Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Each lesson in grades 5 begin with a mental math and fluency exercise that develops fluency with basic facts and other skills that require automaticity, see lesson 6-2 Homework link also is geared towards fluency	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Lessons in grade 5 give opportunities for students to use algorithms-finding area and perimeters in grade 5 using algorithms, continuing practice with multiplication and division	

Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Students apply their fluency with basic facts to learning algorithms. Using learning from 3rd, students begin using partial product, then move toward the traditional algorithm in 5th grade. Mental math and fluency games continue throughout the year (note) Lesson 2-4 multiplication algorithm- 20 practice problems, only appeared 6 in unit 3, 7 in unit 4, and none in unit 5	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Many opportunities to solve problems contextually-math boxes throughout grade level are contextual word problems. Grade 5: Lesson 2-3 contextual problems with estimating powers of 10 Student Journal pf 181, 231	

Do application problems particularly stress applying the Major Work of the grade? Eval[illegible]essons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Unit 8 is all application	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Lesson 5-13, students engage in content covering fractions by solving contextual problems involving operations with fractions. Students apply concepts learned in earlier lessons to fraction number stories involving division. Journal pg 10, 144, 243	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

____Does Not Meet

Strengths/Weaknesses:
Thorough work within units to support standards with models as appropriate

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Lesson6-8 engage with practice standards 8 and 5.NBT 7- they make generalizations about the relative size of decimal products and quotients, need to reason about the size of factors and make predictions about decimal products based on repeated reasoning. See TE 22-23, TE 512-513	**(Reviewer only.)** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials at to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each quest and rate Metric 2B.** **(Reviewer only.)** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Each lesson has integrated practice standards annotated in the teachers manuals. Each unit has a focus standard. At the lesson level, multiple practice standards are clearly addressed in every activity Lesson 2-1, 2-10, 4-1	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** SMP are integrated and explicitly tied to all activities in every lesson. Expectations for students with regard to the MP increase in sophistication as they age. Lesson 2-10 students use the relationship between multiplication and division to mentally divide multi-digit numbers. In lesson 2-1 students create representations using expanded forms of numbers to solve problems and in 4-1 they use place-value charts to explain patterns in numbers with decimals to the thousandths place. Student reference book pg 4-34	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Lesson 2-10 students use the relationship between multiplication and division to mentally divide multi-digit numbers. Embedded throughout lesson TE 24-25	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **_x_Meets (2)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Students are encouraged to construct viable arguments and critique the reasoning of others while engaging with grade-level work lesson 3-7 Students construct viable arguments while sharing how they can estimate the sums of fractions, they support their arguments and explain their reasoning while answering questions, they justify their solutions by explaining them as distances on the number line. Most lessons support academic language through the use of sentence frames embedded in the lesson Games: bullseye, TE pg 120 uses partnership	**____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Students are encouraged to construct viable arguments and critique the reasoning of others while engaging with grade-level work Lesson 3-7 Students construct viable arguments while sharing how they can estimate the sums of fractions, they support their arguments and explain their reasoning while answering questions, they justify their solutions by explaining them as distances on the number line. Most lessons support academic language through the use of sentence frames embedded in the lesson	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Students are encouraged to construct viable arguments and critique the reasoning of others while engaging with grade-level work Lesson 3-7 Students construct viable arguments while sharing how they can estimate the sums of fractions, they support their arguments and explain their reasoning while answering questions, they justify their solutions by explaining them as distances on the number line. Most lessons support academic language through the use of sentence frames embedded in the lesson TE pgs 13, 259-260. 272, 679, 600, 472-473, 413	

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_x_Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3: Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]lish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Every lesson contains [illegible]iple specific suggestions for with with special populations of students: ELL, students who need scaffolding, extensions, and additional practices. Additional activities for Readiness, Enrichment and Extra Practice address the differentiation needs of every student. Common misconceptions allow teachers to see potential misunderstandings that may occur when learning new concepts. Student reference books for grade 3-6 provide support for students on key concepts. Lesson 6-3 the ELL support section suggests the use of sentence frames to help students make sense of the term convert, moving the between "convert" and "change", the common misconception note provides support for students who have trouble making sense of using a "What's my Rule" table to make measurement conversions, and the Adjusting the Activity note provides teachers with additional questions to ask students to help them make conversions in context.	**Reviewer only.)** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Every lesson contains multiple differentiation options to address the needs of abroad range of learners with additional activities described in the lesson opener; differentiation options in every regular lesson include Readiness, Enrichment, and extra practice activities. As students develop a better understanding of a particular concept or skill supports are gradually removed. Lesson 6-3 the ELL support section suggests the use of sentence frames to help students make sense of the term convert, moving the between "convert" and "change", the common misconception note provides support for students who have trouble making sense of using a "What's my Rule" table to make measurement conversions, and the Adjusting the Activity note provides teachers with additional questions to ask students to help them make conversions in context.	**Reviewer only.)** **__X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Every activity including the differentiation options provide one or more suggestions for possible instructional approaches including grouping suggestions Lesson 3-14 students play Number Top-it to build their understanding of place value relationships and expanded form (5NBT1). Observations prompts are included along with discussion questions encouraging students to explain mathematical structures in their own words Every lesson has an activity/game	**Reviewer only.)** **_X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **_X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** S: Active learning embedded throughout; practices/assessment checks are embedded W: odd choice of sequence

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Point of use instructional guidance embedded in each lesson for identifying common misconceptions Focus portion of each lesson begins with a previously unsolved problem Open resources-students are encouraged to explore, explain Math message encourages discussion and helping others reach solutions	**(Reviewer only.)** **_X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each unit contains a limited number of problems to introduce and develop new mathematical learning. Begins with Math Message, students share strategies, then follow-up. Open response allow students to solve non-routine problems and delve deeply into the SMP Practice sessions include games to help provide to reinforce, mental math and fluency exercises build and maintain fluency	**(Reviewer only.)** **__X__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Grade 5: unit 2 begins with place value, moves through multiplication then division, and onto fractions and decimals, all incorporating place value Note: unit 4 and 7 have lessons that don't seem to "fit" within the unit	**(Reviewer only.)** **__X__ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- TE Unit organizer: pg 106-107, 440-443	**(Reviewer only.)** **_X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Both concrete and student generated manipulatives are used Digital lessons use the evaluate feature found in digital lesson activities	**(Reviewer only.)** **__X__ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Pre assessments, a beginning of the unit assessment, formative assessments. Digital curriculum components provide feedback of individual students in order to impact instruction. Summative assessments for each unit Self assessments at the beginning of each Progress check lesson (7-14, 6-14) Readiness check pg 659 TE	**(Reviewer only.)** **_X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Regular lessons contain daily assessment check in Unit progress check lessons begin with a table listing the content and practice standards assessed. Open Response Assessments –odd numbered units- address one or more content standards and one goal for mathematical practice Assessment handbook: rubrics sample student responses (A23-33)	**(Reviewer only.)** **_X__ Yes** **_____ No**

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Problems presented in context that are familiar to students, differentiation options provided for scaffolding and extensions Grade 5: pg 313 Lessons include specific suggestions for grade level appropriate lessons (academic vocabulary)	**(Reviewer only.)** **___X__ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** External reviewers list on Title page Implementation Guide, materials are extensively field-tested by qualified teachers & University of Chicago	**(Reviewer only.)** **___X_ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Student materials are designed with font sizes and text density for the age of the child. Independent student work pages in the math journal , home links, and math masters, familiar icons refer students to specific reference book pages where they can find relevant helpful information.	**(Reviewer only.)** **__X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Family letters for each unit include descriptions of math content, vocabulary, games, selected home-link answers (pg 27) Parent link online provide answers to FAQs and specific grade level information. Home Link pg 51, answer key pg 186	**(Reviewer only.)** **__X__ Yes** **_____ No**

_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

_x__ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? __X_ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Weakness: hard to know when working on major or supporting works quickly, supporting work may cover too much time
Strengths: SMP are embedded throughout the lessons, differentiation/scaffolding is readily available, Home Links with family letters and help; self-assessments

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill School Education, LLC
Title:	Everyday Math
ISBN #	978-0-02-143073-4 TE Vol. 1
Grade Level(s) or Course:	Grade 6
Reviewer ID:	LS, JH

RECOMMENDED AS:

____X____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program
as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program
as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program
as Component.

_____**Intervention Program-** *a program designed and intended to target and* support students' specific needs. Substantial evidence clearly supports the designation of this program
as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-Everyday Math focuses on building a deep framework of 6th grade standards while spending great lengths developing student reasoning and problem-solving skills.

COHERENCE-The development of the Standards is consistent with the Major Works of 6th grade. Unduly emphasis is placed on scaling to deepen understanding of ratios and proportions. Scaling is a 7th grade application standard.

RIGOR-The text provides rich discussion questions, high level conceptual problems, open-ended re-engagement tasks that have many entry points and allow students to explore the mathematics of the standards.

CONCEPTUAL UNDERSTANDING-There is a strong component of conceptual understanding that asks students to discuss and construct viable arguments, use a variety of models, and solve real world problems.

MATHEMATICAL PRACTICES-The textbook instructs teachers and students about the habits of mind associated with the mathematical practices.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-A mix of instructional strategies is evident in the program. The sequencing of tasks, problems, and questions provide for growing understanding and fluency.

OTHER: There are several games in the manipulative that are extremely beneficial to the program.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: McGraw-Hill School Education, LLC

Title of Material: Everyday Math Grade 6

Author: Bell, et al

ISBN #: 978-0-02-143073-4 TE Vol 1 **Copyright** 2016

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	Required Materials • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	Rating this Criterion: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.
Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.**	**Evidence-** A review of the assessments provided for the textbook reveals all content related to the work of 6th grade. Standards from upper grades are not assessed.	**(Reviewer only.)** **_X_Meets**

• Probabi[illegible]ncluding chance, likely outcomes, probability models. (I[illegible]oduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non- Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	Probability, including chance, likely outcomes, and probability models are not included. Similarity, congruence, and geometric transformations are not included.	____**Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:
Standards are broken down to create a framework for students' learning. Lessons build on prior knowledge from previous lessons in the curriculum. There are multiple opportunities for students to explore and discover and then discuss their strategies. The assessments reflect only 6th grade CCSS content.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:
Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)
Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)
Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.
For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-
The first seven units are directly linked with the Major work of the 6th grade. The authors seemed to develop the units around the four critical areas identified in the CCSS. The last unit includes lessons related to scaling. This topic is suggested for 7th grade in the Progression document for Ratios and Proportional Reasoning.

(Reviewer only.)

__x__Meets

____Does Not Meet/

Insufficient Evidence

Metric N[illegible]3: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** How to Find the Evidence: Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The four supporting clusters are integrated throughout the units. There is a spiraling review and reinforcement of computation with multi-digit numbers. The problems related to area, surface area, and volume require computation with fractions and decimals. The unit on statistics introduces students to multiple models and leads to work with number lines and integers and eventually to the coordinate plane.	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** How to Find the Evidence: Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content from previous grades is used daily as a warm-up activity and is related to the 6th grade content in the lesson. The 6th grade content is faithful to the progressions document. This is particularly evident in the lessons related to ratios and proportional reasoning. The textbook extends proportional reasoning to ideas about scaling in the last unit. This topic's placement at the end of the textbook comes after significant at the end of the textbook comes after significant work with ratio tables. This would be an appropriate extension for higher achieving students. Scaling is also present, along with similarity of rectangles, in the second unit. Again, this could be used for higher achieving students. Similarity is not included in the assessment.	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** How to Find the Evidence: Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth.	**Evidence-** Each lesson includes differentiation opportunities for all students. Readiness activities of each unit addresses grade level standards in a simplified manner for learners who need additional scaffolding. See Unit 3 Lesson 8 which has students complete a hands-on activity dropping pennies and writing out ratios followed by a discussion. The Enrichment activities for each	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence

For context, read Criterion #5b in the Publishers' Criteria for the Common Core St[illegible]andards for Mathematics, Grades K–8 (Spring 2013).	unit address[illegible]ade level standards for students who need a [illegible]allenge. Games that practice grad-level problems are included in the manipulative kit for additional practice for all leveled learners. There are also differentiation tips for the teacher in the margins of the teacher edition. The teacher edition also includes information about adjusting the assessments to provide appropriate scaffolding. In all cases, this is consistent with on grade level work. Problems and tasks that encourage higher achieving students to go deeper are also provided.	
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** How to Find the Evidence: Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Warm Up for each lesson asks students to complete review problems that the 6th grade lesson will build on. Unit 3 Lesson 6 Exploring Long Division with Decimals builds on students previous knowledge of multiplying decimals and long division with whole numbers. Each lesson begins with a Readiness Activity that sets the foundation for linking new learning with old learning. This is often in the form of a game. For example, the student s play Fraction Capture to review equivalent fractions and renaming fractions and mixed numbers before dividing fractions with common denominators. The "within grade" level spiral tracker lets a teacher know exactly where a student is relative to mastery of the standard. Less attention is given to how a progression continues to develop across grade levels. Practice problems on fifth grade skills.	(Reviewer only.) **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** How to Find the Evidence: Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate	**Evidence-** The responsibility for the current year is explicit and specific as shown in the Unit Overview, Lesson Overview, Spiral Trace, and the Focus Clusters for each lesson. Previous grades' standards may be included in the Readiness activities and in the Spiral Trace. To see how mastery develops for all standards teachers are	(Reviewer only.) **_x___Meets** **____Does Not Meet/ Insufficient Evidence**

both stude[illegible]d teacher materials.) Identify any content from previous grades and [illegible]ck whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	directed to go[illegible]line. Fifth grade content is clearly labeled as such in the Readiness activities. It takes careful reading to find other references to links with 5th grade work. For example, of the 8 lessons related to multiplication and division of fractions, 3 are focused on models the progression documents suggest for fifth grade. This is detailed in the Teacher Edition Mathematical Background: Content pages. To say that this look back is "clearly identified" is a stretch. It has to be assumed that the teacher will provide this information to the student as they are playing or doing the Readiness activities. The letters to the parents are an effective tool for helping parents understand how new learning will be connected to prior learning (5th grade).	
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** How to Find the Evidence: Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Learning objectives are not formally stated, but the teacher edition lifts language from the clusters so the teacher understands the focus. There is also a Spiral Snapshot to show how this lesson's focus fits in with the standard as a whole The lessons are definitely linked to the clusters. Unit 5 Lesson 5 states the Focus Cluster: Solve real-world and mathematical problems involving area, surface area, and volume which is clearly aligned with 6.G.4. Unit 7 Lesson 5's Focus Cluster states "Understand ratio concepts and use ratio reasoning to solve problems" which is clearly aligned with 6.RP.3b	(Reviewer only.) **_x___Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** How to Find the Evidence: In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen	**Evidence-** Problems and activities connect clusters where natural and important. Expressions and Equations are integrated throughout as students are asked regularly to supply an equation for application problems from multiple domains. Making Box Plots and Finding Interquartile Range is not included in the unit focusing on Statistics. Instead, this topic's introduction is	(Reviewer only.) **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

clusters or ins. NOTE: An example of evaluating this Criterion might include look at whether problems in grade 4 sometimes or often involve students applying their developing computational skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	included after erating with fractions and percents. Surface area and volume problems require students to apply multiplication of decimals and fractions.	

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Strength: The standards are covered in a variety of strategies to meet the learning needs of below level and grade level students. The manipulative kit includes games that will allow students at all levels to deepen their conceptual understanding. Standards are clustered together where necessary. Previous grade level standards are included in the Readiness activities and Math Boxes. Teachers are referred to the textbook website for a full list of standard's development.

Weakness: The spiraling nature of this textbook makes it hard to understand the coherence without extensive study of the Math Background pages. To be effective with this textbook, a teacher would need to spend considerable time to ensure deep understanding of the math content.

Now continue by evaluating the A[illegible]ment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

_2___Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

	Math Masters bo Using Ratios to Make Fruit Cups, students are asked to create a recipe that would taste the same as Recipe B, but uses more than 11 cups of fruit. Students have worked through several problems already and are familiar with Recipe B. Math Masters book: Using Properties to Simplify Expressions, students are asked to create their own expressions using fractions as coefficients. Similar questions are found throughout.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** The students are asked to use multiple models for ratios- ratio tables, pictures, and tape diagrams. They are asked to use related mathematical vocabulary and then the related symbols. The problems presented are contextual based and students are asked to translate the information in a representational model, words, and with ratio notation. Unit 7 Assessment asks students to connect their learning of reading line graphs, plotting in the coordinate plane, and writing equations. Units are also developed with a spiral learning plan so students are reinforcing Idaho Core Standards from one unit to the next. For example: 6.RP.3d is introduced, practiced, and mastered across Unit 2 Lessons 11, 13, 15, Unit 3 Lessons 1, 7, Unit 5 Lessons 4, 10, 11, 13, and Unit 7 Lessons 5, 6, and 12. Similar spiral learning for all major works. Each lesson has "Math Boxes" in the student journal that reviews skills and concepts the students have already learned as well as "Preview Math Boxes" which focus student learning for upcoming concepts.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** How to Find the Evidence: Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and		Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B. (Reviewer only.) **__2__Meets (2)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** 6.RP.A Students are provided an opportunity to develop a conceptual understanding of ratios as they connect ratio language (on each, for, to per) with drawings and models. The teacher edition specifically explains the delay of the use of fraction notation. Students are asked to explain the difference between additive and multiplicative reasoning. There are opportunities for partner work as well as whole group instruction, with discussion questions provided. Tape diagrams and ratio tables are introduced. There is extensive us of MP3, MP4, and MP5. Pictures are used to aid in the development of equivalent ratios. Students are given tasks and problems but are not given specific directions with regard to operations of multiplication and division. Fractional notation is delayed until students have had some experiences with equivalent ratios.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** 6.RP.A Rich discussion questions are provided throughout and the tasks are open so that there are multiple entry points. Students are asked to compare additive and multiplicative reasoning. Students are also asked to compare the advantages of different models. There are multiple opportunities in each Unit for students to deepen their conceptual learning. Unit 2 Cumulative Assessment #8 Create a dot plot with at least 5 data points. The maximum is 10. The balance point for the set of data needs to be 6, but none of the points can be located at 6. Unit 4 Cumulative Assessment #4 Name a number between each pair of numbers. 4a) 0.3 and 0.4 4b) ½ and ⅓ . Unit 6 Challenge #2 Find three consecutive numbers whose sum is 90. Unit 6 Cumulative Assessment #1 Find two numbers between each pair of numbers.	

procedural[illegible]p use throughout the questions associated with this metric. NO[illegible]ome examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		____**Partially Meets (1)** ____**Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The procedural practices from the Major Works are interwoven with conceptual learning throughout each Unit. 6.NS.B.2 & 6.NS.B.3 In the development of the long division algorithm, students are asked to compare the traditional algorithm with partial quotients. This work is preceded by finding quotients using mental math. Scaffolding is suggested to support struggling learners. This skill is part of the spiraling nature of the textbook and will appear in many homework assignments throughout the year. Fluency with decimal operations reflects the same pattern-related warm up with whole numbers; a focus on estimation, and then work toward the traditional algorithms. There is heavy reliance on number sense.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** The bulk of the mental math problems are part of the warm up activity. This textbook relies on distributed review and problems requiring efficient algorithms are included throughout the year in homework and practice.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** The text provides sufficient practice to support fluency standards as evident in warm-ups, below level differentiation lessons,and homework assignments.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.**	The content is taught through contextual based problems so that students work with engaging applications when introduced to a topic and also in	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)**

How to Find Evidence: Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	more formal applications. For example, the students work with ratio tables in a variety of contexts and then complete an independent "paint mixing" task. The same models for ratios and proportional reasoning are used in application tasks involving unit rates. The same is true for percent problems.	**_2___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Two day open response and re-engagement tasks are provided as non-routine problems that engage students in problem solving. Students are asked to solve real world problems in assessments, in homework, and in daily practice.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** The Major Work of the grade is represented in application problems. The is is particularly evident in the ratio problems and the percent problems. Division problems precede ratio problems to provide a natural connection. In the same manner, interquartile ranges are introduced after work with fractions and division. The statistical problems are directly tied to contexts familiar to and important to 6th grade students.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Models are directly provided and students are asked to make sense of the model. Later, students are asked to make and use models that make sense to them given a context. MP4 is evident in all introductory lessons.	
Alignment Criterion 1: **Rigor and Balance** **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.**		(Reviewer only.) **__6__Meets** **____Does Not Meet**

AC1 Mate[illegible] must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn[illegible] than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**Strengths/Weaknesses:** Strength: The curriculum is focused on the Major Works with ample opportunities for students to explore strategies and deepen their conceptual understanding. Conceptual understanding and application metrics are particularly strong for this textbook. Weakness: Some teachers would be concerned that there are not enough opportunities for procedural fluency to develop.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** How to Find the Evidence: Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Mathematical practices are clearly present throughout the curriculum. The Practices are marked in the Unit Organizer, in the Mathematical Background: Practices, and the beginning of each Lesson. But it doesn't stop there, throughout the lessons in the Teacher's Edition the practices are marked to allow teachers to focus different parts of the lesson on the Practices where necessary. Unit 2 Lesson 1 largely focuses on MP6: attend to precision, MP7: look for and make use of structure whereas Unit 2 Lesson 5 largely focuses on MP2: reason abstractly and quantitatively, MP3: construct viable arguments and critique the reasoning of others. Unit 3 Lesson 11 focuses on MP2: reason abstractly and quantitatively and MP4: model with mathematics. All practices are represented sufficiently throughout the curriculum, not only the Practices mentioned.	(Reviewer only.) **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** How to Find the Evidence: For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B. (Reviewer only.) **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Sufficient time and focus are given to the Mathematical Practices throughout the year. The Practice Standards are integrated in each lesson, with each standard the focus at different points in the unit. The assessments require students to demonstrate the Practice Standards. Unit 2 Lesson 1 largely focuses on MP6: attend to precision, MP7: look for and make use of structure whereas Unit 2 Lesson 5 largely focuses on MP2: reason abstractly and quantitatively, MP3: construct viable arguments and critique the reasoning of others. Unit 3 Lesson	

	11 focuses on M reason abstractly and quantitatively and MP4: model with mathematics. All practices are represented sufficiently throughout the curriculum, not only the Practices mentioned.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** The Student Reference Book shows the student what the Practice Standard looks like at the intermediate level. It is difficult to determine if there is a growing arc of sophistication across the grades.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** The Mathematical Practices are outlined in the Teacher's Edition Unit organizers as well as the Mathematical Background sections which are present in all units. Alignment is accurate.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__2__Meets (2)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Reasoning is at the heart of the instruction in the textbook. Students are routinely asked to explain their thinking. Students critique the reasoning of others as they engage in the Open Response and Re-engagement activities. Students are tasked to construct viable arguments and critiquing the arguments of others throughout the curriculum. Unit 1 Lesson 9, Unit 2 Lesson 8, Unit 3 Lesson 3, Unit 4 Lesson 8, Unit 5 Lesson 5, Unit 6 Lesson 4, Unit 7 Lesson 7, Unit 8 Lesson 7	**____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Students are asked to provide models and representations and to explain each. They are taught how to provide a mathematical argument through conjectures and explanations of reasoning. They are asked to critique the reasoning of others as they analyze student errors. Every Unit has an open ended lesson that spans at least 2 days and	

	asks students to [illegible]erate patterns and models on day 1. Day 2 focuses on examining their classmates' work, discussing, and revising their work.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Every unit includes a list of vocabulary in the Mathematical Background section at the beginning of the unit and are expected to use the vocabulary as they explain their reasoning. There are ample opportunities for students to discuss and defend mathematics with the teacher and with other students. Models and representations are objects used to explain reasoning.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. (Reviewer only.) **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **__6__Meets** **____Does Not Meet** **Strengths/Weaknesses:** The Mathematical Practices have a strong presence throughout the curriculum and all Practices are adequately represented and built on. This textbook instructs teachers and students about the habits of mind associated with the mathematical practices. It also assesses the student's performance of the Practice Standards.
Alignment Criterion 3: **Access to the Standards for All Students**	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Materi[illegible]must provide supports for English Language Learners and other special populations. Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	corestandards.org/w[illegible]tent/uploads/Math_Publishers_ Criteria_K-8_Spring_[illegible]_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** How to Find the Evidence: Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Every lesson has differentiated instruction activities for English Language Learners and other special populations. the textbook identifies specific points in instruction where support will be needed for English Language Learners. Often this is based on providing visual information. Reading support is also suggested throughout and the problems are deliberately presented in simple language. Common misconceptions are identified in the teacher edition along with strategies to address the misconceptions. The games provided in the manipulative kit allow all special populations above and below grade level to practice and deepen their understanding of the Standards on their level.	Reviewer only.) **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** How to Find the Evidence: Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The curriculum is laced with spiral learning that allows appropriate scaffolding and support for all learners. Each lesson begins with three levels of Readiness activities. Often these are engaging games from the manipulative kit. Students work in pairs and as a whole on problems and homework or Math Boxes provide independent practice. During instruction, there are notes in the teacher edition for adjusting the activity, addressing misconceptions and the development of academic vocabulary. Games provide further opportunities for differentiation and there are Assessment Check-ins which inform the teacher about needed support or scaffolding. The spiral/distributed review allows for the gradual removal of supports.	Reviewer only.) **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric A[illegible]C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** How to Find the Evidence: Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** There are a variety of lesson strategies used throughout each lesson identified in the teacher's manual including whole group, small group, partner, or independent work. Additionally the questions provided are consistently higher order and there are multiple opportunities for checking for understanding through models, open ended tasks, questioning, and written responses.	Reviewer only.) **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		(Reviewer only.) **__6__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: The program includes a variety of instructional strategies. The sequencing of tasks, problems, and questions provide for growing understanding and fluency.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Each unit has a sufficient guide for the teacher including the Unit Organizer: Standards, Mathematical Practices, Contents (Lessons),list of materials for each lesson, Problem Solving, list of Assessment and Differentiation, as well as	(Reviewer only.) **___x___ Yes** **_____ No**

	Ongoing Practice and how the Games provided can be used for the unit, Mathematical Background of standards and practices, and a Spiral Trace of Standards that are reviewed compared with Standards that are introduced. The lessons in each unit broken down into Warm-Up activities, Focus work and class instruction, Practice opportunities for students in class, and conclude with Math Boxes (aka homework) and a Home Link. Students are consistently engaged through problem solving. The questions strategies provided lead to student engagement and problems/tasks have multiple entry points.	
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Problems and exercises are given in the Focus portion of the lessons as well as in the Practices section where students turn to their Math Journal and Math Masters books. The introduction of ratios provides an example of learning new mathematics through problem solving. The lessons associated with operations with decimals provide examples of working exercises to build mastery.	**(Reviewer only.)** **___x___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Overall, the approach is systematic and follows a logical sequence. The sequence in all lessons is carefully designed to build student understanding and fluency. The distributed review and Readiness activities are intentionally sequenced as well.	**(Reviewer only.)** **____x__ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** Lessons provide mathematical background on the content taught, "possible student responses" and questions to guide discussion. questions are provided to guide student thinking along with strategies to address misconceptions. Specific points when students should demonstrate the Mathematical Practices are identified.	**(Reviewer only.)** **__x____ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** The manipulatives provided are aligned with the mathematical focus of the unit. Online manipulatives are also provided. Students are asked to connect representations with written methods.	(Reviewer only.) ___x___ **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** In addition to frequent teacher observations, every lesson offers an Assessment Check-In to gauge students' performance on one or more of the standards. The textbook contains the identified curriculum embedded assessments. The Assessment Handbook offers a student Self Assessment, Assessment with procedural and conceptual problems, Challenge Assessment with open ended questions, and a Cumulative Unit Assessment. Additionally there are Beginning-of-Year, Mid-Year, and End-of-Year Assessments each with an outlining of goal Standards that are covered in the assessment.	(Reviewer only.) __x____ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Rubrics and scoring guidelines with student samples are included in the Assessment Handbook, but the rubrics are generic. Answer keys for the Assessment Check-In questions and Summative Assessments are available in the Teacher Edition of the textbook. Assessment of the Mathematical Practices is provided along with assessment of the math content.	(Reviewer only.) ___x___ **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Questions that assess student performance model the language in the textbook.	(Reviewer only.) ___x___ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Evaluators, both from the project as well as outside, are included are listed on the copyright page of the Teacher's' Edition.	(Reviewer only.) __x____ **Yes**

		_____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The Student Journal is simple and clear. Models are simple and students are asked to provide their own models.	(Reviewer only.) __x____ **Yes** _____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** The Math Masters student book includes a parent letter for each unit which includes an outline of the text content, an overview of data displays, vocabulary, do-anytime activities, games to play at home, and a guide to helping your child with homework including an answer key to homework problems. The Student Reference Book will also serve as a "Parent" Reference Book.	(Reviewer only.) ___x___ **Yes** _____ **No**

Publisher: Mc-Graw Hill Copyright: Mc-Graw Hill Education ISBN: 978-0-02-143073-4 other various

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
___x____ Meets _____ Does Not Meet	__x___ Meets _____ Does Not Meet

Non-Negotiable Overall:

__x___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet

Alignment Criteria Overall:

__x (18/18)___ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __x___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:
Curriculum is well developed and aligned to Common Core State Standards covering a variety of problems and strategies both procedural and conceptual. The text provides great opportunity for teachers to use student thinking to develop conceptual understanding. Student reasoning plays a key role throughout the textbook. Teachers are equipped with a variety of materials and support to teach the lessons. The Teacher's' Edition includes a chart of the Standards and which lesson they are covered, Unit Organizer which further breaks down the lessons taught and the Standards included, a Spiral Trace of review and new concept lessons, and a breakdown of the Mathematical Practices for the each lesson. Materials are listed at the beginning of each lesson. The Manipulative Kit is very extensive, versatile and adaptive to a variety of lessons and situations. There are math games included in the Kit that are accessible for all levels of learners. The Student Reference Book is not consumable and focuses on student-led learning. The Student Math Journal and Math Masters books are well organized with parent letters and strategies to use at home.

Weaknesses:
The Student Math Journal and Math Masters books are consumable. Some applications are actually in the 7th grade standards: scaling is used to develop ideas about proportional reasoning and this is a specific 7th grade application.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill School Education, LLC
Title:	Number Worlds - Level A
ISBN #	various
Grade Level(s) or Course:	Level A
Reviewer ID:	DY, BKC

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____x___**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Pre-skills are assessed before they are taught to students.

COHERENCE-
Materials do focus coherently on the Major Work of the grade level.

RIGOR-
Program offers many opportunities to practice skills through lessons, activities , assessments and projects.

CONCEPTUAL UNDERSTANDING-
Program offers opportunities for students to reflect on their learning and explain their thinking.

MATHEMATICAL PRACTICES-
The mathematical practices are embedded in all activites.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Differentiation and practice in every lesson is evident. Students are supported to demonstrate their learning in a variety of ways.

OTHER:
Vocabulary flash cards are available to purchase, however, this is not a necessity to the success of the program.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: McGraw Hill School Education, LLC

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **No skills were assessed prior to teaching the standards. Program designed as an intervention program.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **28 of the 32 weeks covered the major works for Kindergarten.** **Placement assessments to be given to students.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2[illegible] **Supporting [illegible]k, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The vast amount of [illegible] program is aimed to center on the clusters for grade level because it is an intervention program.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Content from previous of future grades not interfere with grade level content**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **On grade level problems are the main focus in the "engage" step grade level problems are given. There was differentiated instruction for each lesson. "If…then" statements given to help teachers with scaffolding.**	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Placement test shows teachers where to place students within the program.**	(Reviewer only.) ___x_Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Standards are clearly shown the teacher know grade level or standard for the skill, CCSS, utilizing "Skills Trace" in Teaching for Understanding.**	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2C **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Unit overview provides objective and standards for the week and again in the daily plan.**	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Every 4 weeks standards learned combined for Project Based Learning to help deepen understanding for the concepts learned. Some projects cover two domains and some covered 2-3 clusters.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Number sense as the foundation for program. 3 levels of conceptual instruction daily.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Activity cards given with questions to ask for each lesson. Reflects steps in the workbook push students to understand and explain their thinking.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** All lessons feature opportunities to identify correspondences across mathematical representations.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress towa[illegible]ency and procedural skill interwoven with students' develo[illegible]conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Many opportunities f[illegible]uency practice, games, and manipulatives also algorithms included in each lesson.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **Opportunities to use different strategies.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Repeated practice and fluency in all lessons.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Many opportunities for multi-step word problems and extended response questions. Students need critical thinking to solve problems.**	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Focus is on standards of the Major Works and since it was an intervention program it is preparing students to be on grade level.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling builds appropriately for grade level, giving students multiple opportunities for use of hands-on and virtual manipulatives.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

(Reviewer only.)

___x_Meets

____Does Not Meet

Strengths/Weaknesses:

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Materials address the practice standards which strengthen the focus of the Major Work for the grade level.

(Reviewer only.)

___x_Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B **Materials at[illegible] to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to [illegible]uate Metric 2B. Record evidence for each que[illegible] and rate Metric 2B.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Standards are meaningfully present at all grade levels, age appropriate and spark interest in students.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Standards were developed across grade levels and increased in complexity.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **On-line resources were avasilable.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Extended Response and Critical Thinking sections evident in all lessons.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Extended Response and Critical Thinking sections evident in all lessons.**	

Do materials ex attend to the specialized language of mathematics? Is anguage of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Vocabulary at the be ing of each lesson is provided. Words are intended to be used throughout the lesson.**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Support for ELL and special populations is evident. (ELL support guide, Spanish and English letters for home provided along with progress monitoring. Building Blocks also in Spanish.)	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Differentiation and practice in each lesson.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Design of lessons pushes students to demonstrate understanding in a variety of ways including oral, written, and discussion. Also hands-on games, etc.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each lesson provides an easy to use format for the teacher to follow. The components of the lesson are warm-up, engage, reflect, and assess encourages active participation from all students.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **In the Engage section students develop new concepts and then they practice their new learning.**	**(Reviewer only.)** **____x__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Knowledge and placement tests are given and program consists of 5 six-week lessons per grade level.	(Reviewer only.) ____x__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- There is an on-line Teachers edition which includes a discussion board and interactive models and professional development to support the teacher	(Reviewer only.) _____x_ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Manipulatives provided were appropriate for the grade level and promoted connections to written methods. Materials needed are clear and listed at the beginning of each lesson.	(Reviewer only.) ____x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There are entry level placements tests to be given prior to beginning of program. The formal assessments given at the end of each week and informal assessments given at the end of each lesson.	(Reviewer only.) ___x___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- The placement test guide gives instructions on how to administer and score tests. Answer keys given in the Teacher's Guide for each practice sheet.	(Reviewer only.) __x____ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Assessments are accessible and unbiased and include the course-level language.	(Reviewer only.) ____x__ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The authors were listed on page B2-B5 of the Teacher's Guide.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Activities and pictures are engaging. Questions are age appropriate and pictures catch the attention of students.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Letter home provided for parents in both Spanish and English which includes easy home activities that encourage extra practice and involvement.**	**(Reviewer only.)** **_____x_ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
____x___ Meets _____ Does Not Meet	___x__ Meets _____ Does Not Meet

Non-Negotiable Overall:

____x_ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____ Meets _____ Does Not Meet

Alignment Criteria Overall:

__x___ Meets _____ Does Not Meet

If the mater[illegible] meet both Non-Negotiables and relevant Alignment C[illegible]ion, they are aligned to the Shifts and major features o[illegible]e Core Standards. **[illegible] the materials meet every Non-Negotiable and Alig[illegible]ent Criterion? __x___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill School Education, LLC
Title:	Number Worlds - Level B
ISBN #	various
Grade Level(s) or Course:	Level B
Reviewer ID:	BKC, DY

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, *coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____x___**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
No skills are assessed before they are taught to students.

COHERENCE-
Materials do focus coherently on the Major Work of the grade level.

RIGOR-
Program offers many opportunities to practice skills through lessons, activities , assessments and projects.

CONCEPTUAL UNDERSTANDING-
Program offers opportunities for students to reflect on their learning and explain their thinking.

MATHEMATICAL PRACTICES-
The mathematical practices are embedded in all activites.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Differentiation and practice in every lesson is evident. Students are supported to demonstrate their learning in a variety of ways.

OTHER:
Vocabulary flash cards are available to purchase, however, this is not a necessity to the success of the program.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: McGraw Hill School Education, LLC

Title of Material: Number Worlds - Level B

Author: Griffin

ISBN #: various **Copyright** 2015

Reviewer ID: BKC, DY

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **No skills were asse[illegible] prior to teaching the standards. Program [illegible]esigned as an intervention program.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **28 of the 32 weeks covered the major works for Kindergarten.** **Placement assessments to be given to students.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The vast amount of program is aimed to center on the clusters for grade level because it is an intervention program.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Content from previous of future grades not interfere with grade level content**	(Reviewer only.) **___x_Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D **Materials gi[illegible] students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **On grade level prob[illegible]s are the main focus in the "engage" step grade level problems are given. There was differentiated instruction for each lesson. "If...then" statements given to help teachers with scaffolding.**	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Placement test shows teachers where to place students within the program.**	(Reviewer only.) ___x_Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Standards are clearly shown the teacher know grade level or standard for the skill, CCSS, utilizing "Skills Trace" in Teaching for Understanding.**	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2 **Materials inc[illegible]e learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Unit overview provi[illegible]objective and standards for the week and again in the daily plan.**	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Every 4 weeks standards learned combined for Project Based Learning to help deepen understanding for the concepts learned. Some projects cover two domains and some covered 2-3 clusters.**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Number sense as the foundation for program. 3 levels of conceptual instruction daily.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Activity cards given with questions to ask for each lesson. Reflects steps in the workbook push students to understand and explain their thinking.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** All lessons feature opportunities to identify correspondences across mathematical representations.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress tow[illegible]uency and procedural skill interwoven with students' develo[illegible]conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Many opportunities f[illegible]uency practice, games, and manipulatives also algorithms included in each lesson.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **Opportunities to use different strategies.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Repeated practice and fluency in all lessons.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Many opportunities for multi-step word problems and extended response questions. Students need critical thinking to solve problems.**	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Focus is on standards of the Major Works and since it was an intervention program it is preparing students to be on grade level.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling builds appropriately for grade level, giving students multiple opportunities for use of hands-on and virtual manipulatives.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

___x_Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Materials address the practice standards which strengthen the focus of the Major Work for the grade level.

(Reviewer only.)

___x_Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Standards are meaningfully present at all grade levels, age appropriate and spark interest in students.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Standards were developed across grade levels and increased in complexity.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **On-line resources were avasilable.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Extended Response and Critical Thinking sections evident in all lessons.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Extended Response and Critical Thinking sections evident in all lessons.**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Vocabulary at the beginning of each lesson is provided. Words are intended to be used throughout the lesson.**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Support for ELL and special populations is evident. (ELL support guide, Spanish and English letters for home provided along with progress monitoring. Building Blocks also in Spanish.)	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Differentiation and practice in each lesson.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Design of lessons pushes students to demonstrate understanding in a variety of ways including oral, written, and discussion. Also hands-on games, etc.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each lesson provides an easy to use format for the teacher to follow. The components of the lesson are warm-up, engage, reflect, and assess encourages active participation from all students.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **In the Engage section students develop new concepts and then they practice their new learning.**	**(Reviewer only.)** **____x__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Knowledge and placement tests are given and program consists of 5 six-week lessons per grade level.	(Reviewer only.) ____x__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- There is an on-line Teachers edition which includes a discussion board and interactive models and professional development to support the teacher	(Reviewer only.) _____x_ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Manipulatives provided were appropriate for the grade level and promoted connections to written methods. Materials needed are clear and listed at the beginning of each lesson.	(Reviewer only.) ____x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There are entry level placements tests to be given prior to beginning of program. The formal assessments given at the end of each week and informal assessments given at the end of each lesson.	(Reviewer only.) ___x___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- The placement test guide gives instructions on how to administer and score tests. Answer keys given in the Teacher's Guide for each practice sheet.	(Reviewer only.) __x____ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Assessments are accessible and unbiased and include the course-level language.	(Reviewer only.) ____x__ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The authors were listed on page B2-B5 of the Teacher's Guide.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Activities and pictures are engaging. Questions are age appropriate and pictures catch the attention of students.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Letter home provided for parents in both Spanish and English which includes easy home activities that encourage extra practice and involvement.**	**(Reviewer only.)** **_____x_ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
____x___ Meets _____ Does Not Meet	___x__ Meets _____ Does Not Meet

Non-Negotiable Overall:

____x_ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____ Meets _____ Does Not Meet

Alignment Criteria Overall:

__x___ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __x___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill School Education, LLC
Title:	Number Worlds - Level C
ISBN #	various
Grade Level(s) or Course:	Level C
Reviewer ID:	KC, DY

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____x___**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Most skills are assessed before they are taught to students.

COHERENCE-
Materials do not focus coherently on the Major Work of the grade level.

RIGOR-
Program offers many opportunities to practice skills through lessons, activities, assessments and projects.

CONCEPTUAL UNDERSTANDING-
Program offers opportunities for students to reflect on their learning and explain their thinking.

MATHEMATICAL PRACTICES-
The mathematical practices are embedded in all activities.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Differentiation and practice in every lesson is evident. Students are supported to demonstrate their learning in a variety of ways.

OTHER:
Vocabulary flash cards are available to purchase, however, this is not a necessity to the success of the program.

Focused on Major Works of Kindergarten instead of 1st grade.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **No skills were assessed prior to teaching the standards. Program designed as an intervention program.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **10 of the 32 weeks covered the major works for 1st Grade. 22 of the 32 weeks covered the major works for Kindergarten.** **Placement assessments to be given to students.**	**(Reviewer only.)** **____Meets** **___x_Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **There are 10 weeks instruction that center on standards included in the 1st grade major work.**	(Reviewer only.) **____Meets** **___x_Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Content from previous or future grades does not interfere with grade level content**	(Reviewer only.) **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **On grade level problems are the main focus in the "engage" step grade level problems are given. There was differentiated instruction for each lesson. "If…then" statements given to help teachers with scaffolding.**	(Reviewer only.) **__x__Meets** **_____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Placement test shows teachers where to place students within the program.**	(Reviewer only.) **___x_Meets** **_____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Standards are clearly shown the teacher know grade level or standard for the skill, CCSS, utilizing "Skills Trace" in Teaching for Understanding.**	(Reviewer only.) **__x__Meets** **_____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Unit overview provides objective and standards for the week and again in the daily plan.**	(Reviewer only.) **_x___Meets** **_____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Every 4 weeks standards learned combined for Project Based Learning to help deepen understanding for the concepts learned. Some projects cover two domains and some covered 2-3 clusters.**	(Reviewer only.) **__x__Meets** **_____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **_____Meets** **__x__Does Not Meet** **Strengths/Weaknesses:**
Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.		

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

____Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Number sense as the foundation for program. 3 levels of conceptual instruction daily.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Activity cards given with questions to ask for each lesson. Reflects steps in the workbook push students to understand and explain their thinking.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** All lessons feature opportunities to identify correspondences across mathematical representations.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Many opportunities for fluency practice, games, and manipulatives also algorithms included in each lesson.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** **Opportunities to use different strategies.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Repeated practice and fluency in all lessons.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **____Meets (2)** **___x_Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are [illegible]sit? Evaluate lessons, chapter/unit assessments, and homework [illegible]signments.	**Evidence-** **Many opportunities for multi-step word problems and extended response questions. Students need critical thinking to solve problems.**	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Problems span from Kindergarten to 1st grade. All of the major work of 1st grade is not covered.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Modeling builds appropriately for grade level, giving students multiple opportunities for use of hands-on and virtual manipulatives.**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

___x_Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Materials address the practice standards which strengthen the focus of the Major Work for the grade level.

(Reviewer only.)

___x_Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials a[illegible]d to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each qu[illegible]n and rate Metric 2B.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Standards are meaningfully present at all grade levels, age appropriate and spark interest in students.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Standards were developed across grade levels and increased in complexity.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **On-line resources were avasilable.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Extended Response and Critical Thinking sections evident in all lessons.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Extended Response and Critical Thinking sections evident in all lessons.**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Vocabulary at the beginning of each lesson is provided. Words are intended to be used throughout the lesson.**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Support for ELL and special populations is evident. (ELL support guide, Spanish and English letters for home provided along with progress monitoring. Building Blocks also in Spanish.)	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Differentiation and practice in each lesson.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Design of lessons pushes students to demonstrate understanding in a variety of ways including oral, written, and discussion. Also hands-on games, etc.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__x__Meets** **_____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each lesson provides an easy to use format for the teacher to follow. The components of the lesson are warm-up, engage, reflect, and assess encourages active participation from all students.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems a[illegible]exercises be labeled as such.**	**Evidence-** **In the Engage section students develop new concepts and then they practice their new learning.**	**(Reviewer only.)** **____x__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Knowledge and placement tests are given and program consists of 5 six-week lessons per grade level.	(Reviewer only.) ____x__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- There is an on-line Teachers edition which includes a discussion board and interactive models and professional development to support the teacher	(Reviewer only.) _____x_ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Manipulatives provided were appropriate for the grade level and promoted connections to written methods. Materials needed are clear and listed at the beginning of each lesson.	(Reviewer only.) ____x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There are entry level placements tests to be given prior to beginning of program. The formal assessments given at the end of each week and informal assessments given at the end of each lesson.	(Reviewer only.) ___x___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- The placement test guide gives instructions on how to administer and score tests. Answer keys given in the Teacher's Guide for each practice sheet.	(Reviewer only.) __x____ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Assessments are accessible and unbiased and include the course-level language.	(Reviewer only.) ____x__ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The authors were listed on page B2-B5 of the Teacher's Guide.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Activities and pictures are engaging. Questions are age appropriate and pictures catch the attention of students.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Letter home provided for parents in both Spanish and English which includes easy home activities that encourage extra practice and involvement.**	**(Reviewer only.)** **_____x_ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
____x___ Meets _____ Does Not Meet	____ Meets ___x__ Does Not Meet

Non-Negotiable Overall:

_____ Meets _____x_ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___5__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____x_ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet

Alignment Criteria Overall:

__x___ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes __x___ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

This program is a 1st grade intervention program, however, it focuses on Kindergarten major works. We are concerned that students will not be exposed to the 1st grade major works.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill School Education, LLC
Title:	Number Worlds
ISBN #	various
Grade Level(s) or Course:	Level D
Reviewer ID:	DY, CN

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**x**___**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Most skills are assessed before they are taught to students.

