

## Device Guide

This is the information you need to gather about your device. You will present this information to your group after you have done the research. You can use the internet or the fact sheets at your table.

Please fill out this paper for each device presented, include for yours.

**Device Example:**     Stove    

**What it is used for?**     A stove is used to cook food and warm food up after it's been cooked or to keep food warm for long periods of time.    

**How is it powered?**     A stove can be powered electrically, with natural gas, with wood or pellets, or coals. Some stoves can be powered with the sun or with kerosene.    

**What are some interesting qualities about this device?**     Stoves have evolved over the years; they can perform a wide variety of tasks that make our modern lives easier. Stoves and cooked food is one of the main reasons humans live longer (due to killing bacteria present in food).    

**What did we do before electricity? How did we live without this device?**     Before stoves, we used fire to warm and cook food. Before there was electricity, we used wood stoves or kerosene stoves.
