)

____ Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set e[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding present. place value - Unit 3, Module 1, Sessions 1, 2, 4, Module 3 Session 4.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** • Conceptual problems are built within units along with number corners • Math forums - Unit 1, mod 2, Session 2	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** • Written description for 3 dims. figures provided after modeling & demonstrating. • Drawings. open arrays. number lines - opportunities embedded throughout.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** • fluency - unit 4, mod. 1, 3, 4 unit 5; mod 1, 24. • number corners have computational fluency each month homeconnection + student book daily	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** • unit work, work place, daily practice pages. • variety of algorithms for all four operations Note: program has practice, but many times groups → partner progression, not always independent sufficiently.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** • Daily practice pages, number corners., home connections • variety of strategies working with whole numbers, fractions, decimals	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** • lessons includes: whole group, small group, partner work, independent practice • Cluster (major) represent approximately 70% of grade level work.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** modeling moves from concrete to iconic & symbolic #number corners include various models & contextual problems. (March)	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** • Application problems reflect major work of the grade • curriculum focuses on students having a deep understanding - evident through consistent practice with various strategies within the components of the curriculum	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** • modeling moves from concrete to iconic to symbols • real-world problems represented by students in various ways	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

- High quality of work on conceptual understanding
- multiple opportunities to practice various strategies
- Great job of offering student opportunities to move through progression - concrete, iconic - symbolic

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

- Most lessons have students employ reasoning / discussion
- journals are utilized
- Many examples of program coherence.
  MP7 - pictures to show numbers present throughout
  Unit 2, Mod. 1, Sess. 4 - adding fractions, area models utilized

(Reviewer only.)

X **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Metric AC2B: **Materials att to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each que and rate Metric 2B.** **(Reviewer only.)** **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** • Assessment Guide - Session 3 pg 19-25 • Unit sessions & Number corners - list to show focus of MP. • Sidebars included in teachers guide	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** • Graph paper to solve problems • Sidebar - "Math Practici in Action" ways to integrate practices into lesson	-Note. not all lessons have multple standards addressed.
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Teacher guide - shows information on practices. Assessment guide - shares practices in assessments	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** • Creats opportunities for students to reason • Unit 2, Mod 2, Session 2 - story problems, answers shared • Assessment rubrics for teachers	to assess arguments
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** • Unit 5 module 2 Session 1 +,- fractions using equivalents • Brians Box • Number corners	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** • Journal used as a resource for mathematical concepts with appropriate language • Teacher-created anchor charts (suggestions provided). • Vocabulary cards provided.	

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Multiple opportunities within all units - daily practice, number corners, - to practice reasoning with conceptual problems

Alignment Criterion 3: Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [redacted]ish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Spanish parent letters & student work book, home connection offered Note: only offered in Spanish - not for non-Spanish speaking ELL	Reviewer only.) ____Meets (2) X Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** • TE guide - differentiation for learning (scaffolding + challenge) Unit 2 - Racing Fractions • Workplace - allows students to work at their own pace. Note - not all lessons offer differentiation - just some.	Reviewer only.) X Meets (2) X Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** • Lessons begin with concrete practice & then into iconic and finally symbolic • Students work independently, in pairs, small groups • teachers provided with high quality questions	Reviewer only.) X Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** ~~X~~ **Meets** X **Does Not Meet** **Strengths/Weaknesses:** W- only spanish available for ELL S- differentation available for each session in TE guide -extensive modeling/strategies

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** • Lesson set-up thorough • Binders are organized & easy to follow • TE guide, copies, student book provided	**(Reviewer only.)** X **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** • Workplace provides practice in new skills • Student book builds independence • Home connection practice on skills previously taught.	**(Reviewer only.)** X **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** • lessons have specific sequence- begins with teacher-led and moves to independence of student.	(Reviewer only.) X Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** • professional development provided year long. • Sample student responses • Unit outline- page #'s for teacher- master, student book & home connection	(Reviewer only.) X Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Various manipulatives calendar marker, sticks, money cards, dice, vocab cards	(Reviewer only.) X Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Assessment binder- thorough. Includes: pre-assessments Check-ups post assessments oral assessment, intervention ideas	(Reviewer only.) X Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Assessments include- answer key rubrics / scoring guide reflection sheets (pre-assess)	(Reviewer only.) X Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessment questions align to practice. Contextual word problems. Offer concrete tangible items to visualize & represent.	(Reviewer only.) X Yes ____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Names of creators of program & reviewers are provided.	**(Reviewer only.)** X **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** • Student pages supported by manipulatives & models • graphics included • navigation through texts easy to follow	**(Reviewer only.)** X **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** • Home connection 2x week • Suggestions for family activities • Family support web page. • games, activities, literature suggestions	**(Reviewer only.)** X **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** Bridges - Grade 5

Publisher: The Math Learning Center **Copyright:** 2016 **ISBN:** 978-1-60262-573

Reviewer ID # AM + DB **Date Review Completed:** March 9, 2016

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

\ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 4 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	~~X~~ Meets
_____ Does Not Meet	_____ Does Not Meet	Y Does Not Meet

Alignment Criteria Overall:

~~X~~ Meets X Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** ~~X~~ **Yes** X **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths - number clusters connect within cluster and across domains

- progression of work from concrete to iconic to symbolic throughout units
- contextual - real world multi-step problems throughout with many opportunities to ~~of~~ reason and present arguments

Weaknesses - Spanish only option for ELL
- insufficient practice in student workbooks
- practice standards not sufficiently addressed in lessons

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill School Education LLC
Title:	My Math
ISBN #	Varias
Grade Level(s) or Course:	Kindergarten
Reviewer ID:	CO, AF

RECOMMENDED AS:

✓ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The instructional materials do not assess any topics from future grades. The assessments are featured online. Six assessment forms exist for each chapter and an online test generator is available. My Math only assesses grade level content.

COHERENCE-
Supporting content for Kindergarten My Math enhances focus and content by engaging students in major work. The instructional materials do not miss opportunities to connect non-major clusters of standards to the major clusters.

RIGOR-
At the beginning of each lesson a section on rigor exists to identify levels of complexity by problem or exercise number. for example (lesson 8 in chapter 3 has two workbook pages 225-226 for conceptual learning.

CONCEPTUAL UNDERSTANDING-
The majority of the homework contains problems that provide students the opportunity to practice procedural skills and fluency. Procedures for addition and subtraction are emphasized in Kindergarten. Most of the investigate the math is conceptual understanding. The talk Math targets conceptual understanding.

MATHEMATICAL PRACTICES-
Overall the instructional materials carefully attend to the full meaning of the mathematical practices. They are used within and throughout the grade. The teacher edition pages T22-T24. states the MP and the corresponding pages.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Kindergarten My Math meet the expectations for accessibility of standards. The materials for both students and teachers have multiple ways for students to engage with the vocabulary of mathematics that is consistently present throughout the materials.
Vocabulary checks are included in some homework assignments

OTHER: Chapter 3 page 172.

Strenghts of the program include:
Problem of the day
Lots of problem solving
Differenciated instruction
Vocabulary
Ell Component
Literature connection

Weaknesses of the program include:
10 frames are the main model

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** The instructional materials do not assess any topics from future grade levels. The assessments are featured online. Six assessment forms exist for each chapter and an online test generator is available. The Kindergarten *My Math* instructional materials only assess grade-level content on form assessments. An online test generator is included in the materials for teachers to create their own assessments.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: Focus and Coherence	Required Materials	Rating this Criterion:
Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	• Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A: **In each grade 1–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** The instructional materials do not spend the majority of the time on the major work of the grade. Kindergarten *My Math* consists of 12 chapters scheduled to be taught in 160 days. • In Kindergarten, the major work should happen closer to the 85% of the time benchmark. • Eight of the twelve chapters or about 67% of the time is spent on the major work of the grade or in support of the major work. • Four of the twelve chapters (8-12) or about 33% of the time is spent on the supporting work of the grade. • The chapters are written to be taught and assessed over 160 days. • Each chapter has a certain number of days set aside for instruction and two days for each unit are focused on assessment. • Chapters 1-7 are focused on the major work of the grade level. This is 102 out of 160 days, which is 64% of the instruction is focused on major work of the grade level. • The remaining 58 days or 36% of the work is focused on additional and supporting clusters. Chapter 9 focuses on a supporting cluster, while chapters 8-12 focus on additional clusters. The major work of Kindergarten, specifically counting and cardinality, are not given daily practice.	**(Reviewer only.)** **__x__Meets** **_____Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting [illegible], where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Supporting content for Kindergarten *My Math* enhances focus and content by engaging students in the major work of the grade. Overall, the instructional materials do not miss opportunities to connect non-major clusters of standards to major clusters and as a result, the supporting content does engage students in the major work of Kindergarten. • In chapter 9 on classifying objects, students must count objects (K.CC) in order to classify objects into groups (lesson 5). • In chapter 8 on measurement, students must count objects (K.CC) in order to estimate lengths of objects (lesson 3). • In chapter 11 on two-dimensional shapes, students must count (K.CC) vertices and sides of objects (lesson 2).	(Reviewer only.) **___x_Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The amount of content designated for Kindergarten *My Math* is viable for one school year. Overall, the amount of time needed to complete the lessons is appropriate for a school year of approximately 170-190. • There are 160 days of instruction/assessment. • Each lesson is designed for one day of instruction. • Chapter assessments and reviews are calculated to take two instructional days per chapter. Each chapter also has remediation and enrichment activities available plus chapter projects.	(Reviewer only.) **_x___Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Kindergarten *My Math* materials are consistent with the progressions in the standards. Content is clearly identified, there are extensive grade-level problems and concepts are explicitly related to prior knowledge. The Kindergarten materials develop according to grade-by-grade progressions in the standards and are clearly identified and related to grade-level work. • Each chapter identifies how students will apply current learning to the next chapter and also in the next grade. • In chapter 1, students are working on numbers 0-5. In chapter 2, students will be learning to count, represent and name number objects up to 10 (K.CC.A.1). This standard progresses to the Grade 1 standard, where students will be learning to read and write numerals and represent a number of objects with a written numeral up to 120 (teacher edition 1F). • Each lesson shows coherence by identifying which standard is being taught now and how it connects to the standard being taught in the next grade. • There is no content from prior or future grade levels. • The major work of the grade is found within the first seven chapters and supporting work is found in the last five chapters. • Each chapter has a page titled "What's in this chapter?" This page explains the skills associated with each CCSSM standard that is included within the chapter. An example of this can be found in chapter 1, page 1F. • Each chapter contains a section that explains what happened before, now and next with each of the standards. An example of this can be found in chapter 1 on page 11A. • The teacher edition has a page at the beginning of each chapter that shows what information the student should know before the chapter and also shows the progression to what standard will be taught in the next unit. The Kindergarten materials give all students extensive work with grade-level problems.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2E: **Materials re[illegible]on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Kindergarten materials foster coherence through connections at a single grade level. Overall, the materials do include learning objectives that are visibly shaped by the CCSSM cluster headings and the materials connect two or more clusters in a domain or two or more domains in a grade when appropriate. The Kindergarten materials include learning objectives visibly shaped by CCSSM cluster objectives. • The chapter overview of the teacher edition identifies each lesson as major, supporting, or additional work. The learning objective is listed below. • For example, chapter 1 focuses on major work of counting and cardinality. Lesson 1 has students counting 1, 2, and 3, then lesson 2 has students writing 1, 2 and 3. • Each lesson identifies the domain, cluster, objective and any additional objectives that are addressed in the lesson. Materials include problems and activities that serve to connect two or more clusters in a domain or two or more domains in a grade. • Activities in lesson 1, chapter 1 connect K.CC.B.4.A with K.CC.B.4.B and K.OA.A.1. • Activities in lesson 3, chapter 8 address K.MD.A.1 with connections to K.CC.B.4.B. Chapter 2 connects clusters under counting and cardinality.	(Reviewer only.) **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The scope and sequence of the materials are aigned to the common core progresson. Kindergarten: Numbers 0-5, Numbers to 10, Numbers beyond 10, Compose and Decompose numbers to 10, Addition, Subtraction, Compose and Decompose numbers 11-19, Measurement, Classify Objects, Position, 2 dimentional shapes, 3 dimentional shapes.	(Reviewer only.) **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Kindergarten materials include learning objectives visibly shaped by CCSSM cluster objectives. • The chapter overview of the teacher edition identifies each lesson as major, supporting, or additional work. The learning objective is listed below. • For example, chapter 1 focuses on major work of counting and cardinality. Lesson 1 has students counting 1, 2, and 3, then lesson 2 has students writing 1, 2 and 3. • Each lesson identifies the domain, cluster, objective and any additional objectives that are addressed in the lesson.	(Reviewer only.) **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials include problems and activities that serve to connect two or more clusters in a domain or two or more domains in a grade. • Activities in lesson 1, chapter 1 connect K.CC.B.4.A with K.CC.B.4.B and K.OA.A.1. • Activities in lesson 3, chapter 8 address K.MD.A.1 with connections to K.CC.B.4.B. • Chapter 2 connects clusters under counting and cardinality.	(Reviewer only.) **_x___Meets** **____Does Not Meet/ Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The material[illegible]pport the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use [illegible]valuate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for [illegible] question and rate Metric 1A.** **____Meets (2)** **__x__Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Kindergarten *My Math* materials partially meet the expectations for developing conceptual understanding of key mathematical concepts, where called for, in specific content standards or cluster headings. • The majority of the homework contains problems that provide students the opportunity to practice procedural skill and fluency and not conceptual understanding. • Procedures for addition/putting together and subtraction/taking apart are emphasized in Kindergarten. More attention is needed for the conceptual understanding of addition/subtraction • The content in chapters 1 and 4 through 6 address standards that are	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	explicitly outlined as conceptual standards. (K.CC.B.4 and K.NBT.A.1) • Of the 88 lessons, [illegible] focused specifically on the conceptual understanding standards. • The majority of lessons in Kindergarten My Math have a section called "Investigate the Math" which targets conceptual understanding. This is contained in the online lesson presentation. For example, see page 705B in the teacher edition. • All lessons in the series have a section called "Talk Math" which targets conceptual understanding. This is contained in the online lesson presentation. For example, see pages 495 – 496 in the teacher and student editions. • In the student edition, some of the lessons in Kindergarten *My Math* have a section "Explore and Explain" to begin the lessons which targets conceptual understanding. For example, see page 705 in the teacher and student editions. • Most Investigate the Math is conceptual understanding; however, there are a few instances where this is not true. For examples, see chapter 1, lesson 8, page 55B TE; chapter 2, lesson 10, page 151B TE; and chapter 2, lesson 11, page 157B.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-**	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Kindergarten *My Math* materials partially meet the expectations for giving attention throughout the year to individual standards to set an expectation of procedural skill and fluency. Lessons contain some examples of fluency practice pages. • Lessons contain few examples with fluency practice pages. • In the student edition, K.OA.5 is addressed in chapters 5 and 6. For example, see chapter 5, pages 339-344, and chapter 6, pages 415–420. • Homework does not contain multiple opportunities for students to practice fluency. • A "Fact Dash" game is available online with the student login to practice fluency. Students can select the operation and number facts. • The online teacher edition does have fluency pages available for printing. • "Sail through the Math" is an app game for fluency and is available for purchase ($1.99). • Eight lessons out of 89 address K.OA.A.5 Fluently add and subtract within 5 and are in chapters 5 and 6, which does not provide enough time to become fluent. • Procedural skills and fluency are present in the majority of the lessons in "Model the Math" (TE 43B). • Daily practice of counting /counting sequence is not provided in Kindergarten My Math. • In the student edition, fluency practice to write numbers is present in many lessons. • Math standard K.CC.A.1 (count to 100 by ones and tens) is addressed in 11 lessons out of 88 in chapters 1, 2 and 3. With counting to 100 by ones and tens being a required fluency for Kindergarten, 11 lessons are insufficient. • The cluster K.OA.A (Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from) has 13 lessons out of 88 that address the standard and are all in chapters 2 and 3. • Procedural skills such as writing numbers are present in most of the lessons. • Within the Connect Ed website, there are more opportunities to give fluency, but they are difficult to find.	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **x** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-**	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Kindergarten *My Math* materials meet the expectations for being designed so teachers and students spend sufficient time working with engaging applications of the mathematics without losing focus on the major work. • The majority of lessons include "Explore and Explain" which uses real-world problems to introduce concepts. For example, see chapter 1, lesson 5, page 35 and chapter 8, lesson 1, page 489. • The teacher edition states "Explore and Explain" and "Real-World Problem Solving Readers" address application. • While "Real-World Problem-Solving Readers" are available to provide additional problems, they were not reviewed by EdReports.org as they are not included in the basic package with the student and teacher editions and were therefore considered supplementary. • In the online portion, several chapters include "Project-Based Learning," which has students' applying mathematics to real-world situations.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** rten *My Math* materials meet the expectations for being designed so teachers and students spend sufficient time working with engaging applications of the mathematics without losing focus on the major work. • The majority of lessons include "Explore and Explain" which uses real-world problems to introduce concepts. For example, see chapter 1, lesson 5, page 35 and chapter 8, lesson 1, page 489. • The teacher edition states "Explore and Explain" and "Real-World Problem Solving Readers" address application. • While "Real-World Problem-Solving Readers" are available to provide additional problems, they were not reviewed by EdReports.org as they are not included in the basic package with the student and teacher editions and were therefore considered supplementary. • In the online portion, several chapters include "Project-Based Learning," which has students' applying mathematics to real-world situations.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** rten *My Math* materials meet the expectations for being designed so teachers and students spend sufficient time working with engaging applications of the mathematics without losing focus on the major work. • The majority of lessons include "Explore and Explain" which uses real-world problems to introduce concepts. For example, see chapter 1, lesson 5, page 35 and chapter 8, lesson 1, page 489. • The teacher edition states "Explore and Explain" and "Real-World Problem Solving Readers" address application. • While "Real-World Problem-Solving Readers" are available to provide additional problems, they were not reviewed by EdReports.org as they are not included in the basic package with the student and teacher editions and were therefore considered supplementary. • In the online portion, several chapters include "Project-Based Learning," which has students' applying mathematics to real-world situations.	