COHERENCE-
Materials do focus coherently on the Major Work of the grade level.

RIGOR-
Program offers many opportunities to practice skills through lessons, activities , assessments and projects.

CONCEPTUAL UNDERSTANDING-
Program offers opportunities for students to reflect on their learning and explain their thinking.

MATHEMATICAL PRACTICES-
The mathematical practices are embedded in all activites.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Differentiation and practice in every lesson is evident. Students are supported to demonstrate their learning in a variety of ways.

OTHER:
Vocabulary flash cards are available to purchase, however, this is not a necessity to the success of the program.

Reviewer ID: DY, CN

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **No skills were assessed prior to teaching the standards. Program designed as an intervention program.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **28 of the 32 weeks covered the major works for Kindergarten.** **Placement assessments to be given to students.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting [illegible]k, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The vast amount of [illegible] program is aimed to center on the clusters for grade level because it is an intervention program.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Content from previous of future grades not interfere with grade level content**	(Reviewer only.) **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **On grade level problems are the main focus in the "engage" step grade level problems are given. There was differentiated instruction for each lesson. "If…then" statements given to help teachers with scaffolding.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Placement test shows teachers where to place students within the program.**	(Reviewer only.) **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Standards are clearly shown the teacher know grade level or standard for the skill, CCSS, utilizing "Skills Trace" in Teaching for Understanding.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Unit overview provides objective and standards for the week and again in the daily plan.**	(Reviewer only.) **_x___Meets** **_____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Every 4 weeks standards learned combined for Project Based Learning to help deepen understanding for the concepts learned. Some projects cover two domains and some covered 2-3 clusters.**	(Reviewer only.) **__x__Meets** **_____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **___x_Meets** **_____Does Not Meet** **Strengths/Weaknesses:**
Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.		

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

____**Meets (2)**

____**Partially Meets (1)**

____**Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Number sense as the foundation for program. 3 levels of conceptual instruction daily.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Activity cards given with questions to ask for each lesson. Reflects steps in the workbook push students to understand and explain their thinking.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** All lessons feature opportunities to identify correspondences across mathematical representations.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Many opportunities for fluency practice, games, and manipulatives also algorithms included in each lesson.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** **Opportunities to use different strategies.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Repeated practice and fluency in all lessons.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Many opportunities for multi-step word problems and extended response questions. Students need critical thinking to solve problems.**	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Focus is on standards the Major Works and since it was an intervention program it is preparing students to be on grade level.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling builds appropriately for grade level, giving students multiple opportunities for use of hands-on and virtual manipulatives.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

___x_Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Materials address the practice standards which strengthen the focus of the Major Work for the grade level.	**(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Standards are meaningfully present at all grade levels, age appropriate and spark interest in students.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Standards were developed across grade levels and increased in complexity.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **On-line resources were avasilable.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Extended Response and Critical Thinking sections evident in all lessons.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Extended Response and Critical Thinking sections evident in all lessons.**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Vocabulary at the beginning of each lesson is provided. Words are intended to be used throughout the lesson.**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Support for ELL and special populations is evident. (ELL support guide, Spanish and English letters for home provided along with progress monitoring. Building Blocks also in Spanish.)	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Differentiation and practice in each lesson.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Design of lessons pushes students to demonstrate understanding in a variety of ways including oral, written, and discussion. Also hands-on games, etc.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each lesson provides an easy to use format for the teacher to follow. The components of the lesson are warm-up, engage, reflect, and assess encourages active participation from all students.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **In the Engage section students develop new concepts and then they practice their new learning.**	**(Reviewer only.)** **____x__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Knowledge and placement tests are given and program consists of 5 six-week lessons per grade level.	(Reviewer only.) ____x__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- There is an on-line Teachers edition which includes a discussion board and interactive models and professional development to support the teacher	(Reviewer only.) _____x_ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Manipulatives provided were appropriate for the grade level and promoted connections to written methods. Materials needed are clear and listed at the beginning of each lesson.	(Reviewer only.) ____x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There are entry level placements tests to be given prior to beginning of program. The formal assessments given at the end of each week and informal assessments given at the end of each lesson.	(Reviewer only.) ___x___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- The placement test guide gives instructions on how to administer and score tests. Answer keys given in the Teacher's Guide for each practice sheet.	(Reviewer only.) __x____ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Assessments are accessible and unbiased and include the course-level language.	(Reviewer only.) ____x__ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The authors were listed on page B2-B5 of the Teacher's Guide.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Activities and pictures are engaging. Questions are age appropriate and pictures catch the attention of students.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Letter home provided for parents in both Spanish and English which includes easy home activities that encourage extra practice and involvement.**	**(Reviewer only.)** **_____x_ Yes** **_____ No**

Reviewer ID # BKC, DY Date Review Completed: March 8, 2016

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
____x___ Meets _____ Does Not Meet	___x__ Meets _____ Does Not Meet

Non-Negotiable Overall:

____x_ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X___ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X__ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X___ Meets _____ Does Not Meet

Alignment Criteria Overall:

__x___ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __x___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill School Education, LLC
Title:	Number Worlds
ISBN #	various
Grade Level(s) or Course:	Level E
Reviewer ID:	LC, CN

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____x___**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Most skills are assessed before they are taught to students.

COHERENCE-
Materials do not focus coherently on the Major Work of the grade level.

RIGOR-
Program offers many opportunities to practice skills through lessons, activities, assessments and projects.

CONCEPTUAL UNDERSTANDING-
Program offers opportunities for students to reflect on their learning and explain their thinking.

MATHEMATICAL PRACTICES-
The mathematical practices are embedded in all activities.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Differentiation and practice in every lesson is evident. Students are supported to demonstrate their learning in a variety of ways.

OTHER:
Vocabulary flash cards are available to purchase, however, this is not a necessity to the success of the program.

Focused on Major Works of Kindergarten instead of 1st grade.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **No skills were asse[illegible]d prior to teaching the standards. Program designed as an intervention program.**	**(Reviewer only.)** **___x_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:
Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-
28 of the 30 weeks covered the major works for 3rd Grade.
Placement assessments to be given to students.

(Reviewer only.)

___x_Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The vast amount of program is aimed to center on the clusters for grade level because it is an intervention program.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Content from previous of future grades not interfere with grade level content**	(Reviewer only.) **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **On grade level problems are the main focus in the "engage" step grade level problems are given. There was differentiated instruction for each lesson. "If…then" statements given to help teachers with scaffolding.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Placement test shows teachers where to place students within the program.**	(Reviewer only.) **___x_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Standards are clearly shown the teacher know grade level or standard for the skill, CCSS, utilizing "Skills Trace" in Teaching for Understanding.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Unit overview provides objective and standards for the week and again in the daily plan.**	(Reviewer only.) **_x___Meets** **_____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Every 4 weeks standards learned combined for Project Based Learning to help deepen understanding for the concepts learned. Some projects cover two domains and some covered 2-3 clusters.**	(Reviewer only.) **__x__Meets** **_____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **___x_Meets** **_____Does Not Meet** **Strengths/Weaknesses:**
Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.		

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

____Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Number sense as the foundation for program. 3 levels of conceptual instruction daily.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Activity cards given with questions to ask for each lesson. Reflects steps in the workbook push students to understand and explain their thinking.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** All lessons feature opportunities to identify correspondences across mathematical representations.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **Many opportunities for fluency practice, games, and manipulatives also algorithms included in each lesson.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **Opportunities to use different strategies.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Repeated practice and fluency in all lessons.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are e[illegible]it? Evaluate lessons, chapter/unit assessments, and homework [illegible]ignments.	**Evidence-** **Many opportunities for multi-step word problems and extended response questions. Students need critical thinking to solve problems.**	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Focus is on standards the Major Works and since it was an intervention program it is preparing students to be on grade level.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling builds appropriately for grade level, giving students multiple opportunities for use of hands-on and virtual manipulatives.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

___x_Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Materials address the practice standards which strengthen the focus of the Major Work for the grade level.	**(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials a[illegible]d to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each qu[illegible]n and rate Metric 2B.** **(Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Standards are meaningfully present at all grade levels, age appropriate and spark interest in students.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Standards were developed across grade levels and increased in complexity.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **On-line resources were avasilable.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Extended Response and Critical Thinking sections evident in all lessons.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Extended Response and Critical Thinking sections evident in all lessons.**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Vocabulary at the beginning of each lesson is provided. Words are intended to be used throughout the lesson.**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Support for ELL and special populations is evident. (ELL support guide, Spanish and English letters for home provided along with progress monitoring. Building Blocks also in Spanish.)	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Differentiation and practice in each lesson.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Design of lessons pushes students to demonstrate understanding in a variety of ways including oral, written, and discussion. Also hands-on games, etc.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students Materials must provide supports for English Language Learners and other special populations. **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each lesson provides an easy to use format for the teacher to follow. The components of the lesson are warm-up, engage, reflect, and assess encourages active participation from all students.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems a[illegible]exercises be labeled as such.**	**Evidence-** **In the Engage section students develop new concepts and then they practice their new learning.**	**(Reviewer only.)** **____x__ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Knowledge and placement tests are given and program consists of 5 six-week lessons per grade level.	(Reviewer only.) ____x__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- There is an on-line Teachers edition which includes a discussion board and interactive models and professional development to support the teacher	(Reviewer only.) _____x_ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Manipulatives provided were appropriate for the grade level and promoted connections to written methods. Materials needed are clear and listed at the beginning of each lesson.	(Reviewer only.) ____x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There are entry level placements tests to be given prior to beginning of program. The formal assessments given at the end of each week and informal assessments given at the end of each lesson.	(Reviewer only.) ___x___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- The placement test guide gives instructions on how to administer and score tests. Answer keys given in the Teacher's Guide for each practice sheet.	(Reviewer only.) __x____ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Assessments are accessible and unbiased and include the course-level language.	(Reviewer only.) ____x__ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The authors were listed on page B2-B5 of the Teacher's Guide.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Activities and pictures are engaging. Questions are age appropriate and pictures catch the attention of students.**	**(Reviewer only.)** **____x__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Letter home provided for parents in both Spanish and English which includes easy home activities that encourage extra practice and involvement.**	**(Reviewer only.)** **_____x_ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
____x___ Meets _____ Does Not Meet	___x__ Meets _____ Does Not Meet

Non-Negotiable Overall:

____x_ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X___ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X___ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X___ Meets _____ Does Not Meet

Alignment Criteria Overall:

__x___ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __x___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill Education
Title:	Number Worlds Level F
ISBN #	TE 978-0-02-129479-4
Grade Level(s) or Course:	Level F
Reviewer ID:	LS, LC

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

__X__**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The topics listed are not assessed before grade level, nor are other topics outside of grade level primarily assessed.

COHERENCE- The Number Worlds Program is faithful to the Major Work of the grade level.

RIGOR- The program builds a framework for conceptual understanding overtime with sufficient problems dedicated to procedure and fluency.

CONCEPTUAL UNDERSTANDING- There are sufficient amounts of high quality conceptual problems to build a framework for students and deeper understanding.

MATHEMATICAL PRACTICES- The mathematical practices are not explicitly adhered to in Number Worlds.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- All materials are accessible to students who require opportunities outside a core program to solidify a framework in mathematical concepts

OTHER:

The activity cards in the manipulative kit are necessary for each lesson.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- **Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.**

- **Record and explain the evidence upon which the rating is based.**

Proceed to Section 4: Indicators of Quality

- **Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.**

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www corestandards org/wp-content/uploads/Math_Standards pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_ Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.
Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indic[illegible].**	**Evidence-** Number Worlds is not meant to be used during a specific grade level rather it focuses on standards t[illegible]tudents have not mastered.	**(Reviewer only.)** **_x_ Meets**

• Proba[illegible], including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non- Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	Students tak[illegible] Placement Test that identifies their level of need. Therefore, the Standards are not assessed before the grade level indicated. Level F includes many 4th grade Standards: 4.NBT.2, 4.NF.1, 4.OA5, 4.NBT.5, 4.G.2, and many more. Level F would not be used with students who have not yet been exposed to the standards it covers based on the student's performance in the Placement Test.	____**Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**(Reviewer only.)** __x__**Meets** ____**Does Not Meet** **Strengths/Weaknesses:** Each unit clearly outlines the standards that are covered.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:
Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)
Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)
Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.
For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-
All Major Works are covered. Four out of five units are focused on the Major Works of the 4th grade:

- Unit 1 place value, equivalent fractions, Generalize place value for multi-digit whole numbers, extend understanding of fraction equivalence and ordering, build fractions from unit fractions
- Unit 2 addition and subtraction, use place value understanding and properties of operations to perform multi-digit arithmetic
- 3 multiplication, use place value understanding and properties of operations to perform multi-digit arithmetic
- Unit 4 division, use place value understanding and properties of operations to perform multi-digit arithmetic

(Reviewer only.)

_x___Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Supporting Work does not detract from the Major Work and builds to support the Major Works. • Unit 5 Geometry and Measurement covers the Supporting Work: solved problems involving measurement and conversion of measurements from a larger unit to a smaller unit, and the Additional Cluster: Geometric measurement: understand concepts of angle and measure angles, Draw and identify lines and angles, and classify shapes by properties of their lines and angles. • Unit 1 Week 3 covers the Supporting Work Gain familiarity with factors and multiples.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Number Worlds is designed as an intervention program to be used with small groups or whole class where Standards need reinforced to fill gaps. Students take a placement test to identify what level of Number Worlds they should begin using. According to the Implementation Guide: • Level A focuses on kindergarten standards • Level B focuses on kindergarten standards • Level C focuses on kindergarten and 1st grade standards • Level D focuses on 1st and 2nd grade standards • Level E focuses on 3rd grade standards • Level F focuses on 4th grade standards • Level G focuses on 5th grade standards • Level H focuses on 6th grade standards • Level I focuses on 7th grade standards • Level J focuses on 8th grade standards	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Number Worlds program intervenes in a grade level to cover Standards that a student has not mastered. Therefore, the materials from Nubmer Worlds may or may not be at the student's age grade level, but will be at their learning level based on their placement test. • A 5th grader may need extensive intervention with number sense and will be placed in Number Worlds Level F Unit 1 to deepen their understanding of the concepts of number sense.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Teacher's Edition includes several pages of "Key Standards by Lesson Week" for every level of their curriculum as a guide for teachers. This resource is so useful for teachers to see what Major Works are being taught in each level of the curriculum to ensure students are placed appropriately. Each unit has a pacing guide broken down into weeks and lessons within each week. Each unit has a pacing guide broken down into weeks and lessons within each week. Lessons are developed with explicit objectives, Standard covered, and context for the content. Students begin with a "Warm Up" which relates previous knowledge of the content, then move on to "Engage" for the bulk of the lesson in individual, small, or whole groups and build conceptual understanding. The lesson ends with "Reflect" and "Assess" for students to evaluate their work and learning.	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate	**Evidence-** The standards covered are clearly marked at the beginning of units and lessons. However, the standards taught are not necessarily grade level standards. The program is meant to be used as intervention depending on the student skill level. The teacher will know if the standard is not at grade level based on the student placement test.	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/ Insufficient Evidence**

both stu[illegible]nd teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In each weekly opener the CCSSM domain and cluster are listed. Learning objectives are placed at the beginning of each lesson just above the Standard it is based on. Objectives are shaped from the Standards. • Unit 1 Week 1 Lesson 1: Students can decompose a number into tens and ones, based on 4.NBT.2 • Unit 2 Week 1 Lesson 1: Students can add and subtract with a one- and a two-digit number, based on 4.NBT.4 • Unit 3 Week 2 Lesson 2: Students can create tree diagrams to help solve multiplication problems, based on 4.NBT.5	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computational skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Where necessary, clusters are combined to build on each other. Each cluster addresses questions for the weekly key standard. Students apply standards from several clusters at the completion of projects. • Unit 3 Week 2 Lesson 2 combines generalizing place value and performing multi-digit arithmetic allowing students to apply their developing computational skills. • Unit 3 Week 2 Lesson 1 Multiplication Strategies gives students word problems to apply their knowledge of the four operations with whole numbers, and use place value understanding to solve multiplication with the distributive property and grouping.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence**		**(Reviewer only.)** **_x___Meets**

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

____Does Not Meet

Strengths/Weaknesses:
The focus and coherence of each unit is concise and explicit in the Teacher's Edition and the Student Workbook. The placement test allows interventionists to tailor lessons to the areas of need for each student based on the student's placement test performance.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding is adhered to in the Activity Cards utilized in the "Engage" portion of each lesson. The student workbook promotes conceptual understanding on and off throughout the unit. • Unit 3 Week 2 Lesson 1 Multiplication Strategies in the student workbook simply asks students to solve word problems without giving space or direction to explore the problem by grouping as practiced in the "3D City Skyline" Activity Card. However, by the end of the week in Lesson 5 students are asked to draw models and show their thinking and strategies they have practiced during the week.	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** The Activity Cards featured in each lesson are highly conceptual and represent real world problems. The activity promotes discussion of standards, understanding, and explanation. Think Critically address high quality problems and conceptual discussion for the class.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Materials such as games, manipulatives, model and vocabulary cards along with project based learning identify correspondence across mathematical representations. Students have opportunities to infer and make connections across lessons and units. At the end of each week there is a "Project" problem for students to apply what they have practiced that week and make connections between lessons. The Projects are theme related within a Unit to build cohesive application. • By the end of Unit 1 students have experienced real world place value in "Owning a Sports Team" , estimated ticket sales, shown strategies to determine prime or composite numbers, found fractions of a playing field, explored strategies to order fractions, and made connections between patterns. • Unit 3 Week 2 is focused in multiplication strategies. Students are challenged throughout the week to explore different strategies and make connections. They also study the Associative, Commutative, and Distributive Properties to group and solve problems in a variety of ways. Activity Card 3C asks students to write the product of 24 as many ways as they can. • Unit 4 Week 4, students will divide 2- and 3-digit numbers by 1-digit numbers traditional division, models, and in Activity Card 4M students demonstrate their knowledge with manipula[illegible]es.	

Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Fluency practice opportunities for students are provided with each lesson. Students have opportunities to practice procedural understanding of the standards.The student workbook provides procedural problem practice that builds fluency. • Unit 2 Week 6: subtracting mixed numbers with regrouping • Unit 4 Week 4: dividing using the standard algorithm	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** Number Worlds provides opportunities for students to practice standard algorithms in the student practice book: listed under "additional practice" in the Teacher's Edition. Students can choose their strategy for solving problems. The curriculum also provides students with opportunities to develop their own strategies; typically these types of problems are in the Activity Cards. • Activity Card 3C: Try Another Way • Activity Card 3P Fraction Computations	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Multiple opportunities for fluency are available for students in the daily lesson routine. "Warm-up" allows students to refresh their memory, "Engage" creates a framework for learning and provides	

	practice of new skills, "Reflect" asks students to evaluate and justify their strategies, "Assess" (informal or formal) shows students and teacher what the class has learned. Fluency is built as students add to the framework throughout the Units.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are problem solving opportunities for skills practice with word problems that include multi-step computation and extended student response. The daily routine has a variety of strategies for students to understand, explore, and apply their knowledge of the Standards. One-step problems are heavily present throughout lessons. Multi-step problems are present but in small numbers. Real world problems are present throughout lessons and end of week projects.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problem[illegible]nect concepts, Standards, and domains in ways that are natural a[illegible]mportant. For a list of situation types for one-step	**Evidence-** The curriculum is focused on building the Major Works of a grade level by having the large majority of those standards immersed throughout all units.	

addition, [illegible]action, multiplication, and division problems, see Situation Types for the Operations in Word Problems		
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are developmentally appropriate models of the mathematics represented. Number Worlds Level F is based on 4th grade Standards and asks students to use arrays, model repeated addition, use factor pairs, fraction bars, and more. Not only are models used, but manipulatives such as counters, unifix cubes, dot cubes and number cubes are utilized as well.	
Alignment Criterion 1: **Rigor and Balance** **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** **AC1** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_6___Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: The Number Worlds program is student centered allowing students to work at the level of their individual need.
Directions for Alignment Criterion 2 **Standards for Mathematical Practice**		
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as

demonstrate authentic connections between content Standards and practice Standards.	texts and workbooks	mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** The practice standards are not explicitly attended to or referenced in the units; however, teachers and students will need to apply the practice standards throughout the units. MP3 is present where students provide explanations and justification of their work. MP4 is present where students are asked to draw a model or representation of their work. MP6 is present where problems require precise answers. MP7 is evident in the real world problems provided. Other practices are applicable throughout the units.	**(Reviewer only.)** **____Meets (2)** **_1___Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **____Partially Meets (1)** **__0__Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The Mathematical Practices are inferred, but never explicitly referenced. Number Worlds provides teachers with overviews, charts, and a scope and sequence of the Major Works and Standards but fails to provide any similar resources for the Mathematical Practices.	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Teachers will have to infer the Mathematical Practices for different lessons which is completely doable; however, there should be a guide to ensure that all Practices are met.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** There are no teacher-directed materials that explain the role of the practice Standards.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)** **__1__Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Students have opportunities to explain their work, but not create an argument or defend their strategy.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Students are asked to provide models such as arrays, fraction bars, and explanations in a developmentally appropriate manner; however, they are not asked create arguments or defend their strategy.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Grade appropriate vocabulary is clear and explicit in the Teacher's Edition. Instructions and word problems use mathematical terms correctly in the Teacher's Edition and the student Practice Book.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.**		**(Reviewer only.)** **____Meets** **__x__Does Not Meet**

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**Strengths/Weaknesses:** Strengths: The Unit Overviews and Lesson Overviews provide great detail on the Standards that are taught. Charts and guides are provided for teachers to relate the Standards in each unit and lesson. Weaknesses: The Mathematical Practices are not explicit or well-linked to the content.
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Support for English Language Learners is evident. A Support Guide is provided to aid teachers who are teaching English Language Learners. Number Worlds is focused on students who require intervention.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Appropriate scaffolding is present throughout lessons and units beginning with warm-up activities and group work and ending with a project to culminate their weekly learning. Teachers are encouraged to use a variety of group sizes as well as individual assignments. Each lesson gives grouping suggestions. The nature of Number Worlds is for a differentiated group of lower learners. Vocabulary is available in the Teacher's Edition and additional vocabulary is present in the English Learner Support Guide.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Lessons include a variety of instructional approaches using multiple representations: pair:share, individual, whole group, small group, hands-on, procedural, diagrams, and informal/formal assessments throughout.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__6__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: Number Worlds is well designed to address gaps in learning for students in a differentiation group. There are multiple opportunities for students to practice in a variety of ways thereby reaching a wide gamut of learners.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** There are clear instructions and guides for the teacher at the Unit Overview and in each lessons. The lessons hint at being too scripted.	**(Reviewer only.)** **__x____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Students are introduced to new mathematics in the "Engage: Develop" portion of the lessons and practice their newly acquired skills in the "Engage: Practice" section as well as in the Additional Practice section.	**(Reviewer only.)** **___x___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The lessons scaffold the students learning, allowing their understanding to grow and deepen in a logical way.	**(Reviewer only.)** **__x____ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** Background and charts are available in the beginning and end of the Teacher's Edition.	**(Reviewer only.)** **__x____ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** The manipulatives are effective and well represented in the text.	**(Reviewer only.)** **__x____ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** The placement test is used to determine which Level of Number Worlds the students should begin. Each Unit has a Pretest and Posttest as well as Weekly Tests to give at the end of each week. Additionally, each lesson includes a Student Record for the teacher to record and monitor student learning.	**(Reviewer only.)** **___x___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Answer keys are available in the Assessment handbook provided.	**(Reviewer only.)** **___x___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The language used is unbiased, the math terms are developmentally appropriate.	**(Reviewer only.)** **___x___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Evaluators not listed.	**(Reviewer only.)** **_____ Yes** **___x___ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Visuals and models provided are developmentally appropriate and aid students in understanding the Standards.	**(Reviewer only.)** **___x___ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Number Worlds is an intervention program and does not provide homework assignments for students. The Building Blocks software is utilized throughout the curriculum.	**(Reviewer only.)** **_____ Yes** **___x___ No**

Reviewer IMET Evaluation Summary Title/Level: _Number Worlds Level F_____

Publisher: _McGraw-Hill_____ Copyright: ___2015____ ISBN:_TE# 978-0-02-129479-4_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
__x_____ Meets _____ Does Not Meet	__x___ Meets _____ Does Not Meet

Non-Negotiable Overall:

_x____ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet	Points: __2___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____ Meets ___x____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __x_____ Meets _____ Does Not Meet

Alignment Criteria Overall:

_14/18____ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes __x___ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials

Strengths: The daily routine provides consistency yet offers a variety of instructional strategies such as grouping, hands-on activities, and student exploration. Number Worlds can be used along with a Core Mathematics Program and includes a "Suggestions for Implementation" guide for teachers that outlines which sections to use depending on the time allotted for intervention: 30, 45, or 60+ minutes. There are effective planning resources for the teacher: Unit overview, charts that show alignment to standards, strong student engagement, Key Standards by Lesson Week charts in the back of the Teacher's Edition for all grades.

Weaknesses: The Mathematical Practices are not explicitly addressed. Students are not asked to provide arguments or defend their work.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill Education
Title:	Number Worlds
ISBN #	TE 978-0-02-129480-0
Grade Level(s) or Course:	Level G
Reviewer ID:	LS, CB

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

__X__**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Number Worlds, Level G is an intervention program intended to target students who need additional scaffolding.

COHERENCE-
Major works are coherently implemented in units + lessons.

~~RIGOR:~~ Conceptual Understanding
Conceptual understanding is adhered to through multiple representations of practice.

~~CONCEPTUAL UNDERSTANDING-~~ Rigor
Work is grade appropriate with multiple types of problems + opportunities to deepen understanding.

MATHEMATICAL PRACTICES-
Practices are inferred but never explicitly referenced.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
This is an intervention program designed to target students with gaps in their learning

OTHER:
Manipulative Kit + teacher editions are necessary. Teacher edition references the computer program, Building Blocks.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Assem all of the materials necessary for the evaluation. It is ess al for evaluators to have materials for all grades covered b e program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- **Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.**

- **Record and explain the evidence upon which the rating is based.**

Proceed to Section 4: Indicators of Quality

- **Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.**

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.
Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indica**	**Evidence-** Number Worlds is not meant to be used during a specific grade level rather it focuses on standards th[illegible]udents have not mastered. The	**(Reviewer only.)** **_x_ Meets**

• Probability including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non- Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	placement test used an entry point for teachers to accurately place students in the appropriate level. Therefore, the Standards are not assessed before the grade level indicated. Level F includes many 5th grade Standards: 5.NBT.3a, 5.OA.2, 5.NF.1, 5.G.1, and many more. Level G would not be used with students who have not yet been exposed to the Standards it covers based on the student's performance in the Placement Test.	____**Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** __x__**Meets** ____**Does Not Meet** **Strengths/Weaknesses:** Each unit clearly outlines the standards that are covered.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:
Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)
Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)
Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.
For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-
All five units are focused on the Major Works of the 5th grade:

- Unit 1 place value, working with decimals, multiplying and dividing by powers of ten
- Unit 2 perform operations with multi-digit whole numbers and with decimals to hundredths, multiplication properties and strategies, division basics, division using whole numbers
- Unit 3 perform operations with multi-digit whole numbers and with decimals to hundredths, adding decimals, subtracting decimals, multiplication, and division with models and decimals
- Unit 4 use equivalent fractions as a strategy to add and subtract fractions, apply and extend previous understandings

(Reviewer only.)

_x___Meets

____Does Not Meet/

Insufficient Evidence

	of multiplication and division to multiply and divide fractions • Unit 5 understand concepts of volume and relate volume to multiplication and to addition	
Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Supporting Work does not detract from the Major Work and builds to support the Major Works. Converting like measurement units within given measurement system is 1 week; a unit or entire lesson is not devoted to the supporting work represent and interpret data, however, students do practice this standard within other lessons.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Number Worlds is designed as an intervention program to be used with small groups or whole class where Standards need reinforced to fill gaps. Students take a placement test to identify what level of Number Worlds they should begin using. According to the Implementation Guide: • Level A focuses on kindergarten standards • Level B focuses on kindergarten standards • Level C focuses on kindergarten and 1st grade standards • Level D focuses on 1st and 2nd grade standards • Level E focuses on 3rd grade standards • Level F focuses on 4th grade standards • Level G focuses on 5th grade standards • Level H focuses on 6th grade standards • Level I focuses on 7th grade standards • Level J focuses on 8th grade standards	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Number Worlds program intervenes in a grade level to cover Standards that a student has not mastered regardless of the grade that the student is currently placed. Lessons reflect on-grade-level learning. Remedial and challenge options are not evident. "Projects" sections do not extend learning. • A 6th grader may need extensive intervention with number and operations in base ten to perform operations with multi-digit whole numbers and with decimals to hundredths and will be placed in Number Worlds Level G Unit 1 to deepen their understanding of the the operations in relation to decimals even though this level covers 5th grade standards.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Teacher's Edition includes several pages of "Key Standards by Lesson Week" for every level of their curriculum. This resource is so useful for teachers to see what Major Works are being taught in each level of the curriculum to ensure students are placed appropriately. Each unit has a pacing guide broken down into weeks and lessons within each week. Lessons are developed with explicit objectives, Standard covered, and context for the content. Students begin with a "Warm Up" which relates previous knowledge of the content, then move on to "Engage" for the bulk of the lesson in individual, small, or whole groups and build conceptual understanding. The lesson ends with "Reflect" and "Assess" for students to evaluate their work and learning.	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and**	**Evidence-** Standards are clearly marked at the beginning of units and lessons. The Standards covered may not be on the [illegible]dent's age grade level	**(Reviewer only.)** **_x___Meets**

studen an see what their specific responsibility is for the current year. **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	according to t placement test because Number Worlds is an intervention program.	**____Does Not Meet/** **Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Learning objectives are placed at the beginning of each lesson just above the Standard it is based on. Objectives are shaped from the Standards. • Unit 1 Week 3 Lesson 4: Students can compare two decimal numbers without the use of a place value chart. 5.NBT.3B Compare two decimals to thousandths based on meanings of the digits in each place, using >, =, and < symbols to record the results of comparisons. • Unit 2 Week 4 Lesson 1: Students can divide multi-digit numbers by single-digit divisors using manipulatives. 5.NBT.6 Find whole-number quotients of whole numbers with up to four-digit dividends and two-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models. • Unit 3 Week 3 Lesson 2: Students can multiply a decimal number in tenths and a whole number. 5.NBT.7 Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**

	subtraction; relate the strategy to a written method and explain the reasoning used.	
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computational skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Where necessary, clusters are combined to build on each other. • Unit 3 Week 3 combines understanding the place value system and performing operations with multi-digit whole numbers and with decimals to hundredths. • Unit 5 Week 2 combines understanding concepts of volume and relate volume to multiplication and to addition with converting like measurement units within a given measurement system	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_x___Meets** **____Does Not Meet** **Strengths/Weaknesses:** The focus and coherence of each unit is concise and explicit in the Teacher's Edition and the Student Workbook. The placement test allows interventionists to tailor lessons to the areas of need for each student based on the student's placement test performance.
Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.		

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding is adhered to in the Activity Cards utilized in the "Engage" portion of each lesson. The student workbook promotes conceptual understanding on and off throughout the unit. Most of the conceptual understanding is practiced with the Activity Card situation proposed in the "Engage" section of the lesson. • Unit 5 Week 2 begins teaching volume with hands-on counting cubes, Activity Card 5F "Volume by Cubes" and moves to an algorithm when students understand the multiplication they are performing, Activity Card 5G "Volume by Formula"	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** The Activity Cards featured in each lesson are highly conceptual and promote discussion of Standards, understanding, and explanation. Written responses allow for explanation of analysis.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Varied approaches to similar concepts allow for practice with varied representations and deeper understanding. Students have opportunities to infer and make connections across lessons and units. At the end of each week there is a "Project" problem for students to apply what they have practiced that week and make connections between lessons. The Projects are theme related within a Unit to build cohesive application. • By the end of Unit 4 students have doubled a recipe from a cookbook brought in for the project or found online, multiplied a specific ingredient to have enough for the whole class, and cut a recipe in half using division.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Stand** **How to Find the Evidence:**		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)**

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Students have opportunities to practice procedural understanding of the Standards.The student workbook provides procedural problem practice. • Unit 3 Week 2: subtracting decimals to the hundredths place • Unit 4 Week 5: multiplying fractions by fractions	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $– x = 1 + 2y$.	**Evidence-** the "practice" and "lesson review" are dedicated to procedural practice. Number Worlds provides opportunities for students to practice standard algorithms in the student practice book: listed under "additional practice" in the Teacher's Edition. The curriculum also provides students with opportunities to develop their own strategies; typically these types of problems are in the Activity Cards. • Activity Card 3O: Decimal Stories • Activity Card 4I: Adding in the City	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Multiple opportunities for fluency are available for students in the daily lesson routine. "Warm-up" allows students to refresh their memory, "Engage" creates a framework for learning and provides practice of new skills, "Reflect" asks students to evaluate and justify their strategies, "Assess" (informal or formal) shows students and teacher what the class has learned. Fluency is built as students add to the framework throughout the Units.	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Practice with major works comes in several different forms of practice: 4 lessons, 1 review lesson, and 1 "project" application lesson.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The daily routine has a variety of strategies for students to understand, explore, and apply their knowledge of the Standards. One-step problems are present in all lessons. Multi-step problems are are present but not in great number. Real world problems are present throughout lessons and end of week projects.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** The curriculum is focused on building the Major Works of a grade level by having 65% or more of the lessons based on the Major Works of the grade. • Unit 1, Week 3: Place Value • Unit 2, Week 2-5: Multiplication and division of whole numbers. • Unit 3, Week 1-4: Operations with decimals. • Unit 4, Week 1-6: Operations with fractions. • Unit 5, Week 2: Volume of rectangles and prisms.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate [illegible]ons, chapter/unit assessments, and homework assignm[illegible]	**Evidence-** There are developmentally appropriate models of the mathematics represented. Number Worlds Level G is based on 5th grade Standards and asks students to use arrays, model repeated addition, use factor pairs, frac[illegible] bars, and more. Not only are models used, but manipulatives such as counters,	

	unifix cubes, dot es and number cubes are utilized as well. reflections exercises allow some application for review.	
Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** **AC1** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_6___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** The Major Work of the grade are represented: • Unit 1: Understand the place value system • Unit 2: perform operations with multi-digit whole numbers and with decimals to hundredths • Unit 3: perform operations with multi-digit whole numbers and with decimals to hundredths • More examples can be found in the curriculum.	**(Reviewer only.)** **_2___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **____Meets (2)** **__1__Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The Mathematical Practices are inferred, but never explicitly referenced. Number Worlds provides teachers with overviews, charts, and a scope and sequence of the Major Works and Standards but fails to provide any similar resources for the Mathematical Practices. While most mathematical practices are present in student work, they are not explicitly indicated in the teacher's edition or the student workbook.	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Teachers will have to infer the Mathematical Practices for different lessons which is completely doable; however, there should be a guide to ensure that all Practices are met.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** There are no teacher-directed materials that explain the role of the practice Standards.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)** **__1__Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Students have opportunities to explain their work, but not create an argument or defend their strategy.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Students are asked to provide models such as arrays, fraction bars, and explanations in a developmentally appropriate manner; however, they are not asked create arguments or defend their strategy.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Grade appropriate vocabulary is clear and explicit in the Teacher's Edition. Instructions and word problems use mathematical terms correctly in the Teacher's Edition and the student Practice Book. Glossaries and vocabulary cards supplement vocabulary instruction.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet**

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**Strengths/Weaknesses:** Weaknesses: The Mathematical Practices are not explicit or well-linked to the content. Problems do not elicit argument or critique of others' arguments. Strengths: The Unit Overviews and Lesson Overviews provide great detail on the Standards that are taught. Charts and guides are provided for teachers to relate the Standards in each unit and lesson.
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Support for English Language Learners is evident. A Support Guide is provided to aid teachers who are teaching English Language Learners. Vocabulary cards are available in 9 languages. Number Worlds is focused on students who require intervention.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Appropriate scaffolding is present throughout lessons and units. Teachers are encouraged to use a variety of group sizes as well as individual assignments. Each lesson gives grouping suggestions. The nature of Number Worlds is for a differentiated group of lower learners. Vocabulary is available in the Teacher's Edition and additional vocabulary is present in the English Learner Support Guide.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Lessons include a variety of instructional approaches using multiple representations: pair:share, individual, whole group, small group, hands-on, procedural, diagrams, and informal/formal assessments throughout. There are several ways of practicing concepts within lessons.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**		**(Reviewer only.)** **__6__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: Number Worlds is well designed to address gaps in learning for students in a differentiation group. There are multiple opportunities for students to practice

Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .	in a variety of ways thereby reaching a wide gamut of learners.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** There are clear instructions and guides for the teacher at the Unit Overview and in each lesson. The lessons hint at being too scripted.	**(Reviewer only.)** **__x____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Problems and exercises allow for practice with surface and deeper conceptual learning. Students are introduced to new mathematics in the "Engage: Develop" portion of the lessons and practice their newly acquired skills in the "Engage: Practice" section as well as in the Additional Practice section.	**(Reviewer only.)** **___x___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The lessons scaffold the students learning, allowing their understanding to grow and deepen in a logical way.	**(Reviewer only.)** **__x____ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on**	**Evidence-** Background and charts are available in the beginning and end of the Teacher's Edition.	**(Reviewer only.)** **__x____ Yes** **_____ No**

student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.		
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** The manipulatives are effective and well represented in the text.	**(Reviewer only.)** **__x____ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** The placement test is used to determine which Level of Number Worlds the students should begin. Each Unit has a Pretest and Posttest as well as Weekly Tests to give at the end of each week. Additionally, each lesson includes a Student Record for the teacher to record and monitor student learning.	**(Reviewer only.)** **___x___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Answer keys are available in the Assessment handbook provided.	**(Reviewer only.)** **___x___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The language used is unbiased, and the math terms are developmentally appropriate.	**(Reviewer only.)** **___x___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Griffin, Clements, and Sorama	**(Reviewer only.)** **___x___ Yes** **_____ No**

10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Visuals and models provided are developmentally appropriate and aid students in understanding the Standards. The pattern of lessons and units is easy to follow. Each week there are 4 lessons , 1 review lesson, and a project.	**(Reviewer only.)** **___x___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Number Worlds is an intervention program and does not provide assigned homework for students. However, if students need to take their work home it is simple and easy to understand.	**(Reviewer only.)** **___x___ Yes** **_____ No**

Reviewer IMET Evaluation Summary Title/Level: _Number Worlds Level F_____

Publisher: _McGraw-Hill_____ Copyright: ___2015____ ISBN:_TE# 978-0-02-129479-4_____

Reviewer ID # __LS_____ Date Review Completed:__02/16/16_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
__x_____ Meets _____ Does Not Meet	__x___ Meets _____ Does Not Meet

Non-Negotiable Overall:

_x____ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet	Points: __4___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __x_____ Meets _____ Does Not Meet

Alignment Criteria Overall:

__x___ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _x____ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials

Strengths: Format is easy to follow for students. Vocabulary enriches understanding. Assessments are useful in placing students appropriately. Questions that call for explanations are helpful in developing conceptual understanding, problem-solving and daily lessons are useful for procedural understanding. The daily routine provides consistency yet offers a variety of instructional strategies such as grouping, hands-on activities, and student exploration. Number Worlds can be used along with a Core Mathematics Program and includes a "Suggestions for Implementation" guide for teachers that outlines which sections to use depending on the time the teacher has available for intervention: 30, 45, or 60+ minutes. There are effective planning resources for the teacher: Unit overview, charts that show alignment to standards, strong student engagement. Key Standards by Lesson Week charts in the back of the Teacher's Edition for all grades.

Weaknesses: The Mathematical Practices are not explicitly addressed. Students do not have opportunities to create arguments to defend their reasoning. There is a heavy emphasis on procedural fluency.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill LLC
Title:	Number Worlds Level H
ISBN #	
Grade Level(s) or Course:	Level H (6th Grade)
Reviewer ID:	JL AP

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

__✓__**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Standards addressed are from the appropriate grade level and aligned to CCSM
15/30 weeks address major works of the grade

COHERENCE-

A comprehensive approach to teaching computation / number sense. Scaffolding is evident as students work from concrete to abstract.

RIGOR-

Student lessons and activities require application of the standards and support the major works of the grade.

CONCEPTUAL UNDERSTANDING-

Conceptual Understanding is developed Through units/activities where students build understanding of math concepts.

MATHEMATICAL PRACTICES-

Connections between standards & practice standards were embedded in lessons in order to help students develop habits of critical thinking & math practice.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

As an intervention program, Number Worlds provides activities to targeted students of various backgrounds (ELL) and learning needs.

OTHER:

Design of lessons & activities were easy to follow.

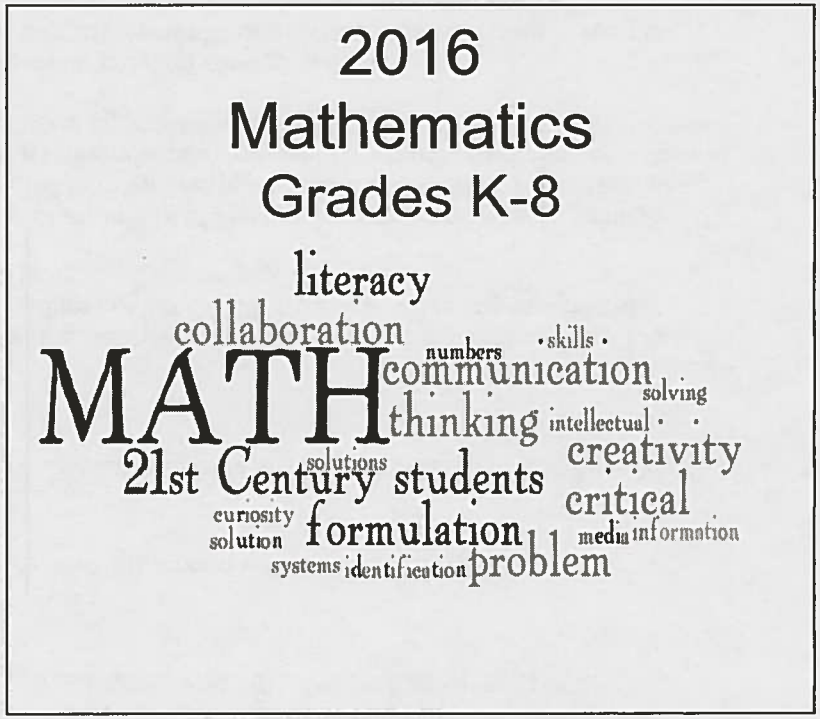
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A:
Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.

- Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7)
- Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6)
- Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8)
- Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4)

How to Find the Evidence:

Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics).

For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.)

In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)

Evidence-
This is an intervention program and does not cover all CCSMs. However the key standards are taught and aligned and assessed.

Probability not covered (7th grade)

-pg. b14 week by week standards

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Intervention Program, does not meet all CCSS

50% of standards are covered

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

Marjor works of the grade are covered:
Pg. T8A
Topics per grade:
-number sense
-operations sense
-algebra
-statistical analysis
-geometry/measurement

15/30 weeks on major works

(Reviewer only.)

