

# Migration

## Migration

---

Many animals move from one place to another, or migrate. Most animals migrate to find a warmer **climate**. Some migrate to look for food or water. Others migrate to **mate**.

# Geese

---

Geese migrate south in the fall. They move to a warmer **habitat** during winter.

In the spring, they migrate north again.

# Monarchs

---

Monarch butterflies migrate away from cold weather.

They fly south each fall.

Many fly long distances from Canada to Mexico.

# Find Water

---

In Africa, wildebeests migrate to find food and water.

During the dry **season**, they migrate north.

They migrate south for the rainy **season**.

# Salmon

---

Adult salmon migrate up rivers to **mate** and lay eggs.

Then they die.

After the young **hatch**, they migrate to the ocean.