Does modeling build slowly across K–8, with applications that are relatively simpl[illegible] earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** rten *My Math* materials meet the expectations for being designed so teachers and students spend sufficient time working with engaging applications of the mathematics without losing focus on the major work. • The majority of lessons include "Explore and Explain" which uses real-world problems to introduce concepts. For example, see chapter 1, lesson 5, page 35 and chapter 8, lesson 1, page 489. • The teacher edition states "Explore and Explain" and "Real-World Problem Solving Readers" address application. • While "Real-World Problem-Solving Readers" are available to provide additional problems, they were not reviewed by EdReports.org as they are not included in the basic package with the student and teacher editions and were therefore considered supplementary. • In the online portion, several chapters include "Project-Based Learning," which has students' applying mathematics to real-world situations.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_x___Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Kindergarten *My Math* instructional materials meet the expectations for balance. Overall, the three aspects of rigor are neither always treated together nor always treated separately within the materials, and there is a balance of the three aspects of rigor within the grade.

- At the beginning of each lesson a section on rigor exists to identify levels of complexity by problem or exercise number. For example, lesson 8 in chapter 3 has two workbook pages (pages 225 – 226) for conceptual learning (understand concepts), one workbook page (page 227) for fluency/procedural skill (apply concepts), and one workbook page (page 228) for application (extend concepts).

(Reviewer only.)

__x__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials a[illegible]d to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2[illegible]to evaluate Metric 2B. Record evidence for eac[illegible]stion and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **__x__Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Kindergarten My Math, the materials meet the expectations for identifying the MPs and using them to enrich mathematics content within and throughout Kindergarten. Overall, the instructional materials do not over-identify or under-identify the MPs, and they are used within and throughout the grade. • The teacher edition, pages T22 – T24, states the MPs and the corresponding pages. • The practices are identified throughout all 89 lessons. Each lesson addresses three to four practices as a focus. • The teacher edition indicates which Mathematical practice the student is working with in the lesson and in the homework. • **The student edition for Kindergarten does not indicate which Mathematical practice is present.** • **Not addressed on assessments.** Overall, the instructional materials carefully attend to the full meaning of some of the practice standards but not for all of them. The full meaning of each practice standard is not consistently addressed.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Overall, the instructional materials carefully attend to the full meaning of some of the practice standards but not for all of them. The full meaning of each practice standard is not consistently addressed.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Overall, the instructional materials carefully attend to the full meaning of some of the practice standards but not for all of them. The full meaning of each practice standard is not consistently addressed.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **___x_Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	Mathematical Practices are throughout every lesson.	____**Partially Meets (1)** ____**Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	Mathematical Practices are throughout every lesson. Chapter 1 Lesson 1: Building conceptual understanding – includes arguments, models, and solutions.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.		

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:

Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:

Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:

Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-

The Kindergarten *My Math* instructional materials meet the expectations for explicitly attending to the specialized language of mathematics. Overall, the materials for both students and teachers have multiple ways for students to engage with the vocabulary of mathematics that is consistently present throughout the materials

- The special language of mathematics is a strength of the series.
- Individual vocabulary cards are found at the beginning of each chapter in the student edition.
- Vocabulary checks are included in some homework assignments. For example, see chapter 3, page 172.
- Vocabulary assessments can be created online.
- Virtual word walls are available online.
- "Match the Pairs" is an interactive vocabulary component.
- "Check my Progress" assesses vocabulary.
- Each chapter begins with a foldable that supports vocabulary development.
- "My Math Words" is at the beginning of some chapters. For example, see chapter 5, lesson 1, page 325A TE.
- The teacher, student, and online editions contain extensive glossaries in English and Spanish.

Oral and listening assessments are available online.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of

Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2[illegible]).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Every content lesson is organized with a five-step plan for instruction. 1. Get Ready 2. Investigate and Model 3. Teach 4. Practice and Apply 5. Wrap Up	(Reviewer only.) ___x___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** My Math has problems and exercises. The math in the chapter shows how the math relates to previous and future work.	(Reviewer only.) _x_____ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The design of work is arranged from guided practice, independent practice, extra practice, apply and extend. The problem of the day, literature connection, investigate the math and model the math have students using the mathematical practices.	(Reviewer only.) __x____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** There are several online resources available for the teacher. The teacher can choose to only use the print resourse. ConnectED is an online portal that has all of the resources available digitally. My Math gives teachers lots of background knowledge about the content.	(Reviewer only.) ___x___ Yes _____ No

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives and diagrams are included with the curriculum. The use of manipulatives start in Kindergarten. Instruction for the use of manipulatives is in the student edition and in Modeling the math.	(Reviewer only.) __x____ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Pre and post tests for each unit are included with My Math. The Problem of the Day is also a great way to assess students informally. Assessment masters are available on line and in print. There is also a check my progress diagnostic test and pretest.	(Reviewer only.) ____x__ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** The assessments include rubrics, answer keys, and scoring guidelines both in digital and print form.	(Reviewer only.) ___x___ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The unit tests assess students proficiency.	(Reviewer only.) ___x___ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-**	(Reviewer only.) ___x___ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The use of real world examples help to gain the students interest. This helps the students to understand the content. This helps students relate. The material is visually appealing.	(Reviewer only.) ___x___ Yes _____ No

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Parent letters are provided to introduce the math topics and to offer suggestions for assisting with student learning at home.	**(Reviewer only.)** __x____ **Yes** _____ **No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus __X__ **Meets** _____ **Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** __X__ **Meets** _____ **Does Not Meet**

Non-Negotiable Overall:

X Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 4 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
_____ Meets	X Meets	X Meets
X Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

X Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

- Problem of the day
- Lots of problem solving
- Differenctiated instruction
- Vocabulary
- Big ELL component
- Big Literature Connection

Weaknesses:

- 10 frames are the main model
- rigor could be higher
- not many games for kids to play

not much for counting 21-100

RECOMMENDED AS:

__✓__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- My Math assesses on grade level standards. Lessons are devoted to the major works of the grade level. There is a natural progression of skills taught through the grade level curriculum.

COHERENCE-

Each lesson identifies prerequisite skills needed to master current standards and practices being taught. It also identifies what standards will be taught in next grade level and how they link.

RIGOR-

Each chapter begins with basic skills and builds to conceptual understanding.

CONCEPTUAL UNDERSTANDING-

Each lesson has a conceptual understanding piece with emphasis on discussion.

MATHEMATICAL PRACTICES-

Mathematical practices are infused throughout each lesson. They are in the Teacher Edition and Student Edition. They are linked to standards.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

ELL support and differentiating options contained in each lesson.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **After reviewing the table of contents, chapter tests, and unit tests all standards that are expected to be taught at the 1st grade level are the only standards being tested.**	(Reviewer only.) **_X_ Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Strengths: Chapter overviews show standards taught. Tests on each required standard in a variety of ways. (differentiation)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **_X_ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **74% of lessons devoted to major work of the grade. 7 of the 10 chapters (1-6 and 8) focus on the 4 major clusters for 1st grade. In the mid range of the 65%-85% range for devotion to major works.** **The other 3 chapters focus on the rest of the standards. Chapters 1-6 are focusing on addition and subtraction while chapter 8 is time and measurement.** **The pacing of the program puts most of the major work within the 1st half of the school year. The remainder of the chapters are supporting clusters.**	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Data is mostly represented in the data chapters (7 and 8). However, within that unit every data display is tied to real world problems and students have to use addition or subtraction to solve the problems within the unit.** **Page 501C – "What students should understand" overview.** **Page 509A – Lesson 1 (chapter 7) – "On My Own" – good example of data interpretation.**	(Reviewer only.) **__X__ Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The teacher's edition breaks down what the students learned in the previous grade and each chapter begins with an Am I Ready? This assesses whether students have the prerequisite skills mastered to be successful with the new content being taught. All content within the chapters builds on what they should already know.**	(Reviewer only.) **__X__ Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson has an explore and explain, see and show, on my own, and problem solving section. This scaffolds the lessons and gives the students several opportunities within each lesson to practice the topic. There is also a differentiation section containing reteach, on level, and beyond activity for each lesson for homework.**	(Reviewer only.) **__X__ Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **There is a "What's the Math in this Chapter" which shows what students should already know, what students should understand, and what students should be able to do, and what will my students do next with these skills for each chapter. This shows the direct link to prior standards that have been taught and how the chapter builds on prior knowledge.**	(Reviewer only.) **__X__ Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **This is found in the "Review What I Know" at the beginning of each chapter. Instruction for review of concepts is based on how students answer and what they miss.** **For example – Chapter 1 page 11A – shows K.OA.2 progression to 1.OA.1**	(Reviewer only.) **__X__ Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Every lesson is labeled with a domain, major cluster, MP, lesson objectives, and specific standard being taught.**	(Reviewer only.) **_X_ Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **In the supplement "Countdown to Common Core" Mathematics Performance Tasks; students are given 4 opportunities to solve problems that cover multiple mathematical practices, domains, and standards within a single task.**	(Reviewer only.) **_X_ Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Chapter overviews shows domains and major works covered in the curriculum.** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **_X_ Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.		

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set e[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **Every chapter begins with an essential question which is then referenced within every lesson in that chapter. Each lesson helps the students to gain a conceptual understanding of the essential concept.** **Each lesson within the chapter uses the previous lessons knowledge to go to a deeper understanding of the concept.** **For example – Chapter 1 lesson 2 and 3 – building conceptual understanding of part-part-whole.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Every lesson, homework page, and test has a problem solving section. Every lesson has a math talk to get conversations about the topic started.** **For example – Chapter 1 lesson 2 - Investigate the discussion. – Students discuss subtraction.**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **Mathematical practices are identified by a red arrow on the page. The teacher's edition then has an activity to check students for understanding.** **For Example – Chapter 2 1.OA.1 Lesson 2** • **Problem of the Day** • **Model the Math** • **Explore and Explain** • **See and Show** **Models go from enactive to iconic**	

Metric AC1B: **The material[illegible]e designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each questi[illegible]nd rate Metric 1B.** **(Reviewer only.)** **__x__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **There is fluency practice in each of the chapters that deals with addition and subtraction.** **Pg. 93,94, 197-198, 267-268, 331-332 are fluency specific and many practice pages within the addition and subtraction chapters.** **There are also on-line digital resources like fact dash and sail through math that work with fact fluency.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **Within each lesson students are working toward fluency within the problems solving section of the lesson where they need to apply what they have learned.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Every lesson within the addition and subtraction chapters has an independent portion where students are practicing their fluency.** **See Chapter 1 lesson 7 for an example.**	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **In addition to the student edition there are also practice opportunities with learning stations. This gives students practice through games, problem solving, graphic novels, real world problem readers, and interactive activities.** **These can be referenced in the teacher's edition 1l; 102; 99l; 99-100; 203G; 203-204; 273G; 273-274**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Problem solving within every lesson.**	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **The program uses HOT (Higher Order Thinking) problems to apply the major work.** **Example: Chapter 2 Lesson 12 page 182 of the student book**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **An example would be the array model where in 1st grade they use arrays to begin the understanding of addition to 10 and then to 20. Then in 2nd grade students are introduced to repeated addition using arrays.**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Weakness – Could use more practice with missing addends in all positions.

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X_ Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **Mathematical practices are labeled at key points in the lesson instruction to provide an indication of a clear and specific example for teachers to use to draw students attention to the practice without making it overwhelming.** **Example: MP8 (Look for and express regularity in repeated reasoning) is found throughout every chapter.**	**(Reviewer only.)** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **The beginning of each chapter outlines the mathematical practices that will be represented in that chapter. Each lesson identifies the practice that represents the mathematical practices. They are not identified on the assessments but similar problems are evident.** **For Example - Chapter 1 – Lesson 1 - page 11A – MP 1, 2, 3, 4, 7**	**____Partially Meets (1)** **____Does Not Meet (0)**

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **The standards are identified in early grades and key words and ideas are called out in the text making it simple for students to identify what they need to concentrate on to solve the problem.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **The teacher's edition calls out each mathematical practice within the lesson and has dialog or a lesson help to help make sure the practice is covered.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **My Math has a built in feature called math talk in the lessons. It gives students an opportunity to describe and defend work. There is a math talk in almost every lesson.** **Student edition page 212 – Talk Math**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **My Math has a built in feature called math talk in the lessons. It gives students an opportunity to describe and defend work.** **Students are given practice through HOT problems: Example Chapter 5 Lesson 4** **Morgan wrote this sentence. Tell why Morgan is wrong. Make it right.** **3 tens and 6 more is 16.**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Each chapter has math vocabulary that is introduced at the beginning of each chapter. It is then reinforced throughout the chapter in the lessons and tested on the check my progress and at the end of each chapter. Interactive guides for ELL and vocabulary support.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Strength - Content standards and practice standards are linked throughout each lesson and chapter overviews.

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__ Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** How to Find the Evidence: Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **There is ELL Support in the teacher's edition for every lesson. The lessons feature differentiated support for beginning, intermediate, and advanced language proficiency. The activities emphasize oral language development.**	Reviewer only.) __x__ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** How to Find the Evidence: Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **The program has scaffolded lessons as in I do, we do, you do. It also has leveled homework; reteaching, practice, and enrich.** **RTI Support at the end of each lesson.** **ELL Support Guide.**	Reviewer only.) __X__ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** How to Find the Evidence: Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **There is differentiated instruction for each lesson within a chapter. These include hands on activities, games, and lesson animations. For examples see: 15A; 21A; 27A; 33A.** **Online option to differentiate assessments.**	Reviewer only.) __X__ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Strengths – Support provided in each lesson.** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each lesson is organized under a five-step plan for instruction: Get ready, investigate and model, teach, practice and apply, and wrap it up.**	**(Reviewer only.)** **__X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **My Math offers a variety of problems and exercises. There are several problems that mimic the examples of the new mathematics that were introduced in the lesson There are also multi-step problems that allow students to combine the math that they learned with previously learned skills.**	**(Reviewer only.)** **__X__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Each lesson is organized under a five-step plan for instruction: Get ready, investigate and model, teach, practice and apply, and wrap it up. Each chapter includes a problem solving investigation that is linked to a real-world situation so students can understand how it is important to them. Scope and Sequence page T17	(Reviewer only.) __X__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Everything can be taught from print form; however, ConnectED which is the online portal has all of the digital resources in one place including teacher's edition, student edition, digital animations and tutorials, editable worksheets, and assessment resources. It also has professional development, page 1l, such as webinars and videos on standards for MP's.	(Reviewer only.) __x__ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- There are multiple manipulatives to use with the program to help with the visual and kinesthetic learners. They are primarily used during the modeling math part of the lesson. There is also a foldable at the beginning of most chapters to help with the main concept of the chapter.	(Reviewer only.) __x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There is Am I Ready at the beginning of each chapter that assesses previously taught skills or prerequisite skills for the chapter. There are also chapter pretests and check my progress tests, and end of chapter tests in multiple formats for all types of learners. Also included is standard test practice.	(Reviewer only.) __x__ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Each chapter has a performance task which includes a rubric for scoring. Also there are answer keys for all assessments. Think Smart for the SBAC Guide contains rubrics.	(Reviewer only.) __x__ Yes _____ No

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **All tests are in student friendly wording (if you teach the academic vocabulary). See example on page 160-184 in the assessment masters for all Chapter 7 Tests.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **See pages xx through xxiii for a complete list of the authors, consultants, and reviewers of the program.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The text is colorful and student friendly. The teacher's edition is easy to navigate and clear. The exercises are written so students can relate and to make it more interesting. For examples see pages 235-240 in the student edition.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **There are parent letters at the beginning of each chapter to help explain to parents what their child will be learning. There is also a stepped out problem on all homework pages to demonstrate to parents what was learned. In addition there are also digital personal tutors available on line. There is also ConnetEd.mcgraw-hill.com available for parent help.**	**(Reviewer only.)** **__x__ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level:** My Math Grade 1

Publisher: McGraw-Hill School Education, LLC **Copyright:** 2014
ISBN: various

Reviewer ID # _____ **Date Review Completed:** _____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus __X__ Meets _____ Does Not Meet	**Non- Negotiable 2: Focus and Coherence** __X__ Meets _____ Does Not Meet

Non-Negotiable Overall:

__X__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: __6__ **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** __X__ Meets _____ Does Not Meet	**Points:** __6__ **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** __X__ Meets _____ Does Not Meet	**Points:** __6__ **of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** __X__ Meets _____ Does Not Meet

Alignment Criteria Overall:

__X__ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill
Title:	My Math
ISBN #	978-0-02-138395-5 and 978-0-02-138396-2
Grade Level(s) or Course:	2nd
Reviewer ID:	EL & EL

RECOMMENDED AS:

X **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The work is focused on grade level standards with the majority on the time spent on the major clusters.

COHERENCE- Major clusters of standards are supported by the minor clusters. Learning from prior grade level is explicit to teachers and connected work for next grade level.

RIGOR- Work supports the development of conceptual understanding (maybe more support than ideal) and fluency is present to build procedural skills, especially when online resources are considered.

CONCEPTUAL UNDERSTANDING- Opportunities are present for students to develop conceptual understanding through: essential questions & building on prior learning.