__X__ **Meets**

____ **Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Solve real-world and mathematical problems involving area, surface area, and volume. - Pg. Unit 5 – lesson 3 & lesson 4 - Assessment pg. 48-49 of workbook - Focus supporting works & fractions - 5 weeks of instruction is centered on standards in the supporting work for 6th grade	**(Reviewer only.)** __x__**Meets** ____**Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** -Scope and sequence progression pg. B18-22 -Key standards by Lesson Week B8-B16 shows progression from K – 8 -Units divided by weeks in a progression of skills for 6th grade level	**(Reviewer only.)** __X__**Meets** ____**Does Not Meet/** **Insufficient Evidence**

Metric NN1: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** - Each lesson has an "engage" activity that is on grade - Progress monitoring, reflection and assessment in each lesson - Additional practice - Supported & independent practice in each lesson	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** -each lesson has a warm up - creating context in each lesson -reviews -interactive differentiation	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Skill trace – pg 360 - Shows what students should know before Level, during level and after level Standards listed for each activity/lesson shows grade level Scaffolding of standards Lower-level -State	(Reviewer only.) __X__ **Meets** ____ **Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Key standard for the week shows:** **-domain** **-cluster** **-CCSM standard** **Pg. 363 (geometry)** **Pg. 161 (expressions & equations)**	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **School Carnival project blends clusters** - **Project based learning** - **Pg. 272** ***this curriculum is more focused on addressing a standard at a time as it is an intervention**	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **X Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** __X__ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding shown in project based learning activities pg. 344 -engage has hands on games and interaction -activity cards -game boards Activities lead from models to algorithms	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Activity cards engage students and develop math inquiry through games and activities Pg. t15A -creating context in each lesson -reflect/think critically activities Pg. 20, 21 Project based learning in between units	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** -Data Displays 2 shows graphing in multiple ways	

Metric AC **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Procedural skills & ...encies Week 3 – Lessons 1-4 pg. 134-141	**Use the questions for Metric 1B ...valuate Metric 1 B. Record evidence for each qu...on and rate Metric 1B.** **(Reviewer only.)** X **Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Each lesson follows this routine: -vocab, creating context -warm up Engage Reflect Assess Practice	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Opportunistic & generic strategies Algorithms- wkbk. Pg. 46, 47 - Supported practice and real world application pg. 152m 153 TM	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Whole number operations unit** **Lessons provide repeated practice towards fluency of whole number operations** **-addition and subtraction of whole numbers** **Pg. 104-105**	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Cluster chosen – 6RP Major works are the focus throughout RP covered for 5 weeks	**Use the questions for Metric 1C to [illegible]ate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Multiple representations of concept - Picture problems - -word problems - Standard algorithm (ratio representation 1:3) - Each lesson has multiple opportunities to practice and engage - Real world problems apparent in project based learning and - Just the facts pg. 50 - Real-world application pg. 51	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Learning goals for each lesson include application Unit 4 – pg. 275 "daily lessons use communication, logic, reasoning, modeling, and patters to solve" -essential questions -major works of the grade are represented in application problems 50% of major work	

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Key standards grid pg. b7-b16 Scope & sequence pg. b17 –b22	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Major works of the grade are addressed in practice standards - Daily lessons - Daily practices - Assessments - Reflections - Additional worksheerts Weakness * mp should be listed for teacher ease	**(Reviewer only.)** X **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** X **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **-each lesson has the following which are related to mathematical standards practice:** **-creating context** **Interactive differentiation** **Independent practice** **Supported practice** **Progress monitoring** **Alternative grouping** **Real world applications** **Additional practice**	

Do the materi eat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Students work from simple to more complex to using project based learning**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **Implementation guide pg. T15a-b** * Module 4 provides teacher support for practice standards	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)** **_X_Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **All lessons have a reflect & think critically activity that encourage students to discuss and reinforce their concepts** **-multiplication pg. 125 TM** * no critique of others *	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Unit 3 Algebra 6EE** **-students apply & extend** **Answers and solutions on workbook pages** **Arguments & explanations in the reflect and think critically** **Activity cards** **-school carnival project pg. 202-203**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Vocabulary identified at the beginning of each lesson -pg. 206** **-used throughout in engage and student workbooks as well as throughout the reflect and assessments** limited – but appropriate for interrention	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

MP standards should be identified in each lesson or an appendix/resource that shows lesson where mp standards are addressed.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
-ELL support guide
-vocabulary identified in each lesson
-English & Spanish version of online activities and letters
Hands on games and activities
-scaffolding present in lessons

Reviewer only.)

X **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Metric AC: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence** **-implementation guide pg. t10** **Differentiation guide pg. t11-a** **Project based learning pg. t12** **Interactive games pg. t13** **Flexible implementation pg. t15** • supports + differentiation for ELL + lower level learning	**Reviewer only.)** **_X_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Each lesson has oral response, group activities, practices Critical thinking Pg. 20 (groupings)	**Reviewer only.)** **_X_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **_X_ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- -warm up -engage -reflect -assess Progress monitoring (if/then) Guided discussion Informal assessment guides the teacher in thought process	(Reviewer only.) X Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Develop -activities teach students new concepts Practice –activities to show understanding In each lesson Engage in solving problems	(Reviewer only.) X Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Sequence is intentional - Skills strengthened throughout each lesson as you work through - Warm up, engage, reflect, assess - Next skill builds on previous lesson	(Reviewer only.) X Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Teacher's edition has a professional development link found online Discussion board	(Reviewer only.) X Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- -Each lesson uses manipulatives -digital manipulatives/games -varied models of pictorial representation -tub of manipulatives provided with materials	(Reviewer only.) X Yes _____ No

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- -Placement test/number knowledge test -each lesson has informal assessment -formative assessment on workbook pages -building blocks software available -project evaluation criteria with project based learning	(Reviewer only.) X Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Answer keys available online an in tm Scoring rubric with exceeds, meets, and does not meet criteria (pg. 158) for project based learning -teacher reflections pg 159 Informal assessment for each lesson	(Reviewer only.) X Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Pre/post test for every unit Weekly tests worksheets	(Reviewer only.) X Yes ____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- Sharon Griffin Douglas H Clements Julie Sarama	(Reviewer only.) X Yes ____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- Visual design is easy to read and understand Consistency throughout lessons/units	(Reviewer only.) X Yes ____ No
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	Evidence- "Math at Home" Newsletters Online activities can be done at home to engage students and parents	(Reviewer only.) X Yes ____ No

_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 5 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

X **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** X **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths-

- Accessible for all students
- Easy to understand/use for teachers + students
- Different types of questioning strategies
  - concrete/basic → abstract/application

Weakness-

More support needed to identif Math Practice Standards within the lessons or as a resource (appendix)

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill School Education, LLC
Title:	Number Worlds I
ISBN #	Various
Grade Level(s) or Course:	7th
Reviewer ID:	MMHC

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

__✓__**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- 60% of the major work is covered. Topics are not assessed or introduced above grade level. 18 of 30 weeks are major work.

COHERENCE- Not all standards for Grade 7 are covered in this curriculum. Intervention does not meet all CCSS. 60% of standards are covered.

RIGOR- Although not all standard are addressed, there is a high level of rigor and balance for the intervention lessons focused on.

CONCEPTUAL UNDERSTANDING- There is a high level of conceptual and procedural understanding enhanced through the use of activity cards and projects.

MATHEMATICAL PRACTICES- All 8 MPs are seen throughout and embedded within each lesson.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Materials provide supports for ELLs and other diverse learners. "Creating Context" is seen at the beginning of every lesson and provides supports.

OTHER: This is an intervention curriculum that focuses on the following standards.

7.NS.2d, 3
7.RP.1, 3
7.NS.1, 1d, 2, 2c, 3
7.EE.4, 4a, 4b
7.SP.4, 7, 8
7.G.4, 5, 6

Activity Cards are a necessity for this intervention program.

Online access is not needed.

Student workbooks are required for procedural practice.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Number Worlds does not introduce or assess any Standards above grade level. In Unit 3, Lesson 3, Pg. 224 students are taught to solve two-step equations using division. Pg. 229 tests solving using distributive property, which has not been taught, but distributive property is not above grade level. 7.RP, 7EE.B4, 7.SP.C.8	(Reviewer only.) X Meets ___ Does Not Meet

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

___ **Does Not Meet**

Strengths/Weaknesses:

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Every lesson has vocabulary terms to focus on. There are vocabulary cards that can be purchased & used. The ELL support guide focuses on vocabulary.	

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

✓ **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Alignment Criterion 3: Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** *The ELL support guide provides an Oral assessment, differentiated lesson, and practice WS for each Unit. *"Creating Context" discusses how to better help students (sometimes specifically ELL's) in every lesson. Pg. 18, 32, 46, 60, 74, 88, 104, 118, etc., 404, 418, 432	Reviewer only.) ✓ Meets (2) ___ Partially Meets (1) ___ Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Differentiation and supported practice are provided in every lesson. Suggestions for Implementation T-10A. Each unit builds on itself until the project at the very end. Supports are not removed- they are consistent.	Reviewer only.) ✓ Meets (2) ___ Partially Meets (1) ___ Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Alternative grouping and reflect questions are provided in ea. lesson. Activity Cards have "Questions to Ask". There are lessons, hands-on learning, discovery, activities, and projects.	Reviewer only.) ✓ Meets (2) ___ Partially Meets (1) ___ Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** ✓ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Every lesson has a warm-up, engage (activity), reflect, and assess section. Pacing is provided on T-10-A Ea. lesson has vocab & guided discussion prompts. Common misconceptions: Pg- 18, 46, 118, 190, 290, 318, 362, 392, 98.	**(Reviewer only.)** ✓ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Each lesson has a warmup, guided review, and "reflect". There are activities and worksheets for every lesson and projects at the end of each week for practice and application.	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Scope & Sequence provided. B17-B22 Activity Cards has scaffolded questions in "Questions to Ask" Practice → application w/ activity & worksheet Concepts builds every week in Unit.	**(Reviewer only.)** ✓ Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Implementation Guide included. Online supports available. additional materials for ea. lesson.	**(Reviewer only.)** ✓ Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives are used throughout. pg. 107, 108 Activity 2a.26 Uses manipulatives when working with integers.	**(Reviewer only.)** ✓ Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** placement Tests Informal Assessment (every lesson) Activities Summative (End of Each week/unit)	**(Reviewer only.)** ✓ Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Placement Tests have scoring instructions. Answer keys provided. Projects have rubrics. Pg. 30, 44, 86, 100, 116, 130, 144, 158, 172, 186, 202, 216, 230, 244, 258, 272.	**(Reviewer only.)** ✓ Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Tests at end of each week. (Paper/Online) Placement tests Throughout	**(Reviewer only.)** ✓ Yes ____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Meet the authors Pg. 56.57 -Implementation Guide- Sharon Griffin, Julie Sarama, Dr. Douglas Clements.	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Activity Cards Vocab Cards manipulatives Online Activities	**(Reviewer only.)** ✓ **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Homework - every lesson Additional Practice - every lesson. academic vocab throughout. "Math at Home" parent letter ea. week Pg. 18, 32, 46, 60, 74, 88, 118, 104, 132, 146, 160, 174, 190, 204, 218, 232, 246, 260, 276, 290, 304, 318, 332, 346, 362, 376, 390, 404, 418, 432.	**(Reviewer only.)** ✓ **Yes** ____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths

Excellent intervention to use for the standards focused on.
Discovery based.
High level of engagement.
Hands on activities.
Vocabulary Cards.
Pacing guides.

Weaknesses

Student workbook must be purchased in sets of 5.
Manipulatives must be purchased.
A lot of materials.

Do not need online access.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill School Education, LLC
Title:	Number Worlds - J
ISBN #	
Grade Level(s) or Course:	8th Grade
Reviewer ID:	DN MM

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

__X__**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- As an intervention program the focus is 53% major work. Topics in later grades are not assessed.

COHERENCE- 53% of focus is major work. 16/30 weeks intervention program; does not need majority of time. (Functions, E.E, Geometry)

RIGOR- conceptual understanding present in "Engage" portions of lessons. Opportunities for discussion present on Activity cards. Single step problems throughout.

CONCEPTUAL UNDERSTANDING- Engage lessons provide prescribed ways to solve problems. Procedural practice is evident throughout.

MATHEMATICAL PRACTICES- Students regularly use MPs throughout program. The only exception is MP3. Students are asked to justify but not critique.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- ELL support guide is present. Creating context prompts at the beginning of each lesson. Progress monitoring tools "If this, then this" statements. Games and activities allow for a variety of instructional strategies.

OTHER:

High level of engagement.
Variety of instructional strategies.
Good teacher resources (ELL)
Activity based

computer component is not a ~~ACES~~ necessity.

would like stronger focus on functions, radicals, congruence/similarity.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

ISBN #: Various Copyright 2015

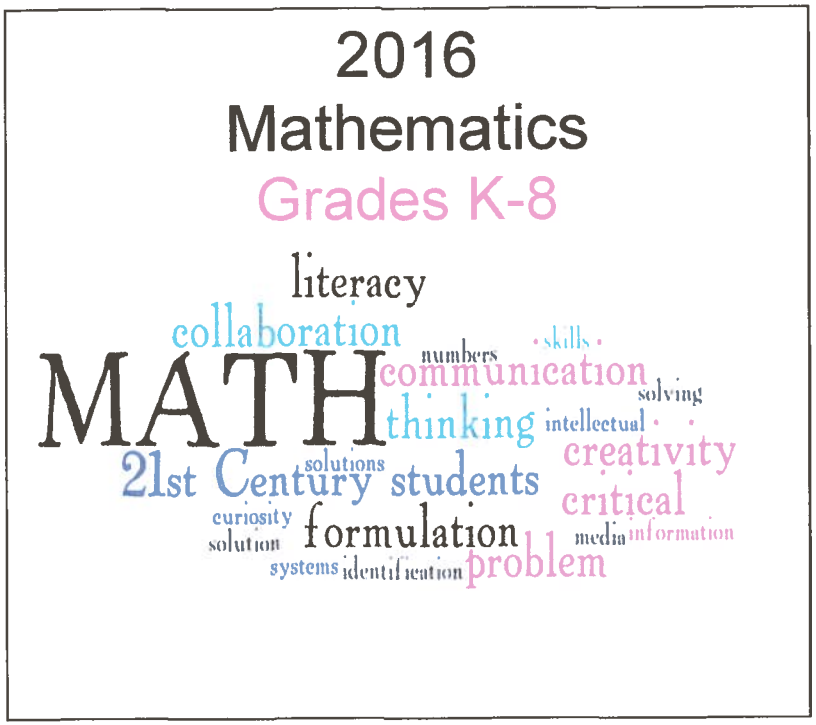
Reviewer ID: _____

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Looking through the assessment booklet, there are no Algebra 1 or beyond topics addressed.**	**(Reviewer only.)** **___X_Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **Number Worlds is an intervention program not designed to cover all CCSS.** **16/30 weeks are spent on major work.** **53% of time.** **Not majority of the time.**	**(Reviewer only.)** **____Meets** **__x__Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **No mention of Irrational Numbers (8.NS.A.1).** **Only 1 unit covers bivariate data, not enough to support major works.**	**(Reviewer only.)** **____Meets** **_x___Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content is grade level appropriate. Previous standards serve to enrich grade level standards and do not inhibit. NO future grade level material is present.	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content is on gra[illegible]evel. Intervention program does not cover all major work. Progress Monitoring in lesson allows for differentiation. "Engage" parts of lesson.	**(Reviewer only.)** **___X_Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Placement tests determine which level students will start at. This allows comprehension of previous work and material. Progress Monitoring. Page 21 directs to additional practice.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Skills Trace at beginning of unit allows teacher to see previous works, next grade level concepts. Pg. 6,7 Vocab Table of contents/headings tell direction for the year.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Learning objectives present at daily lessons.** **Presented as "key ideas" in student notebook.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Weekly Project Based Learning combines ideas into a larger piece of linking standards/clusters.** **"Numbers in the Real Worlds" page 30.** **"Numbers All Around."**	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Intervention Program. Not designed to cover all CCSS. Focuses on Major Work 53% of the time.** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **____Meets** **__X__Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set e expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Unit 3, Week 3, Le n 1,2,3 More Expressions and Equations than Functions. 8.F.1 8.EE.C.7	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Questions to ask on Activity Cards are great discussion topics. Example 3G "What generalizations can you make about the slope and steepness of the lines?"	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Construction of graphs. Unit 3 Week 3 Lesson 2	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **____Meets (2)** **_X___Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Missing solving wit actional coefficients 8.EE.7 Procedural practice is evident throughout. Unit 3 Week 1 is conceptual, reflection questions.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Generic cases are often present. Opportunistic strategies are lacking in student work except during Engage portion of lesson. Engage lessons provide prescribed way to solve problem. Examples: Activity Cards 2B, 2O.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **N/A**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Rarely (Snack Bar Prices). Most are single step problems. Singe Step: Project Based Learning. "Exponents" Week 6 "Word Problems with Equations"	

Do application problems particularly stress applying the Major Work of the grade? Eva[illegible]essons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Application problem[illegible]n the engage sections work towards applying major work. Application problems are primarily in Engage section. Students are rarely asked to work independently through an application problem. Activity Card 3J, 3O	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** "Investigating Slope" is a good example of modeling with slope – simple block diagram shows rise/run.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

__X__Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Students regularly use mathematical practices throughout program. The only exception we could find is a critique of arguments from MP3. Students are asked to justify but not to critique. MP1 – pg 258, 273 MP4 – pg 207 MP5 – 52, 53	**(Reviewer only.)** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Each practice is evident throughout each lesson.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **They are age appropriate.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **Implementation guide helps define where and how the MPs are used.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **The "reflect" at the end of each lesson allows students to construct argument but not critique one another.** **Project Based Learning – Pg. 31**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **As an intervention when major works are present students do have opportunities to make arguments and use diagrams.**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Vocabulary cards are used and vocabulary is bolded/identified at the beginning of each lesson.**	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Intervention program - only covers 53% of major works.** **MP are present but opportunity to critique other arguments is not present.** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **____Meets** **__X__Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** ELL support guide present. Spanish resources online. Creating context prompts at the beginning of each lesson.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Progress monitoring and use of Intervention Strategy. "If this... then this" statements- EX: Pg 24	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Different games and activities allow for a variety of instructional techniques.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Starts with warm-up, then progresses to engage activity, then reflect, then assess. Logical progression.**	**(Reviewer only.)** **____X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **More focus on exercises. Workbook of procedural activities.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Sequence is appropriate and accessible.	(Reviewer only.) ___X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Lots of additional materials but the specific reward for teacher study is lacking.	(Reviewer only.) _____ Yes ___X___ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Lots of resources.	(Reviewer only.) ___X___ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Assessments are traditional at the conclusion of each unit. Pretests and rubrics for student observation.	(Reviewer only.) ___X___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Rubric for problem evaluation criteria (Pg 30) and answer keys for assessments are present.	(Reviewer only.) ____X__ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Unbiased and accessible.	(Reviewer only.) ___X___ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **Yes, McGraw Hill and list is present.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **Colorful and hands on interactive activities help students engage.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Letters home to parents.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

Reviewer ID # _____ Date Review Completed:____3/8/16__

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
___X____ Meets _____ Does Not Meet	_____ Meets ___X__ Does Not Meet

Non-Negotiable Overall:

_____ Meets ___X__ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___5__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet	Points: ___4__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____ Meets ___X____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet

Alignment Criteria Overall:

_____ Meets __X___ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes ___X__ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths: Activity based use of manipulatives. Good teacher resources (Example – ELL.) Very high level of engagement. Variety of instructional techniques.

Weaknesses: We would like to see a stronger focus on; Functions, Radicals, and Congruence and Similarity.

*Computer component is not necessarily needed.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill
Title:	Glenco Math
ISBN #	978-02-1381081
Grade Level(s) or Course:	6th Grade Course 1
Reviewer ID:	JL PW

RECOMMENDED AS:

__✓__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Materials reflect content standards for 6th grade with focus on major works and supporting works of the grade. Progression through standards is consistent and well covered. 76% focused on major works.

COHERENCE-
Lessons include coherence through previous, grade level and next activities and lessons across grade levels. Stated in lessons & by chapters.

RIGOR-
Scaffolding and multiple opportunities to develop procedural skills and fluency.

CONCEPTUAL UNDERSTANDING-
Conceptual understanding and fluency supported through guided, independent work and higher order thinking problems & applications.

MATHEMATICAL PRACTICES-
Mathmatical practices are denoted in student math practices handbook, in student text and teachers manual. Numerous opportunities to practice MP standards.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Levels of complexity for activities and lessons throughout chapters. Leveled instruction and vocab to meet ind. needs. Spanish versions/ELL available.

OTHER: Teachers manual provides alternative strategies.

This is a comprehensive program with many ancillary products. Consumable text needs more work space for student problem-solving.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: McGraw Hill

Title of Material: GlenCo Math Grade 6

Author: Carter et al

ISBN #: 978-02-1381081 **Copyright** 2015

Reviewer ID: JL PW

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Units organized by [illegible]S Domain and target 6th grade standards.** - **Unit 12 (pg. 799-926) Include statistics, introducing statistical distributions but NOT Probability** - **Adheres to CCSSM for grade 6** - **Geometry Topics (Chapters 9 & 10) include on topics for 6th grade standards** - **No other topics are addressed in tests, quizzes, and chapters that are outside of topics for 6th grade CCSSM** - **Standards that are assessed are shown in the teacher's edition on pages vi-xvii** Geometry chapters focus on area of figures	**(Reviewer only.)** **_x___Meets** **____Does Not Meet**

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**(Reviewer only.)** **_x___Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Each chapter includes stated standards that adhere to 6th Grade CCSSM. Each standard and topics are identified at the beginning of the unit. Standards assessed in each chapter are shown in the teacher's edition**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **The Major Works of 6th grade are apparent in Glenco Math (Grade 6). Each chapter in the book is focused on the 6th grade major works.** - **Pg. T26-T31 show all of the 6th grade standards and what lessons and pages those standards are met.** - **TOC on pg. iii have the units divided up by 6th grade standard and actually state the standard on the unit page** - **Introduction to each unit outlines adherence to 6th grade standard by standard number and topic** lessons + standards in TM 2 chapters for each major work	**(Reviewer only.)** **_x___Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Supporting work is focused on extending the knowledge of the major works of the grade level.** - **Supporting work is found at the end of chapters and in problem solving activities.** -utilizing variable equations to geometric supporting	(Reviewer only.) **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The text is focused on 6th Grade CCSM. - Each chapter is tied to a grade level standard - Pg. xix – shows ccss that are met in each chapter and allow tracking of ccss progress for grade 6 only - Review of previous grade level skills does not interfere with grade level content - Lessons are launched with 6th grade standards (example pg. 19) - - lessons are launched directly with comparing ratios, a 6th grade standard (not reflecting on other grade level learning) - No scope + sequence reference for all grade level	(Reviewer only.) **_x___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D **Materials g... all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Students are given opportunities for on grade-level work in the following ways: -inquiry hands on activities -investigations -analyze and reflect -create -guided practice -independent practice -Higher Order Thinking Problems -Extra practices -Common Core Test Practice -Common Core Spiral Review (These are just a list of on grade level practices for on lesson in Expressions & Equations pg. 429 – 440) 8-guided prac. 12 algorithm 4 word 5 HOT prob.	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Prior knowledge is related at the beginning of each lesson. - Pg. 428 – quick review of ccss 4 nbt.5 and 5nf.1 to review prior knowledge of factors, LCDs and powers, adding and subtracting of fractions - Quick checks are also presented to check student knowledge of earlier grades CCSSM Previous – Now – Next "Are You Ready?"	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher's manual shows review material that is clearly labeled by CCSS Review - Example – pg. 176 of TM - Quick check states standards being reviewed - Students also see review standards that are clearly labeled and practiced in quick check - - list of CCSS responsibilities for grade level are shown in lessons and in Tables of Contents, as well as on student checklists (pg. xix – xxii)	(Reviewer only.) __X__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Learning objectives are clearly stated for each lesson . Next to each lesson objective is the CCSS in number form.** - **Objectives are shaped by CCSS cluster titles** - **Cluster titles w/ objectives are in the TM table of contents** - **Chapters are named by CCSS cluster titles**	(Reviewer only.) __x__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **-Clusters are connected through real world links** **- Clusters are connected through inquiry labs at the beginning of units** - Relates problem-solving from equations to ratios & quantitative relationships	(Reviewer only.) _x___Meets ____Does Not Meet/ Insufficient Evidence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Standards are clearly present in lessons. for students & teachers

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	-
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding is evident in the Ratios/Proportions unit in the following ways: -making models to show understanding -picture problems - application using charts/graphs -inquiry labs -investigations -analysis & reflection Each lesson begins w/ inquiry	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Highly conceptual problems/discussion is modeled in units and tests - TM pg. 84 questioning strategies (Answering essential questions) - Career projects - Performance tasks Find error Justify Conclusion	

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Multiple Mathematical representations - Key concept check pg. 82 - Inquiry Lab pg. 735 (models of volume) - Guided practice pg. 190 shows example of multiplying decimals, using equations and using estimation Bar models to visualize written expressions w/ variable ⇒ equations	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Development of fluency is supported by conceptual understanding - Use of guided, independent and extra practice in each lesson - Use of word problems to show conceptual understanding - Patterning → algorithm	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Procedural problems w/ algorithms shown on pgs: -326-327 and throughout lessons - unit tests include algorithms to solve Practice w/ ratio tables to solve real world problems	

Do the materials in grades K–6 provide repeated practice toward attainment of fluency standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **Fluency attainment is apparent** - **Daily independent practice** - ***Extra practice (pg. 331)** - **ALEKs homework/extra practice targets lack of fluency and provides additional practice** Guided practice	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each unit is designed and centered around major clusters with engaging application in the Major work - Each unit includes multiple lessons on the major work - Units include hands-on activities, investigations, alternate strategies, analyzing, reflecting, creating, and modeling Pg. 18 Variety of practice/opportunities	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Authentic problem solving practiced in unit projects (pg. career projects, pg. 163, 79, 247 performance task pg. 251, 337 Create your own problem to show understanding	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Problem solving investigations – pg. 125-126 - Application of Major work is apparent throughout - Major works spiraled throughout	

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Guided and independent practice allow students to model problem solving - Investigations (pg. 431 of ST) - HOT problems in lessons have "Model With Mathematics" questions (pg. 438) - Hands on activities and inquiry Labs (pg. 457) Begin w/ partners Analysis/Create Response	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Practices strengthen focus of Major Works -power up CCSS practice tests - Common Core spiral review (pg. 54) MP (Math Practice denoted throughout teacher manual) pg. 55 – cabin fever - Math practice handbook - CCSS tracking progress (pg. xix) - TG lists specific problems, That meet/target mathematical practice standards	(Reviewer only.) __x__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** (Reviewer only.) __X__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Math practices handbook is part of Student text and teacher manual (pg. MP1-MP 20)** **"MP" listed in TM where practices are reviewed/taught** **Pg. 70 (analyze and reflect), 231 (launch the lesson)** **Correlations chart pg. T23 – T25)** Real world/Persevere w/ problems	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Levels of complexity are in each lesson with denotations of Levels 1 -3 (example pg. 17 Collaborate)**	

Are these teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **-inquiry labs** **-performance tasks** **- Higher order thinking questions** MP Correlations throughout	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Reasoning skills are seen throughout** **- Questioning strategies (pg. 706)** **- Investigations** **- Pairs discussions (pg. 714)** **- Heads together (pg. 758)**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Performance tasks** **Career investigations** **Hands on activities** **Inquiry labs** **Formative assessments** Find Error Reason Inductively Draw multiple representations	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Each chapter/unit has a vocabulary activity, review, and what you know that is built on mathematical language (pg. 802-803) This language is used throughout** **- Vocabulary is highlighted thoughout** **- Questioning uses mathematical language (pg. 805)** **- TM questioning strategies/script uses mathematical language**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-

Student edition available in Spanish
Leveled instruction
Vocabulary review
Interactive guide for ELL available
Glossary has vocabulary in English and Spanish
EL in teacher's manual shows alternate strategies for teaching ELL concepts (pg. 783)
Word problems not lengthy

Reviewer only.)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** This is a strength of this program - Scaffolding – "previous, now, next" in each lesson(ie. Pg. 535) - Levels of complexity (pg. 539) in each lesson - Guided practice & independent practice - Differentiation for hw options Alternative Strategies in each lesson	**Reviewer only.)** **__x__Meets (2)** **_ ___Partially Meets (1)** **___Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Multiple approaches are used in "HOT Problems", and in guided and extra practice (ie. Pg. 540) Common errors noted on problems in teacher's manual (check for understanding) - Alternate strategies - Think pair share (pg. 546) - Exit tickets for lessons	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **___x_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- Learning path is evident through the following steps in EACH lesson: formative assessments Launch the lesson Teach the concept (with examples in varying forms) Guided practice Practice and apply Extra practice Additional activities (inquiry lab, hands on activities,collaboration and investigations) Lesson 551-561) teacher support	(Reviewer only.) ____x__ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Design is consistently using practice problems and exercises. Problems are apparent in practice examples (guided and independent practice) and in student assignments. Exercises shown pg. 557 Problem examples pg. 556 #16	(Reviewer only.) ____x__ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Problems go from guided practice to independent practice to extra practice & enrichment Examples → rules → practice → extension	(Reviewer only.) ____x__ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- Online feature at connected provides teacher with supplemental study material. Textbook also includes instructions for teachers to track progress, (pg. 574) Strategies for students – pg. 809 Analyze and reflect – pg. 808 + Launch + Differentiate etc.	(Reviewer only.) ____x__ Yes _____ No

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Foldables at the end of the book (FL1 –FL16) Problem solving investigations- each lesson 21st Century Careers – each unit Hands on activities each lesson Real world representations	(Reviewer only.) ____x__ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Every unit has a - common core practice test -common core spiral review -unit assessments - exit tickets	(Reviewer only.) ___x___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Common core test practice has scoring rubric Example pg. 898 -answers to all problems are on each page in the teacher's manual and at the end of the TM "Got it?" questions	(Reviewer only.) __x____ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Each chapter has pretests, vocab reviews, and lessons have levels of complexity complete with the number of problem on each level Language is consistent throughout Benchmark tests > Rubrics Performance tasks	(Reviewer only.) ____x__ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- T-18 – T21 Authors/Writers are in the field of education and highly qualified to in the area of math	(Reviewer only.) ___x___ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- Easy navigation from topic to topic - Each topic builds on each other Age appropriate graphics -need more room to work out problems in Student Consumable	(Reviewer only.) __x____ Yes _____ No

11. The materials engage parents in appropriate ways. For exa[illegible], homework assignments in elementary gra[illegible]s, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **Multiple models are p[illegible]ided with samples that help parents help their kids** **-step by step activities** **-completed examples** **-answers to some problems in the back of student book (SA pages)**	**(Reviewer only.)** **___x___ Yes** **_____ No**

Reviewer IMET Evaluation Summary Title/Level: Glenco Math –Built to the Common Core C1

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **___x___ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **___x__ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **__x___ Meets _____ Does Not Meet**	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: _6____ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet

Alignment Criteria Overall:

_x____ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __x___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill School Education LLC
Title:	Glencoe Math Course 2 (7th Grade)
ISBN #	9780021447893
Grade Level(s) or Course:	7th Grade
Reviewer ID:	TH + AC

RECOMMENDED AS:

✓ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Materials reflect the content architecture of the standards by not assessing above grade level. The focus is 7th grade state standards.

COHERENCE-

Materials focus coherently on all Major Work Grade 7 standards.

RIGOR-

Materials reflect the balances in the Standards with rigorous expectations.

CONCEPTUAL UNDERSTANDING-

Conceptual and procedural understanding are attended to throughout the curriculum with launch problems, real-world problems and performance tasks.

MATHEMATICAL PRACTICES-

MPs are practiced throughout this curriculum and make authentic connections between standards. MPs meet the needs of ELLs and diverse learners.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

MPs and content throughout this curriculum meet the needs of ELLs and diverse learners through launch problems, small + large group activities, vocabulary startups, graphic organizers, and higher-order-thinking problems.

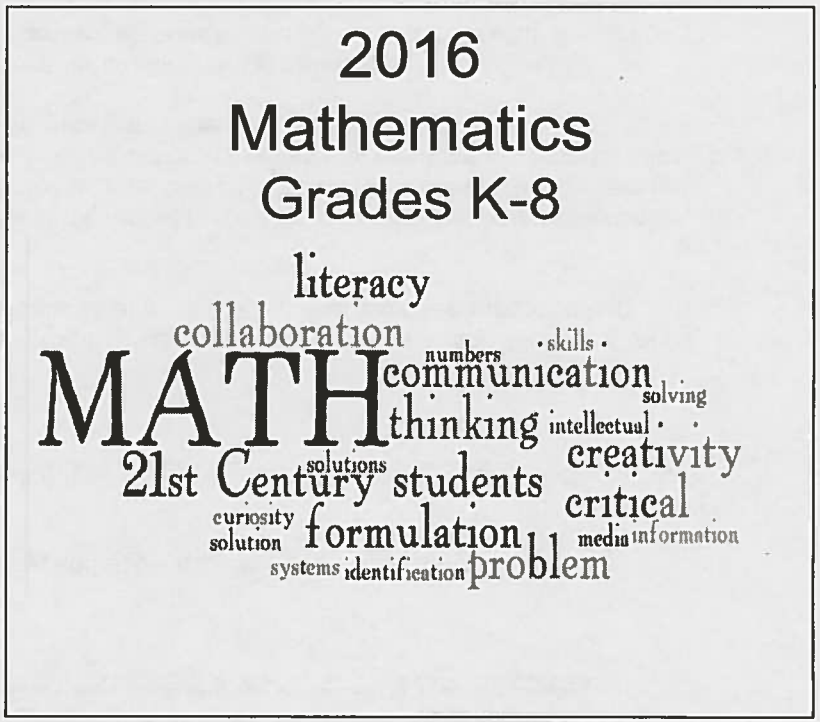
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials r[illegible]t the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Materials in text are on grade level and standards are not assessed before The grade level indicated.	**(Reviewer only.)** X **Meets** ____ **Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

Materials devote approximately 70% of their time to Major Works of 7th grade.

(Reviewer only.)

✓ **Meets**

____ **Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Supporting clusters refer to major works in previous lessons. Example: page 533, when introducing geometric figures the lesson refers students back to what they already know about scale drawings from previous lesson on proportional relationships	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The content of the curriculum is clearly defined. Material from previous grades is referenced at the beginning of the chapter and marked as "prior knowledge" needed. In the teachers' manual, the standards that are to be met in the lesson are clearly stated. The curriculum is in line with CCSS Domain Progression.	(Reviewer only.) ✓ Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There are multiple grade-level problems marked BL (beyond grade level) and AL (almost at grade level). There are also H.O.T (higher order thinking) problems at the end of each lesson to give higher performing students a challenge.	(Reviewer only.) ✓ Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Concepts are related to prior knowledge through "Coherence" at the beginning of each chapter which shows connections and progression. Ex. pg. 9 + pg. 711 "Real-World Links"- pg. 243 "Vocabulary Start-up" pg. 211, 279	(Reviewer only.) ✓ Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** At the beginning of each chapter there is a list of prior knowledge that students need to be successful in the upcoming lesson. Often times the previous standards are not clearly identified, however the students can see what their specific responsibility is for the current year.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Objectives for each chapter are clearly stated with cluster heading at beginning of each chapter. Ex. pg. 191-447. The progression chart has prior standards, current standards + the standards the students will work on next.	(Reviewer only.) ✓ Meets ____ Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The performance Tasks and Inquiry Labs connect several domains. Ex page 287 #7 and #8 standards 7.NS.1c & 7EE4 & 7NS.1d.	(Reviewer only.) X Meets ____ Does Not Meet/ Insufficient Evidence
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) X Meets ____ Does Not Meet **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

X **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set [illegible]t expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding is attended throughout the curriculum. Essential questions are listed for each unit; Ex. pg. 187 in Chapt. 3: "What happens when you add, subtract, multiply & divide integers?"	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** At the beginning of each lesson there are ideas for launching the lesson that would encourage a whole group or small group discussion. There are also ideas for high quality Labs or projects for students to enhance their understanding.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** The materials feature opportunities to enhance learning for visual learners through models, diagrams, number lines, which doesn't belong in estimation, etc.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Each chapter has many skills practice types as well as applications problems that require both conceptual and procedual understanding Ex. pg. 246 #7 requires conceptual understandings of integers procedual and conceptual understanding to explain its meaning are also reflected in performance tasks + Assessments. for chapt. 3	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Procedural problems and exercises are present throughout the curriculum. For example, pg. 247 #1-12 include cases that require the algorithm to divide integers.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** N/A	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson begins with a real-world link which students are either to solve in a whole group, or small group setting. Each real-world link connects to the standards and several mathematical practices, students are also asked to work backwards in their problem solving strategies on page 489 which makes them look for structure in the math being done	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** ☒ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The curriculum includes many types of single + multi-step contextual problems such as real-world application problems that can be solved in small or whole group settings. Independent practice includes single + multi step : pg. 85, Lesson 9 #1, 2-6. #13-15 and HOT problems that are non-routine.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** There are 4 major works of grade 7 and the problems in each lesson focus on the majority of the major works. In addition, to the practice/homework assignments focusing on the topic in the lesson, there are also Spiral Review questions at the end of each assignment which focuses on review questions from prior lessons. There are however, almost just as many lessons focused on supporting or additional clusters.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Real world problems are part of every lesson as well as assessments, performance tasks and unit projects. They increase in difficulty with chapter progression. Ex. pg 8 #3 has students create a problem that can be represented with a bar graph. Then pg. 197 #20-21 has students model integers on a number line.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

✓ **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Mathematical Practices are clearly identified in each lesson throughout.

Chapt. 1 7.RP

Lesson 1: Justify conclusions

Pg. 13 #6 pg 15 #20 & 21

- understand unit rates
- compare + justify reasoning

MP 1 & 3

(Reviewer only.)

X **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** CC Mathematical Practices are present throughout the curriculum as shown in the teacher edition. One example, MP# 1 pg. 14, 331, 738 and MP# 2 pg. 40, 400, 645. Also, Students are asked to evaluate themselves on which practices they used.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** yes pg. 224 - use number lines to represent distance, pg 447 - algebra tiles to represent coefficients	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Mathematical Practices are clearly identified + explained - ex. pg. 447 MP# 1,2,3,4,7 Vocab. Start-up pg. 447 MP# 1,5,6 Pairs Discussion - explained how to implement activities	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Yes. Example; pg 523, students must write two facts and one fib relating to the vocabulary terms listed. Then students work in groups to discuss each fact and fib, identify fibs, and correct them so they become facts.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** In each lesson, group discussions are encouraged in the teacher edition of "Launching the Lesson". On pg. 14 # 11, 12 + 13, students are asked to "explain their reasoning", + "give a counter-example."	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Yes. At the beginning of each lesson there are vocabulary words and appropriate definitions to be used throughout the lesson. Ex: 485 question 8, students are asked to explain real-world story problems in multiple representations.	

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Alignment Criterion 3: Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** There are many supports included: • Vocabulary Start-ups • Graphic Organizers • Pictures • glossary - English to Spanish • Spanish textbooks / tests • HOT (Higher Order Thinking) • Differentiated Homework Options • Levels of the Complexity Identified • online editable assignments/assessments	Reviewer only.) ✓ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** yes In the teachers manual there is a list of alternate strategies, scaffolding ideas, and leveled homework options for approaching level, on level, or beyond level.	Reviewer only.) ✓ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Curriculum includes a mixture of instructional approaches including: think-pair-share, online whiteboard, graphic organizers, round robin, trade-a-problem + three-step-interviews.	Reviewer only.) ✓ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** ✓ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Each chapter starts with multiple ways to launch the lesson. The focus and standards are very clear and there are many ways that a teacher can pick from to guide the class through a meaningful lesson.	**(Reviewer only.)** X **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** In each lesson the practice problems are separated into several sections. 1) Quick review problems to prepare 2) Examples 3) Guided problems to solve w/ assistance 4) Independent practice in solving problems 5) Extra practice problems to build mastery in all standards.	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Yes They are sequenced in a mathematical and logical order.	(Reviewer only.) ✓ Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Teacher materials include ways to discuss or "launch the lesson", the main focus of the lesson, essential questions to ask, standards addressed, math practices used, scaffolding ideas & common misunderstandings.	(Reviewer only.) ✓ Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Yes Example: page 518, it is recommended for students to use a number line to solve for the inequality and on pg. 14 students are encouraged to use a graph to find the average number of heartbeats in a minute	(Reviewer only.) ✓ Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Materials included many assessments: · Diagnostic · Formative · Summative · Pace-Yourself · Performance Tasks · Unit Projects	(Reviewer only.) ✓ Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** All assessments include answer keys and Performance Tasks included rubrics.	(Reviewer only.) ✓ Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Language for lessons, examples & assessments use grade level language & situations. For example, story problems talk often about cell phones, skateboards, movie theaters, middle school fundraisers, etc.	(Reviewer only.) ✓ Yes ____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Yes page T 18-21 4 lead authors 4 program authors 1 contributing authors	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Pictures + visuals are not distracting for 7th graders. For example, when asking a question about the relationship between the cost and number of pizzas as a ratio, there is a small picture of a pizza cut into pieces and on pg. 33.	**(Reviewer only.)** ✓ **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** The material in the textbook is easy to follow and parents could easily understand. On-line resources for parents available	**(Reviewer only.)** ✓ **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** Glencoe Math Course 2 (7th grade)

Publisher: Glencoe McGraw Hill **Copyright:** 2015 **ISBN:** 9780021441893

Reviewer ID # TH & AC **Date Review Completed:** 3-8-2016

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

X **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** _X_ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths: CCSS + MP clearly identified
Many teaching strategies
Many problem types
Many assessment resources
Differentiation

Weaknesses: Teacher edition - pages very flimsy + tear out easily
Student edition - workbook format so pages are perforated + tear out easily
Excessive amount of lessons in supporting clusters.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill Education
Title:	Glencoe Math Course 3
ISBN #	9780076678525 & 9780021454259
Grade Level(s) or Course:	8th Grade
Reviewer ID:	*TH & TC*

RECOMMENDED AS:

__X____Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____Other Mathematics Program- a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____Intervention Program- a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ Does not meet criteria for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
None assessment items cover anything beyond grade 8 on similarity, congruence, or geometric transformations. Items on similarity, congruence, or geometric transformations can be found in the assessment items referred to as Interim

COHERENCE-
There are 50 out of the 63 lessons in the series devoted to the major work of the grade. This represents 79% which is within the acceptable range.

RIGOR-
Throughout chapter 9 they use input/output tables, scatter plots, lines of best fit, two-way tables and also asked to analyze data. Multiple models and diagrams to explain the material.

CONCEPTUAL UNDERSTANDING-
Use of the inquiry labs to solve two-step equations uses diagram in order to build strategies that students can apply to multiple step equations. Also in the lesson 3 there are alternative strategies presented to help students link two step equations with the equation 400 + 15( ) = _____

MATHEMATICAL PRACTICES-
Approximately 90% of the materials in the text are repeated reasoning in proportional relationships, whether it is in equations, graphs, tables, or shapes. There is only 1 chapter that doesn't focus on the major work or 8th grade which is chapter 8. In the independent practice problems they are labeled MP and are also labeled in the heading

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
There is a full Spanish version of the text available. In the teachers manual it gives "Alternate strategy" that is AL (approaching level), OL (on level), and BL (beyond level)

OTHER:
Strengths:
Very good vocabulary and does a great job of using and teaching the mathematical practices.
Is common core aligned and the countdown to SBAC is a very nice resource.
The performance tasks are a very good resource to help the students represent the material in different ways.
The teachers manual helps facilitate a mix of instructional approaches.

Weaknesses:
Many times 7th grade standards over shadow the 8th grade standards. This happens in Chapter 5 with lessons 4-6 focusing on standard deviation (which should not even be introduced yet).
Also Chapter 8 is half volume and half surface area. Surface area is a 7th Grade CCSS.
No pacing guide included.
The consumable workbook format may be costly.
The materials state that Professional Development is a requirement (at a cost). But after reviewing the material we don't think it would be necessary.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: McGraw Hill Education

Title of Material: Glencoe Math Course 3

Author: Carter, Cuevas, Day & Malloy

ISBN #: 9780076607852 5 Vol 1 - 9780021454259 - Vol 2 **Copyright** 2015

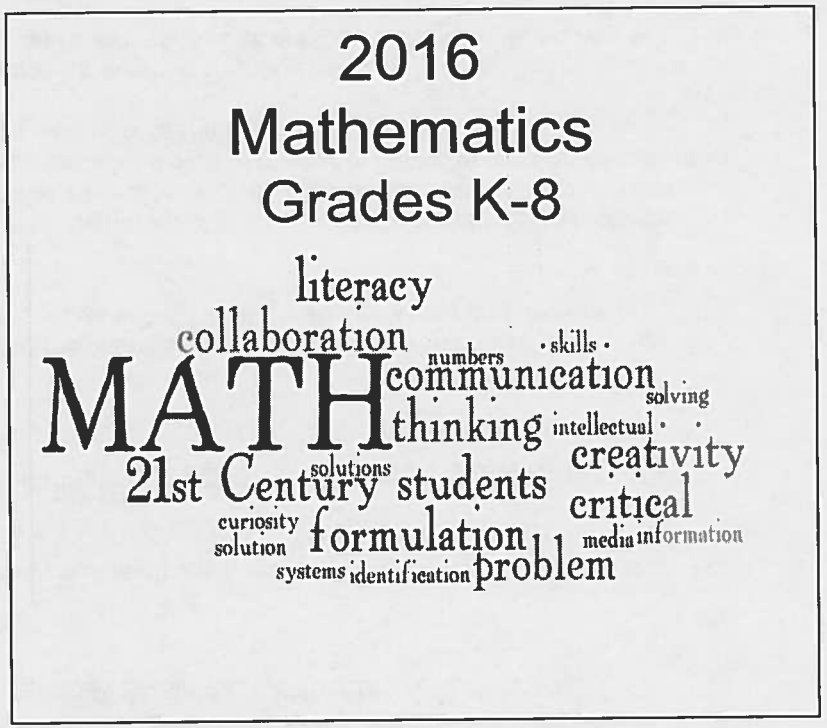
Reviewer ID: TC & TH

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials ref the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** No assessment it cover anything beyond grade 8 on similarity, congruence, or geometric transformations. Items on similarity, congruence, or geometric transformations can be found in the assessment items referred to as Interim	**(Reviewer only.)** **X Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **X Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** There are 50 out of the 63 lessons in the series devoted to the major work of the grade. This represents 79% which is within the acceptable range.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Concepts were introduced and revisited throughout the scope and sequence.** **Supporting clusters refer to major works in previous lessons. On page 665, when introducing scatter plots the vocabulary terms positive and negative slope are referred to.**	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Content from previous or future grades does not unduly interfere with or displace on grade level content. Some standards that shouldn't be covered are and this is noted in the weaknesses of Non Negotiable 2	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible] students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There are multiple [illegible]ade-level problems as well as problems marked BL (beyond grade level) and AL (almost oat grade-level). There are also HOT (higher order thinking) problems at the end of each lesson to give higher preforming students a challenge. The Countdown to SBAC is also a really good resource.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each chapter has Quick Review and Quick Check. Each lesson also has a "Stop and Reflect" Also a common core test practice and spiral review.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The Teachers Edition has a section called "Coherence connecting within and across grades" with Previous/Now/Next. At the beginning of each chapter there is a list of prior knowledge that students need to be successful in the upcoming lesson.	**(Reviewer only.)** **X Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The CCSS are clearly stated at the beginning of every chapter and lesson. The "Track your Progress" at the beginning of the book is also a nice resource.	**(Reviewer only.)** **X Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important. Inquiry labs throughout the text do a very good job of using and reteaching concepts learned.	**(Reviewer only.)** **X Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Weakness: Many times 7th grade standards over shadow the 8th grade standards. This happens in Chapter 5 with lessons 4-6 focusing on standard deviation (which should not even be introduced yet). Also Chapter 8 is half volume and half surface area. Surface area is a 7th Grade CCSS** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **X Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

X Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set ex expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** The curriculum cov all 4 CCSS under statistics and probability. They are found in chapter 9 of the Text	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** They are not only asked to crunch numbers, but also asked to explain and interpret. The inquiry labs are a very good tool which help them enhance their understanding.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Throughout chapter 9 they use input/output tables, scatter plots, lines of best fit, two-way tables and also asked to analyze data. Multiple models and diagrams to explain the material.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo[illegible]onceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The lessons give g[illegible]examples that help the students learn procedures to solve the problems. The standard 8.EE.7b is practiced in 5 chapters and standard 8.EE.8b is practiced in 2 chapters and in two inquiry labs. The standards are interwoven throughout the text.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Use of the inquiry labs to solve two-step equations uses diagram in order to build strategies that students can apply to multiple step equations. Also in the lesson 3 there ar alternative strategies presented to help students link two step equations with the equation 400 + 15( ) = _____	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X__ Meets (2)** **____ Partially Meets (1)** **____Does Not Meet (0)**

Are there are single- and multi-step contextual problems, including non-routine problems that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Each lesson engages students in a variety of applications and contextual situations as well as some procedural practice. The "Real world link" at the beginning of every lesson is a good resource which students are either to solve in a whole group or small group setting. The "When will you use this" at the beginning of each chapter is also a very nice tool.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** The majority of the problems focus on the 7 major works of the 8th grade. The "Real world link" is a good tool and the "ideas for use" in the teachers edition are also a good help.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Opportunities for modeling mathematics and for students to come up with their own assumptions are evident in the inquiry labs and Problem Solving Investigations. The text also has the students evaluate which mathematical practices they use at the beginning of each lesson.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Approximately 90% of the material in the text are repeated reasoning in proportional relationships, whether it be in equations, graphs, tables, or shapes. There is only 1 chapter that doesn't focus on the major work or 8th grade which is chapter 8. In the independent practice problems they are labeled MP and are also labeled in the heading.	**(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Not only do I see the mathematical practices, but the students are asked to evaluate themselves occasionally on which practices they used in the lesson. Practices are will thought out and obvious in the teachers edition.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **N/A**	

Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **Materials attend to the full meaning of each practice standard. The MP is marked in red on the outside section of the Teachers Edition.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Materials support the standards emphasis on mathematical reasoning throughout the text. For example: page 126, question 16, students must use counterarguments to explain integer coefficients.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** The "Inquiry Lab" and "Power Up! Performance task" require the student to reason, explain and justify their findings.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** There are vocabulary words and appropriate definitions to be used throughout the lesson. Students are often asked in their practice to not only find an answer but justify it by listing properties.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

The Standards for Mathematical Practice are evident throughout the materials including many opportunities for writing and critiquing work. There are opportunities for students to create viable arguments in discussions and in open ended responses.

