

## **Did you know that your students have access to Apangea Math throughout the summer?**

- Summer usage is included as a part of the program purchased by the Idaho Department of Education as a part of the Math Initiative. This allows Apangea to be utilized in a number of ways to help your district's summer school programs. Students can be put into specific courses or can be enrolled in general ISAT specific pathways for their grade level.
- **As a supplement to a traditional summer school math class:** This is for students who are attending a traditional summer school program at a school in your district. Each teacher will need to re-enroll their students into their class, even if the student already has an Apangea account.
- **As a self-directed summer math remediation/acceleration program:** This is for students who are not in need of summer school courses but want to use this resource from home over the summer. They can work on content they struggle with or use Apangea to help them get ahead.
  - If students already have an Apangea account, their current math teacher should enroll students into appropriate coursework prior to the end of the year.
  - Students who don't currently have an Apangea account can gain access to the program simply by contacting Glen Zollman or Marisa Alan.
- **As a Virtual Apangea Summer School:** Many students require additional practice in math over the summer months. Meeting the educational needs of each student can be a challenge, from both a financial and logistical perspective. Apangea Summer School is a summer program set up specifically for your district in order to provide online summer school math instruction for your students.
  - We would work closely with you to establish the scope and sequence of materials that would be covered.
  - Hundreds of students could be monitored by a single teacher or administrator (either at home or from a central location) at a fraction of the cost of running a traditional summer school math program.
  - Students in grades 5-8 can use Apangea to achieve grade-level goals for mathematics without having to attend a traditional summer school class. High school students can use Apangea as a part of an alternate route to graduation program.

### **Why should your district use Apangea Math this summer?**

- Students are motivated to use Apangea because the program is engaging and they will earn points that can be used to earn some great prizes. They will also be able to participate in our Summer Contest. Students will also enjoy the flexibility of being able to work on their math first thing in the morning, late at night, or anytime in between.
- Teachers like Apangea because they can oversee the program from home for increased flexibility. The reporting tools make monitoring of student progress easy. The Live Support feature and easy access to customer support makes Apangea an easy program to administer.
- Administrators like Apangea because it gets results and is cost-effective!