MATHEMATICAL PRACTICES- Connections are made for teacher and students between content standards and mathematical standards.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Many supports for all students with differentiation (RTI & ELL specifically) and teacher is supported in teacher all students. The "Am I Ready" pre-assessment helps students and teachers w/ specific things to try when a student misses a problem.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **8 of the 12 chapters (1-7 and 11) focus on the 4 major clusters for 2nd grade. The other 4 chapters focus on the rest of the standards. Units 1-7 are focusing on mastering addition and subtraction while unit 11 is measurement. The pacing of the program puts most of the major work within the 1st half of the school year. The remainder of the chapters are supporting clusters.**	**(Reviewer only.)** **_X__ Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Data is mostly represented in the data chapter (9). However, within that unit every data display is tied to real world problems and students have to use addition or subtraction to solve the problems within the unit.**	(Reviewer only.) **_X_ Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The teacher's edition breaks down what the students learned in the previous grade and each chapter begins with an Am I Ready? This assesses whether students have the prerequisite skills mastered to be successful with the new content being taught. All content within the chapters builds on what they should already know.**	(Reviewer only.) **_X_ Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson has an explore and explain, see and show, on my own, and problems solving. This scaffolds the lessons and gives the students several opportunities within each lesson to practice the topic. There is also a reteach, on level, and beyond activity for each lesson for homework. Common Errors are also addressed.**	(Reviewer only.) __X__ Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **There is a "What's the Math in this Chapter" which shows what students should already know, what students should understand, and what students should be able to do, and what will my students do next with these skills for each chapter. This shows the direct link to prior standards that have been taught and how the chapter builds on prior knowledge.**	(Reviewer only.) _X___ Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **This is found in the "Review What I Know" at the beginning of each chapter. Instruction for review of concepts is based on how students answer and what they miss.**	(Reviewer only.) __X__ Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Every lesson is labeled with a domain, major cluster, and specific standard being taught. Each chapter has an essential question that is addressed in every lesson.**	**(Reviewer only.)** **_X__ Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **In the supplement "Countdown to Common Core" Mathematics Performance Tasks; students are given 4 opportunities to solve problems that cover multiple mathematical practices, domains, and standards within a single task.**	**(Reviewer only.)** **_X__ Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Every chapter begins with an essential question which is then referenced within every lesson in that chapter. Each lesson helps the students to gain a conceptual understanding of the essential concept. For example in chapter 1 the essential question is "What strategies can I use to add and subtract?" and by the end of the unit students should be able to show make a 10, use double to add and subtract, complete fact families, and find missing addends.

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__X__ Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **Each lesson within the unit uses the previous lessons knowledge to go to a deeper understanding of the concept.** **Chapter 1 starts with addition properties and then moves to count on to add, then doubles and near doubles, make a 10, adding 3 numbers, writing number sentence, count back to subtract, subtract all and zero, using doubles to subtract, relate addition and subtraction, missing addends, fact families, and word problems** **The foldable, making connections, and modeling the math help to build the conceptual understanding.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Every lesson, homework page, and test has a problem solving section. Every lesson has a math talk to get conversations about the topic started.**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **Mathematical practices are identified by a red arrow on the page. The teacher's edition then has an activity to check students for understanding. For example on pg. 82 of the student book is a red arrow. The teachers edition tells that it is for MP3 and has students tell a friend both fact families they created. The friend has to verify whether it is accurate or suggest ideas on how to change the fact family to make them accurate.**	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**There is fluency practice in each of the chapters that deals with addition and subtraction.** **There are also on-line digital resources like fact dash and sail through math that work with fact fluency.**	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__x__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **There is fluency practice in each of the chapters that deals with addition and subtraction.** **Pg. 93,94, 151, 152, 209, 210, 281, 282 are fluency specific and many practice pages within the addition and subtraction chapters.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** **Within each lesson students are working toward fluency within the problems solving section of the lesson where they need to apply what they have learned.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Every lesson within the addition and subtraction chapters has an independent portion where students are practicing their fluency.** **See Chapter 1 lesson 7 for an example.**	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **In addition to the student edition there are also practice opportunities with learning stations. This gives students practice through games, problem solving, graphic novels, real world problem readers, and interactive activities.** **These can be referenced in the teacher's edition 1l; 1-2; 157G; 157-158; 215G; 215-216; 285G; 285-286**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__ Meets (2)** **_____Partially Meets (1)** **_____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Problem solving within every lesson.**	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **The program uses HOT (Higher Order Thinking) problems to apply the major work.** **Example: Chapter 1 Lesson 11 page 78 of the student book**	

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **An example would be the array model where in 1st grade they use arrays to begin the understanding of addition to 10 and then to 20. Then in 2nd grade students are introduced to repeated addition using arrays (Chapter 2, Lesson 5)**	
Alignment Criterion 1: **Rigor and Balance** **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** **AC1** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X_ Meets** **____Does Not Meet** **Strengths: Math Talk, See and Show, Conceptual problems** **Weaknesses:Not enough opportunities for students to have productive struggle because of the amount of support in the lessons. Within Math Talk a lot of the questions were low DUK.**
Directions for Alignment Criterion 2 **Standards for Mathematical Practice**		

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **Mathematical practices are labeled at key points in the lesson instruction to provide an indication of a clear and specific example for teachers to use to draw students attention to the practice without making it overwhelming.** **Example: MP8 (Look for and express regularity in repeated reasoning) is found throughout chapters 3 (Subtract two-digit numbers), 6 (Add Three-digit number), and 7 (Subtract three-digit numbers)**	**(Reviewer only.)** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **The beginning of each chapter outlines the mathematical practices that will be represented in that chapter. Each lesson identifies the practice that represents the mathematical practices.** **They are not identified on the assessments but similar problems are evident.**	**____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **The standards are identified in early grades and key words and ideas are called out in the text making it simple for students to identify what they need to concentrate on to solve the problem.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **The teacher's edition calls out each mathematical practice within the lesson and has dialog or a lesson help to help make sure the practice is covered.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__ Meets (2)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **My Math has a built in feature called math talk in the lessons. It gives students an opportunity to describe and defend work. In second grade, it was found on pp. 18; 56; 70; 82; 143; 166; 230; 296; 334; and 414.**	**____Partially Meets (1)** **____Does Not Meet (0)**

Do the materials support students in producing not only answers and solutions, but also in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **My Math has a built in feature called math talk in the lessons. It gives students an opportunity to describe and defend work. In second grade, it was found on pp. 18; 56; 70; 82; 143; 166; 230; 296; 334; and 414.** **There is a Write Math on some of the independent work.** **Students are given practice through HOT problems: Example Chapter 8 Lesson 1** **Paul finds 5 dimes and 2 nickels. He counts them and says he has 50 cents. Tell why Paul is wrong. Make it right.**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Each chapter has math vocabulary that is introduced at the beginning of each chapter. It is then reinforced throughout the chapter in the lessons and tested on the check my progress and at the end of each chapter.**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **There is ELL Support in the teacher's edition for every lesson. The lessons feature differentiated support for beginning, intermediate, and advanced language proficiency. The activities emphasize oral language development.**	**Reviewer only.)** **__x__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **The program has scaffolded lessons as in I do, we do, you do. It also has leveled homework; reteaching, practice, and enrich.**	**Reviewer only.)** **__X__ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teaching materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **There is differentiated instruction for each lesson within a chapter. These include hands on activities, games, and lesson animations. For examples see:** **15A; 21A; 27A; 33A; 39A; 45A; 53A; 59A; 65A; 73A; 79A; 85A; and 91A**	**Reviewer only.)** **__X___ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each lesson is organized under a five-step plan for instruction: Get ready, investigate and model, teach, practice and apply, and wrap it up.**	**(Reviewer only.)** **__X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **My Math offers a variety of problems and exercises. There are several problems that mimic the examples of the new mathematics that were introduced in the lesson There are also multi-step problems that allow students to combine the math that they learned with previously learned skills.**	**(Reviewer only.)** **__X__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** **Each lesson is organized under a five-step plan for instruction: Get ready, investigate and model, teach, practice and apply, and wrap it up.** **Each chapter includes a problem solving investigation that is linked to a real-world situation so students can understand how it is important to them.**	**(Reviewer only.)** **__X__ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** **Everything can be taught from print form; however, ConnectED which is the online portal has all of the digital resources in one place including teacher's edition, student edition, digital animations and tutorials, editable worksheets, and assessment resources.** **TE is very comprehensive; including content knowledge behind the standards and models.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** **There are multiple manipulatives to use with the program to help with the visual and kinesthetic learners. They are primarily used during the modeling math part of the lesson. There is also a foldable at the beginning of most chapters to help with the main concept of the chapter.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **There is Am I Ready at the beginning of each chapter that assesses previously taught skills or prerequisite skills for the chapter. There are also chapter pretests and check my progress tests, and end of chapter tests in multiple formats for all types of learners. Also included is standard test practice. Formative assessments were not explicitly labeled but many of the activities could be used as formative assessments.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **Each chapter has a performance task which includes a rubric for scoring. Also there are answer keys for all assessments.**	**(Reviewer only.)** **__x__ Yes** **_____ No**

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **All tests are in student friendly wording (if you teach the academic vocabulary). See example on page 160-184 in the assessment masters for all Chapter 7 Tests.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **See pages xx through xxiii for a complete list of the authors, consultants, and reviewers of the program.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The text is colorful and student friendly. The teacher's edition is easy to navigate and clear. The exercises are written so students can relate and to make it more interesting. For examples see pages 235-236 in the student edition.**	**(Reviewer only.)** **__x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **There are parent letters at the beginning of each chapter to help explain to parents what their child will be learning. There is also a stepped out problem on all homework pages to demonstrate to parents what was learned. In addition there are also digital personal tutors available on line.**	**(Reviewer only.)** **__x__ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level:** My Math Grade 2

Publisher: McGraw-Hill School Education, LLC **Copyright:** 2014

Reviewer ID # EI & EL **Date Review Completed:** 3-8-16

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
___X____ Meets _____ Does Not Meet	__X___ Meets _____ Does Not Meet

Non-Negotiable Overall:

___X__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet

Alignment Criteria Overall:

___X__ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill
Title:	My Math Grade 3
ISBN #	
Grade Level(s) or Course:	3
Reviewer ID:	DD + AJ

RECOMMENDED AS:

X **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- NN1 & NN2 - my Math 3 devotes majority to the major work of 3 grade.

COHERENCE- NN1 & NN2 My Math 3 provides sufficient support materials to enhance & support Engaging students in the major work of third Grade.

RIGOR- AC1 My Math 3 provides materials and opportunities to help students meet CCSS standard providing both rigor and balance.

CONCEPTUAL UNDERSTANDING- AC1 My Math 3 materials supports the student development and conceptual understanding of key mathematical concepts with regards to CCSS.

MATHEMATICAL PRACTICES- AC2 - Teacher and student edition provide sufficient information to provide understand of mathematical practices for both. Mathematical Reasoning is addressed through various problem-solving strategies and examples.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- AC3 My Math 3 provides good support throughout all materials including teacher's and student edition, and supporting materials to engage diverse learners (and teachers).

OTHER: My Math 3 provides access and practice to the major work and supporting work of the third grade.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	All materials included in My Math are aligned to the standards for 3rd grade. Future grade level concepts may be alluded to, but are not assessed. The materials stick to the concepts, skills, and strategies stated in the standards. Each Lesson includes a focus for the teacher, which states the connection to the Common Core Standards and a coherence portion, which provides thinking across grade levels. Evidence: • Table of Contents (TE) vi-xx • Assessment Masters • Think Smart for the Smarter Balanced Assessment • Common Core State Standards Correlation Chart (T17-T21) • Assessment Master	**(Reviewer only.)** **_X___Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	Materials for 3rd grade, My Math devote the majority of lessons and activities to the major works of the grade. Of the 14 chapters in My Math, 11 are focused on the major works within 3rd grade, equaling 78%. With a total of 160 days, 125 are devoted to the major work of the grade, equaling 78%. • Table of Contents (TE) vi-xx • Assessment Masters • Unit Overviews • Individual Lesson Pacing Guides	**(Reviewer only.)** **_X___Meets** **_____Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Supporting materials support, enhance the focus and coherence the Major Work in CCSS standards and math practices. The supporting works for the grade are not isolated from the major works. For example, in **Measurement and Data; Represent and Interpret Data** (a supporting work), connections to using **Develop understanding of fractions as numbers** (a major work) are made. **Evidence:** • Chapter 12. Lesson 6 connects the creation of a line plot with measures halves and fourth of an inch. This connects measurement and data with the fraction standards. • Chapter 12: Represent and Interpret Data connects with Operations and Algebraic Thinking as students answer story problems to place data on graphs. • On-line professional development and extra videos for each chapter	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The progressions in the materials match those in the Standards. Discrepancies in the content progressions were minimal and used to enhance learning. Each lesson includes a Coherence portion for teacher reference, which provides a sequence of thinking across the grades. It provides a connection to previous lesson (or previous grade), the current lesson, and the subsequent lesson (or subsequent grade). It is also explicitly states how the lesson links to major topics within the grade. Future grade concepts are not taught in the teacher manual, student manual, or online resources. **Evidence:** • Lesson progressions TE: Chapter 2 Lesson 3 p. 73a Addition Patterns Previous Grade 2 2.Oa.2 NOW Grade 3 3.OA.9 NEXT Grade 4 4.OS.5	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The materials give all students the opportunity to work with on grade level problems. Although materials are provided for intervention and remediation, the program does not focus on these sources as a replacement of the core curriculum. Each Lesson includes RTI steps, and identifying what support students may need. Activities for student beyond level (extend) are weak in extending thinking beyond the grade level. **Evidence:** • TE: Chapter 10 Lesson 1: Unit Fractions pg 573A Differentiated Instruction • Teacher guide: Differentiated Instruction • "Am I Ready?" give students and teacher a review and questions to assess the repeated addition concept. This activity is also available on-line.	(Reviewer only.) **_X___Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Materials explicitly relate grade-level concepts to prior knowledge. For teacher reference, each chapter has a "what should my students already know" section. This states what skills student should already possess from the previous grade level. However, connections to previous grade level material or prior knowledge are not explicitly stated in the student materials. **Evidence:** • Chapter 10 TE pg 561E What's the Math in This Chapter? What should my students already know? In the previous grade...What students should understand...what students should be able to do • 2.OA.4 students use Operations and Algebraic Thinking and Operations in Base Ten to gain knowledge of using additon to find the number of total objects arranged in rectangular arrays and skip counting by tens and five, both prerequisites for understanding multiplication.	(Reviewer only.) **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Materials are focused on the current grade-level progressions. Previous grade level topics are quickly reviewed as needed in lessons. The materials focus on third grade standards. **Evidence:** • Chapter 10 Lesson 2 Common Core Quick Check-review of the previous lesson TE 575B Overview • Chapter 13 Overview TE 745C-F What students should be able to understand and do • It also lists Mathematical practices 1-5. Another sidebar listed as Coherence list the progression across grades from the previous grades, the current level and the next year's level. The are accurate with respects to CCSS. • Student material briefly lists the previous years standards, lists in explicit form the current year's CCSS standards and standards for mathematical practice in an easy to read and understand format at the beginning of each chapter. MEETS	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	A correlation between learning objectives and cluster headings is explicit in the materials. The lesson explicitly states the standards being taught in each lesson. Each lesson identifies the cluster, which the lesson correlates to. Student edition also includes CCSS standards and mathematical practices in student friendly language **Evidence:** • For example, in third grade, a cluster is **solving problems involving measurement and estimation of intervals of time, liquid volumes, and masses of objects.** Chapter 11 Lesson 2 (TE 639A supports the learning of this cluster. The stated lesson objective shows a direct correlation to the major cluster. When a lesson is correlated to a supporting work, the lesson focus identifies that as an additional cluster, Chapter 2, Lesson 8 TE 107A. • Student work example: What are all the possible fruit sorbet combinations if you chose one fruit and one flavor to combine? Students use a colorful tree diagram with 3 fruits and three flavors to solve the problem and reach a solution that ends with a multiplication equation.	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	The materials are weak in connecting clusters and domains. The lesson overview only states one cluster and standard. Upon review of the concepts in the lesson, generally only one standard is taught. In the lesson over view Coherence, links to major topics are stated. Opportunities for connecting multiple standards are missed in the materials. **Evidence:** • Chapter 2: Lesson 7l Adding Three-digit numbers focuses only on the procedural aspects of addition. There is a lack of story problems. • Chapter 2: Lesson 8 107A Linking to Major Topics • Example: Chapter 5, Lesson 5 Inverse Operations addresses 3 OA 4, 3 OA 6 and 3 OA 7, with 3 OA 7 being the major domai: Fluently multiply within 100, using strategies such a the relationship between multiplication and division.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	The materials support conceptual understanding of mathematical concepts through varied conceptual problems and questions. Questions range from low difficulty to requiring students make connections between concepts appropriate or the grade level. Evidence: • Connections to place value are made when using models to add. Chapter 2 Lesson 5 SE 93-98. Students use base ten blocks and mat to add numbers with regrouping. • Student worksheets connect addition to place value strategies when adding. SE p. 100-101 • Chapter 6 Lesson4 uses array and area models to teach students multiplying by 5. Students draw arrays and use repeated addition to support conceptual understanding of multiplication.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	3.OA.1. Interpret product of whole numbers as the total number of objects in 5 groups of 7 objects. The materials are limited in their use of high-quality conceptual problems and conceptual discussion questions. Most questions provided are basic and do not require students to demonstrate their conceptual understanding of topic. • TE 295: How does the multiplication table relate to the addition table? • Describe two strategies you can use to remember the multiplication facts for 2. TE 301-302	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	The materials provide correspondence across mathematical representations. However, the connections are weak and sporadic. Evidence: • SE pg 326 # 6-An array is given and students are asked to write an addition sentence and a multiplication sentence. • SE pg 349 When teaching division, a number line and repeated subtraction are shown, but no connection between the two models is made.	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	Student's progression toward fluency is balanced with procedural skills. Students are exposed to a variety of strategies in lessons. However, the strategies, which are based on place-value are often briefly touched on. • In the materials 3.NBT.2 is taught is 14 lessons, which is fourteen days. Students are expected to become fluent in adding and subtracting within 1000 using strategies ad algorithms based on place value during that time. • Chapter 2 Lesson 4 connects addition to expanded form and place value.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	Purely procedural problems which encourage the use of strategies, as well as algorithms are present in the materials. Students have plenty of opportunities to practice procedural problems. Students are transitioned to the traditional algorithm rather quickly. Evidence: • SE pg 173 Independent Practice problems • SE pg 301 Students write an addition sentence and then transition to a multiplication sentence.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	The materials provide repeated practice toward the attainment of fluency of NBT.3.2, adding and subtracting multi-digit whole numbers using strategies and algorithms based on place value. However, emphasis is placed on the traditional algorithm. • Lesson independent Practice • Differentiated Instruction activities for each lesson • Fluency Practice SE p. 119; 351 • ConnectED.mcgraw-hill.com	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	Single and multi-step problems are used throughout the materials. The majority of lessons include either single or multi-step word problems in class work, independent practice, and homework. Evidence: • Chapter 2 Lesson 1 pg 61. Sid has 4 blue pes and 5 red pens. Mario had 5 blue pens and 4 red pens. How many pens does each boy have? • Real-World Problems Solving Readers • My Learning Stations includes many activities centered on contextual problems	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	The major works of the grade are supported through application problems. Varied situation-type problems are used throughout the materials. **Evidence:** • Array of Products: SE pg. 245 Division Arrays • Put Together: The Board Shop sold 342 snowboards and 637 pairs of boots in the last year. About how many snowboards and pairs of boots did they sell altogether. SE p. 87. • Results Unknown: How many more sheets of craft paper does Will have than Lisa?	