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [redacted]ish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** There is a full Spar[redacted]version of the text available. In the teachers manual it gives "Alternate strategy" that is AL (approaching level), OL (on level), and BL (beyond level)	**Reviewer only.)** **__X__Meets (2)** **____ Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** There is a list of alternate strategies, scaffolding ideas, and leveled homework options for approaching level, on level, or beyond level.	**Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The teachers edition gives differentiated homework options in the AL, OL, BL as stated above. The teachers edition gives many ideas for use in grouping, pair-share, and modeling with math tools strategies to use.	**Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **X Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **Each chapter starts with multiple ways to launch the lesson. The focus and standards are very clear, there are many ways introduced that a teacher can pick from to guide the class through a meaningful lesson.**	**(Reviewer only.)** **X Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- In each lesson the practice problems are separated into several sections. 1) Quick review problems to prepare, 2) examples, 3) Guided Problems to solve with assistance. 4) Independent practice in solving problems. 5) extra practice to build mastery in all standards.	(Reviewer only.) X Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- The lesson scaffold and build on each other.	(Reviewer only.) X Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The teachers' edition is helpful in giving activities, alternate strategies, common errors, scaffolding ideas, ideas for manipulatives or tools and an essential questions to ask.	(Reviewer only.) X Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Manipulatives that are suggested in the teacher materials match the content in the standards. The use of "Foldables" is a very good tool.	(Reviewer only.) X Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- There is a separate assessment book that includeds pre-tests, chapter tests, summative test, smarter balanced assessment types in SBAC format, and an end of course test.	(Reviewer only.) X Yes _____ No

7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Same as stated before. Answer keys and scoring guidelines are provided. The only place the rubrics were found were on the student assessments where they assess themselves.	(Reviewer only.) X Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Language for lessons, examples and assessments use grade level language and situations. For example, story problems talk about cell phones, skateboards, movie theatres etc.	(Reviewer only.) X Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- List authors, consultant's and reviewers on page T20 and T21	(Reviewer only.) X Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- Pictures and visuals are not distracting and only add to the helping the student visualize the content. For example, when asking a question about the amount of rainfall, there is a small picture of a rain gauge on page 13.	(Reviewer only.) X Yes _____ No
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	Evidence- The material in the text would be easy for a parent to follow and help support their child.	(Reviewer only.) X Yes _____ No

Reviewer IMET Evaluation Summary **Title/Level: Glencoe Math Course 3 / 8th Grade**

Publisher: McGraw Hill Education **Copyright: 2015** **ISBN: 9780076678525 & 9780021454259**

Reviewer ID # TH & TC **Date Review Completed: March 8, 2016**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **X** Meets _____ Does Not Meet	**Non- Negotiable 2: Focus and Coherence** **X** Meets _____ Does Not Meet
Non-Negotiable Overall: **X** Meets _____ Does Not Meet	
Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.	

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet

Alignment Criteria Overall:

X Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? X Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

Very good vocabulary and does a great job of using and teaching the mathematical practices.
Is common core aligned and the countdown to SBAC is a very nice resource.
The performance tasks are a very good resource to help the students represent the material in different ways.
The teachers manual helps facilitate a mix of instructional approaches.

Weaknesses:

Many times 7th grade standards over shadow the 8th grade standards. This happens in Chapter 5 with lessons 4-6 focusing on standard deviation (which should not even be introduced yet). Also Chapter 8 is half volume and half surface area. Surface area is a 7th Grade CCSS.
No pacing guide included.
The consumable workbook format may be costly.
The materials state that Professional Development is a requirement (at a cost). But after reviewing the material we don't think it would be necessary.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill School Education LLC
Title:	Glencoe Math Accelerated (7th Grade)
ISBN #	Various
Grade Level(s) or Course:	Grade 7
Reviewer ID:	AC + TS

RECOMMENDED AS:

__✓____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

Materials reflect the content architecture of the Standards by not assessing above grade level.
The focus is 7th grade accelerated Standards listed in Appendix A.

COHERENCE-

Materials focus ~~not~~ coherently on all Major Grade 7 & 8 Standards listed in Appendix A.

RIGOR-

Materials reflect the balances in the Standards with Rigorous expectations.

CONCEPTUAL UNDERSTANDING-

Conceptual and procedural understanding are attended to throughout the curriculum with real-world application, HOT problems, virtual manipulatives, and essential questions.

MATHEMATICAL PRACTICES-

MPs are seen throughout this curriculum and make authentic connections between standards. MPs meet the needs of ELLs and diverse learners.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

MPs and content throughout this curriculum meet the needs of ELLs and diverse learners ~~by~~ through real-world problems, vocabulary, graphic organizers, pictures, interactive study guide, higher-order-thinking problems and differentiated homework options.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: McGraw-Hill School Education LLC

Title of Material: Glencoe Math Accelerated (7th Grade)

Author: Price et al

ISBN #: Various **Copyright** 2014

Reviewer ID: AC + TS

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1 **Freedom from Obstacles to Focus**		
Criterion	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A:
Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.

- Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7)
- Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6)
- Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8)
- Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4)

How to Find the Evidence:

Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics).

For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.)

In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)

Evidence-

Unit 1: 7.NS ✓, [illegible].NS ✓, 8.EE ✓

____ Does Not Meet

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards.

NN 1 If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)**

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

✓ Meets

____ Does Not Meet

Strengths/Weaknesses:

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

Total = 88 Chapters

✓ **Meets**

Does Not Meet/ Insufficient Evidence

Metric NN2B: **Supporting [illegible]k, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Supporting Work enhances Major Work. pg 433 Chapt. 10 : [illegible]tistics + Probability builds on Ratios + Proportional Reasoning · Uses Expressions + Equations pg 558 Chapt. 12 : Volume + Surface Area · Uses Number System + Expressions + Equations to compute Volume + Surface Area · Use Proportional Reasoning to find missing sides of proportional figures	(Reviewer only.) ✓ Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In line w/ CCSS Domain Progression. pg. 31 Chapt. 1 Lesson 6 : States it is in preparation for 7.RP.2a,b,d + 8.EE.5 pg. 83 Chapt. 2 Lesson 6 : States it is in preparation for 7.RP.2a,b,d 8.EE.5 pg. 513 Chapt. 11 Lesson 3 : States it is an extension to 8.G.5 All other chapters reference the 7th + 8th grade standards they align with. Table of Contents pg. T25 Shows Standards progression The curriculum routinely includes content standards from both previous grades as well as subsequent grades to enhance the understanding of grade level content.	(Reviewer only.) ✓ Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Throughout: Ex. pg. 437 · Each Chapter has "Differentiated Homework Options" identifying problems AL - Approaching Level OL - On Level BL - Beyond Level · Online Differentiation Instruction · Aleks online option · interactive study guide	(Reviewer only.) ✓ Meets ___ Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Throughout: · Each Chapt. has "Quick Review" to link new concepts to prior skills/knowledge. Ex. pg. 91b · Chapters have "Real-World Links" Ex. pg. 120a - links fractions (add + subtract) to a survey of e-Readers + why they prefer e-Readers over books. Throughout the curriculum prerequisite skills are extended and applied to the new standards being taught. An example is in Chpt. 3 extends operations & use of models.	(Reviewer only.) ✓ Meets ___ Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** pg. 31 Chapt. 1 Lesson 6: states it is in preparation for 7.RP.2.a,b,d + 8.EE.5 pg. 83 Chapt. 2 Lesson 6: states it is in preparation for 7.RP.2a,b,d + 8.EE.5 There is a common core review in every lesson that is identified in the teacher manual by content Standard and grade level. The review supports material being learned in the current year.	(Reviewer only.) ✓ Meets ___ Does Not Meet/ Insufficient Evidence

The curriculum is divided into ... by CCSS clusters. The learning objectives are clearly

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** shaped by these clusters. Objectives identified as "What You'll Learn" at beginning of each chapter. Ex. pg. 120 CCSS are identified : Ex. pg. 120 Each Chapter Lesson	(Reviewer only.) ✓ Meets ____ Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Real world links in the Interactive Study Guide + Inquiry Labs integrate clusters in natural Throughout + important ways. Examples, guided practice, independent practice connect 2 or more clusters. Ex. Chapt. 6 Lesson 1 pg. 250-255 standards : 7.RP2, 7.RP2c, 7.RP.3 7.EE.3 Problems link proportional reasoning to expressions + equations	(Reviewer only.) ✓ Meets ____ Does Not Meet/ Insufficient Evidence Ex : Chapt. 8 making tables + writing equations.

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

✓ Meets

Strengths/Weaknesses:

Major Works @ 76%

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

✓ **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** 7.EE.3 Throughout: • Essential Questions are stated + reviewed for each unit. Ex. pg. 250 How can you use proportional relationships to solve real-world percent problems? Real World Link: pg. 250 Fruit Salad → proportional fruit "Building on the essential question" pg. 254 #48 pg. 290 "Reflect" Answering Essential Questions (graphic organizer)	• HOT problems • Virtual manipulatives • Summaries • essential questions guide discussions + learning • reflection pages - pg. 92 ISG
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** 7.EE.3 Throughout: Ex. pg. 255 #5 In a drawing of a honeybee, the bee is 4.8 cm long. The actual size of the honeybee is 1.2 cm. What is the scale of the drawing?	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** 7.NS. + 7.RP Throughout: bar diagram pg. 248 answers as part, whole, % pg. 252 pg. 261 Example 1 "How would you rewrite "Find 62% of 75" as a question? pg. 264 #31 "explain" #32 find his mistake + correct it	There are Key concept boxes (ex - p. 20) graphic organizers for concepts, use of models, number lines, manipulatives (student centered online)
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Throughout: Each chapter has many skills practice type problems as well as application problems that require both conceptual & procedural understanding. Ex. pg. 118 #50 need procedural understanding to evaluate $40 \cdot \frac{1}{4} + 40 \div \frac{1}{4}$ and conceptual understanding to explain which is greater. Prac	Fluency is built by starting with models and manipulatives to represent algebraic equatio and then moving to algorythms w/ ample
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Throughout! Generic cases that require algorithms: pg. 116 (Chapt. 3 Operations w/ Rational Numbers)	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** 7th-8th grade curriculum	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Throughout; The curriculum provides engaging application within the Major work. • Real World Problems / Applications • Inquiry Labs • Example: Chapt. 2 Lesson 1 7.NSA pg. 46a - Real World Link Geocaching - 46 representing elevation as integers. pg. 47 # Example 3 Order video game scores from least to greatest "Do these problems to find out." pg. 50 Movies + ticket sales	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout Example: Chapt. 2 Lesson 1 pg. 50 Evaluate each expression (single-step) #36-44 Evaluate if $x=-3, y=4+z=2$ # 45-50 (multi-step) #51 multi-step • find absolute value • compare	• Performance Tasks • Unit Projects • Interactive Study Guide

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Inquiry Lab: Chapt. 2 pg. 52 (7.NS.1) Entertainment adding integers w/ algebra tiles - discovering additive inverses Chapt. 10 Statistics pg. 434 - Measures of Center - ordering integers + integers operations	• Application • Ticket out the door pg 203 SE pg. 197-199, 201-205 • HOT problems pg. 204 Real World Links pg. 105, 109, 111, 115, 117 Chpt Rvw pg. 243-244
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout: Real world problems are part of every lesson as well as assessments. They increase in difficulty w/ chapter progression. Ex. pg. 55 Example 1 Use a number line pg. 56 Algorithm / Notation Adding Integers Ex. 2 pg. 57 Ex 5 Real-World App. Problem	Inquiry Labs use algebra tiles, move to rules, making symbolic notation.

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Throughout the curriculum CCSS + MP are integrated + labeled.

Chapt. 2 pg. 55 use number line
Ex 1 (model)
pg. 59 #39
- Write a real-world problem that can be solved w/ a number line
- understand adding integers

MP 1, 4, 6

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** pg. T23 shows All Mathematical Practices distributed throughout curriculum ex) #1 pg. 50, 337, 619	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** throughout #3 pg. 22, 259, 489, 606 pg. 55 use number line to represent integers pg. 52 algebra tiles - adding integers	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Activities / Math. Practices are clearly explained ex. pg. 55 + 52 · Develop the Concept guides ex. pg. 63a · Collaborate ideas - ex. pg. 62	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Throughout: pg. 55a Have students work in pairs. "Without using a number line, how can you know the sum is positive?" pg. 62 Collaborate, Analyze, Reflect pg. 66 Find the error · essential questions HOT problems correct it.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Throughout: pg. 59 · use a counter example pg. 66 #42 Explain why the result is the same.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught.
NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.

Evidence- Throughout

Ex. pg. 66 #39 Write a subtraction expression w/ a positive integer & a negative integer whose difference is positive. Then find the difference.
#40 Find the mistake and correct it.
#42 Write an expression involving the subtraction of a negative integer. Write an equivalent expression. Explain why the result is the same.
- guides them step by step to an argument justifying results.

- Vocab - new terms highlighted
- graphic organizers
- key concept boxes
- glossary

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

(Reviewer only.)

✓ **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Alignment Criterion 3: Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** throughout Vocabulary Graphic organizers Pictures english-spanish glossary H.O.T Problems - higher order thinking Differentiated Homework options • online editable assignments + assessments • ISG	Reviewer only.) ✓ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** • graphic organizers • number lines pg. 55 • algebra tiles pg. 52 • bar diagrams pg. 248 • foldable notes • interactive study guide pg. 555c • Are you ready? • watch-out!	Reviewer only.) ✓ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** online interactive whiteboard graphic organizers pg. 174 ~~Problem-posters~~ Interactive Study Guide - pg. 224 Inquiry Labs - pg. 230-31 Collaborate ticket-out-the door Got it? Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** ✓ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Teacher manuals include lesson tips, clear procedures that are tied to essential questions throughout - Ex. Chapt. 5 Lesson 8 pg. 324a • Teacher notes • Interactive study Guide • Vocab • Real world Link • Examples • Guided Practice • Independent Practice • Common errors • Extra Practice • HOT Problems	**(Reviewer only.)** ✓ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	pg. 228-229 • extra examples • skills practices • real-world app • spiral review Includes problems and exercises and interactive journal to refer to concepts. Problems and exercises increase in complexity to build mastery.	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Progression in complexity Practice other applications. Differentiated homework options & Customizable assignments	**(Reviewer only.)** ✓ **Yes** ____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Teacher edition - teacher notes in outside columns online resources - worksheets - assessments - presentations - interactive whiteboard • Watch out! • CCSS listed • Need another example.	**(Reviewer only.)** ✓ **Yes** ____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** • number line - integers & distance pg. 55 • Algebra tiles to represent adding integers pg. 52	**(Reviewer only.)** ✓ **Yes** ____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** * Assessment Masters * 21st Century Career * Rate yourself ex. pg. 232b • Inquiry Lab reflections • Are you ready? • Quick Checks • Ticket at the Door • Building on essential question • Mid-Chapt. Check	**(Reviewer only.)** ✓ **Yes** ____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Teacher edition - answer keys online resources - online answer keys	**(Reviewer only.)** ✓ **Yes** ____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** • language matches units • Clear sentence structure & explanation	**(Reviewer only.)** ✓ **Yes** ____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** pg. TI4 lists 4 lead authors 3 program authors 1 contributing author	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** · font size is appropriate · appealing for 7th grade · colorful · pictures match problems · visual design supports student engagement	**(Reviewer only.)** ✓ **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** · online resources for parents available · can be understood by parent (chapter explanations)	**(Reviewer only.)** ✓ **Yes** ____ **No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
✓ Meets	✓ Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

✓ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
✓ Meets	✓ Meets	✓ Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

✓ **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** _X_ **Yes** ____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths of the program are teacher resources and differentiated instruction. Visually appealing. The Interactive Student Guide is an excellent resource as well for scaffolding student learning.

Weaknesses are the paper quality of teacher edition (pages tear easily).

Perforation of student guide is not best because the students keep the journal (guide) throughout as a resource.

Districts need to be aware that the Interactive Student Guides are consumable and need to be replaced yearly, however they are necessary.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill
Title:	Core-Plus 1
ISBN #	SE 978-0-07-665794-0
Grade Level(s) or Course:	High School - 9th
Reviewer ID:	MK & TG

RECOMMENDED AS:

✓ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
86% of time on WAPs
Design aligned w/ standards

COHERENCE-
Integration of topics is a dominant design element.
Clusters & domains interwoven in cohesive manner.

RIGOR- Real-world investigations and Summarize the Math components require attention to accurate & high-level math throughout.

CONCEPTUAL UNDERSTANDING- Investigations & classroom discussions require explanation and reflection as opposed to rote procedures.

MATHEMATICAL PRACTICES-
8 SMPs are embedded throughout the design of the curriculum. Teacher tips support implementation.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Adaptations for ELL & other needs may be minimal.

OTHER:
Strengths: Active learning design (4-phase lesson cycle)
Reflection through Summarize the Math components
Strong alignment w/ Standards

Weakness: Explicit support for individual adaptations

Reviewer ID: MK & TG

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any s[illegible]e course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** 86% of [illegible] time on WAPs Example: Unit 1 Lesson 1 of the 13 standards, 11 are WAPs.	✓ **Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Geometry uses application & modeling & real contexts - and capitalizes on algebra skills. Investigations are used to support students in learning and applying the mathematics. Example: Unit 6 Lesson 1 uses spaghetti to discover, model, & prove triangle congruence theorems.	✓ **Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Alignment chart helpful and accurate Use of investigations engage students in authentic mathematical activity - exploring, modeling, justifying, etc. Examples: Unit 1 Lesson 1 appropriate high-school level investigation Unit 1 Lesson 3 appropriate level of challenge & includes use of technology	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Modeling and functions are prominent themes. Core-Plus was designed to address Standards (as opposed to overlaying Standards on existing materials). Sequence designed to promote student learning. Mathematical Practices addressed throughout.	✓ **Meets** ___ **Does Not Meet Insufficient Evidence** Standards Guide very easy to use.
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Cycle within each section has students in recall, investigations, practice, & reflection. There are also Check Your Understanding items in each unit. Margin notes in teacher edition support adaptations.	✓ **Meets** ___ **Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each lesson starts with Think About the Situation, includes a Just-in-Time review and also has Looking Back lessons so that prior knowledge is connected to current concepts.	✓ **Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Clear alignment - visible in unit titles Attention to finding & using patterns contributes to overall focus & coherence.	✓ **Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Integration is a dominant design element. Clusters & domains are interwoven in cohesive manner. Unit 3 Lesson 4 includes A-SSE, A-CED, A-REI, F-IF, F-BF, F-LE & S-ID	✓ **Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets**

____ **Does Not Meet**

Strengths/Weaknesses

Integrated approach has been established by years of implementation. All lessons follow inquiry-based approach. High expectation for discus and formative assessment.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A** ✓ **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Through active learning & cooperative learning in each lesson. "Summarize the Math" encourages reflection. Example: Unit 1 Lesson 2	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Collaborative nature fosters discussions around high-quality conceptual problems. Summarize the Math again.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Learn to represent information in different forms, and to look for and make use of patterns. Unit 1 focuses on patterns of change represented in tables, graph, and equations.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Check Your Understanding items check for both procedural & conceptual understanding.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x − 2)2 = 6x − 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 − 5).	**Evidence-** Unit 3 Lesson 3 is an example of making most of opportunistic strategies.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Investigations & real-world problems are multi-step. Contexts are engaging at an appropriate level.	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** 86% of content focused on WAPs. Application and Connection sections of On Your Own exercises	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling is a key focus through real-world contexts. Unit 5 Lesson 2	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

✓ **Meets** 6/6

Does Not Meet

Strengths/Weaknesses:

Focus on discussion, inquiry and looking for patterns creates a rigorous course. Balance with appropriate level of skills practice.

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Launch, Explore, Share, & Summarize cycle address practice standards across all units. Bungee Jump exploration Unit 1 Lesson 1	✓ Meets (2) ___Partially Meets (1) ___Does Not Meet (0)
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** ✓ Meets (2) ___Partially Meets (1) ___Does Not Meet (0)
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Continuously engaged in SMPs through investigations; interwoven throughout the course. See publisher CCSSM alignment chart.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** TE offers sample discussions to help prompt mathematical communication. Example: Unit 1 Lesson 1	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric.** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Discussions included in all lessons; these discussions involve constructing and critiquing arguments. Teacher has responsibility for promoting & monitoring this activity.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Lots of high-level thinking items Example: Unit 1 Lesson 3 On Your Own & Summarize the Math Sections	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Mathematical language and its proper use is addressed in all investigations.	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		✓ **Meets** 6/4 **Does Not Meet** **Strengths/Weaknesses:** 8 Practices incorporated throughout the curriculum Focus on authentic mathematical activity

Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Differentiation notes & ELL tips in margins. Design focus is intended to promote best practices for all. Tips and notes are minimal	____**Meets (2)** __✓__**Partially Meets (1)** ____**Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The learning cycle allows for multiple instructional strategies that can be adapted to meet individual needs. Collaborative approach promotes access to the math for all students. "Equity through high expectations" supported by research.	__✓__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** 4-phase lesson cycle allows for different learning styles	__✓__**Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations.	✓ Meets 5/6 ____ Does Not Meet **Strengths/Weaknesses:** Expectation of high engagement for all students – allows for adaptation but more support could be provided.
AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lesson cycle leads to objectives with all students as active learners.	**(Reviewer only.)** ✓ **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Problem-based design requires students to learn new mathematics and then apply concepts in On Your Own exercises.	**(Reviewer only.)** ✓ **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** 4-phase lesson cycle reflected in assignments; practice, application and reflection balanced.	**(Reviewer only.)** ✓ Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** ConnectED online portal for teacher support in promoting ~~Mareag~~ active learning	**(Reviewer only.)** ✓ Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Some (few) manipulatives suggested Missed opportunity: no algebra tiles Unit 7 Lesson 2	**(Reviewer only.)** ✓ Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Plenty of assessments, good quality & variety May not allow for teacher modifications	**(Reviewer only.)** ✓ Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Answer keys available Could have more support for formative assessment during investigations	**(Reviewer only.)** ✓ Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Unbiased & balanced	**(Reviewer only.)** ✓ Yes ____ No

9. Materials are carefully evaluated by qualified individuals whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Reviewers listed Research studies shared TE iii	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Appealing w/o being overly busy Illustrations are true to the mathematics	**(Reviewer only.)** ✓ **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** Core-Plus 1

Publisher: McGraw Hill **Copyright:** 2015 **ISBN:** SE 978-0-07-665794-0

Reviewer ID # MK & TG **Date Review Completed:** 3/8/16

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

✓ **Meets**

____ **Does Not Meet**

Non-Negotiable Overall:

✓ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 **of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points:** 6 **of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points:** 5 **of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
✓ **Meets**	✓ **Meets**	✓ **Meets**
_____ **Does Not Meet**	_____ **Does Not Meet**	_____ **Does Not Meet**

Alignment Criteria Overall:

✓ **Meets** _____ **Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[illegible]tandards. **Do the materials meet every Non-Negoti[illegible]e and Alignment Criterion?** ___✓___ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strength: Design focus on active learning through investigations
4-phase lesson cycle
Summarize the Math reflection component
Strong alignment with content standards and intentional development of practice standards.

Weakness: Explicit support for ELL & other adaptations could be increased (this is an explicit design choice, however)

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill School Education LLC
Title:	Core-Plus Mathematics 2
ISBN #	978-0-07-665799-5
Grade Level(s) or Course:	9-12

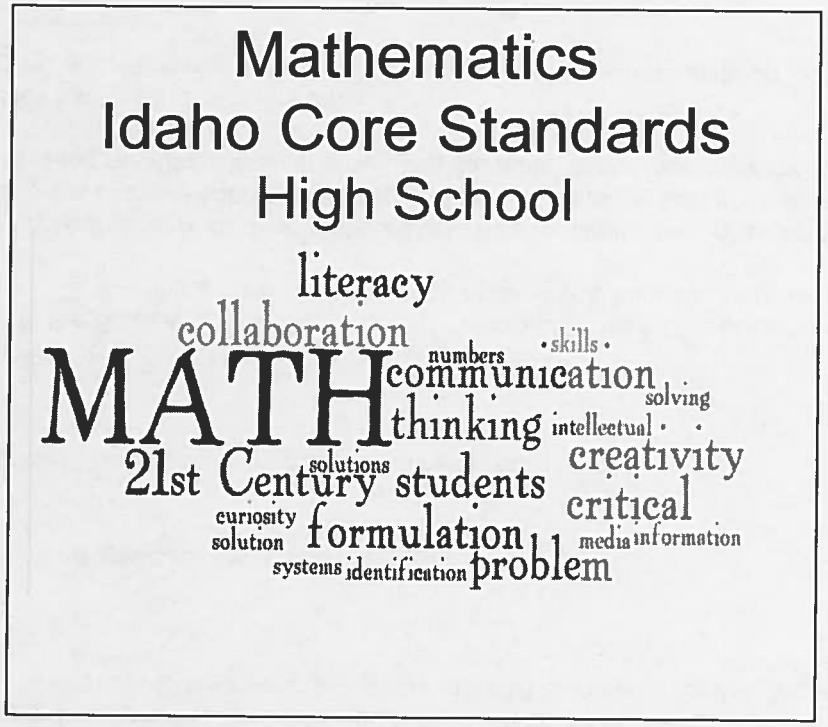
Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, High School

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Core Plus 2 covers the following WAP: N.RN.2, A.SSE.1a, 1b, A.SSE.3a, 3b, 3c, A.CED.1, 2, 4, A.REI.4a, 4b, A.REI.7, F.IF.4 and 5, F.IF.7a, 7b, 8a, 8b, and 9, I.BF.1a, G.CO.10, G.SRT.4, 5, 6, 7, and 8 Core Plus 2 does NOT cover the following WAP: N.RN.1, 3. A.APR.1, I.BF.1b, G.CO. 9 Total Lessons: 29 Lessons Spent on WAP: 18 % of time spent on WAP: 62% However, Core Plus 2 does not align to the Appendix A WAP for a second year course. Two out of the 8 Units focus on CCSS not aligned to Integrated II WAP. The entire Core Plus program does cover all CCSS in Appendix A.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Core Plus 2 contains significant work with applications and modeling. The text contains many investigative tasks that require students to use modeling and algebra skills. This is evident in the following: Unit 3- Lesson 1, 2, On Your Own Problems Unit 5- Lesson 1, On Your Own Problems Unit 6- Lesson 1, On Your Own Problems Unit 7- Lesson 1, 2, On Your Own Problems	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Core Plus 2 contains problems at an appropriate level for high school that involve the extension of knowledge and skills from grades 6-8. The tasks and problems presented in the text require high level thinking strategies. The problems are focused and geared towards high school students and their level of thinking. This is evident in the following: Ratios and Proportional Relationships: Unit 1 Percentage and Unit Conversions: All Units Basic Function Concepts: Unit 1, 5 Geometric Measurement: Unit 3, 7 Basic Statistics and Probability: Unit 4, 8 Ration Number Arithmetic Fluency: All Units	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The standards covered in this course are aligned to the content specified in the CCSS. Each lesson is equipped with a breakdown of which standards are focused on and how they connect to other standards (this can be seen in the margins of the teacher edition of the text.) However, not all WAP are covered; for example circles are covered in year 2, where the Core Plus program covers them in year 3.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The curriculum provides a teacher edition and within the teacher edition there are side notes that suggest differentiation for higher and lower level students but the differentiation is not adequate (TE p. 152); however there are not many suggestions to help special population students. There are notes on common misconceptions and each lesson has a corresponding "On Your Own" section that allows the teacher to meet the needs of students who are absent, need additional practice, or to accelerate those that are ready to move forward with the material. The practice problems within the text are designed in a way that they start easy and gradually increase in difficulty in order to give as many students as possible work with the course-level material.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** In order to relate the curriculum to previous concepts students have already learned, lessons are equipped with "Just-In-Time" review problems/tasks that give students practice with previously learned concepts that they will see in upcoming investigations. Each unit is equipped with a "Looking Back" lesson that helps students formalize concepts learned. "On Your Own" sections for every lesson review previously learned concepts from previous courses and help students connect them to what they are learning in their current lesson.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** In the teacher edition of course materials each lesson has specific learning objectives. These learning objectives are aligned to the CCSS listed in the lesson. The teacher materials also align the CCSS to specific investigations in each lesson. The objectives and related CCSS are listed in the Unit Overview as well and are easily accessible by teachers.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Core Plus 2 program has clusters and domains interwoven in every unit. In each lesson investigations are labeled with the CCSS they meet. Most investigations connect 2 or more clusters in a domain. See evidence below. Clusters Connected: Unit 1: A.SSE, A.REI, A.CED, F.IF, F.BF, S.ID Unit 2: A.CED, A.REI, N.VM Unit 3: N.VM, G.CO, G.SRT, G.GPE, G.MG Unit 4: S.ID, S.IC Unit 5: A.SSE, A.CED, A.APR, A.REI, F.IF, F.BF, F.LE	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Metric NN 1:** If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** The text overall is a cohesive and rigorous course for the mathematics presented. However it does align to the Appendix A Integrated II WAP and the support for special population is weak.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Conceptual understanding is attended to thoroughly in the Core Plus 2 curriculum. Each chapter builds on the development of student's conceptual understanding of the CCSS covered in each lesson. For example, A.SS.1a is addressed heavily in unit 5 of Core Plus 2 through investigations that allow students access to a conceptual understanding of the structure of expressions. All standards are approached in an investigative way to allow students to conceptually understand the course content specified in the CCSS.	

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** All standards are approached in an investigative way that is intended to lead students to a deep conceptual understanding. This is evident in all lesson and investigations.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Students are required to use multiple representations of mathematical concepts in almost every investigation and instances where they are asked to solve tasks and problems. For example students are asked to look at equations and graphs of direct variations in Unit 1.	
AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Progress towards fluency and procedural skills are interwoven within this text. Students are asked to complete purely procedural skills during classroom investigations that lead them to a conceptual understanding of the material. Applications and conceptual understanding of concepts with a procedural emphasis is also achieved through classroom investigations and "On Your Own" problems that students can complete as homework.	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** Purely procedural problems and exercises are included within the text. These can be seen in investigations in the classroom as well as homework problems students complete on their own that area aligned to the lesson students complete in class.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The text focuses heavily on contextual problems (Lesson Investigations) to help students gain a conceptual understanding of the WAP. The text does include non-routine problems designed to develop the mathematics of the course. The real world connections (Lesson Investigations) engage students in problem solving. This can be seen in all lesson investigations included in the text.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The application problems are designed to connect what students have learned in that section, as well as connecting to previously learned concepts earlier in the text/previous courses. The text meets almost all WAP for the course and these are seen in the application problems present in each lesson and homework assignments.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The text connects students to the modeling cycle through real world problems in the lesson investigations. Students are asked to model situations using tables, graphs and equations and interpret the results that they receive.	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X__Meets

____Does Not Meet

Strengths/Weaknesses:
The text in strongest in its design to lead students to a strong conceptual understanding of the mathematics presented in the CCSS.

Alignment Criterion 2:
Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 2 is rated as Meets or Does Not Meet.
To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** MP #1- Every lesson includes a "Check Your Understanding" section that allows students to determine if they are on the right path for conceptual understanding. Students are also given opportunities to preserve through problem solving in all tasks that they complete. MP#2- The text includes numerous story problems that ask students to reason abstractly and quantitatively. This is seen in all lesson investigations that students complete. MP#3- This can be seen in the text when students are asked in investigations to explain their reasoning and to be prepared to defend their answers to their classmates. MP#4- This can be seen in every section of the text. MP#5- Students are asked to use technology such as calculators in lessons to help them reach a deep conceptual understanding of the CCSS. Students are asked to use multiple tools in all sections of the text. MP#6- Students are required to provide exact answers and labels in every problem. They are required to provide clear explanations and descriptions with pictures and diagrams. MP#7- Students are constantly asked to look for a make use of patterns in all work they complete in the text. MP#8- Students are asked to repeatedly use a logical process. Students are asked to explain their reasoning in all work that they complete. This can be seen in lesson investigations as well as "On Your Own" problems.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** See evidence for AC Metric 2A.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** The CCSS guide to Core-Plus mathematics lists all MP standards met in the course. It gives page numbers broken down by MP standards.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** The materials presented in Core Plus 2 aid students in constructing viable arguments by first leading them through a carefully thought out investigation of the CCSS. Students are then asked to justify the mathematics that they have encountered in the investigation and are then asked to share their reasoning and listen to the reasoning of others, critiquing when necessary.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** All investigations in the text ask students to do more than simply produce an answer. They are asked to justify their reasoning and their answers using appropriate mathematical tools. This can be seen in all lessons of the text.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Mathematical vocabulary is attended to with precision in the text. Investigations and homework use consistent vocabulary. The text introduces mathematical terminology in each unit.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X__Meets

____Does Not Meet

Strengths/Weaknesses:
The text does a great job of making sure that students are constantly asked to use the 8 mathematical practice standards.

Alignment Criterion 3:
Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.
To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:

Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
The text does not include specific support for ELL students beyond a Spanish glossary and minimal lessons available online (3 lessons available for this course). There are answers to tasks and homework questions available for teachers through the online resource. Students are expected to have strong reading skills and some special populations do not have these and no supports are interwoven to help these students. However, students are asked to discuss their mathematical thinking, which allows some special populations to participate when they may normally not.

____Meets (2)

__X__Partially Meets (1)

____Does Not Meet (0)

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** The text includes scaffolding for special populations through "Think About This Situation" problems to begin tasks. The tasks begin with easier concepts and gradually increase through the lesson. Scaffolding does exist within the text, but there are no extra resources to support special populations. Differentiation and intervention resources are weak and not always present.	**_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** The text allows students to complete tasks in groups that allow for students to check for understanding and to pair-share. The text also includes a "Check For Understanding" section in each lesson. The text allows students to approach problems with multiple representations through out the text.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** The text has very minimal support for special populations but does do a nice job of using multiple representations to reach a variety of learners.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** All lessons in the text work to build on the previous lessons. Lessons are completed in a thoughtful and coherent structure. Lessons involve engaging investigations that lead to active participation by all students in their learning as well as the learning of their classmates. The teacher edition of the text is a great support. It involves notes in the margins and common misconceptions that lead to thoughtful teaching of mathematics.	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** The design of the text lends itself to students discovering new mathematics through thoughtful investigations. Within these investigations students are asked to solve problems as well as procedural exercises in order to defend their reasoning. Students also complete "On Your Own" problems in order to gain mastery of the CCSS.	**(Reviewer only.)** **__X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The design of assignments within the text is not haphazard. Students complete in class lesson investigations in order to learn and gain a conceptual understanding of the CCSS. Students are then asked to complete "On Your Own" problems in order to cement their understanding. There are also review sections within the text as needed to ensure that students do not experience material in a haphazard way.	**(Reviewer only.)** **__X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** The teacher text of this material is very helpful. The teacher text includes notes on common student misconceptions and how students may think about problems. It thoroughly explains the mathematics of each investigation. The teacher text gives guidance on lesson flow and includes questions to give students in order to start a mathematical discussion.	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** The algebra tiles used in Unit 5 of the text are an accurate and faithful representation of the mathematics.	**(Reviewer only.)** **___X___ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessm[illegible]. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** The text includes [illegible]view lesson with every chapter. Students self-assess with "Check Your Understanding" sections in each lesson. Every section includes review HW. Every lesson includes a quiz that teachers can have students complete. No evidence of pre-assessment was found within the text or online resource.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** The online and text teacher editions do provide answers in English and Spanish to tasks and homework questions. There are no rubrics or scoring guidelines available. There were no answer keys for quizzes found within the text or online edition.	**(Reviewer only.)** _____ **Yes** ___X__ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The materials asses student learning/proficiency using different methods through out the text. There is no bias and consistent language is used through out the text.	**(Reviewer only.)** ___X___ **Yes** _____ **No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** The text lists one evaluation consultant from the University of Wisconsin. There was no evidence found of evaluators with specific credentials listed but there was a development team listed with their credentials. List of reviewers was not present.	**(Reviewer only.)** _____ **Yes** ___X___ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The front cover is not visually appealing. The students can easily tell from the visual design where investigations start and end. The pictures included within investigations do not always enhance student's mathematical understanding because they do not lend to visual representations of the mathematics being covered.	**(Reviewer only.)** _____ **Yes** ___X___ **No**

Reviewer IMET Evaluation Summary **Title/Level:** _____

Publisher: _____ **Copyright:** _____ **ISBN:**_____

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

___X__ Meets

____ Does Not Meet

Non-Negotiable Overall:

__X___ Meets ____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: __6___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: __5___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
___X____ Meets	**___X____ Meets**	**___X____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co[illegible]tandards. **Do the materials meet every Non-Negoti[illegible]e and Alignment Criterion? ___X__ Yes _____ N[illegible]**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

- The investigative tasks are well designed.
- The text is cohesive.
- The text does a nice job of using multiple representations of mathematics to reach a variety of learners.

Weaknesses:

- Minimal ELL and Special population support.
- No summative assessments were provided.
- Answer keys for quizzes were not available.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill School Education LLC
Title:	Core-Plus Mathematics Course 3
ISBN #	978-0-07-6658-01-5
Grade Level(s) or Course:	Course 3
Reviewer ID:	MF MN

RECOMMENDED AS:

____X____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

The focus of this course is to use a problem based model to teach deep understanding of the Common Core State Standards.

COHERENCE-

This course applies previous knowledge to new concepts in a way that allows for conceptual understanding while building what students will need for the next course level.

RIGOR-

The rigor of the problems in this course are level appropriate and require students to argue and critique their work. This course allows for students of different entry levels to excel in the knowledge of the material.

CONCEPTUAL UNDERSTANDING-

The real world problems of this course allow for students conceptual knowledge to grow deeper.

MATHEMATICAL PRACTICES-

The mathematical practices are well represented and are used in the model of how this course is designed to work with students.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

There are many approaches to engage students of all levels throughout this course in problems that contain interesting topics. The vocabulary in this course is defined when needed and the group work supports all students.

OTHER:
Overall, strengths we saw were that this is a problem based course which deepens students understanding conceptually, the layout is clear, and the problems are interesting and engaging for students. The tools provided were appropriate for the problems they were applied to. Teacher resources were strong in support of student learning. Keep up the good work!

2015-1 Interim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: McGraw Hill Education LLC

Title of Material: Core-Plus Mathematics Course 3

Author: Christian R Hirsh, James T Fey, Eric W Hart, Ann E Watkins

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **ASSE1 Throughout units 1,2,4,5,7, and 8** **ASSE2 pgs. 192, 281, 577-583** **AAPR1 pg. 327-335, 338, 393** **AAPR They are asked to interpret zeroes throughout the course** **Missing AAPR4 and 5, but they are addressed in the next course (Course 4).** **AREI2 pgs. 120, 124** **AREI11 pgs. 114 STM** **FIF 109-111**	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Unit 3 Supports that they are using geometry appropriately. Also on pages 45 and 50.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Pg. 13-16 Reflections Pg. 29-39 Geometric Measurement Pg. 109-111 Inequalities Pg. 127-143 Graphing Inequalities w/ Two Variables Pg. 208-215 Ratios and Proportional Relationships Pg. 320-345 Polynomials Pg. 363-376 Rational Number Arithmetic Fluency Pg. 380-385 Basic Function Concepts Pg. 401-403 Chords, Arcs, and Central Angles	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Refer to CCSS Guide to Core-Plus Mathematics. Pg. 319 Polynomial & Rational Functions Pg. 420 Circular Functions	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Above and beyond the standard, and also has practice for standardized testing which is appropriate for the grade level of the students. Not as many low level entry problems, but a lot of scaffolding.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each lesson has an introduction that references prior knowledge. Also, each Unit has a "Looking Back" lesson to tie previous knowledge and concepts together.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Titles reflect standards clearly. All standards listed in each section in the Teacher Edition.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Shown throughout the text. Unit 6 has proving by construction then they explore this concept then check for understanding, finishing with exercises and analyzing. Pg. 400-405 Units 5 and 8 are Polynomial Functions and then Inverse Functions which are connected concepts.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	__X__Meets ____Does Not Meet
Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**Strengths/Weaknesses**

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is applied to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Pg. 63, 492 and throughout there are conceptual understanding problems, and they often call for interpreting/comparing with others.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Pg. 115-117 The students are asked to interpret what they are doing. "Think About the Situation" problems and "Summarize the Math" problems.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Pg. 118 They are analyzing a graph Pg. 151 They are explaining what a maximum value represents.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Pg. 63 They are having them use and adapt their knowledge. Pg. 492 They are using conceptual understanding. Check for Understanding sections. On Your Own Sections. Just In Time-Review sections.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** Pg. 114, 324, 353, 392 and several others throughout the On Your Own section have similar procedural problems.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The real-world problems require multi-steps to solve.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes there were several problems throughout that applied Widely Applicable Prerequisites.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Many problems model different situations. An example is pg. 455 where students deal with a wheel of fortune problem and then a problem about bridges. Problems contain abstract modeling.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Problems are scaffolded so that students may preserve in solving them. They are asked to check for understanding in the lessons. An example is on pg. 112-117. Each lesson introduces new material but begins with previous knowledge. Teacher materials are focused on enriching the course.	**__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** All mathematical practices are represented. Examples: Pg. 32-33, 338, 233, 405-406, 495-506, 597, 519-522	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** In the teacher edition, there are notes on the side, including when students may need to fulfill a mathematical practice. Scaffolding in problems help students make sense of problems. Pg. 360 gives an example of reasoning abstractly. Pg. 220 has students justifying. Modeling is abstract but is present. There are technology tools provided that help enrich the curriculum.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** In Unit 1, students are taught to construct arguments and critiques of others work. They are then asked to do this throughout the course. Example: pg. 206	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** The focus in many of the problems presented is to interpret the solution. This is present throughout the text, especially in the "On Your Own" section.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Vocabulary is defined clearly throughout. Unit 1 and Unit 3 have examples. The language of mathematics is used appropriately. Unit 1 teaches how to create an argument.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**____Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **There are differentiation notes and ELL tips in the Teacher guide. There are also video tutorials in Spanish in the online section. Language is straight forward in the text. Group work is assumed which would be a support for special populations.**	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **There is a broad range of difficulty in problems throughout the lessons. An example on pg. 164 which steps through the problem then has them compare with other students.**	**__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** There are lots of different approaches found throughout the lessons. They are asked to check their understanding and justify their work through each lesson.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- There is a "Promoting Mathematical Discourse" section that allows teachers to see what student discussions would be like. The text is well planned out and follows appropriate sequencing.	(Reviewer only.) ___x___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- There are investigations through the lessons, then a looking back section in each unit, where they tie in knowledge of what they have previously learned. Problems are real world based and are engaging. There are exercises that practice the material of the lesson.	(Reviewer only.) ___x___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Each assignment contains an Applications, Connections, Reflections, and Extensions section. Each of these sections builds student understanding through this curriculum to have intentional sequencing and not be haphazard.	(Reviewer only.) ___x___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- There is a "Promoting Mathematical Discourse" section on pages T3B, T111B, T20B and more. The beginning pages of the teacher edition refer to the model used to teach mathematics. There are also online tools available through ConnectEd which are easily accessible. There are also timing guides provided in each unit.	(Reviewer only.) ___x___ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Manipulatives are accurately used when they are used. Most modeling is abstract throughout.	(Reviewer only.) __x____ Yes _____ No

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- ConnectEd contains online assessments for students. There is also practice for standardized testing available online.	(Reviewer only.) ___x___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Solutions were not easily discovered, but are available online. Teacher edition contains possible solutions for student work.	(Reviewer only.) ___x___ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Language is standard for mathematics problems. Appropriate language is used that shows that this course in not biased.	(Reviewer only.) ___x___ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- Field Test Schools are provided on pg. iv and the reviewers are also provided on pg. v. They give explanations of the evaluations that were done on the curriculum.	(Reviewer only.) ___x___ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- Navigation is clear through the text. Images are relevant to problems in curriculum.	(Reviewer only.) ___x___ Yes _____ No

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

___x__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

___x__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: ___6__ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: ___6__ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
____x___ Meets	**____x___ Meets**	**___x____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

___x__ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Core standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __x___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Overall, strengths we saw were that this is a problem based course which deepens students understanding conceptually, the layout is clear, and the problems are interesting and engaging for students. The tools provided were appropriate for the problems they were applied to. Teacher resources were strong in support of student learning. Keep up the good work!

