5. ACT Interest Inventory matches your interests and skills to job descriptions. One of the most difficult tasks faced by students is to find occupations appropriate to their goals and personal characteristics. The ACT Interest Inventory provides a focus to career exploration by pointing to world-of-work regions individuals may wish to explore. Through exploration, people can find occupations they might otherwise have missed.

6. The ACT World-of-Work Map organizes occupations into six clusters (occupational types), 12 regions, and 26 career areas (groups of similar jobs). It shows how occupations relate to each other according to primary work tasks.

7. These are common uses by universities to identify and qualify students for admission.

8. These are common uses by research services groups to study demographics and comparative analysis.