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	The materials use models in most units when introducing new concepts. However, the models are not a major focus of the materials. Connections to multiple models are made, but done so infrequently. The materials seem to transition students away from models quickly. Examples: • Chapter 6 Lesson 3: Uses the array model to teach basic division facts. • Chapter 6 Lesson 5 Uses money to model Multiplication by 5. • Chapter 6 Lesson5 SE pg 315, students draw an array of multiplication sentences. • Chapter 2 Lesson 8 SE pg. 111 students add by place value, but the model used is not labeled.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	The curriculum uses the practice standards to strengthen the focus of the major works, as they integrate the practices into all lessons and daily work. Evidence: • Each lesson identifies practice standards for teachers throughout the lesson. • In the TE, connections to SMP are provided. TE p. 153A Reason Quantitatively: Have students look back at the problems they solved. (more directions provided) • TE pg 313-314 Why might the 5s facts be easier to remember than other facts? (Construct Arguments) • The student edition identifies problems that require the use of mathematical practices. Se pg 350 • Major work for third grade states that Geometric Measurement should demonstrate the understanding of area and relate area to multiplication and division. 10 lessons are solely devoted to area using array model, L x W, tiling models using unit tiles, Distributive property of Multiplication.	**(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	The mathematical practice standards are present in each lesson through assignments, activities, and problems. **Evidence:** • SMP are built into the instruction and problems throughout the student book. • Make Sense of Problems: How could the multiplication fact 4 x 12 = 48 be used to find 96÷12? SE pg. 484	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	The practice standards are developed throughout the entire year. This is evident through the daily incorporation of mathematical standards in each lesson.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	The materials provided resources for teachers to strengthen their knowledge and application of the standards for mathematical practice. **Evidence:** • Correlation of lessons to Mathematical Practices TE pg. T22-T24	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **_X___Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	The materials place an emphasis on a student's ability to reason and provides numerous opportunities to practice their reasoning skills. However, the questioning required of students is often surface level. Students must explain, justify, show, or prove their thinking daily. Evidence: • Explain the reasoning behind the number sentence you created. TE pg 109-110 • Ask students to explain why it is easy to mentally subtract 10 from a given number. TE pg 133A	____**Partially Meets (1)** ____**Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	The materials occasionally require students to produce not only answers but arguments, models, diagrams, and explanations. Evidence: • Students create an array on Independent Practice SE pg. 306 Draw an array for each. • Vocabulary Check: Write or draw the meaning of a bar diagram. SE pg. 306 • Reflect SE pg. 182 How are the operations of subtraction and addition related. Students create a real world problem, model, and vocabulary • Lesson 3, Chapter 3, Subtraction, where students are asked to solve a problem about Arbor Day tree planting at an elementary and high school. Each step is carefully lined out for instruction, in the practice phase students are given a similar problem about students writing stories in 2nd and third grade.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	The materials are weak in their use and teaching of the language of mathematics. Vocabulary is stated for each lesson in the teacher edition. However, explicit instruction on language for argument, problem solving, and mathematical explanations is not evident.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	Support for ELLs is provided in the materials through notes in the TE, as well as suggestions for visual models, and visual models in the SE. The Interactive Guide Teacher Edition provides a plethora of strategies for English Language Learners. However, ELL supports are not as strong in the SBAC "Think Smart" guide or the Real World Problem Solving Guide. Evidence: • TE pg 179A Differentiated English Language Learners Support (this is separate from Differentiated Instruction) includes emerging level, expanding level, and bridging level. • English Language Learner Instructional Strategy: Vocabulary Support TE pg 79A • Interactive Guide: TE pg T44 English Learner Instructional Strategy for Lesson 5. Includes a note taking page for students	**Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	Through the use of all materials, scaffolding, differentiation and support of diverse learners could be met. At the end of each lesson is a Differentiated Instruction page, which provides teachers with activities, practice, and resources for re-teaching that can be used with students. Online resources include games and re-teaching masters. Evidence: • Differentiated Instruction TE 143A	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	Numerous instructional approaches are included in the materials. Models, pictures, activities, questions, and pair/share are a few of the strategies used throughout a lesson. Evidence: • Hands-On Model Multiplication SE pg 193 • My Drawing SE pg 193. Students draw a representation of their model. • Model the Math TE pg 295B • Talk Math SE pg 384: Explain how knowing 2x7 can help you find 4x7.	**Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **_X___Meets** **_____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Lessons begin with a review problem of the day. This provides students the opportunity to connect previous learning as well as practice using the mathematical practices. Then the lesson transitions into investigating the math, which involves modeling, then guided practice and independent practice follow. Differentiated instruction for Intensive intervention, Approaching Level, On level and Beyond level is also suggested for each lesson. ELL support is also included in the TE. All lessons are structured in this manner providing students with support and time to become independent. **Evidence:** Lesson Introduction, Guided Practice, Independent Practice,	**(Reviewer only.)** **___X___ Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	In the Introduction and Modeled and Guided Instruction, students participate in solving problems. As students gain experience and practice with the concept, they transition to solving exercises in the Independent Practice portion of the lesson. The materials are designed is a comprehensive which includea a variety of problem solving activities in a lesson, including algorithms, word problems, drawings, matching, tables, number lines, base ten blocks, vocabulary cards, and foldables.	**(Reviewer only.)** **__X____ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Chapters and Lesson are designed in an orderly manner that align with CCSS, beginning with a review of addition and subtraction leading into multiplication and division. Operations in Base Ten are placed throughout the chapters. Fractions and measurement follow. Measurement and data follow. **Evidence:** Problems in Independent Practice increase in difficulty through the assignment.	**(Reviewer only.)** **__X____ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	The materials provide teachers support in teaching the lesson. The objective is clearly stated as well as instructions on how to guide students to a deeper mathematical understanding. **Evidence:** • What's the Math in this Chapter (beginning of each chapter) shows what students should already know, what they should understand and what they should be able to do (TE pg 287E-287F). • Professional Development is provided in the online resources at ConnectED	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Manipulatives, when suggested are appropriate and are connected to written methods. Foldables are incorporated into each unit and include graphic organizers, which may then connect with the Model the Math in each lesson. The model the math incorporates manipulatives as well as graphic organizers. Foam pieces are lightweight and colorful, longevity is to be seen	**(Reviewer only.)** **_X_____ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Many opportunities for assessment are provided throughout the materials. The assessments are varied. **Evidence:** • Homework • Test Practice (on homework SE pg 200). Test Practice: Diagnose Students Errors TE pg 299-300 • Summative Assessment by Chapter • Assessment Masters Teacher Edition include; diagnostic tests, formatives tests, and summative assessments • Check My Progress quizzes • Mathematics Performance Tasks • Exit Slips TE pg 187-388 • eAssessment	**(Reviewer only.)** __X____ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	All assessments for the materials contain rubrics, answer keys, and score guides. **Evidence:** • Answer Keys (Assessment Masters) • Performance Task Rubrics • Interim Assessment Solutions TE p.236-238a	**(Reviewer only.)** __X____ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Materials used to assess for proficiency are appropriate to the grade level, and are not biased. All students receive the same opportunities to display proficiency.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Authors are listed. Lead authors John A. Cater, Gilbert J. Cuevas, Roger Day, and Carol Malloy	**(Reviewer only.)** ___X___ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	The materials are difficult to follow. The student pages are very small in the teacher manual. There are numerous colors on a page, which could be distracting for students. • Includes real world activities and ideas. • Children included in photos and drawings are real world and doing third grade student level activities.	**(Reviewer only.)** ___X___ **Yes** _____ **No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	The materials are created to engage parents and support parents and students with math work at home. **Evidence:** Students create foldables and record vocabulary as they learn, which can support the learning at home. Homework is consistent and includes a review of the concept learned, practice, problem solving and vocabulary. Students only receive approximately 9-12 problems for homework. Online help can be accessed by parents at home. Each unit has an overarching theme, a chapter project, and a math at home resource (online).	**(Reviewer only.)** **___X___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: _____My Math_____**

Publisher: _McGraw-Hill_____ Copyright: 2013

ISBN:_____

Reviewer ID # ____AJ, DD **Date Review Completed: March 8, 2016**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **____X___ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **_X____ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **__X___ Meets** **_____ Does Not Meet**	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __5___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **__X____ Meets** **_____ Does Not Meet**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **____X___ Meets** **_____ Does Not Meet**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **____X___ Meets** **_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Weaknesses:

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill
Title:	My Math
ISBN #	Various
Grade Level(s) or Course:	4
Reviewer ID:	SA, RP

RECOMMENDED AS:

____X____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The materials used by students and teachers have devoted the large majority of time to the Major work of the Grade. The curriculum emphasis is at grade level according to the major work clusters with in the standards. (77%) 9 of 14 chapters are devoted to the major work clusters:

COHERENCE- Supporting work enhances coherence by also engaging students in the major work of grade 4. Each lesson is tied to the Common Core standards.

RIGOR- Materials feature opportunities to identify correspondences across mathematical representations. Students use higher order thinking to engage in discourse to describe or defend their solutions.

CONCEPTUAL UNDERSTANDING- Conceptual understanding is attended to where the standards set explicit expectations for understanding or interpreting. The materials support instilling proficiency and developing conceptual understandings.

MATHEMATICAL PRACTICES- Materials provide focused approach to standards of Mathematical Practice in order to enrich the major work of grade 4. Math Practices are clearly labeled in front of teacher manuals

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Materials provide scaffolding, differentiation, intervention and support for a broad range of learners. Every lesson has exact instructional strategies to be taught and has additional differentiated "RTI" instructional activities that may be used.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** All contents reflect[illegible] standards by not assessing the topics before the grade level indicated to the right. Showed overview of domains, clusters, standards, and objectives of entire unit. As well as assessments, materials, and RTI information. Examples: Table of Contents VI Correlation of Standards p. T 17-24 Chapter overviews p.1A, 271A, 685A, 681A	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** The materials used by students and teachers have devoted the large majority of time to the Major Work of the Grade. The curriculum emphasis is at grade level according to the major work clusters with in the standards. (77%) 9 of 14 chapters are devoted to the major work clusters: **Examples:** Contents in Brief VI, Chapter Assessments p. 215-236 in Assessment Book, Homework P. 583	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Supporting work enhances focus and coherence simultaneously by also engaging students in the major work of grade 4. Each lesson is tied to the Common Core standards. Examples: Vocabulary Cards and Foldables, (Teacher Edition pg. 4-9, 128-133, 192-196...) Data displays (Teacher edition pg. 32, 76, 82, 170, 181, 315...) Portable Learning Stations, p. 125G, 321 G Leveled Readers, Virtual online manipulatives.	(Reviewer only.) __X__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials progress on the grade-by-grade progressions in the Standards. Content from previous or future grades does not interfere with or displace on-grade-level content. Common Core Correlation Standards (Teacher Edition p. T16-T21) Beginning of each chapter has "what should my students already know?" section and a "what will my students do next with these skills?" section. (Teacher Edition pg. T16-T21) Each lesson has focus with domain, cluster, standards, math practices, and coherence.	(Reviewer only.) __X__Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2D **Materials gi[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials give all st[illegible]nts extensive work with on-grade-level problems. Assessments help with differentiated learning. Examples: Hands on models Homework P. 215 Diagnostic Assessments (Teacher Edition pg. 3) Independent practice pages may be differentiated (TE pg. 13) All students work from same practice pages. Exit slips may be used (pg. 14) Differentiated Instruction may be used in RTI grouping (TE pg. 15A)	(Reviewer only.) __X__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials relate on-grade-level concepts to prior knowledge from earlier grades. Teachers are made aware of how skills learned previously help with what is taught now, and how what is taught today will help in future skills. Examples: "What's the math in this chapter?" pages help see the correlation between grades. (Teacher Edition pg. 1C-D, 271C-D, 53E-53F, 125E-125F). This section helps teachers see the bridge between content standards.	(Reviewer only.) __X__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Review of material from previous grades is clearly identified and teacher and students are able to see what their responsibility is for the current year. Examples: "What's the math in this Chapter?" states core standards from previous grade, what is being taught for the current grade, and what will be taught in the next grade. (Teacher Edition pg. 1C-1D) Also "Coherence: Thinking across the grades" is shown at the beginning of each lesson (TE pg. 11A, 17A, 23A...)	(Reviewer only.) __X__Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials include learning objectives that are shaped by the cluster headings. The beginning of the Teacher Edition states all standards applied throughout the lessons (TE pg. T16-24) Also each lesson has CCSSM domains and clusters listed. (TE 1A-B)	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade. Learning objectives reflect goals of CCSSM and help explain the cluster being taught. These are listed under "Focus" at beginning of each lesson. (Teacher Edition p 1A-B: all lessons in the chapter. Pg. 11A: individual lessons. Supplemental book "Countdown to the Common Core" has performance tasks specifically related to the common core standards. Chapter Planners p. 125C-D, 685 C-D, 861A-B	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strength: CCSSM and lesson objectives are quick and easy to find in every chapter as well as in individual lessons.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding is attended to where the standards set explicit expectations for understanding or interpreting. The materials support instilling proficiency and developing conceptual understandings. Examples: (Teacher Edition pf 507-508) Lessons go from concrete to abstract, to real world problems. Essential Questioning moves to guided practice and independent practice, P. 329-332, 505-508, 485-488.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** The materials feature high-quality conceptual problems and discussion questions. The level of complexity increases throughout lessons. Examples: (Teacher Edition pg. 508) "How can you check to see if 2 fractions are equivalent?" (Teacher Edition pg. 514) "How can you check to see if a fraction is in simplest form?"	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Materials feature opportunities to identify correspondences across mathematical representations. Students use higher order thinking to engage in discourse to describe or defend their solutions. Examples: (Teacher Edition pg. 500) Mathematical practices. (Teacher Edition pg. 508) Mathematical practices	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Fluency progresses throughout the lessons in independent practice (pg. 119, 399). Fluency practice pages (pg. 119-120, as well as online). Problems of the day, quick check.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** Problems and exercises include chances for students to make use of practice routines to promote automaticity of computational facts and reasoning skills. Examples: Opportunistic strategies (pg. 68 problem #2) Generic cases (pg. 115 problem #5) Math Talk p. 113A-B	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Materials provide repeated practice toward attainment in fluency. Examples: Chapter 2 pertains to specific fluency for grade 4. Many lessons following are used as repeated daily practice of fluency standard. Math in My World p113-114	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials assist students and teachers to spend sufficient time working with engaging applications without losing focus on the major work of Grade 4. Above listed practices plus learning stations that engage students in learning. The "Making Connections" and "Getting Ready" pages. Examples: Teacher Edition Pages: 53G, 53-54, 125G, 125-126, 189G, 189-190	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there are single and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are many single and multi-step problems to engage students in meaningful problem solving strategies. Examples: Story problems are throughout the curriculum including lessons and homework pages (pgs. 78, 436, 680)	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Application problems stress the major work of grade 4. Every lesson uses Higher Order Thinking (HOT) skills that stress the major work. Examples: Pgs. 20, 26, 76	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling builds slowly with applications that are simpler to begin with and increase in depth as year progresses. Lessons build in orderly manner. Examples: (Teacher Edition pg. T23) "Model with Mathematics" information.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Strengths: Standards are written clearly and are used for each lesson essential question.