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill Education LLC
Title:	Core-Plus Mathematics Course 4
ISBN #	978-0-07-665790-2
Grade Level(s) or Course:	Course 4
Reviewer ID:	MF JN

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The main intent of this course is to build off of the Widely Applicable Prerequisites and to deepen students' conceptual understanding in preparing them for calculus.

COHERENCE-
This course is set up in a way that builds upon previous courses. Each lesson is designed so students and teachers have a clear understanding of what is expected.

RIGOR-
Problems reflect correct level of students and give ample opportunity to model, solve, argue, and critique.

CONCEPTUAL UNDERSTANDING-
Students are expected to use prior knowledge from the Widely Applicable Prerequisites to deepen their conceptual understanding. They use their prior, more concrete knowledge to develop a more abstract way of thinking.

MATHEMATICAL PRACTICES-
Mathematical practices are used throughout the course and are evident not only in student, but also the teacher text. The guide provided points to mathematical practices throughout the course accurately.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Although this is an upper level class, scaffolding, groupwork, a spanish glossary, video tutorials in spanish, and clear text are provided and show an unbiased course. Mathematical vocabulary is defined throughout.

OTHER:

This text ~~is~~ is a problem-based text that lends itself to strong mathematical practices throughout the entire content. Students are expected to develop deep conceptual understandings that are built off of widely Applicable Prerequisites. The teachers support in the annotated teacher's edition is beneficial to promote mathematical discussions. The organization of the material is easy to follow, and the flow and coherence makes this content easy to use for teachers and students. Through out the text the students are expected to engage with other students to learn rather than just teacher directed.

The online teacher materials are important but there are ~~no hard copy materials for solutions or answers for the~~ tests/assessments.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, High School

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **At this level of course there are only a few WAP that apply, but these are revisited and well represented within the content:** **Evidenced by: 186-187, 200, 203, 227-237, 241-245, 253-256**	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** The content uses algebra skills to create graphs in Geometry. Their geometry skills are directly related to modeling and applications. Evidenced: 313-327, 276-280, 92, 113, 121-125, 291, 250, 407-409, 454-455, 138-176	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The content makes use of functions, surface area, equation knowledge from 6-8 that require the students to take that knowledge and apply it to a level of sophistication that is appropriate for high school mathematics. Evidenced by: P 3388, 534,	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The content materials are based on the specific standards. Examples include: They perform arithmetic with complex numbers, they are highly represented (evidenced on 214-225). They represent and model vector quantities (102-137) and performed operations on vectors (106-116)	**_X___Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Algebraic skills and understanding in equations and functions is extensive through out the content. Extensions to deepen knowledge with continuations in each unit.	**_X___Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materia[illegible]late course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Several concep[illegible]rom Course 3 are built on and the standards are continued from Course 3. Interpret the structure of a n expression, the beginning chapter looks to previous coursework.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Objectives are outlined at the beginning. The course work follows the objective. See unit 7 for example	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** They connect graphs to the rate of change, which then connects to concepts in calculus. They do make these connections. They also make the connections for the "Looking Back" section in each unit connecting previous topics.	**___X_Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

_X___Meets

____Does Not Meet

Strengths/Weaknesses

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is related to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_2___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence- They tie the conceptual knowledge through their connections and apply the previous knowledge to new situations.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function $f(t) = 5 - t2$?" or "Is $\sqrt{2}$ a polynomial? How about $\frac{1}{2}(x + \sqrt{2}) + \frac{1}{2}(-x + \sqrt{2})$?"	**Evidence- A specific examples of building conceptual understanding is on page 396-400. The content then applies their knowledge and explain in many ways. There are other examples, but specifically page 443.**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence- A specific example can be shown on P 460, however multiple representations are shown through out the content.**	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** There are many examples of procedural skills and fluency throughout the content. "On Your own" contains specific examples of procedural skills.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** There are many examples of purely procedural problems and exercises present throughout the content that allow for opportunistic strategies to be applied and also generic cases that require efficient and general procedures. Evidenced by: 465, 494, 239 # 8	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Most problems require knowledge of widely applicable prerequisites. Unit 3 covers algebraic functions and equations and the Applications section contains interesting and relevant problems that apply these concepts to real world problems. Expectations for multi-step and real world problems are evident throughout the content.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** This is clearly evident through each unit of the content: Pg 227-237, 241-245, 253-256, 186-187, 200	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling is abstract, but is clearly evident. The Applications and Investigations problems are providing opportunities for students to engage in modeling.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**	

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Throughout units 1-8 the content uses the standards for mathematical practices; Rigor and applications are built in that require the students to use other mathematical practices. They also have the course set up to benefit students through groups and reasoning together.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **_2___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The way the course is set up the mathematical practices are used and seen throughout the content and the "On Your Own" and "Investigations" sections allows students to develop conceptual understandings and develop their mathematical reasoning.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** The T20 there are hints that help to guide the teacher through common issues with the students and they use very accurate representations of the mathematical representations. The Guide in the supplemental resources shows clearly where the mathematical practices are in each lesson.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** They critique student's work (Pg-124), group work is assumed throughout the content. There is ample opportunity for self critique and critiquing of other students work throughout the content.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Students are asked to explain and justify their solution throughout the content. The teacher materials show suggested solutions.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Mathematical vocabulary is defined and used throughout the content. In Core 3 the students are taught reasoning and arguments so this is a continuation of their previous knowledge.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **The scaffolding helps ELL students understanding the materials. While mathematical vocabulary is presented and used throughout the course, there is good repetition with basic knowledge that might help ELL students understand and learn the appropriate vocabulary. The group work will help support the ELL students learn the mathematics. There is a Spanish Glossary and videos on line in Spanish.**	**__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **The Core 4 course is an advanced math class and students can still build their knowledge by scaffolding and teachers can use the broad range of problems for differentiation.**	**__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Lessons and instructional approaches are presented graphically, analytically, numerically, and verbally. Multiple representations are evident through out the content. There is a check for understanding section that allows students to self asses, and they are encouraged to work in groups through out the units.	**__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- The "Promoting Mathematical Discourse" section that supports the teacher. Students are encourage to learn and work from each other. The lessons are structured in such a way that will support the teacher's role in leading and facilitating the course.	(Reviewer only.) ___X___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- The Investigation section covers the problems, the On Your Own section provides exercises for student growth, The Looking Back section allows students to review and make connections.	(Reviewer only.) ___X___ Yes _____ No
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- The Design of assignments is clearly organized and students and teachers understand the process of the conceptual understanding development.	(Reviewer only.) __X____ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The teacher materials explain the lesson/concept set up, and there is a model provided in the Overview that explains the flow and coherence of the units.	(Reviewer only.) ___X___ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Physical manipulatives are not expected at this level of a course, however the mathematical modeling is evident throughout the content. There are examples present in the course where students are required to use geometric tools for modeling such as compass, protractor, etc.	(Reviewer only.) ___X___ Yes _____ No

6. Materials include a variety of curriculum-embedded assessme Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Lesson Quizzes, essments on line, self assessment resources (Check your understanding) , Unit Tests, Take Home assessments are provided in the unit.	(Reviewer only.) ___X___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Answers are provided in ConnectEd, this was a little hard to find. They are located under the Asses Tab, but solutions and rubrics are not available.	(Reviewer only.) ___X___ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Bias was not evident in the content and the materials were clearly accessible to all students . Mathematical language is heavily used throughout the text, which leads to less bias.	(Reviewer only.) ___X___ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Evidence- The Development Team is listed and information on field testing was provided.	(Reviewer only.) __X____ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Evidence- The images were interesting and relevant to the mathematical content. Navigation is clear throughout the content because the set up is clear and concise.	(Reviewer only.) __X____ Yes _____ No

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

___X__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

___X__ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: 6 of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: ___6__ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
____X___ Meets	**___X____ Meets**	**____X___ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Co tandards. **Do the materials meet every Non-Negotia and Alignment Criterion? ___X__ Yes _____ N**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

This text is a problem based text that lends itself to strong mathematical practices throughout the entire content. Students are expected to develop deep conceptual understandings that are built off of Widely Applicable Prerequisites. The teachers support in the annotated teachers edition is beneficial to promote mathematical discussions. The organization of the material is easy to follow, and the flow and coherence makes this content easy to use for teachers and students. Throughout the text students are expected to engage with other students to learn rather than just teacher directed.

The on-line teacher materials are important but there are no hard copy materials for solutions or answers for the tests/assessments.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill
Title:	Glencoe Algebra I Common Core Edition 2014
ISBN #	9780076639236
Grade Level(s) or Course:	9-12
Reviewer ID:	MB and PVP

RECOMMENDED AS:

__X_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Text addresses CCSS. Focus on prior knowledge and how this is linked to current/new material is clearly addressed.

COHERENCE- Text includes many exercises that move from simple to more complex. Progression through chapters and text is logical and sequential.

RIGOR- Publisher could do a better job of providing suitable problems to address the Practice Standards. While there are problems that address prior knowledge, there are not enough problems that require the learning of new math. More problems should require written student explanations.

CONCEPTUAL UNDERSTANDING- Majority of problems emphasize procedural fluency. While this is good in a first year algebra course, conceptual understanding of the "why" is lacking.

MATHEMATICAL PRACTICES- Practices are not specifically identified throughout the text. A problem may be labeled "Sense-Making", for example, but it is not clear in the problem itself, how this standard applies.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Publisher has done a good job of providing differentiation tools and other teaching tips to make content accessible to all students.

OTHER:
Quality of material used in textbook construction does not lend itself to durability. In the short time of the review process, binding on text began separate. Review copy was missing numerous pages in the student edition. While attempts have been made to make this text "Common Core", it appears to mostly be a traditional algebra textbook with CCSS labels.

Reviewer ID: MB and PVP

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Metric NN1A: **In any s e course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **Chapters 2-9, 11 12 contain Widely Applicable Prerequisites. Each of these chapters starts at a very basic level but builds to a higher level of student engagement and application**	**X Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** **Very little evidence with modeling/application problems with algebra and geometry. There appears to be one algebra application problem per lesson. Geometry applications appear in some sections at a basic level, usually in the Standardized Test Practice section. Text does use graphing throughout.** **Section 8-6 Example 3 Real-World Example application of geometry problem** **Section 8-9 Student exercises 46-50**	**X Meets** **_____ Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **The level of sophistication is widely varied. Early chapters and early portions of every chapter seem too focused on middle school concepts. Chapter 0 – preparing for algebra seems unnecessary. Other chapters seem to progress very quickly from simple to complex problems.** **Chapter 2 Section 6 – Ratios and Proportions – middle school level problem solving and application. Percentage change – middle school level. Very small section on dimensional analysis, but good section on weighted averages. Doesn't move beyond skills from grade 6-8.** **Chapter 3 Algebra Lab – Analyzing Linear Graphs. Very lengthy introductory "lab" to linear graphs. Not sure why this is a lab, where students aren't doing any kind of application problems. Level of sophistication is not very complex throughout this chapter. Very little instances of interpreting features of a graph in the context of an applied problem.**	**X Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **Text appears to follow the content specified in the Standards. Each chapter starts with a "Get Ready for the Chapter" review of prior knowledge.**	**X Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** All chapters seem to contain way too much content, problems, applications, etc. For example in chapter 6, Get Ready for the Chapter contains 13 problems, introductory section contains a visually packed overview page, two long multi-part examples, a "real world" example, and 9 "check your understanding" problems. The student practice and problem solving section contains 46 problems, 6 "higher-order-thinking" problems, 4 standardized test practice problems, and 20 spiral & skills review problems. Lower-performing student needs may not be adequately addressed. TE has suggestions for "approaching learners" with suggestions like "draw a picture" for the students. Ancillary materials include extra practice, handbook with remediation, and enrichment exercises.	X Meets ____Does Not Meet Insufficient Evidence
Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The TE includes a vertical alignment at the start of each chapter, with a Before the Chapter, During the Chapter, and After the Chapter. These sections outline concepts learned before the current chapter (for example, before 8th grade or earlier in algebra), what concepts will be covered during the chapter that relate to other algebra 1 concepts, and what topics are covered that are preparing students for algebra 2. Each lesson includes a spiral & skills review	X Meets ____Does Not Meet Insufficient Evidence
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The margins of each new chapter section list what Common Core State Standards will be addressed in the section. It is difficult to identify the learning objectives in the student text. Although the Standards are listed, they are not written in language that can be readily understood by algebra students and not clearly related to the learning objective. The TE lists specific CCSS in the Chapter Planner section at the beginning of each chapter.	__X__Meets _____ Does Not Meet Insufficient Evidence

Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **In most sections students are expected to solve problems using multiple interpretations such as modeling, graphing, and solving algebraically. For example section 4-4 connects F.LE.2 and S.I.D.7 constructing linear function form a graph, a description of a relationship, and interpreting slope.**	**X Meets** **____Does Not Meet Insufficient Evidence**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Metric NN 1:** If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**X Meets** **____ Does Not Meet** **Strengths/Weaknesses** **Strengths—many problems throughout each lesson. Focus on prior knowledge and how it ties in to current lesson clearly addressed. Weaknesses—overwhelming visually, does not address basic or advanced learners very well. Standards seem to be added in the margins in lessons as an afterthought.**

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** **Some interpreting is required in homework assignments. The chapter/unit assessments do not include understanding or interpreting. Examples provide some explanation, but students are not expected to do so in their assignments.**	

Do the materials feature high-quality conceptual problems and conceptu[illegible]ussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** **Each assignmen[illegible]ains a H.O.T. (higher order thinking) set of problems designed to foster reasoning skills, but there is insufficient evidence that these problems enhance conceptual understanding. Example: lesson 8-7 "What should you consider when solving a quadratic equation that models a real-world situation?"**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** **Each practice & problem solving (assignment) section contains a Multiple Representations problem in which the students are asked to express their solutions logically, algebraically, analytically, or graphically, and in combination.**	
AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **The majority of problems are specifically focused on procedural skill and fluency with little evidence of practice with conceptual understanding. Sections 8.1-8.4 includes lab using algebra tiles to add/subtract polynomials.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** **Most procedural problems are generic cases that require general procedures. Section 8-3 students move from generic cases to having to use strategies for more complex problems applications—using multiplying polynomials to find the areas of geometric figures.**	

AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Very little evidence. A couple of modeling problems in each assignment along with problems in the H.O.T. sections with CCSS labels. Example problem 42 in lesson 8-2. Label is given as "CCSS Modeling". Problem does not address all aspects of the modeling cycle. Problem could be more rigorous.**	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Some evidence of "real world" application. For example, lesson 3-1 problem 49 "If Mrs. Johnson has only $160 to spend on the rental car, can she afford to rent the car? Explain your reasoning."**	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Some lessons include a specific modeling problem and other lessons include structure problems where the students are asked to explain their reasoning. Teacher would have to stress all parts of the modeling cycle, as most modeling problems use individual parts of the cycle. Section 2-7 includes algebra lab.**	

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC 1: Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

__X__Meets

____Does Not Meet

5 points out of 6

Strengths/Weaknesses:

Strengths: Clear emphasis on procedural problems.
Weaknesses: Not enough evidence of modeling, non-routine, or engaging application problems. Little evidence of problems designed to enhance conceptual understanding.

Alignment Criterion 2:
Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** **Each assignment contains problems emphasizing repeating reasoning to understand concepts. Problems are linked to various real-world applications.**	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **____Meets (2)** **_X___Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Publisher has tried to provide evidence by having problems in the H.O.T. section labeled with particular practice standard titles, such as "PERSEVERENCE", even though these problems do not necessarily attend to the full meaning of the practice standard.**	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** **Teacher materials address the Mathematical Practices in a basic way. Materials often direct teachers to use the problems labeled for "mathematically proficient students" as evidence of Practice Standards. Ancillary materials appear to be more aligned with Practice Standards.**	

AC Metric 2C: **Materi[illegible]upport the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	[illegible]	**Use the questions for AC Metric 2C to evaluate Metric 2C. Record [illegible]nce for each question and rate Metr[illegible]** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Some problems in the H.O.T. section of the assignment include specific argument questions. These tend to be not particularly engaging for argument purposes, but they could be used for reasoning.**	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** **Several problems in each H.O.T. section of the assignment require modeling, writing, explaining, arguing, reasoning, and sense-making.**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** **Materials show clear evidence of attending to the language of mathematics. Every chapter has specific vocabulary sections, including new vocabulary and a review of previously learned vocabulary.**	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards

AC 2: Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)**

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

_X___Meets
5 out of 6 points

_____Does Not Meet

Strengths/Weaknesses:

Strengths: the publisher has made an effort to encourage mathematical reasoning through the use of H.O.T. problems in each lesson.
Weaknesses: Most Practice Standards are addressed in name only, with little evidence of actually addressing the full meaning of the Practice Standard.

Alignment Criterion 3:
Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 3A: **Suppo[illegible] English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **In the TE, the le[illegible]ontains a resource section with ELL suggestions listed. These materials were found in separate resource material books. All evidence was for Spanish speaking students. Difficult to assess whether materials help students meet the same Standards. The beginning of each chapter includes an ELL section under Differentiated Instruction. These suggestions can be toward any ELL student. Online support provides glossary in 13 different languages.**	**__X_Meets (2)** **_____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **In the TE, the lesson contains Approaching Level, On Level, and Beyond Level differentiated resource suggestions. Difficult to determine whether these suggestions will lead learners to engage with on-level content. The online resources have extra support materials to extend learning.**	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **Every chapter begins with study organizers, scaffolded questions, RtI planners, and includes checking for understanding opportunities. Ancillary materials and online component also provides additional instructional approaches.**	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**_X___Meets** **6 out of 6 points** **____Does Not Meet** **Strengths/Weaknesses:** **Strengths: strong TE organization and suggestions for ELL. Ancillary support materials supported differentiation. Text audio component was good. Weaknesses: majority of content was directed toward Spanish speaking ELL. Separate materials in Spanish are provided.**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** **TE provides a very organized Chapter Planner. "Then, Why, How" organization at chapter opener is helpful. Lessons are structured with a somewhat overwhelming amount of content. Teacher tips in margins are useful.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** **Problem sets all look the same. Not a clear distinction between solving problems and working exercises. Most assignments contain roughly 80 problems, so it is difficult to sense that each problem has a specific purpose other than extra practice. Students apply what they already learned in the assignment section labeled "Spiral Review".**	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** **Exercises are clearly given in intentional sequences, with more difficult problems near the end of the assignment.**	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** **Materials include Study Notebooks, Practice Workbooks, Assessment books, Math handbook, and Chapter Resources. Also online component to support instruction. Margins of TE provide teacher tips and scaffolding questions.**	**(Reviewer only.)** **___X___ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Only manipulatives appear to be Dinah Zike's foldables presented in the Get Started section of each new chapter. Algebra tiles are mentioned in some of the lessons. Text does contain graphing calculator activities.	(Reviewer only.) __X____ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Every chapter includes a mid-chapter review, every assignment includes a spiral review and skills review, every chapter also includes a study guide and lesson-by-lesson review, a practice test, a preparing for standardized test section, and a standardized test practice section.	(Reviewer only.) __X____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Assessments contain answer keys. No scoring guidelines or aligned rubrics are provided to interpret student performance.	(Reviewer only.) _____ Yes ___X___ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Materials include a separate practice workbook for ELL. Assessments are free of bias.	(Reviewer only.) __X____ Yes _____ No
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Approximately 40 consultants and reviewers are listed in the TE See pages T4-T7	(Reviewer only.) ___X___ Yes _____ No
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The visual design of the TE is overwhelming with too much content, graphics, and text on each page. Student text is adequate. Navigation through the text is clear.	(Reviewer only.) ___X___ Yes _____ No

Reviewer IMET Evaluation Summary **Title/Level: Glencoe High School Math: Algebra I**

Publisher: McGraw-Hill School Education LLC **Copyright: 2014** **ISBN: 9780076639236**

Reviewer ID # MB **Date Review Completed: 02/06/2016**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

___X__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

__X___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___5__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: __5___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: __6___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
_____ Meets	**____X___ Meets**	**___X____ Meets**
____X___ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet (16 out of 18 possible points met)**

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths: The TE indicates how the materials are supposed to meet the CCSS. Specific resources are cited for each lesson. The SE has many exercises designed to improve or enhance students' procedural skills.

Weaknesses: The assignments are unbalanced, with way to much emphasis on procedure and very little emphasis on application or engaging problems.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill
Title:	Glencoe Algebra 2
ISBN #	9780076639908
Grade Level(s) or Course:	Algebra 2
Reviewer ID:	SH, MB

RECOMMENDED AS:

_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

__X__**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The text contains lessons that are correlated ~~to~~ the Standards.

COHERENCE- Concepts and ideas are connected and presented in a logical sequence. There is a clear connection between Algebra 1 and Algebra 2

RIGOR- Emphasis was primarily on procedural skills. The text needs to have more of an emphasis on conceptual understanding.

CONCEPTUAL UNDERSTANDING- Problem sets ~~for~~ have 1-2 problems that are labeled as promoting conceptual understanding. ~~H~~However, frequently, these problems did not truly require conceptual understanding.

MATHEMATICAL PRACTICES- The beginning of each lesson lists a math practice standard. However, these standards were rarely evident in the lesson.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Both the chapter planner at the start of each chapter and the teacher notes in each lesson give suggestions on making the standards accessible to all students.

OTHER: One of the biggest strengths of this text is the high level of organization & helpful resources for teachers. This text would address all the content standards for Algebra 2. It would not meet the standards for mathematical practices and would not promote strong conceptual understanding.

2015-1[illegible]terim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: McGraw Hill

Title of Material: Glencoe Algebra 2

Author: Carter, Cuevas, Day, Malloy, Casey, Holliday

ISBN #: 9780076639908 **Copyright** 2014

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Chapters 4-8, 11, 12 contain Widely Applicable Prerequisites. This represents 7 out of 13 chapters—more than 50% of the course. Because this is an algebra 2 course, there are additional lessons on (+) content from the CCSS.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** Geometry includes graphing, triangle trigonometry, trigonometric identities, and conic sections. All utilize algebra prerequisite skills. The 0 chapter also includes sections on congruent and similar figures, and the Pythagorean Theorem.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There a[illegible]roblems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Early chapters 0-3[illegible]m to be at a low level of sophistication. These chapters would probably need to be omitted if teaching an advanced algebra 2 course. The remaining chapters involve many instances of application of knowledge and skills from grades 6-8 and algebra 1. Evidence includes rational number arithmetic fluency (combining algebraic fractions), interpreting features of a graph (understanding where a maximum or minimum value occur), and basic probability and statistics. Ratio and proportional relationships in section on geometric sequences. Example of unit conversions in trigonometry unit—students must convert radian and degree measure.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Content is specified in the table of contents and also the chapter planner in the TE for each chapter.	**_X___Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** TE includes options for differentiated instruction including activities to reach kinesthetic and visual learners, for example. The "beyond level" activities for the higher-performing students are a bit far-fetched. For example, one activity asks students to "write or find a musical score that might model the path of a parabola". Problem sets include extensive practice with problems of low to medium degree of difficulty. Problems are appropriate for level of course.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materia late course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Prior knowledge i plied. For example, Chapter 9 (conic sections) includes applying the distance formula to finding the equation of a circle. Each lesson includes a "then" and "now" heading relating prior knowledge to what will be addressed in the lesson. Systems of equations is extended to systems of three variables and matrices. Solving quadratic equations is extended from algebra 1 to include complex numbers.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** A side bar of each lesson includes what CCSS and Mathematical Practices will be addressed in each lesson. These are not specific to the lesson, however, and may be difficult for students to interpret. Some standards and practices do not necessarily apply to the lesson for which they are stated. For example, lesson 6-6 Rational Exponents lists Make Sense of Problems and Persevere in Solving Them, without identifying how/why this is the practice being used.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each lesson includes a "Multiple Representations" problem where students are using more than one approach. These may include graphing and writing an algebraic model for a problem. There are not enough of these in the course content, however. There is very little evidence. Complex numbers are connected to solving quadratic equations (A-REI) and Matrices are connected to systems of equations (A-REI)	**__X__Meets (with reservation)** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

_X___Meets

____Does Not Meet

Strengths/Weaknesses

Strengths: content specific standards, lots of problems
Weaknesses: too much of text focuses on prerequisite low level skills, not always a clear and accurate connection to standards

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1:
Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf)
- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is applied to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric** **____Meets (2)** **_X__Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Very little evidence of conceptual understanding. Majority of assignments contain procedural exercises.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Very few high-quality conceptual problems/discussion questions. One example from the H.O.T. (higher-order thinking problems) lesson 9-7: "When the vertex of a parabola lies on an ellipse, how many solutions can the quadratic system represented by the two graphs have? Explain your reasoning using graphs".	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** Very few opportunities to identify correspondences across mathematical representations—less than 10 in the problem sets throughout the text. Some lessons included this—for example, Chapter 5 (Polynomials and Polynomial Functions) did show the relationship between roots of a polynomial and x-intercepts on a graph.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Vast majority of student exercises focus on procedural skill with very little evidence tying the procedural to the conceptual.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** Exercises include efficient and general procedures.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The publisher has made an effort to include applications of problems in a variety of contexts and real-world applications—astronomy, construction, sports, physics, business, entertainment, etc. These are highlighted in the student exercises. There are not any non-routine problems other than those that have worked-out examples provided.	

Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Problems stress applying the Applicable Prerequisites. The exception to this would be in the chapter practice tests or chapter assessments, where there is very little evidence of application problems.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling problems are identified by the word "Modeling" and appear on occasion in the student Practice and Problem Solving exercises. Individual components are the modeling cycle are present, but not the complete model in all cases.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**____Meets** **__X__Does Not Meet** **Earned 4 out of 6 possible points.** **Strengths/Weaknesses:** **Strengths: lots of problems requiring procedural fluency** **Weaknesses: very little evidence of problems requiring students to engage in problem-solving in a meaningful way**
Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Concepts seem to be taught too frequently in isolation without enough evidence of enriching the Widely Applicable Prerequisites. Each lesson does include a "then" and "now" section in an effort to show connectedness.	____Meets (2) _X___Partially Meets (1) ____Does Not Meet (0)
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** ____Meets (2) __X__Partially Meets (1) ____Does Not Meet (0)
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Not thoroughly addressed. For example, a Check Your Understanding section might contain an exercise labeled "CCSS Precision" that does not require the students to attend to precision in a meaningful way. The exercises look no different than others without the word "precision" on the same page (see lesson 6-6 Check Your Understanding)	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** The margins of the TE include "Teaching of the Mathematical Practices" stated, but with no tie-in to the lessons themselves.	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Exercises in the Practice and Problem Solving sections of the text are occasionally labeled as "CCSS Reasoning" but may not require any more reasoning skills than prior problems.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Some exercises require students to critique the work of a fictitious student or students and explain what he/she did incorrectly. Other exercises may be labeled as "CCSS Arguments"—example, "For what values of a is $\sqrt{a}\cdot\sqrt{-a}$ a real number? Explain". Teacher materials include questioning that may inspire students to provide a mathematical argument.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** The language of mathematics is adhered to throughout the text.	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**____Meets** **__X__Does Not Meet** **Meets 3 out of 6 points** **Strengths/Weaknesses:** **Strengths: precise language of mathematics is used throughout the materials** **Weaknesses: Practice Standards are addressed in name only, without clear evidence of their applications**

Alignment Criterion 3: **Access[illegible]he Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure a[illegible]ents are able to meet the Standards. Thus, aligned materials m[illegible]ovide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as[illegible]s or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** In the TE, the lesson contains a resource section with ELL suggestions listed. These materials were found in separate resource material books. There is a multilingual eGlossary available online. Difficult to assess whether these materials help students meet the same Standards. The beginning of each chapter includes an ELL section under Differentiated Instruction. These suggestions can be toward any ELL student.	**__X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** In the TE, the lesson contains Approaching Level, On Level, and Beyond Level differentiated resource suggestions. Difficult to determine whether these suggestions will lead learners to engage with on-level content.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Every chapter begins with study organizers, scaffolded questions, RtI planners, and includes checking for understanding opportunities.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations.	__X__Meets 6 out of 6 point met ____Does Not Meet
AC 3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**Strengths/Weaknesses:** **Strengths: publisher has made a strong effort to address ELL students by providing separate materials in Spanish—including an assessment book** **Weaknesses: emphasis in ELL is primarily for Spanish-speaking students**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** TE provides a very organized Chapter Planner. Lessons are structured with a somewhat overwhelming amount of content. Not a strong enough emphasis on active participation by the students.	**(Reviewer only.)** __X____ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Problem sets all look the same. Not a clear distinction between solving problems and working exercises. Most assignments contain roughly 80 exercises, so it is difficult to sense that they are problems with a specific purpose. Majority of problems address new mathematics, with applying what they already learned in the assignment section labeled "Spiral Review".	**(Reviewer only.)** _____ **Yes** __X____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Exercises are clearly given in intentional sequences, with more difficult problems near the end of the assignment.	**(Reviewer only.)** ___X___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Materials include Study Notebooks, Practice Workbooks, Assessment books, and Chapter Resources. Resources lack discussion of the mathematics of the units and the mathematical point of each lesson.	**(Reviewer only.)** __X____ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Algebra tiles are mentioned in some of the lessons. Text contains numerous graphing calculator activities. Chapters begin with having students construct a Dinah Zike Foldable study organizer.	**(Reviewer only.)** ___X___ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Every chapter includes a Get Ready for the Chapter diagnostic quiz, a mid-chapter review, every assignment includes a spiral review and skills review, every chapter also includes a study guide and lesson-by-lesson review, a practice test, a preparing for standardized test section, and a standardized test practice section. TE includes formative assessment suggestions.	**(Reviewer only.)** __X____ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Resource masters include generic form rubrics for grading extended response questions. Answer keys are provided with assessments.	**(Reviewer only.)** ___X__ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Materials include a separate practice workbook for ELL. Assessments appear to be free of bias and include course-level language.	**(Reviewer only.)** ___X___ Yes _____ No

9. Materials are carefully evaluated by qualified individual[illegible]hose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** TE identifies review[illegible]nd their areas of expertise. Evaluators should have reviewed some of the people who were highlighted in some of the problems—Lance Armstrong is listed along with Mark McGwire. Both of these athletes have admitted using performance enhancing drugs. They probably shouldn't be included in the text.	**(Reviewer only.)** __X____ **Yes** _____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Page layout and design is often overwhelming. Lots of words, graphics, and problems on each page. The TE is organized very well, with clear focus on navigating each chapter and the text.	**(Reviewer only.)** ____X__ **Yes** _____ **No**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.
Non- Negotiable 1: Focus and Coherence ___X__ **Meets** _____ **Does Not Meet**

Non-Negotiable Overall:

__X___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __4___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)**	**Points: __3___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points: _6__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
_____ Meets	**_____ Meets**	**___X____ Meets**
__X_____ Does Not Meet	**___X____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

_____ Meets __X___ Does Not Meet 13 out of 18 possible points earned

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes ___X__ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths: Teacher's Edition is very well-organized with chapters outlines and lesson outlines included. Numerous opportunities for students to practice procedural fluency. Materials include a separate chapter resource book with additional problems, although these aren't very visually appealing.

Weaknesses: student exercises clearly focus on procedural fluency with not much effort to include conceptual understanding. Student exercise sets are very long and many teachers may skip the problems that would best emphasize the shifts and major features of the Core Standards.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw-Hill
Title:	Glencoe High School Math - Geometry
ISBN #	978-0-07-663930-4
Grade Level(s) or Course:	9-12
Reviewer ID:	*RW and DG*

RECOMMENDED AS:

____X____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
The textbook is completely aligned with the CCSS and consistently incorporates all 8 MPs.

COHERENCE-
The sections do a really good job of scaffolding problems from skill building to application problem solving. The chapters are ordered in a way in which all concepts build on each other.

RIGOR-
Problems definitely meet the standards rigorous expectations. The practice and apply problems are well written with a conceptual understanding basis and includes high order thinking skills.

CONCEPTUAL UNDERSTANDING-
The textbook suggests problems to assign students based on their understanding. At the beginning of each chapter, there is an RTI component to ensure conceptual understanding.

MATHEMATICAL PRACTICES-
The materials do a great job of connecting content standards and practice standards.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
The material does a great job in reaching all types of learners. Including ELL students, special population students as well as advanced students.

OTHER:
This program provides great opportunity for scaffolding learning for all populations. The program is traditional and does not include task based learning and has minimal cooperative learning opportunities (in labs only).

2015-1 nterim Mathematics Review

Mathematics Evaluation Tool – High School

Publisher: McGraw-Hill

Title of Material: Glencoe High School Math-Geometry

Author: Carter, Cuevas, Day, Molloy, Cummins

ISBN #: TE 978-0-07-663930-4 **Copyright** 2014

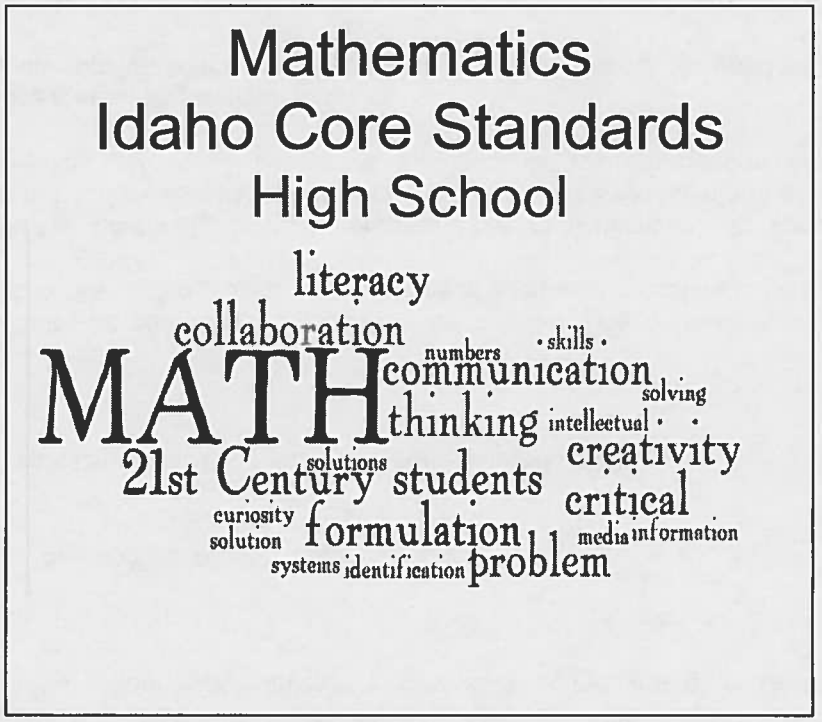
Reviewer ID: DG RW

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www. corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** In the Geometry portion of the program, students spend less than 50% of their time on Widely Applicable Prerequisites. However, when the program is viewed as a whole, the students spend well over 50% of the time on WAP.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** This is the Geometry course of the traditional pathway. Therefore, the entire course covers the geometry standards. In order to effectively complete the material, students must use algebra skills on a daily basis. There is a lot of real-life problems that include the use of algebra.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Students are using their knowledge and skills from grades 6-8 and are building on those skills when completing this program. Throughout the textbook, the students are constantly reviewing their math skills from grades 6-8 as well as skills being learned in previous lessons. The problems are at a level of sophistication to high school students. For example, in chapters 3, 4, 5, 6, 7, 10 and 13, students must rely on skills learned in grades 6-8.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** All of the standards are addressed in this program. In the margin of the teachers edition, it outlines which standard is being covered when. Standards are being addressed and readdressed throughout the textbook. This can be found at the beginning of each lesson, for example page 364.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Pg. 237 At the beginning of each lesson, in the teachers edition of the textbook, there is a resources section that guides teachers on differentiating and scaffolding of the lesson. Pg. 240 In each lesson, the teachers edition also gives suggestion for different homework problems based on students level of understanding.	**___X_Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence- pg. 393** In the Teacher edition and student edition, at the top of each lesson, there is a "Then, Now, Why" section that shows the focus of the lesson. There is also a "Focus" section that shows the vertical alignment.	**_X___Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The objectives for each lesson are clearly stated in the textbook at the beginning of each lesson. The CCSS and the MP's are also listed.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Pg. 255 At the beginning of each lesson, the domains are listed and in the majority of the lessons, two or more clusters in a domain are included. These connections naturally flow together and are important in scaffolding learning.	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	__X__Meets ____Does Not Meet
Metric NN 1: If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**Strengths/Weaknesses** The text is completely aligned to the CCSS and the WAP are present throughout.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** The problems are based specifically on the Standards.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** In each section, there are "H.O.T" problems that require higher order thinking.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence-** In each lesson, there is a "multiple representation" problem that require students to have an understanding of different ways to represent the same problem.	

AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5 For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** In each lesson, the new vocabulary is identified and defined. Anytime there is a vocabulary word that shows up again. it is referenced and highlighted in the margin. The glossary is in English and Spanish and includes diagrams.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving x2 + 5 = 49 + 5 or (3x – 2)2 = 6x – 4. Generic cases that require efficient and general procedures might include such problems as solving c + 8 – c2 = 3(c – 1)2 – 5).	**Evidence-** In each chapter, there is 1-2 lab sections that lead from basic understanding to more complex thought processes that are not just procedural type questions. "Design" and "Reasoning" questions require higher level thinking.	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Throughout the text, there are single- and multi-step contextual problems, including real life problems.	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The WAP are listed and used in almost every lesson throughout the book.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Each lesson starts with an application problem, then moves to example problems, then to actual exercise problems.	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** The materials provide extra help for struggling students as well as problems to push the advanced students.	

Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Each chapter starts with a vertical alignment. The lessons build upon themselves to mirror the vertical alignment. The practice standards are listed in every unit and the WAP are required to complete the problems throughout the textbook.	**___X_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence- pg. 478** The MPs are listed throughout the book in each lesson and are accurate.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** In each lesson, there is a "Teach" section that directs the teachers to make sure the standards and practices are being covered. It gives helpful hints as to common mistakes that can be made. Pg. 486: CCSS questions are available to reinforce teaching of the mathematical practices. The teachers edition of the textbook describes how the question relates to the CCSS.	
AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** In some of the labs, students are working in pairs or groups and are required to work together to form a solution. This gives students opportunity to construct arguments and critique each others reasoning.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** Proofs and constructions are present throughout the lessons.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence- Pg. 416** There is a vocabulary list in each section. There is a review vocabulary box in many sections. There is a key vocabulary list at the end of each chapter. As well as a vocabulary check at the end of each chapter.	

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Vocabulary is throughout the text. Practice standards are listed in each lesson.**
Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** The online glossary has 13 languages. The text glossary has 2 languages (English and Spanish). There is a differentiated instruction for ELL students before every chapter. (pg. 458f) (pg. 406) Prior to each chapter, the vocab list gives the English words in Spanish and the page those words appear on.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** At the beginning of each chapter, in the teachers edition of the text, there is an RTI section (pg. 459). There is a differentiated instruction section for each chapter (pg. 460). In each lesson there is a "scaffolding questions" section in the teacher's edition of the text.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** There is a resources section at the bottom of each unit of the teacher's edition of the text. There are ideas of study organizers. (pg. 460-461)	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Lots of support and differentiation.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewer only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** The students are guided by the "Then, Now, Why". The problem sets start with a "Check for Understanding" section that has all of the answers in the back of the book with step-by-step solutions.	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** When looking at the practice and problem solving section, the problems are organized and correlated to the examples in that section. The example problem is noted next to the problems so that the students know which example problem to look at when they need help.	**(Reviewer only.)** **__X____ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The problems start off easier and gradually get more difficult. They are sequenced well.	**(Reviewer only.)** **__X____ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** At the beginning of each chapter, there is a professional development section that teachers can access to get more support. In the margins of the teacher's edition of the textbook there are a lot of study tips to aid teachers.	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** 9-5 (pg. 670-671) Reflective mirrors. There are not very many manipulatives presented in the book, but when they are, they are faithful representations of what they look like and what they are used for.	**(Reviewer only.)** **__X____ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessm . Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** All are represented well in the textbook.	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** There were no specific scoring guidelines. However, the assessments and answer keys do align.	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** The tests model the text problems.	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** All names and information can be found on Pg. T4-T7	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The text is colorful and appeasing to the eye and is very well structured.	**(Reviewer only.)** **__X____ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: __Glencoe High School Math – Geometry 9-12__**

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

__X___ Meets

_____ Does Not Meet

Non-Negotiable Overall:

___X__ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.)	**Points: ___6__ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)	**Points: __6___ of 6 possible.** (Materials must receive at least 5 of 6 points to align.)
___X____ Meets	**___X____ Meets**	**___X____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

There is minimal opportunity for cooperative learning and is mostly only present in the "Labs". There is not any errors analysis type of problems.

No list of postulates/theorems.
The title page for the "Student Handbook" is in the back of the book. The front of the book would be a better place.

The book has lots of resources for all types of learners.

In the teacher's edition, the answers for the additional problems are at the end of each unit instead of at the end of the book.

The book is straight traditional learning with lots of support. There is not a lot of opportunity for cooperative learning. No task based learning either.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	McGraw Hill
Title:	Precalculus
ISBN #	978007664203-8
Grade Level(s) or Course:	9-12
Reviewer ID:	SH, PVP

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The course addresses all of the WAP standards for a fourth course and it extends to cover all the + standards.

COHERENCE- The text makes many connections to previous Algebra and Geometry courses. It is well organized and followed a logical sequence.

RIGOR- The text does a good job of teaching procedural skills and application, but it is not as strong on conceptual understanding.

CONCEPTUAL UNDERSTANDING- Conceptual understanding is addressed some of the multi-step and the H.O.T. problems. Some lessons have "explore" and "extend" mini-lessons that help develop conceptual understanding, but it is not integrated within each lesson.

MATHEMATICAL PRACTICES- The publisher does not specifically indicate where the practice standards are used in the text. There is evidence that they are addressed, but not at the level or rigor that the standards suggest.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- There are resources, assignments suggestions, and teaching strategies included for all different types and levels of students.

OTHER:
The textbooks do not seem like they would hold up well to several years of use by students. The binding was cracking after just a few weeks of use.