Weakness: Could use more fluency practice daily.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Materials provide focused approach to standards of Mathematical Practice in order to enrich the major work of grade 4. Math Practices are clearly labeled in front of teacher manuals (Teacher Edition T22-24, T393-394). The practices are also labeled on each lesson page. (pg. 19-20, 393). Examples: Math Practice 6, "Attend to Precision", Students communicate precisely with others using mathematical language. Teacher Edition Pgs: 11-12 13-14 17A 23A	**(Reviewer only.)** __X__ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Metric AC2B **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Math Practices are clearly labeled at beginning of Teacher Text (T22-24) as well as in individual lessons (T17A-B) and practice pages (17-18, 19-20). All math practices are used throughout the year. Example pages in Teacher Edition: MP1: 17B, 453-454 MP5: 23-24, 839A MP2: 11B, 729-730 MP6: 17A, 931-932 MP3: 19-20, 631A MP7: 45-46, 801A MP4: 13-14, 135B MP8: 61B, 709-710	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Math Practices are labeled at the beginning of each lesson (511A). Examples develop in sophistication from beginning of year lessons (37A) to end of year lessons (673-674).	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Teacher Manual explain the role of math practices in each lesson Example: Teacher Edition pg. 61A-66	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	"My Math" materials support the standards' emphasis on mathematical reason. It provides many opportunities for students to reason mathematically. Students are asked to describe and defend their work.	**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Materials support students in constructing and critiquing arguments. Students have prompts within lessons to describe their understanding of concepts labeled "Talk Math". Examples: pgs. 24, 142, 224, 388	

Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Materials help students produce solutions as well as arguments and models for major work of grade 4. Higher Order Thinking (HOT) problems allow students to formulate and articulate reasoning and understanding of essential questions of major work of the grade. Examples: pgs. 64, 250, 428	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Materials attend to mathematical language. "My Math" has vocabulary cards and new vocabulary outlined in each lesson. These words help assess students' understanding of connections between mathematical language and symbols. Examples: Teacher Edition pgs.: 56-58, 61A 128, 274)	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X___Meets

____Does Not Meet

Strengths/Weaknesses:
Strengths: Math practices, standards and vocabulary are clearly represented and labeled in each lesson.

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Every lesson has an "ELL" instructional component to help students with language barriers. Each lesson also includes differentiated activities to help all students to progress and gain success. Examples: Teacher Edition pgs. 61A, 65A, 527A	**Reviewer only.)** __X__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Materials provide scaffolding, differentiation, intervention and support for a broad range of learners. Every lesson has exact instructional strategies to be taught and has additional differentiated "RTI" instructional activities that may be used. Example: Teacher Edition pg. 41A ELL Strategies 61A, 67A	**Reviewer only.)** __X__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Lessons incorporate many strategies for a variety of learners using multiple representations. Examples: (Teacher Edition pages 161A-166) Also available in: literature connections, investigations, ELL strategies, math modeling, guided practice, math conversations, independent practices, vocabulary, and assessments.	**Reviewer only.)** __X__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: Every lesson contains ELL instruction and differentiated activities.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons develop from review then move to an investigation, math model explicit instruction, guided practice, independent practice and end with formative assessment. 5 step plan of instruction 197A-202, 537A-542.	**(Reviewer only.)** **__X____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Lessons have multiple strategies included in guided and independent practices: Algorithms, story problems, equations, and explanation of reasoning all help students learn new procedures and apply them to real-life situations. What's the Math p. 189E-F, 321E-F.	**(Reviewer only.)** **___X___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Lessons are arranged to go from guided practice with the teacher, or in small groups, and moves into independent practices and extra practices. Complexity of lessons progress throughout a unit. Flow of teaching is given in instructional sequence to develop student understanding. P.561A-566	(Reviewer only.) ___X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** There are suggestions of furthering teacher development of concepts online at connected.mcgraw-hill.com. There is some background knowledge embedded in the beginning of each lesson, but not enough to further teachers' knowledge base. However, the lesson scripts are comprehensive enough to allow teachers to teach efficiently.	(Reviewer only.) ___X___ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives are listed at the beginning of each chapter unit listed under "foldables". Also some individual lessons also include manipulatives to help students move from concrete to abstract reasoning (Teacher Edition pg. 499-500). All manipulatives are structurally efficient and faithful representations. P. 274-278, 626-630	(Reviewer only.) __X____ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Each chapter begins with diagnostic assessments (pg. 477). Most lessons contain a formative assessment (pg. 83-84, 508). Each chapter has a summative assessment which may be printed out or taken online (pg. 552A). Also online resources.	(Reviewer only.) __X____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Rubrics and student models are in a separate assessment manual with keys.	(Reviewer only.) ___X___ Yes _____ No

8. Materials [illegible]ss student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessment manual co[illegible]ins tests, tasks, rubrics, and student examples. These are unbiased and include course-level language. Test forms A & B. Assessment book page 69-72.	(Reviewer only.) ___X___ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Experts are listed at the beginning of the Teacher Edition manuals pages xxii-xxv.	(Reviewer only.) ___X___ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Overall appearance is appealing to the eye. Manuals are in color. Text is clearly printed. Some extra paper may be needed to work algorithms since there is not much room on practice pages. Examples: Student book p. 99-106, 631-636.	(Reviewer only.) ___X___ Yes _____ No
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Parent letters and "Math at Home" pages are in each chapter. Also each homework page gives information to help students and parents be successful in understanding the essential question of the day. Example: Homework Unit 9 Lesson 9 p. 617-618, Unit 5 Lesson 4 p.303-304	(Reviewer only.) __X____ Yes _____ No

Alignment Criteria Overall:

___X__ Meets _____ Does Not Meet

If the mate[illegible] meet both Non-Negotiables and relevant Alignment C[illegible]ion, they are aligned to the Shifts and major features [illegible]he Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill
Title:	My Math
ISBN #	Various
Grade Level(s) or Course:	5
Reviewer ID:	RP, SB

RECOMMENDED AS:

____X____Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____Other Mathematics Program- a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____Intervention Program- a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ Does not meet criteria for recommendation as a Curricular Material or Online Resource for Mathematics.

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** All contents reflect standards by not assessing the topics before the grade level indicated to the right.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A: **In each grad -8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** The materials used tudents and teachers have devoted the large majority of time to the Major Work of the Grade. The curriculum emphasis is at grade level according to the major work clusters with in the standards. 10 of 12 chapters (83%) are devoted to the major work clusters. The following gives examples of the Chapters: 1) place value 2) x whole numbers 3) ÷ whole numbers 4) ÷ by 2 digit numbers 5) +, - decimal numbers 6) x, ÷ decimal numbers 8) fractions and decimals 9) +, - fractions 10) x, ÷ fractions 12) Geometric Measurement	(Reviewer only.) __X__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Supporting work enhances focus and coherence simultaneously by also engaging students in the major work of grade 5. Each lesson is tied to the Common Core standards. Examples: Vocabulary Cards and Foldables, (Teacher Edition pg. 4-10, 74-80, 152-156...) Data displays for real-world problems (Teacher edition pg. 20, 46, 52...)	(Reviewer only.) __X__Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials progress the grade-by-grade progressions in the Standards. Content from previous or future grades does not interfere with or displace on-grade-level content. Common Core Correlation Standards (Teacher Edition p. T16-T21) Beginning of each chapter has "what should my students already know?" section and a "what will my students do next with these skills?" section. (Teacher Edition pg. T16-T21, 1E-1F)	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials give all students extensive work with on-grade-level problems. Assessments help with differentiated learning. Examples: Diagnostic Assessments (Teacher Edition pg 3) Independent practice pages may be differentiated (TE pg. 31-32) All students work from same practice pages. Exit slips may be used (pg. 34) Differentiated Instruction may be used in RTI grouping (TE pg 15A)	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials relate on-grade-level concepts to prior knowledge from earlier grades. Teachers are made aware of how skills learned previously help with what is taught now, and how what is taught today will help in future skills. Examples: "What's the math in this chapter?" pages help see the correlation between grades. (Teacher Edition pg 71E-71F, 149G-149H). This section helps teachers see the bridge between content standards.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Review of material from previous grades is clearly identified and teacher and students are able to see what their responsibility is for the current year. Examples: "What's the math in this Chapter?" states core standards from previous grade, what is being taught for the current grade, and what will be taught in the next grade. (Teacher Edition pg 149G-149H) Also "Coherence: Thinking across the grades" is shown at the beginning of each lesson (TE pg. 163A, 201A, 23A...)	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials include learning objectives that are shaped by the cluster headings. The beginning of the Teacher Edition states all standards applied throughout the lessons (TE pg. T16-24) Also each lesson has CCSSM domains and clusters listed. (TE 1A-B)	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade. Learning objectives reflect goals of CCSSM and help explain the cluster being taught. These are listed under "Focus" at beginning of each lesson. (Teacher Edition p 1A-B: all lessons in the chapter. Pg. 11A: individual lessons.)`` Supplemental book "Countdown to the Common Core" has performance tasks specifically related to the common core standards.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

(Reviewer only.)

__X__Meets

____Does Not Meet

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths/Weaknesses:
Strength: CCSSM and lesson objectives are quick and easy to find in every chapter as well as in individual lessons.

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding is attended to where the standards set explicit expectations for understanding or interpreting. The materials support instilling proficiency and developing conceptual understandings. Examples: (Teacher Edition pg. 551A-556) Lessons go from concrete to abstract, to real world problems. Fractions: Start with writing a fraction for part that is shaded, moves to finding equivalent fraction and circling equivalent fractions, to finding unknown numerator or denominator, and finally to story problems involving fractions.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** The materials feature high-quality conceptual problems and discussion questions. The level of complexity increases throughout lessons. Examples: (Teacher Edition pg. 554) "How can division be represented by using a fraction?" (Teacher Edition pg. 566) "Why is it important to be able to write a fraction in simplest form?"	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Materials feature opportunities to identify correspondences across mathematical representations. Students use higher order thinking to engage in discourse to describe or defend their solutions. Examples: (Teacher Edition pg. 157A-162) vocabulary needed, literature book "A Place for Zero", patterns, fact families, number sense, story problems	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each questi[illegible]d rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Fluency progresses throughout the lessons in independent practice (pg. 101, 393). There are also specific fluency practice pages teachers may use for student use. (pg. 143-144, as well as online).	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Problems and exercises include chances for students to make use of practice routines to promote automaticity of computational facts and reasoning skills. Examples: Opportunistic strategies (pg. 23) Generic cases (pg. 139)	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Materials provide repeated practice toward attainment in fluency. Examples: Chapter 2 pertains to specific fluency for grade 4. Many lessons following are used as repeated daily practice of fluency standard.	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials assist students and teachers to spend sufficient time working with engaging applications without losing focus on the major work of Grade 5. The "Making Connections" and "Getting Ready" pages at beginning of each chapter help fulfill this requirement. Examples: Teacher Edition Pages: 1G, 1-2, 71G, 71-72, 371 G	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are many single-step and multi-step problems to engage students in meaningful problem solving strategies. Examples: Story problems are throughout the curriculum including lessons and homework pages (pgs. 140, 204, 238)	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Application problems stress the major work of grade 5. Every lesson uses Higher Order Thinking (HOT) skills that stress the major work. Examples: Pgs. 58, 102, 134	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling builds slowly with applications that are simpler to begin with and increase in depth as year progresses. Lessons build in orderly manner. Examples: (Teacher Edition pg. T23) "Model with Mathematics" information.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Strengths: Standards are written clearly and are used for each lesson essential question.

Weakness: Could use more fluency practice daily.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Materials provide focused approach to standards of Mathematical Practice in order to enrich the major work of grade 5. Math Practices are clearly labeled in front of teacher manuals (Teacher Edition T22-24). The practices are also labeled on each lesson page. (pg. 19-20). Examples: Math Practice 6, "Attend to Precision", Students communicate precisely with others using mathematical language. Teacher Edition Pgs: 11-12 13-14 17A	**(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Math Practices are clearly labeled at beginning of Teacher Text (T22-24) as well as in individual lessons (T17A-B) and practice pages (17-18, 19-20). All math practices are used throughout the year. Example pages in Teacher Edition: MP1: 17B, 393-394 MP2: 27-28, 279-280 MP3: 21-22, 183B MP4: 23-24, 379B MP5: 23-24, 437A MP6: 11A, 563-564 MP7: 49B, 157-158 MP8: 37A, 99-100	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Math Practices are labeled at the beginning of each lesson (29A). Examples develop in sophistication from beginning of year lessons to end of year lessons.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Teacher Manual explains the role of math practices in each lesson Example: Teacher Edition pg. 23A-28	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	"My Math" materials support the standards' emphasis on mathematical reason. It provides many opportunities for students to reason mathematically. Students are asked to describe and defend their work.	**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Materials support students in constructing and critiquing arguments. Students have prompts within lessons to describe their understanding of concepts labeled "Talk Math". Examples: pgs. 30, 44, 82	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Materials help students produce solutions as well as arguments and models for major work of grade 5. Higher Order Thinking (HOT) problems allow students to formulate and articulate reasoning and understanding of essential questions of major work of the grade. Examples: pgs. 68, 122, 134	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Materials attend to mathematical language. "My Math" has vocabulary cards and new vocabulary outlined in each lesson. These words help assess students' understanding of connections between mathematical language and symbols. Examples: Teacher Edition pgs.: 74-80, 81A	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

(Reviewer only.)

_X___Meets

____Does Not Meet

Strengths/Weaknesses:
Strengths: Math practices, standards and vocabulary are clearly represented and labeled in each lesson.

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
Every lesson has an "ELL" instructional component to help students with language barriers. Each lesson also includes differentiated activities to help all students to progress and gain success.
Examples: Teacher Edition pgs. 81A, 303A

Reviewer only.)

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials pr[illegible]e appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Materials provide sca[illegible]ding, differentiation, intervention and support for a broad range of learners. Every lesson has exact instructional strategies to be taught and has additional differentiated "RTI" instructional activities that may be used. Example: Teacher Edition pg. 307A	**Reviewer only.)** __X__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Lessons incorporate many strategies for a variety of learners using multiple representations. Examples: (Teacher Edition pages 303A-306) Also available in: literature connections, investigations, ELL strategies, math modeling, guided practice, math conversations, independent practices, vocabulary, and assessments.	**Reviewer only.)** __X__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** __X__Meets ____Does Not Meet **Strengths/Weaknesses:** Strengths: Every lesson contains ELL instruction and differentiated activities.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons develop from review then move to an investigation, math model explicit instruction, guided practice, independent practice and end with formative assessment. Example pgs. 303A-308	(Reviewer only.) __X____ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Lessons have multiple strategies included in guided and independent practices: Algorithms, story problems, equations, and explanation of reasoning all help students learn new procedures and apply them to real-life situations. Example: pgs. 315-320	(Reviewer only.) ___X___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Lessons are arranged to go from guided practice with the teacher, or in small groups, and moves into independent practices and extra practices. Complexity of lessons progress throughout a unit.	(Reviewer only.) ___X___ Yes _____ No
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** There are suggestions of furthering teacher development of concepts online at connected.mcgraw-hill.com. There is some background knowledge embedded in the beginning of each lesson, but not enough to further teachers' knowledge base. However, the lesson scripts are comprehensive enough to allow teachers to teach efficiently.	(Reviewer only.) ___X___ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives are listed at the beginning of each chapter unit listed under "foldables". Also some individual lessons also include manipulatives to help students move from concrete to abstract reasoning (Teacher Edition pg. 301-303B). All manipulatives are structurally efficient and faithful representations.	(Reviewer only.) __X____ Yes _____ No

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Each chapter begins with diagnostic assessments (pg. 297A). Most lessons contain a formative assessment (pg. 312, 340). Each chapter has a summative assessment which may be printed out or taken online (pg. 370A). I did not see any self-assessment resources for students.	(Reviewer only.) __X____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Rubrics and student models are in a separate assessment manual.	(Reviewer only.) ___X___ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessment manual contains tests, tasks, rubrics, and student examples. These are unbiased and include course-level language.	(Reviewer only.) ___X___ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Experts are listed at the beginning of the Teacher Edition manuals pages xx-xxiii.	(Reviewer only.) ___X___ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Overall appearance is appealing to the eye. Manuals are in color. Text is clearly printed. Some extra paper may be needed to work algorithms since there is not much room on practice pages.	(Reviewer only.) ___X___ Yes _____ No
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Parent letters and "Math at Home" pages are in each chapter. Also each homework page gives information to help students and parents be successful in understanding the essential question of the day.	(Reviewer only.) __X____ Yes _____ No

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
___X____ Meets _____ Does Not Meet	__X___ Meets _____ Does Not Meet

Non-Negotiable Overall:

__X___ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X_____ Meets _____ Does Not Meet	Points: _6____ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet	Points: _6____ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X_____ Meets _____ Does Not Meet

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? _X____ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

A weakness is that there isn't a lot of room to work math problems on the specific student practice page.

A strength is that the standards and practices are clearly labeled. The connections between the grades are easy to find and they help students and teachers understand how the lessons align

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill
Title:	Everyday Math (K)
ISBN #	Various
Grade Level(s) or Course:	K
Reviewer ID:	DY & AF

RECOMMENDED AS:

__✓__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Everyday Math assesses on grade level. It does not attempt to assess above grade level.

COHERENCE- Standards are well blended and show progression of skills.

RIGOR- Everyday Math started with basic skills needed and progressed at a logical pace. Degree of mastery expected at the end of each unit is noted in unit overviews.

CONCEPTUAL UNDERSTANDING-

Everyday Math has lots of differentiated and varied practice to achieve conceptual understanding of each lesson and standard.

MATHEMATICAL PRACTICES-

Each unit has math practice goals stated in each lesson. Background information for each math practice given at the beginning of each unit.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

E.L.L support in each lesson along with differentiation options. Flexible grouping suggestions and online support available.

OTHER:

Everyday Math is a comprehensive core program. It has lots of hands-on and engaging activities to meet the Common Core standards.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula. Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A:
Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.

- Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7)
- Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6)
- Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8)
- Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4)

How to Find the Evidence:

Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics).

For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.)

In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)

Evidence-

Assessment check-ins in each lesson to on grade level skills & concepts.

Assessment Handbook assess B, M, E of year skills

Online option available for assessment

(Reviewer only.)

X **Meets**

____**Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____**Does Not Meet**

Strengths/Weaknesses:

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

Spiral Trace page 36 shows major works of the grade covered over the course of year.

- page xv - correlation of ccss to units / lessons
- kcc addressed in first unit + builds upon them with other standards
- Daily routines at the beginning of the year focus on major works pgs. 2-26

include MP in routines along with standards

(Reviewer only.)

_X_ **Meets**

____ **Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Daily Routines #2,4,5 (Pg 2-26) students analyze + discuss data MP3,4,5 Lessons that cover supporting works: 1-7, 1-8, 2-7, 3-1, 4-1, 4-3	**(Reviewer only.)** X **Meets** ____ **Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** page xiv - CCSS correlation to lessons • Section overviews show lessons + standards covered • Spiral Trace page 36 Unit 1 - states what they should be able to do at the end of each section	**(Reviewer only.)** X **Meets** ____ **Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Page xxvi - shows explanation of differentiated learning available in curriculum • each lesson contains differentiation options for example: pg. 55 lesson 1-4 pg 56 lesson 1-5 Also ELL support cited in curriculum	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** This is Kindergarten material. Some students may enter grade level with no math skills. Curriculum assumes students are entering with very little math knowledge. Starts with basic skills Section 1, Lesson 1 - K.CC.1, K.MD.2 Spiral Trace pg. 36	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Not applicable to this grade	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Spiral Tra in each lesson shows standards covered. Lesson focus is covered in each section overview.	**(Reviewer only.)** X **Meets** ____ **Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** connected domains: Chapter 1 K.MD.2, K.MD.3, K.G.1 Chapter 2 K.G.1, K.G.4, K.G.6 page xvii Correlation of standards across lessons Lesson focus shows domains + standards covered	**(Reviewer only.)** X **Meets** ____ **Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** standards are well blended + show progression of skills **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** weakness: didn't state exact % of lessons on major works

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set ex expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** KMD3 pg. 1 Lesson 2-7 open response - intro to sorting KCC4 lessons 1-3, 1-7, 1-8 Children use one to one correspondance + cardinal principles as they engage in counting game	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Lesson 1-3 pg. 49 explain why it is important to count correctly pg. 61 (1-6) Conclusion: Why is it important to count accurately	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** One example of many Connections: pg. 42 connecting verbal description, diagrams, + equations that model, + numbers	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Each lesson has daily routines, core activities, connections to literature + music, + assessment but not a lot of pen to paper practice	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** subitizing cards, ten-frame cards K.NBT.1 Lesson 5-6 Teen Partners pg. 320	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** subitizing cards, ten-frame cards, daily counting routines, games such as "Frog Hop" - non traditional sense	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Lesson 2-5 pg. 119 K.OA.1 Children use concrete non-verbal experiences to develop understanding of addition + subtraction • each lesson contains practice with engaging activities - above is just one example	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** lots of opportunity in lessons for contextual problems ex: Lesson 2-6 pg. 123	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Unit 1 Spiral Trace on page 3 shows major work of counting + cardinality in units 1 through 5. Describes degree of mastery at end of the unit. ex: lesson 1-6 Children practice oral counting & counting on	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** starts with simple counting activities in unit 1 + progress to adding + subtraction - Then moves to more complex number stories in unit 5	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

not enough written fluency practice for addition + subtraction

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Each unit has a mathematical background that focuses on standards + math practices

Lesson 1-3 counting + cardinality
Math practice 1 + 6

Lesson 1-4 counting + cardinality
math practice 4

Lesson 1-5 counting + cardinality
math practice 2

_X_ **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Metric AC2B: **Materials att to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each qu on and rate Metric 2B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Each lesson has a math practice + each math practice has a goal	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Students start with simple counting activities to practice attending to precision + accuracy.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** TE. Gives detailed summary of each math practice addressed + how it is used in lesson	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** · Math Practice 3 unit 5 overview · lesson 5-2, 5-5 · open response lessons · various lessons throughout	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Open response lessons 5-7 pg. 324-331 -give various examples embedded throughout -reengagement	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Each lesson lists vocabulary + models how to use the vocabulary correctly Throughout curriculum questioning is used to scaffold language development Prompts to correct misconceptions	

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

vocab isn't taught by direct instruction

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Alignment Criterion 3: Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]ish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** • ELL support in each lesson as a side note • ELL Support Guide	**Reviewer only.)** X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** - Differentiation options at the end of each lesson • online differentiation	**Reviewer only.)** X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Flexible grouping suggestions End of lesson assessment for quick check in online assessment available	**Reviewer only.)** X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** ·Daily Routines to build understanding ·Each lesson has lots of activities to teach major/supporting works ·Common misconceptions are addressed	**(Reviewer only.)** ✓ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson has an activity to teach problem solving Opportunities for practice to teach mastery	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Spiral Snapshot: lessons spiral but cover all standards	**(Reviewer only.)** ✓ **Yes** ____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Each unit has a math background to deepen understanding of concepts + practices Professional Development notes throughout	**(Reviewer only.)** ✓ **Yes** ____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** manipulatives are adequate + do represent objects Connect well to lessons	**(Reviewer only.)** ✓ **Yes** ____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** -assessment handbook -online assessment -end of lesson assessment	**(Reviewer only.)** ✓ **Yes** ____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** -rubric for assessments -multiple ways to assess student learning available	**(Reviewer only.)** ✓ **Yes** ____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Do not contain bias	**(Reviewer only.)** ✓ **Yes** ____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Reviewers cited by authors on back of title page	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Easy to read Clear + easy lessons to follow	**(Reviewer only.)** ✓ **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Home link letters to parents - gives explanation of content + ideas for activities	**(Reviewer only.)** ✓ **Yes** ____ **No**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
✓ Meets	✓ Meets	✓ Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

✓ **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** _____ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill
Title:	Everyday Math 1st
ISBN #	978-0-02-138365-8 ; 978-0-02-1144603-1
Grade Level(s) or Course:	1st
Reviewer ID:	DY, AF

RECOMMENDED AS:

__✓__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Assessed on grade level. It did not attempt to assess above grade level. It did cite skills needed from previous grade level that are needed to begin curriculum.

COHERENCE-

Major works are large majority of the lessons with supporting works interwoven appropriately throughout curriculum.

RIGOR-

Each lesson is highly engaging. Many opportunities for open response throughout lessons.

CONCEPTUAL UNDERSTANDING-

Each lesson has opportunities for conceptual understanding in many areas.

MATHEMATICAL PRACTICES-

Math practices are cited and interwoven through every lesson with grade level language.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

ELL support and many other differentiating options available. Also, RTI support available.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core St[illegible] Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__✓__ **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Each lesson has engaging activities to allow for open response. Lesson 3.4 page 240 – Open Response and discussion	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Each lesson has the opportunity to include discussion on conceptual understanding. For Example: Chapter 3, Lesson 6	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Many different representations are used throughout curriculum. For Example: page 225 - Chapter 3, Lesson 1 • Dominoes vs. Part-Part-Whole	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Many opportunities for fluency and procedural skill practice interwoven through lessons. For example: Math Boxes, Mental Math, Home Links	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Lots of practice available for bare problems which include – Quick Looks, Mental Math, Math Boxes and Home Links.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Spiral Trace shows repeated practice.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson has warm-ups, objectives, focus, and practice that focus on major works of the grade.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Real problems with multiple steps in lessons throughout curriculum. For example: Open Response Problems, Journal Problems	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Application problems are interwoven throughout curriculum. For example: Homelinks Lessons Journals All have application problems that cover OA - a major work.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Daily Routines have an appropriate progression of skills leading to unit 1 and the following units. For example: Students use simple hands-on activities to practice addition and subtraction.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

(Reviewer only.)

✓ **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Strengths:
Everyday Math provides many opportunities for hands-on practice to conceptual understanding in all areas.

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Practice standards are embedded throughout lessons and enhance student work.

For example:
page 211 - Unit Organizer - Shows Math Practices addressed in the unit.

(Reviewer only.)

✓ **Meets (2)**

Partially Meets (1)

Does Not Meet (0)

Metric AC2B **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Practice standards are noted in lessons where they are covered. Example: page 224- Unit 3, Lesson 1	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Grade level appropriate language used. As curriculum progresses, math practice language stays with on grade level language but activities progress.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Each unit has an explanation of practices covered. For example: Unit 1, page 49	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Every unit has open response lessons. For example: Unit 1, Lesson 4	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** The Open Response lessons provide practice in building arguments to support explanations and solutions to major work problems. Lots of other opportunities for discussion and arguments. Summarizing section included in each lesson.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary addressed at the beginning of each lesson. Sentences frames used in lessons to encourage the appropriate language.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Strength: Mathematical Practices are very well represented in each lesson. Many opportunities to practice all of them through the whole year.

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

✓ **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** ELL support in every lesson. Also, common misconceptions addressed in each lesson. Example - page 51 Lesson 1, Unit 1	Reviewer only.) ✓ **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Differentiation for all learners at all levels. For example - Unit 1, Lesson 6, page 83	Reviewer only.) ✓ **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** All types of models, small groups, lessons, and assessments differentiated for all learners. Adjusting Activity suggestions also included in all lessons. For example - page 87 unit 1, Lesson 6	Reviewer only.) ✓ **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** ELL support and support for other students throughout curriculum. **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** ✓ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons are very structured. Overviews show lesson structures and contain highly engaging activities.	**(Reviewer only.)** ✓ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Focus- has a math problem that is new and used to introduce and develop mathematical thinking which leads to thought ful open response.	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of [illegible]gnments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Lessons are designed to focus on standards of major works with supporting standards included in units. Spiral Trace is a very clear overview of lessons.	(Reviewer only.) ✓ Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Professional development available for teachers to learn curriculum and how to use effectively. For example: Online training, webinars.	(Reviewer only.) ✓ Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives are effective representations of models and problems used in lessons. Tool kits and manipulative kits are well supplied.	(Reviewer only.) ✓ Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Assessment book contains - summative and cummulative. B, M, E of year assessments. Online assessments available.	(Reviewer only.) ✓ Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Each unit contains rubrics to interpret student answers. Scoring guidelines in assessment book.	(Reviewer only.) ✓ Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Assessments do not contain bias. Specific suggestions of language to use in academic development.	(Reviewer only.) ✓ Yes ____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Reviewers cited on inside Curriculum corr.	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Age appropriate font, text, and wording.	**(Reviewer only.)** ✓ **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Family letters describe content learned. Also, lists vocabulary to be learned and references to lessons on letter to show parents what learning to look for.	**(Reviewer only.)** ✓ **Yes** ____ **No**

Alignment Criteria Overall:

✓ **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** ✓ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill School Education LLC
Title:	Everyday Math
ISBN #	Various
Grade Level(s) or Course:	Grade 2
Reviewer ID:	KT LW

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- This curriculum follows the grade level standards and does not assess outside of the appropriate standards. The materials are aligned with the grade level standards.

COHERENCE- A significant portion of the instruction focuses on the Major Work for the grade. Supporting works make connections with the Major Works. The progression in the materials is clear. Materials contain ample practice. Learning objectives are present but were not easily visibl

RIGOR- The materials clearly meet all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. All three areas are strongly represented.

CONCEPTUAL UNDERSTANDING- Conceptual understanding is promoted through appropriate classroom discussions. Furthermore, problem solving occurs frequently beyond a single answer response and open-ended question. Progress towards fluency and procedural skills are interwoven with the development of mathematical understanding.

MATHEMATICAL PRACTICES- Materials demonstrate authentic connections between content standards and mathematical practice standards. The use of MPs focus on the Major Work and provide coherent connections. The MPs develop across the grade level. There are teacher materials that explain the roles of MPs and support student learning.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- There were ample supports for ELL and other special populations to meet the grade level standards. Materials provide appropriate level and variation in scaffolding, differentiation, intervention, and supports for home. Teacher and student materials support instruction through the discussions, problem solving, manipulatives, and various models.

OTHER:

Student Reference book does a great job with the mathematical practices. However, there are not enough supports to assist students in structuring mathematical arguments.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: McGraw-Hill School Education LLC

Title of Material: EveryDay Math Grade 2

Author: Bell et al

ISBN #: Various **Copyright** 2016

Reviewer ID: KT LW

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be infomative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject matter and pedagogical expertise. Evaluators should be well versed in the Standards (www corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (• Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **No indication of assessments for the following topics was found: probability, statistical distributions, geometry for grade 8 (similarity, congruence, or geometric transformations), or symmetry of shapes. The text does not assess listed topics before the indicated grade level.** **1) Each assessment identifies specific grade-level standards that are being assessed.** **2) All lessons and practice identify specific grade-level standards that are being taught**	**(Reviewer only.)** **_X___Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **The Major Works for Grade 2 include Number and Operations in Base Ten, within Operations and Algebraic Thinking, represent and solve problems involving addition and subtraction, adding and subtracting within 20, and within Measurement and Data, measure and estimate lengths in standard units, and relate addition and subtraction to length. Supporting Works include work with equal groups of objects to gain foundations of multiplication, work with time and money, and represent and interpret data. The only additional work is in Geometry, reason with shapes and their attributes.** **1) At least 65-85% of instruction and practice is focused on Major Works** **2) At least six of the nine units targets the Major Works with components of the Major work in all units**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The text uses supporting work to make connections with Major Works.** **1) Time and money, data, shapes and equal groups are infused within the Major Works concepts and help to enhance focus** **2) Supporting works do not detract from the Major Works** **3) Student Math Journal**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The progression in text matches the progression within the standards. Any earlier grade level materials are introduced to omit gaps in students' understanding. Furthermore, material towards subsequent grade levels is provided in preparation for that upcoming grade. Differentiation requires meeting student needs. Content from previous grades is reviewed in the Warm-Up section of the lesson and does not interfere or detract from grade level content or the progression through the grade level standards. Future grade level content does not interfere at all.** **1) Students work beyond grade-level multiplication problems to develop the connections between the multiplication strategies they are learning and the upcoming multi-digit multiplication.** **2) Readiness and Enrichment activities** **3) Units 8 and 9 not only introduce students to equal groupings but make connections to multiplication, skip counting**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Although differentiation is offered in each lesson, Readiness, Enrichment, and Extra Practice, all students receive grade-level instruction that is developmentally appropriate instruction that deepens grade level mathematical understanding. The text does not invent connections but rather uses the natural progression of the standards to create connections. There are ample opportunities for students to work on grade-level problems.** **1) Readiness, Enrichment, Extra Practice** **2) Math Journal** **3) Blackline masters**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **1) P. EM2 of each volume explains if students are extending or developing an understanding of a concept. Extending indicates a continuation of instruction from previous grade level and developing indicates it is introduced during the current grade level.** **2) At the beginning of each lesson there is a Spiral Snapshot** **3) Pp. EM10-13 indicate the games correlation in regards to the standards for K-2** **4) TE gives teacher instruction on how to relate prior knowledge and link it to new concepts.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The year-to-year and current grade level instructional and standards progression is evident in the Unit Organizer which indicates the standards, domains, clusters, and MPs for the unit, individual lessons, games, the Spiral Trace, and through the Mathematical Background PD section.** **1) Previous grade materials are typically used in Readiness activities if at all and do not constitute the main focus of the lesson** **2) Beginning of the year pre-assessments tend to have materials from the previous year of instruction.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The learning objectives are clearly shaped by the CCSS domains, clusters, and MPs.** **1) The learning objectives are called Goals for Mathematical Content (GMCs) and relate directly to the standards (pp. EM3-5)** **2) The start of each unit and lesson outlines the CCSS cluster and domains.**	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Connection within the text are mathematically natural and significant.** **1) Most lessons, if not all, address multiple clusters and highlighting the existing mathematical connections.** **2) Problem solving is connected to real world situations and uses operations and properties to develop solutions** **3) Measurement is connected to addition and subtraction** **4) Time and money are connected to addition and subtraction**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.		

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set e expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **Classroom discussion about problems offers opportunities to engage in MPs for constructing and critiquing arguments.** **1) TE Sharing Strategies section within the lessons (p. 150) and other such classroom discussion opportunities have sample answers** **2) The MPs and the specific goals for the particular MPs are listed at the start of each lesson in the TE as a reminder.** **3) The two-day Open Response/Reengagement lesson in each unit requires students to use apply concepts they have learned to solve a word problem. A simple rubric in the TE helps the teacher identify if students are meeting grade-level expectations (pp. 186-193)** **4) Program uses Base Ten blocks, number lines, input charts, tally marks, and the place value chart to develop and explain addition and subtraction algorithms**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Very rarely do students just provide a single answer response. Questions are more open-ended or require more than just a single number solution.** **1) See 3) above** **2) Grade level appropriate discussion questions relating to value of digit in place value**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **Materials used within the student pages and reference book correspond to the manipulatives used for modeling strategies. The manipulatives and concrete representations enhance the mathematical understandings and are connected to the written and symbolic mathematical methods. The program gives ample opportunities for students to connect verbal description with equations that mode mathematics.** 1) **Mathematical representations are consistent within the grade level and extending across grade levels (tallies, number line, ten frames, etc.)** 2) **See above**	

Metric AC1B: **The materia[illegible]e designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each ques[illegible]and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Progress towards fluency and procedural skill interwoven with students' developing conceptual understanding of the operations. The fluency and procedural skill opportunities are present in each lesson** **1) Each lesson begins with a progression towards fluency and reinforcement of the procedural skills with the Mental Math and Fluency exercises contained within the Warm-Up portion of the lesson.** **2) Additional practice is provided at the end of each lesson within the Practice section which often times includes Math Boxes and sometimes Home Links for support and practice at home.** **3) Fluency development is evident in each unit's Spiral Trace** **4) Blackline masters**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **Procedural problems and exercises are present throughout the program.** **1) Quick Looks and "helper facts"** **2) Fact families** **3) Work with equal groups to lead toward multiplication** **4) Math Journal – includes procedural problems and exercises requiring efficient algorithms**	

Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **The materials provide repeated practice towards attainment of fluency standards.** **1) See above** **2) Repeated addition, arrays, and equal group problems begin to develop multiplicative thinking** **3) Lessons** **4) Daily routines** **5) Homework**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The text provides opportunities to meet CCSS and work with multi-step real-world problem solving. There are opportunities for practice and developing problem solving. Problems and activities are grade level appropriate. Learned content knowledge, skills, and strategies are used to develop solutions. This is a strength of the text. Ample time is spent working with various models within Major Works.** **1) Various types of problems and situations** **2) Numerous open-ended problems** **3) Math Journal** **2.OA.A – Unit 2 through Unit 8 as indicated by Correlation to CCSS (p. xiv)**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **The grade level text works with solving number stories using applications from the Major Work (application problems) throughout. The program utilizes single and multi-step contextual problems and opportunity for practice and problem solving.**	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Students use the CCSS content knowledge to problem solve with emphasis on the Major Work for the grade. In fact, many of the quality multi-step problems use multiple operations.** **Application problems focus to a great extent on the Major Work of the grade.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Models are built upon previous grade levels and prepare students for existing grade level connections and beyond. Problems and activities are grade level appropriate. For example, repeated addition is used in multiple grade levels for the appropriate grade level problems.**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X___Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

The use of the MPs support the focus on the Major Work for the grade level and provide coherence and connections in both TE and student pages.