More problems (where students learn new math) needs to be integrated in the assignments.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_ HS_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process
2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.
3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www. achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some crit[illegible]cannot be rated without having access to each grade. In ad[illegible]n, each evaluator should have a reference copy of the Comm[illegible]Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Focus and Coherence

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.	Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards. **Required Materials:** • Common Core State Standards for Mathematics (www.corestandards.org/wpcontent/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN1A: **In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The Widely Applicable Prerequisites outlined for 4th courses were met. This text does not spend 50% of its time on Widely Applicable Prerequisites as well it should not it is extending beyond them in order to prepare students for a college Calculus I course.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1B: **Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students' college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.	**Evidence-** This course includes Trigonometry (Ch 4 and 5), Conic Sections (Ch 7), Vectors (Ch 8), Polar Coordinates (Ch 9) which have a heavy emphasis on geometry problems integrated with algebra skills. There are also sections within other chapters that address this as well for example 10.3 Geometric Sequences and Series and 12.5 Area Under a Curve and Integration	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1C: **There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.** **How to Find the Evidence:** Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Problems should include application of the following topics from grades 6-8: • Ratios and proportional relationships. • Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/ m3, acre-feet, etc.). • Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem. • Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic. • Concepts and skills of basic statistics and probability (see grades 6–8.SP) • Performing rational number arithmetic fluently. For context, read Table 1 on Page 8 of the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The problems in this text are an extension of topics that were built in previous courses. Many of these topics are incorporated throughout the text and it is expected that students will be fluent in these topics as they apply them to more advanced situations.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1D: **Materials base courses on the content specified in the Standards.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. For context, read Criterion #3a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** The plus (+) standards are linked to sections in the text on pgs. T11-T15. At the beginning of each chapter there is a chart that connects standards to individual lessons. Some topics are included in this text that are not part of the standards, but that would be expected of a Pre-Calculus text.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1E: **Materials give all students extensive work with course-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth. For context, read Criterion #3b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** There are differentiated homework options in each lesson (for example pg. 115). The problems sets are organized from skills builidng to application problems. The problems on the H.O.T section would provide a challenge to higher students. However, by the time students reach Pre-Calculus they should not need a lot of differentiation. The pro	**__X__Meets** **____Does Not Meet Insufficient Evidence**

Metric NN1F: **Materials [illegible]e course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.** **How to Find the Evidence:** Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem. For context, read Criterion #3c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** This course is su[illegible]rted by previous courses and appropriately extends that learning to prepare students for Pre-Calculus. For example, trig concepts are extended to include circular angles. Function transformations are presented for isolated functions in Algebra 2 and are presented for all functions in Pre-Calculus.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1G: **Materials include learning objectives that are visibly shaped by CCSSM cluster and domain headings.** **How to Find the Evidence:** Select several clusters from the course being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** Learning objectives are connected to the CCSSM at the beginning of the book and at the beginning of each chapter in the chapter planner.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Metric NN1H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a category, or two or more categories, in cases where these connections are natural and important.** **How to Find the Evidence:** In the course being evaluated, choose two or more clusters, two or more domains, or two or more categories for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might be to look at whether materials include problems in which students analyze a situation by building a function, graphing it, and using it to create and solve an equation. For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** There are many examples of problems and activities that connect two or more clusters. For example, Chapter 2 ties algebra concepts of factoring to graphing functions. Also, Chapter 6 connects solving systems of equations with writing constraints and with matrices.	**__X__Meets** **____Does Not Meet Insufficient Evidence**
Non-Negotiable 1: Focus and Coherence- Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.		**__X__Meets**

Metric NN 1. If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**	**____Does Not Meet** **Strengths/Weaknesses** Strengths: This text covers the WAP standards that are not covered in Algebra 2 and it extends to the + standards. Weaknesses: Standards covered in each section are not easily visible.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: **Rigor and Balance- Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A.REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7 For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	• Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence" below.)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.	**Evidence-** Conceptual understanding is developed as exercises progress from simple to more conceptual in the H.O.T. problems. For example - Average rate of change in Lesson 1-4	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of conceptual problems might include such questions as "What is the maximum value of the function f(t) = 5 – t2 ?" or "Is √2 a polynomial? How about ½(x + √2)+ ½ (-x + √2)?"	**Evidence-** Each lesson includes a H.O.T. (Higher Order Thinking) problem section that includes various types of conceptual problems. For example - HOT problems on pg. 42.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).	**Evidence -** Some lessons include Multiple Representation problems that require students to represent a problem in multiple ways (for example - pg 146 requires students to complete a table, graph functions, and algebraically solve inequalities)	
AC Metric 1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: A-SSE.A.1b, A-SSE.2, A-APR.A.1, A-APR.C.6, F-BF.B.3, G-GPE.B.4, G-GPE.B.5, G-GPE.B.7, G-CO.A.1, G-SRT.B.5		**Use the questions for AC Metric 1B to evaluate Metric 1B. Record evidence for each question and rate Metric 1B.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

For context, read Criterion #2b in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		
Is progress toward fluency and procedural skill interwoven with the student's developing conceptual understanding of the skills in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** The problems in each section move from building skills problems to more conceptual problems.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient and general procedures present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Problems in which opportunistic strategies are valuable might include such examples as solving $x2 + 5 = 49 + 5$ or $(3x - 2)2 = 6x - 4$. Generic cases that require efficient and general procedures might include such problems as solving $c + 8 - c2 = 3(c - 1)2 - 5$).	**Evidence-** Problems are present in the text that allow for opportunistic strategies and that require general strategies. For example, pg. 145 #48-54 require opportunistic strategies and problems #58-61 and 65-68 require general strategies	
AC Metric 1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Widely Applicable Prerequisites.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: N-Q.A, A-SSE.B.3, A-REI.D.11, F-IF.B, F-IF.C.7, F-BF.A.1, G-SRT.C.8, S-ID.A.2, S-IC.A.1 For context, read Criterion #2c in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are several single step and multi-step contextual problems in each section. There is some evidence of problems that develop the math of the course (for example pg. 229 #82).	
Do application problems particularly stress applying the Widely Applicable Prerequisites? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Most WAP standards are covered in earlier courses. This course uses those standards to extend to more involved problems.	
Are there ample opportunities for students to engage with modeling problems? Do materials require students to use both individual parts of the modeling cycle as well as the full modeling cycle? Read the pages on High School—Modeling in the Standards for Mathematics (pp. 72 and 73). Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are problems in each section that require students to use parts of the modeling cycle, but we didn't find any problems that included the full modeling cycle. For example, pg. 105 #68 requires students to formulate an equation and compute a	

	quantity from that equation but it doesn't require the remaining s[illegible])	
Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations. **AC 1:** Materials must earn at least 5 of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: The problem sets integrate modeling problems within the procedural problems instead of grouping all these problems together. Weaknesses: There are not a lot of problems that help students develop the mathematics or that demonstrate the full modeling process.
Alignment Criterion 2: **Standards for Mathematical Practice- Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards. **Required Materials**: • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

AC Metric 2A: **Materials address the practice Standards in such a way as to enrich the Widely Applicable Prerequisites; practices strengthen the focus of the course instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the course. NOTE: An example of evaluating this Criterion might include looking at whether materials use regularity in repeated reasoning to illuminate formal algebra as well as functions, particularly recursive definitions of functions. For context, read Criterion #6 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).	**Evidence-** In Precalculus most of the WAP standards have already been covered in other classes. This course enriches student understanding of those standards covered in previous courses. There are some problems in each lesson that address the practice standards and help strengthen students understanding of the math. For example pg. 230 #82 requires students to use a graphing calculator (SMP #5) and pg. 209 #30 addresses constructing viable arguments and critiquing others' reasoning (SMP #3)	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **____Meets (2)** **__X__Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** The practice standards are used to solve some of the problems in each lesson, but they don't stimulate students to develop the habits of mind described in the practice standards. For example, pg. 128 #73 asks students to decide which of two possible solutions in correct. This relates to SMP #3 but doesn't require students to critique the reasoning of others, only to choose between two possible correct answers.	
Are teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development included? Are alignments to practice Standards accurate? Evaluate teacher materials, paying attention to explanations of the role of the practice Standards in the classroom and in students' mathematical development. Evaluate documents aligning lessons to practice Standards for accuracy. NOTE: Examples to look for when evaluating this metric might include the following: a highly scaffolded problem should not be aligned to MP.1; or a problem that directs a student to use a calculator should not be aligned to MP.5; or a problem about merely extending a pattern should not be aligned to MP.8.	**Evidence-** There is no reference to the Standards for Mathematical Practices in this text.	

AC Metric 2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).		**Use the questions for AC Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning course-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Each problem set features a section called H.O.T. problems. Many of these problems require students to construct viable arguments. However, they are not required to critique the reasoning of others. For example pg. 229 #83 and 84 ask for constructing viable arguments.	
Do the materials support students in producing not only answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Widely Applicable Prerequisites? Familiarize yourself with the Widely Applicable Prerequisites. Evaluate teacher and student materials to understand the types of work students are expected to produce.	**Evidence-** The H.O.T. section includes problems that ask for arguments and explanations. Some problems also ask for diagrams and mathematical models. See above examples or pg. 265 #39.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: An example of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counter example; or recognizing that examples alone do not establish a general statement.	**Evidence-** Course specific and appropriate language is used and defined in each section, for example section 4-4. Vocabulary is highlighted and defined with examples.	
Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards. **AC 2:** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: The H.O.T. problems in each section provide opportunities for students to use the practice standards, as do some of the multi-step problems. Weaknesses: The full rigor of the practice standards are not supported by this text. Teacher materials do not provide

		alignment to the practice standards.
Alignment Criterion 3: **Access to the Standards for All Students- Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations. **Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math Publishers_Criteria_HS_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
AC Metric 3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** There are suggestions at the start of each chapter for ELL and there are some suggestions throughout the chapters. There is an online glossary in 13 different languages and most sections are available by audio. Some spanish resources are included with the teacher resources.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
AC Metric 3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Suggestions for differentiated instruction are included in each section. At this level, there is not as much need for scaffolding, differentiation and intervention	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

AC Metric 3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** There are problems that require multiple approaches. There are teaching suggestions in each lesson for different approaches to the lessons that would reach a variety of learners.	**__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: Materials must provide supports for English Language Learners and other special populations. **AC 3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewers only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** Strengths: Each chapter and lesson includes suggestions for different types of learners and well as resources that will help ELL and other special populations.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons start out with then, now and why statements, then step-by-step examples of how to do problems. Lessons are thorough and detailed. The sequence is logical.	**(Reviewer only.)** **___X___ Yes** **_____ No**

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	**Evidence-** While there are a[illegible]ation problems mixed in with procedural problems, these problems do not teach new math, they just apply math already learned.	**(Reviewer only.)** **___X___ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Problems are sequences from easy to harder and from procedural to application to conceptual	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Each chapter has a chapter planner, focus on mathematical content and suggestions for assessment, intervention, and differentiated instruction.	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Graphing calculators are used throughout the text. Other manipulatives aren't applicable to this course.	**(Reviewer only.)** **___X___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** There are chapter tests, quizzes, pre-requisite skills quizzes, mid-chapter assessments and practice tests. These are included in the textbook as well as online.	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Answers to all exercises and assessments are included in the teacher edition. The esolutions includes full solutions for each problem.	**(Reviewer only.)** **___X___ Yes** **_____ No**

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Language on test questions is similar to that in the text. Online tests are available in spanish. Language is appropriate for this level.	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** pg. T4-T5 list authors pg. T6 lists consultants pg. T7 lists reviewers	**(Reviewer only.)** **___X___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The chapters are clearly labeled, well-organized, and follow a predicatble format that allows students to navigate through each section.	**(Reviewer only.)** **__X____ Yes** **_____ No**

Reviewer IMET Evaluation Summary Title/Level: __Precalculus_____

Non-Negotiable Criteria-The Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non- Negotiable 1: Focus and Coherence

__X__ Meets

_____ Does Not Meet

Non-Negotiable Overall:

__X___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __5___ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)**	**Points: __5___ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**	**Points: ___6__ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)**
___X____ Meets	**___X____ Meets**	**___X____ Meets**
_____ Does Not Meet	**_____ Does Not Meet**	**_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets _____ Does Not Meet

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strengths:

- Lots of procedural and applied problems.
- The text is very well organized and easy to navigate.
- Teacher edition contains lots of helpful resources.
- Students using this text would be prepared for a calculus course.
- Online resources (eSolution guide and test materials) are helpful.

Weaknesses:

- Mathematical practice standards are not addressed in either the student or teacher editions.
- There are no problems that give students the opportunity to learn new mathematics through solving the problems.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Origo Education
Title:	Stepping Stones Grade K
ISBN #	9781921959790
Grade Level(s) or Course:	Kindergarten
Reviewer ID:	K.C., C.N.

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- No topics are assessed before being introduced. Stepping Stones K covers all CCSS identified as the major work of this grade. It stays within Kindergarten level progression and matches the scope and sequence.

COHERENCE-
There are no previous grade levels to reference for Kindergarten.

RIGOR-
This program incorporates conceptual understanding, procedural skill and fluency, and applications.

CONCEPTUAL UNDERSTANDING-
Major clusters for Kindergarten are centered around conceptual rather than procedural understanding. High quality conceptual problems and discussions are featured.

MATHEMATICAL PRACTICES-
One or more mathematical practice standards are used in every lesson. These are stated in many different ways online.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
There are ELL resources provided in each module. Each lesson also includes whole group, small group, practice and differentiation activities.

OTHER:
Number Case with manipulatives is needed for a variety of the activities.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: Origo Education

Title of Material: Stepping Stones Grade K

Author: J. Burnett, C. Irons, R. Irons

ISBN #: 9781921959790 **Copyright** 2012

Reviewer ID: K.C, C.N.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** No topics are assessed before introduced. All kindergarten CCSS are taught and evaluated through the 12 modules.	**(Reviewer only.)** X **Meets** ____ **Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** Stepping Stones K covers all CCSS identified as the major work of this grade. Counting & Cardinality - 40 lessons Operations & Algebraic Thinking 23 lessons Base 10 - 10 lessons	**(Reviewer only.)** X **Meets** ____ **Does Not Meet/ Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Measurement and Data and Geometry are supporting work. 10 lessons total. Examples: Module 1 Lessons 5 & 6 Module 2 Lesson 6 Module 9 Lessons 5 & 6	(Reviewer only.) X Meets ___ Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Stepping Stones stays within Kindergarten level progression & matches the scope & sequence. The layout of this curculum is set up for early learners to have the new concepts introduced, practiced & reinforced several times throughout the program.	(Reviewer only.) X Meets ___ Does Not Meet/ Insufficient Evidence

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There are a vast amount of opportunities for students to work with grade level problems. There is a differentiation link in each module that provides extra help, practice & challenge activities.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Stepping Stones K lessons are not based on prior knowledge. New concepts are introduced in a whole group setting & reinforced with additional practice.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There are no previous grade levels to reference for Kindergarten.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** For each module there is a mathematics link that takes you to the learning targets covered within those lessons.	(Reviewer only.) X Meets ___ Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Majority of the numbers connect two or more clusters in a domain or two or more K domains. example: Lesson 2.1 connects K.CC.3, K.CC.4, K.CC4a, K.CC.4b.	(Reviewer only.) X Meets ___ Does Not Meet/ Insufficient Evidence
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) X Meets ___ Does Not Meet **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

X **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set e[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Major clusters for K are centered around conceptual rather than procedural understanding.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Yes high quality conceptual problems & discussions are featured. In reflecting sections open ended questions are asked.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Opportunities to identify correspondences across mathematical representations is apparent. Ex: Module 9	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Standards require fluency through 5 for addition & subtraction. There are 9 lessons throughout 4 modules that teach this.	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** X **Meets (2)** ___ **Partially Meets (1)** ___ **Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Modules 1-8 introduced & practice counting. Module 6 introduces addition. Module 9 introduces subtraction. Modules 10-12 build fact fluency.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** There is no formal algorithm for Kindergarten. Algorithms are availible in the extension portion.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Refer to question 1.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In stepping stones there are 31 counting lessons and 18 operations lessons. There is no focus lost on major work of grade.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Examples of single & multi-step contextual problems are in lessons: 6.1, 9.1, 12.1 & 12.2	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Under online curriculum there is a range of topics across grade levels shown.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** In Kindergarten many of the concepts are introduced through pictures, role play, stories, models & manipulatives.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

One or more mathematical practice standards are used in every lesson. These are stated in many different ways / places online including module lesson contents chart and also within each individual lesson.

(Reviewer only.)

X **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Practices are given online in a variety of ways - Flow chart - Program overview doc.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Online each grade level is provided with mathematical practices flow chart.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Through videos, links & charts mathematical practices are explained.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** There are multiple opportunities for students to explain thinking & reason with others.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Students are pushed to justify answers using drawings, models, argue, & explain.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Specialized language of mathematics is introduced in each lesson.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]ish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** There are ELL resources provided in each module. Pictures, manipulatives & visual models are used throughout.	Reviewer only.) X Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Each lesson includes whole group, small group, practice & differentiation, so that needs of different learners can be met.	Reviewer only.) X Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** There is a wide variety of materials intended to address different learner needs such as games, visual models, big books, etc.	Reviewer only.) X Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** ____**Meets** ____**Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Easy to use & online access for teacher to follow. Formatting for grades & modules is the same	**(Reviewer only.)** X **Yes** ____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Problem solving with new concepts is done in whole group. Practice is done in small group as well.	**(Reviewer only.)** X **Yes** ____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The design of spaced learning is focused on major clusters.	(Reviewer only.) X Yes ____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Professional development is availible online for teachers through training videos, focusing documents. & research into practice for each module.	(Reviewer only.) X Yes ____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Number case with manipulatives is provided & used to support learners.	(Reviewer only.) X Yes ____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Each module has formative & summative assesments.	(Reviewer only.) X Yes ____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** For each module under assesments there are scoring tools provided.	(Reviewer only.) X Yes ____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Oral assesments are given in cases where students need task read to them.	(Reviewer only.) X Yes ____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Qualified individuals names are listed on the home page.	**(Reviewer only.)** X **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Good balance of text and graphics appropriate for K students.	**(Reviewer only.)** X **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** For each module there is a letter to home provided in Spanish & english.	**(Reviewer only.)** X **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** Stepping Stones K

Publisher: Origo **Copyright:** 2012 **ISBN:** 9781921959190

Reviewer ID # K.C & C.N. **Date Review Completed:** 3/7/16

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets ____ Does Not Meet	X Meets ____ Does Not Meet

Non-Negotiable Overall:

X **Meets** ____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets ____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets ____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets ____ Does Not Meet

Alignment Criteria Overall:

X **Meets** ____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** X **Yes** ____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

ORIGO Stepping Stones for Kindergarten was designed and can be used as a CORE mathematics program. It covers all of the CCSS for Kindergarten with the use of 12 modules and 6 lessons embedded in each module. The use of all 8 mathematical practices is apparent throughout the entirety of this program. The format and progression of each module and lesson is appropriate for early learners to begin building a foundation of these math concepts. Extra support given for both teachers and learners is very useful.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	ORIGO - Stepping Stones
Title:	Stepping Stones
ISBN #	987-1921959-79-0
Grade Level(s) or Course:	1st Grade
Reviewer ID:	RO SC

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-

The majority of the text focuses on the major work of the curriculum.

COHERENCE-

Topics are vertically alligned between kindergarten, 1st grade, and 2nd grade.

RIGOR-

Conceptual understanding, procedural skill and fluency, along with applications are evident in this curriculum

CONCEPTUAL UNDERSTANDING-

Each module has problem solving activities to help build conceptual understanding

MATHEMATICAL PRACTICES-

They are evident through all the lessons.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

The curriculum offers a mix of instructional approaches for a variety of learners.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www corestandards org/wp-content/uploads/Math_Standards pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials ref[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **Curriculum does no[illegible]sess the listed topics on the left before grade level.** **HOWEVER:** **There are several items that are assessed that are outside the first grade standards. Some examples are...** **1) Ordinal numbers are assessed. They are not a part of first grade standards.** **2) Money, including, pennies, nickels, dimes, quarters, and dollars are assessed. This is a second grade standard.** **3) Subtract a 2 digit – 1 digit (39-3). This goes beyond first grade standards. The standard says you can Add 2 digit plus a 1 digit (39+3), but not subtract.** **4) Subtract 2 digit- decade (49-20). The standard says you can Add 2 digit + decade (49+20), but not subtract.** **5) Growing and shrinking patterns. This is a 4th grade skill.** **6) Numbers to 130. The standard is numbers to120.**	**(Reviewer only.)** **__x_Meets** **___Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x_Meets** **___Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **The materials devote a lot of the time to the Major Work of first grade, but also includes several standards that are not first grade standards. The curriculum has the majority of the lessons related to the major works of first grade. The rest of the lessons focus on supporting and additional standards.**	**(Reviewer only.)** **__x_Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Supporting work includes, time, geometry, and data. The curriculum teaches and assesses the supporting work. Most of them are found in modules 10-12.**	(Reviewer only.) __x_Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Modules 1, 2, 3, 5, 6, 11, and 12 include concepts from second grade, third grade, and fourth grade which are taught and assessed.** **The content sequence tab shows when standards are taught in each grade level. It also shows how each lesson correlates to the standards.**	(Reviewer only.) __x_Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Materials have seve[illegible]ifferent opportunities to receive extensive work with grade level problems in the lessons, investigations, and problem solving activities.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The focus tab under each module tells what kindergarten students were taught.**	(Reviewer only.) **_x__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each module has a mathematical focus. The ongoing practice activities for each lesson can be hovered over which shows the standards or fluency being practiced.**	(Reviewer only.) **__x__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Materials include objective that are visibly shaped by the CCSSM cluster headings. The curriculum also includes a support for student's learning, DA Development Activity.**	**(Reviewer only.)** __x_Meets ____Does Not Meet/ **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **When you are in a lesson, if you click on the eye icon, it will show you which standards are being taught or observed. There are several lessons that include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade.**	**(Reviewer only.)** _x__Meets ____Does Not Meet/ **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** _x__Meets ____Does Not Meet **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set ex expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** **There is plenty of opp nities for students to comprehend mathematical concepts, operations, and mathematical relations for example when you go to the content sequence and hover over the addition of whole numbers there are 31 lessons related to that particular concept. By repeating this process you can see how many lessons are taught for each major work of the grade.**	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** **Each module has problem solving activities to help build conceptual understanding. Online teacher manuals are written in a step by step fashion including preparing the lesson, starting the lesson, teaching the lesson, and reflecting the work. There are several discussion questions with each step to ensure student learning is being monitored.**	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** **The representations are used throughout the lesson and assessments so students are familiar with what they look like and what they mean.** **Module 4 Lessons 1-3 are very focused on making sure students understand what the symbol of subtraction means and how to represent it. Further lessons go on to practice using subtraction in writing and representing.**	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develop[illegible]onceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** **The lessons spiral an[illegible]ovide lots of practice.**	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** **A variety of problems can be found throughout the curriculum. Strategies with tools can be found throughout the curriculum as well as practice exercises.**	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** **The lessons spiral and provide lots of practice. Multiple strategies are provided for students to work with addition and subtraction fluency. Ongoing practice often contains fluency practice.**	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **The Curriculum works sufficiently with the major work of the grade. All lessons have instruction, practice, and differentiation. They also include ELL support.**	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **There are single and multi-step problems throughout the curriculum. Each lesson has questions has to deepen students thinking and the opportunity to share how they solved a problem using number talks.**	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** **Curriculum work with application of the standards. Application problems in this program are focused on the major works of the grade.**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** **Modeling builds through the curriculum. In module 1, students are using tools to work with numbers. In module 2, students begin to write equations and use tools to with work with numbers. The program also offers other channels such as Flare and Fundamentals to model quantities and representations for any given standard.**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

(Reviewer only.)

_x__Meets

____Does Not Meet

Strengths/Weaknesses:

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Mathematical practices are evident throughout the curriculum. They are listed at the beginning of each module and found within the lessons.

(Reviewer only.)

_x__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials att to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each questi nd rate Metric 2B.** **(Reviewer only.)** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **Mathematical Practices are explicitly mentioned and examples of what to look for within the lesson are given.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** **Mathematical Practices are evident in each lesson.**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** **There are specific places in the materials that explain the role of the Mathematical Practices and how they are put in action within the lessons.**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **____Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** **Students are given opportunities to reason with grade-level mathematics within the lessons, investigations, and problem solving tasks.**	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** **Students have opportunities to produce explanations, diagrams, and mathematical models within the lessons, investigations, and problem solving tasks. They are also encouraged to use number talks to explain their solutions.**	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** **In each module under the mathematics tab there is a language development tab that tells teachers what language/vocabulary will be used and developed.**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_x__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]ish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** **Many lessons have a[illegible]L icon to hover over, that give ELL suggestions.**	**Reviewer only.)** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** **There are options for differentiation, which include extra help, extra practice, and extra challenge. Not every lesson includes all three, but each lesson, does include at least two of the helps.**	**Reviewer only.)** **__x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** **The curriculum offers a mix of instructional approaches for a variety of learners. The Fundamentals Channel offers a variety of representations including models and allows students to share strategies in solving problems.**	**Reviewer only.)** **_x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students Materials must provide supports for English Language Learners and other special populations. AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.(Reviewer only.) Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .	(Reviewer only.) _x__Meets ____Does Not Meet Strengths/Weaknesses:

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Evidence- New learning is introduced through problem solving situations as a whole class. This learning is reinforced, practiced, and extended in small group activities, journal pages, differentiation, and practice tasks.	(Reviewer only.) __x___ Yes _____ No
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	Evidence- Lessons are practiced, and extended in small group activities, journal pages, differentiation, and practice tasks.	(Reviewer only.) __x___ Yes _____ No

3. Design of assignments is not haphazard: exercises are [illegible]en in intentional sequences in order to strengthen students' mathematical understanding.	Evidence- Lessons format is co[illegible]ent through each module. Ongoing practice pages spiral for constant review of materials taught.	(Reviewer only.) __x___ Yes _____ No
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Evidence- The mathematics down menus that give extra support to the teacher including such things as focus, mathematical practices, correlations, and research in practice. There are also training videos and support on how to use the online program, ORIGO Slate.	(Reviewer only.) __x___ Yes _____ No
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Evidence- Dominoes are used to teach doubles, doubles plus one, and doubles plus two. Some other manipulatives used are connecting cubes, 100 charts, ten frames, number lines, and counters.	(Reviewer only.) __x___ Yes _____ No
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Evidence- Assessments include formative and summative assessments. Formative assessments include pre-test, observations and discussions, journals and portfolios. Summative assessments include, check-ups, performance tasks, and interviews.	(Reviewer only.) __x___ Yes _____ No
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	Evidence- Under the resources tab, you can find answer keys, scoring rubrics, and teacher check off skills list.	(Reviewer only.) __x___ Yes _____ No
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	Evidence- Materials are kid friendly. The journal pages are simple, yet colorful. Instructions are easy to understand and written in kid friendly language.	(Reviewer only.) __x___ Yes _____ No

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** **The names of authors, consultants, publishing teams, and advisors are listed on the home page of the website. It also lists the names of consulting teachers and the school districts in which they teach.**	**(Reviewer only.)** **__x___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** **The representations are used throughout the lesson and assessments so students are familiar with what they look like and what they mean.**	**(Reviewer only.)** **__x___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** **There are letters home for each module in English and Spanish. They can be downloaded and printed or e-mailed to parents.**	**(Reviewer only.)** **__x___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level:** _____

Publisher: _____ **Copyright:** _____ **ISBN:**_____

Reviewer ID # _____ **Date Review Completed:**_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
___x___ Meets _____ Does Not Meet	__x__ Meets _____ Does Not Meet

Non-Negotiable Overall:

__x___ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x___ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x___ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __x____ Meets _____ Does Not Meet

Alignment Criteria Overall:

__x__ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Origo
Title:	Stepping Stones Grade 2

Grade Level(s) or Course:	2
Reviewer ID:	*CJS and TB*

RECOMMENDED AS:

___X_____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Does not assess standards before grade level where they first appear in the standards.

The majority of the lessons are focused the major works of grade 2.

COHERENCE- The majority of the lessons are focused on the major works of grade 2. There are a few lessons outside the 2nd grade curriculum, but they are clearly marked as 1st or 3rd grade standards.

RIGOR-

2NBT.A /2.NBT.B: (44% of the lessons address this)

- Use of manipulatives and pictures
- Use of models that show students standard and word form of numbers
- Use of number tracks and number lines
- Numeral expanders
- Use of ten frames
- Use of hundreds chart
- Use of base ten blocks
- Use of place value chart
- Use of dot cards and dominoes for addition and subtraction
- Big books and games

Each lesson provides sample discussion questions as well as a "reflecting on the work" section designed to wrap up the lesson and check for conceptual understanding.

After significant work in conceptual development lessons contain procedural problems for students to apply this knowledge.

Each lesson contains an on-going practice activity that revisits content from previous modules and lessons to develop fluency with grade level content. Each module in lessons 1, 5, and 9 (total of 36 lessons) has an on-going practice specifically designed for the development of fact fluency.

CONCEPTUAL UNDERSTANDING-

Each lesson provides sample discussion questions as well as a "reflecting on the work" section designed to wrap up the lesson and check for conceptual understanding.

Each lesson has on-going practice activities and each module has problem solving and investigation activities that focus on more open ended problem types.

MATHEMATICAL PRACTICES-
Each module has a document in the Mathematics tab that lists the Mathematical Practices addressed for each lesson. There is a master document that shows the coverage of the Standards for Mathematical Practice in all modules available. If you hover over the title of any lesson it will show the standards addressed.

The practices are also highlighted in the teacher's materials for each lesson along with the objective.

In the Mathematics Tab, each practice is highlighted and there are professional development videos that discuss both Unwrapping the Mathematical Practice Standards and Exploring Habits of Mind.

Each lesson has a Reflecting on the Work section in which students discuss their solutions and approaches. The program approaches the mathematics through dialogue, models, explanations, etc.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

In the Mathematics Tab, there is and English Language Learners portion that provides and overview of key strategies in addressing the needs of EL students. In certain lessons, teachers can hover over an EL icon which provides guidance in helping a teacher deliver instruction more easily accessible to EL students.

Each lesson has a minimum of 2 differentiation activities (extra help, extra practice, extra challenge). The drop down arrow on the top right of any lesson also displays the range of lessons within that topic K-5.

In most lessons, there is a balance of whole group, small group, and individual activities including the use of big books, games, manipulatives, models, and direct instruction. Sample questions are provided for the teacher to use throughout the lesson to check for understanding.

OTHER:

Professional development is a must for Stepping Stones! The publisher says that professional development/training is required. With an adoption teachers receive a 3 hour implementation session. Publisher recommends a follow up 3 hour session.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a

reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core St Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** **No assessments or lessons address any of the listed topics.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **The focus of instruction is on 2nd grade standards.** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** **There are only 144 total lessons. 86% of the lessons are directly tied to the 2nd grade standards.** **63% of the lessons are focused on the major clusters (2.OA.A, 2.OA.B, 2.NBT.A, 2.NBT.B, 2.MD.A, 2.MD.B).** **46 of the lessons focus on *Use place value understanding and properties of operations to add and subtract (2.NBT.B).* A highlight of the major work in grades K-2.** **14% of the lessons go beyond the standards (3rd and 4th grade standards). 4.5% of those focus on 3.OA.B (a major work of 3rd grade). *Understand properties of multiplication and the relationship between multiplication and division* – a direct extension of 2.OA.C and occurs in Module 11 of 12 (6 of the last 18 lessons in the program)**	**(Reviewer only.)** **___X_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **15% of the grade level work supports the major work of 2nd grade by focusing on 2.OA.C, 2.MD.C, 2.MD.D and 2.G.A.** **In several of these lessons, the work in the supporting clusters is in support of/conjunction with the major cluster work.**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2C: **Materials ba[illegible]ontent progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** 14% of the lessons go beyond the standards (3rd and 4th grade standards). 4.5% of those focus on 3.OA.B (a major work of 3rd grade). *Understand properties of multiplication and the relationship between multiplication and division* – a direct extension of 2.OA.C and occurs in Module 11 of 12 (6 of the last 18 lessons in the program) Stepping Stones has a content chart available in which the teacher can see the progression of lessons within a topic from grade K-5.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The materials include a student journal, which is a 2 page practice directly related to the lesson. Each lesson has a minimum of 2 differentiation activities (extra help, extra practice, extra challenge). Each lesson has ongoing practice in which students revisit content to gain fluency with grade level concepts. Each module contains 2 additional options for work with on grade level concepts. There are 3 investigations and 3 problem solving activities.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2E: **Materials re[illegible] on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** 6% of the lessons directly relate 1st grade concepts to 2nd grade content in the major clusters. Time is spent using manipulatives, pictures, and models to reinforce conceptual understanding of grade level content.	**(Reviewer only.)** **___X_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In the Lesson Content and Learning Targets resource page for every module, the standards are clearly highlighted if they are attached to previous grade level concepts. Additionally, each lesson in the TE clearly states both the standard and the mathematical practice being addressed. (roll over the title of the lesson and the on-going practice activities to see the standards)	**(Reviewer only.)** **___X_Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In the Lesson Content and Learning Targets resource for each module, Origo lists the Common Core cluster heading along with the standard for every lesson.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In many modules, lessons focus on a connection between clusters in a domain such as Operations and Algebraic Thinking and Number and Operations in Base Ten, and Operations and Algebraic Thinking and Measurement and Data. There are also many connections between two or more clusters in a domain such as understanding place value and use place value understanding and properties of operations to add and subtract within the NBT domain.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **___X_Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:

The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

__2__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** 2NBT.A /2.NBT.B: (44% of the lessons address this) - Use of manipulatives and pictures - Use of models that show students standard and word form of numbers - Use of number tracks and number lines - Numeral expanders - Use of ten frames - Use of hundreds chart - Use of base ten blocks - Use of place value chart - Use of dot cards and dominoes for addition and subtraction - Big books and games	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Each lesson provides sample discussion questions as well as a "reflecting on the work" section designed to wrap up the lesson and check for conceptual understanding. Each lesson has on-going practice activities and each module has problem solving and investigation activities that focus on more open ended problem types.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** 2NBT.A /2.NBT.B: - Use of manipulatives and pictures - Use of models that show students standard and word form of numbers - Use of number tracks and number lines - Numeral expanders - Use of ten frames - Use of hundreds chart - Use of base ten blocks - Use of place value chart - Use of dot cards and dominoes for addition and subtraction - Big books and games Explicit connections between the representations above are made throughout the program in most lessons.	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Each lesson contains an on-going practice activity that revisits content from previous modules and lessons to develop fluency with grade level content.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Yes, after significant work in conceptual development lessons contain procedural problems for students to apply this knowledge. Example for evidence: 2.4, 4.7, 12.8, 11.1, 11.5, 11.6 etc...	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Each lesson contains an on-going practice activity that revisits content from previous modules and lessons to develop fluency with grade level content. Each module in lessons 1, 5, and 9 (total of 36 lessons) has an on-going practice specifically designed for the development of fact fluency.	

Metric AC1C: **The material[illegible]e designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** 2.OA.A: There are 16 lessons that are directly tied to this cluster, however, 46 lessons are tied to 2.NBT.B which is connected to this cluster. Example: 2.4, 6.2, 7.5	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each quest[illegible] and rate Metric 1C.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Most lessons give students the opportunity to apply the concept to problems both bare and contextual. Also, many problem solving activities located in the More Math Section of each module provide problem solving opportunities.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Most lessons give students the opportunity to apply the concept to problems both bare and contextual. Each lesson also has a Step Ahead section that promotes application of the lesson's focus. Example for evidence: - Lesson 6.2, 12.5 Stepping Stones has a content chart available in which the teacher can see the progression of lessons within a topic from grade K-5. **Drop down arrow in top right of any lesson.*	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** MP4 is found throughout the lessons including evidence in the teacher's pages with guided questioning and discussion points. A lot of manipulatives, drawings and models are used to connect the mathematical concepts and ideas.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Each module has a document in the Mathematics tab that lists the Mathematical Practices addressed for each lesson. There is a master document that shows the coverage of the Standards for Mathematical Practice in all modules available. If you hover over the title of any lesson, it will show the standards addressed.	**(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Each module has a document in the Mathematics tab that lists the Mathematical Practices addressed for each lesson. There is a master document that shows the coverage of the Standards for Mathematical Practice in all modules available. The practices are also highlighted in the teacher's materials for each lesson along with the objective.	

Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Each module has a document in the Mathematics tab that lists the Mathematical Practices addressed for each lesson. There is a master document that shows the coverage of the Standards for Mathematical Practice in all modules available. The practices are also highlighted in the teacher's materials for each lesson along with the objective.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** In the Mathematics Tab, each practice is highlighted and there are professional development videos that discuss both Unwrapping the Mathematical Practice Standards and Exploring Habits of Mind.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** An example would be each lesson has a Reflecting on the Work section in which students discuss their solutions and approaches. MP3 is highlighted in 32 lessons.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** An example would be each lesson has a Reflecting on the Work section in which students discuss their solutions and approaches. The program approaches the mathematics through dialogue, models, explanations, etc.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Each module in the Mathematics section has a language development section that identifies key vocabulary that students will use and develop in that set of 12 lessons.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-

In the Mathematics Tab, there is and English Language Learners portion that provides and overview of key strategies in addressing the needs of EL students. In certain lessons, teachers can hover over an EL icon which provides guidance in helping a teacher deliver instruction more easily accessible to EL students.

Reviewer only.)

__2__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials pr e appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Each lesson has a minimum of 2 differentiation activities (extra help, extra practice, extra challenge). The drop down arrow on the top right of any lesson also displays the range of lessons within that topic K-5.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** In most lessons, there is a balance of whole group, small group, and individual activities including the use of big books, games, manipulatives, models, and direct instruction. Sample questions are provided for the teacher to use throughout the lesson to check for understanding.	**Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** In most lessons, there is a balance of whole group, small group, and individual activities including the use of big books, games, manipulatives, models, and direct instruction. Sample questions are provided for the teacher to use throughout the lesson to check for understanding.	**(Reviewer only.)** **____X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** The student journal that goes with each lesson provides daily opportunity for students to solve problems. Each lesson has an on-going practice page which provides practice to build mastery.	**(Reviewer only.)** **____X__ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** There is a scope and sequence which provides a "spaced learning" approach. Students are provided instruction on a portion of a concept then allowed time to practice. Further instruction on that topic continues at a later time which builds on the initial instruction and practice.	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** Each module contains a Mathematics section that is designed specifically for teacher support and or professional development. That section includes a detailed description of the mathematical focus of the module, including which models, vocabulary words, and manipulatives will be used. Professional development videos are imbedded in this section as well which are designed to support teachers in all areas described on the left. (Focus, Learning Targets, Mathematical Practices, English Language Learners, Language Development, Letter to home, Research into Practice)	**(Reviewer only.)** **___X___ Yes** **_____ No**

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Number lines, base ten blocks, ten frames, shapes etc. both digitally and physical representations some included in the Number Case.	**(Reviewer only.)** **___X___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Yes, each module contains an assessment section with an overview correlating the learning targets with each form of assessments – formative/summative. Formative include pre-test, observation/discussion, journal/portfolio. Summative include check-up, performance task, interview, and quarterly tests.	**(Reviewer only.)** **___X___ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Rubrics and answer keys are included.	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Yes, materials seem unbiased and accessible to second grade students. Assessment graphics match graphics used in instruction and practice.	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** James Burnett (Senior writer and executive director and CEO of Origo),Calvin Irons (the Senior Lecturer in math at at Queensland University of Technology in Australia),Rosemary Irons (a primary and early childhood math educator at Queensland University of Technology in Australia) Other authors include Peter Stowasser , and Allan Turton	**(Reviewer only.)** **____X__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Grade appropriate graphics and text.	**(Reviewer only.)** **___X___ Yes** **_____ No**

11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Parent letter for each module can be sent home. The on-going practice pages are always review. All materials available in English and Spanish.	**(Reviewer only.)** **____X__ Yes** **_____ No**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet

Alignment Criteria Overall:

__x___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___x__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Origo Education, Inc
Title:	Stepping Stones
ISBN #	9781921959790
Grade Level(s) or Course:	Grade 3
Reviewer ID:	T B RP

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
Materials devote a large majority of time to major work: 68%. Supporting work and materials enhance the major work of the grade.

COHERENCE- Lessons are sequential across grade. Sequence Navigator tab shows sequencing of lessons across all grade levels.

RIGOR- Program seems balanced in concepts, fluency, and applications. Specific fluency practice pages are not available

CONCEPTUAL UNDERSTANDING- Students are asked to explain their thinking and understanding. However there is not much in the way of practice skills.

MATHEMATICAL PRACTICES-
Math practices are easy to find in most lessons and throughout Modules.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Lessons have differentiated instruction. Most of the instruction is grade level with some ELL. There was not much enrichment for higher-performing students.

OTHER:
This program does meet the evaluation However are found it difficult & time consuming to navigate & find what was needed.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the · Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** All materials reflect the basic architecture of the Standards. I did not find evidence of assessment before the listed grade level topics.	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X_ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** Materials devote a large majority of time spent on the Major Work for grade 3. Of 144 lessons 98 lessons meet major work content for 68% of the lessons. Many practice pages also have "extra practices" for Major Work of Grade 3.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All modules have multiple lessons addressing the supporting work of Grade 3. These lessons enhance focus and coherence simultaneously by engaging students in the Major Work of grade 3. Examples: Module 7 lessons 10-12 represent and interpret data Module 10 lessons 9-12 shapes and their attributes	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials show sequencing of lesson materials. There is an online component that displays the lesson-by-lesson sequencing. Individual lessons do not show what was previously taught nor where the lesson intends the students to go in the future. Some concepts of other grades do appear in the lessons, but they do not interfere with or displace on-grade level content.	(Reviewer only.) **_X___Meets** **___Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]ll students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials give most [illegible]ents extensive work with on grade-level problems. Under the More Math tab for each module there are differentiated activities for the lessons. These include extra help and extra practice. Module 6 provides enrichment for higher performing students. .	(Reviewer only.) **_X___Meets** **___Does Not Meet/** **Insufficient Evidence** Needs more enrichment for higher performing students.
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Sequence Navigator shows related content between grades. The "focus" and "Research into Practice" tabs at the beginning of each module give teachers an understanding of what is being taught.	(Reviewer only.) **_X ___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Review of material from previous grades is listed in "content navigator". Students are not shown what their specific responsibility is for the current year. Standards listed as you hover over each lesson title. Focus tab and Research into practice tab give connections and natural progression of standards.	(Reviewer only.) **_X___Meets** **___Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Learning objectives are visibly shaped by the CCSSM cluster headings. These can be found listed under the following tab path: Grade 3, Module 1, Mathematics, Learning targets. Major cluster are found in most module lessons.	(Reviewer only.) **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials include problems and activities that connect two or more clusters in a domain. Many lessons connect several clusters within a domain or several domains in a grade. Two or more clusters are linked throughout modules, but not always within the same lesson. Examples of these can be found under the "Learning Targets" tab for each module.	(Reviewer only.) **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Weaknesses: Differentiation is for lower-performing students, but not for higher-performing students.
Materials do not state explicitly what is being focused on from prior grade-levels nor preparation for future grade-levels.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding is attended to where the Standards set explicit expectations for understanding or interpreting. Lessons have a section for students to explain reasoning and understanding called "Reflection on the Work" which is labeled under the "Lesson" "Steps" tabs. There are not many questions to practice with before the Reflection section.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Materials feature high-quality conceptual problems and discussion questions. Many lessons ask students to discuss a concept. Examples are listed under "steps" tab. I did not find sufficient evidence in the student journal or practice book. Could not find online teaching notes.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Materials feature opportunities to identify correspondences across mathematical representations. There are several visual/graphic/mathematical representations of a problem such as number lines, place-value charts, and fraction bars. The "Number Case" has manipulatives to support lesson features.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' devel[illegible] conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Many lessons have flu[illegible] and procedural skills woven into guided lesson and practice pages in Student Journals, practice pages, and online practices. Additional fluency lessons and worksheets are found in the Ongoing Practices.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system $x + y = 1$, $2x + 2y = 3$. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system $6y + x = x + 3$, $-x = 1 + 2y$.	**Evidence-** Many lessons include opportunistic strategies and algorithms. Strategies are developed before the algorithm is introduced. Examples: Student Journal pages 59, 67, 162-163	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Addition and subtraction computation is included in many lessons.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teachers and students spend sufficient time working with engaging applications without losing focus of the Major Work of the grade. Example: Many lessons are designed for students to work on using multiplication and division within 100 to solve word problems in solutions involving equal groups, arrays, measurement (3.OA.A.3).	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are single- and multi-step contextual problems to help engage students in problem solving. Most lessons contain real-world problems to help students engage in problem solving. Examples: Module 7, Lesson 5, steps Module 7, lesson 5, student journal pages 160-161	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Application problems stress applying the Major Work of grade 3. Most lessons focus on the Major Work. Examples: Modules 3, 6, 9, 12 have quarterly tests that have criteria to be met from the Major Work of Grade 3.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling builds slowly. Students are provided modeling before algorithms are introduced. This helps the students move from concrete to abstract strategies. Examples: "Sequential Navigation" shows math strategies by grade. Each lesson begins with "Starting the Lesson" which usually contains modeling for lesson objective.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

(Reviewer only.)

_X___Meets

____Does Not Meet

Strengths/Weaknesses:

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

"Standards for Mathematical Practice" enrich the Major Work of the Grade. They are listed in the materials under each module. Math practices help enrich the Major Work of Grade 3 and do not detract from it in either teacher or student materials.

The practices can be found in the opening paragraphs of the lessons (hover the mouse over beginning paragraph for information to show).

(Reviewer only.)

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials at[illegible] to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each qu[illegible]n and rate Metric 2B.** **(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Mathematical practices are present in the form of assignments, activities, and problems. "Mathematical Practices" tabs are listed under each module. Practices can be found in each lesson.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Materials address the standards throughout the modules. They develop from easier to more sophisticated problems across the year.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Each lesson opening paragraph explains the practices being used in the lesson. Also each module has a Mathematical Practices chart to show development across lessons. There are also Professional Development videos for teacher to view.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** There are 16 lessons that incorporate arguments and critiquing of arguments. Examples include: 1.2, 1.4, 1.7, 2.3, 2.5, 2.10, 2.11, 6.10, 7.5, 7.6 8.1, 8.2, 8.6, 9.10,11.10, 12.10	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Lessons ask students to produce answers, arguments, explorations and models. Most lessons give students the model and student fill in the answers. Examples: Student Journal page 78-79, 192-193	

Do materials explicitly attend to the specialized language of mathematics? I[illegible]anguage of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Language developme[illegible] each module is listed. This gives the list of vocabulary for the module, but there are no specific definitions listed. There are definitions listed under the "glossary" tab. Example: Module 3, Mathematics, Language Development.	
Alignment Criterion 2: **Standards for Mathematical Practice** **Materials must demonstrate authentic connections between content Standards and practice Standards.** **AC2** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:** Weaknesses: No specific vocabulary taught with specific definitions. I couldn't find many explicitly taught vocabulary other than highlighted word in some lessons. Example: 3.1 "steps"
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Support for ELL and other special populations helps those students meet the same standards as all other students. Each module has an ELL section under the "Mathematics" tab. Also many lessons have an ELL icon in the top right corner of the lesson page. Example: Module 2 lesson 1 "steps" Module 11 lesson 1 "steps"	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Materials provide appropriate levels and support for a broad range of learners. Content is introduced first in concrete ways and models then moves toward the abstract algorithms. The scaffolding of context may be spaced across many modules. Examples: Journal pages are created for teacher support on first page and individual work on 2nd page. Extra practices may be found through the "differentiation" tab.	**Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Lessons recommends and facilitates a mix of instructional approaches for a variety of learners. "Steps" help with a variety of learning strategies. Example: Module 4 Lesson 1 has—base 10 blocks, observe, build, place-value chart, numerical chart, converse in small group, whole class practice, independent practice (lesson 1, pages 80-81 in student journal).	**Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: Access to the Standards for All Students **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons are thoughtfully structured beginning with modeling and concrete strategies then building toward algorithms, class discussions, and independent practices.	**(Reviewer only.)** **__X____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Problems and exercises are developed throughout modules Examples: 10.1 introduces area model 10.3 uses multiplication to calculate area 10.5 uses real-world word problems.	**(Reviewer only.)** **__X____ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Stepping Stones uses "Spaced Learning" model. This gives students an initial building block for a skill and builds upon it throughout the curriculum; exploring in smaller practices before introducing the next piece.	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** There are some video segments and Professional Development sections for teacher support of modules and lessons. These are listed under "Research into Practices" tab.	**(Reviewer only.)** **__X____ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives are listed for each module under "Resource Overview" tab. Lessons and practice pages use faithful representations. There is a number case with place value cards, but there are not many other hands-on manipulatives.	**(Reviewer only.)** **__X____ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Every module has formative and summative assessments. There are also quarterly tests after every 3 modules. Every formative assessment includes: pre-test, observations and discussions, and journals and portfolios. Summative is under check-ups, performance tasks, and interviews.	**(Reviewer only.)** **__X____ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Each assessment included has answer keys under the "resources" tab. There are also multiple forms for recording data.	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** All assessments seem unbiased and are on-grade level and accessible.	**(Reviewer only.)** **___X___ Yes** **_____ No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Materials have listed the names of those who evaluated the materials for mathematical errors. These names are listed in the "information" pages from Origo.	**(Reviewer only.)** **__X____ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Visual design is in color and is engaging and text is clear and helps the student make sense of content.	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Each module provides a print-out of parent letters to explain module focus, vocabulary, and ideas that can be used from home.	**(Reviewer only.)** **__X____ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: _____Stepping Stones Grade 3_____**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
___X____ Meets _____ Does Not Meet	_X____ Meets _____ Does Not Meet

Non-Negotiable Overall:

__X___ Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: _6____ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____X___ Meets _____ Does Not Meet	Points: _6____ of 6 possible. (Materials must receive at least 5 of 6 points to align.) __X_____ Meets _____ Does Not Meet	Points: _6____ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___X____ Meets _____ Does Not Meet

Alignment Criteria Overall:

__X___ Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

****Origo Stepping Stones meets the IMET Criteria. However, the components are very difficult and time consuming to find and difficult to navigate through. Multiple tabs had to be open in order to find the needed information. Navigation could be difficult for students and families to use.