1) **MPs, standards, and content are integrated for meaningful practice.**
2) **Each lesson and each activity in the lesson lists the MPs and standards used (TE) and the Student Reference Book highlights the MPs**
3) **Student Reference Book goes through in student friendly explanation of all the MPs to help students understand how to apply them.**
4) **TE continually points out where an how to take advantage of the MPs.**

(Reviewer only.)

_X___Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials at[illegible] to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each qu[illegible] and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **The MPs are connected to the content in a meaningful way. The problems assist in promoting student development of mathematical habits of mind. Discussions within the lessons support the practice of the MPs in the problem solving process.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Each unit has a practice Standard as a focus. However, within each lesson, multiple practice Standards are addressed.** **The two-day lesson Open Response/Reengagement, in each unit, offer the most in-depth practice with the MPs**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **The teacher-directed materials explain the role of the practice Standards in the classroom and in students' mathematical conceptual understanding based upon the standards.** **1) Mathematical Background at the start of each unit** **2) Standards and Goals for Mathematical Practice are listed at the start of each lesson by the Warm Up activity** **3) Students have explanations and expectations of the MPs in their reference book** **4) Open-response assessments** **5) Task-specific rubrics** **6) Readymade checklists** **7) Online assessments**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **_X___Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **The text provides opportunities for students to reason mathematically and share their process through discussions, and some of the written work. Discussion activities within each lesson support constructing viable arguments and critiquing the arguments of others. Intentional support is indicated within the TE to help students develop skills needed for mathematical discussions; however, more teacher support on how to help students construct viable arguments would be helpful. Students are asked How did you show… Explain how you know… Explain why it works… What patterns do you see….**	**__X__Partially Meets (1)** **____Does Not Meet (0)** Weakness is helping students how to structure a mathematical argument rather than simply explaining.
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **While the text has supports for students' explanations, justification, and demonstrating their problem solving process, more teacher materials could have supported the discussions and sharing of results to create better students results. Not all teachers have the knowledge or the skill to support such dialogue. The high number of open-ended questions also supports students in producing solutions and not just answers.** **1) Math Journals** **2) Open Response/Reengagement** **3) TE and student journal does a great job with models, explanations, and diagrams**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **There are no modifications to the mathematical language within the TE or in the student pages that sacrifice mathematical concepts or language development. However, constructing arguments is not taught. Teacher is not assisted in how to teach students to construct arguments. It is assumed that by asking How do you know type of questions that the student would come up with an argument. The program does not teach students or teacher how to base the argument.** **1) Each unit identifies vocabulary to be used** **2) Some lessons include Academic Language Development (p. 281)**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Students constructing arguments is not taught even though discussions are encouraged.

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **ELL supports and other special populations have thoughtful and helpful supports to assist the students in meeting the grade-level standards.** **1) Supports are included with each lesson** **2) Academic Language Development notes in some lessons** **3) Common Misconceptions and differentiated instruction sections may also address the needs of ELL students** **4) TE has Differentiation box in each lesson** **5) Differentiation options (RTI) offered at the beginning of each level** **6) Online supports available**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **1) Each lesson has multiple differentiation options for a variety of learners** **2) Readiness, Enrichment, and Extra Practice** **3) Games** **4) Sections for Adjusting the Activity** **5) Common Misconceptions** **6) Academic Language Development** **7) Online differentiations supports**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **Materials provide appropriate level and variation in scaffolding, differentiation, intervention, and support for a variety of learners.** **1) Written practice** **2) Classroom discussion** **3) Individual, partner, small group, and whole group work** **4) Games** **5) Multiple methods/strategies for solving problems** **6) Manipulatives are used in various activities**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each unit follows a structured sequence** **Each lesson follows an appropriately structured sequence with a variety of instructional methods and activities** **1) Teacher supports are clear and easy to follow** **2) Intended sequence is evident in the**	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Both problems and exercises are included in the lessons. Problems are used to introduce and develop new mathematical learning (Math Message). Exercises are used to practice, apply, and build mastery of mathematic concepts (Fluency, Math Boxes).**	**(Reviewer only.)** **___X___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Lesson design develops concepts, skills, and applications with increased number of connections between content with grade level appropriateness that spirals through the previous and upcoming grade levels.	(Reviewer only.) __X____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Professional development pieces are interwoven in the lessons and each unit has a lengthy PD section, Mathematical Background, in the Unit Organizer. Each lesson has pacing guidelines and guided instruction for supporting student learning. Digital resources include the Virtual Learning Community and Everyday Math Online. 1) Professional development pieces are interwoven in the lessons and each unit has a lengthy PD section, Mathematical Background, in the Unit Organizer. 2) Each lesson has pacing guidelines and guided instruction for supporting student learning. 3) Digital resources include the Virtual Learning Community and Everyday Math Online. 4) TE Observe and Discuss at the beginning of each lesson gives teachers questions to use during observation and questions to facilitate classroom discussion 5) GMP listed in the back of TE explains goals for each lesson	(Reviewer only.) __X____ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Manipulatives and student-generated representations are used. Connections are made between the manipulatives and problem solving strategies. Instructional strategies work to connect the appropriate manipulatives and representations and assist students in moving towards more efficient methods of problem solving. Manipulatives are faithful representations and are well-connected to written methods.	(Reviewer only.) ___X___ Yes _____ No

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** **The text has a variety of embedded assessments including Preview Math Boxes and Assessment Check-In.** **1) Mental Math and Fluency could be used as quick formative assessments.** **2) Digital tools are also available.** **3) Formative assessment opportunities are present for teacher to use while presenting each lesson** **4) Self-assessments available for all units** **5) Summative assessment at the end of each unit** **6) Journal**	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** **In addition to the embedded assessments listed above, the text also has Unit Progress Check Lessons with optional Challenge Assessments. Answers are included in the TE. Open-Response Assessments in every other unit are evaluated with a task specific rubric. The Assessment Handbook includes Progress Check masters, Interim Assessments, Record-Keeping Masters, and Blank Exit Slips that could be used for a quick post assessment.** **See above.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** **Grade level appropriate language is used in student prompts and appear to be accessible and unbiased.** **1) See above** **2) Math Journal** **3) Answer Book**	**(Reviewer only.)** **__X____ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Authors and editors carefully evaluated materials to ensure grade level appropriateness and freedom from errors.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The hands-on activities and the visual design of the student reference book are engaging the student thoughtfully with the content. Navigation is clear. Materials are well-laid out and visually appealing.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Family Letters are included for each unit and include vocabulary, games, and activities.** **Home Links have practice problems from the concepts covered in class and explanations for how the content was taught.**	**(Reviewer only.)** **__X____ Yes** **_____ No**

Reviewer IMET Evaluation Summary Title/Level: Everyday Math/ Grade 2_____

Publisher: McGraw-Hill School Education LLC__ Copyright: 2016_____ ISBN: Various_____

Reviewer ID # __KT____LW_____ Date Review Completed: 3-9-16_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **____X___ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **__X___ Meets** **_____ Does Not Meet**

Non-Negotiable Overall:

___X__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)**	**Points: ___5__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
___X____ Meets	**___X____ Meets**	**___X____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

___X__ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill School Education LLC
Title:	Everyday Math
ISBN #	Various
Grade Level(s) or Course:	Grade 3
Reviewer ID:	KT LW

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- This curriculum follows the grade level standards and does not assess outside of the appropriate standards. The materials are aligned with the grade level standards.

COHERENCE- A significant portion of the instruction focuses on the Major Work for the grade. Supporting works make connections with the Major Works; however the Interpret and Represent Data seemed to be more of a stand alone section. The progression in the materials is clear. Materials contain sufficient practice. Learning objectives are present but were not clearly visible.

RIGOR- The materials meet all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. All three areas are strongly represented.

CONCEPTUAL UNDERSTANDING- Conceptual understanding is promoted through appropriate classroom discussions. Furthermore, problem solving occurs frequently beyond a single answer response and open-ended question. Progress towards flueney and procedural skills are interwoven with the development of mathematical understanding.

MATHEMATICAL PRACTICES- Materials demonstrate authentic connections between content Standards and mathematical practice standards. The use of MPs focus on the Major Work and provide coherent connections. The MPs develop across the grade level. There are teacher materials that explain the roles of the MPs and support student learning.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- There were ample supports for ELL and other special populations to meet the grade level standards. Materials provide appropriate level and variation in scaffolding, differentiation, intervention, and supports for home. Teacher and student materials support instruction through the discussions, problem solving, manipulatives, and various models.

OTHER:

Student Reference book does a great job with the mathematical practices.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **No indication of assessments for the following topics was found: probability, statistical distributions, geometry for grade 8 (similarity, congruence, or geometric transformations), or symmetry of shapes. The text does not assess listed topics before the indicated grade level.** **1) Each assessment identifies specific grade-level standards that are being assessed.** **2) All lessons and practice identify specific grade-level standards that are being taught**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A: **In each grad[illegible]8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **The Major Works for Grade 3 include Operations and Algebraic Thinking, Number and Operations with Fractions, and in Measurement and Data, solve problems involving measurement and estimation of intervals of time, liquid volumes, and masses of objects as well as geometric measurement: understand concepts of area and relate area to multiplication and to addition. Supporting works include represent and interpret data and reason with shapes and their attributes. Additional clusters include geometric measurement to recognize perimeter as an attribute of plane figures and distinguish between linear and area measures as well as using place value understanding and properties of operations to perform multi-digit arithmetic.** 1) **Approx. 97% of instruction is focused on Major Work** 2) **At least five of the nine units target Major Works with components of the Major work in all units**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The text uses supporting work to make connections with Major Works. While the supporting work has sufficient time given to it. It appeared to be more standalone content, not as well coordinated with the major work of the grade.** 1) **Connections in represent and interpret data are not as strong** 2) **Place value works with performing multi-digit arithemetic.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2C: **Materials ba[illegible]ontent progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The progression in text matches the progression within the standards. Any earlier grade level materials are introduced to omit gaps in students' understanding. Furthermore, material towards subsequent grade levels is provided in preparation for that upcoming grade. Differentiation requires meeting student needs. Content from previous grades is reviewed in the Warm-Up section of the lesson and does not interfere or detract from grade level content or the progression through the grade level standards. Future grade level content does not interfere at all.** **1) Students work beyond grade-level multiplication problems to develop the connections between the multiplication strategies they are learning and the upcoming multi-digit multiplication.** **2) Readiness and Enrichment activities**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The materials contain sufficient practice with grade level appropriate problems. Although differentiation is offered in each lesson, Readiness, Enrichment, and Extra Practice, all students receive grade-level instruction that is developmentally appropriate instruction that deepens grade level mathematical understanding.** **1) Readiness, Enrichment, Extra Practice**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2E: **Materials rel[illegible]n-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **1) Multiplication and division work relates to addition and subtraction from previous grade level.** **2) Problem solving using the four operations connects with prior knowledge and strategies** **3) P. EM2 of each volume explains if students are extending or developing an understanding of a concept. Extending indicates a continuation of instruction from previous grade level and developing indicates it is introduced during the current grade level** **4) TE Grades 3-4 games correlation (pp. EM12-13)** **5) At the beginning of each lesson there is a Spiral Snapshot**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The year-to-year and current grade level instructional and standards progression is evident in the Unit Organizer which indicates the standards, domains, clusters, and MPs for the unit, individual lessons, games, the Spiral Trace, and through the Mathematical Background PD section.** **1) Previous grade materials are typically used in Readiness activities if at all and do not constitute the main focus of the lesson** **2) Text indicates if strategies have been introduced in previous grades with italicized text within the lesson ex. "Note that Second Grade Mathematics introduced all of these strategies." (p. 29, p. 250 TE). However, it can be difficult to see and there are not many of them that I could identify.** **3) Beginning of the year pre-assessments tend to have materials from the previous year of instruction.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The learning objectives are clearly shaped by the CCSS domains, clusters, and MPs. However, they are not clearly identifiable and easy to access** **1) The learning objectives are called Goals for Mathematical Content (GMCs) and relate directly to the standards (pp. EM3-5)** **2) The start of each unit and lesson outlines the CCSS cluster and domains.** **3) TE each lesson begins with a "Focus Cluster" connected with CCSS** **4) Student Resource Book and Journal do not include learning objectives.**	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Connection within the text are mathematically natural and significant.** **1) Most lessons, if not all, address multiple clusters and highlighting the existing mathematical connections.** **2) Strategies and operations are connected to real world problems in order to develop a working solution** **3) Multiplication and division are utilized in word problems** **4) Volume is also used to practice addition and subtraction**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Weaknesses Learning Objectives though present use a different terminology and are not easily identifiable within the TE and are not present in SE.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The material[illegible]pport the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use [illegible]valuate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for ea[illegible]uestion and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **Classroom discussion about problems offers opportunities to engage in MPs for constructing and critiquing arguments. Conceptual understanding is well-developed.** **1) TE Sharing Strategies section within the lessons (p. 150) and other such classroom discussion opportunities have sample answers** **2) The MPs and the specific goals for the particular MPs are listed at the start of each lesson in the TE as a reminder.** **3) The two-day Open Response/Reengagement lesson in each unit requires students to use multiple strategies to solve a word problem. A simple rubric in the TE helps the teacher identify if students are meeting grade-level expectations (pp. 386-394)** **4) Multi-digit addition and subtraction algorithm are developed and explained on the basis of place value**	

Do the materials feature high-quality conceptual problems and conceptual discu questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Very rarely do students just provide a single answer response. Several questions are open-ended or require more than just a single number solution. Answers can vary.** **1) See 3) above** **2) Math Message requires students to solve a problem they haven't been shown how to solve** **3) Common Misconceptions helps teachers differentiate and could help lead to conceptual discussion** **4) Teacher asks** **"How are the problems related?"** **"What is the same?"** **"What do you notice?"**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **Materials used within the student pages and reference book correspond to the manipulatives used for modeling strategies. The manipulatives and concrete representations enhance the mathematical understandings and are connected to the written and symbolic mathematical methods.** **1) Connections are made from story problems verbally, to drawing pictures of the problem, number lines, and to algorithm** **2) Mathematical representations are consistent within the grade level and extending across grade levels (ex. Clocks, Balance for weight, tallies, diagrams, etc.)**	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo[illegible]onceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Progress towards fluency and procedural skill is interwoven with students' developing conceptual understanding of the operations.** **3.OA.C.7 – Fluently multiply and divide within 100. Practice for this standard occurs from L1.1 to L9.7 and occurs approximately nine times in each lesson. There is ample practice for this standard. 3NBT also occurs at a high frequency.** **1) Each lesson begins with a progression towards fluency and reinforcement of the procedural skills with the Mental Math and Fluency exercises contained within the Warm-Up portion of the lesson.** **2) Additional practice is provided at the end of each lesson within the Practice section which often times includes Math Boxes and sometimes Home Links for support and practice at home.** **3) Fluency development is evident in each unit's Spiral Trace**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** **Procedural problems and exercises are present throughout the program.** **1) See above** **2) Games provide an additional way to practice procedural problems**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **The materials provide repeated practice towards attainment of fluency standards.** **1) Leveled practice (online)** **2) Extra practice worksheets for each lesson** **3) Blackline masters and lesson pages provide repeated practice** **4) Develop multiplication strategies that connect to larger multiplication problems and area models** **5) Discussions take place to develop multiple methods for problem solving and identifying efficient strategies**	

Metric AC1C: **The material[illegible]e designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The text provides opportunities to meet CCSS and work with multi-step real-world problem solving. There are opportunities for practice and developing problem solving. Problems and activities are grade level appropriate. Learned content knowledge, skills, and strategies are used to develop solutions.** **1) Various types of problems and situations** **2) Numerous open-ended problems** **3.OA.D.8 – Problem solving as such begins in Unit 2 and continues through Unit 9 (p. xv)**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each que[illegible] and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **The grade level text works with solving number stories using applications from the Major Work (application problems) throughout. The program utilizes single and multi-step contextual problems and opportunity for practice and problem solving.**	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Students use the CCSS content knowledge to problem solve with emphasis on the Major Work for the grade. In fact, many of the quality multi-step problems use multiple operations.** **Application problems focus to a great extent focus to a great extent on the Major Work of the grade.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Models are built upon previous grade levels and prepare students for existing grade level connections and beyond. Problems and activities are grade level appropriate. Modeling is appropriate for the grade level.**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Weaknesses Learning Objectives though present use a different terminology and are not easily identifiable within the TE and are not present in SE.