****Stepping Stones needed several programs downloaded in order to run the program.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Origo Education, Inc.
Title:	Stepping Stones Grade 4
ISBN #	9781219590790
Grade Level(s) or Course:	grade 4
Reviewer ID:	SA RP

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Materials devote a large majority of time spent on major work of grade. Supporting work + sequencing added to majority work

COHERENCE- Sequencing of lessons is available at a quick glance in "sequence navigator" tab.

RIGOR- Lessons have a section for students to explain understanding. However there is not much practice before students are asked to reflect.

CONCEPTUAL UNDERSTANDING- There are single- & multi- step contextual problems to help engage students in problem solving.

MATHEMATICAL PRACTICES- Math practices are easy to find & readily available in every lesson.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- This program covers all students at differing abilities - however there really isn't much enrichment for higher-performing students.

OTHER:

This program meets the IMET evaluation. But we found it to be confusing and time consuming.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Publisher: Origo Education, Inc

Title of Material: Stepping Stones Grade 4

Author: J Burnett, C. Irons, R. Irons

ISBN #: 978121959790 **Copyright** 2012

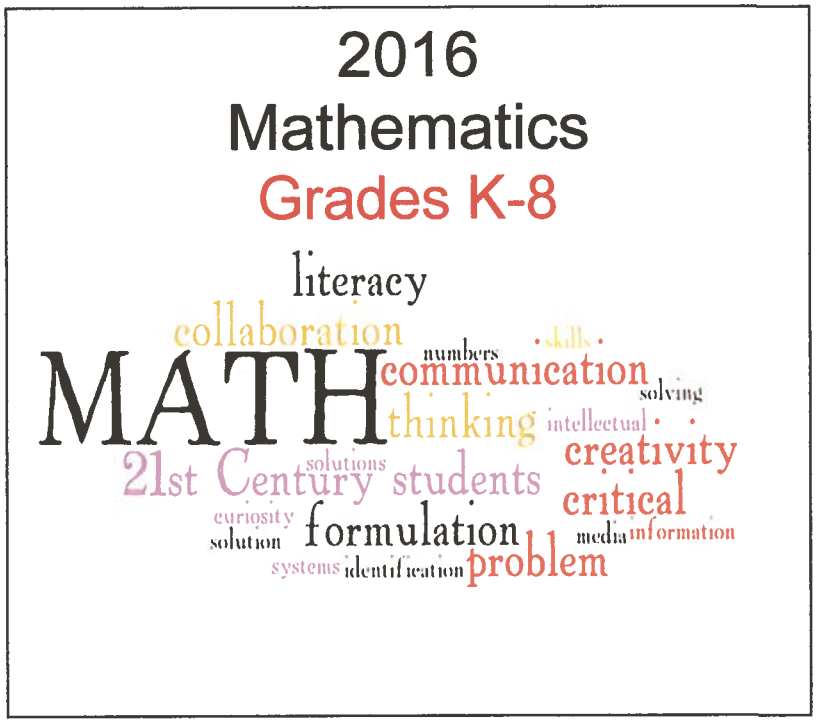
Reviewer ID: SA, RP

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.



- Evaluation Form adapted from Instructional Materials Evaluation Toolkit (IMET).

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** All materials reflect the basic architecture of the Standards. I did not find evidence of assessment before the listed grade level topics. See attached Grade 4 CCSS Document topics listed in table which are not assessed before grade level.	**(Reviewer only.)** **_X_ Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X_ Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** Materials devote a large majority of time spent on the Major Work for grade 4. Of 144 lessons 112 lessons meet major work content for 78% of the lessons. Cross curricular activities also address this work. See attached document.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All modules have multiple lessons addressing the supporting work of Grade 4. These lessons enhance focus and coherence simultaneously by engaging students in the Major Work of grade 4. Examples: 4.OA.B Factors and multiples: 3.1, 3.2, 3.4, 3.5 4.MD.A Solve problems involving measurement from larger to smaller: 2.11, 2.12, 5.10, 8.7-8.12, 9.7-9.12, 1.8-11.12, 12.7-12.12 4.MD.B Represent and interpret data: 9.1-9.6	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials show sequencing of lesson materials. There is an online component that displays the lesson-by-lesson sequencing Individual lessons do not show what was previously taught nor where the lesson intends the students to go in the future. Some concepts of other grades do appear in the lessons, but they do not interfere with or displace on-grade level content. Attached document shows progression of lessons taught by the grade. Remediation resources clearly identified as extra help or extra practice. Examples: Module 2 lesson 10, Module 8 lesson 4.	(Reviewer only.) **_X___Meets** **___Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials give students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials give most students extensive work with on grade-level problems. Under the More Math tab for each module there are differentiated activities for the lessons. These include extra help and extra practice. Modules 11 and 12 provide enrichment for higher performing students. .	(Reviewer only.) **_X___Meets** **___Does Not Meet/** **Insufficient Evidence** Needs more enrichment for higher performing students.
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Sequence Navigator shows related content between grades. The "focus" and "Research into Practice" tabs at the beginning of each module give teachers an understanding of what is being taught,	(Reviewer only.) **_X ___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Review of material from previous grades is listed in "content navigator". Students are not shown what their specific responsibility is for the current year. Standards listed as you hover over each lesson title. Focus tab and Research into practice tab give connections and natural progression of standards. See attached document NN Metric 2F.	(Reviewer only.) **_X___Meets** **___Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Learning objectives are visibly shaped by the CCSSM cluster headings. These can be found listed under the following tab path: Grade 4, Module 1, Mathematics, Learning targets. Major cluster are found in most module lessons.	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Materials include problems and activities that connect two or more clusters in a domain. Many lessons connect several clusters within a domain or several domains in a grade. Two or more clusters are linked throughout modules, but not always within the same lesson. Examples of these can be found under the "Learning Targets" tab for each module.	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

____Meets

____Does Not Meet

Strengths/Weaknesses:

Weaknesses: Differentiation is for lower-performing students, but not for higher-performing students.
Materials do not state explicitly what is being focused on from prior grade-levels nor preparation for future grade-levels.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Conceptual understanding is attended to where the Standards set explicit expectations for understanding or interpreting. Lessons have a section for students to explain reasoning and understanding called "Reflection on the Work" which is labeled under the "Lesson" "Steps" tabs. There are not many questions to practice with before the Reflection section.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Materials feature high-quality conceptual problems and discussion questions. Many lessons ask students to discuss a concept. Examples are listed under "steps" tab. I did not find sufficient evidence in the student journal or practice book. Could not find online teaching notes.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Materials feature opportunities to identify correspondences across mathematical representations. There are several visual/graphic/mathematical representations of a problem such as number lines, place-value charts, and fraction bars. The "Number Case" has manipulatives to support lesson features.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	Fluency for 4th grade is to fluently add or subtract multi-digit whole numbers using the standard algorithm.	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' develo conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Many lessons have flu and procedural skills woven into guided lesson and practice pages in Student Journals, practice pages, and online practices. Additional fluency lessons and worksheets are found in the Ongoing Practices.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Many lessons include opportunistic strategies and algorithms. Strategies are developed before the algorithm is introduced. Examples: Module 2 Lessons 4, 5, 6, 7 Practice pages 2.6, 2.8, 2.10	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Addition and subtraction computation is included in many lessons.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teachers and students spend sufficient time working with engaging applications without losing focus of the Major Work of the grade. Example: Many lessons are designed for students to work on using the four operations with whole numbers to solve problems (4.OA.A.3).	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are single- and multi-step contextual problems to help engage students in problem solving. Most lessons contain real-world problems to help students engage in problem solving. Examples: 7.8 "steps", Mod 9 Investigation 1, Mod. 12 "quarterly tests"	

Do application problems particularly stress applying the Major Work of the grade? Eval[illegible]essons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Application problems s[illegible]s applying the Major Work of grade 4. Most lessons focus on the Major Work. Examples: Modules 3, 6, 9, 12 have quarterly tests that have criteria to be met from the Major Work of Grade 4.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Modeling builds slowly. Students are provided modeling before algorithms are introduced. This helps the students move from concrete to abstract strategies. Examples: "Sequential Navigation" shows math strategies by grade. Each lesson begins with "Starting the Lesson" which usually contains modeling for lesson objective.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X___Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:

Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

"Standards for Mathematical Practice" enrich the Major Work of the Grade. They are listed in the materials under each module. Math practices help enrich the Major Work of Grade 4 and do not detract from it in either teacher or student materials.

The practices can be found in the opening paragraphs of the lessons (hover the mouse over beginning paragraph for information to show).

Example:

Module 5 lesson 4 "steps"

(Reviewer only.)

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Mathematical practices are present in the form of assignments, activities, and problems. "Mathematical Practices" tabs are listed under each module. Practices can be found in each lesson. See attached Module 7 chart.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Materials address the standards throughout the modules. They develop from easier to more sophisticated problems across the year. Examples: 1:1, Lesson 8.5	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Each lesson opening paragraph explains the practices being used in the lesson. Also each module has a Mathematical Practices chart to show development across lessons. There are also Professional Development videos for teacher to view.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** There are 17 lessons that incorporate arguments and critiquing of arguments. Examples include: 2.1, 2.2, 2.3, 2.9, 3.9, 4.2, 6.6, 6.9, 7.5, 8.12, 9.2, 9.4, 9.11, 12.3, 12.4, 12.11, 12.12	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Lessons ask students to produce answers, arguments, explorations and models. Most lessons give students the model and student fill in the answers. Examples: Student Journal page 78-79, Module 5 lesson 1 "steps"	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Language development for each module is listed. This gives the list of vocabulary for the module, but there are no specific definitions listed. There are definitions listed under the "glossary" tab. Example: Module 3, Mathematics, Language Development.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

_X___Meets

____Does Not Meet

Strengths/Weaknesses:
Weaknesses: No specific vocabulary taught with specific definitions. I couldn't find many explicitly taught vocabulary other than highlighted word in some lessons. Example: 3.1 "steps"

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Support for ELL and other special populations helps those students meet the same standards as all other students. Each module has an ELL section under the "Mathematics" tab. Also many lessons have an ELL icon in the top right corner of the lesson page. Example: Module 3 lesson 1 "steps" Module 4 lesson 1 "steps" See attached document AC Metric 3 A	Reviewer only.) __X__Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Materials provide appropriate levels and support for a broad range of learners. Content is introduced first in concrete ways and models then moves toward the abstract algorithms. The scaffolding of context may be spaced across many modules. Examples: Journal pages are created for teacher support on first page and individual work on 2nd page. Extra practices may be found through the "differentiation" tab.	Reviewer only.) _X___Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Lessons recommends and facilitates a mix of instructional approaches for a variety of learners. "Steps" help with a variety of learning strategies. Example: Module 5 Lesson 1 has—fraction patterns, manipulatives, comparing fractions, compare with partner, whole class discussion, and independent practice.	Reviewer only.) _X___Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **_X___Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Lessons are thoughtfully structured beginning with modeling and concrete strategies then building toward algorithms, class discussions, and independent practices.	**(Reviewer only.)** **__X____ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Problems and exercises are developed throughout modules Examples: 6.1 introduces comparison model 6.2 to 6.5 uses diagrams to compare, differentiate, and explore. 6.6 solves real-world word problems.	**(Reviewer only.)** **__X____ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Stepping Stones uses "Spaced Learning" model. This gives students an initial building block for a skill and builds upon it throughout the curriculum; exploring in smaller practices before introducing the next piece.	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** There are some video segments and Professional Development sections for teacher support of modules and lessons. These are listed under "Research into Practices" tab.	**(Reviewer only.)** **__X____ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulatives are listed for each module under "Resource Overview" tab. Lessons and practice pages use faithful representations. There are not many hands-on manipulatives with this program.	**(Reviewer only.)** **__X____ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Every module has formative and summative assessments. There are also quarterly tests after every 3 modules. Every formative assessment includes: pre-test, observations and discussions, and journals and portfolios. Summative is under check-ups, performance tasks, and interviews. See attached examples for Indicator Quality 6.	**(Reviewer only.)** **__X____ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** Each assessment included has answer keys under the "resources" tab. There are also multiple forms for recording data. See attached examples for Indicator Quality 7.	**(Reviewer only.)** **___X___ Yes** **_____ No**

8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** All assessments seem unbiased and are on-grade level and accessible.	**(Reviewer only.)** **___X___ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Materials have listed the names of those who evaluated the materials for mathematical errors. These names are listed in the "information" pages from Origo. Authors are found in the Program Tab.	**(Reviewer only.)** **__X____ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Visual design is in color and is engaging and text is clear and helps the student make sense of content.	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** Each module provides a print-out of parent letters to explain module focus, vocabulary, and ideas that can be used from home. See attached examples for Indicator Quality 11.	**(Reviewer only.)** **__X____ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: _____Stepping Stones Grade 4_____**

Publisher: ___Origo Education, INC_____ Copyright: __2012_____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.	
Non-Negotiable 1: Freedom from Obstacles to Focus **___X____ Meets** **_____ Does Not Meet**	**Non- Negotiable 2: Focus and Coherence** **_X____ Meets** **_____ Does Not Meet**
Non-Negotiable Overall: **__X___ Meets** **_____ Does Not Meet**	

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	**Alignment Criterion 2: Standards of Mathematical Practice**	**Alignment Criterion 3: Access to Standards for All Learners**
Points: _6____ of 6 possible. **(Materials must receive at least 5 of 6 points to align.)** **____X___ Meets** **_____ Does Not Meet**	**Points: _6____ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **__X_____ Meets** **_____ Does Not Meet**	**Points: _6____ of 6 possible.** **(Materials must receive at least 5 of 6 points to align.)** **___X____ Meets** **_____ Does Not Meet**

Alignment Criteria Overall:

__X___ Meets **_____ Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **the materials meet every Non-Negotiable and Alignment Criterion? __X___ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Origo Stepping Stones meets the IMET Criteria. However, the components are very difficult and time consuming to find and difficult to navigate through. Multiple tabs had to be open in order to find the needed information.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Origo Education
Title:	Grade 5 Stepping Stones
ISBN #	978921959790
Grade Level(s) or Course:	Grade 5
Reviewer ID:	*PL,TR*

RECOMMENDED AS:

____x____**Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____**Other Mathematics Program-** a program that substantially, but partially, meets the *focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for* supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____**Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____**Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The program maintains consistent focus on the concepts, skills and processes aligned the Common Core Content Standards and Mathematical Practices. It is free of extraneous or non-aligned content.

COHERENCE- Mathematics is presented as interrelated concepts and skills. The online teacher resources support coherence and progressive development of ideas, concepts, skills and processes.

RIGOR- Scope and pacing of materials attends to the components of conceptual understanding, procedural skill, fluency and applications. The program sets high expectations for all three components throughout the materials for teacher and students.

CONCEPTUAL UNDERSTANDING- Conceptual understanding is attended to thoroughly where the Standards set explicit expectations for understanding or interpreting. Materials provide students enactive, iconic and symbolic opportunities to develop and communicate understandings of the major clusters of the grade 5 Standards.

MATHEMATICAL PRACTICES- Standards of Mathematical Practice (SMP) are embedded in each module. All Practice Standards are embedded in the instructions usually providing students opportunities for guided and independent engagement with the SMP.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- Materials provide a full range of opportunities for differentiation, both remediation and extension, as well as ELL support.

OTHER:

It might be difficult for teachers to realize the full breadth and depth of these materials without professional development/training.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts ( ) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 ( )

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics ( ) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** Teacher [illegible]e Materials, Student Book, Student Journal Ready Common Core Mathematics for Grade 5 does not assess any of the topics indicated on the NN1 Metric 1A list.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

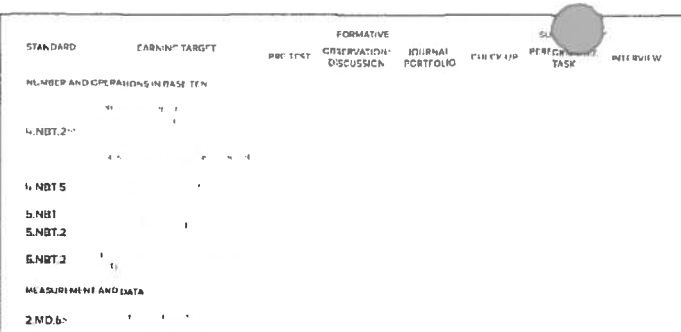
To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** Teacher Online Materials, Student ...ok, Student Journal There are 144 lessons in the Origo Stepping Stones grade 5 program, 92 lessons attend to standards associated with major clusters, 22 lessons attend to standards associated with supporting clusters, and 27 lessons attend to standards associated with additional clusters. Stepping Stones addresses the three (numbered for ease of communication in this document) Major Works of grade 5 as follows: Major Work 1: Understanding fraction models and computations with fractions. Approximately 43% (62/144) of the lessons are devoted directly to this major work. These lessons are included in modules 1, 2, 4, 6, 7, 9, 10, 11, and 12. Major Work 2: Fluency of division procedures with values whole number values as well as decimal values through hundredths. Approximately 17% (24/144) of the lessons are devoted directly to this major work. These lessons are included in modules 2, 5, 8, and 10. Major Work 3: Understanding of volume as cubic units filling a three-dimensional space. Understanding to include finding volume through decomposition of three-dimensional shapes into right rectangular prisms. Approximately 4% (6/144) of the lessons are devoted directly to this major work. These lessons are included in Module 3.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2B **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Online Materials, Student Book, Student Journal Supporting work includes engaging students in the Major Works of the grade. Lesson 1.7 ties to the Major Work: Understanding fraction models and computations with fractions. The focus of Module 1 is the understanding the concept associated with millions. Lesson 1.10 reviews through application skills necessary to achieve standard 4.NBT.5 and ties to the Major Work: Understanding of volume as cubic units filling a three-dimensional space.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in	**Evidence-** Teacher Online Materials, Student Book, Student Journal Learning targets (found in the Module Mathematics tab) transparently shows the standards being targeted in the lesson. In the assessment overview for each module, the targeted standards are explicitly identified. This example is from Module 1. Notice the grade 4 standards and even a grade 2 standard. Only Module 1 has assessment elements aligned to standards below grade 5. Module 8 has one assessment element aligned to a related 6th grade standard. In all other modules all assessment elements align to grade 5 standards only.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned.

For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).



>*Indicates that these standards are addressed at levels beyond the CCSS level.

Lesson 1 connects skills and concepts of standard 4.NBT.2 to those of standard 5.NBT.1.

Lesson 2 focuses is on building the skills and concepts of standard 5.NBT.1 and standard 5.NBT.2.

Lesson 3 reviews through application, skills related to standard 4.NBT.2.

Lesson 4 applies the skills related to standard 2.MD.6 to seven digit numbers.

Lesson 5 applies the skills related to standard 4.NBT.2.

Lesson 6 build on lesson 3 applying and extending the skills related to standard 4.NBT.2.

Lesson 7 builds on the previous lessons and ties to the Major Work: Understanding fraction models and computations with fractions.

Lesson 8 extends skills related to standard 4.NBT.2 and connects with standard 5.NBT.2.

Lesson 9 reviews through application skills necessary to achieve standard 4.NBT.5.

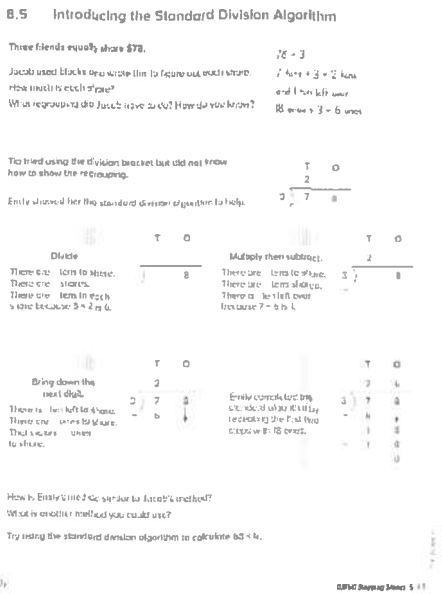
Lesson 10 reviews through application skills necessary to achieve standard 4.NBT.5 and ties to the Major Work: Understanding of volume as cubic units filling a three-dimensional space.

Lesson 11 reviews through application skills necessary to achieve standard 4.NBT.5.

Lesson 12 reviews through application skills necessary to achieve standard 4.NBT.5.

Module 8 references 6.NS.2: Compute fluently with multi-digit numbers and find common factors and multiples. Use an algorithm to divide up to four-digit numbers by one- or two-digit numbers.

In Lesson 8.5 (Journal page below), "students use the standard algorithm for division to divide two-digit dividends by one-digit divisors. All examples involve regrouping."



8.5 Introducing the Standard Division Algorithm

Three friends equally share $78.

Jacob used blocks and base-ten disks to figure out each share.

How much is each share?

What regrouping did Jacob have to do? How do you know?

Tia tried using the division bracket but did not know how to show the regrouping.

Emily showed her the standard division algorithm to help.

Divide

There are tens to share.
There are shares.
There are tens in each share because 5 × 2 = 10.

Multiply then subtract.

There are tens to share.
There are tens shared.
There is ten left over because 7 − 5 = 2.

Bring down the next digit.

There is ten left to share.
There are ones to share.
That makes ones to share.

Emily corrected her by saying that Jacob actually regrouping the first ten as ten ones.

How is Emily's method similar to Jacob's method?

What is another method you could use?

Try using the standard division algorithm to calculate 85 ÷ 4.

Metric NN2D **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence- Evidence-** Teacher Online Materi[illegible] Student Book, Student Journal In addition to the main lesson and journal activities for each lesson, there are also extra help, extra practice, and extra challenge pages. The practice pages provide mixed practice, some practice targets skills and concepts taught in earlier modules/lessons. Some practice targets developing fluency. Investigations and problem-solving activities provide additional on-grade-level work. Practice reviewed in the grade 5 materials was at grade-level. The teacher has access to practice/materials from previous grade-levels should remediation practice below grade-level be necessary.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics,	**Evidence-** Teacher Online Materials, Student Book, Student Journal Teacher resources such as the Sequence Navigator provide support for seeing the continuum of development across the Stepping Stones curriculum. The example is from Module 4 Lesson 2. It shows where Module 4 Lesson 2 is situated in the curriculum progression. Here are the titles of the lessons noted above. Grade 4 Module 6 Lesson 11: Adding Mixed Numbers (Composing Whole Numbers) Grade 4 Module 6 Lesson 12: Solving Word Problems Involving Mixed Numbers	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Grades K–8 (Sp 013).	Grade 5 Module 4 Lesson 1: Reviewing Ad on of Common Fractions and Mixed Numbers (Same Denominator) Grade 5 Module 4 Lesson 2: Adding Common Fractions (Related Denominators) Grade 5 Module 4 Lesson 3: Adding Common Fractions (Unrelated Denominators) Grade 5 Module 4 Lesson 4: Adding Mixed Numbers (Related Denominators) Grade 5 Module 4 Lesson 5: Adding Mixed Numbers (Unrelated Denominators) Teacher resources found in the mathematics tab also include information related to progression of materials, concepts and skills. 	

Metric NN2F **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Online Materials, Student [illegible]ok, Student Journal Review of materials from previous grades is identified for the teacher in the learning targets, in the Sequence Navigator, in the Assessment overview and in the mathematical background information found in the mathematical focus and research into practice sections. Specific indication for students of responsibilities was not found.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2C **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Online Materials, Student k, Student Journal Each module contains teacher supports for identifying the focus of the lessons. Each module addresses 2-3 'big ideas'. The heading for these ideas corresponds to the cluster headings, e.g. Number and Operations in Base Ten and Measurement and Data The example is from Module 11: mathematical focus. Approximately two-thirds of the lessons (94/144) are aligned to major clusters for grade 5.	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2H **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Online Materials, Student [illegible]k, Student Journal Lesson 1.7 ties to the Major Work: Understanding fraction models and computations with fractions. Cluster headings Numbers and operations in Base Ten connected to Number and operations Fractions. Working with Millions Expressed as Fractions	**(Reviewer only.)** **__x__Meets** **____Does Not Meet/ Insufficient Evidence**

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from th or Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for A tric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.

Evidence- Teacher Online Materials, Student Book, Student Journal
Materials attend to conceptual understanding thoroughly. They included high-quality conceptual problems and discussion questions as well as opportunities to identify correspondences across mathematical representations.
Examples

5.NF.B

Number and Operations - Fractions

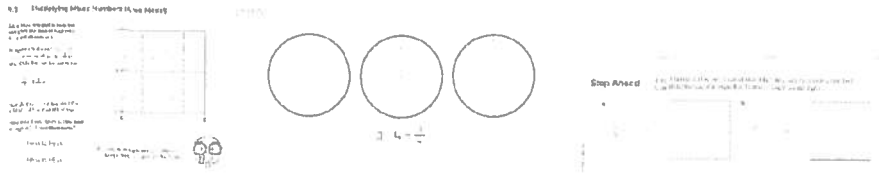
- Apply and extend previous understandings of multiplication and division to multiply and divide fractions.

Modules 9 and 11 focus on this standard.

The focus for this standard in Module 9 "is the development of multiplication of two common fractions and/or mixed numbers. (Grade 5, Module 9, Mathematical Focus)

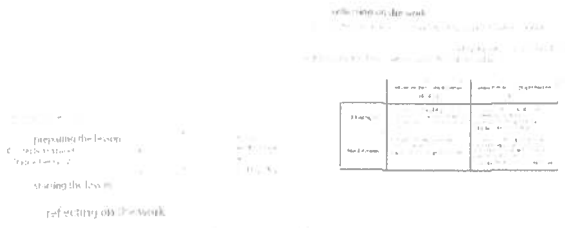
The focus for this stand in Module 11 is "students investigate division involving common fractions. All divisors are either whole numbers or unit fractions. The main aim of the lessons is to establish that an equation involving division by a common fraction such as 1/2 ÷1/4 = _____ can be restated using a multiplication equation 1/2 x 4=____."(Grade 5, Module 11, Mathematical Focus)

Enactive representation is generally shading an area model. Examples 9.5 Steps, 11.2 Steps, 11.3 Student Journal



Iconic representation: Examples 9.1 Steps, 9.1 Student Journal, 9 Problem solving 1,

Symbolic representation 9.2 Steps, 9 problem solving 1 (see above)



Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book	**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__2__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	Procedural: The use of area models is used throughout Module 9 (multiplication of fractions) and Module 11 (division of fractions). Stepping Stones uses a "spaced learning concept" that distribute practice over time. Practice 9.2, 6 exercises, multiplying a proper fraction/mixed number by a whole number Practice 9.4, 3 exercises, multiplying two proper fractions Practice 9.6, 5 exercises, multiplying two fractions (some proper, some improper) grid for modeling included Practice 9.8, 4 exercises, multiplying two improper fractions Practice 9.10, 4 problems, figuring out multiplication sentences from a diagram (see above in AC Metric 1A) Practice 9.12, 1 story problem finding the area of a room and the cost of tiling it. Practice 10.2, 4 exercises, multiplying a proper fraction/mixed number by a whole number Practice 10.4, 3 exercises, multiplying two proper fractions Practice 11.2, 1 exercise, shading parts of 3 whole and relating it to division of a whole by a fraction Practice 11.4, 1 exercise, relating 3/4 to 3 divided by 4 Practice 11.6, 2 exercises using an area model to divide a fraction by a whole number Practice 11.8, 2 word problems requiring the division of a fraction by a whole number Practice 11.10, 1 problem determining how many fourths are in 5 Practice 11.12, 3 exercises multiplying two mixed fractions Practice 12.2, 2 problems (the same layout as practice 11.10) how many fractional parts are in so many whole Practice 12.4, 2 story problems one requiring division of a whole number by a fraction, one requiring multiplication of a fraction by a whole number Fluency practice for multiplication with multi-digits is distributed in the same manner as all skill development. See the above example with fractions for an idea of this distribution.	

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	Procedural problems and exercises are present and include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms are present.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	Yes	

Metric AC1C

The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B

For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Evidence- Teacher Resource B Student Book, Student Practice and Problem Solving Book

Module 9 Investigation 2, 9.12 Practice, Module 9 Problem Solving Activity 2, 9 Quarterly test 1, 9 Quarterly test 2

Use the questions for M 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.

(Reviewer only.)

__2__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Are there are si[illegible]and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Yes**	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Yes**	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Yes**	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

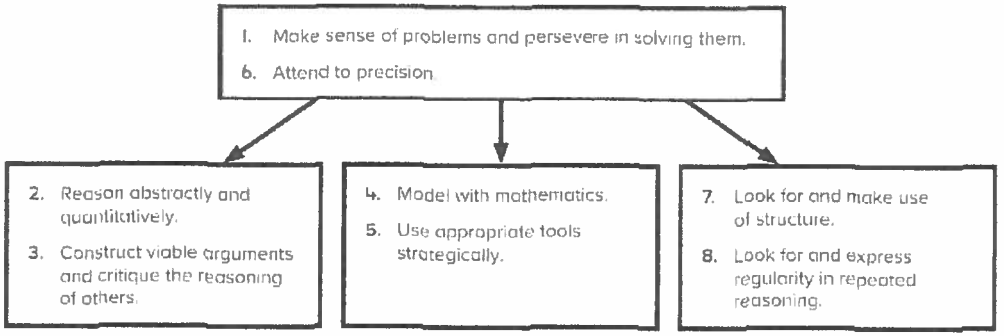
Strength
Scope and pacing of materials attends to the components of conceptual understanding, procedural skill, fluency and applications. The program sets high expectations for all three components throughout the materials for teacher and students.

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Grade 5 Coverage of Standards for Mathematical Practice	**(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

NOTE: Example[illegible]valuating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.
For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).



All coverage of standards for mathematical practice is embedded in the content lessons.

The Mathematical Practices Overview standards addressed in each module. Teacher materials indicate that each lesson aligns to one, two or occasionally 3 standards for mathematical practice.

Stepping Stone Module	Number of Lessons in Each Module Aligned to Each Standard of Mathematical Practice							
	1	2	3	4	5	6	7	8
1	0	2	6	0	0	4	9	5
2	0	5	4	1	0	4	5	2
3	2	7	1	0	1	0	7	3
4	3	3	4	2	0	3	1	4
5	0	3	3	1	2	7	2	0
6	3	4	4	1	0	8	1	0
7	0	8	5	1	2	3	2	0
8	1	0	1	0	1	6	10	3
9	3	2	4	2	0	1	5	3
10	1	1	3	1	0	2	9	4

11	3	5	2	[illegible]	0	3	6	3
12	1	6	0	1	0	2	8	7

(Path to overview: module_1/mathematic/mathematical practices, click resources link upper right, bottom of the list.)

Metric AC2E

Materials attend to the full meaning of each practice Standard.

How to Find the Evidence:
For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

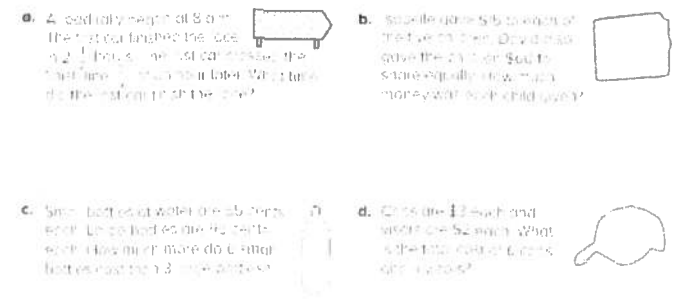
Evidence- Teacher R[illegible]rce Book, Student Book, Student Practice and Problem Solving Book

Below are the indicated lessons alignment to SMP 4: Model with mathematics

2.7 Connection to SMP 4: not recognized

4.11 Connection to SMP 4: writing expressions to model the information in a story problem (Student Journal)

2. Write an expression to show how to solve each problem. You do not need to figure out the answer.



4.12 Connection to SMP 4: similar to that found in 4.11

5.1 Connection to SMP 4: applying symbolic notation < and >, to compare locations of numbers on a number line, which is not connected to a real life situation.

6.12 Connection to SMP 4: creating a line plot to display results of an experiment

Use the questions for Metric 2B [illegible]aluate Metric 2B. Record evidence for each question and rate Metric 2B.

(Reviewer only.)

__x__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Yes**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Yes**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Yes**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book The Grade 5 Coverage of Standards for Mathematical Practice shows SMP 3: Reason abstractly and quantitatively as a specific focus in 37 lessons. Lessons without this specific focus also incorporate opportunities for students to use and convey their reasoning. Examples (Randomly chosen lessons for which SMP 3 is not a noted focus for the lesson) "How did you know the fraction you wrote was equivalent?" (6.2 Steps) "What length is each arrow pointing to? How do you know?" (8.10 Steps) "Ask questions that focus their thinking on the underlying concepts of why that works." (9.3 Steps) "Why does it make sense that 300 is the answer in the last question?" (12.7 Steps)	**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	Yes	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Yes**	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Yes**	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__x__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 3 is rated as Meets or Does Not Meet. To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC3A: **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Each module contains ELL supports as well as differentiation possibilities. Many of the resources are available in Spanish as well as in English.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC3B **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book Each lesson is structured on the gradual release of responsibility model. First, the teacher does and students watch and partially participate. Second, students do and the teacher watches and partially participates. Third, students do and the teacher watches. Lessons have additional supports for differentiation include extra help, extra practice and extra challenge. Assessments include both formative and summative assessments that allow students to demonstrate their mathematical understanding. The Ongoing Practice pages prove students opportunities to demonstrate understanding across time, as do the cumulative assessments.	**Reviewer only.)** **___x_Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book The grade 5 Stepping Stones program does employ a variety of instructional approaches. Modeling, question and answer, investigation, problem solving, graphs, charts, use of manipulative, etc. Assessment is also varied, tests, observation/discussion, journal/portfolio, quizzes (check-up), performance tasks, interview, quarterly tests. Student groupings vary including whole class, small group, pairs and individual.	**Reviewer only.)** **__x__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__x__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.** **Evidence-** Teacher Resource Book, Student Book, Student Practice and Problem Solving Book	**Rating: (Reviewers only.)**

1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	Stepping Stone teachers materials (Lesson steps) present 5 sections of information. The example is taken from Module 3 Lesson 8. Note that shown below is only some of the information provided in the teacher materials for each introduction/step.
	• An introductory narrative of the lesson, including the targeted standards and mathematical practices, and the intent of the lesson
	• Step 1: preparing the less indicates the resources needed for the lesson
	  ○ If these are Stepping Stone resources, they can be viewed/downloaded from the resource icon in the upper right of the lesson page.
	  ▪ Example: assortment of small to medium-sized boxes such as toothpaste boxes, matchbox, soap box, gift box, cereal box, jewelry box, and so on
		(Reviewer only.)
		
		___x___ Yes
		
		_____ No

- Step 2: starting the lesson provides teachers with suggested questions/prompts and talking points to guide focusing of the lesson on the learning targets.
    - Example: Display the boxes and say, Imagine these boxes are being packed into a cupboard. *How could your figure out the amount of space that each box occupies?* Invite students to share their suggestions. Guide them toward the suggestion of packing each box with smaller objects like cubes. Reflect upon the previous lesson and ask, *What do we call the amount of space that an object occupies?* (Volume)
- Step 3: teaching the lesson provides step-by-step structure for the lesson, including questions/prompts/talking points and student work tasks (group and individual)
    - Example: Arrange the classroom tables into groups so that the students can move freely between them. Place one box and the container of each resource at each group of tables. Organize the students into groups and move each group to a display table. Ask each group to investigate the volume of the box that is on their table. They should identify the unit that they would use to measure the volume. They then use this unit to determine the volume. Make sure they record their data for later discussion.
- Step 4: reflecting on the work provides teachers suggestions for formatively assessing and for supporting consolidation of student understandings.
    - Example: Discuss the students' answers to Student Journal 3.8. Have the students share their rule for determining the total number of cubes when they know the dimension of the base and the number of layers.

      Refer to Step Ahead and ask, *Do you think Tyler's calculation is accurate?* Encourage students to cite the gaps and overlaps that are left by the cubes in the container.

2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.	In addition to the questions asked during the lesson, each module includes practice problems, multiple investigations, and multiple problem solving activities. Across each module, materials provide both exercises and problem solving. The example is from Module 9. • On-going practice • Investigations: tape diagram  • Problem solving activity: Working backward 	**(Reviewer only.)** **___x___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	The publisher stated, "Students are presented with initial building blocks for a concept/skill and given opportunities through *Ongoing Practice* to master these concepts and skills before being given the next building blocks in the structure." It was found in the review that exercises in *Ongoing Practice* provide mixed practice of concepts and skills taught in previous lessons. The *Ongoing Practice* does not necessarily align with the focus of the associated lesson. It does seem that the practice is placed intentionally sequenced and distributed across the practice opportunities. Example from Module 10, Lesson 4. The focus of the lesson is using a partial-product strategy for multiplying decimal fractions (hundredths). The Ongoing Practice page for this lesson requires students to order decimal fractions (from Lesson 5.2), multiply fractions using area model (from Lesson 9.3), and multiply a whole number by a decimal fraction (tenths) by using a number line (from Lesson 10.1).	**(Reviewer only.)** **____x__ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	Teacher support resources exist for each module. The following are examples from Module 6. The mathematics tab for each module contains the following features. • *focus*: describes the major concepts and skills of the module, arranged by CCSS cluster headings; within the focus are links to teacher support videos  • *learning targets*: shows what students should be able to do through completion of the module in relation to CCSS	**(Reviewer only.)** **___x___ Yes** **_____ No**

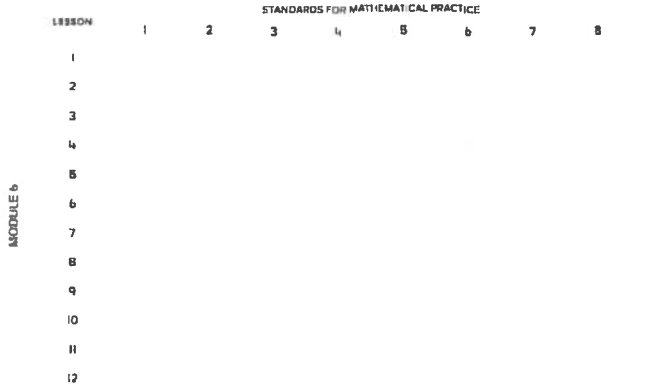
On completion of this module, students should be able to:

Use equivalent fractions as a strategy to add and subtract fractions.

5.NF.1

5.NF.2

- *mathematical practices*: show which mathematical practices are emphasized in the module and in which lessons; within the mathematical practices section are links to teacher support videos



- *research into practice*: gives some cited research behind the structure of the module
- *language development*: gives a list of vocabulary developed in the unit

Each lesson provides teachers with question prompts to elicit mathematical discussion.

reflecting on the work

Discuss the students' answers to Student Journal 6.6. Invite students to summarize the main steps: write the equations so the fractions have the same denominator; then subtract using improper fractions or using mixed numbers where one of the whole numbers must be decomposed. Ask

5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	Visual representations of manipulatives are faithful representations of the objects and are connected to written methods. The example is from Module 1, Lesson 2.  	**(Reviewer only.)** **___x___ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	Each module has the following assessment resources.
	• Assessment overview
	  ○ A table showing the provided assessments aligned to specific standard being assessed
	
	• Formative assessments
	  ○ Pre-test, observation and discussion, journals and portfolios
	• Summative assessments
	  ○ Check-ups
	• Recording tool
	Summative tests show alignment to standards for each question
		(Reviewer only.)

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	Stepping Stones authors, consultants, implementation advisors and publishing team are listed on the website home page. www.origoslate.com/3/index.php#/17157 Biographical information about the authors can be found on the website as well. http://www.origoeducation.com/origomath-support/	**(Reviewer only.)** **___x___ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	Student materials consist of a Student Journal and a Student Workbook. Navigation of each page is supported by layout and color. Navigation	**(Reviewer only.)** **___x___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	Each module has a letter home. The letter includes suggested activities for helping students at home and supports for exercises. The examples are from Module 4.  *Add improper fractions* Ideas for Home • Finding common denominators is a key skill when working with fractions. Say two numbers less than 12 (e.g. 3 and 5), and ask your child to find a common multiple. E.g. the multiples for 3 are 3, 6, 9, 12, 15, and the multiples for 5 are 5, 10, 15. A common multiple for 3 and 5 is 15.	**(Reviewer only.)** **___x___ Yes** **_____ No**

Reviewer IMET Evaluation Summary **Title/Level: Grade 5 Stepping Stones**

Publisher: Origo Education **Copyright: 2012** **ISBN: 9781921959790**

Reviewer ID # PL,TR_____ **Date Review Completed: March 9, 2016**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
_____x__ Meets _____ Does Not Meet	___x__ Meets _____ Does Not Meet

Non-Negotiable Overall:

___x__ Meets **_____ Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ____x___ Meets _____ Does Not Meet	Points: ___6__ of 6 possible. (Materials must receive at least 5 of 6 points to align.) _____x__ Meets _____ Does Not Meet	Points: __6___ of 6 possible. (Materials must receive at least 5 of 6 points to align.) ___x____ Meets _____ Does Not Meet

Alignment Criteria Overall:

___x__ Meets **_____ Does Not Meet**

If the mater meet both Non-Negotiables and relevant Alignment C rion, they are aligned to the Shifts and major features e Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? ___x__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

Strength

- Layout of online teacher materials, once familiar with navigation.
- Login-the program opens to the page you were viewing when last closing the program.
- Geometry is interspersed throughout the modules
- All teachers receive the mathematical content of all grade levels. This is especially helpful for interventions (both remedial and extending).
- Teacher materials include a means for viewing the sequence of lessons across grade levels that develop the concepts and skills for that lesson

Weakness

- The program uses everyday items in lessons/investigation, such as boxes or scales as well as specific items such as pattern blocks. There seems to be no master list of resources needed for the entire program.
- Practice exercises, pre-tests, and summative assessments are not limited to the content of the associated module. It is not clear when any given concept or skill is expected to be mastered or when/where practice for any give skill will be presented.
- Modules seem to be organized by the constraint of 12 lessons, rather than topics that are related.
- Binding on the workbook fell apart with the second opening.

Note: Professional development would greatly impact successful implementation, as there are many components to the online resource. Program success depends upon reliable internet access for the teacher (and the student, if the student books are not purchased).

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Pearson
Title:	enVision math 2.0
ISBN #	9780328847587
Grade Level(s) or Course:	Kindergarten

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS-
The majority of time is spent on the major work of kindergarten. 76% of the lessons address the major works.

COHERENCE-
Each topic has a coherence section that lays out students prior knowledge, new on-level knowledge, and future applications and how the on-level standard connects to grade 1 standards.

RIGOR-
there are many opportunities throughout EnVisions 2.0 for students to use strategies that make sense to the student.

CONCEPTUAL UNDERSTANDING-
Kindergarten students are asked to use pictorial, concrete, and symbolic models for mathematical concepts.

MATHEMATICAL PRACTICES-
Mathematical practices are infused into all aspects of the program.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
Daily ELL support is provided for each lesson. Independent practice, and homework is leveled throughout with additional support for RTI students.

OTHER:
EnVisions math 2.0 is easy to navigate and use as a teacher. There is a technology componet built into each lesson.

2015-16 Interim Mathematics Review

Mathematics Evaluation Tool Grades K-8

Reviewer ID: SJ CJ

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** The following standards are not assessed in the topics before the grade level indicated.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** Majority of time is devoted to the Major Work of kindergarten. K.CC.A: 4 topics K.CC.B: 3 topics K.CC.C: 1 topic K.NBT.A: 1 topic 11/14 topics are devoted to the Major Work. 76% of the lessons address the Major Works. Supporting Clusters, Additional Clusters, and Supporting Clusters are color coded throughout the TE so teachers are aware of type of cluster they are teaching.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2B: **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Additional Clusters are identified as such and include: K.G.A: 1 Topic K.G.B: 1 Topic K.MD.A: 1 Topic Supporting Clusters are identified as such and include: K.MD.B: 1 Topic	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each topic overview has a Coherence section that lays out student prior knowledge, new on-level knowledge, and future applications and how the standard connects to grade 1 standard.	**(Reviewer only.)** **_X___Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Every lesson has [illegible]ny opportunities to practice current grade-level standards regardless of instructional level. Each lesson includes: -Daily Common Core Review -Solve and Share -Visual Learning -Do you understand? Show me! -Guided practice -Reteach -Independent practice -Leveled practice and homework	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each topic overview has a Coherence section that lays out student prior knowledge, new on-level knowledge, and future applications and how the standard connects to grade 1 standard.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson has a Show What You Know piece where students will review prior learning; each topic also has a Coherence section that relates to prior knowledge (Even relates it back to pre-school).	**(Reviewer only.)** **__X__Meets** **____Does Not Meet/ Insufficient Evidence**

Metric NN2G **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each lesson has color coded headers indicating what cluster is being taught. Topic planner for each topic is specifically names standard and is listed at the beginning of each lesson.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Each Common Core cluster is the focus of one or more topics. Topics contain connections to other clusters and other domains where sensible.** **Example:** **K.CC.A, K.CC.B: Topic 1, Topic 3, Topic 9, Topic 11**	(Reviewer only.) **__X__Meets** **____Does Not Meet/ Insufficient Evidence**
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** **Very organized and intentional. Teachers are very aware of what cluster they are in, if it's a Major Cluster, Additional Cluster, and Supporting Cluster**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **_x___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Developing understanding is the focus of 10 out of the 14 kindergarten topics.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Every lesson begins with Solve and Share, this gives students a non-routine problem to solve, these non-routine problems are used to introduce new ideas in mathematics.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Kindergarten students are asked to use pictorial, concrete, and symbolic models for mathematical concepts.	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Fluency is practiced in topics 9-14 after time has been spent developing the skills needed.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** There are many opportunities throughout EnVisions for students to use strategies that make sense to them.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Students are given many opportunities to practice adding and subtracting within 5. -Fluency Practice Activities -Fluency Practice/Assessment Worksheets -Game Center -Math Diagnosis and Intervention System 2.0 -"My Fluency Progress" form.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Topics 6-8 are the only places where k.OA.A.2 is addressed.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Are there are s and multi-step contextual problems, including non-routine prob s, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are many si e-step problems including at least 1 non-routine problem at the beginning of each lesson.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** In topics 6-8 there are a variety of problems types.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** There are many different mathematical models that are used through out this program. This builds a solid understanding for kindergarten students.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X_Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice **Materials must demonstrate authentic connections between content Standards and practice Standards.** The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.	**Required Materials:** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion** Alignment Criterion 2 is rated as Meets or Does Not Meet. To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Mathematical Practices are infused into all aspects of the program. -Solve and Share requires students to select, implement, and manage multiple mathematical practices. -Visual Learning Bridge: discussion questions from the teacher materials connect to mathematical practices -Do You Understand? Show Me!: focuses on a specific mathematical practice -Each lesson's Independent Practice, Math Practice, and Problem Solving, and Homework and Practice specific items are labeled with at least one mathematical practice.	**(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** **There is a problem-solving handbook at the beginning of the TE and SE, there is a classroom set of Mathematical Practices posters, MP rubrics, and MP listed for each lesson.**	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-**	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-**	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** MP 3 is supported in Solve and Share, Look Back, The Visual Learning Bridge, Do You Understand? Show Me! As well as in Homework and practice.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Students are encouraged to use reason and explain their strategies using diagrams, models, and tools appropriately.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Math Practices and Problem Solving lessons are opportunities to focus on specific math practice during problem solving.	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3 **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Daily ELL instruction support is provided in the TE for every lesson. Visual Learning Animation uses motion and sound, where questions are real aloud to students; there is also many pictures throughout the program.	Reviewer only.) **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** EnVision meets the needs of all students and provides Response to Intervention during each lesson, at the end of each lesson, at the end of each Topic, and as indicated: -On Going, during the lesson -Strategic Intervention, at the end of the lesson -Intensive Intervention -Math Diagnosis and Intervention System 2.0	Reviewer only.) **_X___Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** Students are asked to use models to represent their thinking and solutions in the Problem-Based learning part of each lesson. Students are also asked to use models in: -Do You Understand? Show Me! -Convince Me!	Reviewer only.) **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** enVisionmath2.0 uses two key steps to the core instructional model. Step 1: Problem-Based Learning -Where concepts and procedures are introduced Step 2: Visual Learning -Makes the important mathematics explicit with enhanced direct instruction connected to Step 1.	**(Reviewer only.)** **___X___ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Students are engaged with a wide variety of problems and exercises. -Problem-Based Learning -Visual Learning Bridge -Independent Practice -Differentiation Lessons	**(Reviewer only.)** **___X___ Yes** **_____ No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** The design of assignments have many different models to strengthen students' mathematical understanding such as: -Hands-on activities -Pictures -Symbols	**(Reviewer only.)** **___X___ Yes** **_____ No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** At the beginning of each TE there is an explanation of Mathematical Practices and Common Core connections. There are also online videos available, explanation of student misconceptions, background knowledge, as well as, answer keys and examples of student work.	**(Reviewer only.)** **___X___ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Manipulative are available as individual kits, teacher demonstration kits, center kits, and online virtual manipulatives. Examples of manipulatives include: linking cubes, foam blocks, counters, 3-D shapes, etc.	**(Reviewer only.)** **___X___ Yes** **_____ No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Each Topic includes a pre-assessment, post assessment and performance task. Each lesson includes formative assessment ideas.	**(Reviewer only.)** **____X__ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** There are rubrics for each of the Mathematical Practices, there are also answer keys for each of the Topic assessments.	**(Reviewer only.)** **___X___ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** Two choices for assessment: performance task and topic assessment	**(Reviewer only.)** **___X___ Yes** **_____ No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Authors are listed. Authors are math and educational professionals.	**(Reviewer only.)** **__X____ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Every lesson follows the same 2 step design: Step 1: Problem-Based Learning Step 2: Visual Learning	**(Reviewer only.)** **___X___ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** There is online homework support, directions for parents at the bottom of each of the SE workbook page, Parent letters, as well as, online support videos for parents.	**(Reviewer only.)** **___X___ Yes** **_____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Pearson Education, Inc.
Title:	enVision math 2.0 Grade 1
ISBN #	9780328847655
Grade Level(s) or Course:	Grade 1
Reviewer ID:	C.J.T.B

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Envision Math 2.0 uses an easy-to-read color coding system so teachers can easily see what topics are addressing major clusters, Additional clusters, and Supporting clusters.

COHERENCE-

Each Topic in Envision Math 2.0 has a Coherence heading where teachers can see prior knowledge, new on-grade-level knowledge, and future applications and standards.

RIGOR-

There are many opportunities throughout Topics and lessons for students to use strategies, practice fluency, connect to prior knowledge, and use many different models.

CONCEPTUAL UNDERSTANDING-

TE for Envision math provides many opportunities for discussion questions before, during, and after each lesson. This program also helps students develop solid strategies.

MATHEMATICAL PRACTICES-

There is a Comprehensive math practice and problem solving lesson in every topic that is completely devoted and gives special focus to one of the eight math practices.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-

Daily ELL instruction support in every lesson, Each lesson can be leveled as Intervention, on-level, and Advanced. Assignments, homework, and practice can be leveled. There are also many online tools that can be used as support.

OTHER:

This program addresses all standards and Mathematical Practices in an easy to use form. This program includes connections to science, technology, art, and language arts.

ISBN #: 9780328847655 **Copyright** 2016

Reviewer ID: C.J. T.B

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

The IMET was developed by Student Achievement Partners. Educators may use or adapt. http://creativecommons.org/licenses/by/3.0/ Download this tool at http://achievethecore.org/IMET

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1 **Freedom from Obstacles to Focus**		
Criterion	**Evidence- Give specific examples.**	**Rating: (Reviewer only.)**
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion:** Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials re[illegible] the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** enVisions math 2.0 does not assess any of these topics prior to their introduction by the Common Core.	(Reviewer only.) ✓ **Meets** ____ **Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) ✓ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

Major clusters appear early in the year.
- Clusters are color coded as
Major Clusters = green, Supporting = blue
Additional = yellow
11/15 topics are major clusters
1/15 = topic is a supporting cluster
3/15 are additional clusters

(Reviewer only.)

✓ **Meets**

Does Not Meet/ Insufficient Evidence

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Supporting work is noted in the table of contents, as well as color coded throughout the teacher's edition.	**(Reviewer only.)** ✓ **Meets** ____ **Does Not Meet/ Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Under to Coherence heading in each topic, teachers are aware of prior knowledge, new on-grade-level content, as well as future applications and standards. Example: TE page 75C-75D	**(Reviewer only.)** ✓ **Meets** ____ **Does Not Meet/ Insufficient Evidence**

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** every lesson in envision has: Daily Common Core review, Solve & share, Visual learning bridge, Do You Understand? Show me!, Guided Practice, Reteaching Set. Independent Practice, Math Practices and Problem Solving, and leveled homework and practice. As well as lesson differentiation	(Reviewer only.) ✓ Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In the Teacher's Edition, each cluster overview contains a Section on Coherence that describes how the new on-grade-level content connects to prior knowledge in an earlier grade and/or prior knowledge earlier in the year. Example: TE 75C-75D	(Reviewer only.) ✓ Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** - Fluency Practice - Daily Common Core Review - Today's Challenge - Placement Tests	(Reviewer only.) ✓ Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The lesson overview in the TE includes the Domain, Cluster, Content Standard, Mathematical Practices, as well as a lesson objective that is shaped by the CCSSM Cluster.	(Reviewer only.) ✓ Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Topic 4: Subtraction Facts to 20: use strategies focuses on developing operation properties + relationships (1.OA.B) but also develops subtraction facts (1.OA.C) and includes real world problems using basic facts (1.OA.A).	(Reviewer only.) ✓ Meets ____Does Not Meet/ Insufficient Evidence
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) ✓ Meets ____Does Not Meet **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

_✓_ Meets (2)

____ Partially Meets (1)

____ Does Not Meet (0)

Is conceptual understanding attended to thoroughly where the Standards set e[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** 1.OA.B understand and apply properties of operations and the relationships between addition & subtraction. * Counting on * doubles * near doubles * make a ten	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** The TE provides Before, During, & After questions to support best practices and promote discourse.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Students are prompted to use pictorial, concrete, and symbolic models for mathematical concepts. (Examples: SE/TE 309, 315, 321, 327, 331)	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Practice for fluency is found in Topic 1 and topic 2.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Opportunities throughout for students to use strategies that make sense to them, if even if they are non-traditional.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** fluency practice activities, fluency practice/assessment, games, intervention, and "My Fluency Progess" form.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson begins with "Solve and Share" where students make connections to prior knowledge and determine their own method for solving the problem.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** ✓ **Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Lessons 5-6, students make sense of word problems. (TE/SE p. 329-334)	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Solve & Share: start of each lesson, apply prior knowledge Visual Learning Bridge: real-world problems, follow-up to Solve & Share, reinforce operation meanings.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Students model math problems with concrete objects & manipulatives -colored counters -number lines -cubes -graphs -models -pictures -symbols	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

✓ **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

A Comprehensive Math Practices and Problem Solving lesson in every topic is completly devoted to and gives special focus to one of the eight math practices.

lessons: 1-9, 2-10, 3-10, 4-9, 5-7, 6-5, 7-7, 8-6, 9-6, 10-9, 11-7, 12-5, 13-4, 14-9, 15-4

(Reviewer only.)

Metric AC2B: **Materials att to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each qu n and rate Metric 2B.** **(Reviewer only.)** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** There are special lessons in each topic that focuses on each of the eight Math Practices.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Math Practices are throughout all daily lessons & in Math Practices and Problem Solving lessons.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** TE includes - Math Practices - Problem Solving Guide · recording sheet - Math Practices rubric	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** ✓ **Meets (2)** **Partially Meets (1)** **Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Student demostrate MP. 3 throughout lessons and topics connected directly to grade-level content. (TE: 21, 57, 52, 86, 60)	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Grade 1 Topic 10 students are encouraged to represent their thinking with concrete & abstract models throughout the unit. (TE 541A-541F)	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** - Vocabulary cards - Vocabulary review - glossary - online vocab. games	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

✓ Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A: **Support for [illegible]lish Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** -Daily ELL instruction support for every lesson -Visual Learning Animation Plus - Sound + motion Visual Learning Bridge - Visual models Pictures, ELL Consultants	Reviewer only.) ✓ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Every lesson can be broken up for beginning, intermediate, and advanced students. -Assignments, practice, and homework can be leveled as needed.	Reviewer only.) ✓ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** -Digital math tools -Online games -Leveled homework + practice -Leveled assignments -math diagnostic intervention system -Online practice	Reviewer only.) ✓ Meets (2) ____Partially Meets (1) ____Does Not Meet (0)

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** ✓ **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:**

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** two key steps to the core instructional model: ① Problem Based learning ② Visual learning	**(Reviewer only.)** _____ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** step 1 is problem based learning step 2 visual learning Bridge	**(Reviewer only.)** _____ **Yes** _____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Independent Practice, Practice Buddy Online, leveled homework and practice	**(Reviewer only.)** ✓ **Yes** ____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Professional development videos for each topic, extensive teaching notes, print & digital resources to assess	**(Reviewer only.)** ✓ **Yes** ____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** individual manipulative kits, teacher demonstration kits, center kits, and online virtual manipulatives	**(Reviewer only.)** ✓ **Yes** ____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** - Diagnostic assessment - start of the year - start of the topic - Formative assessment - During + end of lesson - Summative Assessment - end of topic	**(Reviewer only.)** ✓ **Yes** ____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** - online self scoring assessments - math practices Proficiency rubric - scoring guides and student examples	**(Reviewer only.)** ✓ **Yes** ____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** - Selected response - constructed response - technology enhanced items - Preformance tasks	**(Reviewer only.)** ✓ **Yes** ____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** Yes, authors are listed	**(Reviewer only.)** ✓ **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** Visual design supports the two key steps in the core model and is engaging to young learners	**(Reviewer only.)** ✓ **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** - Homework & practice includes examples for parents & students - Another Look Homework Videos - parents can view student assignments online.	**(Reviewer only.)** ✓ **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Level:** _____

Publisher: _____ **Copyright:** _____ **ISBN:** _____

Reviewer ID # _____ **Date Review Completed:** _____

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
✓ Meets _____ Does Not Meet	✓ Meets _____ Does Not Meet

Non-Negotiable Overall:

_____ **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) ✓ Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) ✓ Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) ✓ Meets _____ Does Not Meet

Alignment Criteria Overall:

✓ **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion?** ✓ **Yes** _____ **No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Pearson Education
Title:	EnVision Math 2.0
ISBN #	9780328847600
Grade Level(s) or Course:	2
Reviewer ID:	KC + TB

RECOMMENDED AS:

X **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- The program reflects the CCSS materials for 2nd grade without assessing topics that aren't supposed to be addressed. The majority of time is spent on the major work of the grade.
No evidence of content that "unduly" inteferes with grade-level content

COHERENCE-
The program supports students understanding of key mathematical concepts and progresses in a logical and coherent manner. The material is designed to meet the fluencies and procedural skills required by the standards.

RIGOR-
In the Teacher's Edition, each cluster has a section called "Rigor" which includes information about conceptual understanding.

CONCEPTUAL UNDERSTANDING-
Students use pictorial, concrete and symbolic models to develop math understanding and solve problems. Various strategies are taught to help students understand and apply a concept.

MATHEMATICAL PRACTICES-
Besides the CCSSM clusters, the 8 standards for Mathematical Practice are used and integrated into the curriculum. Engagement of the mathematical practices enables learners to develop understanding.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS-
There is daily ELL instruction support. Every lesson can be broken up for beginning, intemediate and advanced students. Digital math tools, on-line games, leveled homework and practice, math diagnostic & intervention systems.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Instructional Materials Evaluation Tool

Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:

- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?
This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-inmathematics/) at the heart of the Common Core State Standards are:
- **Focus** strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:
- Common Core State Standards for Mathematics (www.corestandards.org/Math)
- Publishers' Criteria for the Common Core State Standards in Mathematics grade K-8 (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)

When to use the IMET
1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students' actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.
Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?
Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http:// www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Getting Started
Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers' Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1-3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria

- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as "Meets" or "Does Note Meet" based on the number of points assigned. The more points the materials receive on the alignment Criteria, the better they are aligned.

Record and explain the evidence upon which the rating is based.

Proceed to Section 4: Indicators of Quality

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.

Directions for Non-Negotiable 1

Freedom from Obstacles to Focus

Criterion	Evidence- Give specific examples.	Rating: (Reviewer only.)
Non-Negotiable 1: **Freedom from Obstacles to Focus** **Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.** The Standards foster students' progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards. In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Required Materials** • Common Core State Standards for Mathematics (www.corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • From the materials being evaluated: teacher guides and all assessment components	**Rating this Criterion**: Non-Negotiable 1 is rated as Meets or Does Not Meet. To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A. If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Metric NN1A: **Materials reflect the basic architecture of the Standards by not assessing the listed topics before the grade level indicated.** • Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7) • Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grade 6) • Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8) • Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4) **How to Find the Evidence:** Evaluate the table of contents, all chapter tests, all unit tests, and other such assessment components (including rubrics). For context, read Criterion #2 from the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013). NOTE: Grade alignments of other topics are addressed in Non-Negotiable 2, Focus and Coherence.) In this criterion, "topics named" means the topics that are explicitly named in Metric 1A. No other topics should be added to the list in Metric 1A. (Note that other topics in the standards are addressed in criterion NN2.)	**Evidence-** All major clusters are addressed and assessed in appropriate grade levels. Any additional skills or lessons, are identified as supplementary, and not assessed above grade level.	**(Reviewer only.)** **__X__Meets** **____Does Not Meet**
Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named* before the grade level where they first appear in the Standards. **NN 1** If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non- Negotiable 1 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		**(Reviewer only.)** **_X_ Meets** **____Does Not Meet** **Strengths/Weaknesses:** All grade level standards are clearly identified. Assessments align to each of the lessons taught, but do not exceed the grade level skills.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2:

Focus and Coherence

Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Metric NN2A:

In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)

Evidence-

All major clusters, supporting clusters, and additional clusters are clearly identified, with approximately 80% of work in major clusters. All supporting and additional clusters work to build deeper conceptual understanding of the skills at grade level.

(Reviewer only.)

__X__Meets

____Does Not Meet/

Insufficient Evidence

Metric NN2B: **Supporting work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **All supporting work develops concepts within the major work of the grade, and is clearly marked as such with descriptions of the connections made.**	(Reviewer only.) **_X__Meets** **____Does Not Meet/** **Insufficient Evidence**
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** **Teacher materials specifically list the content standards from previous grades which will support the learning of the skill being taught in the "Look Back" section. Standards for upcoming grades are also listed with descriptions of how the Grade 2 standard will connect to future content in "Look Ahead" section.**	(Reviewer only.) **__X__Meets** **____Does Not Meet/** **Insufficient Evidence**

Metric NN2D: **Materials gi[illegible]l students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Student workbook[illegible]ive individual practice and the teacher has access to online videos, worksheets, textbook problems, problem solving, reading mats, and daily review questions. All of these materials provide extension and remediation opportunities.	**(Reviewer only.)** __X__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** All concepts are linked to previous grade concepts and skills. For example, pg. 1C shows how the first topic in the book (addition and subtraction) uses the terms "put together" and "take from", which ties to the language they used in 1st grade in the introduction of this concept.	**(Reviewer only.)** __X__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** In the student workbook, at the beginning of each topic, students are asked to review in the "Review What You Know" section. This aligns with the teacher manual descriptions of previous and upcoming grade level connections.	**(Reviewer only.)** __X__ **Meets** ____ **Does Not Meet/** **Insufficient Evidence**

Metric NN2G: **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Each lesson is labeled with the CCSS, and pages in the teacher manual show how the lesson meets the standards and explains how to evaluate the work.	(Reviewer only.) __X__Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Concepts are aligned throughout the curriculum, and when appropriate, are connected to one another.	(Reviewer only.) __X__Meets (but weak) ____Does Not Meet/ Insufficient Evidence
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** NN 2 If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) __X__Meets ____Does Not Meet **Strengths/Weaknesses:**

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance **Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.** The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (achievethecore.org/focus) • Situation Types for the Operations in Word Problems (achievethecore.org/situation-types) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Alignment Criterion 1 is rated as Meets or Does Not Meet. To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence. Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Metric AC1A: **The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A Clusters or Standards grouped by parentheses are closely connected and could be analyzed together. For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)	**Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set ex[illegible] expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** The lessons build c[illegible]arious strategies and models to develop conceptual understanding. For example, for addition students begin with making 10s, cube links, decomposing, compensation, visual models, partial sums, and reasoning problems. These begin the foundation for understanding the concept of addition and subtraction algorithms in future grades. Strong focus on place value throughout curriculum.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** The "Make Sense" and "reasoning" problems give students the opportunity to apply their practice standards. Additionally, the reading mats, interactive math stories, and enrichment worksheets add depth as well. On assessments, students are given the opportunity to "show what they know" using a variety of strategies and models.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** There are visual models used throughout the text such as hundreds boards, blocks, number lines, and some algorithms. These models evolve as the complexity increases throughout the text. For example, students move from enactive (unifix cubes) to iconic (bar models, number line) to symbolic (number sentences and eventually algorithms).	

Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Daily review problems, fluency fact practice sheets, and warm-ups are available each day.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** The first few problems of each lesson are mostly procedural with additional problems pushing to conceptual understanding, application, and problem solving.	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** As addition and subtract is developed, students are encouraged to see patterns which increase mental fluency.	

Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The artwork and colorful pages engage the students, but do not interfere with their focus. There are a lot of problems, which may overwhelm a student. Teachers need to be given the ability to utilize the leveled problems on each assignment. The teacher's manual specifies which problems are intervention, on level, and advanced. This way, students do not have to complete all problems on the page. The daily lesson structure is predictable. This can be both a pro and a con. Familiarity with the structure, allows students to focus on the math. However, this repeated structure may become monotonous over the school year or over the years a student is in school.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** **_X_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** In each lesson, students are given the opportunity to apply what they know in problem solving contexts. Most lessons offer at least one multi-step problem. There are also additional resources such as the "Math and Science" activities which ask students to apply their learning.	
Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** The majority of lessons and activities focus on major work of Grade 2. The lessons are paced throughout the year, so that students are exposed to the foundational skills of the grade, at the beginning.	

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The modeling is consistent throughout the book, and into the following grades. This includes the lesson structure, additional resources, and language of math.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A: **Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions. For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).	**Evidence-** Math Practice Standards are clearly noted in various problems such as "Reasoning" and "Make Sense" throughout the text. Specific tasks have been designed to give students opportunities to develop these standards while learning specific skills from grade level work.	(Reviewer only.) **_X_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC2B: **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** (Reviewer only.) **_X_ Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Problems are specifically designed for the purpose of assessing and practicing these standards.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** These standards are found in every grade level of materials reviewed.	

Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** The teacher's guide explains the role of the practice standards and how to engage students in the discussion.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Class problems and individual problems ask students to reason and justify. These problems are answered in writing, and would need the teacher to elicit conversation from the class based on these problems.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** In 2nd grade, some models are provided on the student workbook pages to help students at a developmentally appropriate level, but mathematical thinking is required to complete them.	
Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Language used matches the language used in CCSS, in standardized assessments, and in mathematical discussions. For example, the models are named "open number line" and "bar model". Teachers would want to supplement this language with words such as "iterate" and "partition".	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

__X__Meets

____Does Not Meet

Strengths/Weaknesses:

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A:
Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.

How to Find the Evidence:
Evaluate teacher and student materials, paying attention to supports offered for special populations.

Evidence-
Specific vocabulary introduction with visuals and modeling is apparent in each unit. ELL and differentiated lessons and small group activities are available within each topic.

Reviewer only.)

__X__Meets (2)

____Partially Meets (1)

____Does Not Meet (0)

Metric AC3B: **Materials pr[illegible]e appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Each lesson engag[illegible]students in a level of productive struggle prior to "instructing" on a skill. Review, remediation, and extension activities are available for each topic. Each assignment is also leveled, so that teachers can use discretion to assign a student at their instructional level. Intervention activities are listed as a reaction to students performing at lower levels on formative assessment.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** There are videos, instructional texts, activities with manipulatives, problem solving, application of skills with reading mats, games, and math/science connection activities.	**Reviewer only.)** **__X__Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** AC3 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**		**(Reviewer only.)** **__X__Meets** **____Does Not Meet** **Strengths/Weaknesses:** There are many resources available for a teacher to choose from. This allows teachers to spend more or less time on a skill based on the needs of their students. At first, teachers will need to take time to learn and master the multitude of resources to know where to find each of the pieces.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	Evidence- Give specific examples.	Rating: (Reviewers only.)
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Active participation is required to develop concepts. Teacher may need to keep engagement in mind as they plan the lessons in order to avoid monotony.	**(Reviewer only.)** **__X__ Yes** **_____ No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** There are multiple applications for skills as listed previously.	**(Reviewer only.)** **__X__ Yes** **_____ No**
3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Formative assessment after each lesson, also helps teachers identify students who need intervention. Intervention activities are available based on specific needs of students. Summative assessment at the end of each topic is graded using a scoring rubric.	**(Reviewer only.)** **__X__ Yes** **_____ No**
4. There are separate teacher materials that support and **reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.**	**Evidence-** Teacher guide is full of ideas to help students with concepts. There are examples of student thinking and reteach/extensions for most concepts.	**(Reviewer only.)** **__X__ Yes** **_____ No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** At Grade 2, the students are encouraged to use many authentic tools which are then connected to the text.	**(Reviewer only.)** **__X__ Yes** **_____ No**

6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Each lesson, topic, and chapter has assessment built in. There is also a diagnostic assessment to give prior to instruction, at the beginning of the year.	**(Reviewer only.)** **__X__ Yes** **_____ No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** There are scoring guides with descriptors of points possible and how they are earned. There are also digital tools for self-graded assessment.	**(Reviewer only.)** **__X__ Yes** **_____ No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** All questions connect back to the language and models used in the initial lesson.	**(Reviewer only.)** **__X__ Yes** **_____ No**
9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** There are multiple professors and teachers listed. Specifically some authors who are engaged in current research.	**(Reviewer only.)** **__X__ Yes** **_____ No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The text can be a bit busy to the eye, but is consistent throughout. Once a teacher or student is used to the format, it should be easier to navigate.	**(Reviewer only.)** **__X__ Yes** **_____ No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** There are online lesson videos, "reteach" sections on homework, and letters to send home at the beginning of each topic.	**(Reviewer only.)** **__X__ Yes** **_____ No**

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet

Non-Negotiable Overall:

X Meets _____ Does Not Meet

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.)
X Meets	X Meets	X Meets
_____ Does Not Meet	_____ Does Not Meet	_____ Does Not Meet

Alignment Criteria Overall:

X Meets _____ Does Not Meet

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? __X__ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation?

This curriculum is very clearly aligned with the Common Core Content Standards as well as the Mathematical Practice Standards. There is a clear scope and sequence within the grade level, as well as throughout the K-6 program. It is well organized with a variety of materials (hands on manipulatives, posters, reading mats, etc.) The online component is flexible for teachers to be able to rearrange and omit lessons when appropriate. All activities and lessons keep differentiation and learner needs in perspective.

The lesson structure is consistent throughout K-6. This is a strength and a weakness. Teachers and students may feel the lessons are monotonous, and engagement may decline as students see the same structure daily for years. Teachers must be given autonomy to be able to supplement and change the daily lesson structure when needed. There are many different resources, and teachers would benefit from a professional development by the publisher to become familiar with all components available.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Pearson
Title:	enVision 2.0 Grade 3
ISBN #	978 032 884 7617
Grade Level(s) or Course:	3rd
Reviewer ID:	KC & PL

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- NN1/NN2

Major works of the grade are clearly identified. Any additional works are also easily identifiable and can be omitted for time or taught.

COHERENCE- NN2

Each grade level builds on previous grade, and builds towards upcoming grades. There is consistency in structure and language. Teacher edition lists previous/upcoming connected standards.

RIGOR- AC1

Students are pushed to understand, model, apply, and explain standards using a variety of models and strategies.

CONCEPTUAL UNDERSTANDING- AC1

Students are developing concepts using enactive, iconic, and symbolic models and strategies.

MATHEMATICAL PRACTICES- AC2

All mathematical practices are taught and applied through intentional problems and tasks. They are also clearly identified throughout the text. Teachers need to engage students in discussion, as many of these problems are written answers.

ACCESSIBILITY OF STANDARDS TO ALL STUDENTS- AC3

Differentiated activities and lessons are shown in teacher edition for each skill. Student worksheets are differentiated within the same problemset. Teachers can choose which level to assign.

OTHER:

Materials are very comprehensive. The structure is easy to follow, but may be seen as a bit overwhelming. The repetitive nature may become monotonous for teachers and students, and will require teacher creativity to ensure continued student engagement.

Core Mathematics Program- a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Core.

Other Mathematics Program- a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials.
Substantial evidence clearly supports the designation of this program as Other.

Component Mathematics Program- a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs.
Substantial evidence clearly supports the designation of this program as Component.

Intervention Program- a program designed and intended to target and support students' specific needs.
Substantial evidence clearly supports the designation of this program as Intervention.

Directions for Non-Negotiable 2

Focus and Coherence

Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.	**Required Materials** • Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf) • Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf) • Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus) • From the materials being evaluated: teacher guides, student texts and workbooks	**Rating this Criterion:** Non-Negotiable 2 is rated as Meets or Does Not Meet. To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
Metric NN2A: **In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.) Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade. For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013)	**Evidence-** The majority of materials cover major works of the grade. There are additional topics, and spiral review available.	**(Reviewer only.)** X **Meets** ____ **Does Not Meet/ Insufficient Evidence**

Metric NN2B **Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.** **How to Find the Evidence:** Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The supportive topics allow students to connect back to the major works. Many of these skills create flexibility and fluency with mental math strategies, application problems, and multiple opportunities for practice.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2C: **Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.** **How to Find the Evidence:** Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards' progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Any time previous grade material is brought up, it is as review or to formatively assess skills which are the foundation for the upcoming lesson. Topic 9-6 is introducing standard algorithm for subtraction of multi-digit numbers, but this strategy is not required on the assessment. Standard algorithm for addition also introduced and practiced.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2D: **Materials give all students extensive work with on-grade-level problems.** **How to Find the Evidence:** Evaluate both student and teacher materials. If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth. For context, read Criterion #5b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There are guided practice, independent practice, and problem solving problems in each topic. There are also Problem Based Learning prompts, games, leveled worksheets, daily spiral review, and reading mats.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2E: **Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.** **How to Find the Evidence:** Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase "Apply and extend previous understanding"). For context, read Criterion #5c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Yes, all concepts are linked to previous grade's knowledge.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2F: **Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.** **How to Find the Evidence:** Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such. For context, read Criterion #5a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** The review skills are clearly identified in the teacher text, and are labeled as "Review What You Know" in student text. Also in the teacher text is a glimpse at upcoming grade work, and how the skill being taught connects.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence

Metric NN2G **Materials include learning objectives that are visibly shaped by CCSSM cluster headings.** **How to Find the Evidence:** Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters. For context, read Criterion #6a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** Yes, each lesson is clearly identified with the CCSS. Each unit is based on a CCSS cluster heading.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Metric NN2H: **Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.** **How to Find the Evidence:** In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important. Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA). For context, read Criterion #6b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** When applicable, connections between clusters are clearly marked and explained in the teacher materials.	(Reviewer only.) X Meets ____Does Not Meet/ Insufficient Evidence
Non-Negotiable 2: **Focus and Coherence** **Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.** **NN 2** If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)** **Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary.**		(Reviewer only.) X Meets ____Does Not Meet **Strengths/Weaknesses:** Easy to follow materials for teacher + student. Could become monotonous, and reduce student + teacher engagement

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance.

Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

Required Materials

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)
- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.
Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence:

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NF.A, (4.NBT.A, 4.NBT.B), 5.NF.B, (5.NBT.A, 5.NBT.B), 6.RP.A, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.F.A, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

For context, read Criterion #4a in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

-Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in "How to Find the Evidence".)

Use the questions for AC Metric 1A to evaluate Metric 1A. Record evidence for each question and rate Metric 1A.

_X_ **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.	**Evidence-** Yes, in 3rd grade the lessons go from enactive to iconic, and eventually reach writing number sentences. For example, in multiplication students begin with repeated addition, arrays, area model, and then to number sentences.	
Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as "Find a number greater than 1/5 and less than 1/4," or "If the divisor does not change and the dividend increases, what happens to the quotient?"	**Evidence-** Yes, each lesson gives procedural practice, and then extends into application, problem solving, and reasoning.	
Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and 6/2) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.	**Evidence-** Yes, the visual models are used throughout the text, and evolve as the complexity increases. For example: groups with manipulatives → arrays → area model → #sentences repeated addition	
Metric AC1B: **The materials are designed so that students attain the fluencies and procedural skills required by the Standards.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A.1,7.EE.B.4a, 8.EE.C.7, 8.EE.C.8b For context, read Criterion #4b in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 1B to evaluate Metric 1 B. Record evidence for each question and rate Metric 1B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.	**Evidence-** Yes, daily review, fluency fact practice sheets and warm-ups are available each day.	
Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = x + 3, – x = 1 + 2y.	**Evidence-** Yes. The first few problems are mostly procedural with additional problems pushing to conceptual understanding, application, and problem solving	
Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards? Evaluate lessons, daily routines, and homework assignments for evidence of repeated practice toward attainment of the following K–6 Standards that set an explicit expectation of fluent (accurate and reasonably fast) computation: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, 6.NS.B.3.	**Evidence-** Yes. As operations are developed, students are encouraged to see patterns which increase mental fluency.	
Metric AC1C: **The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.** **How to Find the Evidence:** Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.F.B For context, read Criterion #4c in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).	**Evidence-** There are a lot of problems, which may overwhelm a student. However, in the teacher edition, problems are identified by level, for differentiated instruction. This allows the teacher to choose which pieces are completed.	**Use the questions for Metric 1C to evaluate Metric 1C. Record evidence for each question and rate Metric 1C.** **(Reviewer only.)** X **Meets (2)** ____ **Partially Meets (1)** ____ **Does Not Meet (0)**
Are there are single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** Yes. In each lesson, students are given the opportunity to apply what they know. Most lessons offer at least one multi-step problem.	

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems	**Evidence-** Yes. In all lessons identified as "major work", the application problems are supportive of student learning.	
Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.	**Evidence-** The modeling is consistent ~~throughout~~ throughout the book, and continues into future grades.	

Alignment Criterion 1: Rigor and Balance

Materials must reflect the balances in the Standards and help students meet the Standards' rigorous expectations.

AC1 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion. **(Reviewer only.)**

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:

Directions for Alignment Criterion 2

Standards for Mathematical Practice

Alignment Criterion 2: Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence:

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade.

NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

For context, read Criterion #8 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013).

Evidence-

Math Practice Standards are clearly noted in various problems throughout the text. Specific tasks have been designed to give students opportunities to develop these standards, while learning specific skills from grade level work.

(Reviewer only.)

X **Meets (2)**

____ **Partially Meets (1)**

____ **Does Not Meet (0)**

Metric AC2B **Materials attend to the full meaning of each practice Standard.** **How to Find the Evidence:** For context, read Criterion #7 and Criterion #9 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2B to evaluate Metric 2B. Record evidence for each question and rate Metric 2B.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Over the course of any given year of instruction, is each mathematical practice Standard meaningfully present in the form of assignments, activities, or problems that stimulate students to develop the habits of mind described in the practice Standard? Evaluate lessons, chapter/ unit assessments, and homework assignments for evidence of each mathematical practice being meaningfully present in instruction.	**Evidence-** Yes. Problems are specifically designed for this purpose.	
Do the materials treat the practice Standards as developing across grades or grade bands? Are the practice Standards in early grades appropriately simple? Do they display an arc of growing sophistication across the grades?	**Evidence-** Yes. These standards are found in every grade level.	
Are there teacher-directed materials that explain the role of the practice Standards in the classroom and in students' mathematical development? Are alignments to practice Standards accurate?	**Evidence-** Yes. The teacher's guide explains the role of the standards, and how to engage students in discussion.	
Metric AC2C: **Materials support the Standards' emphasis on mathematical reasoning.** **How to Find the Evidence:** For context, read Criterion #10 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).		**Use the questions for Metric 2C to evaluate Metric 2C. Record evidence for each question and rate Metric 2C.** **(Reviewer only.)** **X Meets (2)** **____Partially Meets (1)** **____Does Not Meet (0)**
Do the materials support students in constructing viable arguments and critiquing the arguments of others concerning grade-level mathematics that is detailed in the content Standards? Read Standard for Mathematical Practice 3. Evaluate teacher and student materials to ensure that students are given opportunities to reason with grade-level mathematics.	**Evidence-** Yes. Class problems and independent problems ask students to reason and justify. Teacher would need to elicit class discussion from written work.	
Do the materials support students in producing not only answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc., especially in the Major Work of the grade? Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate teacher and student materials, to understand the types of work students are expected to produce.	**Evidence-** Yes. For 3rd graders models were easily accessible. The level of thinking was developmentally appropriate, but students need to push themselves to answer them.	

Do materials explicitly attend to the specialized language of mathematics? Is the language of argument, problem solving, and mathematical explanations taught rather than assumed? Evaluate teacher and student materials, paying attention to how mathematical language is taught. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in: basing arguments on definitions; using the method of providing a counterexample; or recognizing that examples alone do not establish a general statement.	**Evidence-** Yes. Language used matches the language of CCSS and standardized testing. For example, models are named "bar model" and "area model."	

Alignment Criterion 2:
Standards for Mathematical Practice

Materials must demonstrate authentic connections between content Standards and practice Standards.

AC2 Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.
Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.
(Reviewer only.)

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary.

(Reviewer only.)

X **Meets**

____ **Does Not Meet**

Strengths/Weaknesses:
Clearly labeled and explained in detail for teacher.

Standards are practiced mostly in writing, and teacher would need to engage class in conversation.

Alignment Criterion 3:
Access to the Standards for All Students

Materials must provide supports for English Language Learners and other special populations.

Because Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the Standards. Thus, aligned materials must provide supports for English Language Learners and other special populations.

Required Materials:

- Common Core State Standards for Mathematics (http://corestandards.org/wp-content/uploads/Math_Standards.pdf)
- Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) (http://www.corestandards.org/wp-content/uploads/Math_Publishers_Criteria_K-8_Spring_2013_FINAL1.pdf)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion:
Alignment Criterion 3 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 3, first rate metrics 3A, 3B, and 3C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 3 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as support for special population, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.

Metric AC3A **Support for English Language Learners and other special populations is thoughtful and helps those students meet the same Standards as all other students. The language in which problems are posed is carefully considered.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to supports offered for special populations.	**Evidence-** Specific vocabulary introduction with visuals and modeling in each unit. ELL & differentiated instruction are available for each topic.	**Reviewer only.)** X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**
Metric AC3B: **Materials provide appropriate level and type of scaffolding, differentiation, intervention, and support for a broad range of learners with gradual removal of supports, when needed, to allow students to demonstrate their mathematical understanding independently.** **How to Find the Evidence:** Evaluate teacher and student materials, paying attention to whether materials provide differentiation that will lead all learners to engage with on-grade-level content.	**Evidence-** Yes, each lesson engages students in a level of productive struggle prior to instructing on a skill. Review, remediation, and extension activities are all available. Each assignment is leveled to give options for students on the same worksheet.	**Reviewer only.)** X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)** Intervention activities also.
Metric AC3C: **Design of lessons recommends and facilitates a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).** **How to Find the Evidence:** Evaluate teacher materials, noting instructional approaches suggested for whole class and differentiated lessons and activities.	**Evidence-** There are videos, instructional texts, activities with manipulatives, problem solving, application of skills with reading mats and games.	**Reviewer only.)** X **Meets (2)** ____**Partially Meets (1)** ____**Does Not Meet (0)**

Alignment Criterion 3: **Access to the Standards for All Students** **Materials must provide supports for English Language Learners and other special populations.** **AC3** Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 points, the Criterion has not been met. Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.**(Reviewer only.)** **Move to the Evaluation Summary and record the final Meets or Does Not Meet rating .**	**(Reviewer only.)** X **Meets** ____ **Does Not Meet** **Strengths/Weaknesses:** Easy to find resources to help all students. Differentiation on same worksheet Language focused on Spanish without other language options.

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Indicators of Quality	**Evidence- Give specific examples.**	**Rating: (Reviewers only.)**
1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.	**Evidence-** Yes. Active participation is required to develop concepts. Student engagement may decline as they are exposed to the same lesson structure every day.	**(Reviewer only.)** _X_ **Yes** _____ **No**
2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. **NOTE: This Criterion does not require that the problems and exercises be labeled as such.**	**Evidence-** Yes. There are multiple applications for skills.	**(Reviewer only.)** _X_ **Yes** _____ **No**

3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students' mathematical understanding.	**Evidence-** Formative assessment at the end of each lesson. Summative assessment at the end of each topic.	**(Reviewer only.)** X **Yes** _____ **No**
4. There are separate teacher materials that support and reward teacher study including, but not limited to: discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit, discussion on student ways of thinking and anticipating a variety of students responses, guidance on lesson flow, guidance on questions that prompt students thinking, and discussion of desired mathematical behaviors being elicited among students.	**Evidence-** Teacher guide is full of ideas to help students with the concepts. There are examples of student thinking and reteach/extensions for most concepts.	**(Reviewer only.)** X **Yes** _____ **No**
5. Manipulatives suggested in the materials are faithful representations of the mathematical objects they represent and are connected to written methods.	**Evidence-** Students are encouraged to use many authentic tools to move from enactive to iconic and connect to the text.	**(Reviewer only.)** X **Yes** _____ **No**
6. Materials include a variety of curriculum-embedded assessments. Examples include pre-, formative, summative, and self-assessment resources.	**Evidence-** Yes. Each lesson topic and cluster has assessment built in. There's also diagnostic assessment to give prior to instruction.	**(Reviewer only.)** X **Yes** _____ **No**
7. Assessments contain aligned rubrics, answer keys, and scoring guidelines that provide sufficient guidance for interpreting student performance.	**Evidence-** There are scoring guides with descriptors of points possible, and how they are earned. There are also digital assessments which are graded for the teacher.	**(Reviewer only.)** X **Yes** _____ **No**
8. Materials assess student proficiency using methods that are accessible and unbiased, including the use of course-level language in student prompts.	**Evidence-** All questions connect back to language and models used to form the essential understandings.	**(Reviewer only.)** X **Yes** _____ **No**

9. Materials are carefully evaluated by qualified individuals, whose names are listed, in an effort to ensure freedom from mathematical errors and course-level appropriateness.	**Evidence-** There are multiple professors and teachers listed. Specifically some authors engaged in current research.	**(Reviewer only.)** X **Yes** ____ **No**
10. The visual design supports students in engaging thoughtfully with the subject. Navigation through the text is clear.	**Evidence-** The text can be a bit busy to the eye. However, it is consistent throughout. So, once a teacher/student is used to the format, it should be easier.	**(Reviewer only.)** X **Yes** ____ **No**
11. The materials engage parents in appropriate ways. For example, homework assignments in elementary grades, consist of routine problems, practice with getting answers, and fluency-building exercises that parents can easily support.	**Evidence-** There are online videos of lessons, "reteach" sections on homework, and letters to send home.	**(Reviewer only.)** X **Yes** ____ **No**

Reviewer IMET Evaluation Summary **Title/Lev** enVision 2.0. Grade 3

Publisher: Pearson **Copyright:** 2016 **ISBN:** 9780328847617

Reviewer ID # _____ **Date Review Completed:** 3/7/16

Non-Negotiable Criteria- Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

Non-Negotiable 1: Freedom from Obstacles to Focus	Non- Negotiable 2: Focus and Coherence
X Meets _____ Does Not Meet	X Meets _____ Does Not Meet

Non-Negotiable Overall:

X **Meets** _____ **Does Not Meet**

Alignment Criteria- Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as "Meets" overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1: Rigor and Balance	Alignment Criterion 2: Standards of Mathematical Practice	Alignment Criterion 3: Access to Standards for All Learners
Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet	Points: 6 of 6 possible. (Materials must receive at least 5 of 6 points to align.) X Meets _____ Does Not Meet

Alignment Criteria Overall:

X **Meets** _____ **Does Not Meet**

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the Core Standards. **Do the materials meet every Non-Negotiable and Alignment Criterion? _____ Yes _____ No**

What are the specific areas of strength and weakness based on this evaluation? Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.

2015-16 Mathematics Interim Review Recommendation & Summary

Publisher Name:	Pearson Education Inc.
Title:	enVision Math 2.0 Grade 4
ISBN #	9780328847624
Grade Level(s) or Course:	4
Reviewer ID:	CB, MH

RECOMMENDED AS:

__X__ **Core Mathematics Program-** a complete stand-alone program which meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with minimal or no need for supplemental materials. Substantial evidence clearly supports the designation of this program as Core.

_____ **Other Mathematics Program-** a program that substantially, but partially, meets the focus, coherence and rigor of the Idaho Core Mathematics Standards, with some need for supplemental materials. Substantial evidence clearly supports the designation of this program as Other.

_____ **Component Mathematics Program-** a program designed and intended to be used with another program. This program supports and/or enhances the focus, coherence and rigor of Core and Other Programs. Substantial evidence clearly supports the designation of this program as Component.

_____ **Intervention Program-** a program designed and intended to target and support students' specific needs. Substantial evidence clearly supports the designation of this program as Intervention.

_____ **Does not meet criteria** for recommendation as a Curricular Material or Online Resource for Mathematics.

EVIDENCE SUMMARY:

FOCUS- Superbly covers all grade level standards, and does not cover or assess standards not addressed in grade Level.

COHERENCE- Includes appropriate review of early grade and continues to build on grade level standard. This is true for all topics. Particularly good at helping make connections across the clusters and domains.