Conceptual understanding is a strength.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** **The use of the MPs support the focus on the Major Work for the grade level and provide coherence and connections in both TE and student pages.** **1) MPs, standards, and content are integrated for meaningful practice.** **2) Each lesson and each activity in the lesson lists the MPs and standards used (TE) and the Student Reference Book highlights the MPs** **3) Student Reference Book pp. 1-33 goes through in student friendly explanation of all the MPs to help students understand how to apply them.** **4) TE continually points out where an how to take advantage of the MPs.**	**(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **The MPs are connected to the content in a meaningful way. The problems assist in promoting student development of mathematical habits of mind. Discussions within the lessons support the practice of the MPs in the problem solving process.** **1) TE** **2) Student Reference Guide** **3) Lessons ask students to use numbers or pictures to show how you solved the problem or to sketch a number line or to use fraction strips to show your answer is true**	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Each unit has a practice Standard as a focus. However, within each lesson, multiple practice Standards are addressed.** **The two-day lesson Open Response/Reengagement, in each unit, offer the most in-depth practice with the MPs**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **The teacher-directed materials explain the role of the practice Standards in the classroom and in students' mathematical conceptual understanding based upon the standards.** **1) Mathematical Background at the start of each unit** **2) Standards and Goals for Mathematical Practice are listed at the start of each lesson by the Warm Up activity** **3) Students have explanations and expectations of the MPs in their reference book** **4) Open-response assessments** **5) Task-specific rubrics** **6) Readymade checklists** **7) Online assessments**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **The text provides opportunities for students to reason mathematically and share their process through discussions, and some of the written work.** **Discussion activities within each lesson support constructing viable arguments and critiquing the arguments of others. Intentional support is indicated within the TE to help students develop skills needed for mathematical discussions; however, more teacher support on how to help students construct viable arguments would be helpful.**	

Do the materials support students in producing not only answers and solutions, but also in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **While the text has supports for students' explanations, justification, and demonstrating their problem solving process, more teacher materials could have supported the discussions and sharing of results to create better students results. Not all teachers have the knowledge or the skill to support such dialogue. The high number of open-ended questions also supports students in producing solutions and not just answers.** **1) Math Journals** **2) Open Response/Reengagement**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **There are no modifications to the mathematical language within the TE or in the student pages that sacrifice mathematical concepts or language development.** **1) Each unit identifies vocabulary to be used** **2) Some lessons include Academic Language Development (p.223) See Index for more examples**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **ELL supports and other special populations have thoughtful and helpful supports to assist the students in meeting the grade-level standards.** **1) Supports are included with each lesson** **2) Academic Language Development notes in some lessons** **3) Common Misconceptions and differentiated instruction sections may also address the needs of ELL students**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **Materials provide appropriate level and variation in scaffolding, differentiation, intervention, and support for a variety of learners.** **1) Each lesson has multiple differentiation options for a variety of learners Differentiate-Adjust the Lesson** **2) Readiness, Enrichment, and Extra Practice** **3) Games** **4) Sections for Adjusting the Activity** **5) Common Misconceptions** **6) Academic Language Development** **7) Online differentiations supports** **8) Online teacher support lesson guide provides expanded lesson specific suggestions for ELL and scaffolding**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **Lesson design recommends and facilitates a variety of instructional approaches for a variety of learners through the use of multiple representations, models, discussion questions, and flexible grouping.** **1) Written practice** **2) Classroom discussion** **3) Individual, partner, small group, and whole group work** **4) Games** **5) Multiple methods/strategies for solving problems** **6) Manipulatives are used in various activities**	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)

1. Lessons are thoughtfully structured and support the teacher in guiding the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each unit follows a structured sequence** **Each lesson follows an appropriately structured sequence with a variety of instructional methods and activities** **1) Teacher supports are clear and easy to follow** **2) Intended sequence is evident in the TE**	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Both problems and exercises are included in the lessons. Problems are used to introduce and develop new mathematical learning (Math Message). Exercises are used to practice, apply, and build mastery of mathematic concepts (Fluency, Math Boxes).**	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** **Lesson design develops concepts, skills, and applications with increased number of connections between content with grade level appropriateness that spirals through the previous and upcoming grade levels. Intended sequence is evident in assignments.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** **There are teacher materials and sections that support instruction through the discussion of the mathematics, discussions, students' thinking, and more.** **1) Professional development pieces are interwoven in the lessons and each unit has a lengthy PD section, Mathematical Background, in the Unit Organizer.** **2) Each lesson has pacing guidelines and guided instruction for supporting student learning.** **3) Digital resources include the Virtual Learning Community and Everyday Math Online.** **4) TE Observe and Discuss at the beginning of each lesson gives teachers questions to use during observation and questions to facilitate classroom discussion** **5) GMP listed in the back of TE explains goals for each lesson**	**(Reviewer only.)** **___X___ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Manipulatives and student-generated representations are used. Connections are made between the manipulatives and problem solving strategies. Instructional strategies work to connect the appropriate manipulatives and representations and assist students in moving towards more efficient methods of problem solving. Manipulatives are faithful representations and are well-connected to written methods.	(Reviewer only.) __X____ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- The text has a variety of embedded assessments including Preview Math Boxes and Assessment Check-In. 1) Mental Math and Fluency could be used as quick formative assessments. 2) Digital tools are also available. 3) Formative assessment opportunities are present for teacher to use while presenting each lesson 4) Self-assessments available for all units 5) Summative assessment at the end of each unit 6) Journal	(Reviewer only.) __X____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- In addition to the embedded assessments listed above, the text also has Unit Progress Check Lessons with optional Challenge Assessments. Answers are included in the TE. Open-Response Assessments in every other unit are evaluated with a task specific rubric. The Assessment Handbook includes Progress Check masters, Interim Assessments, Record-Keeping Masters for multiplication facts, MPs, etc., Blank Exit Slips that could be used for a quick post assessment. See above.	(Reviewer only.) __X____ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Grade level appropriate language is used in student prompts and appear to be accessible and unbiased. 1) See above 2) Math Journal 3) Answer Book	(Reviewer only.) __X____ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Authors and editors carefully evaluated materials to ensure grade level appropriateness and freedom from errors.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The hands-on activities and the visual design of the student reference book are engaging the student thoughtfully with the content. Navigation is clear. Materials are well-laid out and visually appealing.**	**(Reviewer only.)** **__X____ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Family Letters are included for each unit and include vocabulary, games, and activities.** **Home Links have practice problems from the concepts covered in class and explanations for how the content was taught.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: ___6__ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** ____X___ **Meets** _____ **Does Not Meet**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** ____X___ **Meets** _____ **Does Not Meet**	**Points: __6___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** ___X____ **Meets** _____ **Does Not Meet**

Alignment Criteria Overall:

___X__ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill School Education LLC
Title:	Everyday Math
ISBN #	978-0-02-141001-9
Grade Level(s) or Course:	4
Reviewer ID:	MH & DB

RECOMMENDED AS:

_✓_ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- although supporting standards sometimes use a larger portion of time than necessary, generally materials focus on major work of the grade.

COHERENCE-
Domains and clusters are clearly stated at the beginning of each unit and lesson. They address more than one standard and SMP for the lesson.

RIGOR-
Students continually work on fluency, applying that to real problems found embedded in multi-step word problems & open responses.

CONCEPTUAL UNDERSTANDING-
Students engage in content (standards) by solving contextual problems and apply concepts learned in earlier lessons / grades.

MATHEMATICAL PRACTICES-
SMP are integrated and explicitly tied to all activities in all lessons

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Every lesson contains multiple differentiation options to address the needs of a broad range of learners with additional activities assigned in the lesson opener.

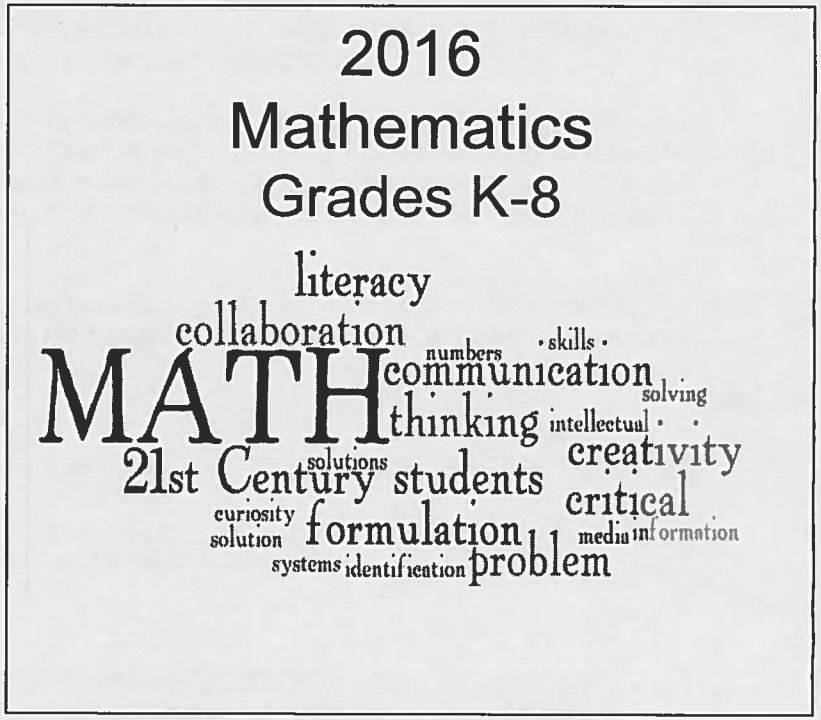
Reviewer ID: DB, MH

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials r[illegible]t the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Teachers guide: p[illegible]6-147** **- Lesson 2-5 contains standards addressed,** **- includes assessment check-in, extra practice, enrichment (differentiate)** **- Unit assessment includes all standards assessed pg 202 (unit 2)** **Teachers Guide: pg 312-313 Unit 4** **- Includes standards, differentiation and assessments** **- Pg 336-spiral snapshot and spiral trace-showing where standards addressed (318-319)** **Includes beginning of year, mid-year, and end of year Assessment guide matches** ***Note: lattice method assessed on page 28 of assessment guide-shows no place value understanding!**	

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

___X_Meets

____Does Not Meet

Strengths/Weaknesses:
Includes progression of standards, with a variety of activities for students, workbook/journal allows students to "write" answers

Weakness: seems to jump around and go back and forth)

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:
Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

Unpacking the standards-beginning of each teachers' guide
Grade 4: introduces measurement conversions: moves between the various units using function/ratio tables so not actually asking to convert without ratio table
Fractions start with equivalent (equal sharing) 3rd grade standard to move into 4thgradestandard

Note: assessments assess more supporting clusters than major clusters Unit 5- 6 of the 15 angle or shape questions (supporting cluster)

(Reviewer only.)

___x_Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Supporting clusters appear only where they support and engage students in the major work of the grade and these clusters only become the focus of lessons in later units: Grade 4: 4MD.1 and 4.MD2 supporting clusters addressed in conjunction with the major work within the NBT and NF domains-Lesson 6-6 students use multi-digit multiplication (4NBT.5) to solve number stories involving conversions between ounces, pounds, and tons Note: lesson 5-10 rotations and angles in the middle of fractions-angles are taught in unit 1-unusual organization	**(Reviewer only.)** **_X_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teachers guide -contains "unpacking the standards", clearly articulates the progression of each standard in the grade -differentiation support such as Readiness and Enrichment activities that are included in each lesson assists students to reinforce skills Grade 4: content from previous grades revisited to form bridge for 4th grade content. Lesson 3-1 fraction work begins with equivalent fractions (3rd grade standard) Spiral tracker doesn't always connect to previous grades Games pg E12-14 shows correlation to 3rd grade	**(Reviewer only.)** **_X_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Readiness activities [illegible]are students who need scaffolding for the main tasks. Extra practice provides all students with meaningful practice of grade-level content from the lesson Grade 4- Lesson 7-4 multiplying fractions by a whole number includes readiness activity of rewriting the problem as repeated addition-reinforcing the connection between adding fractions and multiplying a fraction by a whole number using fraction circles, number lines, models. Student friendly activity cards for small group/partner Assessment check-in, recommendations for interventions, open response for enrichment and differentiation No separate ELL component in print, only online	**(Reviewer only.)** **_X_Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Grade 4: Unit 7 organizer states "Building upon informal strategies such as repeated addition…and using a variety of representations allows students to see that multiplying a fraction by a whole number is conceptually the same as multiplying two whole numbers." Language is relevant to Grade 4 by extending and applying previous understanding	**(Reviewer only.)** **_X_Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Lessons and activities contain minimal amounts of materials from earlier grades-clearly identified as previous standards Grade 4: lessons 1-7 and 1-9 traditional addition and subtractions algorithms introduced, lesson focus begins with review of addition and subtractions strategies used as bridge for conceptual understanding of algorithm. Beginning of the year assessment-measures student knowledge and skills related to content in the first few units Differentiation support cover topics of the major clusters	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Lesson begins with a lesson opener which clearly outlines the CCSS cluster headings addressed in the lesson content; includes learning objectives called Goals for Mathematical Content (GMC's) that enable finer-grained tracking of student progress. GMC's are broken down versions of the standards	**(Reviewer only.)** **_X_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All lessons begin with identifying focus clusters. All activities list standards that are addressed in the activity and many of them connect multiple domains. Grade 4: Lesson 6-8 students interpret remainders for multidigit division problems in the context of number stories, connecting standards from 2 domains: 4.OA.3 and 4.NBT.6	**(Reviewer only.)** **X_Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:
Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X_Meets

____Does Not Meet

Strengths/Weaknesses:
Domains/clusters are clearly stated at the beginning of each unit/lesson
Address more than one standard and SMP for each lesson

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill School Education, LLC
Title:	Every Day Math Grade 5
ISBN #	978-0-02-143068
Grade Level(s) or Course:	Grade 5
Reviewer ID:	DBMH

RECOMMENDED AS:

✓ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Although supporting standards sometimes ~~has~~ use a larger portion of time than necessary generally materials focus on Major Work of the grade.

COHERENCE-
Domains and clusters are clearly ~~focused~~ stated at the beginning of each unit and lesson and address more than one standard & Math Practice for each lesson.

RIGOR-
Students continually work on fluency applying that to real-world problems embedded in multi-step word problems and open-responses.

CONCEPTUAL UNDERSTANDING-
Students engage in content by solving contextual problems and apply concepts learned in earlier grades & lessons.

MATHEMATICAL PRACTICES-
Mathematical practices are integrated and explicitly tied to all activities.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Every lesson contains multiple differentiation options to address the needs of a broad range of learners with additional activities described in the lesson opener.

Reviewer ID: DB, MH

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a

reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core S Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** ****Assessment- thou[illegible]dths are tested Unit 4, pg 33 assessment handbook- not a standard for 5th grade**	

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X_Meets

____Does Not Meet

Strengths/Weaknesses:

Weakness: assessing to thousandths-not a standard

Strengths: Includes progression of standards, with a variety of activities for students, workbook/journal allows students to "write" answers

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** Table of contents and publishers comments state 98% on major works	**(Reviewer only.)** **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Supporting clusters appear only where they support and engage students in the major work of the grade and these clusters only become the focus of lessons in later units:** **Grade 5: 5MD.1 is a supporting cluster. Lesson 6-3 students convert metric measurements (5. MD.1) in the context of solving real-world multi-step problems (5.NBT.2)** **6 of 8 units are major work.** **Note: unit 4 and 7 have large sections that are not part of the major work**	**(Reviewer only.)** **_X_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teachers guide -contains "unpacking the standards", clearly articulates the progression of each standard in the grade -differentiation support such as Readiness and Enrichment activities that are included in each lesson assists students to reinforce skills Spiral tracer (internet) doesn't have connection to previous grade, teacher edition EM1-9 only discussed grade level standards, not previous	**(Reviewer only.)** **_X_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Readiness activities-[illegible]are students who need scaffolding for the main tasks. Extra practice provides all students with meaningful practice of grade-level content from the lesson Note: no separate ELL components in print, but is online Each lesson has embedded ELL scaffoldiing	**(Reviewer only.)** **_X_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Grade 5: Unit 3 organizer states "students build on fraction concepts from previous grades to understand fractions as division" The language reflects the language of the relevant Grade 5 cluster heading: Apply and extend previous understandings of multiplication and division to multiply and divide fractions.	**(Reviewer only.)** **_X_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Lessons and activities contain minimal amounts of materials from earlier grades-clearly identified as previous standards Beginning of the year assessment-measures student knowledge and skills related to content in the first few units Differentiation support cover topics of the major clusters Grade 5: multiplying of fractions begins with review of multiplying by whole numbers to help bridge concept	**(Reviewer only.)** **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials in[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Lesson begins with a[illegible]son opener which clearly outlines the CCSS cluster headings addressed in the lesson content; includes learning objectives called Goals for Mathematical Content (GMC's) that enable finer-grained tracking of student progress. GMC's are broken down versions of the standards Table of contents match objectives- but no specific mention to the terminology of "expressions"	**(Reviewer only.)** **_X_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All lessons begin with identifying focus clusters. All activities list standards that are addressed in the activity and many of them connect multiple domains. Grade 5: Lesson 3-3 students explore situations where it makes sense to report remainders as the fractions, connecting standards from the 2 domains: 5.NBT.6 and 5.NF3	**(Reviewer only.)** **X_Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:
Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X_Meets

____Does Not Meet

Strengths/Weaknesses:
Weakness: ELL scaffolding
Strengths: organization at the beginning of units allows teacher knowledge of clusters and domains being taught

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Each lesson features high-quality conceptual problems as in the Open Response/Reengagement Grade 5: Open response Lesson 1-3 Quilt Area-must explain their reasoning and the others reasons (critique) Unit 5: 4 lessons on add and subtract fractions, 2 lessons on dividing fractions by a whole, algorithm 2 lessons	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Grade 5: Lesson 3-12 operations involving fractions in understanding fractions as division of the numerator by the denominator, applying this in lesson 5-12 when they consider real-world situations involving multiplication of fractions Student Journal pgs 187, 233-235, 253 Daily Math messages	

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Grade 5: Lesson 1-5 through 1-11 beginning with comparing volume to finding volume with and algorithm Student Journal: pg 253, 221, 191
